- ☐ To measure Screw thread parameters using 2-Wire or 3-Wire method, gear tooth profile using gear tooth vernier/Gear tooth micrometer.
- ☐ To measure surface roughness using Tally Surf/ Mechanical Comparator.

Scheme of Examination:

ONE question from part -A:	30 Marks
ONE question from part -B:	50 Marks
<u>Viva -Voice:</u>	<u>20 Marks</u>
Total :	100 Marks

FOUNDRY AND FORGING LAB
B.E, III Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL38A / 48A	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction + 2 Hours Laboratory)	SEE Marks	60
RBT Levels	L1, L2, L3	Exam Hours	03

Credits – 02

Course Objectives:

- ☐ To provide an insight into different sand preparation and foundry equipment.
- ☐ To provide an insight into different forging tools and equipment.
- ☐ To provide training to students to enhance their practical skills.
- ☐ To practically demonstrate precautions to be taken during casting and hot working.
- ☐ To develop team qualities and ethical principles.

PART-A

1. Testing of Molding sand and Core sand

Preparation of sand specimens and conduction of the following tests:

1. Compression, Shear and Tensile tests on Universal Sand Testing Machine.
2. Permeability test
3. Sieve Analysis to find Grain Fineness Number(GFN) of Base Sand
4. Clay content determination in Base Sand.

PART-B

2. Foundry Practice

1. Use of foundry tools and other equipment's.
2. Preparation of molding sand mixture.
3. Preparation of green sand molds using two molding boxes kept ready for pouring.
 - ☐ Using patterns (Single piece pattern and Split pattern)
 - ☐ Without patterns.
 - ☐ Incorporating core in the mold. (Core boxes).
 - ☐ Preparation of one casting (Aluminum or cast iron-Demonstration only)

PART C

3. Forging Operations :

Use of forging tools and other equipment's

- Calculation of length of the raw material required to prepare the model considering scale losses.
- Preparing minimum three forged models involving upsetting, drawing and bending operations.
- ☐ Demonstration of forging model using Power Hammer.

Course outcomes:

Students will be able to

- ▯ **Demonstrate various skills of sand preparation, molding.**
- ▯ **Demonstrate various skills of forging operations.**
- ▯ **Work as a team keeping up ethical principles.**

Scheme of Examination:

One question is to be set from Part-A 30

Marks

One question is to be set from either Part-B or Part-C50 Marks

Viva – Voce 20

Total Marks100

MACHINE SHOP
B.E, III Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL38B / 48B	CIE Marks	40
Number of Hours/Week	03 (1 Hour Instruction + 2 Hours Laboratory)	SEE Marks	60
Total Hours	50	Exam Hours	03

Credits – 02

Course Objectives:

- ▯ To provide an insight to different machine tools, accessories and attachments
- ▯ To train students into machining operations to enrich their practical skills
- ▯ To inculcate team qualities and expose students to shop floor activities
- ▯ To educate students about ethical , environmental and safety standards

PART-A:

Preparation of three models on lathe involving Plain turning, Taper turning, Step turning, Thread cutting, Facing, Knurling, Drilling, Boring, Internal Thread cutting and Eccentric turning.

PART-B

Cutting of V Groove/ dovetail / Rectangular groove using a shaper
 Cutting of Gear Teeth using Milling Machine

PART C

For demonstration

Demonstration of formation of cutting parameters of single point cutting tool using bench grinder / tool & cutter grinder. Demonstration of surface milling /slot milling

Course outcomes:

- ▯ Perform turning , facing , knurling , thread cutting, tapering , eccentric turning and allied operations, keyways / slots , grooves etc using shaper
- ▯ Perform gear tooth cutting using milling machine
- ▯ Understand the formation of cutting tool parameters of single point cutting tool using bench grinder / tool and cutter grinder, Surface Milling/Slot Milling
- ▯ Demonstrate precautions and safety norms followed in Machine Shop
- ▯ Exhibit interpersonal skills towards working in a team

Scheme of Examination:

One Model from Part – A	50 Marks
One Model from Part – B	30 Marks
Viva Voce	20 Marks
Total 100 Marks	

MANAGEMENT AND ENGINEERING ECONOMICS
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME51	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- Examine the meaning, importance, nature of management, its difference between management and administration and role of managers in management.
- Examine the meaning characteristics principles and process of organizing.
- Describe effective communication process, its importance, types and purpose for running an organization.
- Explain the importance of engineering economics, Law of demand and supply in engineering decision making.
- Describe various interest rate factors and implement the same for economic decision making.
- Examine different economic analysis methods-NPW, EAW, IRR, FW for decision making.
- Discuss different component of costs and methods of cost estimation.
- Explain depreciation, different methods of computing depreciation.
- Discuss taxation concepts-income tax and corporate taxes.

Module - 1

Management: Introduction - Meaning - nature and characteristics of Management, Scope and Functional areas of management - Management as science, art of profession - Management & Administration - Roles of Management, Levels of Management, Development of Management Thought-early management approaches – Modern management approaches.

Planning: Nature, importance and purpose of planning process Objectives -Types of plans (Meaning Only) - Decision making Importance of planning -steps in planning & planning premises - Hierarchy of plans.

Module - 2

Organizing And Staffing: Nature and purpose of organization Principles of organization - Types of organization - Departmentation Committees- Centralization Vs Decentralization of authority and responsibility - Span of control - MBO and MBE (Meaning Only) Nature and importance of staffing--:Process of Selection & Recruitment (in brief).

Directing & Controlling: Meaning and nature of directing Leadership styles, Motivation Theories, Communication - Meaning and importance - coordination, meaning and importance and Techniques of Co Ordination. Meaning and steps in controlling - Essentials of a sound control system - Methods of establishing control (in brief)

Module - 3

Introduction: Engineering and economics, Problem solving and decision making, Laws of demand and supply, Difference between Microeconomics & Macroeconomics, equilibrium between demand & supply, elasticity of demand, price elasticity, income elasticity. Law of Returns, Interest and interest factors, simple and compound interest, Cash flow diagrams, personal loans and EMI payment calculation with flexible interest rates, Discussion and problems

Module - 4

Present, future and annual worth and rate of returns: Basic present worth comparisons, Present worth-equivalence, Assets with unequal lives and infinite lives, future worth comparisons, payback comparisons, Equivalent annual worth comparisons, situations for annual worth comparisons. Asset life, Rate of return, minimum acceptable rate of return, IRR anomalies and misconceptions, Cost of capital, comparisons of all present future and annual worth with IRR, product costing, Discussions and problems

Module - 5

Costing and depreciation: Components of costs, estimation of selling price, marginal cost, first cost, all kinds of overheads, indirect cost estimation with depreciation, mensuration and estimation of material cost, cost estimation of mechanical process, idling time. Product costing (approaches to product costing), causes of depreciation, methods of computing depreciation charges, straight line method, declining balance method, sum of years method, sinking fund method, service output methods, taxation concepts, personal income taxes and corporate taxes, Discussions and problems.

Course outcomes:

On completion of this subject students will be able to

1. Explain the development of management and the role it plays at different levels in an organization.
2. Comprehend the process and role of effective planning, organizing and staffing for the development of an organization.
3. Understand the necessity of good leadership, communication and coordination for establishing effective control in an organization.
4. Understand engineering economics demand supply and its importance in economics decision making and problem solving.
5. Calculate present worth, annual worth and IRR for different alternatives in economic decision making.
6. Understand the procedure involved in estimation of cost for a simple component, product costing and depreciation, its methods.

TEXT BOOKS:

1. Principles of Management by Tripathy and Reddy
2. Mechanical estimation and costing, T.R. Banga & S.C. Sharma, 17th edition 2015
3. Engineering Economy, Riggs J.L. McGraw Hill, 2002
4. Engineering Economy, Thuesen H.G. PHI, 2002

REFERENCE BOOKS

1. Management Fundamentals- Concepts, Application, Skill Development - RobersLusier - Thomson
2. Basics of Engineering Economy, Leland Blank & Anthony Tarquin, McGraw Hill Publication (India) Private Limited
3. Engineering Economics, R.Paneerselvam, PHI publication
4. Fundamentals of Management: Essential Concepts and Applications, Pearson Education, Robbins S.P. and Decenzo David A.
5. Economics: Principles of Economics, N Gregory Mankiw, Cengage Learning
6. Modern Economic Theory, By Dr. K. K. Dewett & M. H. Navalur, S. Chand Publications

DYNAMICS OF MACHINERY
B.E, VSemester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME52	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- 1. To gain the knowledge static and dynamic equilibrium conditions of mechanisms subjected forces and couple, with and without friction.**
- 2. Analyze the mechanisms for static and dynamic equilibrium.**
- 3. To understand the balancing principles of rotating and reciprocating masses, governors and gyroscopes.**
- 4. Analyze the balancing of rotating and reciprocating masses, governors and gyroscopes.**
- 5. To understand vibrations characteristics of single degree of freedom systems.**
- 6. Characterize the single degree freedom systems subjected to free and forced vibrations with and without damping.**

Module - 1

Static force Analysis: Static equilibrium. Equilibrium of two and three force members. Members with two forces and torque, Free body diagrams, Static force analysis of four bar mechanism and Slider-crank mechanism with and without friction.

Dynamic force Analysis: D'Alembert's principle, Inertia force, Inertia torque. Dynamic force analysis of four-bar mechanism and Slider crank mechanism without friction, numerical problems.

Module - 2

Balancing of Rotating Masses: Static and dynamic balancing, balancing of single rotating mass by balancing masses in same plane and in different planes. Balancing of several rotating masses by balancing masses in same plane and in different planes.

Balancing of Reciprocating Masses: Inertia effect of crank and connecting rod, Single cylinder engine, balancing in multi cylinder-inline engine (primary and secondary forces), numerical problems.

Module - 3

Governors: Types of governors, force analysis of Porter and Hartnell governors. Controlling force, Stability, Sensitiveness, Isochronism, Effort and Power.

Gyroscope: Vectorial representation of angular motion, Gyroscopic couple. Effect of gyroscopic couple on plane disc, aeroplane, ship, stability of two wheelers and four wheelers, numerical problems.

Module - 4

Introduction & Undamped free Vibrations (Single Degree of Freedom)

Types of vibrations, Definitions, Simple Harmonic Motion (SHM), Work done by harmonic force, Principle of super position applied to SHM. Methods of analysis – (Newton's, Energy & Rayleigh's methods). Derivations for spring mass systems, Natural frequencies of simple systems, Springs in series and parallel, Torsional and transverse vibrations, Effect of mass of spring and problems.

Module - 5

Damped free Vibrations (Single Degree of Freedom)

Types of damping, Analysis with viscous damping - Derivations for over, critical and under damped systems, Logarithmic decrement and numerical problems.

Forced Vibrations (Single Degree of Freedom):

Analysis of forced vibration with constant harmonic excitation, Magnification factor (M.F.), Vibration isolation - Transmissibility ratio, Excitation of support (absolute and relative), Numerical problems.

Course outcomes:

1. Determine the forces and couples for static and dynamic conditions of four bar and slider crank mechanisms to keep the system in equilibrium.
2. Determine magnitude and angular position of balancing masses under static and dynamic condition of rotating masses in same and different planes.
3. Determine unbalanced primary, secondary forces and couples in single and multi-cylinder engine.
4. Determine sensitiveness, isochronism, effort and power of porter and hartnell governors.
5. Determine gyroscopic couple and effects related to 2, 4 wheeler, plane disc, ship and aeroplanes.
6. Understand types of vibration, SHM and methods of finding natural frequencies of simple mechanical systems.
7. Determine equation of motion, natural frequency, damping factor, logarithmic decrement of damped free vibration (SDOF) systems.
8. Determine the natural frequency, force and motion transmissibility of single degree freedom systems.
9. Determine equation of motion of rotating and reciprocating unbalance systems, magnification factor, and transmissibility of forced vibration (SDOF) systems.

TEXT BOOKS:

1. Theory of Machines, Sadhu Singh, Pearson Education, 2nd Edition. 2007.
2. Mechanism and Machine Theory, A. G. Ambekar PHI, 2007
3. Mechanical Vibrations, V. P. Singh, Dhanpat Rai and Company,
4. Mechanical Vibrations, G. K. Grover, Nem Chand and Bros.

REFERENCE BOOKS

1. Theory of Machines, Rattan S.S. Tata McGraw Hill Publishing Company Ltd., New Delhi, 3rd Edition, 2009.
2. Mechanical Vibrations, S. S. Rao, Pearson Education Inc, 4th edition, 2003.

TURBO MACHINES
B.E, VSemester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME53	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- ▯ **The course aims at giving an overview of different types of turbomachinery used for energy transformation, such as pumps, fans, compressors, as well as hydraulic and steam turbines.**
- ▯ **Explain the working principles of turbomachines and apply it to various types of machines**
- ▯ **It will focus on application of turbo machinery in power generation, power absorption and transportation sectors.**

Module - 1

Introduction: Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Dimensionless parameters and their significance, Effect of Reynolds number, Unit and specific quantities, model studies.

(Note: Since dimensional analysis is covered in Fluid Mechanics subject, questions on dimensional analysis may not be given. However, dimensional parameters and model studies may be given more weightage.)

Thermodynamics of fluid flow: Application of first and second law of thermodynamics to turbo machines, Efficiencies of turbo machines, Static and Stagnation states, Incompressible fluids and perfect gases, overall isentropic efficiency, stage efficiency (their comparison) and polytropic efficiency for both compression and expansion processes. Reheat factor for expansion process

Module - 2

Energy exchange in Turbo machines: Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems.

General Analysis of Turbo machines: Radial flow compressors and pumps – general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, Theoretical head – capacity relationship, General analysis of axial flow pumps and compressors, degree of reaction, velocity triangles, Problems.

Module - 3

Steam Turbines: Classification, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor.

Reaction turbine – Parsons's turbine, condition for maximum utilization factor, reaction staging. Problems.

Module - 4

Hydraulic Turbines: Classification, various efficiencies. **Pelton turbine** – velocity triangles, design parameters, Maximum efficiency.

Francis turbine - velocity triangles, design parameters, runner shapes for different blade speeds. Draft tubes- Types and functions. **Kaplan and Propeller turbines** - velocity triangles, design parameters. Problems.

Module - 5

Centrifugal Pumps: Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the flow, Maximum suction lift, Net positive suction head, Cavitation, Need for priming, Pumps in series and parallel. Problems.

Centrifugal Compressors: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, stage efficiency and surging and problems. Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies and stalling. Problems.

Course outcomes:

- ▯ **Able to give precise definition of turbomachinery**
- ▯ **Identify various types of turbo machinery**
- ▯ **Apply the Euler's equation for turbomachinery to analyse energy transfer in turbomachines**
- ▯ **Understand the principle of operation of pumps, fans, compressors and turbines.**
- ▯ **Perform the preliminary design of turbomachines (pumps, rotary compressors and turbines)**
- ▯ **Analyze the performance of turbo machinery.**

TEXT BOOKS:

1. An Introduction to Energy Conversion, Volume III, Turbo machinery, V. Kadambi and Manohar Prasad, New Age International Publishers, reprint 2008.
2. Turbo Machines ,B.U.Pai , 1st Editions, Wiley India Pvt, Ltd.
3. Turbines, Compressors & Fans, S. M. Yahya, Tata McGraw Hill Co. Ltd., 2nd edition, 2002

REFERENCE BOOKS

1. Principals of Turbo machines, D. G. Shepherd, The Macmillan Company (1964).
2. Fluid Mechanics & Thermodynamics of Turbo machines, S. L. Dixon, Elsevier (2005).
3. Text Book of Turbo machines, M. S. Govindgouda and A. M. Nagaraj, M. M. Publications, 4Th Ed, 2008.

DESIGN OF MACHINE ELEMENTS – I
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME54	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

1. Able to understand mechanical design procedure, materials, codes and use of standards
2. Able to design machine components for static, impact and fatigue strength.
3. Able to design fasteners, shafts, joints, couplings, keys, threaded fasteners riveted joints, welded joints and power screws.

Module - 1

Fundamentals of Mechanical Engineering Design

Mechanical engineering design, Phases of design process, Design considerations, Engineering Materials and their Mechanical properties, Standards and Codes, Factor of safety, Material selection.
 Static Stresses: Static loads. Normal, Bending, Shear and Combined stresses. Theories of failure. Stress concentration and determination of stress concentration factor.

Module - 2

Design for Impact and Fatigue Loads

Impact stress due to Axial, Bending and Torsional loads.
 Fatigue failure: Endurance limit, S-N Diagram, Low cycle fatigue, High cycle fatigue, modifying factors: size effect, surface effect. Stress concentration effects, Notch sensitivity, fluctuating stresses, Goodman and Soderberg relationship, stresses due to combined loading, cumulative fatigue damage.

Module - 3

Design of Shafts, Joints, Couplings and Keys

Torsion of shafts, design for strength and rigidity with steady loading, ASME codes for power transmission shafting, shafts under combined loads. Design of Cotter and Knuckle joints, Rigid and flexible couplings, Flange coupling, Bush and Pin type coupling and Oldham's coupling. Design of keys-square, saddle, flat and father.

Module - 4

Riveted Joints and Weld Joints

Rivet types, rivet materials, failures of riveted joints, Joint Efficiency, Boiler Joints, Lozanze Joints, Riveted Brackets, eccentrically loaded joints. Types of welded joints, Strength of butt and fillet welds, welded brackets with transverse and parallel fillet welds, eccentrically loaded welded joints.

Module - 5

Threaded Fasteners and Power Screws

Stresses in threaded fasteners, Effect of initial tension, Design of threaded fasteners under static loads, Design of eccentrically loaded bolted joints. Types of power screws, efficiency and self-locking, Design of power screw, Design of screw jack: (Complete Design).

Course outcomes:

1. Describe the design process, choose materials.
2. Apply the codes and standards in design process.
3. Analyze the behavior of machine components under static, impact, fatigue loading using failure theories.
4. Design shafts, joints, couplings.
5. Design of riveted and welded joints.
6. Design of threaded fasteners and power screws

TEXT BOOKS:

1. Design of Machine Elements, V.B. Bhandari, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2nd Edition 2007.
2. Mechanical Engineering Design, Joseph E Shigley and Charles R. Mischke. McGraw Hill International edition, 6th Edition, 2009.

Design Data Handbook:

1. Design Data Hand Book, K. Lingaiah, McGraw Hill, 2nd Ed.
2. Data Hand Book, K. Mahadevan and Balaveera Reddy, CBS Publication
3. Design Data Hand Book, S C Pilli and H. G. Patil, I. K. International Publisher, 2010.

REFERENCE BOOKS

2. Engineering Design, George E. Dieter, Linda C Schmidt, McGraw Hill Education, Indian Edition, 2013.
3. Design of Machined Elements, S C Pilli and H. G. Patil, I. K. International Publisher, 2017.
4. Machine Design, Hall, Holowenko, Laughlin (Schaum's Outline series) adapted by S.K Somani, tata McGraw Hill Publishing company Ltd., New Delhi, Special Indian Edition, 2008

REFRIGERATION AND AIR-CONDITIONING
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME551	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8Hours per Module)	Exam Hours	03

Credits – 03

Course Objectives:

- 1. Study the basic definition, ASHRAE Nomenclature for refrigerating systems**
- 2. Understand the working principles and applications of different types of refrigeration systems**
- 3. Study the working of air conditioning systems and their applications**
- 4. Identify the performance parameters and their relations of an air conditioning system**

Module - 1

Introduction to Refrigeration –Basic Definitions, Heat pump and Refrigerating Machine, Best Refrigeration Cycle:The Carnot Principle, Gas as a Refrigerant in Reversed Carnot Cycle,Limitations of Reversed Carnot Cycle, Reversed Brayton or Bell Coleman Cycle, Application to Aircraft Refrigeration, Simple Numerical problems.

Industrial Refrigeration-Chemical and process industries, Dairy plants, Petroleum refineries, Food processing units.

Module - 2

Vapor Compression Refrigeration System(VCRS): Modifications in Reversed Carnot Cycle with Vapor as a refrigerant, Vapor Compression Cycle, Ewing’s Construction, Actual Vapor Compression Cycle, Effect of Operating Conditions. Simple Numerical problems.

Multistage or Compound Compression, Multi-evaporator systems, Cascade Systems, – Methods like Flash Gas removal, Flash inter cooling and water Inter cooling.

Module - 3

Vapor Absorption Refrigeration Systems: Simple Vapor – Absorption System, Maximum Coefficient of Performance of a Heat Operated Refrigerating Machine, Absorbent – Refrigerant combinations, Water-Ammonia Systems,Practical problems, Lithium- Bromide System, Modifications to Simple Vapor-Absorption, Electrolux Refrigerator.

Other types of Refrigeration systems: (i) Steam-Jet refrigeration system and (ii) Thermoelectric refrigeration,(iii) pulse tube refrigeration, (iv)thermo acoustic refrigeration systems

Module - 4

Refrigerants:Primary and Secondary refrigerants, Designation of Refrigerants, Desirable properties of refrigerants, Selection of a Refrigerant, Ozone Depletion Potential and Global Warming Potential of CFC Refrigerants. Thermodynamic requirements, Comparison between different refrigerants, Substitutes for CFC refrigerants, Secondary Refrigerants.

Refrigeration systems Equipment: Compressors, Condensers, Expansion Devices and Evaporators, A brief look at other components of the system.

Module - 5

Air-Conditioning: Basic Processes in Conditioning of Air, Psychrometric Processes in Air-Conditioning Equipment, Simple Air-Conditioning /system and State and Mass Rate of Supply Air, Summer Air Conditioning, Winter Air Conditioning.

Loading Calculation and Applied Psychometrics : Preliminary Considerations, Internal Heat Gains, System Heat Gains, Break-up of Ventilation Load and Effective Sensible Heat Factor, Cooling Load Estimate. Psychrometric Calculations for Cooling, Selection of Air-Conditioning Apparatus for Cooling and Dehumidification, Building Requirements and Energy Conservation in Air Conditioned Buildings.

Transport air conditioning Systems: Air conditioning systems for automobiles (cars, buses etc.), Air conditioning systems for trains, Air conditioning systems for ships.

Course outcomes:

1. Illustrate the principles, nomenclature and applications of refrigeration systems.
2. Explain vapor compression refrigeration system and identify methods for performance improvement
3. Study the working principles of air, vapor absorption, thermoelectric and steam-jet and thermo-acoustic refrigeration systems
4. Estimate the performance of air-conditioning systems using the principles of psychrometry.
5. Compute and Interpret cooling and heating loads in an air-conditioning system
6. Identify suitable refrigerant for various refrigerating systems

NON TRADITIONAL MACHINING
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME554	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40 (8Hours per Module)	Exam Hours	03

Credits – 03

Module - 1

INTRODUCTION

Introduction to Non-traditional machining, Need for Non-traditional machining process, Comparison between traditional and non-traditional machining, general classification Non-traditional machining processes, classification based on nature of energy employed in machining, selection of non-traditional machining processes, Specific advantages, limitations and applications of non-traditional machining processes.

Module - 2

Ultrasonic Machining (USM): Introduction, Equipment and material process, Effect of process parameters: Effect of amplitude and frequency, Effect of abrasive grain diameter, effect of slurry, tool & work material. Process characteristics: Material removal rate, tool wear, accuracy, surface finish, applications, advantages & limitations of USM.

Abrasive Jet Machining (AJM): Introduction, Equipment and process of material removal, process variables: carrier gas, type of abrasive, work material, stand-off distance (SOD). Process characteristics- Material removal rate, Nozzle wear, accuracy & surface finish. Applications, advantages & limitations of AJM.

Water Jet Machining (WJM): Equipment & process, Operation, applications, advantages and limitations of WJM.

Module - 3

ELECTROCHEMICAL MACHINING (ECM)

Introduction, Principle of electro chemical machining: ECM equipment, elements of ECM operation, Chemistry of ECM. ECM Process characteristics: Material removal rate, accuracy, surface finish.

Process parameters: Current density, Tool feed rate, Gap between tool & work piece, velocity of electrolyte flow, type of electrolyte, its concentration temperature, and choice of electrolytes. ECM Tooling: ECM tooling technique & example, Tool & insulation materials.

Applications ECM: Electrochemical grinding and electrochemical honing process. Advantages, disadvantages and application of ECG, ECH.

CHEMICAL MACHINING (CHM)

Elements of the process: Resists (maskants), Etchants. Types of chemical machining process-chemical blanking process, chemical milling process. Process characteristics of CHM: material removal rate, accuracy, surface finish, advantages, limitations and applications of chemical machining process.

Module - 4

ELECTRICAL DISCHARGE MACHINING (EDM)

Introduction, mechanism of metal removal, EDM equipment: spark erosion generator (relaxation type), dielectric medium-its functions & desirable properties, electrode feed control system. Flushing types; pressure flushing, suction flushing, side flushing, pulsed flushing. EDM process parameters: Spark frequency, current & spark gap, surface finish, Heat Affected Zone. Advantages, limitations & applications of EDM, Electrical discharge grinding, Traveling wire EDM.

PLASMA ARC MACHINING (PAM)

Introduction, non-thermal generation of plasma, equipment mechanism of metal removal, Plasma torch, process parameters, process characteristics. Safety precautions. Safety precautions, applications, advantages and limitations.

Module - 5

LASER BEAM MACHINING (LBM)

Introduction, generation of LASER, Equipment and mechanism of metal removal, LBM parameters and characteristics, Applications, Advantages & limitations.

ELECTRON BEAM MACHINING (EBM)

Introduction, Principle, equipment and mechanism of metal removal, applications, advantages and limitations.

Course outcomes:

- 1. Understand the compare traditional and non-traditional machining process and recognize the need for Non-traditional machining process.**
- 2. Understand the constructional features, performance parameters, process characteristics, applications, advantages and limitations of USM, AJM and WJM.**
- 3. Identify the need of Chemical and electro-chemical machining process along with the constructional features, process parameters, process characteristics, applications, advantages and limitations.**
- 4. Understand the constructional feature of the equipment, process parameters, process characteristics, applications, advantages and limitations EDM & PAM.**
- 5. Understand the LBM equipment, LBM parameters, and characteristics. EBM equipment and mechanism of metal removal, applications, advantages and limitations LBM & EBM.**

TEXT BOOKS:

1. Modern Machining Process by P.C Pandey and H S Shah, McGraw Hill Education India Pvt. Ltd. 2000
2. Production technology, HMT, McGraw Hill Education India Pvt. Ltd. 2001

REFERENCE BOOKS

1. New Technology, Dr. Amitabha Bhattacharyya, The Institute of Engineers (India), 2000
2. Modern Machining process, Aditya, 2002.

ENERGY AND ENVIRONMENT
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME562	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40 (8Hours per Module)	Exam Hours	03

Credits – 03

Course Objective:

1. **Understand energy scenario, energy sources and their utilization**
2. **Learn about methods of energy storage, energy management and economic analysis**
3. **Have proper awareness about environment and eco system.**
4. **Understand the environment pollution along with social issues and acts.**

Module - 1

Basic Introduction to Energy: Energy and power, forms of energy, primary energy sources, energy flows, world energy production and consumption, Key energy trends in India: Demand, Electricity, Access to modern energy, Energy production and trade, Factors affecting India's energy development: Economy and demographics Policy and institutional framework, Energy prices and affordability, Social and environmental aspects, Investment..

Module - 2

Energy storage systems: Thermal energy storage methods, Energy saving, Thermal energy storage systems
Energy Management: Principles of Energy Management, Energy demand estimation, Energy pricing
Energy Audit: Purpose, Methodology with respect to process Industries, Characteristic method employed in Certain Energy Intensive Industries
Economic Analysis: Scope, Characterization of an Investment Project

Module - 3

Environment: Introduction, Multidisciplinary nature of environmental studies- Definition, scope and importance, Need for public awareness.
Ecosystem: Concept, Energy flow, Structure and function of an ecosystem. Food chains, food webs and ecological pyramids, Forest ecosystem, Grassland ecosystem, Desert ecosystem and Aquatic ecosystems, Ecological succession.

Module - 4

Environmental Pollution: Definition, Cause, effects and control measures of - Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution and Nuclear hazards , Solid waste Management, Disaster management Role of an individual in prevention of pollution, Pollution case studies.

Module - 5

Social Issues and the Environment: Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case Studies. Wasteland reclamation, Consumerism and waste products, Environment Protection Act, Air (Prevention and Control of Pollution) Act,

Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation.

Course outcomes:

1. Summarize the basic concepts of energy, its distribution and general Scenario.
2. Explain different energy storage systems, energy management, audit and economic analysis.
3. Summarize the environment eco system and its need for awareness.
4. Identify the various types of environment pollution and their effects.
5. Discuss the social issues of the environment with associated acts.

TEXT BOOKS:

1. Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education by University grant commission and Bharathi Vidyapeeth Institute of environment education and Research ,Pune
2. De, B. K., Energy Management audit & Conservation, 2nd Edition, Vrinda Publication, 2010.

5. Environmental studies, by Benny Joseph, Tata McGraw Hill, 2008, 2nd edition.

FLUID MECHANICS & MACHINERY LAB
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL57	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction+ 2 Hours Laboratory)	SEE Marks	60
RBT Levels	L1, L2, L3	Exam Hours	03

Credits – 02

Course Objectives:

1. This course will provide a basic understanding of flow measurements using various types of flow measuring devices, calibration and losses associated with these devices.
2. Energy conversion principles, analysis and understanding of hydraulic turbines and pumps will be discussed. Application of these concepts for these machines will be demonstrated. Performance analysis will be carried out using characteristic curves.

PART A

1. Lab layout, calibration of instruments and standards to be discussed
2. Determination of coefficient of friction of flow in a pipe.
3. Determination of minor losses in flow through pipes.
4. Application of momentum equation for determination of coefficient of impact of jets on flat and curved blades
5. Calibration of flow measuring devices.
6. Orifice meter
 - o Nozzle
 - o Venturimeter
 - o V-notch

PART B

1. Performance on hydraulic Turbines
 - a. Pelton wheel
 - b. Francis Turbine
 - c. Kaplan Turbines

2. Performance hydraulic Pumps
 - a. Single stage and Multi stage centrifugal pumps
 - b. Reciprocating pump
3. Performance test on a two stage Reciprocating Air Compressor
4. Performance test on an Air Blower

PART C(Optional)

1. Visit to Hydraulic Power station/ Municipal Water Pump House and Case Studies
2. Demonstration of cut section models of Hydraulic turbines and Pumps.

Course outcomes:

- ☐ **Perform experiments to determine the coefficient of discharge of flow measuring devices.**
- ☐ **Conduct experiments on hydraulic turbines and pumps to draw characteristics.**
- ☐ **Test basic performance parameters of hydraulic turbines and pumps and execute the knowledge in real life situations.**
- ☐ **Determine the energy flow pattern through the hydraulic turbines and pumps**
- ☐ **Exhibit his competency towards preventive maintenance of hydraulic machines**
- ☐

Reading:

1. K.L.Kumar.“Engineering Fluid Mechanics” Experiments, Eurasia Publishing House, 1997
2. JagdishLal, Hydraulic Machines, Metropolitan Book Co, Delhi, 1995
3. [George E. Totten](#) , [Victor J. De Negri](#) “Handbook of Hydraulic Fluid Technology, Second Edition, 2011.

Scheme of Examination:

ONE question from part -A: 50 Marks
 ONE question from part -B: 30 Marks
 Viva –Voice : 20 Marks
 Total: 100 Marks

ENERGY LAB
B.E, V Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL58	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction+ 2 Hours Laboratory)	SEE Marks	60
Total hours	50	Exam Hours	03

Credits – 02

Course Objectives:

- 1. This course will provide a basic understanding of fuel properties and its measurements using various types of measuring devices**
- 2. Energy conversion principles, analysis and understanding of I C Engines will be discussed. Application of these concepts for these machines will be demonstrated. Performance analysis will be carried out using characteristic curves.**
- 3. Exhaust emissions of I C Engines will be measured and compared with the standards.**

PART A

1. Lab layout, calibration of instruments and standards to be discussed
2. Determination of Flash point and Fire point of lubricating oil using Abel Pensky and Marten's (closed) / Cleveland's (Open Cup) Apparatus.
3. Determination of Calorific value of solid, liquid and gaseous fuels.
4. Determination of Viscosity of a lubricating oil using Redwoods, Saybolt and Torsion Viscometers.
5. Analysis of moisture, volatile matter, ash content and fixed carbon of solid and liquid fuel samples
6. Valve Timing/port opening diagram of an I.C. Engine.

PART B

1. Performance Tests on I.C. Engines, Calculations of IP, BP, Thermal efficiency, Volumetric efficiency, Mechanical efficiency, SFC, FP, A:F Ratio, heat balance sheet for
 - a. Four stroke Diesel Engine
 - b. Four stroke Petrol Engine
 - c. Multi Cylinder Diesel/Petrol Engine, (Morse test)
 - d. Two stroke Petrol Engine
 - e. Variable Compression Ratio I.C. Engine.
2. Measurements of Exhaust Emissions of Petrol engine.
3. Measurements of Exhaust Emissions of Diesel engine.

4. Demonstration of p , pV plots using Computerized IC engine test rig

PART C(Optional)

1. Visit to Automobile Industry/service stations.
2. CFD Analysis of design, development, performance evaluation and process optimization in I C Engines.

Course outcomes:

- ☐ **Perform experiments to determine the properties of fuels and oils.**
- ☐ **Conduct experiments on engines and draw characteristics.**
- ☐ **Test basic performance parameters of I.C. Engine and implement the knowledge in industry.**
- ☐ **Identify exhaust emission, factors affecting them and report the remedies.**
- ☐ **Determine the energy flow pattern through the I C Engine**
- ☐ **Exhibit his competency towards preventive maintenance of IC engines.**

6. C. F. Taylor The internal combustion engines in theory and practice, 2 vols. by:, pub.: Wily.
7. Ganesan, V., Fundamentals of IC Engines, Tata McGraw Hill, 2003
8. Bosch, Automotive hand book, 9th edition.

Scheme of Examination:

ONE question from part -A: 50 Marks
ONE question from part -B: 30 Marks
Viva –Voice : 20 Marks
Total: 100 Marks

FINITE ELEMENT ANALYSIS
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME61	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- **To learn basic principles of finite element analysis procedure.**
- **To learn the theory and characteristics of finite elements that represent engineering structures.**
- **To learn and apply finite element solutions to structural, thermal, dynamic problem to develop the knowledge and skills needed to effectively evaluate finite element analyses.**

Module - 1

Introduction to Finite Element Method: General description of the finite element method. Engineering applications of finite element method. Boundary conditions: homogeneous and nonhomogeneous for structural, heat transfer and fluid flow problems. Potential energy method, Rayleigh Ritz method, Galerkin's method, Displacement method of finite element formulation. Convergence criteria, Discretization process, Types of elements: 1D, 2D and 3D, Node numbering, Location of nodes. Strain displacement relations, Stress strain relations, Plain stress and Plain strain conditions, temperature effects.

Interpolation models: Simplex, complex and multiplex elements, Linear interpolation polynomials in terms of global coordinates 1D, 2D, 3D Simplex Elements.

Module - 2

One-Dimensional Elements-Analysis of Bars and Trusses, Linear interpolation polynomials in terms of local coordinate's for 1D, 2D elements. Higher order interpolation functions for 1D quadratic and cubic elements in natural coordinates, Constant strain triangle, Four-Nodded Tetrahedral Element (TET 4), Eight-Nodded Hexahedral Element (HEXA8), 2D iso-parametric element, Lagrange interpolation functions, Numerical integration: Gaussian quadrature one point, two point formulae, 2D integrals. Fore terms: Body force, traction force and point loads,
Numerical Problems: Solution for displacement, stress and strain in 1D straight bars, stepped bars and tapered bars using elimination approach and penalty approach, Analysis of trusses

Module - 3

Beams and Shafts: Boundary conditions, Load vector, Hermite shape functions, Beam stiffness matrix based on Euler-Bernoulli beam theory, Examples on cantilever beams, propped cantilever beams, Numerical problems on simply supported, fixed straight and stepped beams using direct stiffness method with concentrated and uniformly distributed load.
Torsion of Shafts: Finite element formulation of shafts, determination of stress and twists in circular shafts.

Module - 4

Heat Transfer: Basic equations of heat transfer: Energy balance equation, Rate equation: conduction, convection, radiation, energy generated in solid, energy stored in solid, 1D finite element formulation using vibrational method, Problems with temperature gradient and heat fluxes, heat transfer in composite sections, straight fins.

Module - 5

Axi-symmetric Solid Elements: Derivation of stiffness matrix of axisymmetric bodies with triangular elements, Numerical solution of axisymmetric triangular element(s) subjected to surface forces, point loads, angular velocity, pressure vessels.
Dynamic Considerations: Formulation for point mass and distributed masses, Consistent element mass matrix of one dimensional bar element, truss element, axisymmetric triangular element, quadrilateral element, beam element. Lumped mass matrix of bar element, truss element, Evaluation of eigen values and eigen vectors, Applications to bars, stepped bars, and beams.

Course outcomes:

- 1. Understand the concepts behind formulation methods in FEM.**
- 2. Identify the application and characteristics of FEA elements such as bars, beams, plane and iso-parametric elements.**
- 3. Develop element characteristic equation and generation of global equation.**
- 4. Able to apply suitable boundary conditions to a global equation for bars, trusses, beams, circular shafts, heat transfer, fluid flow, axisymmetric and dynamic problems and solve them displacements, stress and strains induced.**

Computer Integrated Manufacturing
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME62	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- ▯ **To impart knowledge of CIM and Automation and different concepts of automation by developing mathematical models.**
- ▯ **To make students to understand the Computer Applications in Design and Manufacturing [CAD / CAM) leading to Computer integrated systems. Enable them to perform various transformations of entities on display devices.**
- ▯ **To expose students to automated flow lines, assembly lines, Line Balancing Techniques, and Flexible Manufacturing Systems.**
- ▯ **To expose students to computer aided process planning, material requirement planning, capacity planning etc.**
- ▯ **To expose the students to CNC Machine Tools, CNC part programming, and industrial robots.**
- ▯ **To introduce the students to concepts of Additive Manufacturing, Internet of Things, and Industry 4.0 leading to Smart Factory.**

Module - 1

Introduction to CIM and Automation:

Automation in Production Systems, automated manufacturing systems- types of automation, reasons for automating, Computer Integrated Manufacturing, computerized elements of a CIM system, CAD/CAM and CIM.

Mathematical models and matrices: production rate, production capacity, utilization and availability, manufacturing lead time, work-in-process, numerical problems.

Automated Production Lines and Assembly Systems: Fundamentals, system configurations, applications, automated flow lines, buffer storage, control of production line, analysis of transfer lines, analysis of flow lines without storage, partial automation, analysis of automated flow lines with storage buffer, fundamentals of automated assembly systems, numerical problems.

Module - 2

CAD and Computer Graphics Software: The design process, applications of computers in design, software configuration, functions of graphics package, constructing the geometry.

Transformations: 2D transformations, translation, rotation and scaling, homogeneous transformation matrix, concatenation, numerical problems on transformations.

Computerized Manufacture Planning and Control System: Computer Aided Process Planning, Retrieval and Generative Systems, benefits of CAPP, Production Planning and Control Systems, typical activities of PPC System, computer integrated production management system, Material Requirement Planning, inputs to MRP system, working of MRP, outputs and benefits, Capacity Planning, Computer Aided Quality Control, Shop floor control.

Module - 3

Flexible Manufacturing Systems: Fundamentals of Group Technology and Flexible Manufacturing Systems, types of FMS, FMS components, Material handling and storage system, applications, benefits, computer control systems, FMS planning and design issues, Automated Storage and Retrieval Systems, AS/RS and Automatic parts identification systems and data capture.

Line Balancing: Line balancing algorithms, methods of line balancing, numerical problems on largest candidate rule, Kilbridge and Wester method, and Ranked Positional Weights method.

Module - 4

Computer Numerical Control: Introduction, components of CNC, CNC programming, manual part programming, G Codes, M Codes, programming of simple components in turning, drilling and milling systems, programming with canned cycles. Cutter radius compensations.

Robot Technology: Robot anatomy, joints and links, common robot configurations, robot control systems, accuracy and repeatability, end effectors, sensors in robotics.

Robot programming methods: on-line and off-line methods.

Robot industrial applications: Material handling, processing and assembly and inspection.

Module - 5

Additive Manufacturing Systems: Basic principles of additive manufacturing, slicing CAD models for AM, advantages and limitations of AM technologies, Additive manufacturing processes: Photo polymerization, material jetting, binder jetting, material extrusion, Powder bed sintering techniques, sheet lamination, direct energy deposition techniques, applications of AM. Recent trends in manufacturing, Hybrid manufacturing.

Future of Automated Factory: Industry 4.0, functions, applications and benefits. Components of Industry 4.0, Internet of Things (IOT), IOT applications in manufacturing, Big-Data and Cloud Computing for IOT, IOT for smart manufacturing, influence of IOT on predictive maintenance, industrial automation, supply chain optimization, supply-chain & logistics, cyber-physical manufacturing systems.

Course outcomes:

- ☐ Able to define Automation, CIM, CAD, CAM and explain the differences between these concepts.
- ☐ Solve simple problems of transformations of entities on computer screen.
- ☐ Explain the basics of automated manufacturing industries through mathematical models and analyze different types of automated flow lines.
- ☐ Analyze the automated flow lines to reduce down time and enhance productivity.
- ☐ Explain the use of different computer applications in manufacturing, and able to prepare part programs for simple jobs on CNC machine tools and robot programming.
- ☐ Visualize and appreciate the modern trends in Manufacturing like additive manufacturing, Industry 4.0 and applications of Internet of Things leading to Smart Manufacturing.

Heat Transfer
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME63	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- ▢ Study the modes of heat transfer.
- ▢ Learn how to formulate and solve 1-D steady and unsteady heat conduction problems.
- ▢ Apply empirical correlations for fully-developed laminar, turbulent internal flows and external boundary layer convective flow problems.
- ▢ Study the basic principles of heat exchanger analysis and thermal design.
- ▢ Understand the principles of boiling and condensation including radiation heat transfer related engineering problems.

Module - 1

Introductory concepts and definitions: Modes of heat transfer: Basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity; convective heat transfer coefficient; radiation heat transfer combined heat transfer mechanism, Types of boundary conditions. General Heat Conduction Equation: Derivation of the equation in (i) Cartesian, (ii) Polar and (iii) Spherical Co-ordinate Systems.
 Steady-state one-dimensional heat conduction problems in Cartesian System: Steady-state one-dimensional heat conduction problems (i) with and without heat generation and (ii) with and without varying thermal conductivity - in Cartesian system with various possible boundary conditions, Thermal Resistances in Series and in Parallel.

Module - 2

Critical Thickness of Insulation: Concept, Derivation, Extended Surfaces or Fins: Classification, Straight Rectangular and Circular Fins, Temperature Distribution and Heat Transfer Calculations, Fin Efficiency and Effectiveness, Applications
 Transient [Unsteady-state] heat conduction: Definition, Different cases - Negligible internal thermal resistance, negligible surface resistance, comparable internal thermal and surface resistance, Lumped body, Numerical Problems, Heisler and Grober charts.
 Introduction to Numerical analysis of Heat conduction

Module - 3

Forced Convection: Boundary Layer Theory, Velocity and Thermal Boundary Layers, Prandtl number, Governing Equations – Continuity, Navier-Stokes and Energy equations, Boundary layer assumptions, Integral and Analytical solutions to above equations, Turbulent flow, Various empirical solutions, forced convection flow over cylinders and spheres, Internal flows –laminar and turbulent flow solutions, Forced Convection Cooling of Electronic Devices.
 Free convection: Laminar and Turbulent flows, Vertical Plates, Vertical Tubes and Horizontal Tubes, Empirical solutions.

Module - 4

Thermal Radiation: Fundamental principles - Gray, White, Opaque, Transparent and Black bodies, Spectral emissive power, Wien's, Rayleigh-Jeans' and Planck's laws, Hemispherical Emissive Power, Stefan-Boltzmann law for the total emissive power of a black body, Emissivity and Kirchoff's Laws, View factor, Net radiation exchange in a two-body enclosure, Typical examples for these enclosures, Radiation Shield.

Module - 5

Heat Exchangers: Definition, Classification, applications, LMTD method, Effectiveness - NTU method, Analytical Methods, Fouling Factors, Chart Solution Procedures for solving Heat Exchanger problems: Correction Factor Charts and Effectiveness-NTU Charts, compact heat exchangers. Heat Transfer with Phase Change: Introduction to boiling, pool boiling, Bubble Growth Mechanisms, Nucleate Pool Boiling, Critical Heat Flux in Nucleate Pool Boiling, Pool Film Boiling, Critical Heat Flux, Heat Transfer beyond the Critical Point, filmwise and dropwise Condensation, heat pipes, entrainment, wicking and boiling limitations.

Course outcomes:

- ☐ **Understand the basic modes of heat transfer.**
- ☐ **Compute temperature distribution in steady-state and unsteady-state heat conduction**
- ☐ **Understand and interpret heat transfer through extended surfaces.**
- ☐ **Interpret and compute forced and free convective heat transfer.**
- ☐ **Explain the principles of radiation heat transfer and understand the numerical formula for heat conduction problems.**
- ☐ **Design heat exchangers using LMTD and NTU methods.**

DESIGN OF MACHINE ELEMENTS II
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME64	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- ▢ To understand various elements involved in a mechanical system.
- ▢ To analyze various forces acting on the elements of a mechanical system and design them using appropriate techniques, codes, and standards.
- ▢ To select transmission elements like gears, belts, pulleys, bearings from the manufacturers' catalogue.
- ▢ To design completely a mechanical system integrating machine elements.
- ▢ To produce assembly and working drawings of various mechanical systems involving machine elements like belts, pulleys, gears, springs, bearings, clutches and brakes.

Module - 1

Curved Beams:Stresses in curved beams of standard cross sections used in crane hook, punching presses & clamps, closed rings and links.
Cylinders & Cylinder Heads: Review of Lamé's equations; compound cylinders, stresses due to different types of fit on cylinders; cylinder heads and flats.

Module - 2

Belts: Materials of construction of flat and V belts, power rating of belts, concept of slip and creep, initial tension, effect of centrifugal tension, maximum power condition.

Selection of flat and V belts-length & cross section from manufacturers' catalogues.

Construction and application of timing belts.

Wire ropes:Construction of wire ropes, stresses in wire ropes, and selection of wire ropes.

(Only theoretical treatment)

Chain drive:Types of power transmission chains, modes of failure for chain, and lubrication of chains (Only theoretical treatment)

Springs:Types of springs, spring materials, stresses in helical coil springs of circular and non-circular cross sections. Tension and compression springs, concentric springs; springs under fluctuating loads.

Leaf Springs: Stresses in leaf springs, equalized stresses, and nipping of leaf springs.

Introduction to torsion and Belleville springs.

Module - 3

Gear drives: Classification of gears, materials for gears, standard systems of gear tooth, gear tooth failure modes and lubrication of gears.

Spur Gears: Definitions, stresses in gear tooth: Lewis equation and form factor, design for strength, dynamic load and wear.

Helical Gears: Definitions, transverse and normal module, formative number of teeth, design based on strength, dynamic load and wear.

Bevel Gears: Definitions, formative number of teeth, design based on strength, dynamic load and wear.

Module - 4

Worm Gears: Definitions, types of worm and worm gears, and materials for worm and worm wheel. Design based on strength, dynamic, wear loads and efficiency of worm gear drives.

Design of Clutches: Types of clutches and their applications, single plate and multi-plate clutches.

(Numerical examples only on single and multi-plate clutches)

Design of Brakes: Types of Brakes, Block and Band brakes, self-locking of brakes, and heat generation in brakes.

Module - 5

Lubrication and Bearings: Lubricants and their properties, bearing materials and properties; mechanisms of lubrication, hydrodynamic lubrication, pressure development in oil film, bearing modulus, coefficient of friction, minimum oil film thickness, heat generated, and heat dissipated. Numerical examples on hydrodynamic journal and thrust bearing design.

Anti-friction bearings: Types of rolling contact bearings and their applications, static and dynamic load carrying capacities, equivalent bearing load, load life relationship; selection of deep groove ball bearings from the manufacturers' catalogue; selection of bearings subjected to cyclic loads and speeds; probability of survival.

Course outcomes:

- Apply engineering design tools to product design.
- Design mechanical systems involving springs, belts and pulleys.
- Design different types of gears and simple gear boxes for different applications.
- Design brakes and clutches.
- Design hydrodynamic bearings for different applications.
- Select Anti friction bearings for different applications using the manufacturers, catalogue.
- Develop proficiency to generate production drawings using CAD software.
- Become good design engineers through learning the art of working in a team with morality and ethics.

METAL FORMING
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME653	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8 Hours per Module)	Exam Hours	03

Credits – 03

Course Objectives:

- ▯ **To acquaint with the basic knowledge on fundamentals of metal forming processes**
- ▯ **To study various metal forming processes**
- ▯ **Understanding plastic deformation during forming processes**

Module - 1

Introduction to Metal Forming: Classification of metal forming processes, advantages and limitations, stress-strain relations in elastic and plastic deformation. Concepts of true stress, true strain, triaxial & biaxial stresses. Determination of flow stress, principal stresses, yield criteria and their significance, Tresca & Von-Mises yield criteria, concepts of plane stress & plane strain. Deformation mechanisms, Hot and Cold working processes and its effect on mechanical properties.

Module - 2

Effects of Parameters: Metallurgical aspects of metal forming, slip, twinning mechanics of plastic deformation, Effects of Temperature, strain rate, friction and lubrication, hydrostatic pressure in metal working, Deformation zone geometry, workability of materials, Residual stresses in wrought products.

Forging: Classification of forging processes. Forging machines equipment. Expressions for forging pressures & load in open die forging and closed die forging by slab analysis, concepts of friction hill and factors affecting it. Die-design parameters. Material flow lines in forging, forging defects, residual stresses in forging. Simple problems.

Module - 3

Rolling: Classification of rolling processes. Types of rolling mills, expression for rolling load. Roll separating force. Frictional losses in bearing, power required in rolling, effects of front & back tensions, friction, friction hill. Maximum possible reduction. Defects in rolled products. Rolling variables. Simple problems.

Drawing: Drawing equipment & dies, expression for drawing load by slab analysis, power requirement. Redundant work and its estimation, optimal cone angle & dead zone formation, drawing variables, Tube drawing, classification of tube drawing. Simple problems.

Module - 4

Extrusion: Types of extrusion processes, extrusion equipment & dies, deformation, lubrication & defects in extrusion. Extrusion dies, extrusion of seamless tubes. Extrusion variables. Simple problems.

Sheet Metal Forming: Forming methods, dies & punches, progressive die, compound die, combination die. Rubber forming. Open back inclinable press (OBI press), piercing, blanking, bending, deep drawing, LDR in drawing, forming limit criterion, defects of drawn products, stretch forming. Roll bending & contouring. Simple problems

Module - 5

High Energy Rate Forming Methods & Powder Metallurgy: High Energy Rate Forming Methods: Principles, advantages and applications, explosive forming, electro hydraulic forming, Electromagnetic forming.

Powder Metallurgy: Basic steps in Powder metallurgy brief description of methods of production of metal powders, conditioning and blending powders, compaction and sintering application of powder metallurgy components, advantages and limitations.

Course outcomes:

- ▯ **Able to understand the concept of different metal forming process.**
- ▯ **Able to approach metal forming processes both analytically and numerically**
- ▯ **Able to design metal forming processes**
- ▯ **Able to develop approaches and solutions to analyze metal forming processes and the associated problems and flaws.**

AUTOMOBILE ENGINEERING
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME655	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8Hours per Module)	Exam Hours	03

Credits – 03

Course Objectives:

- ▯ The layout and arrangement of principal parts of an automobile
- ▯ The working of transmission and brake systems
- ▯ The operation and working of steering and suspension systems
- ▯ To know the Injection system and its advancements
- ▯ To know the automobile emissions and its effects on environment

Module - 1

ENGINE COMPONENTS AND IT'S PRINCIPLE PARTS: Spark Ignition (SI) & Compression Ignition (CI) engines, cylinder – arrangements and their relatives merits, Liners, Piston, connecting rod, crankshaft, valves, valve actuating mechanisms, valve and port timing diagrams, Types of combustion chambers for S.I.Engine and C.I.Engines, methods of a Swirl generation, choice of materials for different engine components, engine positioning. Concept of HCCI engines, hybrid engines, twin spark engine, electric car.

COOLING AND LUBRICATION: cooling requirements, types of cooling- thermo siphon system, forced circulation water cooling system, water pump, Radiator, thermostat valves. Significance of lubrication, splash and forced feed system.

Module - 2

TRANSMISSION SYSTEMS: Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.

BRAKES: Types of brakes, mechanical compressed air, vacuum and hydraulic braking systems, construction and working of master and wheel cylinder, brake shoe arrangements, Disk brakes, drum brakes, Antilock –Braking systems, purpose and operation of antilock-braking system, ABS Hydraulic Unit, Rear-wheel antilock & Numerical

Module - 3

STEERING AND SUSPENSION SYSTEMS: Steering geometry and types of steering gear box-Power Steering, Types of Front Axle, Suspension, Torsion bar suspension systems, leaf spring, coil spring, independent suspension for front wheel and rear wheel, Air suspension system.

IGNITION SYSTEM: Battery Ignition system, Magneto Ignition system, electronic Ignition system.

Module - 4

SUPERCHARGERS AND TURBOCHARGERS: Naturally aspirated engines, Forced Induction, Types of superchargers, Turbocharger construction and operation, Intercooler, Turbocharger lag.

FUELS, FUEL SUPPLY SYSTEMS FOR SI AND CI ENGINES: Conventional fuels, alternative fuels, normal and abnormal combustion, cetane and octane numbers, Fuel mixture requirements for SI engines, types of carburetors, C.D.& C.C. carburetors, multi point and single point fuel injection systems, fuel transfer pumps, Fuel filters, fuel injection pumps and injectors. Electronic Injection system, Common Rail Direct Injection System.

Module - 5

AUTOMOTIVE EMISSION CONTROL SYSTEMS: Different air pollutants, formation of photochemical smog and causes. Automotive emission controls, controlling crankcase emissions, controlling evaporative emissions, Cleaning the exhaust gas, Controlling the air-fuel mixture, Controlling the combustion process, Exhaust gas recirculation, Treating the exhaust gas, Air-injection system, Air-aspirator system, Catalytic converter.

EMISSION STANDARDS: Euro I, II, III and IV norms, Bharat Stage II, III, IV norms. Motor Vehicle Act

Course outcomes:

- ☐ To identify the different parts of an automobile and its working
- ☐ To understand the working of transmission and braking systems
- ☐ To comprehend the working of steering and suspension systems
- ☐ To learn various types of fuels and injection systems
- ☐ To know the cause of automobile emissions, its effects on environment and methods to reduce the emissions.

4. Automobile Engineering, R. B. Gupta, SatyaPrakashan,(4th Edition) 1984.

Maintenance Engineering
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME663	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8 Hours per Module)	Exam Hours	03

Credits – 03

Course objectives:

The course is intended to provide basic concepts of maintenance engineering to engineering students with following aspects:

- To acquire basic understanding of Maintenance systems
- To develop an understanding of the principles of Preventive Maintenance & Predictive Maintenance
- Provides a methodology for reliability & probability concepts applied to maintenance engineering
- The students will concept and procedures for Condition Monitoring in Mechanical and Electrical systems along with the analysis and processing techniques for machine fault identification

Module – 1

Maintenance systems: Maintenance objectives and scopes; Maintenance strategies & organizations; Maintenance works; life cycle costs Preventive Maintenance: Principles of preventive maintenance, procedures & selection; Preventive Maintenance planning, scheduling and control; Forms & resources; Maintenance work measurement; Modeling and analysis techniques in PM and inspections; Predictive maintenance.

Computerized Maintenance Management systems: Benefits and applications; Work order systems & plant registers; Maintenance reports, analysis and monitoring; Introduction to commercial packages Equipment maintenance: Installation, commissioning and testing of plant equipment, checking for alignment, lubrication and lubrication schedule; maintenance of typical rotating and process equipment systems like turbines, pumps and fans, centrifuges, heat exchangers, boilers and pressure vessels etc.

Module – 2

Reliability & probability Concepts: Basic concepts of probability theory and distributions, definition of reliability, failure probability, reliability and hazard rate function, MTBF and MTTR, System reliability, series and parallel system, redundancy.

Module – 3

Reliability Centered Maintenance: principles of RCM, Benefits of RCM, application of RCM Step-by-step procedure in conducting RCM analysis. The Plant Register. Functions and Failures. Failure mode and effect analysis (FMEA). Failure consequences. Maintenance and decision making. Actuarial analysis and Failure data. Perspective loops. Default action. The RCM Decision diagram. The nature of Failure and Technical history.

Module – 4

Total Productive Maintenance: Goals of TPM and methodology, TPM improvement plan & procedures. The modern role of care and asset management through TPM, the use of TPM concepts consisting of Pareto ABC analysis, Fishbone diagrams, OEE and 5S. Fault analysis.

Condition Monitoring:**Measurable phenomena from different Plant Items:**

Measurable phenomena associated with degradation from a range of plant items including motors/generators, transformers, cables, bushings, connectors, capacitors and circuit breakers.

Module - 5**Fault diagnosis of Rotational Machines:**

Unbalance, shaft and coupling misalignments, bent shafts, gear and bearing wear, oil whirls and shaft eccentricity.

Measurement Strategies and Techniques:

A wide range of strategies and associated technologies will be discussed including light emission (photo multipliers, fiber optic techniques etc.), heat emissions (IR, cameras, direct temperature measurement, etc.), electrical charges (tan d, electrical particle discharge, etc.), force, power and vibration.

Data Processing and Analysis:

For each of the approaches, options with respect to data processing and analysis will be discussed including digital signal processing and computational techniques. Close attention will be paid through examples of the cost benefits and the reliability which can be placed on data with respect to formulating a view on the condition of a give item of plant.

Course outcomes:**On completion of this subject students will be able to:**

- 1. Understand maintenance objectives and evaluate various maintenance strategies for process plant application, Develop necessary planning and scheduling and control of preventive maintenance activities.**
- 2. Evaluate reliability of a simple plant component and system.**
- 3. Understand and apply the advanced concepts such as RCM and advantages for a company employing them**
- 4. Understand and apply the advanced concepts such as TPM and advantages for a company employing**
- 5. Apply the principles of condition monitoring systems.**
- 6. Apply the mechanical condition monitoring techniques and analyze the data used in condition monitoring**

TEXT BOOKS:

1. Practical machinery Vibration Analysis & Predictive Maintenance, C. Scheffer and P. Girdhar,, IDC technologies, 2004.
2. Introduction to Machinery Analysis and Monitoring, John S. Mitchell, PennWell Books, 1993.
3. Machinery Vibration, Measurement and Analysis, Victor Wowk, Mc Craw Hill, 1991

REFERENCE BOOKS

1. Handbook of Condition Monitoring, B.K.N. Rao, 1996
2. Reliability Engineering, Srinath L S,
3. Maintenance Replacement and Reliability, Jardine AKS,
4. Practical reliability engineering, Oconnor, Patrick D T
5. , Reliability and Maintainability Engineering, Charles E Ebeling
6. Introduction to Reliability Engineering Lewis E,

TOTAL QUALITY MANAGEMENT
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME664	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8 Hours per Module)	Exam Hours	03

Credits – 03

Course objectives:

- 1. Understand various approaches to TQM**
- 2. Understand the characteristics of quality leader and his role.**
- 3. Develop feedback and suggestion systems for quality management.**
- 4. Enhance the knowledge in Tools and Techniques of quality management**

Module – 1

Principles and Practice: Definition, basic approach, gurus of TQM, TQM Framework, awareness, defining quality, historical review, obstacles, benefits of TQM.

Quality Management Systems: Introduction, benefits of ISO registration, ISO 9000 series of standards, ISO 9001 requirements

Module – 2

Leadership: Definition, characteristics of quality leaders, leadership concept, characteristics of effective people, ethics, the Deming philosophy, role of TQM leaders, implementation, core values, concepts and framework, strategic planning communication, decision making,

Module – 3

Customer Satisfaction and Customer Involvement:

Customer Satisfaction: customer and customer perception of quality, feedback, using customer complaints, service quality, translating needs into requirements, customer retention, case studies.

Employee Involvement – Motivation, employee surveys, empowerment, teams, suggestion system, recognition and reward, gain sharing, performance appraisal, unions and employee involvement, case studies.

Module – 4

Continuous Process Improvement: process, the Juran trilogy, improvement strategies, types of problems, the PDCA Cycle, problem-solving methods, Kaizen, reengineering, six sigma, case studies.

Statistical Process Control: Pareto diagram, process flow diagram, cause and effect diagram, check sheets, histograms, statistical fundamentals, Control charts, state of control, out of control process, control charts for variables, control charts for attributes, scatter diagrams, case studies

Module - 5

Tools and Techniques: Benchmarking, information technology, quality management systems, environmental management system, and quality function deployment, quality by design, failure mode and effect analysis, product liability, total productive maintenance.

Course outcomes:

1. Explain the various approaches of TQM
2. Infer the customer perception of quality
3. Analyze customer needs and perceptions to design feedback systems.
4. Apply statistical tools for continuous improvement of systems
5. Apply the tools and technique for effective implementation of TQM.

TEXT BOOKS:

- Total Quality Management: Dale H. Besterfield, Publisher -Pearson Education India, ISBN: 8129702606, Edition 03.
2. Total Quality Management for Engineers: M. Zairi, ISBN:1855730243, Publisher: Wood head Publishing

REFERENCE BOOKS

1. Managing for Quality and Performance Excellence by James R.Evans and William M Lindsay, 9th edition, Publisher Cengage Learning.
- 2 A New American TQM, four revolutions in management, Shoji Shiba, Alan Graham, David Walden, Productivity press, Oregon, 1990
3. Organizational Excellence through TQM, H. Lal, New age Publications, 2008

Heat Transfer Lab
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL67	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction+ 2 Hours Laboratory)	SEE Marks	60
RBT Levels	L1, L2, L3	Exam Hours	03

Credits – 02

Course objectives:

- ▯ **The primary objective of this course is to provide the fundamental knowledge necessary to understand the behavior of thermal systems.**
- ▯ **This course provides a detailed experimental analysis, including the application and heat transfer through solids, fluids, and vacuum. Convection, conduction, and radiation heat transfer in one and two dimensional steady and unsteady systems are examined.**

PART – A

1. Determination of Thermal Conductivity of a Metal Rod.
2. Determination of Overall Heat Transfer Coefficient of a Composite wall.
3. Determination of Effectiveness on a Metallic fin.
4. Determination of Heat Transfer Coefficient in a free Convection on a
5. Determination of Heat Transfer Coefficient in a Forced Convection Flow through a Pipe.
6. Determination of Emissivity of a Surface.
7. Analysis of steady and transient heat conduction, temperature distribution of plane wall and cylinder using Numerical approach (ANSYS/CFD package).

PART – B

1. Determination of Stefan Boltzmann Constant.
2. Determination of LMDT and Effectiveness in a Parallel Flow and Counter Flow Heat Exchangers.
3. Experiments on Boiling of Liquid and Condensation of Vapour.
4. Performance Test on a Vapour Compression Refrigeration.
5. Performance Test on a Vapour Compression Air – Conditioner.
6. Experiment on Transient Conduction Heat Transfer.

7. Determination of temperature distribution along a rectangular and circular fin subjected to heat loss through convection using Numerical approach (ANSYS/CFD package)

Course outcomes:

1. **Perform experiments to determine the thermal conductivity of a metal rod**
2. **Conduct experiments to determine convective heat transfer coefficient for free and forced convection and correlate with theoretical values.**
3. **Estimate the effective thermal resistance in composite slabs and efficiency in pin-fin**
4. **Determine surface emissivity of a test plate**
5. **Estimate performance of a refrigerator and effectiveness of fin**
6. **Calculate temperature distribution of study and transient heat conduction through plane wall, cylinder and fin using numerical approach.**

Reading:

1. M. Necati Ozisik, Heat Transfer – A Basic Approach, McGraw Hill, New York, 2005.
2. Incropera, F. P. and De Witt, D. P., Fundamentals of Heat and Mass Transfer, 5th Edition, John Wiley and Sons, New York, 2006.
3. Holman, J. P., Heat Transfer, 9th Edition, Tata McGraw Hill, New York, 2008.

Scheme of Examination:

ONE question from part -A: 50 Marks

ONE question from part -B: 30 Marks

Viva –Voice :20 Marks

Total: 100 Marks

Modeling and Analysis Lab (FEA)
B.E, VI Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL68	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction+ 2 Hours Laboratory)	SEE Marks	60
RBT Levels	L1, L2, L3	Exam Hours	03

Credits – 02

Course objectives:

- ▯ **To acquire basic understanding of Modeling and Analysis software**
- ▯ **To understand the different kinds of analysis and apply the basic principles to find out the stress and other related parameters of bars, beams loaded with loading conditions.**
- ▯ **To learn to apply the basic principles to carry out dynamic analysis to know the natural frequency of different kind of beams.**

PART – A

1. Bars of constant cross section area, tapered cross section area and stepped bar
2. Trusses – **(Minimum 2 exercises of different types)**
3. Beams – Simply supported, cantilever, beams with point load, UDL, beams with varying load etc **(Minimum 6 exercises different nature)**
4. Stress analysis of a rectangular plate with a circular hole

PART – B

- 1) Thermal Analysis – 1D & 2D problem with conduction and convection boundary conditions **(Minimum 4 exercises of different types)**
- 2) Dynamic Analysis to find
 - a) Fixed – fixed beam for natural frequency determination
 - b) Bar subjected to forcing function
 - c) Fixed – fixed beam subjected to forcing function

PART – C

- 1) Demonstrate the use of graphics standards (IGES, STEP etc) to import the model from modeler to solver
- 2) Demonstrate one example of contact analysis to learn the procedure to carry out contact analysis.
- 3) Demonstrate at least two different type of example to model and analyze bars or plates made from composite material

Course outcomes:

- ▯ **Demonstrate the basic features of an analysis package.**
- ▯ **Use the modern tools to formulate the problem, and able to create geometry, discretize, apply boundary condition to solve problems of bars, truss, beams, plate to find stress with different-loading conditions.**
- ▯ **Demonstrate the deflection of beams subjected to point, uniformly distributed and varying loads further to use the available results to draw shear force and bending moment diagrams.**
- ▯ **Analyze the given problem by applying basic principle to solve and demonstrate 1D and 2D heat transfer with conduction and convection boundary conditions.**
- ▯ **Carry out dynamic analysis and finding natural frequencies for various boundary conditions and also analyze with forcing function.**

REFERENCE BOOKS:

1. **A first course in the Finite element method**, Daryl L Logan, Thomson, Third Edition
2. **Fundamentals of FEM**, Hutton – McGraw Hill, 2004
3. **Finite Element Analysis**, George R. Buchanan, Schaum Series

Scheme for Examination:

One Question from Part A - 40Marks (10 Write up +30)

One Question from Part B - 40 Marks (10 Write up +30)

Viva-Voce - 20 Marks

Total 100 Marks

ENERGY ENGINEERING
B.E, VII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME71	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- **Understand energy scenario, energy sources and their utilization**
- **Learn about energy conversion methods and their analysis**
- **Study the principles of renewable energy conversion systems**
- **Understand the concept of green energy and zero energy.**

Module - 1

Thermal Energy conversion system: Review of energy scenario in India, General Philosophy and need of Energy, Different Types of Fuels used for steam generation, Equipment for burning coal in lump form, stokers, different types, Oilburners, Advantages and Disadvantages of using pulverized fuel, Equipment for preparation and burning of pulverized coal, unit system and bin system. Pulverized fuel furnaces, cyclone furnace, Coal and ash handling, Generation of steam using forced circulation, high and supercritical pressures. Chimneys: Natural, forced, induced and balanced draft, Calculations and numerical involving height of chimney to produce a given draft. Cooling towers and Ponds. Accessories for the Steam generators such as Superheaters, De-superheater, control of superheaters, Economizers, Air preheaters and re-heaters.

Module - 2

Diesel Engine Power System: Applications of Diesel Engines in Power field. Method of starting Diesel engines. Auxiliaries like cooling and lubrication system, filters, centrifuges, Oil heaters, intake and exhaust system, Layout of diesel power plant.
Hydro-Electric Energy: Hydrographs, flow duration and mass curves, unit hydrograph and numerical. Storage and pondage, pumped storage plants, low, medium and high head plants, Penstock, water hammer, surge tanks, gates and valves. General layout of hydel power plants.

Module - 3

Solar Energy: Fundamentals; Solar Radiation; Estimation of solar radiation on horizontal and inclined surfaces; Measurement of solar radiation data, Solar Thermal systems: Introduction; Basics of thermodynamics and heat transfer; Flat plate collector; Evacuated Tubular Collector; Solar air collector; Solar concentrator; Solar distillation; Solar cooker; Solar refrigeration and air conditioning; Thermal energy storage systems, Solar Photovoltaic systems: Introduction; Solar cell Fundamentals; Characteristics and classification; Solar cell: Module, panel and Array construction; Photovoltaic thermal systems

Module - 4

Wind Energy: Properties of wind, availability of wind energy in India, wind velocity and power from wind; major problems associated with wind power, wind machines; Types of wind machines and their characteristics, horizontal land vertical axis wind mills, coefficient of performance of a wind mill rotor (Numerical Examples).

Tidal Power: Tides and waves as energy suppliers and their mechanics; fundamental characteristics of tidal power, harnessing tidal energy, Limitations.

Module - 5

Biomass Energy: Introduction; Photosynthesis Process; Biofuels; Biomass Resources; Biomass conversion technologies; Urban waste to energy conversion; Biomass gasification.

Green Energy: Introduction: Fuel cells: Overview; Classification of fuel cells; Operating principles; Fuel cell thermodynamics Nuclear, ocean, MHD, thermoelectric and geothermal energy applications; Origin and their types; Working principles, Zero energy Concepts .

Course outcomes:

1. Summarize the basic concepts of thermal energy systems,
2. Identify renewable energy sources and their utilization.
3. Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
4. Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. Identify methods of energy storage for specific applications

TEXT BOOKS:

1. B H Khan, Non conventional energy resources, 3rd Edition, McGraw Hill Education
2. Principles of Energy conversion, A. W. Culp Jr., McGraw Hill. 1996

REFERENCE BOOKS

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill (1984).
2. C. S. Solanki, "Solar Photovoltaic's: Fundamental Applications and Technologies, Prentice Hall of India, 2009.
3. L.L. Freris, Wind Energy Conversion Systems, Prentice Hall, 1990.

FLUID POWER SYSTEMS
B.E, VII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME72	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- **To provide an insight into the capabilities of hydraulic and pneumatic fluid power.**
- **To understand concepts and relationships surrounding force, pressure, energy and power in fluid power systems.**
- **To examine concepts centering on sources of hydraulic power, rotary and linear actuators, distribution systems, hydraulic flow in pipes, and control components in fluid power systems.**
- **Exposure to build and interpret hydraulic and pneumatic circuits related to industrial applications.**
- **To familiarize with logic controls and troubleshooting**

Module - 1

Introduction to fluid power systems

Fluid power system: components, advantages and applications. Transmission of power at static and dynamic states. Pascal's law and its applications. Fluids for hydraulic system: types, properties, and selection. Additives, effect of temperature and pressure on hydraulic fluid. Seals, sealing materials, compatibility of seal with fluids. Types of pipes, hoses, and quick acting couplings. Pressure drop in hoses/pipes. Fluid conditioning through filters, strainers; sources of contamination and contamination control; heat exchangers.

Module - 2

Pumps and actuators

Pumps: Classification of pumps, Pumping theory of positive displacement pumps, construction and working of Gear pumps, Vane pumps, Piston pumps, fixed and variable displacement pumps, Pump performance characteristics, pump selection factors, problems on pumps.

Accumulators: Types, selection/ design procedure, applications of accumulators. Types of Intensifiers, Pressure switches /sensor, Temperature switches/sensor, Level sensor.

Actuators: Classification cylinder and hydraulic motors, Hydraulic cylinders, single and double acting cylinder, mounting arrangements, cushioning, special types of cylinders, problems on cylinders.

Construction and working of rotary actuators such as gear, vane, piston motors, and Hydraulic Motor. Theoretical torque, power, flowrate, and hydraulic motor performance; numerical problems. Symbolic representation of hydraulic actuators (cylinders and motors).

Module - 3

Components and hydraulic circuit design

Components: Classification of control valves, Directional Control Valves-symbolic representation, constructional features of poppet, sliding spool, rotary type valves solenoid and pilot operated DCV, shuttle valve, and check valves.

Pressure control valves - types, direct operated types and pilot operated types.

Flow Control Valves - compensated and non-compensated FCV, needle valve, temperature compensated, pressure compensated, pressure and temperature compensated FCV, symbolic representation.

Hydraulic Circuit Design: Control of single and Double -acting hydraulic cylinder, regenerative circuit, pump unloading circuit, double pump hydraulic system, counter balance valve application, hydraulic cylinder sequencing circuits, cylinder synchronizing circuit using different methods, hydraulic circuit for

force multiplication; speed control of hydraulic cylinder- metering in, metering out and bleed off circuits. Pilot pressure operated circuits. Hydraulic circuit examples with accumulator.

Module - 4

Pneumatic power systems

Introduction to Pneumatic systems: Pneumatic power system, advantages, limitations, applications, Choice of working medium. Characteristics of compressed air and air compressors. Structure of pneumatic control System, fluid conditioners-dryers and FRL unit.

Pneumatic Actuators: Linear cylinder –types of cylinders, working, end position cushioning, seals, mounting arrangements, and applications.

Rotary cylinders- types, construction and application, symbols.

Pneumatic Control Valves: DCV such as poppet, spool, suspended seat type slide valve, pressure control valves, flow control valves, types and construction, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, twin pressure valve, symbols.

Module - 5

Pneumatic control circuits

Simple Pneumatic Control: Direct and indirect actuation pneumatic cylinders, speed control of cylinders - supply air throttling and exhaust air throttling.

Signal Processing Elements: Use of Logic gates - OR and AND gates in pneumatic applications.

Practical examples involving the use of logic gates.

Multi- Cylinder Application: Coordinated and sequential motion control, motion and control diagrams. Signal elimination methods, Cascading method-principle, Practical application examples (up to two cylinders) using cascading method (using reversing valves).

Electro- Pneumatic Control: Principles - signal input and output, pilot assisted solenoid control of directional control valves, use of relay and contactors. Control circuitry for simple signal cylinder application.

Course outcomes:

1. **Identify and analyse the functional requirements of a fluid power transmission system for a given application.**
2. **Visualize how a hydraulic/pneumatic circuit will work to accomplish the function.**
3. **Design an appropriate hydraulic or pneumatic circuit or combination circuit like electro-hydraulics, electro-pneumatics for a given application.**
4. **Select and size the different components of the circuit.**
5. **Develop a comprehensive circuit diagram by integrating the components selected for the given application.**

CONTROL ENGINEERING

B.E, VII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME73	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- Modeling of mechanical, hydraulic, pneumatic and electrical systems.
- Representation of system elements by blocks and its reduction
- Transient and steady state response analysis of a system.
- Frequency response analysis using polar plot.
- Frequency response analysis using bode plot.
- Analysis of system using root locus plots.
- Different system compensators and variable characteristics of linear systems.

Module - 1

Introduction: Concept of automatic controls, Open loop and closed loop systems, Concepts of feedback, requirements of an ideal control system, Types of controllers-Proportional, Integral, Differential, Proportional & Integral, Proportional Differential and Proportional Integral Differential controllers.

Module - 2

Modeling of Physical Systems :Mathematical Models of Mechanical, Electrical, Thermal, Hydraulic and Pneumatic Systems.

Analogous Systems: Direct and inverse analogs for mechanical, thermal and fluid systems.

Block diagram Algebra: General representation of a feedback control system, transfer functions, rules of block diagram algebra, reduction of block dia. to obtain closed loop transfer function.

Signal flow graphs : Mason's gain formula

Module - 3

Steady state operation: Steady state analysis for general block dia. for a control system, steady state characteristics, equilibrium in a system.

Transient Response: Transient response and steady state analysis of unit, step input, general operational representation for a differential equation of control system, distinct, repeated and complex conjugate zeros, general form of transient response, Routh's stability criterion for a control system.

Root Locus Plots : Root locus method: Significance of Root locus, angle and magnitude conditions, breakaway points, angles of departure and arrival, construction of Root locus using general rules and steps, Lead and Lag compensation

Module - 4

Frequency Domain Analysis: Relationship between time and frequency response, Polar plot, Bode's Plot, Nyquist plot and Nyquist stability criterion, Relative Stability, Phase and Gain Margins

Module - 5

System Compensation and State Variable Characteristics of Linear Systems :Series and feedback compensation, Introduction to state concepts, state equation of linear continuous data system. Matrix representation of state equations, controllability and observability, Kalman and Gilberts test.

Course outcomes:

1. **Recognize control system and its types , control actions**
2. **Determine the system governing equations for physical models(Electrical, Thermal, Mechanical, ElectroMechanical)**
3. **Calculate the gain of the system using block diagram and signal flow graph**
4. **Illustrate the response of 1st and 2nd order systems**
5. **Determine the stability of transfer functions in complex domain and frequency domain**
6. **Employ state equations to study the controllability and observability**

TEXT BOOKS:

1. Modern control theory, Katsuhiko Ogata, Pearson Education International , Fifth edition.

TRIBOLOGY
B.E, VII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME742	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03

Credits –03

Course Objectives:

- ▯ **To educate the students on the importance of friction, the related theories/laws of sliding and rolling friction and the effect of viscosity of lubricants.**
- ▯ **To expose the students to the consequences of wear, wear mechanisms, wear theories and analysis of wear problems.**
- ▯ **To make the students understand the principles of lubrication, lubrication regimes, theories of hydrodynamic and the advanced lubrication techniques.**
- ▯ **To expose the students to the factors influencing the selection of bearing materials for different sliding applications.**
- ▯ **To introduce the concepts of surface engineering and its importance in tribology.**

Module - 1

Introduction to tribology: Historical background, practical importance, and subsequent use in the field.

Lubricants: Types and specific field of applications. Properties of lubricants, viscosity, its measurement, effect of temperature and pressure on viscosity, lubrication types, standard grades of lubricants, and selection of lubricants.

Module - 2

Friction: Origin, friction theories, measurement methods, friction of metals and non-metals.

Wear: Classification and mechanisms of wear, delamination theory, debris analysis, testing methods and standards. Related case studies.

Module - 3

Hydrodynamic journal bearings: Friction forces and power loss in a lightly loaded journal bearing, Petroff's equation, mechanism of pressure development in an oil film, and Reynold's equation in 2D.

Introduction to idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's number and its significance; partial bearings, end leakages in journal bearing, numerical examples on full journal bearings only.

Module - 4

Plane slider bearings with fixed/pivoted shoe: Pressure distribution, Load carrying capacity, coefficient of friction, frictional resistance in a fixed/pivoted shoe bearing, center of pressure, numerical examples.

Hydrostatic Lubrication: Introduction to hydrostatic lubrication, hydrostatic step bearings, load carrying capacity and oil flow through the hydrostatic step bearing, numerical examples.

Module - 5

Bearing Materials: Commonly used bearings materials, and properties of typical bearing materials. Advantages and disadvantages of bearing materials.

Introduction to Surface engineering: Concept and scope of surface engineering.

Surface modification – transformation hardening, surface melting, thermo chemical processes.

Surface Coating – plating, fusion processes, vapour phase processes.

Selection of coating for wear and corrosion resistance.

Course outcomes:

1. Understand the fundamentals of tribology and associated parameters.
2. Apply concepts of tribology for the performance analysis and design of components experiencing relative motion.
3. Analyse the requirements and design hydrodynamic journal and plane slider bearings for a given application.
4. Select proper bearing materials and lubricants for a given tribological application.
5. Apply the principles of surface engineering for different applications of tribology.

TEXT BOOKS:

1. "Introduction to Tribology", B. Bhushan, John Wiley & Sons, Inc., New York, 2002

MECHATRONICS
B.E, VII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME753	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8 Hours per Module)	Exam Hours	03

Credits –03

Course Objective:

- Understand the evolution and development of Mechatronics as a discipline.
- Substantiate the need for interdisciplinary study in technology education.
- Understand the applications of microprocessors in various systems and to know the functions of each element
- Demonstrate the integration philosophy in view of Mechatronics technology

Module - 1

Introduction: Definition, Multidisciplinary Scenario, Evolution of Mechatronics, Design of Mechatronics system, Objectives, advantages and disadvantages of Mechatronics.

Transducers and sensors: Definition and classification of transducers, Difference between transducer and sensor, Definition and classification of sensors, Principle of working and applications of light sensors, proximity switches and Hall Effect sensors.

Module - 2

Microprocessor & Microcontrollers: Introduction, Microprocessor systems, Basic elements of control systems, Microcontrollers, Difference between Microprocessor and Microcontrollers.

Microprocessor Architecture: Microprocessor architecture and terminology-CPU, memory and address, I/O and Peripheral devices, ALU, Instruction and Program, Assembler, Data, Registers, Program Counter, Flags, Fetch cycle, write cycle, state, bus interrupts. Intel's 8085A Microprocessor.

Module - 3

Programmable logic controller: Introduction to PLC's, basic structure, Principle of operation, Programming and concept of ladder diagram, concept of latching & selection of a PLC.

Integration: Introduction & background, Advanced actuators, Pneumatic actuators, Industrial Robot, different parts of a Robot-Controller, Drive, Arm, End Effectors, Sensor & Functional requirements of robot.

Module - 4

Mechanical actuation systems: Mechanical systems, types of motion, Cams, Gear trains, Ratchet & Pawl, belt and chain drives, mechanical aspects of motor selection.

Electrical actuation systems: Electrical systems, Mechanical switches, Solenoids, Relays, DC/AC Motors, Principle of Stepper Motors & servomotors.

Module - 5

Pneumatic and hydraulic actuation systems: Actuating systems, Pneumatic and hydraulic systems, Classifications of Valves, Pressure relief valves, Pressure regulating/reducing valves, Cylinders and rotary actuators.

DCV & FCV: Principle & construction details, types of sliding spool valve, solenoid operated, Symbols of hydraulic elements, components of hydraulic system, functions of various units of hydraulic system. Design of simple hydraulic circuits for various applications.

Course outcomes:

On completion of this subject, students will be able to:

- 1. Illustrate various components of Mechatronics systems.**
- 2. Assess various control systems used in automation.**
- 3. Develop mechanical, hydraulic, pneumatic and electrical control systems.**

TEXT BOOKS:

1. Nitaigour Premchand Mahalik, Mechatronics-Principles, Concepts and Applications, Tata McGraw Hill, 1st Edition, 2003 ISBN.No. 0071239243, 9780071239240.

DESIGN LABORATORY
B.E, VII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17MEL76	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction+ 2 Hours Laboratory)	SEE Marks	60
RBT Levels	L1, L2, L3	Exam Hours	03

Credits –02

Course Objective:

- To understand the natural frequency, logarithmic decrement, damping ratio and damping.
- To understand the balancing of rotating masses.
- To understand the concept of the critical speed of a rotating shaft.
- To understand the concept of stress concentration using Photo elasticity.
- To understand the equilibrium speed, sensitiveness, power and effort of Governor.

PART A

1. Determination of natural frequency, logarithmic decrement, damping ratio and damping Co-efficient in a single degree of freedom vibrating systems (longitudinal and torsional)
2. Determination of critical speed of rotating shaft.
3. Balancing of rotating masses.
4. Determination of fringe constant of Photo-elastic material using Circular disk subjected diametric compression, Pure bending specimen (four point bending)
5. Determination of stress concentration using Photo elasticity for simple components like Plate with hole under tension or bending, circular disk with circular hole under compression, 2-d crane hook.

PART B

1. Determination of equilibrium speed, sensitiveness, power and effort of Porter/ Proel / Hartnell Governor. (at least one)
2. Determination of pressure distribution in Journal bearing
3. Determination of principle stresses and strain in a member subjected to combined loading using strain rosettes.
4. Determination of stresses in curved beam using strain gauge.
5. Experiments on Gyroscope (Demonstration only)

Course outcomes:

On completion of this subject, students will be able to:

1. To understand the working principles of machine elements such as Governors, Gyroscopes etc.,
2. To identify forces and couples in rotating mechanical system components.
3. To identify vibrations in machine elements and design appropriate damping methods and to determine the critical speed of a rotating shaft.
4. To measure strain in various machine elements using strain gauges.

5. To determine the minimum film thickness, load carrying capacity, frictional torque and pressure distribution of journal bearing.
6. To determine strain induced in a structural member using the principle of photo-elasticity.

Scheme of Examination:

One question from Part A:	50 Marks
One question from part B:	30 Marks
Viva- Voce:	20Marks
<hr/> Total:	<hr/> 100 Marks

COMPUTER INTEGRATED MANUFACTURING LAB B.E, VII Semester, Mechanical Engineering [As per Choice Based Credit System (CBCS) scheme]			
Course Code	17MEL77	CIE Marks	40
Number of Lecture Hours/Week	03 (1 Hour Instruction+ 2 Hours Laboratory)	SEE Marks	60
Total Hours	40	Exam Hours	03
Credits –02			

Course Objectives:

CLO1	To expose the students to the techniques of CNC programming and cutting tool path generation through CNC simulation software by using G-Codes and M-codes
CLO2	To educate the students on the usage of CAM packages and cut part on virtual CNC machine simulator.
CLO3	To make the students understand the importance of automation in industries through exposure to FMS, Robotics, and Hydraulics and Pneumatics.

Part-A

Manual CNC part programming for 2 turning and 2 milling parts. Selection and assignment of tools, correction of syntax and logical errors, and verification of tool path.

CNC part programming using CAM packages. Simulation of Turning, Drilling, Milling operations. 3 typical simulations to be carried out using simulation packages like: **CademCAMLab-Pro, Master-CAM.**

Program generation using software. Optimize spindle power, torque utilization, and cycle time. Generation and printing of shop documents like process and cycle time sheets, tool list, and tool layouts. Enter program, take tool offsets, cut part in single block and auto mode, measure the virtual part on screen in the virtual CNC machine simulator, for standard CNC control systems FANUC, FAGOR, HAAS and SINUMERIK.

Part B

(Only for Demo/Viva voce)

FMS (Flexible Manufacturing System): Programming of Automatic storage and Retrieval system (ASRS) and linear shuttle conveyor Interfacing CNC lathe, milling with loading unloading arm and ASRS to be carried out on simple components.

(Only for Demo/Viva voce)

Robot programming: Using Teach Pendant & Offline programming to perform pick and place, stacking of objects (2 programs).

Pneumatics and Hydraulics, Electro-Pneumatics: 3 typical experiments on Basics of these topics to be conducted.

Course Outcomes:

After studying this course, students will be able to:

CLO1	Generate CNC Lathe part program for Turning, Facing, Chamfering, Grooving, Step turning, Taper turning, Circular interpolation etc.
CLO2	Generate CNC Mill Part programming for Point to point motions, Line motions, Circular interpolation, Contour motion, Pocket milling- circular, rectangular, Mirror commands etc.
CLO3	Use Canned Cycles for Drilling, Peck drilling, Boring, Tapping, Turning, Facing, Taper turning Thread cutting etc.
CLO4	Simulate Tool Path for different Machining operations of small components using CNC Lathe & CNC Milling Machine.
CLO5	Use high end CAM packages for machining complex parts; use state of art cutting tools and related cutting parameters; optimize cycle time; set up and cut part on.
CLO6	Understand & write programs for Robot control; understand the operating principles of hydraulics, pneumatics and electro pneumatic systems.

Scheme for Examination:

Two Questions from Part A - 60 Marks (30 +30)

Viva-Voce - 20 Marks

Total: 80 Marks

Project Work, Phase I

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Project Work, Phase I	17MEP78	2	0-3-0	100	-	-

OPERATIONS RESEARCH
B.E, VIII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME81	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

1. To enable the students to understand the scientific methods of providing various departments of an organization with a quantitative basis of decision making.
2. To enable the students to understand the importance of various tools and techniques in finding optimal solutions to problems involving limited resources in the form of Men, Materials and machinery.

Module - 1

Introduction: Evolution of OR, Definitions of OR, Scope of OR, Applications of OR, Phases in OR study. Characteristics and limitations of OR, models used in OR, Linear Programming Problem (LPP), Generalized LPP- Formulation of problems as L.P.P. SolutionstoLPP by graphical method(Two Variables).

Module - 2

LPP: Simplex method, Canonical and Standard form of LP problem, slack, surplus and artificial variables, Solutions to LPP by Simplex method, Big-M Method and Two Phase Simplex Method, Degeneracy in LPP. Concept of Duality, writing Dual of given LPP. Solutions to L.P.P by Dual Simplex Method.

Module - 3

Transportation Problem: Formulation of transportation problem, types, initial basic feasible solution using North-West Corner rule, Vogel's Approximation method. Optimality in Transportation problem by Modified Distribution(MODI) method. Unbalanced T.P. Maximization T.P. Degeneracy in transportation problems, application of transportation problem.

Module - 4

Network analysis: Introduction, Construction of networks, Fulkerson's rule for numbering the nodes, AON and AOA diagrams; Critical path method to find the expected completion time of a project, determination of floats in networks, PERT networks, determining the probability of completing a project, predicting the completion time of project; Cost analysis in networks. Crashingofnetworks- Problems.

Queuing Theory: Queuing systems and their characteristics, Pure-birth and Pure-death models (only equations), Kendall & Lee's notation of Queuing, empirical queuing models – Numerical on M/M/1 and M/M/C Queuing models.

Module - 5

Game Theory: Definition, Pure Strategy problems, Saddle point, Max-Min and Min-Max criteria, Principle of Dominance, Solution of games with Saddle point. Mixed Strategy problems. Solution of 2X2 games by Arithmetic method, Solution of 2Xn m and mX2 games by graphical method. Formulation of games.

Sequencing: Basic assumptions, Johnson's algorithm, sequencing 'n' jobs on single machine using priority rules, sequencing using Johnson's rule-'n' jobs on 2 machines, 'n' jobs on 3 machines, 'n' jobs on 'm' machines. Sequencing of 2 jobs on 'm' machines using graphical method.

Course outcomes:

1. Understand the meaning, definitions, scope, need, phases and techniques of operations research.
2. Formulate as L.P.P and derive optimal solutions to linear programming problems by graphical method, Simplex method, Big-M method and Dual Simplex method.
3. Formulate as Transportation and Assignment problems and derive optimum solutions for transportation, Assignment and travelling salesman problems.
4. Solve problems on game theory for pure and mixed strategy under competitive environment.
5. Solve waiting line problems for M/M/1 and M/M/K queuing models.
6. Construct network diagrams and determine critical path, floats for deterministic and PERT networks including crashing of Networks.
7. Determine minimum processing times for sequencing of n jobs-2 machines, n jobs-3 machines, n jobs-m machines and 2 jobs-n machines using Johnson's algorithm.

4. Introduction to Operations Research, Hillier and Lieberman, 8th Ed., McGraw Hill

ADDITIVE MANUFACTURING
B.E, VIII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME82	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03

Credits – 04

Course Objectives:

- 1. Understand the additive manufacturing process, polymerization and powder metallurgy process**
- 2. Understand characterisation techniques in additive manufacturing.**
- 3. Acquire knowledge on CNC and Automation.**

Module - 1

Introduction to Additive Manufacturing: Introduction to AM, AM evolution, Distinction between AM & CNC machining, Advantages of AM, **AM process chain:** Conceptualization, CAD, conversion to STL, Transfer to AM, STL file manipulation, Machine setup, build , removal and clean up, post processing.

Classification of AM processes: Liquid polymer system, Discrete particle system, Molten material systems and Solid sheet system.

Post processing of AM parts: Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern, property enhancements using non-thermal and thermal techniques.

Guidelines for process selection: Introduction, selection methods for a part, challenges of selection

AM Applications: Functional models, Pattern for investment and vacuum casting, Medical models, art models, Engineering analysis models, Rapid tooling, new materials development, Bi-metallic parts, Re-manufacturing. Application examples for Aerospace, defence, automobile, Bio-medical and general engineering industries.

Module - 2

System Drives and devices: Hydraulic and pneumatic motors and their features, Electrical motors AC/DC and their features

Actuators: Electrical Actuators; Solenoids, Relays, Diodes, Thyristors, and Triacs. Hydraulic and Pneumatic actuators, Design of Hydraulic and Pneumatic circuits, Piezoelectric actuators, Shape memory alloys.

Module - 3

POLYMERS & POWDER METALLURGY

Basic Concepts: Introduction to Polymers used for additive manufacturing: polyamide, PF resin, polyesters etc. Classification of polymers, Concept of functionality, Polydispersity and Molecular weight [MW], Molecular Weight Distribution [MWD] **Polymer Processing:** Methods of spinning for additive manufacturing: Wet spinning, Dry spinning. Biopolymers, Compatibility issues with polymers. Moulding and casting of polymers, Polymer processing techniques

General Concepts: Introduction and History of Powder Metallurgy (PM), Present and Future Trends of PM

Powder Production Techniques: Different Mechanical and Chemical methods, Atomisation of Powder, other emerging processes.

Characterization Techniques: Particle Size & Shape Distribution, Electron Microscopy of Powder, Interparticle Friction, Compression ability, Powder Structure, Chemical Characterization

Microstructure Control in Powder: Importance of Microstructure Study, Microstructures of Powder by Different techniques.

Powder Shaping: Particle Packing Modifications, Lubricants & Binders, Powder Compaction & Process Variables, Pressure & Density Distribution during Compaction, Isotactic Pressing, Injection Moulding, Powder Extrusion, Slip Casting, Tape Casting.

Sintering: Theory of Sintering, Sintering of Single & Mixed Phase Powder, Liquid Phase Sintering Modern Sintering Techniques, Physical & Mechanical Properties Evaluation, Structure-Property Correlation Study, Modern Sintering techniques, Defects Analysis of Sintered Components

Application of Powder Metallurgy: Filters, Tungsten Filaments, Self-Lubricating Bearings, Porous Materials, Biomaterials etc.

Module - 4

NANO MATERIALS & CHARACTERIZATION TECHNIQUES:

Introduction: Importance of Nano-technology, Emergence of Nanotechnology, Bottom-up and Top-down approaches, challenges in Nanotechnology

Nano-materials Synthesis and Processing: Methods for creating Nanostructures; Processes for producing ultrafine powders- Mechanical grinding; Wet Chemical Synthesis of Nano-materials- sol-gel process; Gas Phase synthesis of Nano-materials- Furnace, Flame assisted ultrasonic spray pyrolysis; Gas Condensation Processing (GPC), Chemical Vapour Condensation(CVC).

Optical Microscopy - principles, Imaging Modes, Applications, Limitations.

Scanning Electron Microscopy (SEM) - principles, Imaging Modes, Applications, Limitations. **Transmission Electron Microscopy (TEM)** - principles, Imaging Modes, Applications, Limitations. **X-Ray Diffraction (XRD)** - principles, Imaging Modes, Applications, Limitations. **Scanning Probe Microscopy (SPM)** - principles, Imaging Modes, Applications, Limitations. **Atomic Force Microscopy (AFM)** - basic principles, instrumentation, operational modes, Applications, Limitations. **Electron Probe Micro Analyzer (EPMA)** - Introduction, Sample preparation, Working procedure, Applications, Limitations.

Module - 5

MANUFACTURING CONTROL AND AUTOMATION

CNC technology - An overview: Introduction to NC/CNC/DNC machine tools, Classification of NC /CNC machine tools, Advantage, disadvantages of NC /CNC machine tools, Application of NC/CNC **Part programming:** CNC programming and introduction, Manual part programming: Basic (Drilling, milling, turning etc.), Special part programming, Advanced part programming, Computer aided part programming (APT)

Introduction: Automation in production system principles and strategies of automation, basic Elements of an automated system. Advanced Automation functions. Levels of Automations, introduction to automation productivity

Control Technologies in Automation: Industrial control system. Process industry vs discrete manufacturing industries. Continuous vs discrete control. Continuous process and its forms. Other control system components.

Course outcomes:

1. Understand the different process of Additive Manufacturing. using Polymer, Powder and Nano materials manufacturing.
2. Analyse the different characterization techniques.
3. Describe the various NC, CNC machine programming and Automation techniques.

TEXT BOOKS:

1. Chua Chee Kai, Leong Kah Fai, "Rapid Prototyping: Principles & Applications", World Scientific, 2003.
2. G Odian Principles of Polymerization, Wiley Interscience John Wiley and Sons, 4th edition, 2005

EXPERIMENTAL STRESS ANALYSIS
B.E, VIII Semester, Mechanical Engineering
[As per Choice Based Credit System (CBCS) scheme]

Course Code	17ME832	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40(8 Hours per Module)	Exam Hours	03

Credits – 03

Course Objectives:

- 4. To understand the measurement of strain using electrical strain gauges.**
- 5. To analyze stress and strains induced mechanical systems using electrical strain gauges.**
- 6. To understand the photo elastic techniques to characterize the elastic behavior of solids.**
- 7. To understand elastic behavior of solid bodies using coating techniques.**
- 8. To apply the holography methods to measure stress and strains.**

Module - 1

Introduction: Definition of terms, Calibration, Standards, Dimension and units generalized measurement system. Basic concepts in dynamic measurements, system response, distortion, impedance matching, Analysis of experimental data, cause and types of experimental errors. General consideration in data analysis.

Electrical Resistance Strain Gages: Strain sensitivity in metallic alloys, Gage construction, adhesives and mounting techniques, Gage sensitivity and gage factor, Performance Characteristics, Environmental effects, Strain Gage circuits. Potentiometer, Wheatstone's bridges, Constant current circuits.

Module - 2

Strain Analysis Methods: Two element, three element rectangular and delta rosettes, Correction for transverse strain effects, Stress gage, Plane shear gage, Stress intensity factor gage.

Force, Torque and strain measurements: Mass balance measurement, Elastic element for force measurements, torque measurement.

Module - 3

Photoelasticity: Nature of light, Wave theory of light - optical interference, Stress optic law –effect of stressed model in plane and circular polariscopes, Isoclinics & Isochromatics, Fringe order determination Fringe multiplication techniques, Calibration photoelastic model materials.

Two Dimensional Photoelasticity: Separation methods: Shear difference method, Analytical separation methods, Model to prototype scaling, Properties of 2D photoelastic model materials, Materials for 2D photoelasticity.

Module - 4

Three Dimensional Photo elasticity: Stress freezing method, Scattered light photoelasticity, Scattered light as an interior analyzer and polarizer, Scattered light polariscope and stress data Analyses.

Photoelastic (Birefringent) Coatings : Birefringence coating stresses, Effects of coating thickness: Reinforcing effects, Poisson's Stress separation techniques: Oblique incidence.

Module - 5

Brittle Coatings: Coatings stresses, Crack patterns, Refrigeration techniques, Load relaxation techniques, Crack detection methods, Types of brittle coatings and its applications.

Moire Methods: Moire fringes produced by mechanical interference. Geometrical approach, Displacement field approach to Moire fringe analysis, Out of plane displacement measurements, Out of plane slope measurements. Applications and advantages

Course outcomes:

1. **Explain and the elastic behavior of solid bodies.**
2. **Describe stress strain analysis of mechanical systems using electrical resistance strain gauges.**
3. **Understand the experimental methods of determining stresses and strains induced.**
4. **Apply the coating techniques to determine the stresses and strains.**

TEXT BOOKS:

1. **"Experimental Stress Analysis"**, Dally and Riley, McGraw Hill.
2. **"Experimental Stress Analysis"**. Sadhu Singh, Khanna publisher.

REFERENCE BOOKS

1. **Experimental stress Analysis**, Srinath L.S tata Mc Graw Hill.
2. **"Photoelasticity Vol I and Vol II**, M.M.Frocht, John Wiley & sons.
3. **"Photo Elastic Stress Analysis"**, Kuske, Albrecht & Robertson John Wiley & Sons.
4. **Motion Measurement and Stress Analysis Dave and Adams**
5. **Holman, "Experimental Methods for Engineers"** Tata McGraw Hill Companies, 7th Edition, New York, 2007

- 1. Core subject:** This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.
- 2. Professional Elective:** Elective relevant to chosen specialization/ branch
- 3. OpenElective:** Electives from other technical and/or emerging subject areas.

MANAGEMENT AND ENGINEERING ECONOMICS

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Management And Engineering Economics	15ME51	04	3-2-0	80	20	3Hrs

MODULE – 1

Management: Introduction - Meaning - nature and characteristics of Management, Scope and Functional areas of management - Management as science, art of profession - Management & Administration - Roles of Management, Levels of Management, Development of Management Thought- early management approaches – Modern management approaches.

Planning: Nature, importance and purpose of planning process Objectives -Types of plans (Meaning Only) - Decision making Importance of planning - steps in planning & planning premises - Hierarchy of plans. **10 Hours**

MODULE - 2

Organizing And Staffing: Nature and purpose of organization Principles of organization - Types of organization - Departmentation Committees- Centralization Vs Decentralization of authority and responsibility - Span of control - MBO and MBE (Meaning Only) Nature and importance of staffing-- :Process of Selection & Recruitment (in brief).

Directing & Controlling: Meaning and nature of directing Leadership styles, Motivation Theories, Communication - Meaning and importance - coordination, meaning and importance and Techniques of Co Ordination. Meaning and steps in controlling - Essentials of a sound control system - Methods of establishing control (in brief) **10 Hours**

MODULE -3

Introduction: Engineering and economics, Problem solving and decision making, Laws of demand and supply, Difference between Microeconomics & Macroeconomics, equilibrium between demand & supply, elasticity of demand, price elasticity, income elasticity.

Law of Returns, Interest and interest factors, simple and compound interest, Cash flow diagrams, personal loans and EMI payment calculation with flexible interest rates, Discussion and problems **10 Hours**

MODULE -4

Present, future and annual worth and rate of returns: Basic present worth comparisons, Present worth-equivalence, Assets with unequal lives and infinite lives, future worth comparisons, payback comparisons, Equivalent annual worth comparisons, situations for annual worth comparisons. Asset life, Rate of return, minimum acceptable rate of return, IRR anomalies and misconceptions, Cost of capital, comparisons of all present future and annual worth with IRR, product costing, Discussions and problems **10 Hours**

MODULE -5

Costing and depreciation: Components of costs, estimation of selling price, marginal cost, first cost, all kinds of overheads, indirect cost estimation with depreciation, mensuration and estimation of material cost, cost estimation of mechanical process, idling time. Product costing (approaches to product costing), causes of depreciation, methods of computing depreciation charges, straight line method, declining balance method, sum of years method, sinking fund method, service output methods, taxation concepts, personal income taxes and corporate taxes, Discussions and problems. **10 Hours**

Course outcomes

On completion of this subject students will be able to

1. Understand needs, functions, roles, scope and evolution of Management
2. Understand importance, purpose of Planning and hierarchy of planning and also analyze its types
3. Discuss Decision making, Organizing, Staffing, Directing and Controlling
4. Select the best economic model from various available alternatives
5. Understand various interest rate methods and implement the suitable one.
6. Estimate various depreciation values of commodities
7. Prepare the project reports effectively.

DYNAMICS OF MACHINERY

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Dynamics of Machinery	15ME52	04	3-2-0	80	20	3Hrs

Course Objectives

1. To gain the knowledge static and dynamic equilibrium conditions of mechanisms subjected forces and couple, with and without friction.
2. Analyse the mechanisms for static and dynamic equilibrium.
3. To understand the balancing principles of rotating and reciprocating masses, governors and gyroscopes.
4. Analyse the balancing of rotating and reciprocating masses, governors and gyroscopes.
5. To understand vibrations characteristics of single degree of freedom systems.
6. Characterise the single degree freedom systems subjected to free and forced vibrations with and without damping.

MODULE 1

Static force Analysis: Static equilibrium. Equilibrium of two and three force members. Members with two forces and torque, Free body diagrams, Static force analysis of four bar mechanism and Slider-crank mechanism with and without friction.

Dynamic force Analysis: D'Alembert's principle, Inertia force, Inertia torque. Dynamic force analysis of four-bar mechanism and Slider crank mechanism without friction, numerical problems.

10 Hours

MODULE 2

Balancing of Rotating Masses: Static and dynamic balancing, balancing of single rotating mass by balancing masses in same plane and in different planes. Balancing of several rotating masses by balancing masses in same plane and in different planes.

Balancing of Reciprocating Masses: Inertia effect of crank and connecting rod, Single cylinder engine, balancing in multi cylinder-inline engine (primary and secondary forces), numerical problems.

10 Hours

MODULE 3

Governors: Types of governors, force analysis of Porter and Hartnell governors. Controlling force, Stability, Sensitiveness, Isochronism, Effort and Power.

Gyroscope: Vectorial representation of angular motion, Gyroscopic couple. Effect of gyroscopic couple on plane disc, aeroplane, ship, stability of two wheelers and four wheelers, numerical problems.

10 Hours

MODULE - 4

Introduction & Undamped free Vibrations (Single Degree of Freedom)

Types of vibrations, Definitions, Simple Harmonic Motion (SHM), Work done by harmonic force, Principle of super position applied to SHM. Methods of analysis – (Newton's, Energy & Rayleigh's methods). Derivations for spring mass systems, Natural frequencies of simple systems, Springs in series and parallel, Torsional and transverse vibrations, Effect of mass of spring and problems.

10 Hours

MODULE – 5

Damped free Vibrations (Single Degree of Freedom)

Types of damping, Analysis with viscous damping - Derivations for over, critical and under damped systems, Logarithmic decrement and numerical problems.

Forced Vibrations (Single Degree of Freedom):

Analysis of forced vibration with constant harmonic excitation, Magnification factor (M.F.), Vibration isolation - Transmissibility ratio, Excitation of support (absolute and relative), Numerical problems.

10 Hours

Course outcomes

On completing the course the student will be able to

1. Determine the forces and couples for static and dynamic conditions of four bar and slider crank mechanisms to keep the system in equilibrium.
2. Determine magnitude and angular position of balancing masses under static and dynamic condition of rotating masses in same and different planes.
3. Determine unbalanced primary, secondary forces and couples in single and multi-cylinder engine.
4. Determine sensitiveness, isochronism, effort and power of porter and hartnell governors.
5. Determine gyroscopic couple and effects related to 2, 4 wheeler, plane disc, ship and aeroplanes.
6. Understand types of vibration, SHM and methods of finding natural frequencies of simple mechanical systems.
7. Determine equation of motion, natural frequency, damping factor, logarithmic decrement of damped free vibration (SDOF) systems.
8. Determine the natural frequency, force and motion transmissibility of single degree freedom systems.
9. Determine equation of motion of rotating and reciprocating unbalance systems, magnification factor, and transmissibility of forced vibration (SDOF) systems.

TURBO MACHINES

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Turbo Machines	15ME53	04	3-2-0	80	20	3Hrs

Course Objectives:

- The course aims at giving an overview of different types of turbomachinery used for energy transformation, such as pumps, fans, compressors, as well as hydraulic and steam turbines.
- Explain the working principles of turbomachines and apply it to various types of machines
- It will focus on application of turbo machinery in power generation, power absorption and transportation sectors.

Module 1

Introduction: Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Dimensionless parameters and their significance, Effect of Reynolds number, Unit and specific quantities, model studies.

(Note: Since dimensional analysis is covered in Fluid Mechanics subject, questions on dimensional analysis may not be given. However, dimensional parameters and model studies may be given more weightage.)

Thermodynamics of fluid flow: Application of first and second law of thermodynamics to turbo machines, Efficiencies of turbo machines, Static and Stagnation states, Incompressible fluids and perfect gases, overall isentropic efficiency, stage efficiency (their comparison) and polytropic efficiency for both compression and expansion processes. Reheat factor for expansion process **(10 Hours)**

Module 2

Energy exchange in Turbo machines: Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems.

General Analysis of Turbo machines: Radial flow compressors and pumps – general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, Theoretical head – capacity relationship, General analysis of axial flow pumps and compressors, degree of reaction, velocity triangles, Problems.

(10 Hours)

Module 3

Steam Turbines: Classification, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor.

Reaction turbine – Parsons's turbine, condition for maximum utilization factor, reaction staging. Problems.

(10 Hours)

Module 4

Hydraulic Turbines: Classification, various efficiencies. **Pelton turbine** – velocity triangles, design parameters, Maximum efficiency.

Francis turbine - velocity triangles, design parameters, runner shapes for different blade speeds. Draft tubes- Types and functions. **Kaplan and**

Propeller turbines - velocity triangles, design parameters. Problems. **(10 Hours)**

Module 5

Centrifugal Pumps: Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the flow, Maximum suction lift, Net positive suction head, Cavitation, Need for priming, Pumps in series and parallel. Problems.

Centrifugal Compressors: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, stage efficiency and surging and problems. Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies and stalling. Problems.

(10 Hours)

Course Outcomes:

- Able to give precise definition of turbomachinery
- Identify various types of turbo machinery
- Apply the Euler's equation for turbomachinery to analyse energy transfer in turbomachines
- Understand the principle of operation of pumps, fans, compressors and turbines.
- Perform the preliminary design of turbomachines (pumps, rotary compressors and turbines)
- Analyze the performance of turbo machinery.

TEXT BOOKS:

1. An Introduction to Energy Conversion, Volume III, Turbo machinery, V. Kadambi and Manohar Prasad, New Age International Publishers, reprint 2008.
2. Turbines, Compressors & Fans, S. M. Yahya, Tata McGraw Hill Co. Ltd., 2nd edition, 2002

REFERENCE BOOKS:

1. Principals of Turbo machines, D. G. Shepherd, The Macmillan Company (1964).
2. Fluid Mechanics & Thermodynamics of Turbo machines, S. L. Dixon, Elsevier (2005).

3. Text Book of Turbo machines, M. S. Govindegouda and A. M. Nagaraj, M. M. Publications, 4Th Ed, 2008.

DESIGN OF MACHINE ELEMENTS – I

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Design of Machine Elements	15ME54	04	3-2-0	80	20	3Hrs

Course Objectives

1. Able to understand mechanical design procedure, materials, codes and use of standards
2. Able to design machine components for static, impact and fatigue strength.
3. Able to design fasteners, shafts, joints, couplings, keys, threaded fasteners riveted joints, welded joints and power screws.

Module-1

Fundamentals of Mechanical Engineering Design

Mechanical engineering design, Phases of design process, Design considerations, Engineering Materials and their Mechanical properties, Standards and Codes, Factor of safety, Material selection.

Static Stresses: Static loads .Normal, Bending, Shear and Combined stresses. Stress concentration and determination of stress concentration factor.

10 Hours

Module -2

Design for Impact and Fatigue Loads

Impact stress due to Axial, Bending and Torsional loads.

Fatigue failure: Endurance limit, S-N Diagram, Low cycle fatigue, High cycle fatigue, modifying factors: size effect, surface effect. Stress concentration effects, Notch sensitivity, fluctuating stresses, Goodman and Soderberg relationship, stresses due to combined loading, cumulative fatigue damage.

10Hours

Module -3

Design of Shafts, Joints, Couplings and Keys

Torsion of shafts, design for strength and rigidity with steady loading, ASME codes for power transmission shafting, shafts under combined loads.

Design of Cotter and Knuckle joints, Rigid and flexible couplings, Flange coupling, Bush and Pin type coupling and Oldham's coupling. Design of keys-square, saddle, flat and father.

10 Hours

Module - 4

Riveted Joints and Weld Joints

Rivet types, rivet materials, failures of riveted joints, Joint Efficiency, Boiler Joints, Lozanze Joints, Riveted Brackets, eccentrically loaded joints. Types of welded joints, Strength of butt and fillet welds, welded brackets with transverse and parallel fillet welds, eccentrically loaded welded joints.

10 Hours

Module -5

Threaded Fasteners and Power Screws

Stresses in threaded fasteners, Effect of initial tension, Design of threaded fasteners under static loads, Design of eccentrically loaded bolted joints. Types of power screws, efficiency and self-locking, Design of power screw, Design of screw jack: (Complete Design).

10 Hours

Course outcomes

On completion of the course the student will be able to

1. Describe the design process, choose materials.
2. Apply the codes and standards in design process.
3. Analyze the behavior of machine components under static, impact, fatigue loading using failure theories.
4. Design shafts, joints, couplings.
5. Design of riveted and welded joints.
6. Design of threaded fasteners and power screws

Text Books:

1. Design of Machine Elements, V.B. Bhandari, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2nd Edition 2007.

REFRIGERATION AND AIR-CONDITIONING
(Professional Elective-I)

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Refrigeration And Air-Conditioning	15ME551	03	3-0-0	80	20	3Hrs

Pre-requisites: Basic and Applied Thermodynamics

Course objectives

1. Study the basic definition, ASHRAE Nomenclature for refrigerating systems
2. Understand the working principles and applications of different types of refrigeration systems
3. Study the working of air conditioning systems and their applications
4. Identify the performance parameters and their relations of an air conditioning system

Module – I

Introduction to Refrigeration –Basic Definitions, ASHRAE Nomenclature, Air Refrigeration Cycles-reversed Carnot cycle, Bell-Coleman cycle analysis, Air Refrigeration systems-merits and demerits and applications:Aircraft refrigeration cycles, Joule Thompson coefficient and Inversion Temperature, Linde, Claude and Stirling cycles for liquefaction of air.

Industrial Refrigeration-Chemical and process industries, Dairy plants, Petroleum refineries, Food processing and food chain, Miscellaneous
8 Hours

Module – II

Vapour Compression Refrigeration System(VCRS): Comparison of Vapour Compression Cycle and Gas cycle,Vapour Compression Refrigeration system Working and analysis, Limitations, Superheat horn and throttling loss for various refrigerants, efficiency,Modifications to standard cycle – liquid-suction heat exchangers, Grindlay cycle and Lorenz cycle, Optimum suction condition for optimum COP – Ewing’s construction and Gosney’s method.Actual cycles with pressure drops, Complete Vapour Compression Refrigeration System, Multi-Pressure,Multi-evaporator systems or Compound Vapour Compression Refrigeration Systems – Methods like Flash Gas removal, Flash inter cooling and water Inter cooling.

10 Hours

Module – III

Vapour Absorption Refrigeration Systems: Absorbent – Refrigerant combinations, Water-Ammonia Systems,Practical problems, Lithium- Bromide System, Contrast between the two systems, Modified Version of Aqua-Ammonia System with Rectifier and Analyzer Assembly.Practical problems – crystallization and air leakage, Commercial systems

Other types of Refrigeration systems: Brief Discussion on (i) Steam-Jet refrigeration system and (ii) Thermoelectric refrigeration, pulse tube refrigeration, thermo acoustic refrigeration systems

8

Hours

Module – IV

Refrigerants:Primary and secondary refrigerants, Designation of Refrigerants, Desirable properties of refrigerants including solubility in water and lubricating oil, material compatibility, toxicity, flammability, leak detection, cost, environment and performance issues Thermodynamic properties of refrigerants, Synthetic and natural refrigerants, Comparison between different refrigerants vis a vis applications, Special issues and practical implications Refrigerant mixtures – zeotropic and azeotropic mixtures

Refrigeration systems Equipment: Compressors, Condensers, Expansion Devices and Evaporators, A brief look at other components of the system.

8 Hours

Module – V

Air-Conditioning: Introduction to Air-Conditioning, Basic Definition, Classification, power rating, ASHRAE Nomenclature pertaining to Air-Conditioning, Applications of Air-Conditioning, Mathematical Analysis of Air-Conditioning Loads, Related Aspects, Different Air-Conditioning Systems-Central – Station Air-Conditioning System, Unitary Air-Conditioning System, Window Air-Conditioner and Packaged Air-Conditioner, Components related to Air-Conditioning Systems.

Transport air conditioning Systems: Air conditioning systems for automobiles (cars, buses etc.), Air conditioning systems for trains, Air conditioning systems for ships.

8 Hours

Course Outcomes

At the end of the course, the student will be able to:

1. Illustrate the principles, nomenclature and applications of refrigeration systems.
2. Explain vapour compression refrigeration system and identify methods for performance improvement
3. Study the working principles of air, vapour absorption, thermoelectric and steam-jet and thermo-acoustic refrigeration systems
4. Estimate the performance of air-conditioning systems using the principles of psychrometry.
5. Compute and Interpret cooling and heating loads in an air-conditioning system
6. Identify suitable refrigerant for various refrigerating systems

**NON TRADITIONAL MACHINING
(Professional Elective-I)**

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Non Traditional Machining	15ME554	03	3-0-0	80	20	3Hrs

MODULE 1

INTRODUCTION

Introduction to Non-traditional machining, Need for Non-traditional machining process, Comparison between traditional and non-traditional machining, general classification Non-traditional machining processes, classification based on nature of energy employed in machining, selection of non-traditional machining processes, Specific advantages, limitations and applications of non-traditional machining processes.

08 hours

MODULE 2

Ultrasonic Machining (USM): Introduction, Equipment and material process, Effect of process parameters: Effect of amplitude and frequency, Effect of abrasive grain diameter, effect of slurry, tool & work material. Process characteristics: Material removal rate, tool wear, accuracy, surface finish, applications, advantages & limitations of USM.

Abrasive Jet Machining (AJM): Introduction, Equipment and process of material removal, process variables: carrier gas, type of abrasive, work material, stand-off distance (SOD). Process characteristics- Material removal rate, Nozzle wear, accuracy & surface finish. Applications, advantages & limitations of AJM.

Water Jet Machining (WJM): Equipment & process, Operation, applications, advantages and limitations of WJM.

08 hours

MODULE 3

ELECTROCHEMICAL MACHINING (ECM)

Introduction, Principle of electro chemical machining: ECM equipment, elements of ECM operation, Chemistry of ECM. ECM Process characteristics: Material removal rate, accuracy, surface finish.

Process parameters: Current density, Tool feed rate, Gap between tool & work piece, velocity of electrolyte flow, type of electrolyte, its concentration temperature, and choice of electrolytes. ECM Tooling: ECM tooling technique & example, Tool & insulation materials.

Applications ECM: Electrochemical grinding and electrochemical honing process. Advantages, disadvantages and application of ECG, ECH.

CHEMICAL MACHINING (CHM)

Elements of the process: Resists (maskants), Etchants. Types of chemical machining process-chemical blanking process, chemical milling process.

Process characteristics of CHM: material removal rate, accuracy, surface finish, advantages, limitations and applications of chemical machining process.

10 hours

MODULE 4

ELECTRICAL DISCHARGE MACHINING (EDM)

Introduction, mechanism of metal removal, EDM equipment: spark erosion generator (relaxation type), dielectric medium-its functions & desirable properties, electrode feed control system. Flushing types; pressure flushing, suction flushing, side flushing, pulsed flushing. EDM process parameters: Spark frequency, current & spark gap, surface finish, Heat Affected Zone. Advantages, limitations & applications of EDM, Electrical discharge grinding, Traveling wire EDM.

PLASMA ARC MACHINING (PAM)

Introduction, non-thermal generation of plasma, equipment mechanism of metal removal, Plasma torch, process parameters, process characteristics. Safety precautions. Safety precautions, applications, advantages and limitations.

08 hours

MODULE 5

LASER BEAM MACHINING (LBM)

Introduction, generation of LASER, Equipment and mechanism of metal removal, LBM parameters and characteristics, Applications, Advantages & limitations.

ELECTRON BEAM MACHINING (EBM)

Introduction, Principle, equipment and mechanism of metal removal, applications, advantages and limitations.

08 hours

Course Outcomes

On completion of the course, the students will be able to

1. Understand the compare traditional and non-traditional machining process and recognize the need for Non-traditional machining process.
2. Understand the constructional features, performance parameters, process characteristics, applications, advantages and limitations of USM, AJM and WJM.
3. Identify the need of Chemical and electro-chemical machining process along with the constructional features, process parameters, process characteristics, applications, advantages and limitations.
4. Understand the constructional feature of the equipment, process parameters, process characteristics, applications, advantages and limitations EDM & PAM.
5. Understand the LBM equipment, LBM parameters, and characteristics. EBM equipment and mechanism of metal removal, applications, advantages and limitations LBM & EBM.

Text Books:

1. Modern Machining Process by P.C Pandey and H S Shah, McGraw Hill Education India Pvt. Ltd. 2000
2. Production technology, HMT, McGraw Hill Education India Pvt. Ltd. 2001

Reference Books

1. New Technology, Dr. Amitabha Bhattacharyya, The Institute of Engineers (India), 2000
2. Modern Machining process, Aditya, 2002.

ENERGY AND ENVIRONMENT
(OPEN ELECTIVE – I)

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Energy And Environment	15ME562	03	3-0-0	80	20	3Hrs

Course Objectives

1. Understand energy scenario, energy sources and their utilization
2. Learn about methods of energy storage, energy management and economic analysis
3. Have proper awareness about environment and eco system.
4. Understand the environment pollution along with social issues and acts.

Module – I

Basic Introduction to Energy: Energy and power, forms of energy, primary energy sources, energy flows, world energy production and consumption, Key energy trends in India: Demand, Electricity, Access to modern energy, Energy production and trade, Factors affecting India's energy development: Economy and demographics Policy and institutional framework, Energy prices and affordability, Social and environmental aspects, Investment. **8 Hours**

Module – II

Energy storage systems: Thermal energy storage methods, Energy saving, Thermal energy storage systems

Energy Management: Principles of Energy Management, Energy demand estimation, Energy pricing

Energy Audit: Purpose, Methodology with respect to process Industries, Characteristic method employed in Certain Energy Intensive Industries

Economic Analysis: Scope, Characterization of an Investment Project

10 Hours

Module – III

Environment: Introduction, Multidisciplinary nature of environmental studies- Definition, scope and importance, Need for public awareness.

Ecosystem: Concept, Energy flow, Structure and function of an ecosystem. Food chains, food webs and ecological pyramids, Forest ecosystem, Grassland ecosystem, Desert ecosystem and Aquatic ecosystems, Ecological succession. **8 Hours**

Module – IV

Environmental Pollution: Definition, Cause, effects and control measures of - Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution and Nuclear hazards, Solid waste Management, Disaster management Role of an individual in prevention of pollution, Pollution case studies. **8 Hours**

Module – V

Social Issues and the Environment: Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case Studies. Wasteland reclamation, Consumerism and waste products, Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation.

8 Hours

Course Outcomes

At the end of the course, the student will be able to:

1. Summarize the basic concepts of energy, its distribution and general Scenario.
2. Explain different energy storage systems, energy management, audit and economic analysis.
3. Summarize the environment eco system and its need for awareness.
4. Identify the various types of environment pollution and their effects.
5. Discuss the social issues of the environment with associated acts.

TEXT BOOKS:

1. Textbook for Environmental Studies For Undergraduate Courses of all Branches of Higher Education by University grant commission and Bharathi Vidyapeeth Institute of environment education and Research ,Pune
2. De, B. K., Energy Management audit & Conservation, 2nd Edition, Vrinda Publication, 2010.

FLUID MECHANICS & MACHINERY LAB

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Fluid Mechanics & Machinery Lab	15MEL57	02	1-0-2	80	20	3Hrs

Co-requisite Courses: Turbo Machines

Prerequisites : Fluid Mechanics and Thermodynamics

Course Objectives:

1. This course will provide a basic understanding of flow measurements using various types of flow measuring devices, calibration and losses associated with these devices.
2. Energy conversion principles, analysis and understanding of hydraulic turbines and pumps will be discussed. Application of these concepts for these machines will be demonstrated. Performance analysis will be carried out using characteristic curves.

PART – A

1. Lab layout, calibration of instruments and standards to be discussed
2. Determination of coefficient of friction of flow in a pipe.
3. Determination of minor losses in flow through pipes.
4. Application of momentum equation for determination of coefficient of impact of jets on flat and curved blades
5. Calibration of flow measuring devices.
6. Orifice meter
 - o Nozzle
 - o Venturimeter
 - o V-notch

PART – B

7. Performance on hydraulic Turbines
 - a. Pelton wheel
 - b. Francis Turbine
 - c. Kaplan Turbines
8. Performance hydraulic Pumps
 - d. Single stage and Multi stage centrifugal pumps
 - e. Reciprocating pump
9. Performance test on a two stage Reciprocating Air Compressor
10. Performance test on an Air Blower

PART – C (Optional)

11. Visit to Hydraulic Power station/ Municipal Water Pump House and Case Studies
12. Demonstration of cut section models of Hydraulic turbines and Pumps.

Course Outcomes:

At the end of this course students are able to,

1. Perform experiments to determine the coefficient of discharge of flow measuring devices.
2. Conduct experiments on hydraulic turbines and pumps to draw characteristics.
3. Test basic performance parameters of hydraulic turbines and pumps and execute the knowledge in real life situations.
4. Determine the energy flow pattern through the hydraulic turbines and pumps
5. Exhibit his competency towards preventive maintenance of hydraulic machines

Reading:

1. K.L.Kumar.“Engineering Fluid Mechanics” Experiments, Eurasia Publishing House, 1997
2. Jagdish Lal, Hydraulic Machines, Metropolitan Book Co, Delhi, 1995
3. [George E. Totten](#) , [Victor J. De Negri](#) “Handbook of Hydraulic Fluid Technology, Second Edition, 2011.

Scheme of Examination:

ONE question from part -A: 25 Marks
ONE question from part -B: 40 Marks
Viva –Voice : 15 Marks
Total: 80 Marks

ENERGY LAB

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Energy Lab	15MEL58	02	1-0-2	80	20	3Hrs

Prerequisites: Basic and Applied Thermodynamics

Course Objectives:

1. This course will provide a basic understanding of fuel properties and its measurements using various types of measuring devices
2. Energy conversion principles, analysis and understanding of I C Engines will be discussed. Application of these concepts for these machines will be demonstrated. Performance analysis will be carried out using characteristic curves.
3. Exhaust emissions of I C Engines will be measured and compared with the standards.

PART – A

1. Lab layout, calibration of instruments and standards to be discussed
2. Determination of Flash point and Fire point of lubricating oil using Abel Pensky and Marten's (closed) / Cleveland's (Open Cup) Apparatus.
3. Determination of Calorific value of solid, liquid and gaseous fuels.
4. Determination of Viscosity of a lubricating oil using Redwoods, Saybolt and Torsion Viscometers.
5. Analysis of moisture, volatile matter, ash content and fixed carbon of solid and liquid fuel samples
6. Valve Timing/port opening diagram of an I.C. Engine.

PART - B

7. Performance Tests on I.C. Engines, Calculations of IP, BP, Thermal efficiency, Volumetric efficiency, Mechanical efficiency, SFC, FP, A:F Ratio, heat balance sheet for
 - a. Four stroke Diesel Engine
 - b. Four stroke Petrol Engine
 - c. Multi Cylinder Diesel/Petrol Engine, (Morse test)
 - d. Two stroke Petrol Engine
 - e. Variable Compression Ratio I.C. Engine.
8. Measurements of Exhaust Emissions of Petrol engine.
9. Measurements of Exhaust Emissions of Diesel engine.
10. Measurement of $p\theta$, pV plots using Computerized IC engine test rig

PART – C (Optional)

11. Visit to Automobile Industry/service stations.
12. CFD Analysis of design, development, performance evaluation and process optimization in I C Engines.

Course Outcomes: At the end of this course students are able to,

1. Perform experiments to determine the properties of fuels and oils.
2. Conduct experiments on engines and draw characteristics.
3. Test basic performance parameters of I.C. Engine and implement the knowledge in industry.
4. Identify exhaust emission, factors affecting them and report the remedies.
5. Determine the energy flow pattern through the I C Engine
6. Exhibit his competency towards preventive maintenance of IC engines.

- 1. Core subject:** This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.
- 2. Professional Elective:** Elective relevant to chosen specialization/ branch
- 3. OpenElective:** Electives from other technical and/or emerging subject areas.

FINITE ELEMENT ANALYSIS

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Finite Element Analysis	15ME61	04	3-2-0	80	20	3Hrs

Course Objectives:

1. To learn basic principles of finite element analysis procedure .
2. To learn the theory and characteristics of finite elements that represent engineering structures.
3. To learn and apply finite element solutions to structural, thermal, dynamic problem to develop the knowledge and skills needed to effectively evaluate finite element analyses.

Module I

Introduction to Finite Element Method :General description of the finite element method. Engineering applications of finite element method. Boundary conditions: homogeneous and nonhomogeneous for structural, heat transfer and fluid flow problems.Potential energy method, Rayleigh Ritz method, Galerkin's method, Displacement method of finite element formulation. Convergence criteria, Discretisation process, Types of elements: 1D, 2D and 3D, Node numbering, Location of nodes. Strain displacement relations, Stress strain relations, Plain stress and Plain strain conditions, temperature effects.

Interpolation models: Simplex, complex and multiplex elements, Linear interpolation polynomials in terms of global coordinates 1D, 2D, 3D Simplex Elements.

10 Hours

Module II

One-Dimensional Elements-Analysis of Bars and Trusses,

Linear interpolation polynomials in terms of localcoordinate's for1D, 2Delements. Higher order interpolation functions for 1D quadratic and cubic elements in natural coordinates, , , Constant strain triangle, Four-Nodded Tetrahedral Element (TET 4), Eight-Nodded Hexahedral Element (HEXA

8), 2D isoparametric element, Lagrange interpolation functions, Numerical integration: Gaussian quadrature one point, two point formulae, 2D integrals. Fore terms: Body force, traction force and point loads,

Numerical Problems: Solution for displacement, stress and strain in 1D straight bars, stepped bars and tapered bars using elimination approach and penalty approach, Analysis of trusses.

10 Hours

Module III

Beams and Shafts: Boundary conditions, Load vector, Hermite shape functions, Beam stiffness matrix based on Euler-Bernoulli beam theory, Examples on cantilever beams, propped cantilever beams, Numerical problems on simply supported, fixed straight and stepped beams using direct stiffness method with concentrated and uniformly distributed load.

Torsion of Shafts: Finite element formulation of shafts, determination of stress and twists in circular shafts.

08 Hours

Module IV

Heat Transfer: Basic equations of heat transfer: Energy balance equation, Rate equation: conduction, convection, radiation, energy generated in solid, energy stored in solid, 1D finite element formulation using vibrational method, Problems with temperature gradient and heat fluxes, heat transfer in composite sections, straight fins.

Fluid Flow: Flow through a porous medium, Flow through pipes of uniform and stepped sections, Flow through hydraulic net works.

10 Hours

Module V

Axi-symmetric Solid Elements: Derivation of stiffness matrix of axisymmetric bodies with triangular elements, Numerical solution of axisymmetric triangular element(s) subjected to surface forces, point loads, angular velocity, pressure vessels.

Dynamic Considerations: Formulation for point mass and distributed masses, Consistent element mass matrix of one dimensional bar element, truss element, axisymmetric triangular element, quadrilateral element, beam element. Lumped mass matrix of bar element, truss element, Evaluation of eigen values and eigen vectors, Applications to bars, stepped bars, and beams.

Course outcomes:

Upon successful completion of this course you should be able to:

1. Understand the concepts behind formulation methods in FEM.
2. Identify the application and characteristics of FEA elements such as bars, beams, plane and iso-parametric elements.
3. Develop element characteristic equation and generation of global equation.
4. Able to apply suitable boundary conditions to a global equation for bars, trusses, beams, circular shafts, heat transfer, fluid flow, axi symmetric and dynamic problems and solve them displacements, stress and strains induced.

12Hours

Computer Integrated Manufacturing

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Computer Integrated Manufacturing	15ME62	04	3-2-0	80	20	3Hrs

Course Objectives:

CLO1	To impart knowledge of CIM and Automation and different concepts of automation by developing mathematical models.
CLO2	To make students to understand the Computer Applications in Design and Manufacturing [CAD / CAM) leading to Computer integrated systems. Enable them to perform various transformations of entities on display devices.
CLO3	To expose students to automated flow lines, assembly lines, Line Balancing Techniques, and Flexible Manufacturing Systems.
CLO4	To expose students to computer aided process planning, material requirement planning, capacity planning etc.
CLO5	To expose the students to CNC Machine Tools, CNC part programming, and industrial robots.
CLO6	To introduce the students to concepts of Additive Manufacturing, Internet of Things, and Industry 4.0 leading to Smart Factory.

Module - 1

1. Introduction to CIM and Automation:

Automation in Production Systems, automated manufacturing systems- types of automation, reasons for automating, Computer Integrated Manufacturing, computerized elements of a CIM system, CAD/CAM and CIM.

Mathematical models and matrices: production rate, production capacity, utilization and availability, manufacturing lead time, work-in-process, numerical problems. **5 Hours**

2. Automated Production Lines and Assembly Systems: Fundamentals, system configurations, applications, automated flow lines, buffer storage, control of production line, analysis of transfer lines, analysis of flow lines without storage, partial automation, analysis of automated flow lines with storage buffer, fundamentals of automated assembly systems, numerical problems. **5 Hours**

Module – 2

3. CAD and Computer Graphics Software: The design process, applications of computers in design, software configuration, functions of graphics package, constructing the geometry.

Transformations: 2D transformations, translation, rotation and scaling, homogeneous transformation matrix, concatenation, numerical problems on transformations.

5 Hours

4. Computerized Manufacture Planning and Control System: Computer Aided Process Planning, Retrieval and Generative Systems, benefits of CAPP, Production Planning and Control Systems, typical activities of PPC System, computer integrated production management system, Material Requirement Planning, inputs to MRP system, working of MRP, outputs and benefits, Capacity Planning, Computer Aided Quality Control, Shop floor control.

5 Hours

Module- 3

5. Flexible Manufacturing Systems: Fundamentals of Group Technology and Flexible Manufacturing Systems, types of FMS, FMS components, Material handling and storage system, applications, benefits, computer control systems, FMS planning and design issues, Automated Storage and Retrieval Systems, AS/RS and Automatic parts identification systems and data capture.

5 Hours

6. Line Balancing: Linebalancing algorithms, methods of line balancing, numerical problems on largest candidate rule, Kilbridge and Wester method, and Ranked Positional Weights method, Mixed Model line balancing, computerized line balancing methods.

5 Hours

Module-4.

7. Computer Numerical Control: Introduction, components of CNC, CNC programming, manual part programming, G Codes, M Codes, programming of simple components in turning, drilling and milling systems, programming with canned cycles. Cutter radius compensations.

5 Hours

8. Robot Technology: Robot anatomy, joints and links, common robot configurations, robot control systems, accuracy and repeatability, end effectors, sensors in robotics.

Robot programming methods: on-line and off-line methods.

Robot industrial applications: material handling, processing and assembly and inspection.

5 Hours

Module – 5

9. Additive Manufacturing Systems: Basic principles of additive manufacturing, slicing CAD models for AM, advantages and limitations of AM technologies, Additive manufacturing processes: Photo polymerization, material jetting, binder jetting, material extrusion, Powder bed sintering techniques, sheet lamination, direct energy deposition techniques, applications of AM. Recent trends in manufacturing, Hybrid manufacturing. **5 Hours**

10. Future of Automated Factory: Industry 4.0, functions, applications and benefits. Components of Industry 4.0, Internet of Things (IOT), IOT applications in manufacturing, Big-Data and Cloud Computing for IOT, IOT for smart manufacturing, influence of IOT on predictive maintenance, industrial automation, supply chain optimization, supply-chain & logistics, cyber-physical manufacturing systems. **5 Hours**

Course Outcomes:

After studying this course, students will be able to:

CO1	Able to define Automation, CIM, CAD, CAM and explain the differences between these concepts. Solve simple problems of transformations of entities on computer screen.
CO2	Explain the basics of automated manufacturing industries through mathematical models and analyze different types of automated flow lines.
CO3	Analyze the automated flow lines to reduce down time and enhance productivity.
CO4	Explain the use of different computer applications in manufacturing, and able to prepare part programs for simple jobs on CNC machine tools and robot programming.
CO5	Visualize and appreciate the modern trends in Manufacturing like additive manufacturing, Industry 4.0 and applications of Internet of Things leading to Smart Manufacturing.

Text Books:

1. Automation, Production Systems and Computer-Integrated Manufacturing, by Mikell P Groover, 4th Edition, 2015, Pearson Learning.
2. CAD / CAM Principles and Applications by P N Rao, 3rd Edition, 2015, Tata McGraw-Hill.
3. CAD/CAM/CIM, Dr. P. Radhakrishnan, 3rd edition, New Age International Publishers, New Delhi.

3. “Work Systems And The Methods, Measurement And Management of Work”, Groover M. P., Pearson/Prentice Hall, Upper Saddle River, NJ, 2007.
4. “Computer Automation in Manufacturing”, Boucher, T. O., Chapman & Hall, London, UK, 1996.
5. “Introduction to Robotics: Mechanics And Control”, Craig, J. J., 2nd Ed., Addison-Wesley Publishing Company, Reading, MA, 1989.
6. Internet of Things (IoT): Digitize or Die: Transform your organization. Embrace the digital evolution. Rise above the competition, by Nicolas Windpassinger, Amazon.
7. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti (Universities Press)
8. Additive Manufacturing Technologies: Rapid Prototyping to Direct Digital Manufacturing, 2nd Ed. (2015), Ian Gibson, David W. Rosen, Brent Stucker
9. **“Understanding Additive Manufacturing”**, Andreas Gebhardt, Hanser Publishers, 2011
10. Industry 4.0: The Industrial Internet of Things, Apress, 2017, by Alasdair Gilchrist

Heat Transfer

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Heat Transfer	15ME63	04	3-2-0	80	20	3Hrs

Pre-requisites: Basic and Applied Thermodynamics

Course learning objectives:

- Study the modes of heat transfer.
- Learn how to formulate and solve 1-D steady and unsteady heat conduction problems.
- Apply empirical correlations for fully-developed laminar, turbulent internal flows and external boundary layer convective flow problems.
- Study the basic principles of heat exchanger analysis and thermal design.
- Understand the principles of boiling and condensation including radiation heat transfer related engineering problems.

Module – I

Introductory concepts and definitions: Modes of heat transfer: Basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity; convective heat transfer coefficient; radiation heat transfer combined heat transfer mechanism, Types of boundary conditions. General Heat Conduction Equation: Derivation of the equation in (i) Cartesian, (ii) Polar and (iii) Spherical Co-ordinate Systems.

Steady-state one-dimensional heat conduction problems in Cartesian System: Steady-state one-dimensional heat conduction problems (i) with and without heat generation and (ii) with and without varying thermal conductivity - in Cartesian system with various possible boundary conditions, Thermal Resistances in Series and in Parallel. **8 Hours**

Module – II

Critical Thickness of Insulation: Concept, Derivation, Extended Surfaces or Fins: Classification, Straight Rectangular and Circular Fins, Temperature Distribution and Heat Transfer Calculations, Fin Efficiency and Effectiveness, Applications

Transient [Unsteady-state] heat conduction: Definition, Different cases - Negligible internal thermal resistance, negligible surface resistance, comparable internal thermal and surface resistance, Lumped body, Infinite Body and Semi-infinite Body, Numerical Problems, Heisler and Grober charts. **9 Hours**

Module – III

Numerical Analysis of Heat Conduction: Introduction, one-dimensional steady conduction, one dimensional unsteady conduction, two-dimensional steady and unsteady conduction, the difference equation, boundary conditions, solution methods, cylindrical coordinates and irregular boundaries.

Thermal Radiation: Fundamental principles - Gray, White, Opaque, Transparent and Black bodies, Spectral emissive power, Wien's, Rayleigh-Jeans' and Planck's laws, Hemispherical Emissive Power, Stefan-Boltzmann law for the total emissive power of a black body, Emissivity and Kirchhoff's Laws, View factor, Net radiation exchange in a two-body enclosure, Typical examples for these enclosures, Radiation Shield. **9 Hours**

Module – IV

Forced Convection: Boundary Layer Theory, Velocity and Thermal Boundary Layers, Prandtl number, Governing Equations – Continuity, Navier-Stokes and Energy equations, Boundary layer assumptions, Integral and Analytical solutions to above equations, Turbulent flow, Various empirical solutions, Forced convection flow over cylinders and spheres, Internal flows –laminar and turbulent flow solutions, Forced Convection Cooling of Electronic Devices.

Free convection: Laminar and Turbulent flows, Vertical Plates, Vertical Tubes and Horizontal Tubes, Empirical solutions.

8 Hours

Module – V

Heat Exchangers: Definition, Classification, applications, LMTD method, Effectiveness - NTU method, Analytical Methods, Fouling Factors, Chart Solution Procedures for solving Heat Exchanger problems: Correction Factor Charts and Effectiveness-NTU Charts, compact heat exchangers.

Heat Transfer with Phase Change: Introduction to boiling, pool boiling, Bubble Growth Mechanisms, Nucleate Pool Boiling, Critical Heat Flux in Nucleate Pool Boiling, Pool Film Boiling, Critical Heat Flux, Heat Transfer beyond the Critical Point, filmwise and dropwise Condensation, heat pipes, entrainment, wicking and boiling limitations.

9 Hours

Course Outcomes

At the end of the course, the student will be able to:

- Understand the basic modes of heat transfer.
- Compute temperature distribution in steady-state and unsteady-state heat conduction
- Understand and interpret heat transfer through extended surfaces.
- Interpret and compute forced and free convective heat transfer.
- Explain the principles of radiation heat transfer and understand the numerical formula for heat conduction problems.
- Design heat exchangers using LMTD and NTU methods.

TEXT BOOKS:

1. Principals of heat transfer, Frank Kreith, Raj M. Manglik, Mark S. Bohn, Seventh Edition, Cengage learning, 2011.
2. Yunus A. Cengel - Heat transfer, a practical approach, Fifth edition, Tata Mc Graw Hill.

REFERENCE BOOKS:

4. Heat Transfer, Holman, J. P., 9th Edition, Tata McGraw Hill, New York, 2008.

E-Books/Web references:

1. A Text book of Heat Transfer, John H Lienhard, 4th Edition,
2. NPTEL Heat Transfer course for Mechanical Engineering, <http://nptel.ac.in/courses/112101097/>
3. Heat Transfer, Chris Long & Naser Sagma, Bookboon.com

MOOCs:

1. Fluid flow, Heat and Mass Transfer- <http://ocw.tudelft.nl/courses/applied-earth-sciences/fluid-flow-heat-mass-transfer/course>
2. Heat transfer course- <https://legacy.saylor.org/me204/Intro/>

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing at least one full question from each module.

DESIGN OF MACHINE ELEMENTS II

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Design of Machine Elements II	15ME64	04	3-2-0	80	20	3Hrs

Course Objectives:

CLO1	To understand various elements involved in a mechanical system.
CLO2	To analyze various forces acting on the elements of a mechanical system and design them using appropriate techniques, codes, and standards.
CLO3	To select transmission elements like gears, belts, pulleys, bearings from the manufacturers' catalogue.
CLO4	To design completely a mechanical system integrating machine elements.
CLO5	To produce assembly and working drawings of various mechanical systems involving machine elements like belts, pulleys, gears, springs, bearings, clutches and brakes.

MODULE I

Curved Beams: Stresses in curved beams of standard cross sections used in crane hook, punching presses & clamps, closed rings and links.

Cylinders & Cylinder Heads: Review of Lamé's equations; compound cylinders, stresses due to different types of fit on cylinders; cylinder heads and flats.

08 Hours

MODULE 2

Belts: Materials of construction of flat and V belts, power rating of belts, concept of slip and creep, initial tension, effect of centrifugal tension, maximum power condition.

Selection of flat and V belts-length & cross section from manufacturers' catalogues.

Construction and application of timing belts.

Wire ropes: Construction of wire ropes, stresses in wire ropes, and selection of wire ropes.

(Only theoretical treatment)

Chain drive: Types of power transmission chains, modes of failure for chain, and lubrication of chains. (Only theoretical treatment)

Springs:Types of springs, spring materials, stresses in helical coil springs of circular and non-circular cross sections. Tension and compression springs, concentric springs;springs under fluctuating loads.

Leaf Springs: Stresses in leaf springs,equalized stresses, and nipping of leaf springs.

Introduction to torsion and Belleville springs.

10 Hours

MODULE 3

Gear drives: Classification of gears, materials for gears, standard systems of gear tooth, gear tooth failure modes and lubrication of gears.

Spur Gears: Definitions, stresses in gear tooth: Lewis equation and form factor, design for strength, dynamic load and wear.

Helical Gears: Definitions, transverse and normal module, formative number of teeth, design based on strength, dynamic load and wear.

Bevel Gears: Definitions, formative number of teeth, design based on strength, dynamic load and wear.

12 Hours

MODULE 4

Worm Gears:Definitions, types of worm and worm gears, and materials for worm and worm wheel. Design based on strength, dynamic, wear loads and efficiency of worm gear drives.

Design of Clutches:Types of clutches and their applications, single plate and multi-plate clutches.

(Numerical examples only on single and multi-plate clutches)

Design of Brakes:Types of Brakes, Block and Band brakes,selflocking of brakes, and heat generation in brakes.

10 Hours

MODULE 5

Lubrication and Bearings:Lubricants and their properties, bearing materials and properties;mechanisms of lubrication,hydrodynamic lubrication, pressure development in oil film, bearing modulus, coefficient of friction, minimum oil film thickness, heat generated, and heat dissipated.

Numerical examples on hydrodynamic journal and thrust bearing design.

Anti friction bearings:Types of rolling contact bearings and their applications, static and dynamic load carrying capacities, equivalent bearing load, load life relationship; selection of deep groove ball bearings from the manufacturers' catalogue; selection of bearings subjected to cyclic loads and speeds; probability of survival.

10 Hours

Course Outcomes:

After learning the course the students should be able to:

CO1	Apply engineering design tools to product design.
CO2	Design mechanical systems involving springs, belts and pulleys.
CO3	Design different types of gears and simple gear boxes for different applications.
CO4	Design brakes and clutches.
CO5	Design hydrodynamic bearings for different applications.
CO6	Select Anti friction bearings for different applications using the manufacturers, catalogue.
CO7	Develop proficiency to generate production drawings using CAD software.
CO8	Become good design engineers through learning the art of working in a team with morality and ethics.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

Assignment:

Course work includes a **Design project**. Design project should enable the students to design a mechanical system (like single stage reduction gear box with spur gears, single stage worm reduction gear box, V-belt and pulley drive system, machine tool spindle with bearing mounting, C-clamp, screw jack, single plate clutch, etc.) A group of students (maximum number in a group should be 4) should submit assembly drawing and part drawings, completely dimensioned, indicating the necessary manufacturing tolerances, surface finish symbols and geometric tolerances wherever necessary. Design project must be completed using appropriate solid modeling software. Computer generated drawings must be submitted. Design calculations must be hand written and should be included in the report.

Design project should be given due credit (5 marks) in internal assessment.

METAL FORMING

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Metal Forming	15ME653	3	3-0-0	80	20	3Hrs

Course objectives:

The course is intended to provide basic understanding of Metal Forming with following aspects:

- To acquaint with the basic knowledge on fundamentals of metal forming processes
- To study various metal forming processes
- Understanding plastic deformation during forming processes

MODULE -1

Introduction to Metal Forming: Classification of metal forming processes, advantages and limitations, stress-strain relations in elastic and plastic deformation. Concepts of true stress, true strain, triaxial & biaxial stresses. Determination of flow stress, principal stresses, yield criteria and their significance, Tresca & Von-Mises yield criteria, concepts of plane stress & plane strain. Deformation mechanisms, Hot and Cold working processes and its effect on mechanical properties. **10 Hrs**

MODULE -2

Effects of Parameters: Metallurgical aspects of metal forming, slip, twinning mechanics of plastic deformation, Effects of Temperature, strain rate, friction and lubrication, hydrostatic pressure in metalworking, Deformation zone geometry, workability of materials, Residual stresses in wrought products.

Forging: Classification of forging processes. Forging machines equipment. Expressions for forging pressures & load in open die forging and closed die forging by slab analysis, concepts of friction hill and factors affecting it. Die-design parameters. Material flow lines in forging, forging defects, residual stresses in forging. Simple problems. **10 Hrs**

MODULE -3

Rolling: Classification of rolling processes. Types of rolling mills, expression for rolling load. Roll separating force. Frictional losses in bearing, power required in rolling, effects of front & back tensions, friction, friction hill. Maximum possible reduction. Defects in rolled products. Rolling variables. Simple problems.

Drawing: Drawing equipment & dies, expression for drawing load by slab analysis, power requirement. Redundant work and its estimation, optimal cone angle & dead zone formation, drawing variables, Tube drawing, classification of tube drawing. Simple problems. **10 Hrs**

MODULE -4

Extrusion:Types of extrusion processes, extrusion equipment & dies, deformation, lubrication & defects in extrusion. Extrusion dies, extrusion of seamless tubes. Extrusion variables. Simple problems.

Sheet Metal Forming: Forming methods, dies & punches, progressive die, compound die, combination die. Rubber forming. Open back inclinable press (OBI press), piercing, blanking, bending, deep drawing, LDR in drawing, Forming limit criterion, defects of drawn products, stretch forming. Roll bending & contouring. Simple problems. **10 Hrs**

MODULE -5

High Energy Rate Forming Methods & Powder Metallurgy: High Energy Rate Forming Methods: Principles, advantages and applications, explosive forming, electro hydraulic forming, Electromagnetic forming.

Powder Metallurgy: Basic steps in Powder metallurgy brief description of methods of production of metal powders, conditioning and blending powders, compaction and sintering application of powder metallurgy components, advantages and limitations. **10 Hrs**

Course outcomes:

On completion of this subject, students will be:

2. Able to understand the concept of different metal forming process.
3. Able to approach metal forming processes both analytically and numerically
4. Able to design metal forming processes
5. Able to develop approaches and solutions to analyze metal forming processes and the associated problems and flaws.

TEXT BOOKS:

1. Mechanical metallurgy (SI Units), G.E.Dieter, McGraw hill Pub-2001.
2. Production Technology (Manufacturing process, technology and Automation), R.K Jain, Khanna Publishers-2004.
3. Manufacturing Science, Amithab Gosh & A.K.Malik, East-West press 2001.
4. Production Technology Vol-II by O. P. Khanna & Lal, Dhanpat Rai Publications-2012.
5. A Course in Workshop Technology Vol: 1, Manufacturing Process, B.S Raghuwanshi, Published by Dhanpat Rai & Co (P) Ltd.-2014.

REFERENCE BOOKS:

2. Elements of Workshop Technology Vol:1, S.K.Hajra Choudhury, Media Promoters & Publishers Pvt Ltd.-2008.
3. Fundamentals of Manufacturing Processes by Lal G K , Narosa
4. Textbook of Production Engineering by P. C. Sharma, S Chand & Company Ltd.

E- Learning

- VTU, E- learning

Scheme of Examination:

Two question to be set from each module. Students have to answer five full questions, choosing at least one full question from each module.

AUTOMOBILE ENGINEERING

Course	Code	Credits	L-T-P	Assessment		Exam duration
				SEE	CIA	
Automobile	15ME655	3	3-0-0	80	20	3 Hrs

Course learning objectives: The student will be able to learn

- The layout and arrangement of principal parts of an automobile
- The working of transmission and brake systems
- The operation and working of steering and suspension systems
- To know the Injection system and its advancements
- To know the automobile emissions and its effects on environment

MODULE 1

ENGINE COMPONENTS AND IT'S PRINCIPLE PARTS: Spark Ignition (SI) & Compression Ignition (CI) engines, cylinder – arrangements and their relatives merits, Liners, Piston, connecting rod, crankshaft, valves, valve actuating mechanisms, valve and port timing diagrams, Types of combustion chambers for S.I.Engine and C.I.Engines, methods of a Swirl generation, choice of materials for different engine components, engine positioning. Concept of HCCI engines, hybrid engines, twin spark engine, electric car.

COOLING AND LUBRICATION: cooling requirements, types of cooling- thermo siphon system, forced circulation water cooling system, water pump, Radiator, thermostat valves. Significance of lubrication, splash and forced feed system. **10 Hours**

MODULE 2

TRANSMISSION SYSTEMS: Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints ,Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.

BRAKES: Types of brakes, mechanical compressed air, vacuum and hydraulic braking systems, construction and working of master and wheel cylinder, brake shoe arrangements, Disk brakes, drum brakes, Antilock –Braking systems, purpose and operation of antilock-braking system, ABS Hydraulic Unit, Rear-wheel antilock & Numerical **08 Hours**

MODULE 3

STEERING AND SUSPENSION SYSTEMS: Steering geometry and types of steering gear box-Power Steering, Types of Front Axle, Suspension, Torsion bar suspension systems, leaf spring, coil spring, independent suspension for front wheel and rear wheel, Air suspension system.

IGNITION SYSTEM: Battery Ignition system, Magneto Ignition system, electronic Ignition system. **08 Hours**

MODULE 4

SUPERCHARGERS AND TURBOCHARGERS: Naturally aspirated engines, Forced Induction, Types of superchargers, Turbocharger construction and operation, Intercooler, Turbocharger lag.

FUELS, FUEL SUPPLY SYSTEMS FOR SI AND CI ENGINES: Conventional fuels, alternative fuels, normal and abnormal combustion, cetane and octane numbers, Fuel mixture requirements for SI engines, types of carburetors, C.D.& C.C. carburetors, multi point and single point fuel injection systems, fuel transfer pumps, Fuel filters, fuel injection pumps and injectors. Electronic Injection system, Common Rail Direct Injection System.

08 Hours

MODULE 5

AUTOMOTIVE EMISSION CONTROL SYSTEMS: Different air pollutants, formation of photochemical smog and causes. Automotive emission controls, Controlling crankcase emissions, Controlling evaporative emissions, Cleaning the exhaust gas, Controlling the air-fuel mixture, Controlling the combustion process, Exhaust gas recirculation, Treating the exhaust gas, Air-injection system, Air-aspirator system, Catalytic converter.

EMISSION STANDARDS: Euro I, II, III and IV norms, Bharat Stage II, III, IV norms. Motor Vehicle Act

08 Hours

Course Outcomes: Student will be able

- To identify the different parts of an automobile and it's working
- To understand the working of transmission and braking systems
- To comprehend the working of steering and suspension systems
- To learn various types of fuels and injection systems
- To know the cause of automobile emissions ,its effects on environment and methods to reduce the emissions.

TEXT BOOKS:

1. Automobile engineering, Kirpal Singh, Vol I and II (12th Edition) Standard Publishers 2011
2. Automotive Mechanics, S. Srinivasan, (2nd Edition) Tata McGraw Hill 2003.

REFERENCE BOOKS:

1. Automotive mechanics, William H Crouse & Donald L Anglin (10th Edition) Tata McGraw Hill Publishing Company Ltd., 2007
2. Automotive mechanics: Principles and Practices, Joseph Heitner, D Van Nostrand Company, Inc
3. Fundamentals of Automobile Engineering, K.K.Ramalingam, Scitech Publications (India) Pvt. Ltd.
4. Automobile Engineering, R. B. Gupta, Satya Prakashan,(4th Edition) 1984.

TOTAL QUALITY MANAGEMENT

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Total Quality Management	15ME664	03	3-0-0	80	20	3Hrs

COURSE LEARNING OBJECTIVES:

This course enables students to

1. Understand various approaches to TQM
2. Understand the characteristics of quality leader and his role.
3. Develop feedback and suggestion systems for quality management.
4. Enhance the knowledge in Tools and Techniques of quality management

Module - 1

Principles and Practice: Definition, basic approach, gurus of TQM, TQM Framework, awareness, defining quality, historical review, obstacles, benefits of TQM.

Quality Management Systems: Introduction, benefits of ISO registration, ISO 9000 series of standards, ISO 9001 requirements.

08 Hours

Module - 2

Leadership: Definition, characteristics of quality leaders, leadership concept, characteristics of effective people, ethics, the Deming philosophy, role of TQM leaders, implementation, core values, concepts and framework, strategic planning communication, decision making,

08 Hours

Module - 3

Customer Satisfaction and Customer Involvement:

Customer Satisfaction: customer and customer perception of quality, feedback, using customer complaints, service quality, translating needs into requirements, customer retention, case studies.

Employee Involvement – Motivation, employee surveys, empowerment, teams, suggestion system, recognition and reward, gain sharing, performance appraisal, unions and employee involvement, case studies.

08 Hours

Module - 4

Continuous Process Improvement: process, the Juran trilogy, improvement strategies, types of problems, the PDCA Cycle, problem-solving methods, Kaizen, reengineering, six sigma, case studies.

Statistical Process Control : Pareto diagram, process flow diagram, cause and effect diagram, check sheets, histograms, statistical fundamentals, Control charts, state of control, out of control process, control charts for variables, control charts for attributes, scatter diagrams, case studies

Module - 5

Tools and Techniques: Benchmarking, information technology, quality management systems, environmental management system, and quality function deployment, quality by design, failure mode and effect analysis, product liability, total productive maintenance.

08 Hours

COURSE OUTCOMES:

Student will be able to

1. Explain the various approaches of TQM
2. Infer the customer perception of quality
3. Analyze customer needs and perceptions to design feedback systems.
4. Apply statistical tools for continuous improvement of systems
5. Apply the tools and technique for effective implementation of TQM.

TEXT BOOKS:

1. Total Quality Management: Dale H. Besterfield, Publisher -Pearson Education India, ISBN: 8129702606, Edition 03.

2. : Introduction to Operations Research- Concepts and Cases, F.S. Hillier. G.J. Lieberman, 9th Edition, Tata McGraw Hill. 2010.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing at least one full question from each module.

Heat Transfer Lab

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Heat Transfer Lab	15MEL67	02	1-0-2	80	20	3Hrs

Co-requisite Courses: Heat Transfer

Course Objectives:

- The primary objective of this course is to provide the fundamental knowledge necessary to understand the behavior of thermal systems.
- This course provides a detailed experimental analysis, including the application and heat transfer through solids, fluids, and vacuum. Convection, conduction, and radiation heat transfer in one and two dimensional steady and unsteady systems are examined.

PART – A

1. Determination of Thermal Conductivity of a Metal Rod.
2. Determination of Overall Heat Transfer Coefficient of a Composite wall.
3. Determination of Effectiveness on a Metallic fin.
4. Determination of Heat Transfer Coefficient in a free Convection on a
5. Determination of Heat Transfer Coefficient in a Forced Convection Flow through a Pipe.
6. Determination of Emissivity of a Surface.
7. Analysis of steady and transient heat conduction, temperature distribution of plane wall and cylinder using Numerical approach (ANSYS/CFD package).

PART – B

1. Determination of Steffan Boltzmann Constant.
2. Determination of LMDT and Effectiveness in a Parallel Flow and Counter Flow Heat Exchangers.
3. Experiments on Boiling of Liquid and Condensation of Vapour.
4. Performance Test on a Vapour Compression Refrigeration.
5. Performance Test on a Vapour Compression Air – Conditioner.
6. Experiment on Transient Conduction Heat Transfer.
7. Determination of temperature distribution along a rectangular and circular fin subjected to heat loss through convection using Numerical approach (ANSYS/CFD package)

Course Outcomes: At the end of this course students are able to,

- Perform experiments to determine the thermal conductivity of a metal rod

- Conduct experiments to determine convective heat transfer coefficient for free and forced convection and correlate with theoretical values.
- Estimate the effective thermal resistance in composite slabs and efficiency in pin-fin
- Determine surface emissivity of a test plate
- Estimate performance of a refrigerator and effectiveness of fin
- Calculate temperature distribution of study and transient heat conduction through plane wall, cylinder and fin using numerical approach.

Reading:

1. M. Necati Ozisik, Heat Transfer – A Basic Approach, McGraw Hill, New York, 2005.
2. Incropera, F. P. and De Witt, D. P., Fundamentals of Heat and Mass Transfer, 5th Edition, John Wiley and Sons, New York, 2006.
3. Holman, J. P., Heat Transfer, 9th Edition, Tata McGraw Hill, New York, 2008.

Scheme of Examination:

ONE question from part -A: 25 Marks

ONE question from part -B: 40 Marks

Viva –Voice : 15 Marks

Total: 80 Marks

Modeling and Analysis Lab (FEA)

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Modeling and Analysis Lab	15MEL68	02	1-0-2	80	20	3Hrs

CREDITS – 02

Prerequisites: Knowledge of any Modeling software, knowledge of coordinate systems and Geometric transformations etc.

Course objectives:

The course is intended to provide basic understanding of Modeling and Analysis techniques students with following aspects:

- To acquire basic understanding of Modeling and Analysis software
- To understand the different kinds of analysis and apply the basic principles to find out the stress and other related parameters of bars, beams loaded with loading conditions.
- To learn to apply the basic principles to carry out dynamic analysis to know the natural frequency of different kind of beams.

PART – A

Study of a FEA package and modeling and stress analysis of:

1. Bars of constant cross section area, tapered cross section area and stepped bar
2. Trusses – **(Minimum 2 exercises of different types)**
3. Beams – Simply supported, cantilever, beams with point load , UDL, beams with varying load etc **(Minimum 6 exercises different nature)**
4. Stress analysis of a rectangular plate with a circular hole

PART - B

- 1) Thermal Analysis – 1D & 2D problem with conduction and convection boundary conditions **(Minimum 4 exercises of different types)**
- 2) Dynamic Analysis to find
 - a) Fixed – fixed beam for natural frequency determination

- b) Bar subjected to forcing function
- c) Fixed – fixed beam subjected to forcing function

PART – C (only for demo and oral exam)

- 1) Demonstrate the use of graphics standards (IGES, STEP etc) to import the model from modeler to solver
- 2) Demonstrate one example of contact analysis to learn the procedure to carry out contact analysis.
- 3) Demonstrate at least two different type of example to model and analyze bars or plates made from composite material

Course Outcomes: At the end of the course the students are able to:

- Demonstrate the basic features of an analysis package.
- Use the modern tools to formulate the problem, and able to create geometry, discretize, apply boundary condition to solve problems of bars, truss, beams, plate to find stress with different-loading conditions.
- Demonstrate the deflection of beams subjected to point, uniformly distributed and varying loads further to use the available results to draw shear force and bending moment diagrams.
- Analyze the given problem by applying basic principle to solve and demonstrate 1D and 2D heat transfer with conduction and convection boundary conditions.
- Carry out dynamic analysis and finding natural frequencies for various boundary conditions and also analyze with forcing function.

ENERGY ENGINEERING

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Energy Engineering	15ME71	04	3-2-0	80	20	3Hrs

Course learning objectives is to

- Understand energy scenario, energy sources and their utilization
- Learn about energy conversion methods and their analysis
- Study the principles of renewable energy conversion systems
- Understand the concept of green energy and zero energy.

Module – I

Thermal Energy conversion system: Review of energy scenario in India, General Philosophy and need of Energy, Different Types of Fuels used for steam generation, Equipment for burning coal in lump form, stokers, different types, Oilburners, Advantages and Disadvantages of using pulverized fuel, Equipment for preparation and burning of pulverized coal, unit system and bin system. Pulverized fuel furnaces, cyclone furnace, Coal and ash handling, Generation of steam using forced circulation, high and supercritical pressures. Chimneys: Natural, forced, induced and balanced draft, Calculations and numerical involving height of chimney to produce a given draft. Cooling towers and Ponds. Accessories for the Steam generators such as Superheaters, De-superheater, control of superheaters, Economizers, Air preheaters and re-heaters.

9 Hours

Module – II

Diesel Engine Power System: Applications of Diesel Engines in Power field. Method of starting Diesel engines. Auxiliaries like cooling and lubrication system, filters, centrifuges, Oil heaters, intake and exhaust system, Layout of diesel power plant.

Hydro-Electric Energy: Hydrographs, flow duration and mass curves, unit hydrograph and numerical. Storage and pondage, pumped storage plants, low, medium and high head plants, Penstock, water hammer, surge tanks, gates and valves. General layout of hydel power plants.

7 Hours

Module – III

Solar Energy: Fundamentals; Solar Radiation; Estimation of solar radiation on horizontal and inclined surfaces; Measurement of solar radiation data, Solar Thermal systems: Introduction; Basics of thermodynamics and heat transfer; Flat plate collector; Evacuated Tubular Collector; Solar air collector; Solar concentrator; Solar distillation; Solar cooker; Solar refrigeration and air conditioning; Thermal energy storage systems, Solar Photovoltaic systems: Introduction; Solar cell Fundamentals; Characteristics and classification; Solar cell: Module, panel and Array construction; Photovoltaic thermal systems

8 Hours

Module – IV

Wind Energy: Properties of wind, availability of wind energy in India, wind velocity and power from wind; major problems associated with wind power, wind machines; Types of wind machines and their characteristics, horizontal and vertical axis wind mills, coefficient of performance of a wind mill rotor (Numerical Examples).

Tidal Power: Tides and waves as energy suppliers and their mechanics; fundamental characteristics of tidal power, harnessing tidal energy, limitations.

8 Hours

Module – V

Biomass Energy: Introduction; Photosynthesis Process; Biofuels; Biomass Resources; Biomass conversion technologies; Urban waste to energy conversion; Biomass gasification.

Green Energy: Introduction: Fuel cells: Overview; Classification of fuel cells; Operating principles; Fuel cell thermodynamics Nuclear, ocean, MHD, thermoelectric and geothermal energy applications; Origin and their types; Working principles, Zero energy Concepts

8 Hours

Course Outcomes

At the end of the course, the student will be able to:

- Summarize the basic concepts of thermal energy systems,
- Identify renewable energy sources and their utilization.
- Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
- Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas.
- Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
- Identify methods of energy storage for specific applications

TEXT BOOKS:

1. B H Khan, Non conventional energy resources, 3rd Edition, McGraw Hill Education
2. Principles of Energy conversion, A. W. Culp Jr., McGraw Hill. 1996

REFERENCE BOOKS:

1. S.P. Sukhatme, Solar Energy: principles of Thermal Collection and Storage, Tata McGraw-Hill (1984).
2. C. S. Solanki, "Solar Photovoltaic's: Fundamental Applications and Technologies, Prentice Hall of India, 2009.
3. L.L. Freris, Wind Energy Conversion Systems, Prentice Hall, 1990.

Scheme of Examination: Two questions to be set from each module. Students have to answer five full questions, choosing at least one full question from each module.

FLUID POWER SYSTEMS

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Fluid Power Systems	15ME72	04	3-2-0	80	20	3Hrs

Course objectives:

CLO1	To provide an insight into the capabilities of hydraulic and pneumatic fluid power.
CLO2	To understand concepts and relationships surrounding force, pressure, energy and power in fluid power systems.
CLO3	To examine concepts centering on sources of hydraulic power, rotary and linear actuators, distribution systems, hydraulic flow in pipes, and control components in fluid power systems.
CLO4	Exposure to build and interpret hydraulic and pneumatic circuits related to industrial applications.
CLO5	To familiarize with logic controls and trouble shooting

Module 1: Introduction to fluid power systems

Fluid power system: components, advantages and applications. Transmission of power at static and dynamic states. Pascal's law and its applications. Fluids for hydraulic system: types, properties, and selection. Additives, effect of temperature and pressure on hydraulic fluid. Seals, sealing materials, compatibility of seal with fluids. Types of pipes, hoses, and quick acting couplings. Pressure drop in hoses/pipes. Fluid conditioning through filters, strainers; sources of contamination and contamination control; heat exchangers.

10 hours

Module 2: Pumps and actuators

Pumps: Classification of pumps, Pumping theory of positive displacement pumps, construction and working of Gear pumps, Vane pumps, Piston pumps, fixed and variable displacement pumps, Pump performance characteristics, pump selection factors, problems on pumps.

Accumulators: Types, selection/ design procedure, applications of accumulators. Types of Intensifiers, Pressure switches /sensor, Temperature switches/sensor, Level sensor.

Actuators: Classification cylinder and hydraulic motors, Hydraulic cylinders, single and double acting cylinder, mounting arrangements, cushioning, special types of cylinders, problems on cylinders.

Construction and working of rotary actuators such as gear, vane, piston motors, and Hydraulic Motor. Theoretical torque, power, flowrate, and hydraulic motor performance; numerical problems. Symbolic representation of hydraulic actuators (cylinders and motors).

10 hours

Module 3: Components and hydraulic circuit design

Components: Classification of control valves, Directional Control Valves-symbolic representation, constructional features of poppet, sliding spool, rotary type valves solenoid and pilot operated DCV, shuttle valve, and check valves.

Pressure control valves - types, direct operated types and pilot operated types.

Flow Control Valves -compensated and non-compensated FCV, needle valve, temperature compensated, pressure compensated, pressure and temperature compensated FCV, symbolic representation.

Hydraulic Circuit Design:Control of single and Double -acting hydraulic cylinder, regenerative circuit, pump unloading circuit, double pump hydraulic system, counter balance valve application,hydrauliccylinder sequencing circuits, cylinder synchronizing circuit using different methods, hydraulic circuit for force multiplication;speedcontrol of hydraulic cylinder- metering in, metering out and bleed off circuits.Pilot pressure operated circuits.Hydraulic circuit examples withaccumulator.

10 hours

Module4: Pneumatic power systems

Introduction to Pneumatic systems:Pneumatic power system, advantages, limitations, applications, Choice of working medium. Characteristics of compressed air and air compressors. Structure of pneumatic control System, fluid conditioners-dryers and FRL unit.

Pneumatic Actuators: Linear cylinder –types of cylinders, working, end position cushioning, seals, mounting arrangements, and applications. Rotary cylinders- types, construction and application, symbols.

Pneumatic Control Valves: DCV such as poppet, spool, suspended seat type slide valve, pressure control valves, flow control valves, types and construction, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, twin pressure valve, symbols.

10 hours

Module5: Pneumatic control circuits

Simple Pneumatic Control: Direct and indirect actuation pneumatic cylinders, speed control of cylinders - supply air throttling and exhaust air throttling.

Signal Processing Elements: Use of Logic gates - OR and AND gates in pneumatic applications.

Practical examples involving the use of logic gates.

Multi- Cylinder Application: Coordinated and sequential motion control, motion and control diagrams. Signal elimination methods, Cascading method-principle, Practical application examples (up to two cylinders) using cascading method (using reversing valves).

Electro- Pneumatic Control: Principles - signal input and output, pilot assisted solenoid control of directional control valves, use of relay and contactors. Control circuitry for simple signal cylinder application.

10 hours

COURSE OUTCOMES:

After studying this course, students will be able to:

CO1	Identify and analyse the functional requirements of a fluid power transmission system for a
------------	---

	given application.
CO2	Visualize how a hydraulic/pneumatic circuit will work to accomplish the function.
CO3	Design an appropriate hydraulic or pneumatic circuit or combination circuit like electro-hydraulics, electro-pneumatics for a given application.
CO4	Select and size the different components of the circuit.
CO5	Develop a comprehensive circuit diagram by integrating the components selected for the given application.

5. Thomson, Introduction to Fluid power, Prentice Hall, 2004
6. John Watton, "Fundamentals of fluid power control", Cambridge University press, 2012.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

Learning Assignment:

The faculty will allocate one or more of the following experiments from group A and B to group of students (containing not more than four students in a group):

Group A: Experiments on hydraulic trainer:

- a. Speed control circuit using metering in and metering out technique
- b. Regenerative and sequencing circuits.
- c. Extend-Retract and Stop system of a linear actuator
- d. Rapid Traverse and Feed circuit.

Group B: Experiments on pneumatic trainer:

- a. Automatic reciprocating circuit
- b. Speed control circuit
- c. Pneumatic circuit involving shuttle valve/ quick exhaust valve
- d. Electro pneumatic valves and circuit

Students should build up the above circuits on computer using software and simulate the flow of fluid during the operation. Afterwards, they themselves can physically connect the circuit on the hydraulic/pneumatic trainer and run the circuit. Record of experiments shall be submitted in the form of journal. Due credit must be given for this assignment (5 Marks).

CONTROL ENGINEERING

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Control Engineering	15ME73	04	3-2-0	80	20	3Hrs

Course Objectives	<ol style="list-style-type: none"> 1. Modeling of mechanical, hydraulic, pneumatic and electrical systems. 2. Representation of system elements by blocks and its reduction 3. Transient and steady state response analysis of a system. 4. Frequency response analysis using polar plot. 5. Frequency response analysis using bode plot. 6. Analysis of system using root locus plots. 7. Different system compensators and variable characteristics of linear systems.
-------------------	---

MODULE I

Introduction: Concept of automatic controls, Open loop and closed loop systems, Concepts of feedback, requirements of an ideal control system, Types of controllers-Proportional, Integral, Differential, Proportional & Integral, Proportional Differential and Proportional Integral Differential controllers.

(7 Hours)

MODULE 2

Modeling of Physical Systems :Mathematical Models of Mechanical, Electrical, Thermal, Hydraulic and Pneumatic Systems.
(3 hours)

Analogous Systems: Direct and inverse analogs for mechanical, thermal and fluid systems.

(4 hours)

Block diagram Algebra: General representation of a feedback control system, transfer functions, rules of block diagram algebra, reduction of block dia. to obtain closed loop transfer function.

Signal flow graphs : Mason's gain formula

(6 Hours)

MODULE 3

Steady state operation: Steady state analysis for general block dia. for a control system, steady state characteristics, equilibrium in a system.
(3 hours)

Transient Response: Transient response and steady state analysis of unit, step input, general operational representation for a differential equation of control system, distinct, repeated and complex conjugate zeros, general form of transient response, Routh's stability criterion for a control system.
(4 hours)

Root Locus Plots : Root locus method: Significance of Root locus, angle and magnitude conditions, breakaway points, angles of departure and arrival, construction of Root locus using general rules and steps, Lead and Lag compensation
(6 Hours)

MODULE 4

Frequency Domain Analysis: Relationship between time and frequency response, Polar plot, Bode's Plot, Nyquist plot and Nyquist stability criterion, Relative Stability, Phase and Gain Margins
(14 Hours)

MODULE 5

System Compensation and State Variable Characteristics of Linear Systems :Series and feedback compensation, Introduction to state concepts, state equation of linear continuous data system. Matrix representation of state equations, controllability and observability, Kalman and Gilberts test .

(7 Hours)

Course Outcomes
CO1: Recognize control system and its types , control actions
CO2: Determine the system governing equations for physical models(Electrical, Thermal, Mechanical, Electro Mechanical)
CO3: Calculate the gain of the system using block diagram and signal flow graph
CO4: Illustrate the response of 1st and 2nd order systems
CO5: Determine the stability of transfer functions in complex domain and frequency domain
CO6: Employ state equations to study the controllability and observability

TRIBOLOGY

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Tribology	15ME742	03	3-0-0	80	20	3Hrs

Course objectives:

CLO1	To educate the students on the importance of friction, the related theories/laws of sliding and rolling friction and the effect of viscosity of lubricants.
CLO2	To expose the students to the consequences of wear, wear mechanisms, wear theories and analysis of wear problems.
CLO3	To make the students understand the principles of lubrication, lubrication regimes, theories of hydrodynamic and the advanced lubrication techniques.
CLO4	To expose the students to the factors influencing the selection of bearing materials for different sliding applications.
CLO5	To introduce the concepts of surface engineering and its importance in tribology.

Module 1

Introduction to tribology: Historical background, practical importance, and subsequent use in the field.

Lubricants: Types and specific field of applications. Properties of lubricants, viscosity, its measurement, effect of temperature and pressure on viscosity, lubrication types, standard grades of lubricants, and selection of lubricants.

8 hours

Module 2

Friction: Origin, friction theories, measurement methods, friction of metals and non-metals.

Wear: Classification and mechanisms of wear, delamination theory, debris analysis, testing methods and standards. Related case studies.

8 hours

Module 3

Hydrodynamic journal bearings: Friction forces and power loss in a lightly loaded journal bearing, Petroff's equation, mechanism of pressure development in an oil film, and Reynold's equation in 2D.

Introduction to idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's number and its significance; partial bearings, end leakages in journal bearing, numerical examples on full journal bearings only.

10 hours

Module 4

Plane slider bearings with fixed/pivoted shoe: Pressure distribution, Load carrying capacity, coefficient of friction, frictional resistance in a fixed/pivoted shoe bearing, center of pressure, numerical examples.

Hydrostatic Lubrication: Introduction to hydrostatic lubrication, hydrostatic step bearings, load carrying capacity and oil flow through the hydrostatic step bearing, numerical examples.

8 hours

Module5

Bearing Materials: Commonly used bearings materials, and properties of typical bearing materials. Advantages and disadvantages of bearing materials.

Introduction to Surface engineering: Concept and scope of surface engineering.

Surface modification – transformation hardening, surface melting, thermo chemical processes.

Surface Coating – plating, fusion processes, vapor phase processes.

Selection of coating for wear and corrosion resistance.

8 hours

COURSE OUTCOMES:

After studying this course, students will be able to:

CO1	Understand the fundamentals of tribology and associated parameters.
CO2	Apply concepts of tribology for the performance analysis and design of components experiencing relative motion.
CO3	Analyse the requirements and design hydrodynamic journal and plane slider bearings for a given application.
CO4	Select proper bearing materials and lubricants for a given tribological application.
CO5	Apply the principles of surface engineering for different applications of tribology.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

Use of approved Design Data Handbook/charts can be permitted during the examination.

MECHATRONICS

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Mechatronics	15ME753	03	3-0-0	80	20	3 Hrs

Course objectives:

1. Understand the evolution and development of Mechatronics as a discipline.
2. Substantiate the need for interdisciplinary study in technology education.
3. Understand the applications of microprocessors in various systems and to know the functions of each element
4. Demonstrate the integration philosophy in view of Mechatronics technology

MODULE -1

Introduction: Definition, Multidisciplinary Scenario, Evolution of Mechatronics, Design of Mechatronics system, Objectives, advantages and disadvantages of Mechatronics.

Transducers and sensors: Definition and classification of transducers, Difference between transducer and sensor, Definition and classification of sensors, Principle of working and applications of light sensors, proximity switches and Hall Effect sensors. 10 Hours

MODULE -2

Microprocessor & Microcontrollers: Introduction, Microprocessor systems, Basic elements of control systems, Microcontrollers, Difference between Microprocessor and Microcontrollers.

Microprocessor Architecture: Microprocessor architecture and terminology-CPU, memory and address, I/O and Peripheral devices, ALU, Instruction and Program, Assembler, Data, Registers, Program Counter, Flags, Fetch cycle, write cycle, state, bus interrupts. Intel's 8085A Microprocessor. 10 Hours

MODULE -3

Programmable logic controller: Introduction to PLC's, basic structure, Principle of operation, Programming and concept of ladder diagram, concept of latching & selection of a PLC.

Integration: Introduction & background, Advanced actuators, Pneumatic actuators, Industrial Robot, different parts of a Robot-Controller, Drive, Arm, End Effectors, Sensor & Functional requirements of robot. 10 Hours

MODULE -4

Mechanical actuation systems: Mechanical systems, types of motion, Cams, Gear trains, Ratchet & Pawl, belt and chain drives, mechanical aspects of motor selection.

Electrical actuation systems: Electrical systems, Mechanical switches, Solenoids, Relays, DC/AC Motors, Principle of Stepper Motors & servomotors. 10 Hours

MODULE -5

Pneumatic and hydraulic actuation systems: Actuating systems, Pneumatic and hydraulic systems, Classifications of Valves, Pressure relief valves, Pressure regulating/reducing valves, Cylinders and rotary actuators.

DCV & FCV: Principle & construction details, types of sliding spool valve,

solenoid operated, Symbols of hydraulic elements, components of hydraulic system, functions of various units of hydraulic system. Design of simple hydraulic circuits for various applications.

10 Hours

Course outcomes:

On completion of this subject, students will be able to:

1. Illustrate various components of Mechatronics systems.
2. Assess various control systems used in automation.
3. Develop mechanical, hydraulic, pneumatic and electrical control systems.

TEXT BOOKS:

1. NitaigourPremchandMahalik , Mechatronics-Principles, Concepts and Applications, Tata McGraw Hill, 1stEdition, 2003 ISBN.No. 0071239243, 9780071239240.

E- Learning

- VTU, E- learning

Scheme of Examination:

Two question to be set from each module. Students have to answer five full questions, choosing at least one full question from each module.

DESIGN LABORATORY

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Design Laboratory	15MEL76	02	1-0-2	80	20	3Hrs

Prerequisites: Knowledge of Dynamics and Machines and Design of Machine Elements

COURSE OBJECTIVES:

Students are expected-

1. To understand the natural frequency, logarithmic decrement, damping ratio and damping.
2. To understand the balancing of rotating masses.
3. To understand the concept of the critical speed of a rotating shaft.
4. To understand the concept of stress concentration using Photo elasticity.
5. To understand the equilibrium speed, sensitiveness, power and effort of Governor.

PART –A

1. Determination of natural frequency, logarithmic decrement, damping ratio and damping Co-efficient in a single degree of freedom vibrating systems (longitudinal and torsional)
2. Determination of critical speed of rotating shaft.
3. Balancing of rotating masses.
4. Determination of fringe constant of Photo-elastic material using Circular disk subjected diametric compression, Pure bending specimen (four point bending)
5. Determination of stress concentration using Photo elasticity for simple components like Plate with hole under tension or bending, circular disk with circular hole under compression, 2-d crane hook.

PART –B

1. Determination of equilibrium speed, sensitiveness, power and effort of Porter/ Proel / Hartnell Governor. (at least one)
2. Determination of pressure distribution in Journal bearing
3. Determination of principle stresses and strain in a member subjected to combined loading using strain rosettes.
4. Determination of stresses in curved beam using strain gauge.
5. Experiments on Gyroscope (Demonstration only)

COURSE OUTCOMES

At the end of the course, the students will be able to:

1. To understand the working principles of machine elements such as Governors, Gyroscopes etc.,
2. To identify forces and couples in rotating mechanical system components.
3. To identify vibrations in machine elements and design appropriate damping methods and to determine the critical speed of a rotating shaft.
4. To measure strain in various machine elements using strain gauges.
5. To determine the minimum film thickness, load carrying capacity, frictional torque and pressure distribution of journal bearing.
6. To determine strain induced in a structural member using the principle of photo-elasticity.

Scheme of Examination:

One question from Part A:	32 Marks
One question from part B:	32 Marks
Viva- Voce:	16 Marks
Total:	80 Marks

COMPTER INTEGRATED MANUFACTURING LAB

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Computer Integrated Manufacturing LAB	15MEL77	02	1-0-2	80	20	3Hrs

Course Objectives:

CLO1	To expose the students to the techniques of CNC programming and cutting tool path generation through CNC simulation software by using G-Codes and M-codes.
CLO2	To educate the students on the usage of CAM packages.
CLO3	To make the students understand the importance of automation in industries through exposure to FMS, Robotics, and Hydraulics and Pneumatics.

Part-A

Manual CNC part programming for 2 turning and 2 milling parts. Selection and assignment of tools, correction of syntax and logical errors, and verification of tool path.

CNC part programming using CAM packages. Simulation of Turning, Drilling, Milling operations.

3 typical simulations to be carried out using simulation packages like: **CademCAMLab-Pro, Master- CAM.**

Program generation using software. Optimize spindle power, torque utilization, and cycle time. Generation and printing of shop documents like process and cycle time sheets, tool list, and tool layouts. Cut the part in single block and auto mode and measure the virtual part on screen.

Post processing of CNC programs for standard CNC control systems like FANUC, SINUMERIC and MISTUBISHI.

Part B

(Only for Demo/Viva voce)

FMS (Flexible Manufacturing System): Programming of Automatic storage and Retrieval system (ASRS) and linear shuttle conveyor Interfacing CNC lathe, milling with loading unloading arm and ASRS to be carried out on simple components.

(Only for Demo/Viva voce)

Robot programming: Using Teach Pendent & Offline programming to perform pick and place, stacking of objects (2 programs).

Pneumatics and Hydraulics, Electro-Pneumatics: 3 typical experiments on Basics of these topics to be conducted.

Course Outcomes:

After studying this course, students will be able to:

CLO1	Generate CNC Lathe part program for Turning, Facing, Chamfering, Grooving, Step turning, Taper turning, Circular interpolation etc.
CLO2	Generate CNC Mill Part programming for Point to point motions, Line motions, Circular interpolation, Contour motion, Pocket milling- circular, rectangular, Mirror commands etc.
CLO3	Use Canned Cycles for Drilling, Peck drilling, Boring, Tapping, Turning, Facing, Taper turning Thread cutting etc.
CLO4	Simulate Tool Path for different Machining operations of small components using CNC Lathe & CNC Milling Machine.
CLO5	Use high end CAM packages for machining complex parts; use state of art cutting tools and related cutting parameters; optimize cycle time.
CLO6	Understand & write programs for Robotcontrol;understand the operating principles of hydraulics, pneumatics and electropneumatic systems. Apply this knowledge to automate & improve efficiency of manufacturing.

Scheme for Examination:

Two Questions from Part A - 60 Marks (30 +30)

Viva-Voce - 20 Marks

Total: 80 Marks

Professional Elective-V	
15ME832	Experimental Stress Analysis

- 1. Core subject:** This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.
- 2. Professional Elective:** Elective relevant to chosen specialization/ branch
- 3. Internship / Professional Practice:** To be carried out between 6th& 7th semester vacation or 7th& 8th semester vacation.

OPERATIONS RESEARCH

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Operations Research	15ME81	4	3-2-0	80	20	3 Hrs

Course objectives:

1. To enable the students to understand the scientific methods of providing various departments of an organization with a quantitative basis of decision making.
2. To enable the students to understand the importance of various tools and techniques in finding optimal solutions to problems involving limited resources in the form of Men, Materials and machinery.

MODULE -1

Introduction: Evolution of OR, Definitions of OR, Scope of OR, Applications of OR, Phases in OR study. Characteristics and limitations of OR, models used in OR,

Linear Programming Problem (LPP), Generalized LPP- Formulation of problems as L.P.P. Solutions to LPP by graphical method (Two Variables).

08 Hours

MODULE -2

LPP: Simplex method, Canonical and Standard form of LP problem, slack, surplus and artificial variables, Solutions to LPP by Simplex method, Big-M Method and Two Phase Simplex Method, Degeneracy in LPP. Concept of Duality, writing Dual of given LPP. Solutions to L.P.P by Dual Simplex Method.

12 Hours

MODULE -3

Transportation Problem: Formulation of transportation problem, types, initial basic feasible solution using North-West Corner rule, Vogel's Approximation method. Optimality in Transportation problem by Modified Distribution (MODI) method. Unbalanced T.P. Maximization T.P. Degeneracy in transportation problems, application of transportation problem.

Assignment Problem- Formulation, Solutions to assignment problems by Hungarian method, Special cases in assignment problems, unbalanced, Maximization assignment problems.

Travelling Salesman Problem (TSP). Difference between assignment and T.S.P, Finding best route by Little's method. Numerical Problems.

12 Hours

MODULE -4

Network analysis: Introduction, Construction of networks, Fulkerson's rule for numbering the nodes, AON and AOA diagrams; Critical path method to find the expected completion time of a project, determination of floats in networks, PERT networks, determining the probability of completing a project, predicting the completion time of project; Cost analysis in networks. Crashing of networks- Problems.

Queuing Theory: Queuing systems and their characteristics, Pure-birth and Pure-death models (only equations), Kendall & Lee's notation of Queuing, empirical queuing models – Numerical on M/M/1 and M/M/C Queuing models. 10 Hours

MODULE -5

Game Theory: Definition, Pure Strategy problems, Saddle point, Max-Min and Min-Max criteria, Principle of Dominance, Solution of games with Saddle point. Mixed Strategy problems. Solution of 2X2 games by Arithmetic method, Solution of 2Xn m and mX2 games by graphical method. Formulation of games.

Sequencing: Basic assumptions, Johnson's algorithm, sequencing 'n' jobs on single machine using priority rules, sequencing using Johnson's rule-'n' jobs on 2 machines, 'n' jobs on 3 machines, 'n' jobs on 'm' machines. Sequencing of 2 jobs on 'm' machines using graphical method. 08 Hours

Course outcomes:

On completion of this subject, students will be able to:

1. Understand the meaning, definitions, scope, need, phases and techniques of operations research.
2. Formulate as L.P.P and derive optimal solutions to linear programming problems by graphical method, Simplex method, Big-M method and Dual Simplex method.
3. Formulate as Transportation and Assignment problems and derive optimum solutions for transportation, Assignment and travelling salesman problems.
4. Solve problems on game theory for pure and mixed strategy under competitive environment.
5. Solve waiting line problems for M/M/1 and M/M/K queuing models.
6. Construct network diagrams and determine critical path, floats for deterministic and PERT networks including crashing of Networks.
7. Determine minimum processing times for sequencing of n jobs-2 machines, n jobs-3 machines, n jobs-m machines and 2 jobs-n machines using Johnson's algorithm.

TEXT BOOKS:

1. Operations Research, P K Gupta and D S Hira, S. Chand and Company LTD.

Publications, New Delhi – 2007

2. Operations Research, An Introduction, Seventh Edition, Hamdy A. Taha, PHI Private Limited, 2006.

REFERENCE BOOKS:

1. Operations Research, Theory and Applications, Sixth Edition, J K Sharma, Trinity Press, Laxmi Publications Pvt.Ltd. 2016.
2. Operations Research, Paneerselvan, PHI
3. Operations Research, A M Natarajan, P Balasubramani, Pearson Education, 2005
4. Introduction to Operations Research, Hillier and Lieberman, 8thEd., McGraw Hill

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing at least one full question from each module.

ADDITIVE MANUFACTURING

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Additive Manufacturing	15ME82	4	4-0-0	80	20	3 Hrs

Course Objectives:

Students will be able to

1. Understand the additive manufacturing process, polymerization and powder metallurgy process
2. Understand characterisation techniques in additive manufacturing.
3. Acquire knowledge on CNC and Automation.

Module 1

Introduction to Additive Manufacturing: Introduction to AM, AM evolution, Distinction between AM & CNC machining, Advantages of AM, **AM process chain:** Conceptualization, CAD, conversion to STL, Transfer to AM, STL file manipulation, Machine setup, build , removal and clean up, post processing.

Classification of AM processes: Liquid polymer system, Discrete particle system, Molten material systems and Solid sheet system.

Post processing of AM parts: Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern, property enhancements using non-thermal and thermal techniques.

Guidelines for process selection: Introduction, selection methods for a part, challenges of selection

AM Applications: Functional models, Pattern for investment and vacuum casting, Medical models, art models, Engineering analysis models, Rapid tooling, new materials development, Bi-metallic parts, Re-manufacturing. Application examples for Aerospace, defence, automobile, Bio-medical and general engineering industries

10 Hours

Module 2

System Drives and devices: Hydraulic and pneumatic motors and their features, Electrical motors AC/DC and their features

Actuators: Electrical Actuators; Solenoids, Relays, Diodes, Thyristors, Triacs, Hydraulic and Pneumatic actuators, Design of Hydraulic and Pneumatic circuits, Piezoelectric actuators, Shape memory alloys.

8 Hours

Module 3

POLYMERS & POWDER METALLURGY

Basic Concepts: Introduction to Polymers used for additive manufacturing: polyamide, PF resin, polyesters etc. Classification of polymers, Concept of functionality,

12 Hours

	<p>Polydispersity and Molecular weight [MW], Molecular Weight Distribution [MWD] Polymer Processing: Methods of spinning for additive manufacturing: Wet spinning, Dry spinning. Biopolymers, Compatibility issues with polymers. Moulding and casting of polymers, Polymer processing techniques General Concepts: Introduction and History of Powder Metallurgy (PM), Present and Future Trends of PM Powder Production Techniques: Different Mechanical and Chemical methods, Atomisation of Powder, other emerging processes.Characterization Techniques: Particle Size & Shape Distribution, Electron Microscopy of Powder, Interparticle Friction, Compression ability, Powder Structure, Chemical Characterization Microstructure Control in Powder: Importance of Microstructure Study, Microstructures of Powder by Different techniques Powder Shaping: Particle Packing Modifications, Lubricants & Binders, Powder Compaction & Process Variables, Pressure & Density Distribution during Compaction, Isotactic Pressing, Injection Moulding, Powder Extrusion, Slip Casting, Tape Casting. Sintering: Theory of Sintering, Sintering of Single & Mixed Phase Powder, Liquid Phase Sintering Modern Sintering Techniques, Physical & Mechanical Properties Evaluation, Structure-Property Correlation Study, Modern Sintering techniques, Defects Analysis of Sintered Components Application of Powder Metallurgy: Filters, Tungsten Filaments, Self-Lubricating Bearings, Porous Materials, Biomaterials etc.</p>	
Module 4		
	<p>NANO MATERIALS & CHARACTERIZATION TECHNIQUES: Introduction: Importance of Nano-technology, Emergence of Nanotechnology, Bottom-up and Top-down approaches, challenges in Nanotechnology Nano-materials Synthesis and Processing: Methods for creating Nanostructures; Processes for producing ultrafine powders- Mechanical grinding; Wet Chemical Synthesis of Nano-materials- sol-gel process; Gas Phase synthesis of Nano-materials- Furnace, Flame assisted ultrasonic spray pyrolysis; Gas Condensation Processing (GPC), Chemical Vapour Condensation(CVC). Optical Microscopy - principles, Imaging Modes, Applications, Limitations. Scanning Electron Microscopy (SEM) - principles, Imaging Modes, Applications, Limitations. Transmission Electron Microscopy (TEM) - principles, Imaging Modes, Applications, Limitations.X- Ray Diffraction (XRD) - principles, Imaging Modes, Applications, Limitations.Scanning Probe Microscopy (SPM) - principles, Imaging Modes, Applications, Limitations, Limitations.Atomic Force Microscopy (AFM) - basic principles, instrumentation, operational modes, Applications, Limitations. Electron Probe Micro Analyzer (EPMA) - Introduction, Sample preparation, Working procedure, Applications, Limitations.</p>	10 Hours
Module 5		
	<p>MANUFACTURING CONTROL AND AUTOMATION CNC technology - An overview: Introduction to NC/CNC/DNC machine tools,</p>	10 Hours

	<p>Classification of NC /CNC machine tools, Advantage, disadvantages of NC /CNC machine tools, Application of NC/CNC Part programming: CNC programming and introduction, Manual part programming: Basic (Drilling, milling, turning etc.), Special part programming, Advanced part programming, Computer aided part programming (APT)</p> <p>Introduction: Automation in production system principles and strategies of automation, basic Elements of an automated system. Advanced Automation functions. Levels of Automations, introduction to automation productivity</p> <p>Control Technologies in Automation: Industrial control system. Process industry vs discrete manufacturing industries. Continuous vs discrete control. Continuous process and its forms. Other control system components.</p>	
--	---	--

Course Outcomes

1. Understand the different process of Additive Manufacturing. using Polymer, Powder and Nano materials manufacturing.
2. Analyse the different characterization techniques.
3. Describe the various NC, CNC machine programing and Automation techniques.

TEXT BOOKS:

1. Chua Chee Kai, Leong Kah Fai, "Rapid Prototyping: Principles & Applications", World Scientific, 2003.
2. G Odian Principles of Polymerization, Wiley Inerscience John Wiley and Sons, 4th edition, 2005
3. Mark James Jackson, Microfabrication and Nanomanufacturing, CRC Press, 2005.
4. Powder Metallurgy Technology, Cambridge International Science Publishing, 2002.
5. P. C. Angelo and R. Subramanian: Powder Metallurgy- Science, Technology and Applications, PHI, New Delhi, 2008.
6. Mikell P Groover, Automation, Production Systems and Computer Integrated Manufacturing, 3rd Edition, Prentice Hall Inc., New Delhi, 2007.

REFERENCE BOOKS:

1. Wohler's Report 2000 - Terry Wohlers - Wohler's Association -2000
2. Computer Aided Manufacturing - P.N. Rao, N.K. Tewari and T.K. Kundra Tata McGraw Hill 1999
3. Ray F. Egerton , Physical Principles of Electron Microscopy: An Introduction to TEM, SEM, and AEM , Springer, 2005.
4. P. C. Angelo and R. Subramanian: Powder Metallurgy- Science, Technology and Applications, PHI, New Delhi, 2008.

EXPERIMENTAL STRESS ANALYSIS

Course	Code	Credits	L-T-P	Assessment		Exam Duration
				SEE	CIA	
Experimental Stress Analysis	15ME832	3	3-0-0	80	20	3 Hrs

Course Learning Objectives (CLO's):

1. To use the method of electrical strain gauges to study and characterize the elastic behavior of solid bodies.
2. To measure displacement and perform stress strain analysis of mechanical systems using electrical resistance strain gauges.
3. To describe the photo elastic method to study and characterize the elastic behavior of solid bodies.
4. To determine stress strain behavior of solid bodies using methods of coating.
5. To conduct stress strain analysis of solid bodies using the methods Holography

Module - 1

Introduction: Definition of terms, Calibration, Standards, Dimension and units generalized measurement system. Basic concepts in dynamic measurements, system response, distortion, impedance matching, Analysis of experimental data, cause and types of experimental errors. general consideration in data analysis.

03Hours

Electrical Resistance Strain Gages: Strain sensitivity in metallic alloys, Gageconstruction, Adhesives and mounting techniques, Gage sensitivity and gage factor, Performance' Characteristics, Environmental effects, Strain Gage circuits. Potentiometer, Wheatstone's bridges, Constant current circuits.

05 Hours

Module -2

Strain Analysis Methods: Two element, three element rectangular and delta rosettes, Correction for transverse strain effects, Stress gage, Plane shear gage, Stress intensity factor gage.

04 Hours

Force, Torque and strain measurements: Mass balance measurement, Elastic element for force measurements, torque measurement.

02 Hours

Module –3

Photoelasticity: Nature of light, Wave theory of light - optical interference, Stress optic law –effect of stressed model in plane and circular polariscopes, Isoclinics&Isochromatics, Fringe order determination Fringe multiplication techniques , Calibration photoelastic model materials

06Hours

Two Dimensional Photoelasticity: Separation methods: Shear difference method, Analytical separation methods, Model to prototype scaling, Properties of 2D photoelastic model materials, Materials for 2D photoelasticity

02 Hours

Module - 4

Three Dimensional Photo elasticity: Stress freezing method, Scattered light photoelasticity, Scattered light as an interior analyzer and polarizer, Scattered light polariscope and stress data Analyses.

04 Hours

Photoelastic (Birefringent) Coatings : Birefringence coating stresses, Effects of coating thickness: Reinforcing effects, Poisson's, Stress separation techniques: Oblique incidence, Strip coatings

06 Hours

Module –5

Brittle Coatings: Coatings stresses, Crack patterns, Refrigeration techniques, Load relaxation techniques, Crack detection methods, Types of brittle coatings, Calibration of coating. Advantages and brittle coating applications.

05Hours

Moire Methods: Moire fringes produced by mechanical interference .Geometrical approach, Displacement field approach to Moire fringe analysis, Out of plane displacement measurements, Out of plane slope measurements .Applications and advantages

05Hours

Course Outcomes (CO's):

At the end of the course, the student will be able to:

1. Explain characterize the elastic behavior of solid bodies.
2. Describe stress strain analysis of mechanical systems using electrical resistance strain gauges.
3. Discuss skills for experimental investigations an accompanying laboratory course is desirable
4. Discuss experimental investigations by predictions by other methods.
5. Describe various coating techniques.

TEXT BOOKS:

1. "**Experimental Stress Analysis**", Dally and Riley, McGraw Hill.
2. "**Experimental Stress Analysis**". Sadhu Singh, Khanna publisher.
3. **Experimental stress Analysis**, Srinath L.S tata Mc Graw Hill.

Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Crystal Structure: BCC, FCC and HCP Structures, coordination number and atomic packing factors, crystal imperfections -point line and surface imperfections. Atomic Diffusion: Phenomenon, Flick's laws of diffusion, factors affecting diffusion.

06 Hours

UNIT - 2

Mechanical Behaviour: Stress-strain diagram showing ductile and brittle behaviour of materials, linear and non linear elastic behaviour and properties, mechanical properties in plastic range, yield strength offset yield strength, ductility, ultimate tensile strength, toughness. Plastic deformation of single crystal by slip and twinning.

06 Hours

UNIT - 3

Fracture: Type I, Type II and Type III.

Creep: Description of the phenomenon with examples. three stages of creep, creep properties, stress relaxation.

Fatigue: Types of fatigue loading with examples, Mechanism of fatigue, fatigue properties, fatigue testing and S-N diagram.

07 Hours

UNIT - 4

Solidification: Mechanism of solidification, Homogenous and Heterogeneous nucleation, crystal growth, cast metal structures.

Phase Diagram I: Solid solutions Hume Rothary rule substitutional, and interstitial solid solutions, intermediate phases, Gibbs phase rule.

07 Hours

PART - B

UNIT - 5

Phase Diagram II: Construction of equilibrium diagrams involving complete and partial solubility, lever rule. Iron carbon equilibrium diagram description of phases, solidification of steels and cast irons, invariant reactions.

06 Hours

UNIT - 6

Heat treating of metals: TTT curves, continuous cooling curves, annealing and its types. normalizing, hardening, tempering, martempering, austempering, hardenability, surface hardening methods like carburizing, cyaniding, nitriding, flame hardening and induction hardening, age hardening of aluminium-copper alloys.

07 Hours

UNIT - 7

Ferrous and non ferrous materials: Properties, Composition and uses of

- Grey cast iron, malleable iron, SG iron and steel
- Copper alloys-brasses and bronzes.
Aluminium alloys-Al-Cu,Al-Si,Al-Zn alloys.

06 Hours

UNIT - 8

Composite Materials: Definition, classification, types of matrix materials & reinforcements, fundamentals of production of FRP' sand MMC's advantages and application of composites.

07 Hours

TEXT BOOKS:

1. **Foundations of Materials Science and Engineering**, Smith, 4th Edition McGraw Hill, 2009
2. **Materials Science, Shackelford., & M. K. Muralidhara**, Pearson Publication – 2007.

REFERENCE BOOKS:

MECHANICAL MEASUREMENTS AND METROLOGY

Sub Code	: 10ME 32B / 42B	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART- A

UNIT-1:

Standards of measurement: Definition and Objectives of metrology, Standards of length-International prototype meter, Imperial standard yard, Wave length standard, subdivision of standards, line and end standard, calibration of end bars (Numerical), Slip gauges, Wringing phenomena, Indian Standards (M-81, M-12), Numerical problems on building of slip gauges.

06 Hours

UNIT-2:

System of Limits, Fits, Tolerance and Gauging: Definition of tolerance, Specification in assembly, Principle of interchangeability and selective assembly limits of size, Indian standards, concept of limits of size and tolerances, compound tolerances, accumulation of tolerances, definition of fits, types of fits and their designation (IS 919-1963), geometrical tolerance, positional-tolerances, hole basis system, shaft basis system, classification of gauges, brief concept of design of gauges (Taylor's principles), Wear allowance on gauges, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge and gauge materials.

07 Hours

UNIT-3:

Comparators and Angular measurement: Introduction to comparators, characteristics, classification of comparators, mechanical comparators-Johnson Mikrokator, sigma comparators, dial indicator, optical comparators-principles, Zeiss ultra optimeter, electric and electronic comparators-principles, LVDT, pneumatic comparators, back pressure gauges, solex comparators. Angular measurements, bevel protractor, sine principle and use of sine bars, sine centre, use of angle gauges (numericals on building of angles), clinometers.

07 Hours

UNIT-4:

Interferometer and screw thread, gear measurement: Interferometer, interferometry, autocollimator. Optical flats. Terminology of screw threads, measurement of major diameter, minor diameter, pitch, angle and effective diameter of screw threads by 2 - wire and 3 - wire methods, best size wire. Tool maker's microscope, gear tooth terminology, use of gear tooth vernier caliper and micrometer.

06 Hours

PART-B

UNIT-5:

Measurements and measurement systems: Definition, significance of measurement, generalized measurement system, definitions and concept of accuracy, precision, calibration, threshold, sensitivity, hysteresis, repeatability, linearity, loading effect, system response-times delay. Errors in measurement, classification of errors. Transducers, transfer efficiency, primary and secondary transducers, electrical, mechanical, electronic transducers, advantages of each type transducers. **07 Hours**

UNIT-6:

Intermediate modifying and terminating devices: Mechanical systems, inherent problems, electrical intermediate modifying devices, input circuitry, ballast circuit, electronic amplifiers and telemetry. Terminating devices, mechanical, cathode ray oscilloscope, oscillographs, X-Y plotters. **06 Hours**

UNIT-7:

Measurement of force, torque and pressure: Principle, analytical balance, platform balance, proving ring. Torque measurement, Prony brake, hydraulic dynamometer. Pressure measurements, principle, use of elastic members, Bridgeman gauge, McLeod gauge, Pirani gauge. **06 Hours**

UNIT-8:

Temperature and strain measurement: Resistance thermometers, thermocouple, law of thermo couple, materials used for construction, pyrometer, optical pyrometer. Strain measurements, strain gauge, preparation and mounting of strain gauges, gauge factor, methods of strain measurement. **07 Hours**

TEXT BOOKS:

1. **Mechanical Measurements**, Beckwith Marangoni and Lienhard, Pearson Education, 6th Ed., 2006.
2. **Engineering Metrology**, R.K. Jain, Khanna Publishers, 1994.

REFERENCE BOOKS:

1. **Engineering Metrology**, I.C. Gupta, Dhanpat Rai Publications, Delhi.
2. **Mechanical Measurements**, R.K. Jain Khanna Publishers, 1994
3. **Industrial Instrumentation**, Alstuko, Jerry. D. Faulk, Cengage Asia Pvt. Ltd. 2002.
4. **Measurement Systems Applications and Design**, Ernest O. Doebelin, 5th Ed., McGraw Hill Book Co.
5. **Metrology & Measurement**, Anand K. Bewoor & Vinay A.

BASIC THERMODYNAMICS

(Common to ME/IP/AU/IM/MA)

Sub Code	: 10ME33	IA Marks	: 25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART-A

UNIT- 1

Fndamental Concepts & Definitions: Thermodynamics definition and scope, Microscopic and Macroscopic approaches. Some practical applications of engineering thermodynamic Systems, Characteristics of system boundary and control surface, examples. Thermodynamic properties; definition and units, intensive and extensive properties. Thermodynamic state, state point, state diagram, path and process, quasi-static process, cyclic and non-cyclic preesses; Thermodynamic equilibrium; definition, mechanical equilibrium; diathermic wall, thermal equilibrium, chemical equilibrium, Zeroth law of thermodynamics, Temperature; concepts, scales, fixed points and measurements.

06 Hours

UNIT- 2

Work and Heat: Mechancis, defintion of work and its limitations. Thermodynamic definition of work; examples, sign convention. Displacement work; as a part of a system boundary, as a whole of a system boundary, expressions for displacement work in various processes through p-v diagrams. Shaft work; Electrical work. Other types of work. Heat; definition, units and sign convention.

06 Hours

UNIT- 3

First Law of Thermodynamics: Joules expriments, equivalence of heat and work. Statement of the First law of thermodynamics, extension of the First law to non - cyclic processes, energy, energy as a property, modes of energy, pure substance; definition, two-property rule, Specific heat at constant volume, enthalpy, specific heat constant pressure. Extension of the First law to control volume; steady state-steady flow energy equation, important applications, analysis of unsteady processes such as film and evacuation of vessels with and without heat transfer.

07 Hours

UNIT - 4

Second Law of Thermodynamics: Devices converting heat to work; (a) in a thermodynamic cycle, (b) in a mechanical cycle. Thermal reservoir. Direct heat

engine; schematic representation and efficiency. Devices converting work to heat in a thermodynamic cycle; reversed heat engine, schematic representation, coefficients of performance. Kelvin - Planck statement of the Second law of Thermodynamics; PMM I and PMM II, Clausius statement of Second law of Thermodynamics, Equivalence of the two statements; Reversible and irreversible processes; factors that make a process irreversible, reversible heat engines, Carnot cycle, Carnot principles.

07 Hours

PART-B

UNIT- 5

Entropy: Clausius inequality; Statement, proof, application to a reversible cycle. Entropy; definition, a property, change of entropy, principle of increase in entropy, entropy as a quantitative test for irreversibility, calculation of entropy using Tds relations, entropy as a coordinate. Available and unavailable energy.

06 Hours

UNIT- 6

Pure Substances: P-T and P-V diagrams, triple point and critical points. Subcooled liquid, saturated liquid, mixture of saturated liquid and vapour, saturated vapour and superheated vapour states of pure substance with water as example. Enthalpy of change of phase (Latent heat). Dryness fraction (quality), T-S and H-S diagrams, representation of various processes on these diagrams. Steam tables and its use. Throttling calorimeter, separating and throttling calorimeter.

07 Hours

UNIT- 7

Thermodynamic relations: Maxwell relation, Clausius Clayperon's equation. Ideal gas; equation of state, internal energy and enthalpy as functions of temperature only, universal and particular gas constants, specific heats, perfect and semi-perfect gases. Evaluation of heat, work, change in internal energy, enthalpy and entropy in various quasi-static processes.

07 Hours

UNIT- 8

Ideal gas mixture : Ideal gas mixture; Dalton's laws of partial pressures, Amagat's law of additive volumes, evaluation of properties, Analysis of various process. Real Gases: Introduction. Van-der Waal's Equation of state, Van-der Waal's constants in terms of critical properties, Law of corresponding states, compressibility factor; compressibility chart

06 Hours

Data Handbooks :

1. **Thermodynamic data hand book**, B.T. Nijaguna.
2. **Properties of Refrigerant & Psychometric** (tables & Charts in SI Units), Dr. S.S. Banwait, Dr. S.C. Laroia, Birla Pub. Pvt. Ltd., Delhi, 2008

TEXT BOOKS:

1. **Basic Engineering Thermodynamics**, A.Venkatesh, University Press, 2008
2. **Basic and Applied Thermodynamics**, P.K.Nag, 2nd Ed., Tata McGraw Hill Pub. 2002

REFERENCE BOOKS:

1. **Thermodynamics**, An Engineering Approach, Yunus A.Cengel and Michael A.Boles, Tata McGraw Hill publications, 2002
2. **Engineering Thermodynamics**, J.B.Jones and G.A.Hawkins, John Wiley and Sons..
3. **Fundamentals of Classical Thermodynamics**, G.J.Van Wylen and R.E.Sonntag, Wiley Eastern.
4. **An Introduction to Thermodynamics**, Y.V.C.Rao, Wiley Eastern, 1993,
5. **B.K Venkanna, Swati B. Wadavadagi “Basic Thermodynamics**, PHI, New Delhi, 2010

MECHANICS OF MATERIALS

Sub Code	: 10ME34	IA Marks	25
Hrs/week	: 04	Exam Hours	03
Total Lecture Hrs	: 52	Exam Marks:	100

PART-A

UNIT 1:

Simple Stress and Strain: Introduction, Stress, strain, mechanical properties of materials, Linear elasticity, Hooke's Law and Poisson's ratio, Stress-Strain relation - behaviour in tension for Mild steel, cast iron and non ferrous metals. Extension / Shortening of a bar, bars with cross sections varying in steps, bars with continuously varying cross sections (circular and rectangular), Elongation due to self weight, Principle of super position.

07 Hours

UNIT 2:

Stress in Composite Section: Volumetric strain, expression for volumetric strain, elastic constants, simple shear stress, shear strain, temperature stresses (including compound bars).

06 Hours

UNIT 3:

Compound Stresses: Introduction, Plane stress, stresses on inclined sections, principal stresses and maximum shear stresses, Mohr's circle for plane stress.

07 Hours

UNIT 4:

Energy Methods: Work and strain energy, Strain energy in bar/beams, Castigliano's theorem, Energy methods.

Thick and Thin Cylinder Stresses in thin cylinders, changes in dimensions of cylinder (diameter, length and volume). Thick cylinders Lamé's equation (compound cylinders not included).

06 Hours

PART-B

UNIT 5:

Bending Moment and Shear Force in Beams: Introduction, Types of beams, loads and reactions, shear forces and bending moments, rate of loading, sign conventions, relationship between shear force and bending moments. Shear force and bending moment diagrams for different beams subjected to concentrated loads, uniformly distributed load, (UDL) uniformly varying load (UVL) and couple for different types of beams.

07 Hours

UNIT 6:

Bending and Shear Stresses in Beams: Introduction, Theory of simple bending, assumptions in simple bending. Bending stress equation, relationship between bending stress, radius of curvature, relationship between bending moment and radius of curvature. Moment carrying capacity of a section. Shearing stresses in beams, shear stress across rectangular, circular, symmetrical I and T sections. (composite / notched beams not included).

07 Hours

UNIT 7:

Deflection of Beams: Introduction, Differential equation for deflection. Equations for deflection, slope and bending moment. Double integration method for cantilever and simply supported beams for point load, UDL, UVL and Couple. Macaulay's method

06 Hours

UNIT 8:

Torsion of Circular Shafts and Elastic Stability of Columns :

Introduction. Pure torsion, assumptions, derivation of torsional equations, polar modulus, torsional rigidity / stiffness of shafts. Power transmitted by solid and hollow circular shafts

Columns: Euler's theory for axially loaded elastic long columns. Derivation of Euler's load for various end conditions, limitations of Euler's theory, Rankine's formula.

06 Hours

TEXT BOOKS:

1. "**Mechanics of Materials**", by R.C.Hibbeler, Prentice Hall. Pearson Edu., 2005
2. "**Mechanics of materials**", James.M.Gere, Thomson, Fifth edition 2004.
3. "**Mechanics of materials**", in SI Units, Ferdinand Beer & Russell Johnston, 5th Ed., TATA McGraw Hill- 2003.

REFERENCE BOOKS:

1. "**Strength of Materials**", S.S. Rattan, Tata McGraw Hill, 2009
2. "**Strength of Materials**", S.S.Bhavikatti, Vikas publications House -1 Pvt. Ltd., 2nd Ed., 2006.
3. "**Mechanics of Materials**", K.V. Rao, G.C. Raju, First Edition, 2007
4. "**Engineering Mechanics of Solids**", Egor.P. Popov, Pearson Edu. India, 2nd, Edison, 1998.
5. "**Strength of Materials**", W.A. Nash, 5th Ed., Sehaum's Outline Series, Fourth Edition-2007.

MANUFACTURING PROCESS – I

(FUNDAMENTALS OF FOUNDRY & WELDING)

Sub Code	: 10ME35	IA Marks	: 25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART – A

CASTING PROCESS

UNIT 1

Introduction: Concept of Manufacturing process, its importance. Classification of Manufacturing processes. Introduction to Casting process & steps involved. Varieties of components produced by casting process. Advantages & Limitations of casting process.

Patterns: Definition, functions, Materials used for pattern, various pattern allowances and their importance. Classification of patterns, BIS color coding of Patterns.

Binder: Definition, Types of binder used in moulding sand.
Additives: Need, Types of additives used and their properties..

06 Hours

UNIT 2

Sand Moulding : Types of base sand, requirement of base sand. Moulding sand mixture ingredients for different sand mixtures. Method used for sand moulding, such as Green sand, dry sand and skin dried moulds.

Cores: Definition, Need, Types. Method of making cores, Binders used, core sand moulding.

Concept of Gating & Risers. Principle and types.

Fettling and cleaning of castings. Basic steps, Casting defects, Causes, features and remedies.

Moulding Machines : Jolt type, Squeeze type, Jolt & Squeeze type and Sand slinger.

07 Hours

UNIT 3

Special moulding Process: Study of important moulding processes, No bake moulds, Flaskless moulds, Sweep mould, CO₂ mould, Shell mould, Investment mould.

Metal moulds: Gravity die-casting, Pressure die casting, Centrifugal casting, Squeeze Casting, Slush casting, Thixo-casting and Continuous Casting Processes.

07 Hours

UNIT 4

Melting Furnaces: Classification of furnaces. Constructional features & working principle of coke fired, oil fired and Gas fired pit furnace, Resistance furnace, Coreless Induction furnace, Electric Arc Furnace, Cupola furnace.

06 Hours

PART – B

WELDING

UNIT 5

Welding process: Definition, Principles, Classification, Application, Advantages & limitations of welding.

Arc Welding: Principle, Metal Arc welding (**MAW**), Flux Shielded Metal Arc Welding (**FSMAW**), Inert Gas Welding (**TIG & MIG**) Submerged Arc Welding (**SAW**) and Atomic Hydrogen Welding processes. (**AHW**)

Gas Welding: Principle, Oxy – Acetylene welding, Chemical Reaction in Gas welding, Flame characteristics. Gas torch construction & working. Forward and backward welding.

07

Hours

UNIT 6

Special types of welding: Resistance welding - principles, Seam welding, Butt welding, Spot welding and projection welding. Friction welding, Explosive welding, Thermit welding, Laser welding and Electron beam welding.

07 Hours

UNIT 7

Metallurgical aspect, in welding : Structure of welds, Formation of different zones during welding. Heat affected zone (**HAZ**). Parameters affecting **HAZ**. Effect of carbon content on structure and properties of steel. Shrinkage in welds & Residual stresses. Concept of electrodes, Filler rod and fluxes. Welding defects – Detection causes & remedy.

06 Hours

UNIT 8

Principles of soldering & brazing: Parameters involved & Mechanism. Different Types of Soldering & Brazing Methods.

Inspection Methods – Methods used for Inspection of casting and welding. Visual, Magnetic particle, Fluorescent particle, Ultrasonic, Radiography, Eddy current, Holography methods of Inspection.

06 Hours

TEXT BOOKS:

1. “**Manufacturing Process-I**”, Dr.K.Radhakrishna, Sapna Book House, 5th Revised Edition 2009.
2. “**Manufacturing & Technology: Foundry Forming and Welding**”, P.N.Rao, 3rd Ed., Tata McGraw Hill, 2003.

REFERENCE BOOKS:

1. “**Process and Materials of Manufacturing**”, Roy A Lindberg, 4th Ed. Pearson Edu. 2006.
2. “**Manufacturing Technology**”, Serope Kalpakjain, Steuen. R. Sechmid, Pearson Education Asia, 5th Ed. 2006.

COMPUTER AIDED MACHINE DRAWING

Sub Code	: 10ME36A / 10ME46A	IA Marks	: 25
Hrs/week	: 04(1 Hrs. Theory & 2 Hrs Practical)	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

Introduction:

Review of graphic interface of the software. Review of basic sketching commands and navigational commands. Starting a new drawing sheet. Sheet sizes. Naming a drawing, Drawing units, grid and snap.

02 Hours

PART-A

UNIT 1:

Sections of Solids: Sections of Pyramids, Prisms, Cubes, Tetrahedrons, Cones and Cylinders resting only on their bases (No problems on, axis inclinations, spheres and hollow solids). True shape of sections.

Orthographic Views: Conversion of pictorial views into orthographic projections. of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings) Hidden line conventions. Precedence of lines.

08 Hours

UNIT 2:

Thread Forms: Thread terminology, sectional views of threads. ISO Metric (Internal & External) BSW (Internal & External) square and Acme. Sellers thread, American Standard thread.

Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut. Flanged nut, slotted nut, taper and split pin for locking, counter sunk head screw, grub screw, Allen screw.

08 Hours

PART-B

UNIT 3:

Keys & Joints :

Parallel key, Taper key, Feather key, Gibhead key and Woodruff key

Riveted Joints: Single and double riveted lap joints, butt joints with single/double cover straps (Chain and Zigzag, using snap head rivets). cotter joint (socket and spigot), knuckle joint (pin joint) for two rods.

08 Hours

UNIT 4:

Couplings:

Split Muff coupling, Protected type flanged coupling, pin (bush) type flexible coupling, Oldham's coupling and universal coupling (Hooks' Joint)

08 Hours

PART - C

Assembly Drawings

(Part drawings should be given)

1. Plummer block (Pedestal Bearing)
2. Rams Bottom Safety Valve
3. I.C. Engine connecting rod
4. Screw jack (Bottle type)
5. Tailstock of lathe
6. Machine vice
7. Tool Head of a shaper

18 Hours

TEXT BOOKS:

1. 'A Primer on Computer Aided Machine Drawing-2007', Published by VTU, Belgaum.
2. 'Machine Drawing', N.D.Bhat & V.M.Panchal

REFERENCE BOOKS:

1. 'A Text Book of Computer Aided Machine Drawing', S. Trymbaka Murthy, CBS Publishers, New Delhi, 2007
2. 'Machine Drawing', K.R. Gopala Krishna, Subhash Publication.
3. 'Machine Drawing with Auto CAD', Goutam Pohit & Goutham Ghosh, 1st Indian print Pearson Education, 2005
4. 'Auto CAD 2006, for engineers and designers', Sham Tickoo. Dream tech 2005
5. 'Machine Drawing', N. Siddeshwar, P. Kanniah, V.V.S. Sastri, published by Tata McGraw Hill,2006

NOTE:

Internal assessment: 25 Marks

All the sheets should be drawn in the class using software. Sheet sizes should be A3/A4. All sheets must be submitted at the end of the class by taking printouts.

Scheme of Examination:

Two questions to be set from each Part-A, Part-B and Part-C
Student has to answer one question each from Part-A and Part-B for 20 marks each. And one question from Part-C for 60 marks.

i.e. PART-A	1 x 20 = 20 Marks
PART-B	1 x 20 = 20 Marks
PART-C	1 x 60 = 60 Marks
<hr/>	
Total	= 100 Marks

FLUID MECHANICS

Sub Code	: 10ME 36B / 46B	IA Marks	25
Hrs/week	: 04	Exam Hours	03
Total Lecture Hrs	: 52	Exam Marks	100

PART – A

UNIT-1

Properties of Fluids: Introduction, Types of fluid, Properties of fluids, viscosity, thermodynamic properties, surface tension, capillarity, vapour pressure and cavitation

06 Hours

UNIT-2

Fluid Statics : Fluid pressure at a point, Pascal's law, pressure variation in a static fluid, absolute, gauge, atmospheric and vacuum pressures, simple manometers and differential manometers. Total pressure and center of pressure on submerged plane surfaces; horizontal, vertical and inclined plane surfaces, curved surface submerged in liquid.

07 Hours

UNIT-3

Buoyancy and Fluid Kinematics:

Buoyancy, center of buoyancy, metacentre and metacentric height, conditions of equilibrium of floating and submerged bodies, determination of Metacentric height experimentally and theoretically.

Kinematics: Types of fluid flow, continuity equation in 2D and 3D (Cartesian Co-ordinates only, velocity and acceleration, velocity potential function and stream function.

07 Hours

UNIT-4

Fluid Dynamics: Introduction equation of motion, Euler's equation of motion, Bernoulli's equation from first principles and also from Euler's equation, limitations of Bernoulli's equation.

06 Hours

PART-B

UNIT-5

Fluid Flow Measurements : Venturimeter, orificemeter, pitot-tube, vertical orifice, V-Notch and rectangular notches.

Dimensional Analysis : Introduction, derived quantities, dimensions of physical quantities, dimensional homogeneity, Rayleigh's method, Buckingham π theorem, dimensionless numbers, similitude, types of similitudes.

07 Hours

UNIT-6

Flow through pipes : Minor losses through pipes. Darcy's and Chezy's equation for loss of head due to friction in pipes. HGL and TEL.

06 Hours

UNIT-7

Laminar flow and viscous effects : Reynold's number, critical Reynold's number, laminar flow through circular pipe-Hagen Poiseuille's equation, laminar flow between parallel and stationary plates.

06 Hours

UNIT-8

Flow past immersed bodies : Drag, Lift, expression for lift and drag, boundary layer concept, displacement, momentum and energy thickness.

Introduction to compressible flow : Velocity of sound in a fluid, Mach number, Mach cone, propagation of pressure waves in a compressible fluid.

07 Hours

TEXT BOOKS:

1. **Fluid Mechanics**, Ojush.K.Kundu, IRAM COCHEN, ELSEVIER, 3rd Ed. 2005.
2. **Fluid Mechanics**, Dr. Bansal, R.K.Lakshmi Publications, 2004.

REFERENCE BOOKS:

1. **Fluid Mechanics and hydraulics**, Dr.Jagadishlal: Metropolitan Book Co-Ltd., 1997.
2. **Fluid Mechanics (SI Units)**, Yunus A. Cengel John M.Oimbala, 2nd Ed., Tata McGraw Hill, 2006.

3. **Fluid Mechanics**, John F.Douglas, Janul and M.Gasiosek and john A.Swaffield, Pearson Education Asia, 5th ed., 2006
4. **Fluid Mechanics and Fluid Power Engineering**, Kumar.D.S, Kataria and Sons., 2004
5. **Fluid Mechanics** - . Merle C. Potter, Elaine P.Scott. Cengage learning

METALLOGRAPHY AND MATERIAL TESTING LABORATORY

Sub Code	: 10MEL 37A / 47A	IA Marks	: 25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 48	Exam Marks	: 50

PART – A

1. Preparation of specimen for Metallographic examination of different engineering materials. Identification of microstructures of plain carbon steel, tool steel, gray C.I, SG iron, Brass, Bronze & composites.
2. Heat treatment: Annealing, normalizing, hardening and tempering of steel. Hardness studies of heat-treated samples.
3. To study the wear characteristics of ferrous, non-ferrous and composite materials for different parameters.
4. Non-destructive test experiments like,
 - (a). Ultrasonic flaw detection
 - (b). Magnetic crack detection
 - (c). Dye penetration testing. To study the defects of Cast and Welded specimens

PART – B

1. Tensile, shear and compression tests of metallic and non metallic specimens using Universal Testing Machine
2. Torsion Test
3. Bending Test on metallic and nonmetallic specimens.
4. Izod and Charpy Tests on M.S, C.I Specimen.
5. Brinell, Rockwell and Vickers's Hardness test.
6. Fatigue Test.

Scheme of Examination:

ONE question from part -A: 20 Marks

ONE question from part -B: 20 Marks

Viva -Voice: 10 Marks

Total : 50 Marks

MECHANICAL MEASUREMENTS AND METROLOGY LABORATORY

Sub Code	: 10MEL 37B / 47B	IA Marks	25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 48	Exam Marks	: 50

PART-A: MECHANICAL MEASUREMENTS

1. Calibration of Pressure Gauge
2. Calibration of Thermocouple
3. Calibration of LVDT
4. Calibration of Load cell
5. Determination of modulus of elasticity of a mild steel specimen using strain gauges.

PART-B: METROLOGY

1. Measurements using Optical Projector / Toolmaker Microscope.
2. Measurement of angle using Sine Center / Sine bar / bevel protractor
3. Measurement of alignment using Autocollimator / Roller set
4. Measurement of cutting tool forces using
 - a) Lathe tool Dynamometer
 - b) Drill tool Dynamometer.
5. Measurement of Screw thread Parameters using Two wire or Three-wire method.
6. Measurements of Surface roughness, Using Tally Surf/Mechanical Comparator
7. Measurement of gear tooth profile using gear tooth vernier /Gear tooth micrometer
8. Calibration of Micrometer using slip gauges
9. Measurement using Optical Flats

Scheme of Examination:

ONE question from part -A: 20 Marks

ONE question from part -B: 20 Marks

Viva -Voice: 10 Marks

Total : 50 Marks

FOUNDRY AND FORGING LABORATORY

Sub Code	: 10MEL 38A / 48A	IA Marks	: 25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 48	Exam Marks	: 50

PART – A

1. Testing of Moulding sand and Core sand

Preparation of sand specimens and conduction of the following tests:

- 1 Compression, Shear and Tensile tests on Universal Sand Testing Machine.
- 2 Permeability test
- 3 Core hardness & Mould hardness tests.
- 4 Sieve Analysis to find Grain Finest number of Base Sand
- 5 Clay content determination in Base Sand

PART – B

2. Foundry Practice

Use of foundry tools and other equipments.

Preparation of moulds using two moulding boxes using patterns or without patterns. (Split pattern, Match plate pattern and Core boxes).

Preparation of one casting (Aluminum or cast iron-Demonstration only)

PART – C

3. Forging Operations :

- Calculation of length of the raw material required to do the model.

- Preparing minimum three forged models involving upsetting, drawing and bending operations.
- Out of these three models, at least one model is to be prepared by using Power Hammer.

Scheme of Examination:

One question is to be set from Part-A: 10 marks

One question is to be set from either

Part-B or Part-C: 30 marks

Calculation part in case of forging is made compulsory

Calculation (Forging)	+ Foundry Model	= 05 +25 = 30 Marks
Calculation (Forging)	+ Forging Model	= 05 +25 = 30 Marks

Viva-Voce : 10 marks.

Total : 50 Marks.

MACHINE SHOP

Sub Code	: 10MEL 38A / 48A	IA Marks	: 25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 48	Exam Marks	: 50

PART – A

Preparation of three models on lathe involving Plain turning, Taper turning, Step turning, Thread cutting, Facing, Knurling, Drilling, Boring, Internal Thread cutting and Eccentric turning.

PART – B

Cutting of V Groove/ dovetail / Rectangular groove using a shaper.
Cutting of Gear Teeth using Milling Machine.

Scheme of Examination:

ONE question from part -A: 30 Marks

ONE question from part -B: 10 Marks

Viva -Voice: 10 Marks

Total : 50 Marks

APPLIED THERMODYNAMICS

Sub Code	: 10ME43	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART-A

Unit 1:

Combustion thermodynamics: Theoretical (Stoichiometric) air and excess air for combustion of fuels. Mass balance, actual combustion. Exhaust gas analysis. A./ F ratio, Energy balance for a chemical reaction, enthalpy of formation, enthalpy and internal energy of combustion, Combustion efficiency, adiabatic flow temperature.

07 Hours

Unit 2:

Gas power cycle: Air Standard cycles: Carnot, Otto, Diesel, Dual and Stirling cycles, P-V and T-S diagrams, description, efficiencies and mean effective pressures, Comparison of Otto, Diesel and dual cycles.

06 Hours

Unit 3:

I.C. Engine: Testing of two stroke and four stroke SI and CI engines for performance Related numerical problems, heat balance, Motoring Method, Willian's line method, swinging field dynamometer, Morse test.

06 Hours

Unit 4:

Vapour Power Cycles: Carnot vapour power cycles, drawbacks as a reference cycle, Simple Rankine cycle, description, T- S diagram, analysis for performance , comparison of Carnot and Rankine cycles. Effects of pressure and temperature on Rankine cycle performance. Actual vapour power cycles. Ideal and practical regenerative Rankine cycle, open and closed feed water heaters, Reheat Rankine cycle.

07 Hours

PART-B

Unit 5:

Reciprocating Compressors: Operation of a single stage reciprocating compressors, work input through P-V diagram and steady state steady flow analysis. Effect of clearance and volumetric efficiency. Adiabatic, isothermal and mechanical efficiencies. Multistage compressor, saving in work,

optimum intermediate pressure, inter- cooling, minimum work for compression.

06 Hours

Unit 6:

Gas turbine and Jet propulsion: Classification of Gas turbines, Analysis of open cycle gas turbine cycle. Advantages and disadvantages of closed cycle. Methods to improve thermal efficiency, Jet propulsion and Rocket propulsion.

07 Hours

Unit 7

Refrigeration: Vapour compression refrigeration system ; description, analysis, refrigerating effect, capacity , power required, units of refrigeration, COP , Refrigerants and their desirable properties. Air cycle refrigeration; reversed Carnot cycle, reversed Brayton cycle, Vapour absorption refrigeration system, steam jet refrigeration.

06 Hours

Unit 8

Psychrometry: Atmospheric air and psychrometric properties; Dry bulb temperature, wet bulb temperature, dew point temperature; partial pressures, specific and relative humidifies and the relation between the two enthalpy and adiabatic saturation temperature. Construction and use of psychrometric chart . Analysis of various processes; heating, cooling , dehumidifying and humidifying. Adiabatic mixing of moist air. Summer and winter air conditioning.

07 Hours

Data Hand Book :

1. **Thermodynamic data hand book**, B.T.Nijaguna.
2. **Properties of Refrigerant & Psychometric** (tables & Charts in SI Units), Dr. S.S. Banwait, Dr. S.C. Laroia, Birla Pub. Pvt. Ltd., Delhi, 2008

TEXT BOOK

1. **Basic and applied Thermodynamics**, P.K. Nag, 2nd Ed., Tata McGraw Hill Pub.Co,2002
2. **Applied Thermodynamics**, Rajput, Laxmi Publication
3. **Applied Thermodynamics**, B.K. Venkahna, Swati B. Wadavadagi, PHI, New Delhi, 2010

REFERENCE BOOKS

1. **Thermodynamics , An engineering approach**, Yunus, A. Cengel and Michael A.Boies, 6th Ed., Tata McGraw Hill pub. Co., 2002,

2. **Fundamental of Classical Thermodynamics**, G.J. Van Wylen and R.E. Sontang Wiley eastern.

KINEMATICS OF MACHINES

Sub Code	: 10ME44	IA Marks	: 25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT 1:

Introduction: Definitions Link or element, kinematic pairs, Degrees of freedom, Grubler's criterion (without derivation), Kinematic chain, Mechanism, Structure, Mobility of Mechanism, Inversion, Machine.

Kinematic Chains and Inversions: Inversions of Four bar chain; Single slider crank chain and Double slider crank chain.

07 Hours

UNIT 2:

Mechanisms: Quick return motion mechanisms-Drag link mechanism, Whitworth mechanism and Crank and slotted lever Mechanism.

Straight line motion mechanisms Peaucellier's mechanism and Robert's mechanism. Intermittent Motion mechanisms -Geneva wheel mechanism and Ratchet and Pawl mechanism. Toggle mechanism, Pantograph, Ackerman steering gear mechanism.

06 Hours

UNIT 3:

Velocity and Acceleration Analysis of Mechanisms (Graphical Methods)

Velocity and acceleration analysis of Four Bar mechanism, slider crank mechanism and Simple Mechanisms by vector polygons: Relative velocity and acceleration of particles in a common link, relative velocity and accelerations of coincident Particles on separate links- Coriolis component of acceleration. Angular velocity and angular acceleration of links, velocity of rubbing.

07 Hours

UNIT 4:

Velocity Analysis by Instantaneous Center Method: Definition, Kennedy's Theorem, Determination of linear and angular velocity using instantaneous center method

Klein's Construction: Analysis of velocity and acceleration of single slider crank mechanism.

06 Hours

PART - B

UNIT 5:

Velocity and Acceleration Analysis of Mechanisms (Analytical Methods):

Analysis of four bar chain and slider crank chain using analytical expressions. (Use of complex algebra and vector algebra)

06 Hours

UNIT 6:

Spur Gears: Gear terminology, law of gearing, Characteristics of involute action, Path of contact. Arc of contact, Contact ratio of spur, helical, bevel and worm gears, Interference in involute gears. Methods of avoiding interference, Back lash. Comparison of involute and cycloidal teeth. Profile Modification.

07 Hours

UNIT 7:

Gear Trains: Simple gear trains, Compound gear trains for large speed. reduction, Epicyclic gear trains, Algebraic and tabular methods of finding velocity ratio of epicyclic gear trains. Tooth load and torque calculations in epicyclic gear trains.

07 Hours

UNIT 8:

Cams: Types of cams, Types of followers. Displacement, Velocity and, Acceleration time curves for cam profiles. Disc cam with reciprocating follower having knife-edge, roller and flat-face follower, Disc cam with oscillating roller follower. Follower motions including SHM, Uniform velocity, uniform acceleration and retardation and Cycloidal motion.

06 Hours

TEXT BOOKS:

1. **"Theory of Machines"**, Rattan S.S, Tata McGraw-Hill Publishing Company Ltd., New Delhi, and 3rd edition -2009.
2. **"Theory of Machines"**, Sadhu Singh, Pearson Education (Singapore) Pvt. Ltd, Indian Branch New Delhi, 2nd Edi. 2006

REFERENCE BOOKS:

1. **"Theory of Machines & Mechanisms"**, J.J. Uicker, , G.R. Pennock, J.E. Shigley. OXFORD 3rd Ed. 2009.
2. **Mechanism and Machine theory**, Ambekar, PHI, 2007

Graphical Solutions may be obtained either on the Graph Sheets or on the Answer Book itself.

MANUFACTURING PROCESS – II

(Metal Removing Process)

Sub Code	: 10ME45	IA Marks	: 25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART – A

UNIT - 1

Theory of Metal Cutting: Single point cutting tool nomenclature, geometry. Mechanics of Chip Formation, Types of Chips. Merchant's circle diagram and analysis, Ernst Merchant's solution, shear angle relationship, problems of Merchant's analysis. Tool Wear and Tool failure, tool life. Effects of cutting parameters on tool life. Tool Failure Criteria, Taylor's Tool Life equation. Problems on tool life evaluation.

07

Hours

UNIT - 2

Cutting Tool Materials: Desired properties and types of cutting tool materials – HSS, carbides coated carbides, ceramics. Cutting fluids. Desired properties, types and selection. Heat generation in metal cutting, factors affecting heat generation. Heat distribution in tool and work piece and chip. Measurement of tool tip temperature.

07 Hours

UNIT - 3

Turning (Lathe), Shaping and Planing Machines: Classification, constructional features of Turret and Capstan Lathe. Tool Layout, shaping Machine, Planing Machine, Driving mechanisms of lathe, shaping and planing machines, Different operations on lathe, shaping machine and planing machine. Simple problems on machining time calculations

07 Hours

UNIT - 4

Drilling machines: Classification, constructional features, drilling & related operations. Types of drill & drill bit nomenclature, drill materials. Introduction to CNC machines- Principles of operation. Axes of NC machine-Coordinate systems. Basics of Manual part programming methods.

06 Hours

PART – B

UNIT - 5

Milling machines: Classification, constructional features, milling cutters nomenclature, milling operations, up milling and down milling concepts. Various milling operations.

Indexing: Simple, compound, differential and angular indexing calculations. Simple problems on simple and compound indexing.

06 Hours

UNIT - 6

Grinding machines: Types of abrasives, Grain size, bonding process, grade and structure of grinding wheels, grinding wheel types. Classification, constructional features of grinding machines (Centerless, cylindrical and surface grinding). Selection of grinding wheel. Grinding process parameters. Dressing and truing of grinding wheels.

07 Hours

UNIT - 7:

Broaching process - Principle of broaching. Details of a broach. Types of broaching machines-constructional details. Applications. Advantages and Limitations.

Finishing and other Processes Lapping and Honing operations – Principles, arrangement of set up and application. Super finishing process, polishing, buffing operation and application.

06 Hours

UNIT - 8

Non-traditional machining processes: Need for non traditional machining, Principle, equipment & operation of Laser Beam, Plasma Arc Machining, Electro Chemical Machining, Ultrasonic Machining, Abrasive Jet Machining, Water Jet Machining, Electron Beam Machining, Electron Discharge Machining and Plasma Arc Machining.

06 Hours

Text Books:

1. **Workshop Technology**, Hazara Choudhry, Vol-II, Media Promoters & Publishers Pvt. Ltd. 2004
2. **Production Technology**, R.K.Jain, Khanna Publications, 2003.
3. **Production Technology**, HMT, Tata Mc Graw Hill, 2001.

Reference Books:

1. **Manufacturing Science**, Amitabha Ghosh and Mallik, affiliated East West Press, 2003.
2. **Fundamentals of Metal Machining and Machine Tools**, G. Boothroyd, McGraw Hill, 2000.

MANAGEMENT AND ENTREPRENEURSHIP

Sub Code	: 10AL 51	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART – A

MANAGEMENT

UNIT - 1

MANAGEMENT: Introduction - Meaning - nature and characteristics of Management, Scope and Functional areas of management - Management as a science, art of profession - Management & Administration - Roles of Management, Levels of Management, Development of Management Thought - early management approaches - Modern management approaches.

7 Hours

UNIT - 2

PLANNING: Nature, importance and purpose of planning process - Objectives - Types of plans (Meaning Only) - Decision making Importance of planning - steps in planning & planning premises - Hierarchy of plans.

6 Hours

UNIT - 3

ORGANIZING AND STAFFING: Nature and purpose of organization - Principles of organization - Types of organization - Departmentation - Committees- Centralization Vs Decentralization of authority. and responsibility - Span of control - MBO and MBE (Meaning Only) Nature and importance of staffing--:Process of Selection & Recruitment (in brief).

6 Hours

UNIT - 4

DIRECTING & CONTROLLING: Meaning and nature of directing - Leadership styles, Motivation Theories, Communication - Meaning and importance - coordination, meaning and importance and Techniques of Co - Ordination. Meaning and steps in controlling - Essentials of a sound control system - Methods of establishing control (in brief):

7 Hours

PART-B

ENTREPRENEURSHIP

UNIT - 5

ENTREPRENEUR: Meaning of Entrepreneur; Evolution of .the Concept; Functions of an Entrepreneur, Types of Entrepreneur, Entrepreneur - an emerging. Class. Concept of Entrepreneurship - Evolution of Entrepreneurship, Development of Entrepreneurship; Stages in entrepreneurial process; Role of entrepreneurs in Economic Development; Entrepreneurship in India; Entrepreneurship - its Barriers.

6 Hours

UNIT – 6

SMALL SCALE INDUSTRIES: Definition; Characteristics; Need and rationale; Objectives; Scope; role of SSI in Economic Development. Advantages of SSI Steps to start and SSI - Government policy towards SSI; Different Policies of SSI; Government Support for SSI during 5 year plans. Impact of Liberalization, Privatization, Globalization on SSI Effect of WTO/GA TT Supporting Agencies of Government for SSI, Meaning, Nature of support; Objectives; Functions; Types of Help; Ancillary Industry and Tiny Industry (Definition Only)

7 Hours

UNIT - 7

INSTITUTIONAL SUPPORT: Different Schemes; TECKSOK; KIADB; KSSIDC; KSIMC; DIC Single Window Agency; SISI; NSIC; SIDBI; KSFC.

7 Hours

UNIT - 8

PREPARATION OF PROJECT: Meaning of Project; Project Identification; Project Selection; Project Report; Need and Significance of Report; Contents; Formulation; Guidelines by Planning Commission for Project report; Network Analysis; Errors of Project Report; Project Appraisal. Identification of business opportunities: Market Feasibility Study; Technical Feasibility Study; Financial Feasibility Study & Social Feasibility Study.

7 Hours

TEXT BOOKS:

1. **Principles of Management** – P. C.Tripathi, P.N. Reddy – Tata McGraw Hill,
2. **Dynamics of Entrepreneurial Development & Management** Vasant Desai - Himalaya Publishing House
3. **Entrepreneurship Development** – Poornima. M. Charantimath Small Business Enterprises - Pearson Education - 2006 (2 & 4).

REFERENCE BOOKS:

1. **Management Fundamentals** - Concepts, Application, Skill Development - Robers Lusier - Thomson
2. **Entrepreneurship Development** - S.S.Khanka - S.Chand & Co.
3. **Management** - Stephen Robbins - Pearson Education/PHI - 17th Edition, 2003.

DESIGN OF MACHINE ELEMENTS-I

Sub Code	: 10ME 52	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT- 1

Introduction: Definitions: normal, shear, biaxial and tri axial stresses, Stress tensor, Principal Stresses. Engineering Materials and their mechanical properties, Stress-Strain diagrams, Stress Analysis, Design considerations: Codes and Standards.

05 Hours

UNIT- 2

Design For Static & Impact Strength:

Static Strength: Static loads and factor of safety, Theories of failure: Maximum normal stress theory, Maximum shear stress theory, Maximum strain theory, Strain energy theory, Distortion energy theory. Failure of brittle and ductile materials, Stress concentration, Determination of Stress concentration factor.

Impact Strength: Introduction, Impact stresses due to axial, bending and torsional loads, effect of inertia.

07 Hours

UNIT - 3

Design For Fatigue Strength: Introduction- S-N Diagram, Low cycle fatigue, High cycle fatigue, Endurance limit, Modifying factors: size effect, surface effect, Stress concentration effects, Fluctuating stresses, Goodman and Soderberg relationship, stresses due to combined loading, cumulative fatigue damage.

08 Hours

UNIT - 4

Threaded Fasteners: Stresses in threaded fasteners, Effect of initial tension, Design of threaded fasteners under static, dynamic and impact loads, Design of eccentrically loaded bolted joints.

06 Hours

PART - B

UNIT - 5

Design Of Shafts: Torsion of shafts, design for strength and rigidity with steady loading, ASME codes for power transmission shafting, shafts under fluctuating loads and combined loads.

07 Hours

UNIT - 6

Cotter And Knuckle Joints, Keys And Couplings: Design of Cotter and Knuckle joints, Keys: Types of keys, Design of keys, Couplings: Rigid and

flexible couplings, Flange coupling, Bush and Pin type coupling and Oldham's coupling.

07 Hours

UNIT - 7

Riveted and Welded Joints – Types, rivet materials, failures of riveted joints, Joint Efficiency, Boiler Joints, Lozanze Joints, Riveted Brackets. Welded Joints – Types, Strength of butt and fillet welds, eccentrically loaded welded joints.

07 Hours

UNIT - 8

Power Screws: Mechanics of power screw, Stresses in power screws, efficiency and self-locking, Design of Power Screw, Design of Screw Jack: (Complete Design).

05 Hours

TEXT BOOKS

1. **Mechanical Engineering Design**, Joseph E Shigley and Charles R. Mischke. McGraw Hill International edition, 6th Edition 2009.
2. **Design of Machine Elements**, V.B. Bhandari, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2nd Edition 2007.

DESIGN DATA HANDBOOK

1. **Design Data Hand Book**, K. Lingaiah, McGraw Hill, 2nd Ed.
2. **Data Hand Book**, K. Mahadevan and Balaveera Reddy, CBS Publication
3. **Design Data Hand Book**, H.G. Patil, I. K. International Publisher, 2010.

REFERENCE BOOKS

1. **Machine Design**, Robert L. Norton, Pearson Education Asia, 2001.
2. **Design of Machine Elements**, M. F. Spotts, T. E. Shoup, L. E. Hornberger, S. R. Jayram and C. V. Venkatesh, Pearson Education, 2006.
3. **Machine Design**, Hall, Holowenko, Laughlin (Schaum's Outlines series) Adapted by S.K. Somani, Tata McGraw Hill Publishing Company Ltd., New Delhi, Special Indian Edition, 2008.
4. **Fundamentals of Machine Component Design**, Robert C. Juvinall and Kurt M Marshek, Wiley India Pvt. Ltd., New Delhi, 3rd Edition, 2007.

ENERGY ENGINEERING

Sub Code	: 10ME 53	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Steam Power Plant: Different Types of Fuels used for steam generation, Equipment for burning coal in lump form, stokers, different types, Oil burners, Advantages and Disadvantages of using pulverized fuel, Equipment for preparation and burning of pulverized coal, unit system and bin system. Pulverized fuel furnaces, cyclone furnace, Coal and ash handling, Generation of steam using forced circulation, high and supercritical pressures.

07 Hours

UNIT - 2

A Brief Account Of Benson, Velox Schmidt Steam Generators. Chimneys: Natural, forced, induced and balanced draft, Calculations and numericals involving height of chimney to produce a given draft. Cooling towers and Ponds. Accessories for the Steam generators such as Superheaters, De-superheater, control of superheaters, Economizers, Air pre-heaters and re-heaters.

07 Hours

UNIT - 3

Diesel Engine Power Plant: Applications of Diesel Engines in Power field. Method of starting Diesel engines. Auxiliaries like cooling and lubrication system, filters, centrifuges, Oil heaters, intake and exhaust system, Layout of diesel power plant.

06 Hours

UNIT - 4

Hydro-Electric Plants: Hydrographs, flow duration and mass curves, unit hydrograph and numericals. Storage and pondage, pumped storage plants, low, medium and high head plants, Penstock, water hammer, surge tanks, gates and valves. General layout of hydel power plants.

06 Hours

PART - B

UNIT - 5

Nuclear Power Plant: Principles of release of nuclear energy; Fusion and fission reactions. Nuclear fuels used in the reactors. Multiplication and thermal utilization factors. Elements of the nuclear reactor; moderator, control rod, fuel rods, coolants. Brief description of reactors of the following types-Pressurized water reactor, Boiling water reactor, Sodium graphite reactor, Fast Breeder reactor, Homogeneous graphite reactor and gas cooled reactor, Radiation hazards, Shieldings, Radio active waste disposal.

06 Hours

UNIT - 6

Solar Energy: Solar Extra terrestrial radiation and radiation at the earth surface, radiation-measuring instruments, working principles of solar flat plate collectors, solar pond and photovoltaic conversion (Numerical Examples).

Wind Energy: Properties of wind, availability of wind energy in India, wind velocity and power from wind; major problems associated with wind power, wind machines; Types of wind machines and their characteristics, horizontal and vertical axis wind mills, coefficient of performance of a wind mill rotor (Numerical Examples).

08 Hours**UNIT - 7**

Tidal Power: Tides and waves as energy suppliers and their mechanics; fundamental characteristics of tidal power, harnessing tidal energy, limitations.

Ocean Thermal Energy Conversion: Principle of working, Rankine cycle, problems associated with OTEC.

Geothermal Energy Conversion: Principle of working, types of geothermal station with schematic diagram, problems associated with geothermal conversion, scope of geothermal energy.

06 Hours**UNIT - 8**

Energy From Bio Mass: Photosynthesis, photosynthetic oxygen production, energy plantation.

Bio Chemical Route: Biogas production from organic wastes by anaerobic fermentation, classification of bio gas plants, factors affecting bio gas generation.

Thermo Chemical Route: Thermo chemical conversion on bio mass, types of gasifiers.

06 Hours**TEXT BOOKS:**

1. **Power Plant Engineering**, P. K. Nag Tata McGraw Hill 2nd edn 2001.
2. **Power Plant Engineering**, Domakundawar, Dhanpath Rai sons. 2003

REFERENCE BOOKS:

1. **Power Plant Engineering**, R. K. Rajput, Laxmi publication, New Delhi.
2. **Principles of Energy conversion**, A. W. Culp Jr., McGraw Hill. 1996

3. **Non conventional Energy sources**, G D Rai Khanna Publishers.
4. **Non conventional resources**, B H Khan TMH - 2007

DYNAMICS OF MACHINES

Sub Code	: 10ME 54	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT 1: Static Force Analysis: Introduction: Static equilibrium. Equilibrium of two and three force members. Members with two forces and torque. Free body diagrams. Principle of virtual work. Static force analysis of four bar mechanism and slider-crank mechanism with and without friction.

06 Hours

UNIT 2: Dynamic Force Analysis: D'Alembert's principle, Inertia force, inertia torque. Dynamic force analysis of four-bar mechanism and slider crank mechanism. Dynamically equivalent systems. Turning moment diagrams and flywheels. Fluctuation of Energy. Determination of size of flywheels.

08 Hours

UNIT 3: Friction and Belt Drives: Definitions: Types of friction: laws of friction, Friction in pivot and collar bearings. Belt drives: Flat belt drives. ratio of belt tensions, centrifugal tension, power transmitted.

06 Hours

UNIT 4: Balancing of Rotating Masses: Static and dynamic balancing. Balancing of single rotating mass by balancing masses in same plane and in different planes. Balancing of several rotating masses by balancing masses in same plane and in different planes.

06 Hours

PART - B

UNIT 5: Balancing of Reciprocating Masses: Inertia effect of crank and connecting rod, single cylinder engine, balancing in multi cylinder-inline engine (primary & secondary forces), V-type engine; Radial engine – Direct and reverse crank method.

08 Hours

UNIT 6: Governors: Types of governors; force analysis of Porter and Hartnell governors. Controlling force. stability, sensitiveness. Isochronism, effort and power,

06 Hours

UNIT 7: Gyroscope: Vectorial representation of angular motion. Gyroscopic couple. Effect of gyroscopic couple on ship, plane disc, aeroplane, stability of two wheelers and four wheelers.

06 Hours

UNIT 8: Analysis of Cams: Analysis of Tangent cam with roller follower and Circular arc cam operating flat faced and roller followers. Undercutting in Cams

06 Hours

TEXT BOOKS:

1. **Theory of Machines**, Sadhu Singh, Pearson Education. 2nd edition. 2007.
2. **Theory of Machines**, Rattan S.S. Tata McGraw Hill Publishing Company Ltd., New Delhi, 3rd Edition, 2009.

REFERENCE BOOKS:

1. **"Theory of Machines & Mechanisms"**, J.J. Uicker, , G.R. Pennock, J.E. Shigley. OXFORD 3rd Ed. 2009
2. **Mechanism and Machine Theory**, A.G.Ambekar PHI, 2007

MANUFACTURING PROCESS – III

(METAL FORMING PROCESS)

Sub Code	: 10ME 55	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Introduction And Concepts: Classification of metal working processes, characteristics of wrought products, advantages and limitations of metal working processes. Concepts of true stress, true strain, triaxial & biaxial stresses. Determination of flow stress. Principal stresses, Tresca & Von-Mises yield criteria, concepts of plane stress & plane strain.

07 Hours

UNIT - 2

Effects Of Parameters: Temperature, strain rate, friction and lubrication, hydrostatic pressure in metalworking, Deformation zone geometry, workability of materials, Residual stresses in wrought products.

06 Hours

UNIT - 3

Forging: Classification of forging processes. Forging machines & equipment. Expressions for forging pressures & load in open die forging and closed die forging by slab analysis, concepts of friction hill and factors affecting it. Die-design parameters. Material flow lines in forging. Forging defects, Residual stresses in forging. Simple problems.

07 Hours**UNIT - 4**

Rolling: Classification of Rolling processes. Types of rolling mills, expression for Rolling load. Roll separating force. Frictional losses in bearing, power required in rolling, Effects of front & back tensions, friction, friction hill. Maximum possible reduction. Defects in rolled products. Rolling variables, simple problems.

06 Hours**PART - B****UNIT - 5**

Drawing: Drawing equipment & dies, expression for drawing load by slab analysis, power requirement. Redundant work and its estimation, optimal cone angle & dead zone formation, drawing variables, Tube drawing, classification of tube drawing, simple problems.

07 Hours**UNIT - 6**

Extrusion: Types of extrusion processes, extrusion equipment & dies, deformation, lubrication & defects in extrusion. Extrusion dies, Extrusion of seamless tubes. Extrusion variables, simple problem

06 Hours**UNIT - 7**

Sheet & Metal Forming: Forming methods, dies & punches, progressive die, compound die, combination die. Rubber forming. Open back inclinable press (OBI press), piercing, blanking, bending, deep drawing, LDR in drawing, Forming limit criterion, defects of drawn products, stretch forming. Roll bending & contouring, Simple problems

06 Hours**UNIT - 8**

High Energy Rate Forming Methods: Principles, advantages and applications, explosive forming, electro hydraulic forming, Electromagnetic forming.

Powder Metallurgy: Basic steps in Powder metallurgy brief description of methods of production of metal powders, conditioning and blending powders, compaction and sintering application of powder metallurgy components, advantages and limitations.

07 Hours**TEXT BOOKS:**

1. **Mechanical metallurgy (SI units)**, G.E. Dieter, Mc Graw Hill pub.2001
2. **Manufacturing Process – III**, Dr. K.Radhakrishna, Sapna Book House, 2009.

REFERENCE BOOKS:

1. **Materials and Processes in Manufacturing**, E.paul, Degramo, J.T. Black, Ronald, A.K. Prentice -hall of India 2002
2. **Principles of Industrial metal working process**, G.W. Rowe, CBSpub. 2002
3. **Manufacturing Science**, Amitabha Ghosh & A.K. Malik - East - Westpress 2001
4. **Technology of Metal Forming Process**, Surendra kumar, PHI – 2008

TURBO MACHINES

Sub Code	: 10ME 56	IA Marks	25
Hrs/week	: 04	Exam Hours	03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART- A

UNIT -1

Introduction: Definition of turbomachine, parts of turbomachines, Comparison with positive displacement machines, Classification, Dimensionless parameters and their significance, Effect of Reynold's number, Unit and specific quantities, model studies. Application of first and second law's of thermodynamics to turbomachines, Efficiencies of turbomachines. Problems.

07 Hours

UNIT – 2

Thermodynamics of fluid flow: Static and Stagnation states-Incompressible fluids and perfect gases, Overall isentropic efficiency, stage efficiency (their comparison) and polytropic efficiency for both compression and expansion processes. Reheat factor for expansion process.

07 Hours

UNIT – 3

Energy exchange in Turbomachines: Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction,

utilization factor, Relation between degree of reaction and Utilization factor, Problems.

06 Hours

UNIT – 4

General Analysis of Turbomachines: Radial flow compressors and pumps – general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, Theoretical head – capacity relationship, General analysis of axial flow pumps and compressors, degree of reaction, velocity triangles, Problems.

06 Hours

PART - B

UNIT – 5

Steam Turbines: Classification, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor, Reaction turbine – Parsons's turbine, condition for maximum utilization factor, reaction staging, Problems.

07 Hours

UNIT – 6

Hydraulic Turbines: Classification, Different efficiencies, Pelton turbine – velocity triangles, design parameters, Maximum efficiency. Francis turbine - velocity triangles, design parameters, runner shapes for different blade speeds. Draft tubes- Types and functions. Kaplan and Propeller turbines - velocity triangles, design parameters. Problems.

07 Hours

UNIT – 7

Centrifugal Pumps: Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the flow, Maximum suction lift, Net positive suction head, Cavitation, Need for priming, Pumps in series and parallel. Problems.

06 Hours

UNIT – 8

Centrifugal Compressors: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, stage efficiency and surging and problems.

Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies and stalling. Problems.

06 Hours

(Note: Since dimensional analysis is covered in Fluid Mechanics subject, questions on dimensional analysis may not be given. However, dimensional parameters and model studies may be given more weightage.)

TEXT BOOKS:

1. **An Introduction to Energy Conversion**, Volume III, Turbo machinery, V. Kadambi and Manohar Prasad, New Age International Publishers, reprint 2008.
2. **Turbines, Compressors & Fans**, S. M. Yahya, Tata McGraw Hill Co. Ltd., 2nd edition, 2002

REFERENCE BOOKS:

1. **Principals of Turbomachines**, D. G. Shepherd, The Macmillan Company (1964).
2. **Fluid Mechanics & Thermodynamics of Turbomachines**, S. L. Dixon, Elsevier (2005).
3. **Turbomachine**, B.K.Venkanna PHI, New Delhi 2009.
4. **Text Book of Turbomachines**, M. S. Govindgouda and A. M. Nagaraj, M. M. Publications, 4Th Ed, 2008.

FLUID MECHANICS AND MACHINES LABORATORY

Sub Code	: 10MEL 57	IA Marks	25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 42	Exam Marks	: 50

PART - A

1. Determination of coefficient of friction of flow in a pipe.
2. Determination of minor losses in flow through pipes.
3. Determination of force developed by impact of jets on vanes.
4. Calibration of flow measuring devices
 - a. Orifice Plate meter
 - b. Nozzle
 - c. Venturimeter
 - d. V-notch

18 Hours

PART - B

5. Performance testing of Turbines
 - a. Pelton wheel
 - b. Francis Turbine
 - c. Kaplan Turbines
6. Performance testing of Pumps
 - a. Single stage / Multi stage centrifugal pumps
 - b. Reciprocating pump
7. Performance test of a two stage Reciprocating Air Compressor
8. Performance test on an Air Blower

24 Hours**Scheme for Examination:**

One Question from Part A	-	15 Marks (05 Writeup + 10)
One Question from Part B	-	25 Marks (05 Writeup + 20)
Viva-Voce	-	10 Marks

Total		50 Marks

ENERGY CONVERSION ENGINEERING LABORATORY

Sub Code	: 10MEL 58	IA Marks	25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 42	Exam Marks	: 50

PART - A

1. Determination of Flash point and Fire point of lubricating oil using Abel Pensky and Marten's (closed) / Cleavland's (Open Cup) Apparatus.
2. Determination of Calorific value of solid, liquid and gaseous fuels.
3. Determination of Viscosity of a lubricating oil using Redwoods, Saybolt and Torsion Viscometers.

4. Valve Timing/port opening diagram of an I.C. engine (4 stroke/2 stroke).
5. Use of planimeter

21 Hours**PART - B**

1. Performance Tests on I.C. Engines, Calculations of IP, BP, Thermal efficiencies, Volumetric efficiency, Mechanical efficiency, SFC, FP, A:F Ratio heat balance sheet for
 - (a) Four stroke Diesel Engine
 - (b) Four stroke Petrol Engine
 - (c) Multi Cylinder Diesel/Petrol Engine, (Morse test)
 - (d) Two stroke Petrol Engine
 - (e) Variable Compression Ratio I.C. Engine.

21 Hours**Scheme for Examination:**

One Question from Part A	-	15 Marks (05 Writeup+10)
One Question from Part B	-	25 Marks (05 Writeup+20)
Viva-Voce	-	10 Marks

Total		50 Marks

COMPUTER INTEGRATED MANUFACTURING

Sub Code	: 10ME 61	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART-A

UNIT - 1

Computer Integrated Manufacturing Systems: Introduction, Automation definition, Types of automation, CIM, processing in manufacturing, Production concepts, Mathematical Models-Manufacturing lead time, production rate, components of operation time, capacity, Utilization and availability, Work-in-process, WIP ratio, TIP ratio, Problems using mathematical model equations.

8 Hours

UNIT - 2

High Volume Production System: Introduction Automated flow line-symbols, objectives, Work part transport-continuous, Intermittent, synchronous, Pallet fixtures, Transfer Mechanism-Linear-Walking beam, roller chain drive, Rotary-rack and pinion, Ratchet & Pawl, Geneva wheel, Buffer storage, control functions-sequence, safety, Quality, Automation for machining operation.

6 Hours

UNIT - 3

Analysis Of Automated Flow Line & Line Balancing: General terminology and analysis, Analysis of Transfer Line without storage upper bound approach, lower bound approach and problems, Analysis of Transfer lines with storage buffer, Effect of storage, buffer capacity with simple problem, Partial automation-with numerical problems, flow lines with more than two stages, Manual Assembly lines, line balancing problem.

6 Hours

UNIT - 4

Minimum Rational Work Element: Work station process time, Cycle time, precedence constraints. Precedence diagram, Balance delay methods of line balancing-largest Candidate rule, Kilbridge and Westers method, Ranked positional weight method, Numerical problems covering L above methods and computerized line balancing.

6 Hours

PART-B

UNIT - 5

Automated Assembly Systems: Design for automated assembly systems, types of automated assembly system, Parts feeding devices-elements of parts delivery system-hopper, part feeder, Selectors, feed back, escapement and placement analysis of Multistation Assembly Machine analysis of single station assembly. **Automated Guided Vehicle System:** Introduction,

Vehicle guidance and routing, System management, Quantitative analysis of AGV's with numerical problems and application.

8 Hours

UNIT - 6

Computerized Manufacturing Planning System: Introduction, Computer Aided Process Planning, Retrieval types of process planning, Generative type of process planning, Material requirement planning, Fundamental concepts of MRP inputs to MRP, Capacity planning.

6 Hours

UNIT - 7

Cnc Machining Centers: Introduction to CNC, elements of CNC, CNC machining centers, part programming, fundamental steps involved in development of part programming for milling and turning.

6 Hours

UNIT - 8

Robotics: Introduction to Robot configuration, Robot motion, programming of Robots end effectors, Robot sensors and Robot applications.

6 Hours

TEXT BOOKS:

2. **Automation, Production system & Computer Integrated manufacturing**, M. P. Groover Person India, 2007 2nd edition.
3. **Principles of Computer Integrated Manufacturing**, S. Kant Vajpayee, Prentice Hall India.

REFERENCE BOOKS:

1. **Computer Integrated Manufacturing**, J. A. Rehg & Henry. W. Kraebber.
2. **CAD/CAM** by Zeid, Tata McGraw Hill.

DESIGN OF MACHINE ELEMENTS – II

Sub Code	: 10ME 62	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Curved Beams: Stresses in curved beams of standard cross sections used in crane hook, punching presses & clamps, closed rings and links

Cylinders & Cylinder Heads: Review of Lame's Equations; compound cylinders, stresses due to different types of fits, cylinder heads, flats.

08 Hours

UNIT - 2

Belts Ropes and Chains: Flat belts: Length & cross section, Selection of V-belts, ropes and chains for different applications.

05 Hours**UNIT - 3**

Springs: Types of springs - stresses in Helical coil springs of circular and non-circular cross sections. Tension and compression springs, springs under fluctuating loads, Leaf Springs: Stresses in leaf springs. Equalized stresses, Energy stored in springs, Torsion, Belleville and Rubber springs.

08 Hours**UNIT - 4**

Spur & Helical Gears: Spur Gears: Definitions, stresses in gear tooth: Lewis equation and form factor, Design for strength, Dynamic load and wear load. Helical Gears: Definitions, formative number of teeth, Design based on strength, dynamic and wear loads.

07 Hours**PART - B****UNIT - 5**

Bevel and Worm Gears: Bevel Gears: Definitions, formative number of teeth, Design based on strength, dynamic and wear loads. Worm Gears: Definitions, Design based on strength, dynamic, wear loads and efficiency of worm gear drives.

07 Hours**UNIT - 6**

Clutches & Brakes: Design of Clutches: Single plate, multi plate and cone clutches. Design of Brakes: Block and Band brakes: Self locking of brakes: Heat generation in Brakes.

05 Hours**UNIT - 7**

Lubrication and Bearings: Lubricants and their properties, Mechanisms of Lubrication bearing modulus, coefficient of friction, minimum oil film thickness, Heat Generated, Heat dissipated, Bearing Materials, Examples of journal bearing and thrust bearing design.

07 Hours**UNIT - 8**

IC Engine Parts: Design of piston, connecting rod and crank shaft.

05 Hours**DESIGN DATA HANDBOOK**

1. **Design Data Hand Book** , K. Lingaiah, McGraw Hill, 2nd Ed.
2. **Data Hand Book**, K. Mahadevan and Balaveera Reddy, CBS Publication

3. **Design Data Hand Book**, H.G. Patil, I. K. International Publisher, 2010.

TEXT BOOKS

1. **Mechanical Engineering Design**, Joseph E Shigley and Charles R. Mischke. McGraw Hill International edition, 6th Edition 2003.
2. **Design of Machine Elements**, V. B Bhandari, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2nd Edition 2007

REFERNCE BOOKS

1. **Machine Design**, Robert L. Norton, Pearson Education Asia, 2001.
2. **Design of Machine Elements**, M. F. Spotts, T. E. Shoup, L. E. Hornberger, S. R. Jayram and C. V. Venkatesh, Pearson Education, 2006.
3. **Machine Design**, Hall, Holowenko, Laughlin (Schaum's Outlines series) Adapted by S.K. Somani, Tata McGraw Hill Publishing Company Ltd., New Delhi, Special Indian Edition, 2008.
4. **Machine Design**, A CAD Approach: Andrew D DIMAROGONAS, John Wiley Sons, Inc, 2001.

HEAT AND MASS TRANSFER

Sub Code	: 10ME 63	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Introductory Concepts And Definitions: Modes of heat transfer: Basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity; convective heat transfer coefficient; radiation heat transfer; combined heat transfer mechanism. Boundry conditions of 1st, 2nd and 3rd Kind

Conduction: Derivation of general three dimensional conduction equation in Cartesian coordinate, special cases, discussion on 3-D conduction in cylindrical and spherical coordinate systems (No derivation). One dimensional conduction equations in rectangular, cylindrical and spherical coordinates for plane and composite walls. Overall heat transfer coefficient. Thermal contact resistance.

07 Hours

UNIT - 2

Variable Thermal Conductivity: Derivation for heat flow and temperature distribution in plane wall. Critical thickness of insulation without heat generation, Thermal resistance concept & its importance. Heat transfer in extended surfaces of uniform cross-section without heat generation, Long fin, short fin with insulated tip and without insulated tip and fin connected between two heat sources. Fin efficiency and effectiveness. Numerical problems.

06 Hours**UNIT - 3**

One-Dimensional Transient Conduction: Conduction in solids with negligible internal temperature gradient (Lumped system analysis), Use of Transient temperature charts (Heisler's charts) for transient conduction in slab, long cylinder and sphere; use of transient temperature charts for transient conduction in semi-infinite solids. Numerical Problems.

06 Hours**UNIT - 4**

Concepts And Basic Relations In Boundary Layers: Flow over a body velocity boundary layer; critical Reynolds number; general expressions for drag coefficient and drag force; thermal boundary layer; general expression for local heat transfer coefficient; Average heat transfer coefficient; Nusselt number. Flow inside a duct- velocity boundary layer, hydrodynamic entrance length and hydro dynamically developed flow; flow through tubes (internal flow discussion only). Numericals based on empirical relation given in data handbook.

Free Or Natural Convection: Application of dimensional analysis for free convection- physical significance of Grashoff number; use of correlations of free convection in vertical, horizontal and inclined flat plates, vertical and horizontal cylinders and spheres, Numerical problems.

07 Hours**PART - B****UNIT - 5**

Forced Convections: Applications of dimensional analysis for forced convection. Physical significance of Reynolds, Prandtl, Nusselt and Stanton numbers. Use of various correlations for hydro dynamically and thermally developed flows inside a duct, use of correlations for flow over a flat plate, over a cylinder and sphere. Numerical problems.

06 Hours**UNIT - 6**

Heat Exchangers: Classification of heat exchangers; overall heat transfer coefficient, fouling and fouling factor; LMTD, Effectiveness-NTU methods of analysis of heat exchangers. Numerical problems.

06 Hours

UNIT - 7

Condensation And Boiling: Types of condensation (discussion only) Nusselt's theory for laminar condensation on a vertical flat surface; use of correlations for condensation on vertical flat surfaces, horizontal tube and horizontal tube banks; Reynolds number for condensate flow; regimes of pool boiling, pool boiling correlations. Numerical problems. Mass transfer definition and terms used in mass transfer analysis, Ficks First law of diffusion (no numericals).

07 Hours**UNIT - 8**

Radiation Heat Transfer: Thermal radiation; definitions of various terms used in radiation heat transfer; Stefan-Boltzman law, Kirchoff's law, Planck's law and Wein's displacement law. Radiation heat exchange between two parallel infinite black surfaces, between two parallel infinite gray surfaces; effect of radiation shield; intensity of radiation and solid angle; Lambert's law; radiation heat exchange between two finite surfaces-configuration factor or view factor. Numerical problems.

07 Hours**TEXT BOOKS:**

1. **Heat & Mass transfer**, Tirumaleshwar, Pearson education 2006
2. **Heat transfer-A basic approach**, Ozisik, Tata McGraw Hill 2002

REFERENCE BOOKS:

1. **Heat transfer, a practical approach**, Yunus A- Cengel Tata Mc Graw Hill
2. **Principles of heat transfer**, Kreith Thomas Learning 2001
3. **Fundamentals of heat and mass transfer**, Frenk P. Incropera and David P. Dewitt, John Wiley and son's.
4. **Heat transfer**, P.K. Nag, Tata McGraw Hill 2002.

FINITE ELEMENT METHODS

Sub Code	: 10ME 64	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART-A

UNIT-1

Introduction: Equilibrium equations in elasticity subjected to body force, traction forces, and stress-strain relations for plane stress and plane strains. General description of Finite Element Method, Application and limitations. Types of elements based on geometry. Node numbering, Half band width.

07 Hrs

UNIT-2

Basic Procedure: Euler - Lagrange equation for bar, beam (cantilever / simply supported fixed) Principle of virtual work, principle of minimum potential energy, Raleigh's Ritz method. Direct approach for stiffness matrix formulation of bar element. Galerkin's method.

07 Hrs

UNIT-3

Interpolation Models: Interpolation polynomials- Linear, quadratic and cubic. Simplex complex and multiplex elements. 2D PASCAL's triangle. CST elements-Shape functions and Nodal load vector, Strain displacement matrix and Jacobian for triangular and rectangular element.

07 Hrs

UNIT-4

Solution of 1-D Bars: Solutions of bars and stepped bars for displacements, reactions and stresses by using penalty approach and elimination approach. Gauss-elimination technique.

06 Hrs

PART-B

UNIT-5

Higher Order Elements: Langrange's interpolation, Higher order one dimensional elements-Quadratic and cubic element and their shape functions. Shape function of 2-D quadrilateral element-linear, quadric element Iso-parametric, Sub parametric and Super parametric elements. numerical integration : 1, 2 and 3 gauge point for 1D and 2D cases.

06 Hrs

UNIT-6

Trusses: Stiffness matrix of Truss element. Numerical problems.

06 Hrs

UNIT-7

Beams: Hermite shape functions for beam element, Derivation of stiffness matrix. Numerical problems of beams carrying concentrated, UDL and linearly varying loads.

06 Hrs

UNIT-8

Heat Transfer: Steady state heat transfer, 1D heat conduction governing equations. Functional approach for heat conduction. Galerkin's approach for heat conduction. 1D heat transfer in thin fins.

07 Hrs**TEXT BOOKS:**

1. **Finite Elements in Engineering**, T.R.Chandrupatla, A.D Belegunde, 3rd Ed PHI.
2. **Finite Element Method in Engineering**, S.S. Rao, 4th Edition, Elsevier, 2006.

REFERENCE BOOKS:

1. **"Finite Element Methods for Engineers"** U.S. Dixit, Cengage Learning, 2009
2. **Concepts and applications of Finite Element Analysis**, R.D. Cook D.S Maltus, M.E Plesha, R.J.Witt, Wiley 4th Ed, 2009
3. **Finite Element Methods**, Daryl. L. Logon, Thomson Learning 3rd edition, 2001.
4. **Finite Element Method**, J.N.Reddy, McGraw -Hill International Edition.

MECHATRONICS & MICROPROCESSOR

Sub Code	: 10ME 65	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A**UNIT - 1**

Introduction to Mechatronic Systems: Measurement and control systems Their elements and functions, Microprocessor based controllers.

06 Hours**UNIT - 2**

Review of Transducers and Sensors: Definition and classification of transducers. Definition and classification of sensors. Principle of working and applications of light sensors, proximity sensors and Hall effect sensors.

07 Hours

UNIT 3

Electrical Actuation Systems: Electrical systems, Mechanical switches, solid-state switches, solenoids, DC & AC motors, Stepper motors and their merits and demerits.

06 Hours**UNIT - 4**

Signal Conditioning: Introduction to signal conditioning. The operational amplifier, Protection, Filtering, Wheatstone bridge, Digital signals Multiplexers, Data acquisition, Introduction to Digital system. Processing Pulse-modulation.

07 Hours**PART - B****UNIT - 5**

Introduction to Microprocessors: Evolution of Microprocessor, Organization of Microprocessors (Preliminary concepts), basic concepts of programming of microprocessors.

Review of concepts - Boolean algebra, Logic Gates and Gate Networks, Binary & Decimal number systems, memory representation of positive and negative integers, maximum and minimum integers. Conversion of real, numbers, floating point notation, representation of floating point numbers, accuracy and range in floating point representation, overflow and underflow, addition of floating point numbers, character representation.

07 Hours**UNIT - 6**

Logic Function: Data word representation. Basic elements of control systems 808SA processor architecture terminology such as CPU, memory and address, ALU, assembler data registers, Fetch cycle, write cycle, state, bus, interrupts. Micro Controllers. Difference between microprocessor and micro controllers. Requirements for control and their implementation in microcontrollers. Classification of micro controllers.

07 Hours**UNIT - 7**

Organization & Programming of Microprocessors: Introduction to organization of INTEL 808S-Data and Address buses, Instruction set of 8085, programming the 8085, assembly language programming.

06 Hours**UNIT - 8**

Central Processing Unit of Microprocessors: Introduction, timing and control unit basic concepts, Instruction and data flow, system timing, examples of INTEL 8085 and INTEL 4004 register organization.

06 Hours

TEXT BOOKS:

1. **Mechatronics**, W.Bolton, Longman, 2Ed, Pearson Publications, 2007.
2. **Microprocessor Architecture, Programming And Applications With 8085/8085A**, R.S. Ganokar, Wiley Eastern.

REFERENCE BOOKS:

1. **Mechatronics and Microprocessors**, K.P.Ramchandran, G.K.Vijayraghavan, M.S.Balasundran, Wiley, 1st Ed, 2009
2. **Mechatronics - Principles, Concepts and applications** – Nitaigour and Premchand Mahilik - Tata McGraw Hill- 2003.
3. **Mechatronics Principles & applications**, Godfrey C. Onwubolu, Elsevier..
4. **Introduction Mechatronics & Measurement systems**, David.G. Aliciatore & Michael. B. Bihistaned, Tata McGraw Hill, 2000.

HEAT & MASS TRANSFER LABORATORY

Sub Code	: 10MEL 67	IA Marks	25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 42	Exam Marks	: 50

PART - A

1. Determination of Thermal Conductivity of a Metal Rod.
2. Determination of Overall Heat Transfer Coefficient of a Composite wall.
3. Determination of Effectiveness on a Metallic fin.
4. Determination of Heat Transfer Coefficient in a free Convection on a vertical tube.
5. Determination of Heat Transfer Coefficient in a Forced Convection Flow through a Pipe.
6. Determination of Emissivity of a Surface.

21 Hours**PART - B**

1. Determination of Stefan Boltzman Constant.
2. Determination of LMDT and Effectiveness in a Parallel Flow and Counter Flow Heat Exchangers
3. Experiments on Boiling of Liquid and Condensation of Vapour

4. Performance Test on a Vapour Compression Refrigeration.
5. Performance Test on a Vapour Compression Air - Conditioner
6. Experiment on Transient Conduction Heat Transfer

21 Hours**Scheme for Examination:**

One Question from Part A	-	20 Marks (05 Write up +15)
One Question from Part B	-	20 Marks (05 Write up +15)
Viva-Voce	-	10 Marks

Total		50 Marks

COMPUTER AIDED MODELING AND ANALYSIS LABORATORY

Sub Code	: 10MEL 68	IA Marks	25
Hrs/week	: 03	Exam Hours	: 03
Total Lecture Hrs	: 42	Exam Marks	: 50

PART - A**Study of a FEA package and modeling stress analysis of**

- a. Bars of constant cross section area, tapered cross section area and stepped bar
6 Hours
- b. Trusses – (Minimum 2 exercises)
3 Hours
- c. Beams – Simply supported, cantilever, beams with UDL, beams with varying load etc (Minimum 6 exercises)
12 Hours

PART - B

- a) Stress analysis of a rectangular plate with a circular hole
3 Hours
- b) Thermal Analysis – 1D & 2D problem with conduction and convection boundary conditions (Minimum 4 exercises)
9 Hours

- c) Dynamic Analysis
- 1) Fixed – fixed beam for natural frequency determination
 - 2) Bar subjected to forcing function
 - 3) Fixed – fixed beam subjected to forcing function

9 Hours

REFERENCE BOOKS:

1. **A first course in the Finite element method**, Daryl L Logan, Thomason, Third Edition
2. **Fundamentals of FEM**, Hutton – McGraw Hill, 2004
3. **Finite Element Analysis**, George R. Buchanan, Schaum Series

Scheme for Examination:

One Question from Part A	-	20 Marks (05 Write up +15)
One Question from Part B	-	20 Marks (05 Write up +15)
Viva-Voce	-	10 Marks

Total		50 Marks

ELECTIVE-II (GROUP - A)

REFRIGERATION AND

AIR CONDITIONING

Sub Code	: 10ME 663	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Methods Of Refrigeration: Ice refrigeration, evaporative refrigeration, air refrigeration, vapour refrigeration, dry ice refrigeration, thermo electric refrigeration, pulse tube refrigeration, thermoacoustic refrigeration.

06 Hours

UNIT – 2

Gas Cycle Refrigeration: Introduction , reverse Carnot cycle, Bell Coleman cycle, advantages & dis-advantages of gas refrigeration system. Applications to aircraft refrigeration, Analysis of gas refrigeration and Numericals.

06 Hours

UNIT – 3

Multi Pressure Vapour Compression Systems: Multi stage compression, Multi evaporator systems, Cascade systems, calculation, production of solid

carbon dioxide, System practices for multistage system.

07 Hours

UNIT - 4

Refrigerants: Types of Refrigerants, Comparative study of Ethane and Methane derivatives, selection of Refrigerants, Requirements of Refrigerants, Effects of lubricants in Refrigerants, substitutes of CFC Refrigerants, Mixture Refrigerants-azeotropic mixtures

07 Hours

PART - B

UNIT – 5

Equipments Used In Vapour Compression Refrigeration System: Compressors: Principle, types of compressors, capacity control. Condensers: Types and construction, Expansion devices: Types- Automatic expansion valve, Thermostatic expansion valves, capillary tube. Sizing Evaporator: Types & construction.

06 Hours

UNIT - 6

Vapour Absorption System: Common refrigerant absorbent combinations, Binary mixtures, Ammonia Water Absorption system, Actual vapour absorption cycle and its representation on enthalpy. composition diagram, calculations. Triple fluid vapour absorption refrigeration system. Water - Lithium Bromide absorption chiller.

07 Hours

UNIT - 7

Design Conditions: Outside design conditions, choice of inside conditions, comfort chart. Choice of supply design condition.

Load Calculations And Applied Psychometrics: Internal heat gains, system heat gains, break up of ventilation load and effective sensible heat factor, Bypass factor, cooling load estimate. Psychometric calculations for cooling. Selection of Air conditioning apparatus for cooling and dehumidification, evaporative cooling.

07 Hours**UNIT - 8**

Transmission And Distribution Of Air: Room Air Distribution, Friction loss in ducts, dynamic losses in ducts, Air flow through simple Duct system, Duct design.

Controls In Refrigeration And Air Conditioning Equipments: High pressure and low pressure cut out, thermostats, pilot operated solenoid valve, motor controls, bypass control-Damper motor. VAV controls.

06 Hours**TEXT BOOKS:**

1. **‘Refrigeration and Air-Conditioning’** C. P. Arora, Tata McGraw Hill Publication, 2nd edition, 2001.
2. **‘Refrigeration and Air-Conditioning’** W. F. Stoecker, Tata McGraw Hill Publication, 2nd edition, 1982.
3. **ASHRAE**, Hand Book, 2009

REFERENCE BOOKS:

1. **‘Principles of Refrigeration’** Dossat, Pearson-2006.
2. **„Heating, Ventilation and Air Conditioning’**, McQuiston, Wiley Students edition, 5th edition 2000.
3. **„Air conditioning’** PITA, 4th edition, pearson-2005
4. **‘Refrigeration and Air-Conditioning’** Manohar prasad
5. **‘Refrigeration and Air-Conditioning’** S C Arora & S Domkundwar, Dhanpat Rai Publication

NON-TRADITIONAL MACHINING

Sub Code	: 10ME 665	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Introduction: History, Classification, comparison between conventional and Non-conventional machining process selection.

05 Hours

UNIT - 2

Ultrasonic Machining (Usm): Introduction, equipment, tool materials & tool size, abrasive slurry, cutting tool system design:- Effect of parameter: Effect of amplitude and frequency and vibration, Effect of abrasive grain diameter, effect of applied static load, effect of slurry, tool & work material, USM process characteristics: Material removal rate, tool wear, Accuracy, surface finish, applications, advantages & Disadvantages of USM.

08 Hours

UNIT - 3

Abrasive Jet Machining (Ajm): Introduction, Equipment, Variables in AJM: Carrier Gas, Type of abrasive, size of abrasive grain, velocity of the abrasive jet, mean number. abrasive particles per unit volume of the carrier gas, work material, stand off distance (SOD), nozzle design, shape of cut. Process characteristics-Material removal rate, Nozzle wear, Accuracy & surface finish. Applications, advantages & Disadvantages of AJM. Water Jet Machining: Principal, Equipment, Operation, Application, Advantages and limitations of water Jet machinery

07 Hours

UNIT - 4

Electrochemical Machining (Ecm): Introduction, study of ECM machine, elements of ECM process : Cathode tool, Anode work piece, source of DC power, Electrolyte, chemistry of the process, ECM Process characteristics – Material removal rate, Accuracy, surface finish, ECM Tooling: ECM tooling technique & example, Tool & insulation materials, Tool size Electrolyte flow arrangement, Handling of slug, Economics of ECM, Applications such as Electrochemical turning, Electrochemical Grinding, Electrochemical Honing, deburring, Advantages, Limitations.

06 Hours

PART - B**UNIT - 5**

Chemical Machining (Chm): Introduction, elements of process, chemical blanking process : Preparation of work piece, preparation of masters, masking with photo resists, etching for blanking, accuracy of chemical blanking, applications of chemical blanking, chemical milling (contour machining): process steps –masking, Etching, process characteristics of CHM: material removal rate, accuracy, surface finish, Hydrogen embrittlement, advantages & application of CHM.

06 Hours**UNIT - 6**

Electrical Discharge Machining (Edm): Introduction, mechanism of metal removal, dielectric fluid, spark generator, EDM tools (electrodes) Electrode feed control, Electrode manufacture, Electrode wear, EDM tool design, choice of machining operation, electrode material selection, under sizing and length of electrode, machining time. Flushing; pressure flushing, suction flushing, side flushing, pulsed flushing synchronized with electrode movement, EDM process characteristics: metal removal rate, accuracy, surface finish, Heat Affected Zone. Machine tool selection, Application, EDM accessories / applications, electrical discharge grinding, Traveling wire EDM.

08 Hours**UNIT - 7**

Plasma Arc Machining (Pam): Introduction, equipment, non-thermal generation of plasma, selection of gas, Mechanism of metal removal, PAM parameters, process characteristics. Safety precautions, Applications, Advantages and limitations.

05 Hours**UNIT - 8**

Laser Beam Machining (Lbm): Introduction, equipment of LBM mechanism of metal removal, LBM parameters, Process characteristics, Applications, Advantages & limitations.

Electron Beam Machining (Ebm): Principles, equipment, operations, applications, advantages and limitation of EBM.

07 Hours**TEXT BOOKS:**

1. **Modern machining process**, Pandey and Shan, Tata McGraw Hill 2000
2. **New Technology**, Bhattacharya 2000

REFERENCE BOOKS:

1. **Production Technology**, HMT Tata McGraw Hill. 2001

2. **Modern Machining Process**, Aditya. 2002
3. **Non-Conventional Machining**, P.K.Mishra, The Institution of Engineers (India) Test book series, Narosa Publishing House – 2005.
4. **Metals Handbook: Machining Volume 16**, Joseph R. Davis (Editor), American Society of Metals (ASM)

ENGINEERING ECONOMY

Sub Code	: 10ME 71	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Introduction: Engineering Decision-Makers, Engineering and Economics, Problem solving and Decision making, Intuition and Analysis, Tactics and Strategy. Engineering Economic Decision, Maze. Law of demand and supply, Law of returns, Interest and Interest factors: Interest rate, Simple interest, Compound interest, Cash - flow diagrams, Personal loans and EMI Payment, Exercises and Discussion.

08 Hours

UNIT - 2

Present-Worth Comparisons: Conditions for present worth comparisons, Basic Present worth comparisons, Present-worth equivalence, Net Present-worth, Assets with unequal lives, infinite lives, Future-worth comparison, Pay-back comparison, Exercises, Discussions and problems.

06 Hours

UNIT - 3

Equivalent Annual-Worth Comparisons: Equivalent Annual-Worth Comparison methods, Situations for Equivalent Annual-Worth Comparisons, Consideration of asset life, Comparison of assets with equal and unequal lives, Use of shrinking fund method, Annuity contract for guaranteed income, Exercises, Problems.

06 Hours

UNIT - 4

Rate-Of-Return Calculations And Depreciation: Rate of return, Minimum acceptable rate of return, IRR, IRR misconceptions, Cost of capital concepts. Causes of Depreciation, Basic methods of computing depreciation charges, Tax concepts, corporate income tax.

06 Hours

PART - B

UNIT - 5

Estimating and Costing: Components of costs such as Direct Material Costs, Direct Labor Costs, Fixed Over-Heads, Factory cost, Administrative Over-Heads, First cost, Marginal cost, Selling price, Estimation for simple components.

05 Hours

UNIT - 6

Introduction, Scope Of Finance, Finance Functions: Statements of Financial Information: Introduction, Source of financial information, Financial statements, Balance sheet, Profit and Loss account, relation between Balance sheet and Profit and Loss account. Simple Numericals

08 Hours

UNIT - 7

Financial Ratio Analysis: Introduction, Nature of ratio analysis, Liquidity ratios, Leverage ratios, Activity ratios, Profitability ratios, Evaluation of a firm's earning power. Comparative statements analysis. Simple numericals

06 Hours

UNIT - 8

Financial And Profit Planning: Introduction, Financial planning, Profit planning, Objectives of profit planning, Essentials of profit planning, Budget administration, type of budgets, preparation of budgets, advantages, problems and dangers of budgeting. Introduction to Bench Marking of Manufacturing Operation.

07 Hours

TEXT BOOKS:

1. **Engineering Economy**, Riggs J.L., 4TH ed. , McGraw Hill, 2002
2. **Engineering Economy**, Thuesen H.G. PHI , 2002

REFERENCE BOOKS:

1. **Engineering Economy**, Tarachand, 2000.
2. **Industrial Engineering and Management**, OP Khanna, Dhanpat Rai & Sons. 2000
3. **Financial Mangement**, Prasanna Chandra, 7th Ed., TMH, 2004
4. **Finacial Management**, IM PANDEY, Vikas Pub. House, 2002

MECHANICAL VIBRATIONS

Sub Code	: 10ME 72	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART- A

UNIT - 1

Introduction: Types of vibrations, Definitions, Simple Harmonic Motion (S.H.M.), Work done by harmonic force, Principle of super position applied to SHM, Beats, Fourier theorem and problems.

06 Hours

UNIT -2

Undamped (Single Degree of Freedom) Free Vibrations: Derivations for spring mass systems, Methods of Analysis, Natural frequencies of simple systems, Springs in series and parallel, Torsional and transverse vibrations, Effect of mass of spring and Problems.

07 Hours

UNIT - 3

Damped free vibrations (1DOF): Types of damping, Analysis with viscous damping - Derivations for over, critical and under damped systems, Logarithmic decrement and Problems.

06 Hours

UNIT - 4

Forced Vibrations (1DOF): Introduction, Analysis of forced vibration with constant harmonic excitation - magnification factor, rotating and reciprocating unbalances, excitation of support (relative and absolute amplitudes), force and motion transmissibility, Energy dissipated due to damping and Problems.

07 Hours

PART – B

UNIT – 5

Vibration Measuring Instruments and Whirling of shafts: Seismic Instruments – Vibrometers, Accelerometer, Frequency measuring instruments and Problems. Whirling of shafts with and without damping, discussion of speeds above and below critical speeds and Problems.

06 Hours

UNIT – 6

Systems with two degrees of Freedom: Principle modes of vibrations, Normal mode and natural frequencies of systems (without damping) – Simple spring mass systems, masses on tightly stretched strings, double pendulum, torsional systems, combined rectilinear and angular systems, geared systems and Problems. Undamped dynamic vibration absorber and Problems.

06 Hours

UNIT - 7

Numerical Methods for multi degree freedom of systems: Introduction, Maxwell's reciprocal theorem, Influence coefficients, Rayleigh's method, Dunkerley's method, Stodola method, Holzer's method, Orthogonality of principal modes, method of matrix iteration and Problems.

09 Hours

UNIT – 8

Modal analysis and Condition Monitoring: Signal analysis, dynamic testing of machines and structures, Experimental modal analysis, Machine condition monitoring and diagnosis.

05 Hours

TEXT BOOKS:

1. **Mechanical Vibrations**, S. S. Rao, Pearson Education Inc, 4th edition, 2003.
2. **Mechanical Vibrations**, V. P. Singh, Dhanpat Rai & Company, 3rd edition, 2006.

REFERENCE BOOKS:

1. **Theory of Vibration with Applications**, W. T. Thomson, M. D. Dahleh and C. Padmanabhan, Pearson Education Inc, 5th edition, 2008.
2. **Mechanical Vibrations:** S. Graham Kelly, Schaum's outline Series, Tata McGraw Hill, Special Indian Edition, 2007.
3. **Theory and Practice of Mechanical Vibrations:** J. S. Rao & K. Gupta, New Age International Publications, New Delhi, 2001.
4. **Mechanical Vibrations**, G. K.Grover, Nem Chand and Bros, 6th edition, 1996.

HYDRAULICS AND PNEUMATICS

Sub Code	: 10ME 73	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT -1

Introduction to Hydraulic Power: Definition of hydraulic system, advantages, limitations, applications, Pascal's law, structure of hydraulic control system, problems on Pascal's law.

The source of Hydraulic Power: Pumps Classification pumps, Pumping theory of positive displacement pumps, construction and working of Gear pumps, Vane pumps, Piston pumps, fixed and variable displacement pumps, Pump performance characteristics, pump Selection factors, problems on pumps.

07 Hours

UNIT -2

Hydraulic Actuators and Motors: Classification cylinder and hydraulic motors, Linear Hydraulic Actuators [cylinders], single and double acting cylinder, Mechanics of Hydraulic Cylinder Loading, mounting arrangements, cushioning, special types of cylinders, problems on cylinders, construction and working of rotary actuators such as gear, vane, piston motors, Hydraulic Motor Theoretical Torque, Power and Flow Rate, Hydraulic Motor Performance, problems, symbolic representation of hydraulic actuators (cylinders and motors).

06 Hours

UNIT - 3

Control Components in Hydraulic Systems: Classification of control valves, Directional Control Valves- Symbolic representation, constructional features of poppet, sliding spool, rotary type valves solenoid and pilot operated DCV, shuttle valve, check valves, Pressure control valves - types, direct operated types and pilot operated types. Flow Control Valves - compensated and non-compensated FCV, needle valve, temperature compensated, pressure compensated, pressure and temperature compensated FCV, symbolic representation.

07 Hours

UNIT - 4

Hydraulic Circuit Design And Analysis: Control of Single and Double - Acting Hydraulic Cylinder, Regenerative circuit, Pump Unloading Circuit, Double Pump Hydraulic System, Counter balance Valve Application, Hydraulic Cylinder Sequencing Circuits, Automatic cylinder reciprocating system, Locked Cylinder using Pilot check Valve, Cylinder synchronizing circuit using different methods, factors affecting synchronization, Hydraulic circuit for force multiplication, Speed Control of Hydraulic Cylinder, Speed Control of Hydraulic Motors, Safety circuit, Accumulators, types, construction and applications with circuits.

06 Hours

PART – B

UNIT - 5

Maintenance of Hydraulic System: Hydraulic Oils - Desirable properties, general type of Fluids, Sealing Devices, Reservoir System, Filters and Strainers, wear of Moving Parts due to solid -particle Contamination, temperature control (heat exchangers), Pressure switches, trouble shooting.

06 Hours

UNIT - 6

Introduction to Pneumatic Control: Definition of pneumatic system, advantages, limitations, applications, Choice of working medium. Characteristic of compressed air. Structure of Pneumatic control System, fluid conditioners and FRL unit.

Pneumatic Actuators: Linear cylinder - Types, Conventional type of cylinder- working, End position cushioning, seals, mounting arrangements- Applications. Rod - Less cylinders types, working, advantages, Rotary cylinders- types construction and application, symbols.

07 Hours

UNIT-7

Pneumatic Control Valves: DCV such as poppet, spool, suspended seat type slide valve, pressure control valves, flow control valves, types and construction, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, twin pressure valve, symbols. 3Hrs Simple Pneumatic Control: Direct and indirect actuation pneumatic cylinders, speed control of cylinders - supply air throttling and Exhaust air throttling and Exhaust air throttling.

Signal Processing Elements: Use of Logic gates - OR and AND gates in pneumatic applications. Practical Examples involving the use of logic gates, Pressure dependant controls- types - construction - practical applications, Time dependent controls principle. Construction, practical applications.

07 Hours

UNIT-8

Multi- Cylinder Application: Coordinated and sequential motion control, Motion and control diagrams. Signal elimination methods, Cascading method- principle, Practical application examples (up to two cylinders) using cascading method (using reversing valves).

Electro- Pneumatic Control: Principles - signal input and out put, pilot assisted solenoid control of directional control valves, Use of relay and contactors. Control circuitry for simple signal cylinder application.

Compressed Air: Production of compressed air- Compressors Preparation of compressed air-Driers, Filters, Regulators, Lubricators, Distribution of compressed air Piping layout.

06 Hours

TEXT BOOKS:

1. **“Fluid Power with Applications”**, Anthony Esposito, Sixth edition, Pearson Education, Inc, 2000.
2. **'Pneumatics and Hydraulics'**, Andrew Parr, Jaico Publishing Co

REFERENCE BOOKS:

1. **'Oil Hydraulic systems', Principles and Maintenance** S. R. Majurr, Tata McGraw Hill Publishing Company Ltd. - 2001
2. **'Industrial Hydraulics', Pippenger, Hicks'** McGraw Hill, New York
3. **'Hydraulic & Pneumatic Power for Production'**, Harry L. Stewart
4. **'Pneumatic Systems'**, S. R. Majumdar, Tata McGraw Hill Publish 1995
5. **Power Hydraulics'** Michael J Pinches & John G Ashby, Prentice Hall

OPERATION RESEARCH

Sub Code	: 10ME 74	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART- A

UNIT -1

Introduction: Evolution of OR, definition of OR, scope of OR, application areas of OR, steps (phases) in OR study, characteristics and limitations of OR, models used in OR, linear programming (LP) problem-formulation and solution by graphical method.

04 Hours

UNIT -2

Solution Of Linear Programming Problems: The simplex method-canonical and standard form of an LP problem, slack, surplus and artificial variables, big M method and concept of duality, dual simplex method.

08 Hours

UNIT -3

Transportation Problem: Formulation of transportation problem, types, initial basic feasible solution using different methods, optimal solution by MODI method, degeneracy in transportation problems, application of transportation problem concept for maximization cases. Assignment Problem-formulation, types, application to maximization cases and travelling salesman problem.

08 Hours

UNIT -4

Integer Programming: Pure and mixed integer programming problems, solution of Integer programming problems-Gomory's all integer cutting plane method and mixed integer method, branch and bound method, Zero-One programming.

06 Hours

PART- B

UNIT -5

Pert-CPM Techniques: Introduction, network construction - rules, Fulkerson's rule for numbering the events, AON and AOA diagrams; Critical path method to find the expected completion time of a project, floats; PERT for finding expected duration of an activity and project, determining the probability of completing a project, predicting the completion time of project; crashing of simple projects.

08 Hours

UNIT -6

Queuing Theory: Queuing systems and their characteristics, Pure-birth and Pure-death models (only equations), empirical queuing models – M/M/1 and M/M/C models and their steady state performance analysis.

06 Hours

UNIT -7

Game Theory: Formulation of games, types, solution of games with saddle point, graphical method of solving mixed strategy games, dominance rule for solving mixed strategy games.

06 Hours

UNIT -8

Sequencing: Basic assumptions, sequencing „n“ jobs on single machine using priority rules, sequencing using Johnson“s rule-„n“ jobs on 2 machines, „n“ jobs on 3 machines, „n“ jobs on „m“ machines. Sequencing 2 jobs on „m“ machines using graphical method.

06 Hours

TEXT BOOKS

1. **Operations Research**, P K Gupta and D S Hira, Chand Publications, New Delhi - 2007
2. **Operations Research**, Taha H A, Pearson Education

REFERNCE BOOKS

1. **Operations Research**, A P Verma, S K Kataria & Sons, 2008
2. **Operations Research**, Paneerselvan, PHI
3. **Operations Research**, A M Natarajan, P Balasubramani, Pearson Education, 2005
4. **Introduction to Operations Research**, Hillier and Liberman, 8th Ed., McGraw Hill
5. **Operations Research** S.D. Sharma, Ledarnath Ramanath & Co, 2002

DESIGN LABORATORY

Sub Code	: 10MEL 77	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 42	Exam Marks	: 50

PART - A

1. Determination of natural frequency, logarithmic decrement, damping ratio and damping coefficient in a single degree of freedom vibrating systems (longitudinal and torsional)
2. Balancing of rotating masses.
3. Determination of critical speed of a rotating shaft.
4. Determination of Fringe constant of Photoelastic material using.
 - a) Circular disc subjected to diametral compression.
 - b) Pure bending specimen (four point bending)
5. Determination of stress concentration using Photoelasticity for simple components like plate with a hole under tension or bending, circular disk with circular hole under compression, 2D Crane hook.

PART - B

6. Determination of equilibrium speed, sensitiveness, power and effort of Porter/Prowel /Hartnel Governor. (only one or more)
7. Determination of Pressure distribution in Journal bearing.
8. Determination of Principal Stresses and strains in a member subjected to combined loading using Strain rosettes.
9. Determination of stresses in Curved beam using strain gauge.
10. Experiments on Gyroscope (Demonstration only)

Scheme of Examination:

One question from Part A -	20 Marks (05 Write up +15)
One question from Part B -	20 Marks (05 Write up +15)
Viva - Voce -	10 Marks

Total: 50 Marks

CIM & AUTOMATION LAB

Sub Code	: 10MEL 78	IA Marks	25
Hrs/week	: 04	Exam Hours	03
Total Lecture Hrs	: 42	Exam Marks	: 50

PART - A

CNC part programming using CAM packages. Simulation of Turning, Drilling, Milling operations. 3 typical simulations to be carried out using simulation packages like Master- CAM, or any equivalent software.

PART - B

(Only for Demo/Viva voce)

1. FMS (Flexible Manufacturing System): Programming of Automatic storage and Retrieval system (ASRS) and linear shuttle conveyor Interfacing CNC lathe, milling with loading unloading arm and ASRS to be carried out on simple components.
2. Robot programming: Using Teach Pendant & Offline programming to perform pick and place, stacking of objects, 2 programs.

PART - C

(Only for Demo/Viva voce)

Pneumatics and Hydraulics, Electro-Pneumatics: 3 typical experiments on Basics of these topics to be conducted.

Scheme of Examination:

Two questions from Part A - 40 Marks (20 Write up +20)
Viva - Voce - 10 Marks

Total: 50 Marks

NON-CONVENTIONAL ENERGY RESOURCE

Sub Code	: 10ME 754	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

Subject Code	:	10ME754	IA Marks	:	25
No. of Lecture Hrs./ Week	:	04	Exam Hours	:	03
Total No. of Lecture Hrs.	:	52	Exam Marks	:	100

PART - A

Will be sent Letter

TOTAL QUALITY MANAGEMENT

Sub Code	: 10ME 758	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Principles and Practice: Definition, basic approach, gurus of TQM, TQM Framework, awareness, defining quality, historical review, obstacles, benefits of TQM.

06 Hours

UNIT - 2

Leadership: Definition, characteristics of quality leaders, leadership concept, characteristics of effective people, ethics, the Deming philosophy, role of TQM leaders, implementation, core values, concepts and framework, strategic planning communication, decision making,

06 Hours

UNIT - 3

Customer Satisfaction and Customer Involvement:

Customer Satisfaction : customer and customer perception of quality, feedback, using customer complaints, service quality, translating needs into requirements, customer retention, Case studies.

Employee Involvement – Motivation, employee surveys, empowerment, teams, suggestion system, recognition and reward, gain sharing, performance appraisal, unions and employee involvement, case studies.

07 Hours

UNIT - 4

Continuous Process Improvement: process, the Juran trilogy, improvement strategies, types of problems, the PDSA Cycle, problem-solving methods, Kaizen, reengineering, six sigma, case studies.

Tools and Techniques: Benchmarking, information technology, quality management systems, environmental management system, quality function deployment, quality by design, failure mode and effect analysis, product liability, total productive maintenance.

07 Hours

PART - B

UNIT - 5

Quality Management Tools : Why Why, forced field analysis, nominal group technique, affinity diagram, interrelationship digraph, tree diagram, matrix diagram, prioritization matrices, process decision program chart, activity network diagram.

07 hours

UNIT - 6

Statistical Process Control : Pareto diagram, process flow diagram, cause-and-effect diagram, check sheets, histograms, statistical fundamentals, Control charts, state of control, out of control process, control charts for variables, control charts for attributes, scatter diagrams, case studies.

06 Hours

UNIT - 7

Building and Sustaining Performance Excellence in Organizations : Making the commitment to total quality, organizational culture and total quality, change management, sustaining the quality organization, self-assessment processes, implementing ISO 9000, Bald ridge, and sis sigma, a view toward the future.

07

Hours

UNIT - 8

Design for Six Sigma: Tools for concept development, tools for design development, tools for design optimization, tools for design verification, problems.

06 Hours

TEXT BOOKS:

1. **Total Quality Management:** Dale H. Bester field, Publisher - Pearson Education India, ISBN: 8129702606, Edition 03/e Paperback (Special Indian Edition)
2. **Total Quality Management for Engineers:** M. Zairi, ISBN: 1855730243, Publisher: Wood head Publishing

REFERENCE BOOKS:

1. **A New American TQM, four revolutions in management,** Shoji Shiba, Alan Graham, David Walden, Productivity press, Oregon, 1990
2. **100 Methods for Total Quality Management:** Gopal K. Kanji and Mike Asher, ISBN: 0803977476, Publisher: Sage Publications, Inc.; Edition – 1
3. **Organisational Excellence through TQM,** H. Lal, New age pub, 2008

ELECTIVE-II (GROUP C)
EXPERIMENTAL STRESS ANALYSIS

Sub Code	: 10ME 761	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT-1

Electrical Resistance Strain Gages: Strain sensitivity in metallic alloys, Gage construction, Adhesives and mounting techniques, Gage sensitivity and gage factor, Performance Characteristics, Environmental effects, Strain Gage circuits. Potentiometer, Wheatstone's bridges, Constant current circuits.

06 Hours

UNIT-2

Strain Analysis Methods: Two element, three element rectangular and delta rosettes, Correction for transverse strain effects, Stress gage, Plane shear gage, Stress intensity factor gage.

06 Hours

UNIT-3

Photo-elasticity: Nature of light, Wave theory of light - optical interference , Stress optic law – effect of stressed model in plane and circular polariscopes, Isoclinics & Isochromatics, Fringe order determination Fringe multiplication techniques, Calibration photoelastic model materials

08 Hours

UNIT-4

Two Dimensional Photo-elasticity: Separation methods: Shear difference method, Analytical separation methods, Model to prototype scaling, Properties of 2D photo-elastic model materials, Materials for 2D photo-elasticity

06 Hours

PART -B

UNIT-5

Three Dimensional Photo elasticity: Stress freezing method, Scattered light photo-elasticity, Scattered light as an interior analyzer and polarizer, Scattered light polariscope and stress data Analyses.

06 Hours

UNIT-6

Photoelastic (Birefringent) Coatings : Birefringence coating stresses, Effects of coating thickness: Reinforcing effects, Poisson's, Stress separation techniques: Oblique incidence, Strip coatings. **08 Hours**

UNIT-7

Brittle Coatings: Coatings stresses, Crack patterns, Refrigeration techniques, Load relaxation techniques, Crack detection methods, Types of brittle coatings, Calibration of coating. Advantages and brittle coating applications.

06 Hours

UNIT-8

Moire Methods: Moire fringes produced by mechanical interference .Geometrical approach, Displacement field approach to Moire fringe analysis ,Out of plane displacement measurements, Out of plane slope measurements .Applications and advantages

06 Hours

TEXT BOOKS:

1. "Experimental Stress Analysis", Dally and Riley, McGraw Hill.
2. "Experimental Stress Analysis". Sadhu Singh, Khanna publisher.
3. **Experimental stress Analysis**, Srinath L.S tata McGraw Hill.

REFERENCES BOOKS :

1. "Photoelasticity Vol I and Vol II, M.M.Frocht, John Wiley & sons.
2. "Strain Gauge Primer", Perry and Lissner,
3. "Photo Elastic Stress Analysis", Kuske, Albrecht & Robertson John Wiley & Sons.
4. "Motion Measurement and Stress Analysis", Dave and Adams,

OPERATION MANAGEMENT

Sub Code	: 10ME 81	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART – A

UNIT 1

Production and Operations Management: Introduction, Functions within business organizations, the operation management function, Classification of production systems, Productivity, factors affecting productivity, contemporary issues and development

06 Hours

UNIT 2

Decision Making: The decision process, characteristics of operations decisions, use of models, decision making environments, graphical linear programming, analysis and trade-offs.

06 Hours

UNIT 3

Forecasting: Steps in forecasting process, approaches to forecasting, forecasts based on judgment and opinion, analysis of time series data, accuracy and control of forecasts, choosing a forecasting technique, elements of a good forecast,

07 Hours

UNIT 4

Capacity & Location Planning: Importance of capacity decisions, defining and measuring capacity, determinants of effective capacity, determining capacity requirement, developing capacity alternatives, evaluating alternatives, Need for location decisions, nature of locations decisions, general procedure for making locations decisions, evaluating locations decisions, facilities layout – need for layout decisions, types of processing.

07 Hours

PART – B

UNIT 5

Aggregate Planning & Master Scheduling: Aggregate planning – Nature and scope of aggregate planning, strategies of aggregate planning, techniques for aggregate planning – graphical and charting techniques, mathematical techniques. The master production schedule, Master scheduling process, Master scheduling methods.

08 hours

UNIT 6

Inventory Management: Types of Inventories, independent and dependent demand, reasons for holding inventory, objectives of inventory control, requirements for effective inventory management – information, cost, priority system. Inventory control and economic-order-quantity models.

06 Hours

UNIT 7

Material Requirement Planning (MRP): Dependent versus independent demand, an overview of MRP – MRP inputs and outputs, MRP processing, An overview of MRP-II and ERP capacity requirement planning, benefits and limitations of MRP.

07 Hours

UNIT 8

Purchasing and Supply Chain Management (SCM): Introduction, Importance of purchasing and SCM, The procurement process, Concept of tenders, Approaches to SCM, Vendor development, Measures of purchasing and SCM, Make or buy decision, Types of buying, E-procurement.

06 Hours

TEXT BOOK:

1. **Production and Operations Management**, William J Stevenson, 9th Ed., Tata McGraw Hill.
2. **Operations Management-Theory and Practice**, B Mahadevan, Pearson Education, 2007.

REFERENCES:

CONTROL ENGINEERING

Sub Code	: 10ME 82	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Introduction: Concept of automatic controls, Open loop and closed loop systems, Concepts of feedback, requirements of an ideal control system, Types of controllers- Proportional, Integral Proportional Integral, Proportional Integral Differential controllers.

07 Hrs

UNIT- 2

Mathematical Models: Transfer function models, models of mechanical systems, models of electrical circuits, DC and AC motors in control systems, models of thermal systems, models of hydraulic systems, pneumatic system, Analogous systems: Force voltage, Force current.

06 Hrs

UNIT - 3

Block Diagrams and Signal Flow Graphs: Transfer Functions definition, function, block representation of systems elements, reduction of block diagrams, Signal flow graphs: Mason's gain formula.

07 Hrs

UNIT- 4

Transient and Steady State Response Analysis: Introduction, first order and second order system response to step, ramp and impulse inputs, concepts of time constant and its importance in speed of response. System stability: Routh's-Hurwitz Criterion.

06 Hrs

PART -B

UNIT - 5

Frequency Response Analysis: Polar plots, Nyquist stability criterion, Stability analysis, Relative stability concepts, Gain margin and phase margin, M&N circles.

06 Hrs

UNIT - 6

Frequency Response Analysis Using Bode Plots: Bode attenuation diagrams, Stability analysis using Bode plots, Simplified Bode Diagrams.

07 Hrs

UNIT - 7

Root Locus Plots: Definition of root loci, General rules for constructing root loci, Analysis using root locus plots.

06 Hrs

UNIT 8

System Compensation and State Variable Characteristics of Linear Systems: Series and feedback compensation, Introduction to state concepts, state equation of linear continuous data system. Matrix representation of state equations, controllability and observability, Kalman and Gilberts test.

07 Hrs

TEXT BOOKS :

1. **Modern Control Engineering,** Katsuhiko Ogatta, Pearson Education,2004.
2. **Control Systems Principles and Design,** M.Gopal, 3rd Ed., TMH,2000.

REFERENCE BOOKS :

1. **Modern Control Systems,** Richard.C.Dorf and Robert.H.Bishop, Addison Wesley,1999
2. **System dynamics & control,** Eronini-Umez, Thomson Asia pte Ltd. singapore, 2002.
3. **Feedback Control System,** Schaum"s series. 2001.

ELECTIVE-II (GROUP - D)

TRIBOLOGY

Sub Code	: 10ME 831	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Introduction To Tribology: Properties of oils and equation of flow: Viscosity, Newton"s Law of viscosity, Hagen-Poiseuille Law, Flow between

parallel stationary planes, viscosity measuring apparatus. Lubrication principles, classification of lubricants. **06 Hours**

UNIT - 2

Hydrodynamic Lubrication: Friction forces and power loss in lightly loaded bearing, Petroff's law, Tower's experiments, mechanism of pressure development in an oil film, Reynold's investigation and Reynold's equation in 2D. **06 Hours**

UNIT - 3

Idealized Journal Bearing: introduction to idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's numbers and significance of it; Partial bearings, end leakages in journal bearing, numerical problems. **07 Hours**

UNIT - 4

Slider / Pad Bearing With A Fixed And Pivoted Shoe: Pressure distribution, Load carrying capacity, coefficient of friction, frictional resistance in a pivoted shoe bearing, numerical examples. **07 Hours**

PART - B

UNIT - 5

Oil Flow And Thermal Equilibrium Of Journal Bearing: Oil flow through bearings, self-contained journal bearings, bearings lubricated under pressure, thermal equilibrium of journal bearings. **06 Hours**

UNIT - 6

Hydrostatic Lubrication: Introduction to hydrostatic lubrication, hydrostatic step bearings, load carrying capacity and oil flow through the hydrostatic step bearing. **06 Hours**

UNIT - 7

Bearing Materials: Commonly used bearings materials, properties of typical bearing materials. Advantages and disadvantages of bearing materials. **07 Hours**

UNIT - 8

Behavior Of Tribological Components: Selection, friction, Wear of ceramic materials, wear measurements, effects of speed, temperature and pressure. Tribological measures, Material selection, improved design, surface engineering **07 Hours**

TEXT BOOKS:

1. **Fundamentals of Tribology** , Basu S K., Sengupta A N., Ahuja B. B., , PHI 2006

2. **Introduction to Tribology Bearings**, Mujumdar B. C., S. Chand company pvt. Ltd 2008.

REFERENC BOOKS:

1. **Theory and Practice of Lubrication for Engineers**, Fuller, D., New York company 1998
2. **Principles and Applications of Tribology**, Moore, Pergamon press 1998
3. **Tribology in Industries**, Srivastava S., S Chand and Company limited, Delhi 2002
4. **Lubrication of bearings – Theoretical Principles and Design**, Redzimoskay E I., Oxford press company 2000

POWER PLANT ENGINEERING

Sub Code	: 10ME 833	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT 1

Steam Power Plant:

Different types of fuels used for steam generation, Equipment for burning coal in lump form, stokers, different types, Oil burners, Advantages and Disadvantages of using pulverised fuel, Equipment for preparation and burning of pulverised coal, unit system and bin system. Pulverised fuel furnaces, cyclone furnace.

7 Hrs

UNIT 2

Coal, Ash Handling and Different Types of Boilers :

Coal and Ash handling, Generation of steam using forced circulation, high and supercritical pressures, A brief account of L Mont, Benson, Velox, Schmidt, Loeffler and Ramson steam generators.

6 Hrs

UNIT 3

Chimneys, Accessories for the Steam Generator Cooling Towers And Ponds:

Natural, forced, induced and balanced draft, Calculations involving height of chimney to produce a given draft. Accessories For The Steam Generator such as super-heaters, desuperheater, control of super heaters, Economisers, Air Pre-heaters Study of different types of cooling towers and ponds.

6 Hrs

UNIT 4

Diesel Engine and Gas Turbine Power Plant:

Method of starting diesel engines, Cooling and lubrication system for the diesel engine. Filters, centrifuges, Oil heaters, Intake and exhaust system, Layout of a diesel power plant. Advantages and disadvantages of the gas turbine plant, Open and closed cycle turbine plants with the accessories.

7Hrs

PART – B

UNIT 5

Hydro-Electric Plants: Storage and pondage, flow duration and mass curves, hydrographs, Low, medium and high head plants, pumped storage plants, Penstock, water hammer, surge tanks, gates and valves, power house,

general layout. A brief description of some of the important Hydel Installations in India.

7Hrs

UNIT 6

Nuclear Power Plant: Principles of release of nuclear energy Fusion and fission reactions. Nuclear fuels used in the reactors. Multiplication and thermal utilization factors. Elements of the Nuclear reactor, Moderator, control rod, fuel rods, coolants. Brief description of reactors of the following types - Pressurized water reactor, Boiling water reactor, Sodium graphite reactor, Homogeneous graphite reactor and gas cooled reactor, Radiation hazards, Radio active waste disposal.

7 Hrs

UNIT 7

Choice of site for power station, load estimation, load duration curve, load factor, capacity factor, use factor, diversity factor, demand factor, Effect of variable load on power plant, selection of the number and size of units.

6 Hrs

UNIT 8

Economic Analysis of power plant: Cost of energy production, selection of plant and generating equipment, performance and operating characteristics of power plants, tariffs for electrical energy.

6 Hrs

TEXT BOOKS:

1. **Power Plant Engineering**, P.K Nag, 3rd Ed. Tata McGraw Hill 2nd ed 2001,
2. **Power Plant Engineering**. Morse F.T., Van Nstrand.1998

REFERENCE BOOKS:

1. **Water Power Engg.**, Edition 3, Barrows, TMH, New Delhi. 1998
2. **Plant Engg. Hand Book**, Stanier, McGraw Hill. 1998
3. **Hydraulic Machines**, Jagadish Lal, Metropolitan Co 1996.
4. **Principles of Energy Conversion**, A.W. Culp Jr., McGraw Hill. 1996
5. **Power Plant Technology**, M.M. EL-Wakil, McGraw Hill, International. 1994
6. **Power Station Engg. Economics**, Skrotizke and V opat. 1994
7. **Power Plant Engineering**, Domakundawar, Dhanpath Rai sons.2003

ELECTIVE-II (GROUP - E)

AUTOMOTIVE ENGINEERING

Sub Code	: 10ME 844	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Engine Components And Cooling & Lubrication Systems: Spark Ignition (SI) & Compression Ignition (CI) engines, cylinder – arrangements and their relatives merits, Liners, Piston, connecting rod, crankshaft, valves, valve actuating mechanisms, valve and port timing diagrams, Types of combustion chambers for S.I.Engine and C.I.Engines, Compression ratio, methods of a Swirl generation, choice of materials for different engine components, engine positioning, cooling requirements, methods of cooling, thermostat valves, different lubrication arrangements.

07 Hours

UNIT - 2

Fuels, Fuel Supply Systems For Si And Ci Engines: Conventional fuels, alternative fuels, normal and abnormal combustion, cetane and octane numbers, Fuel mixture requirements for SI engines, types of carburetors, C.D.& C.C. carburetors, multi point and single point fuel injection systems, fuel transfer pumps, Fuel filters, fuel injection pumps and injectors.

07 Hours

UNIT - 3

Superchargers And Turbochargers: Naturally aspirated engines, Forced Induction, Types pf superchargers, Turbocharger construction and operation, Intercooler, Turbocharger lag.

06 Hours

UNIT - 4

Ignition Systems: Battery Ignition systems, magneto Ignition system, Transistor assist contacts. Electronic Ignition, Automatic Ignition advance systems.

06 Hours

PART - B

UNIT - 5

Power Trains: General arrangement of clutch, Principle of friction clutches, Torque transmitted, Constructional details, Fluid flywheel, Single plate, multi-plate and centrifugal clutches.

Gear box: Necessity for gear ratios in transmission, synchromesh gear boxes, 3, 4 and 5 speed gear boxes. Free wheeling mechanism, planetary gears systems, over drives, fluid coupling and torque converters, Epicyclic gear box, principle of automatic transmission, calculation of gear ratios, Numerical calculations for torque transmission by clutches.

08 Hours

UNIT - 6

Drive To Wheels: Propeller shaft and universal joints, Hotchkiss and torque tube drives, differential, rear axle, different arrangements of fixing the wheels to rear axle, steering geometry, camber, king pin inclination, included angle, castor, toe in & toe out, condition for exact steering, steering gears, power steering, general arrangements of links and stub axle, over steer, under steer and neutral steer, numerical problems, types of chassis frames.

06 Hours

UNIT - 7

Suspension, Springs And Brakes: Requirements, Torsion bar suspension systems, leaf spring, coil spring, independent suspension for front wheel and rear wheel. Air suspension system.

Types of brakes, mechanical compressed air, vacuum and hydraulic braking systems, construction and working of master and wheel cylinder, brake shoe arrangements, Disk brakes, drum brakes, Antilock –Braking systems, purpose and operation of antilock-braking system, ABS Hydraulic Unit, Rear-wheel antilock & Numerical Problems

06 Hours

UNIT - 8

Automotive Emission Control Systems: Automotive emission controls, Controlling crankcase emissions, Controlling evaporative emissions, Cleaning the exhaust gas, Controlling the air-fuel mixture, Controlling the combustion process, Exhaust gas recirculation, Treating the exhaust gas, Air-injection system, Air-aspirator system, Catalytic converter, Emission standards- Euro I, II, III and IV norms, Bharat Stage II, III norms.

6 Hours

TEXT BOOKS:

1. **Automotive mechanics**, William H Crouse & Donald L Anglin, 10th Edition Tata McGraw Hill Publishing Company Ltd., 2007
2. **Automotive Mechanics**, S. Srinivasan, 2nd Ed., Tata McGraw Hill 2003.

REFERENCE BOOKS:

1. **Automotive mechanics: Principles and Practices**, Joseph Heitner, D Van Nostrand Company, Inc
2. **Fundamentals of Automobile Engineering**, K.K.Ramalingam, Scitech Publications (India) Pvt. Ltd.
3. **Automobile Engineering**, R. B. Gupta, Satya Prakashan, 4th edn. 1984.
4. **Automobile engineering**, Kirpal Singh. Vol I and II 2002.

AUTOMOTIVE ENGINEERING

Sub Code	: 10ME 845	IA Marks	25
Hrs/week	: 04	Exam Hours	: 03
Total Lecture Hrs	: 52	Exam Marks	: 100

PART - A

UNIT - 1

Database And Database Users: Introduction, characteristics of database approach, intended uses of a DBMS, advantages and implementation of database approach.

06 Hours

UNIT - 2

Database Systems Concepts And Architecture: Data models, schemes and instances, DBMS architecture and data independence, database languages and interfaces, database system environment, classification of database management systems.

06 Hours

UNIT - 3

Data Modeling: High level conceptual data models for database design. Entity types, entity sets, attributes and keys, Relationships, relationship types, roles and structural constraints. Weak entity types, ER diagram and design issue.

08 Hours

UNIT - 4

Record Storage And Primary File Organizations: Secondary storage devices, buffering of the blocks, placing file records on the disk, operations on files, heap files and sorted files, hashing techniques.

06 Hours

PART - B

UNIT - 5

Relational Data Model And Relational Algebra: Brief discussion on code rules, relational model concepts, constraints and schemas. Update operation on relations, basic and additional relational algebra operations, queries in relational algebra.

07 Hours

UNIT - 6

Structural Query Language (Sql): Data definition etc., in SQL2. Basic and complex queries in SQL, Inset, Delete; Update statements, and views in SQKL, embedded SQL.

07 Hours

UNIT - 7

Database Design: Design guidelines for relational schemas, functional dependencies, normalization 1st, 2nd, 3rd, 4th and 5th; normal forms. Database design process, factors influencing physical database design guidelines, and guidelines for relational systems.

07 Hours

UNIT - 8

System Implementation: System catalogue for RDBMSs, transaction processing, and system concepts, properties of transaction, brief discussion on concurrency control and recovery techniques, database security and authorization.

05 Hours

TEXT BOOKS:

1. **Fundamentals of Database Systems**, Ramez Elmasri and Shanmkanth B. Navathe, 3rd Edition, Addison Pearson.
2. **Database Management System**, Raghu Ramakrishnan, Tata Mc Graw Hill, 3rd Edn. 2002.

REFERENCE BOOKS:

1. **Database Management and Design**, Gray W.hansen and James V. Hansen, 2nd Edn. Printice Hall India Pvt. Ltd., 2002.
2. **Database Management Systems**, Designing and Building business applications by Gerald V. Post, 3rd Edition, Tata Mc Graw Hill Publishing company Ltd.,- 2005
3. **Project Mangment with PERT and CPM**, Moder Joseph J and Phillips cerel, R., VAN Noserand, Reinhold, 2nd Edn., 1976.

SEMESTER I

MANAGEMENT & ORGANIZATIONAL BEHAVIOUR

Subject Code	: 16MBA11	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To make students understand fundamental concepts and principles of management, including the basic roles, skills, and functions of management
- To make students knowledgeable of historical development, theoretical aspects and practice applications of managerial process
- To understand the basic concepts and theories underlying individual behavior besides developing better insights into one's own self
- To make students aware of Individual behavior in groups, dynamics of groups and team building besides developing a better awareness of how they can be better facilitators for building effective teams as leaders themselves

Course Outcomes:

At the end of the course students are able to:

- Comprehend & correlate all the management activities which are happening around them with fundamental concepts and principles of management.
- Get an overview of management, theory of management and practical applications of the same.
- Effectively use their individual skill to work in groups to achieve organizational goals and ability to lead groups/teams.

- Demonstrate their acumen in applying managerial and behavioral concept in real world/situation.

Part A - Principles of Management

Unit 1: (8 Hours)

Introduction: Management: Introduction, Definition of management, Nature, Purpose and Functions, Levels and types of managers, managerial roles, skills for managers, evolution of management thought, Fayol's fourteen principles of management, Recent trends in management.

Unit 2: (12 Hours)

Planning and Organizing:

Planning: Nature of Planning, Planning Process, Objectives, MBO, Strategies, level of strategies, policies, methods and programs, Planning Premises, Decision-making, Process of decision-making, Types of decisions, Techniques in decision-making.

Organizing: Organization structure, Formal and informal organizations, Principles of organizations-chain of command, span of control, delegation, decentralization, and empowerment. Functional, divisional, geographical, customer based and matrix organizations, team based structures, virtual organizations, boundary less organizations.

Unit 3: (5 Hours)

Controlling: Controlling, importance of controlling, controlling process, types of control, factors influencing control effectiveness.

RECOMMENDED BOOKS

- Essentials of Management-Koontz, 8/e, McGraw Hill
- Management: Text and Cases-VSP Rao, Excel Books
- MGMT, An Innovative approach to teaching and learning Principles of Management, Chuck Williams, Cengage Publications, 2010

- Principles and practices of Management, Kiran Nerkar, Vilas Chopde, Dreamtech Press, 2011
- Management Theory & practice – Chandan J. S, Vikas Publishing House.
- Management Theory & Practice Text & Cases – Subba Rao P & Hima Bindu, Himalaya Publication.

REFERENCE BOOKS:

- Masters of Management Thought – Mahanand Charati & M M Munshi, Sapna Book House, Bangalore, 2015.

Part B - Organizational Behaviour

Unit 4: (6 hours)

Introduction: Organizational Behaviour: Introduction, definition, historical development, fundamental principles of OB, contributing disciplines, challenges and opportunities.

Unit 5: (15 Hours)

Foundations of Individual Behaviour: Individual behaviour: Foundations of individual behaviour. Ability: Intellectual abilities, Physical ability, the role of disabilities.

Personality: Meaning, formation, determinants, traits of personality, big five and MBTI, personality attributes influencing OB.

Attitude: Formation, components of attitudes, relation between attitude and behaviour.

Perception: Process of perception, factors influencing perception, link between perception and individual decision-making.

Unit 6: (10 Hours)

Motivation: Meaning, theories of motivation-needs theory, two factor theory, Theory X and Y, application of motivational theories.

Leadership: Meaning, styles of leadership, leadership theories, trait theory, behavioural theories, managerial grid, situational theories.

Note: Related case studies to be discussed.

Practical Components:

- Studying organizational structures of any 10 companies and classifying them into different types of organizations which are studied in Unit 2 and justifying why such structures are chosen by those organizations.
- Preparing the leadership profiles of any 5 business leaders and studying their leadership qualities and behaviours with respects to the trait, behavioural and contingency theories studied.
- Identifying any five job profiles and listing the various types, abilities required for those jobs and also the personality traits/attributes required for the jobs identified.

Note: Faculty can either identify the organizations/ leaders/jobs or students can be allowed to choose the same.

RECOMMENDED BOOKS:

- Organizational behaviour, Stephen P Robbins, Timothy A. Judge, Neharika Vohra, 14th Edition, Pearson, 2012.
- Introduction to Organisational Behaviour – Michael Butler, Jaico Publishing House,
- Organization Behaviour – Ashwathappa, Himalaya Publication House
- ORGB - Nelson, Quick, Khanelwal, 2/e, Cengage Learning, 2012.
- Organizational Behaviour - Anada Das Gupta, Biztantra, 2011.
- Organizational Behaviour: A modern approach - Arun Kumar and Meenakshi, Vikas Publishing House, 2011.
- Organizational Behaviour – Rao V. S. P, Excel BOOKS, 2009.

REFERENCE BOOKS:

- Organizational Behaviour - Fred Luthans, 12/e, McGraw Hill International, 2011.
- Management and Organizational Behaviour - Laurie J Mullins, Pearson education

- Fundamentals of Organizational Behaviour - Slocum/Hillriegel, Cengage Learning
- Organizational Behaviour, Aquinas P. G, Excel Books.

ECONOMICS FOR MANAGERS

Subject Code	: 16MBA12	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

COURSE OBJECTIVES

- To introduce the fundamentals, tools and theories of managerial economics
- To orient on micro economic techniques as a decision making process
- To understand various industrial policies essential for business managers
- To understand the vital characteristics of different market structures

COURSE OUTCOMES

At the end of the course students are able to:

- Equipped with the skill to apply the theory of demand, theory of production and cost in decision making
- Differentiate between various markets structure, functioning and pricing decisions.
- Acquire the knowledge of Indian Industrial Policies, its impact on industrial development so as to develop proper strategy in day to day management.

Unit 1: (12 hours)

Managerial Economics: Meaning, Nature, Scope. & Significance, Uses of Managerial Economics, Objectives and alternative hypothesis of the firm – Law of Demand, Exceptions to the Law of Demand, Elasticity of Demand- Price, Income, Cross and Advertising Elasticity, Uses of Elasticity of Demand for Decision Making, - Demand Forecasting: Meaning and Significance.(problems on Elasticity of Demand only).

Unit 2: (10 hours)

Production Analysis: Concept, Production Function- Total, Average, & Marginal Product –Law of Variable Proportions & ISO-Quants & ISO Costs - Least cost factor combination- Returns to Scale- Economies and Diseconomies of Scale - Technological progress and production function

Unit 3: (8 hours)

Cost and Revenue Profit Functions: Cost Concepts, Fixed and variable costs- Total Cost, Average Cost, Marginal Cost, Opportunity Cost. - Short-run and Long-run Cost Curves

Profits: Determinants of Short-Term & Long Term Profits, Measurement of Profit.

Break Even Analysis- Meaning, Assumptions, Determination of BEA, Limitations and Uses of BEA in Managerial Economics (Problems on BEP only)

Unit 4: (8 hours)

Market Structure: Perfect Competition: Features, Determination of Price under Perfect Competition - Monopoly: Features, Pricing under Monopoly, Price Discrimination - Oligopoly: Features, Kinked Demand Curve, Cartel, Price Leadership - Monopolistic Competition: Features, Pricing under Monopolistic Competition, Product Differentiation Pricing - Descriptive Pricing- Price Skimming, Price Penetration.

Unit 5: (8 hours)

Indian Economic Environment: Overview of Indian Economy, Recent changes in Indian Economy.

Measurement of National Income: Basic Concepts, Components of GDP- Measuring GDP and GNP, Difficulties in measuring National Income, Growth Rate.

Business Cycle – Features, Phases, Economic Indicators, Inflation: Types, causes, Measurement, Kinds of Price Indices, Primary, Secondary and Tertiary Sectors and their contribution to the Economy, SWOT Analysis of Indian Economy.

Unit 6: (10 hours)

Industrial Policies and Structure: A critical look at Industrial Policies of India, New Industrial Policy 1991; Disinvestment in PSUs - Private Sector- Growth, Problems and Prospects, SMEs – Significance in Indian economy-problems and prospects

Economic Policies: Fiscal Policy: Objectives, Instruments, Union Budget,

Monetary Policy: Objectives, tools for Credit Control.

Globalization: Meaning and Implications, Phases, Impact of Globalization on Indian Economy.

Foreign Trade: Trends in India's Foreign Trade, Impact of WTO on India's Foreign Trade.

Note 1: Related case studies to be discussed.

Note 2: 75 percent theory and 25 percent problems from Unit 1 & 3

Practical Components:

- Assessment of Impact of advertisement or sales promotion on the demand of a product (Preferably FMCG goods)
- Study of demand elasticity for a product when there is a price increase or price decrease.
- Demand forecasting – Mini project may be given to students to assess the demand for a product or a service using any method.
- Preparing a project proposal for a new business venture to understand the BEP using real time data.
- An in-depth study of economic indicators on the growth rate

- Analysis of recent budget, fiscal discipline and disinvestment proposals of the GOI
- A study on the effect of monetary policy on banking and NBFCs
- A futuristic study of leading Indian industries and observations of CAG on major issues.

RECOMMENDED BOOKS:

- Managerial Economics, D.N Dwivedi, 6th ed., Vikas Publication.
- Managerial Economics- Theory and Applications, Dr. D.M Mithani, Himalaya Publications.
- Managerial Economics, H. L Ahuja, S. Chand, 2011
- Indian Economy, K P M Sundharam and Dutt, 64th Edition, S Chand Publication.
- Indian Economy, Misra and Puri, Himalaya Publications
- Business Economics, ML Jhingan and Upadhyaya, Vrinda Publications
- Business Environment Text and Cases by Justin Paul, 3rd Edition, McGraw-Hill Companies.

REFERENCE BOOKS:

- Managerial Economics- Principles and worldwide applications, Dominick Salvatore, 6e, Oxford Publication, 2010
- Managerial Economics, Jaswinder Singh, Dreamtech publications, 2013
- Managerial Economics, Yogesh Maheswari, PHI, 2013
- Modern Economic Theory, KK Dewett and MH Navalur, S Chand Publication, 2013
- Managerial Economics: Case study solutions- Kaushal H, 1/e., Macmillan, 2011

ACCOUNTING FOR MANAGERS

Subject Code	: 16MBA13	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To explain fundamental accounting concepts and conventions.
- To explain and use the accounting equation.
- To prepare basic journal entries for business transactions and present the data in an accurate manner
- To present financial statements in vertical and horizontal format.
- To analyze a company's financial statements using various ratios for decision making.
- To understand emerging issues in accounting and taxation.

Course Outcomes:

At the end of the course students are able to:

- Acquire the knowledge about the concepts and fundamental principles of accounting.
- Demonstrate theoretical knowledge and its application in real time accounting.
- Capable of preparing financial statement of sole trading concerns and companies.
- Independently undertake financial statement analysis and take decisions.
- Comprehend emerging trends in accounting and taxation.

Unit 1: (6 Hours)

Introduction to Accounting: Need and Types of Accounting, Users of Accounting, concepts and conventions of Accounting, Accounting Equation (problems on accounting equation).

Unit 2: (10 Hours)

Preparation of books of Accounts: Journals, three column cash book, ledgers and trial balance. Depreciation- Straight line and Written down Value Methods.

Unit 3: (14 Hours)

Preparation of Financial Statements: Preparation of final accounts of sole traders. Preparation of final accounts of companies, vertical form of financial statements. (Basic problems Final Accounts)

Unit 4: (12 Hours)

Analysis of Financial Statements: Ratio Analysis, Preparation of financial statements using ratios, Preparation of Cash flow Statement (only indirect method).

Unit 5: (8 Hours)

Emerging issues in Accounting: Human Resource Accounting, Forensic Accounting, Sustainability Reporting -**Accounting Standards and IFRS:** Nature and significance

Unit 6: (6 Hours)

Fundamentals of Taxation: Heads of Income, Deductions u/s 80C, Income Tax Rates and Returns for Individuals only (only theory)

Practical Components:

- Collecting Annual reports of the companies and analyzing the financial statements using different techniques and presenting the same in the class.
- Analyzing the companies' cash flow statements and presenting the same in the class.

- Exposing the students to usage of accounting software's (Preferably Tally)
- Filling up of ITR forms
- Identify the sustainability report of a company and study the contents.

Note 1: Related case studies to be discussed.

Note 2: 25 percent theory and 75 percent problems

RECOMMENDED BOOKS:

- Financial Accounting: A Managerial Perspective, Narayanaswamy R, 5/e , PHI, 2014
- A Text book of Accounting For Management, Maheswari S. N, Maheswari Sharad K. Maheswari , 2/e, Vikas Publishing house (P) Ltd.
- Financial Accounting, Tulsian P. C, 1/e, Pearson Education.
- Accounting for managers, Madegowda J, Himalaya Publishing House.
- Advanced Accountancy, Gupta R. L & Radhaswamy M, Sultan Chand Publications.
- Financial Accounting, Jain S. P and Narang K L, Kalyani Publishers.
- Business Taxation, Akhileshwar Pathak and Savan Godiawala, 2/e, McGraw Hill Education (India) Pvt. Ltd, 2013.

REFERENCE BOOKS:

- Financial Accounting for Management: An Analytical Perspective, Ambrish Gupta, 4/e, Pearson Education.
- Introduction to Financial Statement Analysis, Ashish K Bhattacharya, Elsevier India.
- Financial Accounting – Raman B. S, Vol I & Vol II, 1/e, United Publishers, 2011.
- Financial Accounting (IFRS update), Gary A. Porter & Curtis L. Norton, 6/e, Cengage Learning.

- Accounting For Management, Arora M. N, Himalaya Publishing House.
- Essentials of Financial Accounting (Based on IFRS), Bhattacharya, 3/e, Prentice Hall India.
- Comdex (Computer and Financial Accounting with Tally 9.0 Course Kit), Dream Tech.
- Comdex – Tally 9, Namrata Agrawal - DreamTech.
- IFRS: A Practical approach, Jasmine Kaur, McGraw Hill.

QUANTITATIVE METHODS

Subject Code	: 16MBA14	IA Marks	: 20
No. of Lecture Hours / Week:	03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To introduce statistics as a tool for business decision making.
- To provide an analytical foundation for dealing business situations.
- To learn how to take decision under various situations.
- To familiarize the use of linear programming and project management evaluation techniques.
- To orient the students with statistical tools.

Course Outcomes:

At the end of the course students are able to:

- Understand and applying descriptive statistical tools in business situations.
- Exhibit the skills in developing and applying probability distribution concepts in business and real time scenario.
- Develop the skills of decision making using Decision Theory.

- Develop mathematical models using Linear Programming technique.
- Illustrate the use of network techniques for successful project implementation

Unit 1 **(10 Hours)**

Descriptive Statistics: Measures of Central Tendency- mean, median, mode, Measures of Dispersion- Standard deviation, variance, Co-efficient of Variance.

Unit 2 **(8 Hours)**

Correlation and Regression: Scatter Diagram, Karl Pearson correlation, Spearman's Rank correlation (one way table only), simple and multiple regression (problems on simple regression only)

Unit 3 **(8 Hours)**

Probability Distribution: Concept and definition - Rules of probability – Random variables –Concept of probability distribution – Theoretical probability distributions: Binomial, Poisson, Normal and Exponential – Baye's theorem (No derivation) (Problems only on Binomial, Poisson and Normal).

Unit 4 **(10 Hours)**

Decision Theory: Introduction – Steps of decision making process-types of decision making environments-decision making under uncertainty- Decision making under Risk- Decision tree analysis (only Theory)

Unit 5 **(10 Hours)**

Linear Programming: structure, advantages, disadvantages, formulation of LPP, solution using Graphical method.

Transportation problem: basic feasible solution using NWCM, LCM, and VAM unbalanced, restricted and maximization problems.

Unit 6

(10 Hours)

Project Management: Introduction – Basic difference between PERT & CPM – Network components and precedence relationships – Critical path analysis – Project scheduling – Project time-cost trade off – Resource allocation, basic concept of project crashing.

Theory 25 percent and Problems percent

Practical Component:(Student-Centered Learning)

- Students are expected to have basic Excel knowledge-hands on experience.
- Students should be able to relate the concepts to real time business situations.
- Student should demonstrate the application of statistical tools.

RECOMMENDED BOOKS:

- Statistical Methods, S. P Gupta, Sulthan Chand & sons, New Edition,
- Quantitative Techniques in Management, N D Vohra, 4th Edition, Tata McGraw Hill, 2010.
- Fundamentals of Statistics, S.C Gupta, 6th edition, Himalaya Publishing House, 2007

REFERENCE BOOKS:

- Operations Research – Theory & Applications, J K Sharma, 5th edition, Macmillan publishers, 2013.
- Quantitative Methods for Business, Anderson, Sweeney and Williams, Thomson, 2005.
- Analyzing Multivariate Data, James Lattin, Douglas Carroll and Paul Green, Thomson Learning, 2003.

MARKETING MANAGEMENT

Subject Code	: 16MBA15	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To provide an insight to basic concepts of marketing management.
- To understand various marketing models for solving marketing problems.
- To understand fundamental premise underlying market driven strategies.

Course Outcome:

At the end of the course students are able to:

- Acquire knowledge regarding basic concepts and functions of Marketing Management.
- Apply various marketing concepts to solve day-to-day corporate problems.
- Learn various strategies which enable decision making process.
- Study ever-changing environment and use of appropriate models and techniques of Marketing.
- Synthesize ideas into a viable marketing plan.

Unit 1: (10 hours)

Introduction to Marketing: Introduction, Definitions of market and marketing, The Exchange Process, Elements of Marketing Concept, Functions of Marketing, Old Concept or Product- oriented Concept, New or Modern or Customer- oriented Concept, Marketing Environment, Techniques used in environment analysis, Characteristics (Micro and Macro), Marketing to the 21st century customer

Unit 2: (8 hours)
Consumer Behaviour Analysis: Meaning and Characteristics, Importance, Factors Influencing Consumer Behaviour, Consumer Purchase Decision Process, Buying Roles, Buying Motives, Buyer Behaviour Models

Unit 3: (10 hours)
Market Segmentation, Targeting & Positioning: Concept of Market Segmentation, Benefits, Requisites of Effective Segmentation, Bases for Segmenting Consumer Markets, Market Segmentation Strategies.
Targeting - Bases for identifying target Customer target Marketing strategies, Positioning - Meaning, Product Differentiation Strategies, Tasks involved in Positioning. Branding - Concept of Branding, Types, Brand Equity, Branding strategies.

Unit 4: (8 hours)
Managing the Product: Concept, product hierarchy, product line, product mix, product mix strategies, Product life cycle and its strategies, New Product Development, packing as a marketing tool, Role of labelling in packing.

Unit-5 (10 hours)
Pricing decisions: Significance of pricing, factor influencing pricing (Internal factor and External factor), objectives, Pricing Strategies-Value based, Cost based, Market based, Competitor based, Pricing Procedure.
Marketing Channels: Meaning, Purpose, Factors Affecting Channel Choice, Channel Design, Channel Management Decision, Channel Conflict, Designing a physical Distribution System, Network Marketing,

Unit 6: (10 hours)
Marketing Planning: Meaning, Concepts, Steps involved in Marketing planning, Marketing Audit- Meaning, Feature, Various components of Marketing Audit Marketing Strategy-Analysis of Industry and Competition, Strategic Planning Process,

Case Studies in Indian Context

Practical Components:

- Analyze Product Life Cycle of few Products like-Electronic goods, Computers etc.
- Study Packaging strategies used by FMCG companies
- Understand Marketing strategies, plans used by automobile, cosmetic, FMCG companies etc.

RECOMMENDED BOOKS

- Marketing Management: A South Asian Perspective–Kotler, Keller, Koshy & Jha, 13/e, Pearson Education, 2012
- Marketing Management, Ramaswamy V. S. & Namakumari S, 4/e, TMH, 2014
- Fundamentals of Marketing Management, Etzel M.J BJ Walker & William J. Stanton, 14/e, TMH, 2012
- Marketing Management: An Applied Approach, Noel Capon & Siddharth Shekhar Singh, Wiley, 2014

REFERENCE BOOKS

- Marketing Management, Arun Kumar & Meenakshi N, 2/e, Vikas, 2012
- Applied Case Studies in Marketing – Shajahan S, Primus BOOKS, 2011.
- Marketing Management – Karunakaran, HPH.
- Marketing in India: Text and Cases- Neelamegham S, 4/e, Vikas.
- Marketing- Lamb, Hair, Mc Danniel, 7/e, Cengage Learning 2012.
- Marketing: Planning, Implementation, and Control -William M. Pride, Ferrell O. C, Cengage Learning, 2010.
- Marketing Management, Tapan Panda, 2/e, Excel Publication

MANAGERIAL COMMUNICATION

Subject Code	: 16MBA16	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objective:

To enhance students communication skills through verbal, non-verbal, correspondence, presentations, interviews and negotiation.

Course Outcomes:

At the end of the course students are able to:

- Describe and develop written and oral communication.
- Independently prepare business letters and reports.
- Exhibit, develop and apply negotiation strategies.
- Gain exposure to media management and demonstrate the skill in analyzing business situation.

Unit 1: (10 Hours)

Introduction: Meaning & Definition, Role, Classification – Purpose of communication – Communication Process – Characteristics of successful communication – Importance of communication in management – Communication structure in organization – Communication in conflict resolution - Communication in crisis. Communication and negotiation - Communication in a cross-cultural setting

Unit 2: (8 Hours)

Oral Communication: Meaning – Principles of successful oral communication – Barriers to communication – Conversation control – Reflection and Empathy: two sides of effective oral communication.

Modes of Oral Communication - Listening as a Communication Skill,
Non-verbal communication

Unit 3: (8 Hours)

Written Communication: Purpose of writing – Clarity in writing – Principles of effective writing – Approaching the writing process systematically: The 3X3 writing process for business communication: Pre writing – Writing – Revising – Specific writing features – Coherence – Electronic writing process.

Unit 4: (12 Hours)

Business Letters and Reports: Introduction to business letters – Types of Business Letters - Writing routine and persuasive letters – Positive and Negative messages Writing Reports: Purpose, Kinds and Objectives of reports – Organization & Preparing reports, short and long reports Writing Proposals: Structure & preparation - Writing memos

Media Management: The press release – Press conference – Media interviews

Group Communication: Meetings – Planning meetings – objectives – participants – timing – venue of meetings.

Meeting Documentation: Notice, Agenda, and Resolution & Minutes

Unit 5: (10 Hours)

Presentation skills: What is a presentation – Elements of presentation – Designing & Delivering Business Presentations – Advanced Visual Support for managers.

Case Methods of learning: Understanding the case method of learning.

Negotiation skills: What is negotiation – Nature and need for negotiation – Factors affecting negotiation – Stages of negotiation process – Negotiation strategies.

Unit 6: (8 Hours)

Employment communication: Introduction – Composing Application Messages - Writing CVs – Group discussions – Interview skills

Impact of Technological Advancement on Business Communication

– Technology-enabled Communication-**Communication networks**–
Intranet–Internet–E-mails–SMS– teleconferencing – videoconferencing

Practical Components:

- Demonstrate the effect of noise as a barrier to communication
- Make students enact and analyze the non-verbal cues
- Give exercises for clarity and conciseness in written communication.
- Demonstrating using Communication Equipments like Fax, Telex, Intercoms, etc,
- Demonstrating Video conferencing & teleconferencing in the class.
- Conduct a mock meeting of students in the class identifying an issue of their concern. The students should prepare notice, agenda and minutes of the meeting.
- Each student to give presentation of 5 minutes (this can be spread throughout the semester)and to be evaluated by the faculty

RECOMMENDED BOOKS:

- Business Communication : Concepts, Cases And Applications – Chaturvedi P. D, & Mukesh Chaturvedi ,2/e, Pearson Education,2011
- Business Communication: Process and Product – Mary Ellen Guffey, 3/e, Cengage Learning, 2002.
- Business Communication – Renuka Murthy T P and YathishChandra M S, HPH.
- Business Communication – Lesikar, Flatley, Rentz & Pande, 11/e, TMH, 2010
- Advanced Business Communication – Penrose, Rasberry, Myers, 5/e, Cengage Learning, 2004.
- BCOM – Lehman, DuFrene, Sinha, Cengage Learning, 2/e, 2012
- Business Communication – Madhukar R. K, 2/e, Vikas Publishing House.

REFERENCE BOOKS:

- Effective Technical Communication - Ashraf Rizvi M, TMH, 2005.

- Business Communication - Sehgal M. K & Khetrapal V, Excel Books.
- Business Communication – Krizan, Merrier, Jones, 8/e, Cengage Learning, 2012.
- Basic Business Communication – Raj Kumar, Excel Books, 2010.

SEMESTER II
HUMAN RESOURCE MANAGEMENT

Subject Code	: 16MBA21	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To understand the HRM concepts and theory
- To obtain an overview of various HRM functions and practices
- To gain an insight into the various statutory provisions

Course outcome:

At the end of the course students will be able to:

- Synthesize information regarding the effectiveness of recruiting methods & selection procedures
- Identify the various training methods and design a training program
- Design a job description and job specification for various levels of employees.
- List out the regulations governing employee benefit practices.

Unit 1:

(8 hours)

Human Resource Management:

Introduction, meaning, nature, scope of HRM - Importance and Evolution of the concept of HRM - Major functions of HRM - Principles of HRM

Unit 2:

(10 hours)

Job Analysis: Meaning, process of Job Analysis, methods of collecting job analysis data, Job Description and Job Specification, Role Analysis.

Human Resource Planning: Objectives, Importance and process of Human Resource Planning, Effective HRP.

Unit 3:

(10 hours)

Recruitment: Definition, Constraints and Challenges, Sources and Methods of Recruitment, New Approaches to recruitment.

Selection: Definition and Process of Selection.

Placement: Meaning, Induction/Orientation, Internal Mobility, Transfer, Promotion, Demotion and Employee Separation.

Unit 4:

(8 hours)

Training and development: Training v/s development, Training v/s Education, Systematic Approach to Training, Training Methods.

Unit 5:

(10 hours)

Performance Appraisal: Concept of Performance Appraisal, the Performance Appraisal Process, Methods of Performance Appraisal

Compensation: Objectives of Compensation Planning, Job Evaluation, Compensation Pay Structure in India.

Unit 6:

(10 hours)

Employee Welfare: Introduction, Types of Welfare Facilities and Statutory Provisions.

Employee Grievances: Employee Grievance procedure, Grievances Management in Indian Industry.

Discipline: Meaning, approaches to discipline, essential of a good disciplinary system, managing difficult employees.

Practical Components:

- Give a case and ask the students to prepare the recruitment advertisement for a newspaper.
- Expose students to standard selection tests followed in various sectors.
- Exploring training and development practices.
- Exploring performance appraisal practices in various sectors.
- Exploring employee separation practices.
- Give a job analysis case and ask the students to prepare job description and job specification.
- Ask the students to prepare an appointment letter for the post of office manager of a company known to you.

RECOMMENDED BOOKS:

- Human Resources Management: A South Asian Perspective, Denski/Griffin/Sarkar-Cengage Learning, 2012.
- Human Resource Management – Rao V. S. P, Excel BOOKS, 2010
- Human Resource Management - Lawrence S. Kleeman, Biztantra , 2012.
- Human Resource Management – Dr. T.P RenukaMurthy HPH

REFERENCE BOOKS:

- Human Resource Management - John M. Ivancevich, 10/e, McGraw Hill.
- Human Resource Management in practice - Srinivas R. Kandula, PHI, 2009
- Managing Human Resources - Luis R Gomez-Mejia, David B. Balkin, Robert L. Cardy, 6/e, PHI, 2010.
- Human Resource Management & Industrial relations, P.Subba Rao, Himalaya Publishing House, Mumbai.
- Human Resource Management – Aswathappa K HPH

FINANCIAL MANAGEMENT

Subject Code	: 16MBA22	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To familiarize the students with basic concepts of financial management.
- To understand time value of money and cost of capital.
- To analyze capital structure, capital budgeting and dividend decision.
- To understand the short term and long term financing and working capital management.

Course Outcome:

At the end of the course students will be able to:

- Understand the basic financial concepts
- Apply time value of money
- Evaluate the investment decisions
- Analyze the capital structure and dividend decisions.
- Estimate working capital requirements.

Unit 1:

(8 Hours)

Financial management – Introduction to financial management, objectives of financial management – profit maximization and wealth maximization. Changing role of finance managers. Interface of Financial Management with other functional areas.

Sources of Financing: Shares, Debentures, Term loans, Lease financing, Hybrid financing, Venture Capital, Angel investing and private equity, Warrants and convertibles (Theory Only)

Emerging Issues: Risk management, Behavioral finance and Financial engineering.

Unit 2:

(10 Hours)

Time value of money – Future value of single cash flow & annuity, present value of single cash flow, annuity & perpetuity. Simple interest & Compound interest, Capital recovery & loan amortization.

Unit 3:

(10 Hours)

Cost of Capital Cost of capital – basic concepts. Cost of debenture capital, cost of preferential capital, cost of term loans, cost of equity capital (Dividend discounting and CAPM model) - Cost of retained earnings - Determination of Weighted average cost of capital (WACC) and Marginal cost of capital.

Unit 4:

(12 Hours)

Investment decisions – Capital budgeting process, Investment evaluation techniques – Net present value, Internal rate of return, Modified internal rate of return, Profitability index, Payback period, discounted payback period, accounting rate of return.

Unit 5:

(8Hours)

Working capital management – factors influencing working capital requirements - Current asset policy and current asset finance policy- Determination of operating cycle and cash cycle - Estimation of working capital requirements of a firm (Does not include Cash, Inventory & Receivables Management)

Unit 6:

(8 Hours)

Capital structure and dividend decisions – Planning the capital structure. (No capital structure theories to be covered) Leverages – Determination of operating leverage, financial leverage and total leverage. Dividend policy – Factors affecting the dividend policy - Dividend Policies- Stable Dividend, Stable Payout (No dividend theories to be covered)

Practical Components:

- Identifying the small or medium sized companies and understanding the Investment evaluation techniques used by them.
- Using the annual reports of selected companies, students can study the working capital management employed by them. Students can also compare the working capital management of companies in the same sector.
- Students can choose the companies that have gone for stock split and Bonus issue in the last few years and study the impact of the same on the stock price.

RESEARCH METHODS

Subject Code	: 16MBA23	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To understand the basic components of research design
- To Gain an insight into the applications of research methods
- To equip students with various research analytical tools used in business research

Course outcome:

At the end of the course students are able to:

- Understand various research approaches, techniques and strategies in the appropriate in business.
- Apply a range of quantitative / qualitative research techniques to business and day to day management problems
- Demonstrate knowledge and understanding of data analysis, interpretation and report writing
- Develop necessary critical thinking skills in order to evaluate different research approaches in Business.

Unit 1:

(8 hours)

Business Research – Meaning, types, process of research- management problem, defining the research problem, formulating the research Hypothesis, developing the research proposals, research design formulation, sampling design, planning and collecting the data for research, data analysis and interpretation. Research Application in business decisions, Features of good research study.

Unit 2:

(10 hours)

Business Research Design: Meaning and significance - **Types:** Exploratory and Conclusive Research Design.

Exploratory Research: Meaning, purpose, methods- Literature search, experience survey, focus groups and comprehensive case methods.

Conclusive Research Design - Descriptive Research - Meaning, Types – Cross sectional studies and longitudinal studies.

Experimental Research Design – Meaning and classification of experimental designs- formal and informal, Pre experimental design, Quasi-experimental design, True experimental design, statistical experimental design.

Unit 3:

(8 hours)

Sampling: Concepts- Types of Sampling - Probability Sampling – simple random sampling, systematic sampling, stratified random sampling, cluster sampling -Non Probability Sampling –

convenience sampling- judgemental sampling, snowball sampling- quota sampling - Errors in sampling.

Unit 4: (12 hours)

Data Collection: Primary and Secondary data

Primary data collection methods - Observations, survey, Interview and Questionnaire, Qualitative Techniques of data collection, Questionnaire design – Meaning - process of designing questionnaire. Secondary data -Sources – advantages and disadvantages.

Measurement and Scaling Techniques: Basic measurement scales-Nominal scale, Ordinal scale, Interval scale, Ratio scale. Attitude measurement scale - Likert's Scale, Semantic Differential Scale, Thurstone scale, Multi-Dimensional Scaling

Unit5: (10 hours)

Hypothesis - types, characteristics, source, formulation of hypotheses, errors in hypotheses. Parametric and Non-Parametric Tests- t-test, z-test, f-test, u-test, K-W Test (problems on all tests) Statistical analysis- Bivariate and Multivariate Analysis- (only theory). ANOVA-one-way and two-way classification (theory only)

Unit6: (8 hours)

Data Analysis and Report Writing: Editing, Coding, Classification, Tabulation, Validation Analysis and Interpretation- **Report writing and presentation of results:** Importance of report writing, types of research report, report structure, guidelines for effective documentation.

Practical Components:

- To identify research problem and collect relevant literatures for data analysis
- To write the research design by using Exploratory and Descriptive Research methods
- To prepare the questionnaire on brand awareness, effectiveness of training in public sector organization, Investors attitude towards Mutual funds in any financial institutions.
- To conduct Market survey and to investigate consumer perception towards any FMCG.
- To demonstrate Report writing and Presentation methods

RECOMMENDED BOOKS

- Business Research Methods: A South-Asian Perspective with course Mate William G.Zikmund/Barry J.Babin/Jon C.Carr/AtanuAdhikari/Mitch Griffin, Cengage learning
- Business Research Methods: S.N.Murthy&U.Bhojanna. Excel Books
- Business Research Methods. Donald R. Cooper & Pamela s Schindler, 9/e, TMH /2007
- Research Methods – M MMunshi& K Gayathri Reddy, Himalaya Publishing House, 2015
- Research Methods for Business, Uma Sekaran& Roger Bougie, 6th Edition, Wiley, 2013
- Business Research Methods-SL Gupta and HeteshGuptha, McGraw hill - 2012
- Marketing Research- Naresh K Malhotrs- 5th Edition, Pearson Education /PHI 2007

BUSINESS LAW AND POLICY

Subject Code	: 16MBA24	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To understand the legal environment of business and complexities faced by businesses.
- To learn various legal provisions under Indian Companies Act.
- To understand the importance of Corporate Social Responsibility

Course Outcome:

At the end of the course students will be able to:

- Demonstrate awareness towards legal and regulatory context of business
- Recognize and appropriately respond to ethical, legal and strategic concerns relating to human resource and organizational management.
- Gain insights into various acts and understand the significance of corporate governance

Unit 1

(10 Hours)

Indian Contract Act, 1872-meaning of contract, agreement, essential elements of a valid contract. Law of agency-meaning, creation and termination of agency. Bailment and Pledge-meaning rights and duties of bailor and bailee.

Unit 2:

(10 Hours)

Companies Act 1956- Meaning and features, kinds of companies, registration and incorporation, Memorandum of Association,& Articles of Association, Prospectus. Winding up of companies

Unit 3:

(10 Hours)

Miscellaneous Acts-Meaning, scope and objectives of: (a) Intellectual Property Law (relating to patents, copyrights and trademarks): (b) Consumer Protection Act 1986 and (c) Environment Protection Act 1986,

Unit 4:

(10 Hours)

Indian Partnership Act 1932 - THE NATURE OF PARTNERSHIP- Introduction of a partner- Admission of the partner -Retirement of a partner- Expulsion of a partner - Insolvency a partner - Liability of estate of deceased partner

Unit 5:**(8 Hours)**

Corporate Governance: Introduction, Definition, Issues in corporate governance, relevance of corporate governance, need and importance of corporate governance, benefits of good corporate governance. Obligation to society, investors, employees and customers, managerial obligation, Indian cases

Unit 6:**(8 Hours)**

Corporate Social Responsibility: Types and nature of social responsibilities, CSR principles and strategies, models of CSR, Best practices of CSR, Need of CSR, Arguments for and against CSR, CSR in Indian perspective, Indian examples. Latest trends in CSR

Practical Components:

- Students are expected to study any five CSR initiatives by Indian organizations and submit a report for the same.
- A group assignment on the relationship between Business, Law and Society in Indian context
- Case studies/Role plays related ethical issues in business with respect to Indian context.
- Students to collect, analyse and discuss MA, AA & Prospectus of a company.
- Organize a programme on consumer awareness and consumer rights.

RECOMMENDED BOOKS:

STRATEGICMANAGEMENT

Subject Code	: 16MBA25	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To provide insights into the core concepts of strategic management.
- To evaluate various business strategies in dynamic market environments.
- To gain insights into various strategic management models

Course Outcome:

At the end of the course students will be able to:

- Formulate a strategic plan that operationalizes the goals and objectives of the firm.
- Use management concepts to analyze complex business situations
- Associate with various Strategic Management models for Business situations
- Ability to evaluate and critique theories and models in corporate environment.

Unit 1

(8 Hours)

Meaning and Nature of Strategic Management, its importance and relevance. Characteristics of Strategic Management. The Strategic Management Process. Relationship between a Company's Strategy and its Business Model.

Unit 2

(8 Hours)

Strategy Formulation – Developing Strategic Vision and Mission for a Company – Setting Objectives – Strategic Objectives and Financial Objectives – Balanced Scorecard. Company Goals and Company Philosophy. The hierarchy of Strategic Intent – Merging the Strategic Vision, Objectives and Strategy into a Strategic Plan.

Unit 3

(10 Hours)

Analyzing a Company's External Environment – The Strategically relevant components of a Company's External Environment – Industry Analysis – Industry Analysis – Porter's dominant economic features – Competitive Environment Analysis – Porter's Five Forces model – Industry driving forces – Key Success Factors – concept and implementation.

Unit 4

(10 Hours)

Analyzing a company's resources and competitive position – Analysis of a Company's present strategies – SWOT analysis – Value Chain Analysis – Benchmarking
Generic Competitive Strategies – Low cost provider Strategy – Differentiation Strategy – Best cost provider Strategy – Focused Strategy – Strategic Alliances and Collaborative Partnerships – Mergers and Acquisition Strategies – Outsourcing Strategies –International Business level Strategies.

Unit 5**(10 Hours)**

Business planning in different environments – Entrepreneurial Level Business planning – Multi stage wealth creation model for entrepreneurs– Planning for large and diversified companies – brief overview of Innovation, integration, Diversification, Turnaround Strategies - GE nine cell planning grid and BCG matrix.

Unit 6**(10 Hours)**

Strategy Implementation – Operationalizing strategy, Annual Objectives, Developing Functional Strategies, Developing and communicating concise policies. Institutionalizing the strategy, Strategy, Leadership and Culture

Practical Components:

- Analysing the Mission and Vision statements of a few companies
- Applying Michael Porter's model to an industry (Retail, Telecom, Infrastructure, FMCG, Insurance, Banking etc)
- Pick a successful growing company. Do a web-search of all news related to that company over a one-year period. Analyse the news items to understand and write down the company's strategy and execution efficiency.

ENTREPRENEURSHIP DEVELOPMENT

Subject Code	: 16MBA26	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To develop and strengthen entrepreneurial quality in students.
- To impart basic entrepreneurial skills and understanding to run a business efficiently and effectively.
- To provide insights to students on entrepreneurial opportunities.

Course Outcomes:

At the end of the course students will be able to:

- Display keen interest and orientation towards entrepreneurship
- Develop a business plan
- Become aware about various sources of funding for an entrepreneur including financial institutions, venture capitalists and Angel Investors
- Gain consciousness towards social entrepreneurship and rural entrepreneurship opportunities

Unit 1:

(10 Hours)

Entrepreneur & Entrepreneurship: Meaning of entrepreneur - Evolution of the concept - Functions of an Entrepreneur - Types of Entrepreneur - Intrapreneur- an emerging class - Concept of Entrepreneurship - Evolution of Entrepreneurship - Development of Entrepreneurship - Entrepreneurial Culture - Stages in entrepreneurial process.

Unit 2:

(10 Hours)

Business Planning Process: Meaning of business plan - Business plan process - Advantages of business planning - Marketing plan - Production/operations plan - Organization plan - Financial plan - Final Project Report with Feasibility Study - preparing a model project report for starting a new venture.

Unit 3:

(8 Hours)

Institutions supporting Entrepreneurs: Small industry financing developing countries - A brief overview of financial institutions in India - Central level and state level institutions - SIDBI - NABARD - IDBI - SIDCO - Indian Institute of Entrepreneurship - DIC - Single Window - Latest Industrial Policy of Government of India

Unit 4:

(8 Hours)

Family Business: Importance of family business - Types - History - Responsibilities and rights of shareholders of a family business - Succession in family business - Pitfalls of the family business - strategies for improving the capability of family business - improving family business performance.

Unit 5:**(10 Hours)**

International Entrepreneurship Opportunities: The nature of international entrepreneurship - Importance of international business to the firm - International versus domestic entrepreneurship - Stages of economic development - Entrepreneurship entry into international business - exporting - Direct foreign investment - barriers to international trade.

Unit 6:**(10 Hours)**

Informal Risk Capital and Venture Capital: Informal risk capital market - venture capital - nature and overview - venture capital process - locating venture capitalists - approaching venture capitalists.

Social Entrepreneurship: Social enterprise-need - types - characteristics and benefits of social enterprises-Social entrepreneurship - Rural entrepreneurship, MSME Policies.

Make-In India, Start-Up India, Stand-Up India.

Case studies in Entrepreneurship Development**Practical Components:**

- Make a business plan for your intended business - talk to bankers to find out what they look for in a business plan - modify accordingly and present it in the class
- Analyze the performance of listed family firms. How is their performance compared to the performance of other firms? Does a family firm successfully manage to create wealth for non-family investors?

Plan of action (proposed)

1. Implementation of CBCS for MBA Programme will be effective from next academic year, i.e., 2016-17
2. Review of Scheme of Teaching and Examinations being finalized
3. Award of Credits for various components of MBA Programme
4. Allotment of marks for the subjects/papers, seminar and summer project.
80:20 patterns of marks for external examination and internal (IA) marks respectively is to be adopted for all the subjects, except Internship, for which the pattern will be 50:50 basis for internal and external assessments respectively.

Question paper for theory examination shall consist of Part A and B as under:

- Part A shall consist of 5 questions subdivided into a, b, c in 3+7+10 mixed pattern
- Part B shall be a *compulsory* question on Case study/ Practical problem for 20 marks (may contain a maximum of 4 sub-questions).

IA Pattern: 20 marks in each subject, comprising of 10 marks for tests and 10 marks for assignments/seminars/practical exercises/quiz/oral exams

- Entrepreneurship Development and Management - Vasant Desai - Himalaya Publishing House - 2007
- Entrepreneurship-Theory and Practice - Raj Shankar Vijay Nicole Imprints Pvt. Ltd - 2006
- Entrepreneurship - Rajiv Roy - 2/e - Oxford University Press 2011
- Entrepreneurship-Principles and Practices - Kurakto - 7/e - Thomson Publication - 2007

SEMESTER III MARKETING SPECIALISATION

CONSUMER BEHAVIOR

Subject Code	: 16MBA MM301	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To understand the concept of consumer behavior, decision making by consumers, behavioral variables and its influences on consumer behavior.
- To comprehend the social and cultural dimensions of consumer behavior.
- To provide an insight of the psychological and behavioral concepts of consumers.

Outcomes:

The student should be able to:

- Explain the background and concepts vital for understanding Consumer Behaviour.
- Identify the role of variables that determines Consumer Behaviour in Social & cultural domain.
- Identifying the psychological and behavioral practices adopted by organizations to enhance the Consumer Behaviour.

Unit 1:

(5 Hours)

Introduction to the study of Consumer Behaviour: Meaning & Definition of CB, Difference between consumer & Customer, Nature & characteristics of Indian Consumers, Consumer Movement in India, Rights & Responsibilities of consumers in India, Benefits of consumerism.

Unit 2:

(9 Hours)

Role of Research in understanding consumer behaviour: Consumer Research: Consumer Research Paradigms (Qualitative & Quantitative Research Methods) Developing research objectives, collecting secondary data, designing primary research, data analysis and reporting research findings.

Models of Consumer Behaviour: Input-Process-Output Model, Nicosia Model, Howard Sheth Model, Engel-Kollat-Blackwell Models of Consumer Behaviour, Internal Influences: Motivation, Personality, Perception, Learning, Attitude, Communications, External Influences: Social Class, Culture, REFERENCE Groups, Family members.

Levels of Consumer Decision Making – Consumer Buying Decision Process, Complex Decision Making or Extensive Problem Solving Model, Low Involvement Decision Making or Limited Problem Solving Model, Routinised Response Behaviour, Four views of consumer decision making. On-line Decision Making: Meaning & Process/Stages
Situational Influences- Nature of Situational Influence (The communication Situation, The Purchase Situation, The usage situation, The disposition situation) Situational Characteristics and consumption behaviour (Physical features, Social Surroundings, Temporal Perspectives, Task Definition, Antecedent States.)

Unit 3:

(10 Hours)

Individual Influences on Consumer Behaviour and CRM: Part 1

A) Motivation: Basics of Motivation, Needs, Goals, Positive & Negative Motivation, Rational Vs Emotional motives, Motivation Process, Arousal of motives, Selection of goals.

Motivation Theories and Marketing Strategy - Maslow's Hierarchy of Needs, McGuire's Psychological Motives (Cognitive Preservation Motives, Cognitive Growth Motives, Affective Preservation Motives, Affective Growth Motives).

B) Personality: Basics of Personality, Theories of Personality and Marketing Strategy (Freudian Theory, Neo-Freudian Theory, Trait Theory), Applications of Personality concepts in Marketing, Personality and understanding consumer diversity (Consumer Innovativeness and related personality traits, Cognitive personality factors, Consumer Materialism, Consumer Ethnocentrism), Brand Personality (Brand Personification, Gender, Geography, Colour), Self and Self-Image (One or Multiple selves, The extended self, Altering the self).

C) Perception: Basics of Perception & Marketing implications, Elements of Perception (Sensation, Absolute Threshold, Differential Threshold, Subliminal Perception), Dynamics of Perception (Perceptual Selection, Perceptual Interpretation, Perceptual Organization, perceived price, perceived quality, price/quality relationship, Perceived Risk, Types of risk, How consumers' handle risk.

Customer Relationship Management

Meaning & Significance of CRM, Types of CRM (Operational, Collaborative, Analytical), Strategies for building relationship marketing, e-CRM, Meaning, Importance of e-CRM, Difference Between CRM & e-CRM

Unit 4:

(08 Hours)

Individual Influences on Consumer Behaviour: Part 2

A) Learning: Elements of Consumer Learning, Motivation, Cues, Response, Reinforcement, Marketing Applications of Behavioural Learning Theories, Classical Conditioning Pavlovian Model, Neo-Pavlovian Model), Instrumental Conditioning, Elaboration Likelihood Model.

B) Attitude: Basics of attitude, the nature of attitude, Models of Attitude and Marketing Implication, (Tri-component Model of attitude, Multi attribute attitude models.

C) Persuasive Communication: Communications strategy, Target Audience, Media Strategy, Message strategies, Message structure and presentation.

Unit 5:

(12 Hours)

External Influences on Consumer Behaviour

Social Class: Social Class Basics, What is Social Class? (Social class & Social status, the dynamics of status consumption, Features of Social Class, Five Social-Class Categories in India

Culture and Subculture - Major Focus on Indian Perspective

Culture: Basics, Meaning, Characteristics, Factors affecting culture, Role of customs, values and beliefs in Consumer Behaviour.

Subculture: Meaning, Subculture division and consumption pattern in India, Types of subcultures

Cross-cultural consumer analysis: Similarities and differences among people, the growing global middle class; Acculturation is a needed marketing viewpoint, applying research techniques Cross-cultural marketing strategy: Cross-cultural marketing problems in India, Strategies to overcome cross-cultural problems.

Groups: Meaning and Nature of Groups, Types

Family: The changing structure of family, Family decision making and consumption related roles, Key family consumption roles, Dynamics of husband-wife decision making, The expanding role of children in family decision making, The family life cycle & marketing strategy, Traditional family life cycle & marketing implications,

Reference Groups: Understanding the power & benefits of reference groups, A broadened perspective on reference groups, Factors that affect reference group influence, Types of reference groups, Friendship groups, Shopping groups, Work groups, Virtual groups, Consumer-action groups, reference group appeals, Celebrities.

Unit 6:

(08 Hours)

Consumer Influence and Diffusion of Innovations

Opinion Leadership: Dynamics of opinion leadership process, Measurement of opinion leadership, Market Mavens, Opinion Leadership & Marketing Strategy, Creation of Opinion Leaders

Diffusion of Innovations: Diffusion Process (Innovation, Communication channels, Social System, Time) Adoption Process: Stages, categories of adopters Post Purchase Processes: Post Purchase Processes, Customer Satisfaction, and customer commitment: Post purchase dissonance, Product use and non use, Disposition, Product disposition.

Case studies in Indian context only

(04 Hours)

Practical Component:

- Students can go to malls and unorganized retail outlets and observe the behavior of consumers of different demographic segments while buying different category of goods. Come back to class and present the findings / observations followed with a group discussion.
- Students can prepare a questionnaire and do a survey on consumer buying behavior and present the findings in the class.
- Find three advertisements that appeal to the need for power, affiliation and achievement and discuss their effectiveness. Rewrite these for persons in different levels of Maslow's Hierarchy?
- Meet your friends and conduct a survey to find what are the important factors in their purchase of mobiles, shoes, bags etc. There are now plenty of advertisements regarding most products – how do they deal with this information overload?.

RECOMMENDED BOOKS:

- Consumer Behavior - Leon Schiff man, Lesslie Kanuk, 10/e, Pearson, 2010.
- Consumer Behaviour: A Managerial Perspective, Dr. Dheeraj Sharma, Jagdish N Sheth, Banwari Mittal, 1/e, Cengage Learning
- Consumer Behavior: Building Marketing Strategy – Del I. Hawkins, & Others, 11/e, TMH,
- Consumer behavior - Jay D. Lindquist, Joseph Sirgy, 1/e, Cengage Learning.
- Consumer Behavior in Indian Perspective – Suja Nair, Himalaya Publications

REFERENCE BOOKS:

- Consumer Behavior - Henry Asseal, Cengage Learning.
- Consumer Behavior- Satish K. Batra & S H HKazmi, Excel Books.
- CRM – Alok Kumar, Chhabi Sinha, 7/e, Biztantra.
- Customer Relationship Management - Peru Ahamed & Sagadevan, Vikas Publishing.
- Consumer Behavior – Kumar Rajeev, Himalaya Publisher.

RETAIL MANAGEMENT

Subject Code	: 16MBA MM302	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To develop an understanding of the contemporary retail management, issues, strategies and trends.
- To highlight the importance of retailing and its role in the success of modern business.
- To acclimatize with the insights of retailing, key activities and relationships.

Outcomes:**The student should be able to:**

- Find out the contemporary retail management, issues, and strategies.
- Evaluate the recent trends in retailing and its impact in the success of modern business.
- Relate store management and visual merchandising practices for effective retailing.

Unit 1:**(8 Hours)**

Introduction and Perspectives on Retailing World of Retailing, Retail management, introduction, meaning, characteristics, emergence of organizations of retailing - Types of Retailers (Retail Formats) - Multichannel Retailing - Customer Buying Behaviour, Historical Perspective, role of retailing, trends in retailing, FDI in Retail - Problems of Indian Retailing - Current Scenario

Unit 2:**(5 Hours)**

Theories of Retailing

Wheel of retailing, The Retail Accordion, Melting Pot Theory, Polarization theory.

Unit 3: (14 Hours)

Retailing strategy for Setting up Retail organization and planning: Retail Market Strategy - Financial Strategy - Site & Locations (Size and space allocation, location strategy, factors Affecting the location of Retail, Retail location Research and Techniques, Objectives of Good store Design.) – Human Resource Management, Information Systems and supply chain management & Logistics.

Retail Pricing and Promotion: Factors influencing retail pricing, Retail pricing strategies, Retail promotion strategies.

Unit 4: (10 Hours)

Store Management and Visual Merchandising:

Store Management: Responsibilities of Store Manager, Store Security, Parking Space Problem at Retail Centres, Store Record and Accounting System, Coding System, Material Handling in Stores, Management of Modern retails –Store Layout, design: Types of Layouts, role of Visual Merchandiser, Visual Merchandising Techniques, Controlling Costs and Reducing Inventories Loss, Exteriors, Interiors Customer Service, Planning Merchandise Assortments -Buying systems -Buying merchandise and Retail Communication Mix.

Unit 5: (9 Hours)

Relationship Marketing & International Retailing: Management & Evaluation of Relationships in Retailing, Retail Research in Retailing: Importance of Research in Retailing, Trends in Retail Research, Areas of Retail Research. Customer Audits, Brand Management in retailing, Internationalization of Retailing and Evolution of International Retailing, Motives of International Retailing, International Retail Environment – Socio-Cultural, Economic, Political, Legal, Technological and issues in international retailing

Unit 6: (6 Hours)

Retail Audit and ethics in Retailing

Undertaking an audit, responding to a retail Audit, problems in conducting a retail audit. Ethics in retailing, social responsibility and consumerism

Case Studies (4 Hours)

Practical Components:

- Interview a salesperson in a retail store and write a brief report about what they like and dislike about their jobs, their salary, travelling allowances, sales quotas, why they chose a sales career, and what does it take to succeed in this profession.
- Go to a kirana store and a supermarket and compare the following: a) store arrangement b) No of brands carried c) pricing policies – are discounts given? d) Service – personal or impersonal? Etc.
- Go to at least three kirana stores in your neighborhood (around 2 kms) and discuss with them the importance of location, pricing, credit policy, etc. What percentages of goods are sold 'loose' in each locality and compare this with the approximate income range of

the customers? What are the retailer's losses when a customer defaults in payment? Does he make up for it by increasing his prices to other customers?

- Ask your friends if they would buy certain goods like groceries, vegetables, socks, mobile, pens etc from the roadside vendor as against a regular shop. Group the products into low risk and high risk ones. Does this buying behavior also depend on the personality of the individual doing the buying? Or the one doing the selling?
- Student can make a presentation on any product or the services of student choice, covering selling strategies and one day work exposure towards merchandising in any big retail outlets of respective places where institute is operating. Rural colleges can send the students to the city nearby to observe the merchandising planning in retail outlets and to make a small report.

RECOMMENDED BOOKS:

- Retail Management - Levy & Weitz, 8/e, TMH, 2012.
- Retail Management - Chetan Bajaj, Oxford University press.
- Retailing, James R Carver, Patrick m Dunne, Robert F Lusch, 8/e
- Retail Marketing Management - Dravid Gilbert, 2/e, Pearson Education.

- Retailing Management - Swapna Pradhan, 4/e, TMH, 2012.
- Retail Management: A Strategic Approach - Barry Berman, Joel R. Evans, Pearson.
- Retail Management, Functional Principles and Practices, Gibson G Vedamani, 4th Edition, JAICO Publishing House.
- Retail Management, Global perspective, Dr. Harjith Singh, 3rd Revised Edition, S.Chand.

SERVICES MARKETING

Subject Code	: 16MBA MM303	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To acquaint the students with the characteristics of services and their marketing implications.
- To discuss and conceptualize the service quality, productivity in services, role of personnel in service marketing and to manage changes in the environment.
- To familiarize the students with the GAPS model and strategizing towards closing the GAPS for effective services marketing.

Outcomes:

The student should be able to:

- Develop an understanding about the various concepts and importance of Services Marketing.
- Enhance knowledge about emerging issues and trends in the service sector
- Learn to implement service strategies to meet new challenges

Unit 1: (10 Hours)

Introduction to services: Concepts, contribution and reasons for the growth of services sector, difference in goods and service in marketing, characteristics of services, concept of service marketing triangle, service marketing mix, GAP models of service quality.

Consumer behaviour in services: Search, Experience and Credence property, consumer expectation of services, two levels of expectation, Zone of tolerance, Factors influencing customer expectation of services.

Customer perception of services-Factors that influence customer perception of service, Service encounters, Customer satisfaction, Strategies for influencing customer perception.

Unit 2: (8 Hours)

Understanding customer expectation through market research: Key reasons for GAP 1, using marketing research to understand customer expectation, Types of service research, Building customer relationship through retention strategies –Relationship marketing, Evaluation of customer relationships, Benefits of customer relationship, levels of retention strategies, Market segmentation-Basis & targeting in services.

Unit 3: (10 Hours)

Customer defined service standards: “Hard” & “Soft” standards, challenges of matching supply & demand in capacity, four common types of constraints facing services, optimum v/s maximum use of capacity, strategies for matching capacity & demand.

Yield management-balancing capacity utilization, pricing. Waiting line strategies- four basic Waiting line strategies.

Leadership & Measurement system for market driven service performance-key reasons for GAP-2 service leadership- Creation of service vision and implementation, Service quality as profit strategy, Role of service quality In offensive and defensive marketing.

Unit 4: (8 Hours)

Employee role in service designing: importance of service employee, Boundary spanning roles, Emotional labour, Source of conflict, Quality- productivity trade off, Strategies for closing GAP 3.

Customer’s role in service delivery-Importance of customer & customer’s role in service delivery, Strategies for enhancing-Customer participation, Delivery through intermediaries-Key intermediaries for service delivery, Intermediary control strategies.

Unit 5: (8 Hours)

Role of marketing communication-Key reasons for GAP 4 involving communication, four categories of strategies to match service promises with delivery, Methodology to exceed customer expectation.

Pricing of services-Role of price and value in provider GAP 4, Role of non-monitory cost, Priceas an indicator of service quality –Approaches to pricing services, pricing strategies.

Unit 6: (6 Hours)

Physical evidence in services: Types of service spaces- Role of service scapes, Frame work forunderstanding service scapes& its effect on behaviour-Guidance for physical evidence strategies.

Case Studies in Indian context only (6 hours)

Practical component:

- Ask students to choose a service industry of their choice at the beginning of the semester
- Ask them to do an in-depth study of the industry and give a presentation at the end of theevery Module relating to the concepts of that Module to the industry
- Students can prepare service blueprints for any service of their choice
- Students can do a role play on service recovery
- Identify any existing services. Locate loopholes in their design and suggest modifications

RECOMMENDED BOOKS:

- Services Marketing-Valarie A Zeithmal& Mary Jo Bitner, 5/e, TMH, 2011
- Services Marketing-Christopher Lovelock, Pearson Education.

REFERENCE BOOKS:

- Services Marketing - RajendraNargundkar, 3/e, TMH, 2010
- Services Marketing - GovindApte, Oxford.
- Services Marketing - Hoffman & Bateson, 4/e, Cengage Learning-2007
- Services Marketing: Operation, Management and Strategy-Kenneth E Clow& David L. Kurtz, 2/e, Biztantra, 2007

MARKETING RESEARCH

Subject Code	: 16MBA MM304	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To provide an understanding of the basics of marketing research process.
- To orient on the theoretical and practical aspects of marketing research.
- Encourage the students to take up analytical thinking through research.
- To highlight importance marketing research for enhancing marketing strategies.

Outcomes:

The student should be able to:

- Comprehend the objectives of Market research & its application in solving marketing problems

- Appreciate the use of different data collection methods, sampling design techniques, measurement methods to analyze the data.
- Generalize and interpret the data with the help of various measurement techniques.
- To understand the emergence of new trends in research.

Unit 1: (8 Hours)

Introduction: Meaning, scope and importance of marketing research; own vs. agency marketing research; marketing information system; meaning, need and components, marketing information system and marketing research; marketing research process-an overview; problem definition, formulation and preparation of research proposal.

Unit 2: (10 Hours)

Research Design and Data Collection

Research Design: Meaning and scope of research design; types of research designs, exploratory, descriptive and conclusive

Secondary Data: Sources and uses of secondary data, collection of secondary data.

Primary Data Collection: Primary data collection methods; mail survey, telephone survey and interviews and their evaluation; observations; experimental methods, questionnaire administering, organizing fieldwork for collecting data.

Unit 3: (9 Hours)

Sample Design and Sampling: Determining universe, sampling frame and sampling unit; determining sampling method; sample size determination; sampling errors vs. non-sampling errors.

Sampling: Steps & Types: Probability / non probability (simple, systematic; stratified proportionate, disproportionate), Sample size determination

Unit 4: (9 Hours)

Questionnaire design:-Steps in Q.D. with examples for each step. Rating Scales, Juster, Likert, Semantic Differential, Thurston, Attitude Scales, Scales for illiterate respondents

Unit 5: (10 Hours)

Measurement Techniques: Nominal Scale, Ordinal Scale, Interval Scale, Ratio Scale; Scale Types: Comparative Scaling, Non-comparative Scaling; Attitude Measurement, Self-Reporting Methods, Methods for Rating Attributes, Data Analysis, Customer Research, Advertising Research, Product Research, Distribution Research, Sales Research, Marketing Environment Research, Internet Marketing Research, and International Marketing Research

Unit 6: (10 Hours)

Research trends, Behavioral Science Based Approach, Economic and Competitive Pressures, Consumer Insight Groups, Quantifying Emotions, Impact of the Social Media, Do-it-Yourself (DIY) Research; Research ethics, typical research errors, Research and culture;

Practical Components:

- Choose 5 successful products or services and identify the insight behind them through a field survey.
- Do a comprehensive essay on the difference between consumer vs. trade vs. competition insights & how best to exploit them.
- Take 5 recent digital innovations e.g. twitter or face book and identify the insights. Locate 5 non-users of search or mail and Interview their reasons.
- Choose 5 recent successful campaigns and identify their insights through consumer interviews. Present your findings to the class
- Choose 3 successful movies e.g. Dabang & Zindaginamilegi & My name is Khan---and interview consumers about the reasons for their success. Similarly repeat this with 3 recent expensive flop movies and Present your findings to the class

RECOMMENDED BOOKS:

- Marketing Research contemporary approach- Naraynreddy and GVRK Acharyalu, Excel publications
- Marketing Research and consumer Behavior Saravanel et.al, Vikas publishing house
- Essentials of Marketing Research – 4/e, Tony Proctor, PHI, 2005
- Essentials of Marketing Research – William G. Zikmund et.al. 4/e, Cengage Learning, 2010.
- Research Skills for Students: Transferable and Learning Skills - Allison, et.al. 1996.
- Market Research – Aekar, 11/e, Wiley publications, 2002.

REFERENCE BOOKS:

- Market Research: a guide to planning, methodology & evaluation - Paul Hague, KoganPage, 1996.
- Market Research Best Practice. 30 Visions of the Future – Peter Mouncey, et.al, 2007.

BUSINESS MARKETING

Subject Code	: 16MBA MM305	IA Marks: 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To develop an understanding of the various concepts of Industrial Marketing.
- To understand the buying process and marketing channels for industrial goods.
- To acquaint with B-2-B-2-C Strategies and their implementation.
- To analyze various pricing strategies of industrial goods & their implications.
- To understand the significance of E-commerce in Business Marketing.

Outcomes:

The student should be able to:

- Describe the nature of business markets and the related concepts.
- Familiarize the business buying behavior of industrial customers.
- Analyze business situations in the context of buyer-seller relationships.
- Apply concepts of pricing strategies for industrial goods

- To evaluate the significance of E –Commerce in Business Marketing.

Unit 1: (8 Hours)

Nature of Business Marketing: Business Marketing Concept, Business vs. Consumer Marketing, Economics of Industrial demand, Types of Industrial Markets, Types of Business Customers, Classifying Industrial Products & Services, Business customers purchase orientations, Organizational Procurement Characteristics, Environment Analysis in Business Marketing.

REFERENCE BOOKS:

- Business Marketing – Frank G Bingham Jr., Latest Edition; Tata McGraw Hill Publication.
- Industrial Marketing – Mukherjee H S; Latest Edition; Excel BOOKS Publication.
- Industrial Marketing – PK Ghosh, Latest Edition; Oxford University Press.

SUPPLY CHAIN MANAGEMENT

Subject Code	: 16MBA MM306	IA Marks	: 20
Number of Lecture Hours/Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours/ Week		

Objectives:

- To understand the basic concepts, processes and key elements of a supply chain.
- To provide insights for establishing efficient, effective, and sustainable supply chains.
- To explain the role of technology in supply chain planning, visibility, and execution.

Outcomes:

The student should be able to:

- Demonstrate knowledge of the functions of logistics and supply chain management.
- To relate concepts and activities of the supply chain to actual organizations.
- Highlight the role of technology in logistics and supply chain management.

- Evaluate cases for effective supply chain management and its implementation.

Unit 1: (7 Hours)

Introduction: Basic concepts & philosophy of SCM, essential features, decision phases – process view, supply chain framework, key issues in SCM and benefits.

Unit 2: (8 Hours)

Designing the supply chain network: Designing the distribution network, role of distribution, factors influencing distribution, design options, distribution networks in practice, network design in the supply chain, factors affecting the network design decisions. Designing and Planning Transportation Networks, role of transportation, modes and their performance, transportation Infrastructure and policies, design options and their trade-offs, tailored transportation.

Unit 3: (10 Hours)

Inventory Management: Concept, various costs associated with inventory, EOQ, buffer stock, lead time reduction, reorder point / re-order level fixation, ABC analysis, SDE/VED Analysis. [Simple problems only for understanding the concept]

Unit 4: (8 Hours)

Purchasing and vendor management: Centralized and decentralized purchasing, function of purchase department and purchase policies, vendor rating/ evaluation, single vendor concept, management of stores, account for materials, just in time & Kanban systems of inventory management

Unit 5: (10 Hours)

Logistics Management: Logistics of part of SCM, logistics costs, different models, logistics, sub-systems, inbound and out bound logistics bullwhip effects in logistics, distribution and warehousing management. Demand Management and Customer Service: Demand Management, traditional forecasting, CPFRP, customer service, expected cost of stockouts.

Unit 6: (8 Hours)

Recent issues in SCM: Role of computer/ IT in supply chain management, CRM Vs SCM, Benchmarking concept, features and implementation, outsourcing – basic concepts, value addition in SCM – concept of demand chain management

Case Studies in Indian context only. (5 Hours)

Practical Components:

- Students are expected to choose any 2 Indian Organization and study their supply chain in terms of drivers of the Supply chain and submit a report
- Students can study different logistics companies and services provided by them.
- Students can identify any product/service and study the type of distribution system used and understand the reason for using that particular type.
- Students can identify the various types of IT applications employed by Indian Organizations in their Supply chain.

RECOMMENDED BOOKS:

- Supply chain management, Chopra Sunil and Peter Meindl - 3rd edition, Pearson, 2007.
- A Logistic approach to Supply Chain Management – Coyle, Bardi, Longley, 1st Edition, Cengage Learning.
- Supply Chain Logistics Management, Donald J Bowersox, Dand J Closs, M Bixby Coluper, 2nd Edition, TMH, 2008.
- Supply Chain Management-A Managerial Approach, Amith Sinha, Herbert, 2nd edition, TMH.

REFERENCE BOOKS:

- Logistics and supply chain management, G. Raghuram (I.I.M.A.), Macmillan, 2000
- Harnessing value in supply chain, Emiko Bonafield, Johnwiley, Singapore, 1999
- Material Management rearview, Dr. Gopal Krishnan, Pearson New Delhi, 2002
- Supply Chain Management, B.S. Sahay, Macmillan, Pearson Education, 2004
- A Text Book of Logistics and Supply chain management, Agarwal D.K. - 1st edition, Macmillan.

Semester: III Finance Specialisation

PRINCIPLES AND PRACTICES OF BANKING

Subject Code	: 16MBA FM301	IA Marks: 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To discuss the Structure and System of Banking in India
- To discuss the features of Negotiable Instrument Act of 1881
- To familiarize the students with Universal Banking
- To discuss the Asset Liability Management in banks

Course Outcomes:

At the end of the course students are able to:

- Understand the banking system in India
- Know the nature of banker – customer relationship
- Make use of Negotiable instruments practically
- Have familiarity in using banking technologies like internet banking, Mobile banking, NEFT, ECS etc.
- Understand the concept of international banking and management of asset and liability in banks

Unit 1:**(10 Hours)**

Banking system and structure in India- Evolution of Indian Banks-Types of banks - Public Sector, Regional Banks, Performance of Public Sector banks, Private Sector Banks.

Commercial banking: Structure, Functions - Primary & secondary function, Role of commercial banks in socio economic development, Services rendered. Credit creation and Deployment of

Funds.-Role of Reserve Bank and GOI as regulator of banking system – Provisions of Banking Regulation Act & Reserve Bank of India Act.

Unit 2: (10 Hours)

Banker and customer – Types of relationship between banker and customer – Bankers obligations to customers – Right of lien, setoff, appropriation–Bankers legal duty of disclosure and related matters.

Customers` accounts with banks – Opening- operation – KYC norms and operation –Types of accounts and customers – Nomination – Settlement of death claims.

The Negotiable Instruments Act 1881: The Paying Banker and The Collecting Banker- Negligence-Bills of exchange and promissory note-Discharge of Negotiable instruments- Hundis.

Unit 3: (10 Hours)

Banking Technology- Concept of Universal Banking-Home banking–ATMs-Internet banking– Mobile banking-Core banking solutions–Debit, Credit and Smart cards– Electronic Payment systems-MICR- Cheque Truncation-ECS- EFT – NEFT-RTGS.

Unit 4: (9 Hours)

International banking–International Banking: Exchange rates and Forex Business, Correspondent banking and NRI Accounts, Letters of Credit, Foreign currency Loans, Facilities for Exporters and Importers, Role of ECGC, RBI and EXIM Bank.

Unit 5: (8 Hours)
Banker as lender – Types of loans – Overdraft facilities – Discounting of bills – Financing book dates and supply bills- Charging of Security bills- pledge – mortgage – assignment

Unit 6: (9Hours)

Asset Liability Management (ALM) in banks: Components of Liabilities and Components of Assets, Significance of Asset Liability management, Purpose and objectives. Prerequisites for ALM, Assets and Liabilities Committee (ALCO)- Activities of ALCO

Practical Components:

- Students can study Universal Banking & Cross Selling concepts adopted by banks
- Students can study Customer Profiling aspects adopted by banks
- Students can analyze Advertisement & Publicity efforts done by banks using ATMs (making a checklist of the publicity material found in an ATM – preferably in a private bank ATM)

RECOMMENDED BOOKS:

- Principles and practices of Banking - IIBF, 2/e, Macmillan, New Delhi.
- Elements of Banking & Insurance – JyothsnaSethi&Nishwan Bhatia, PHI, 2009.
- Bank Management - Koch W, Timothy, & S. Scott, Cengage Learning, New Delhi.

- Management of Banking and Financial Services, Padmalatha Suresh and Justin Paul, Second edition, Pearson, 2011
- Banking Theory and Practice, K.C. Shekhar and LekshmyShekhar, Vikas Publishing House,2011.
- Modern Banking: Theory and Practice, Muraleedharan D, PHI,2013.

REFERENCE BOOKS:

- Banking Theory, Law and practice - Sunderaram and Varshney, Sultan Chand & Sons, New Delhi.
- Banking and Financial System - Prasad K, Nirmala, Chandradas J. Himalaya Publishing House, Mumbai.
- Banking and Financial services- Sharma, Mukund, 1st edition, Himalaya Publishing House, Mumbai.

INVESTMENT BANKING AND FINANCIAL SERVICES

Subject Code	: 16MBA FM302	IA Marks: 20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To provide an understanding of the functioning of investment banking
- To explain the role of depositories and custodians
- To provide an in depth understanding of the financial services like factoring, venture capital, leasing and hire purchase.
- To familiarize the students with working of Housing finance and non banking finance companies
- To explain the concept and developments in micro finance, credit rating and securitization

Course Outcome:

At the end of the course, the students are able to:-

- Understand the functioning of Investment banking
- Be aware of operation connected with depositories and custodians
- Know how financial services like factoring, venture capital, leasing and hire purchase are provided in the financial system.
- Understand the working of Housing finance and non-banking finance companies.
- Identify the developments happening in micro finance, credit rating and securitization system.

Unit 1:

(10 Hours)

Investment Banking- Introduction-Functions of Investment Banks- Types of Investment Banks- Investment Banking Services- Merchant Banking Services-Issue Management-Pre issue and Post

issue obligations-Changing landscape of Investment Banking. Regulation of the Capital Market-SEBI regulations for merchant bankers, brokers and sub brokers, intermediaries and portfolio managers.

Underwriting: Concept – Devolvement - Business model - Underwriting in fixed price offers and book built offers.

Unit 2: (9 Hours)

Depository System: Objectives, activities, interacting systems, role of depositories and their services, Advantages of depository system -NSDL and CDSL. The process of clearing and settlement through Depositories, Depository Participants.

Regulations relating to Depositories-SEBI (Depositories and Participants) Regulations 1996-Registration of depository and participant- Rights and Obligations of depositories and Participants.

Unit 3: (7 Hours)

Housing Finance: Role, Types of housing loans, Institutions and banks offering Housing Finance, Procedure and Interest rates. Income Tax Implication. Reverse mortgage loan.

Non-Banking Finance Companies: Types, Growth, Functions, RBI Guidelines, Prudential Norms.

Unit 4: (9 Hours)

Factoring: Origin, Types, Factoring mechanism, advantages, factoring charges, International factoring, Factoring in India. **Forfeiting:** Origin, characteristics, benefits, difference between factoring and forfeiting, growth of forfeiting in India. **Securitization of debt:** Meaning, Features, Special Purpose Vehicle, Types of securitisable assets, Benefits of Securitization, Issues in Securitization.

Unit 5: (9 Hours)

Venture Capital: Concept, features, Origin and the current Indian Scenario. Private equity-Investment banking perspectives in private equity

Microfinance: The paradigm - NGOs and SHGs - Microfinance delivery mechanisms – Future of micro finance.

Credit rating: Definition and meaning, Process of credit rating of financial instruments, Rating methodology, Rating agencies, Rating symbols of different companies. Rating agencies for SMEs.

Unit 6: (12 Hours)

Leasing: Concept, Steps in Leasing Transactions, Types of Lease, Legal frameworks, Advantages and disadvantages of Leasing, Contents of a Lease Agreement, Matters on Depreciation and Tax, Problems in leasing, Factors influencing Buy or Borrow or Lease Decision.

Hire Purchasing: Concepts and features, Hire Purchase Agreement, Comparison of Hire Purchase with Credit sale, Instalment sale and Leasing. Banks and Hire Purchase. Problems related to outright purchase, Hire purchase and Leasing.

(Question Paper: Case study-Problem on financial evaluation of leasing and hire purchase.)

Practical Components:

- Students can study the procedure for the sanction of housing loans by a bank
- Students can study the Procedure to open a Demat account and an Online Trading Account.
- Students can visit a NBFC and study their operations
- Students may visit a SHG/NGO and study the micro finance aspects
- Visit a bank/financial institution providing factoring service and submit a report.

RECOMMENDED BOOKS:

- Indian Financial System—Khan M. Y, 7/e, TMH, 2011
- Indian Financial System – Machiraju, 4/e, Vikas, 2010
- Financial Markets and Services – Gordon & Natarajan, 7/e, Himalaya publishing, 2011.
- Financial services - Khan M.Y, 6/e, McGraw Hill, 2011.
- Banking and Financial services- Sharma, Mukund, 1/e edition, Himalaya Publishing House, Mumbai.

REFERENCE BOOKS:

- Dynamics of Financial Markets and Institutions in India – Srivastava R. M, Excel Books, 2010.
- Indian Financial System – Bharati V. Pathak, 3/e, Pearson Education, 2011.
- Investment Banking- Pratap G Subramanyam, Tata McGraw Hill, 2012.
- Merchant Banking & Financial services - Vij&Dhavan, 1/e, McGraw Hill, 2011.

INVESTMENT MANAGEMENT

Subject Code	: 16MBA FM303	IA Marks: 20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To develop a thorough understanding of the process of investments.
- To familiarize the students with the stock markets in India and abroad.
- To provide conceptual insights into the valuation of securities.
- To provide insight about the relationship of the risk and return and how risk should be measured to bring about a return according to the expectations of the investors.
- To familiarize the students with the fundamental and technical analysis of the diverse investment avenues
- To learn the Theories of Portfolio management and also the tools and techniques for efficient portfolio management.

Course Outcome:

At the end of the course, the students are able to:-

- Understand the process of investments.
- Get an insight into functioning of stock markets in India and abroad.
- Have insight into the relationship of the risk and return.
- Have familiarity of the fundamental and technical analysis
- Learn the Theories of Portfolio management and also the tools and techniques for efficient portfolio management.

Unit 1: (Theory)

(6 Hours)

Investment: Attributes, Economic vs. Financial Investment, Investment and speculation, Features of a good investment, Investment Process. Financial Instruments: Money Market Instruments, Capital Market Instruments, Derivatives. Mutual Funds: Functions of Investment companies, Classification of Investment companies, Mutual Fund types, Performance of Mutual Funds-NAV.

Unit 2: (Theory)

(6 Hours)

Securities Market: Primary Market - Factors to be considered to enter the primary market, Modes of raising funds, Secondary Market- Major Players in the secondary market, Functioning of Stock Exchanges, Trading and Settlement Procedures, Leading Stock Exchanges in India. Stock Market Indicators- Types of stock market Indices, Indices of Indian Stock Exchanges.

Unit 3: (Theory & Problems)

(10 Hours)

Risk and Return Concepts: Concept of Risk, Types of Risk- Systematic risk, Unsystematic risk, Calculation of Risk and returns of individual security, Portfolio Risk and Return

Unit 4: (Theory & Problems)

(10 Hours)

Valuation of securities: Bond- Bond features, Types of Bonds, Determinants of interest rates, Bond Management Strategies, Bond Valuation, Bond Duration. Preference Shares- Concept, Features, Yields. Equity shares- Concept, Valuation, Dividend Valuation models

Unit:5 (Theory& Problems)

(12 Hours)

Macro-Economic and Industry Analysis: Fundamental analysis-EIC Frame Work, Global Economy, Domestic Economy, Business Cycles, Industry Analysis.

Company Analysis- Financial Statement Analysis, Ratio Analysis.

Technical Analysis – Concept, Theories- Dow Theory, Eliot wave theory. Charts-Types, Trend and Trend Reversal Patterns. Mathematical Indicators – Moving averages, ROC, RSI, and Market Indicators. (Problems in company analysis & Technical analysis)

Market Efficiency and Behavioral Finance: Random walk and Efficient Market Hypothesis, Forms of Market Efficiency, Empirical test for different forms of market efficiency. Behavioral Finance – Interpretation, Biases and critiques. (Theory only)

Unit 6: (Theory & Problems)

(12 Hours)

Modern Portfolio Theory: Markowitz Model -Portfolio Selection, Opportunity set, Efficient Frontier. Capital Asset pricing model: Basic Assumptions, CAPM Equation, Security Market line, Extension of Capital Asset pricing Model - Capital market line, SML VS CML. Arbitrage Pricing Theory: Arbitrage, Equation, Assumption, Equilibrium, APT AND CAPM.

Portfolio Management: Diversification- Investment objectives, Risk Assessment, Selection of asset mix, Risk, Return and benefits from diversification. Portfolio Management Strategies: Active and Passive Portfolio Management strategy. Portfolio Revision: Portfolio Revision Strategies – Objectives, Performance plans.

Portfolio Evaluation: Holding period's returns, Measures of portfolio performance. Sharpe's, Treynor's and Jensen's.

(QUESTION PAPER- 50% Problems, 50% Theory)

Practical Components:

- A Student is expected to trade in stocks. It involves an investment of a virtual amount of Rs.10 lakhs in a diversified portfolio and managing the portfolio. At the end of the Semester the Net worth is to be assessed and marks may be given (to beat an index).
- Students should study the functioning of stock exchange.
- Students can do:-
 - Macro Economic Analysis for the Indian economy.
 - Industry Analysis for Specific Sectors.
 - Company Analysis for select companies.
 - Practice Technical Analysis
- Students can study the mutual funds schemes available in the market and do their Performance evaluation.

RECOMMENDED BOOKS:

- Investments – ZviBodie, Kane, Marcus &Mohanty, 8/e, TMH, 2010.
- Investment Analysis and Portfolio management – Prasanna Chandra, 3/e, TMH, 2010.
- Security Analysis & Portfolio Management- Kevin S, PHI, 2011.
- Investment Management – Bhalla V. K, 17/e, S.Chand, 2011.
- Security Analysis & Portfolio Management – Fisher and Jordan, 6/e, Pearson, 2011.
- Security Analysis & Portfolio Management – Punithavathy Pandian, 2/e, Vikas, 2005.
- Investment Management – Preethi Singh, 17/e, Himalaya Publishing House 2010.

REFERENCE BOOKS:

- Security Analysis & Portfolio Management– Dhanesh Khatri, 1st Edition, Macmillan, 2010.
- Security Analysis & Portfolio Management– Talwar, 1st Edition, Cengage, 2016.

ADVANCED FINANCIAL MANAGEMENT

Subject Code	: 16MBA FM304	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To understand the management of working capital.
- To understand the techniques of cash, inventory and receivables management
- To comprehend the capital structure
- To assess the dividend policy of the firm

Course Outcome:

At the end of the course, the students are able to:

- Realize the importance of management of working capital in an organization.
- Be aware of the techniques of cash, inventory and receivables management
- Get an overview of capital structure theories
- Understand and assess the dividend policy of the firm

Unit 1: (8 Hours)

Working capital management – Determination of level of current assets. Sources for financing working capital. Bank finance for working capital. (No problems on estimation of working capital). Working capital financing: Short term financing of working capital, long term financing of working capital. Working capital leverage.

Unit 2: (10 Hours)

Cash Management – Forecasting cash flows – Cash budgets, long-term cash forecasting, monitoring collections and receivables, optimal cash balances – Baumol model, Miller-Orr model, Strategies for managing surplus fund.

Unit 3: (9 Hours)

Receivables Management – Credit management through credit policy variables, marginal analysis, Credit evaluation: Numerical credit scoring and Discriminate analysis. Control of accounts receivables, Problems on credit granting decision.

Unit 4: (9 Hours)

Inventory Management: Determinations of inventory control levels : ordering, reordering, danger level. EOQ model. Pricing of raw material. Monitoring and control of inventories, ABC Analysis.

Unit 5: (10 Hours)

Capital structure decisions – capital structure & market value of a firm. Theories of capital structure – NI approach, NOI approach, Modigliani Miller approach, Traditional approach. Arbitrage process in capital structure. Planning the capital structure: EBIT and EPS analysis. ROI & ROE analysis. Capital structure policy

Unit 6: (10Hours)

Dividend policy – Theories of dividend policy : relevance and irrelevance dividend decision. Walter's & Gordon's model, Modigliani & Miller approach. Dividend policies – stable dividend, stable payout and growth. Bonus shares and stock split corporate dividend behavior. Legal and procedural aspects of dividends Corporate Dividend Tax.

(Question paper: 40% theory and 60% problems)

Practical Components:

- Study the working capital financing provided by a Bank and submit the report on the same
- Study the annual report of any two companies and prepare a cash budget for next year.
- Study dividend policy of companies and its impact on shareholders' wealth
- Study implications of bonus issues/stock splits of companies

RECOMMENDED BOOKS:

- Financial Management - M.Y. Khan & P.K. Jain, 6/e, TMH, 2011
- Financial Management - Prasanna Chandra, 8/e, TMH, 2011.
- Financial Management - I.M. Pandey, 10/e, Vikas, 2011.
- Financial Management: Comprehensive Text Book with Case Studies – Ravi M. Kishore, 7/e, Taxmann.
- Principle of Corporate Finance– Brearly and Myers, 10/e, TMH, 2012

- Corporate Finance: Ross, Westerfield & Jaffe, – TMH – 8/e, 2010
- Financial Management & Policy - Vanhorne, 12/e, Pearson
- Corporate Finance: Theory & Practice – Ashwath Damodaran, 2/e, Wiley India Pvt. Ltd., 2009.
- Cases in Financial Management - Pandey & Bhatt, 2/e, TMH, 2012.

COST MANAGEMENT

Subject Code	: 16MBA FM305	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To describe the cost concepts, cost behaviors, and cost accounting techniques that are applied to manufacturing and service businesses
- To provide an understanding of the use of cost information in support of different strategies
- To demonstrate costing methods and techniques appropriate to a variety of businesses
- To prepare and interpret budgets and operating results through variance analysis
- To describe the use of balanced scorecard and explain how the balanced scorecard supports strategic cost management

Course Outcome:

At the end of the course, the students are able to :

- Understand the cost concepts, cost behaviors, and cost accounting techniques
- Get an insight into the use of cost information in support of different strategies

- Comprehend costing methods and techniques appropriate to a variety of businesses
- prepare and interpret budgets and operating results through variance analysis

Unit 1:(10 Hours)

Introduction to Cost Management- Cost Accounting to Cost Management- Elements of costs- Classification of costs-Methods of costing-Cost Management Tools- A Strategic View to Cost Management- Preparation of a cost sheet

Unit 2:(10 Hours)

Overheads, Classification and Collection, Difference between Cost Allocation and Cost Apportionment, (Full fledged Problems on Primary and secondary distribution, Simultaneous equations, Absorption of Overhead, Theory on Under and Over absorption of Overhead)

Unit 3:(10 Hours)

Marginal Costing – Nature and Scope- Applications-Break even charts and Point, Decision Making (all types with full problems) Differential Cost Analysis, Advantages and Disadvantages of Marginal Costing.

Unit 4:(10 Hours)

Budgetary Control:- Objectives of Budgetary control, Functional Budgets, Master Budgets, Key Factor Problems on Production Budgets and Flexible Budgets.

Standard Costing:- Comparison with Budgetary control, analysis of Variances, Simple Problems on Material and Labour variances only .

Unit 5:(8 Hours)

Demerits of Traditional Costing, Activity Based Costing, Cost Drivers, Cost Analysis Under ABC (Unit level, Batch Level and Product Sustaining Activities), Benefits and weaknesses of ABC

Unit 6: (8 Hours)

Cost Audit& Reporting to Management:-objectives and advantages of Cost Audit , Cost Audit report .Management Audit- Objectives and Scope.

Reporting to Management – Purpose of reporting-Requisites of a good report,, Classifications of Report, Segment reporting, Cost Reduction and Cost Control, Target Costing – its Principles, Balanced Scorecard: Features and Purpose

(Question Paper:50% Theory and 50% Problems)

Practical components:

- Students can take up a product and get details about the actual cost of raw material, wages and other cost and prepare a cost statement. Standard cost of each component has to be obtained and the variance can be calculated to find the efficiency of Purchase, Operations and Production in charge.

RECOMMENDED BOOKS:

- Cost Accounting – Khan M. Y and Jain P. K, TMH.
- Management Accounting - Khan M. Y and Jain P. K, 6th Edition, McGraw Hill, 2012.
- A Text book of Cost and Management Accounting – Arora M. N, 11th Edition, Vikas.
- Cost Management: A strategic Approach - Vaidya S. C, Suveera Gill, Macmillan, 2010.
- Cost Accounting- Jawaharlal, & Seema Srivastava, 4th Edition, TMH.
- Accounting & Costing for Management – Sinha P. K, Excel Books, 2010.
- A Textbook of Cost Management- G.V Kesava Rao, D Gopinath, M.G. Krishnamurthy and Anita S. Yadav, Paramount Publishing House, 2013

REFERENCE BOOKS:

- Principles and Practice of Cost Accounting - Bhattacharyya, 3rd Edition, PHI.
- Managerial Accounting- James Jiambalvo, 4nd Edition, Wiley India Pvt. Ltd.
- Advanced Cost Accounting – Madegowda J, HPH.
- Cost and Management Accounting – Arora M. N, 3rd Edition, HPH.
- Cost Accounting: Theory and Practice - Bhabatosh Banerjee, 13th Edition, PHI.

STRATEGIC CREDIT MANAGEMENT

Subject Code	: 16MBA FM306	IA Marks	:20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To provide an overview of the sound lending decisions by a bank
- To explain the process of evaluation of the loan proposal
- To provide an insight into the different types of loans
- To describe the aspects of NPA management

Course Outcome:

At the end of the course, the students are able to:

- Understand and evaluate the lending decisions by a bank
- Realize the process of evaluation of the loan proposal by banks
- Get an insight into the different types of loans
- Understand management of NPA

Unit 1:**(10 Hours)**

Credit management in banks-Screening of applications-Appraisal of credit-Sanction limit-Post sanction compliance – Monitoring supervision –Review- Government policies for credit extension- Credit institutions- Principles of good lending- Borrower study and bankers opinion-Credit policy by banks- Government regulation of credit -Prudential norms.

Unit 2: (10 Hours)

Over view of credit policy and loan characteristics-The credit process –Characteristics of different types of loans- Evaluating commercial loan requests – Financial statement analysis- Cash flow analysis- Projections-Management of the firm and other factors –Feasibility study – Fundamental credit issues - Credit analysis-Different types of borrowers – Balance sheet analysis for lending – Forms of advances secured and unsecured advances- Short term and long term advances.

Unit 3: (8 Hours)

Evaluating consumer loans – Types- Credit analysis of consumer loans- Risk–return analysis of consumer loans- Customer profitability analysis and loan pricing- Fixed Vs floating rates

Unit 4: (8 Hours)

Loan and advances against pledge- Hypothecation- Mortgage – Lien- Advances against goods- Document to title to goods – Life insurance policies – Stock exchange securities-Fixed deposit receipts –Book debts- Supply bills- Real estates – Advance against collateral securities

Unit 5: (8 Hours)

Agricultural finances and Retail lending- Crop loans- Crop insurance schemes- Dairy- Sericulture- Poultry- Animal husbandry – Horticulture – Gobar gas – Kissan credit cards – NABARD initiatives – Lead bank schemes – Retail banking advances – Concept – Retail banking products – Consumer credit financing

Unit 6: (12 Hours)

NPA management – Introduction- Identification of NPAs- Asset classification- Prudential norms- Capital adequacy – International Banking Regulation-Basel Norms – asset classification provisioning – effect of NPA on profitability - Assessment procedure- Pre-sanction appraisal – Post sanction supervision- Monitoring systems for existing and likely NPAs—Tools to manage NPAs –Compromise scheme, LokAdalats, Debt Recovery Tribunals, Corporate Debt Restructuring, Willful defaulters, SARFAESI Act, Asset Reconstruction Companies-CIBIL

Practical Components:

- Students can visit a bank and study the lending and loan appraisal system relating to Agricultural loan, consumer financing etc.
- Students can study the NPA status of leading two PSU banks and two private banks.
- Students can study and submit a report on different retail banking products

RECOMMENDED BOOKS:

- Strategic Credit Management in Banks, Popli.G.S. and Puri S. K. , PHI, 2013
- Banking Theory and Practice - Shekar and Shekar, 19th Edition, Vikas Publishing House, 2009.
- Bank Management - W. Koch Scott, Timothy, Cengage Learning, New Delhi.
- Commercial Banking -Benton Gup & James Kolari, 3rd Edition, Wiley India, 2010.
- Indian Financial System, Bharati V. Pathak, 3rd Edition, Pearson, 2012.
- Bank Credit Management, G. Vijayaragavan, Himalaya Publishing House, 2009.

REFERENCE BOOKS:

- Industrial Finance - Vishwanathan R, Macmillan, New Delhi.
- Banking and Financial System - Prasad K, Nirmala and Chandradas. Himalaya Publishing House, Mumbai.
- Managing Banking Risks - Cade, Eddic, Woodhead Publishers, England.

SEMESTER III Human Resource Management Specialisation

INDUSTRIAL RELATIONS AND LEGISLATIONS

Subject Code	: 16MBA HR301	IA Marks :20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To enable students to understand and apply the principles of IR and develop an awareness of the significance of industrial peace.
- To provide a conceptual basis of Industrial Relations.
- To give an understanding of the components and meaning of sustaining Industrial peace anchored on harmonious Employee-Management relations.
- To discuss the various Industrial acts.

Course Outcomes:

The students should be able to

- Gain the insights of IR practices in the industry.
- Develop the knowledge related to employee-management relations
- Implementation of various industrial acts

PART A:

INDUSTRIAL RELATIONS **(32 hours)**

Unit 1 **(8 hours)**

Introduction:

Background of Industrial Relations – Definition, scope, objectives, factors affecting IR, participants of IR, importance of IR. Approaches to Industrial relations, system of IR in India –Historical perspective & post-independence period, Code of Discipline and historical initiatives for harmonious IR, Government policies relating to labor, ILO and its influence on Legal enactments in India.

Unit 2 **(8 Hours)**

Collective Bargaining & Negotiation:

Collective Bargaining: Definition, Meaning, Nature, essential conditions for the success of collective bargaining, functions of collective bargaining, importance of Collective Bargaining, collective bargaining process, prerequisites for collective bargaining, implementation and administration of agreements.

Negotiations-Types of Negotiations-Problem solving attitude, Techniques of negotiation, negotiation process, essential skills for negotiation, Workers Participation in Management

Unit 3 (8 Hours)

Trade Union

Trade Unions: Meaning, trade union movement in India, Objective, role and functions of the Trade Unions in Modern Industrial Society of India, Procedure for registration of Trade Unions, Grounds for the withdrawal and cancellation of registration, union structure, Rights and responsibilities of TUs, Problems of trade unions, Employee relations in IT sector

- Industrial Relations, Trade Unions & Labour Legislation, P R N Sinha et al, Pearson Education, 2004.
- Bare Acts
 - Industrial Relations and labor laws, ArunMonappa, RanjeetNambudiri, PatturajuSelvaraj, TMH, 1997.
 - Industrial relations, trade unions and labor legislations, P R N Sinha, InduBala Sinha, Seema PriyadarshiniShekar, Pearson Education, 2013, ISBN: 9788131731642

PART B: (24 Hours)

Unit 5

INDUSTRIAL LEGISLATIONS (16 hours)

Only basic objectives and major provisions of the following legislations:

- Factories Act 1948,
- Industrial Employment (Standing orders) Act, 1946
- Employees' State Insurance (ESI) Act, 1948,
- Maternity Benefit Act, 1961
- Contract Labour Act,
- Shops and Establishments Act
- Child Labour (Prohibition & Regulation) Act, 1986
- Industrial disputes act of 1947

Unit 6 (8 Hours)

- Minimum Wages Act, 1948
- Payment of Wages Act, 1936

- Payment of Gratuity Act 1972,
- Employees' Provident Fund and Miscellaneous Provisions Act 1952;
- Payment of Bonus Act, 1965.
- Employees Compensation Act in 2013

NO PRACTICAL COMPONENT

RECOMMENDED BOOKS:

- Labor Laws for Managers, BD Singh, Excel Books, 2009
- Industrial Relations and Labor laws, SC Srivatava, 5th Edition, Vikas Publications.
- Elements of Mercantile Law - N. D Kapoor, Sultan Chand, 2004.
- Industrial Relations and Labour Legislations, Piyali Ghosh & Shefali Nandan, TMH.
- Labor Industrial Laws, Dr. V. G. Goswami, Eighth Edition, Central Law Agency, Allahabad

REFERENCE BOOKS:

- Industrial Relations, Trade Unions & Labour Legislation, P R N Sinha et al, Pearson Education, 2004.
- Bare Acts
- Industrial Relations and labor laws, Arun Monappa, Ranjeet Nambudiri, Patturaju Selvaraj, TMH, 1997.
- Industrial relations, trade unions and labor legislations, P R N Sinha, Indu Bala Sinha, Seema Priyadarshini Shekar, Pearson Education, 2013.

RECRUITMENT & SELECTION

Subject Code	: 16MBA HR302	IA Marks	: 20
Number of Lecture Hours/Week	: 03	Exam Hours:	03
Number of Lecture Hours	: 56	Exam Marks:	80
Practical Component	: 02 Hours/ Week		

Course Objectives:

To understand and apply the policies and procedures of recruitment

- To provide a conceptual framework of Selection Procedure in the Industry.
- To understand the new concepts and techniques of recruitment and Selection in the Corporate.

Course Outcomes:

The students should be able to

- Learn the various recruitment policies and procedures.
- Equip with conceptual framework of selection procedures.
- Gain insights of the latest concepts and techniques used in recruitment and selection.

Unit 1:

(6 Hours)

Job Analysis: Meaning, definition and purpose. Methods of job analysis: job analysis interviews, job analysis questionnaire, task analysis inventory, position analysis questionnaire, subject expert

workshops, critical incident technique, Fleishman job analysis survey, functional job analysis, job element method, repertory grid, critical incident technique

Unit 2: (9 Hours)

Hiring Process & Hiring decision: Nature of hiring: regular, temporary, full time, part time, apprentice, contractual, and outsourcing, Existing post or new post to be created, Need analysis, cost analysis and job analysis.

Unit 3: (7 Hours)

Hiring internally: Meaning and definition of internal recruitment, Advantages and disadvantages in terms of cost, time, quality and suitability. Sources of internal recruitment: - circulars, intranet advertisements, employee referrals, Appointment or promotion, Policy guidelines and union settlements.

Unit 4: (10 Hours)

External Hiring: Meaning and definition of external recruitment. Sources of recruitment:- advertisement, in newspaper, TV/Radio, Internet, search on the internet, wanted signboards, consultants, employment exchange, campus recruitment, employee referrals and unsolicited applications. Advantages and disadvantages of the above sources in terms of cost, time, convenience, reach of the targeted population, and quality of applicant pool.

Job advertisement: drafting, size and contents. Contents of public sector recruitment: single or multiple sources and choosing the best source

Unit 5: (8 Hours)

Screening the candidates: Application Forms: bio-data / resume / curriculum vitae and Weighted application blanks: meaning definition, purpose, advantages and disadvantages – taking a Behavioral approach to recruitment: spotting personality patterns, making basic assumptions, Predicting the future, strategy Vs. Technique, Pinning down what is needed: targeted interviewing, focusing on behavior, assessing how person performs, assuming they have been hired. – Identifying the ingredients of success: the winning candidate's profile, challenges in the Interview, the starting point, day to day execution, dealing with people, the inner person, additional characteristics. Studying the CV.

Unit 6: (16 Hours)

Testing, Reference checking & Appointment orders: Meaning, definition, purpose, advantages and disadvantages, Ability tests clerical ability test, mechanical ability test, mental ability test, physical ability test, personality assessment test, typing test, shorthand test, computer proficiency test

Interviewing: Planning the interview, Interview process - Interview in public sector undertaking. Statutory requirements.

Reference checking: meaning, definition and purpose. Verification of character, criminal antecedents, previous work behavior and education qualifications. Verification of community certificates in public sector companies.

Appointment orders: Meaning, definition, and purpose. Contents of appointment letter, hard copy (or soft copy),

Practical Components:

- Students need to identify two jobs in the college and need to do job analysis for those positions using any of the job analysis methods.

- In teams students can be asked to give presentations about various types of jobs (regular, temporary, full time, part time, apprentice, contractual, and outsourcing) in different industries along with its advantages and disadvantages
- In Teams, select and analyze any two of the Job postings advertisements in Newspapers to know more about job description and job specification mentioned in each advertisement for every post.
- Obtain online access to the resume data base of Naukri.com or Monsterindia.com for a week give at least four Job Descriptions and specification to each student, to search and download from the data base at least five resumes for each positions.
- Students can identify 4 or 5 jobs of their interest and can create Advertisements for the same imagining that they are Proprietors of the companies and hiring for these positions.
- Debate on Advantages and disadvantages of hiring external and Internal for the selected jobs like
- Police Constable, Doctor, CEO, Mechanical Engineer, Professor etc.,
- Role play: Students can do the role play for the entire process of hiring and selecting 3 or 4 selected roles in a specific industry.

COMPENSATION AND BENEFITS

Subject Code	: 16MBA HR303	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives

- To know the theoretical and practical developments in the area of compensation and benefits.
- To discuss the strategic importance of compensation for the achievement of organizational goals.

- To understand the relationship between compensation objectives and business strategy.
- To discuss the role of compensation in attracting, motivating, and retaining a high-quality workforce.

Course Outcomes:

The students will be able to

- Gain insights of various conceptual aspects of Compensation and Benefits.
- Determine the performance based compensation system for business excellence.
- Understand the Legal & Administrative Issues in Compensation Global Compensation

Unit 1: (7 Hours)

Introduction to Compensation: Definition of Compensation, Basic concepts of Compensation (wages, salary, benefits, DA, consolidated pay, Equity based programs, commission, reward, remuneration, bonus etc.), Types of Compensation Management - The Pay Model, Strategic Pay Policies, Strategic Perspectives of Pay, Strategic Pay Decisions, Best Practices vs. Best Fit Options

Unit 2: (5 Hours)

Internal Alignment: Definition of Internal Alignment, Internal Pay Structures, Strategic Choices In Internal Alignment Design, Internal Structure

Unit 3: (7Hours)

Job Evaluation: Definition of Job Evaluation, Major Decisions in Job Evaluation, Job Evaluation Methods, Final Result – Pay Structure- various methods of calculation of compensation: Straight Piece Rate Method, Flat Time Rate Method, Halsey Premium Bonus Plan, Rowan Premium Bonus Plan, Taylor Differential Piece Rate Method

Unit 4: (8Hours)

Determining External Competitiveness and Benefits Management:

Competitiveness: Definition of Competitiveness, Pay Policy Alternatives, Wage Surveys, Interpreting Survey Results, Pay Policy Line, Pay Grades

Benefits: Benefits Determination Process, Value of Benefits, Legally Required Benefits, Retirement, Medical, & Other Benefits

Unit 5: (9 Hours)

Performance Based Compensation System:

Employee Contributions: Pay For Performance (PFP): Rewarding Desired Behaviors, Designing PFP Plans, Merit Pay/Variable Pay, Individual vs. Group Incentives, Long Term Incentives. Compensation of Special Groups, Compensation Strategies for Special Groups

Unit 6: (20 Hours)

Legal & Administrative Issues in Compensation Global Compensation: Legal Issues, Pay Discrimination, Comparable Worth, Budgets and Administration: Recognizing Variations, Social Contract, Culture & Pay, Strategic Choices in Global Compensation, Comparing Systems, Expatriate Pay

Practical Components

- Students must prepare a comprehensive compensation plan to be offered to a Sales Executive, A General Manager and The CEO of an organization.

- Students to collect information from an IT organization regarding the Cost To Company of an employee.
- Students have to prepare questionnaire for conducting wage survey and carry out wage survey for any selected sector and prepare a report for the same.
- Solve various case studies.
- Students must compare and analyze compensation practices in different countries.
- Students to calculate the bonus amount eligible to an employee working as a HR Executive for the past 10 years in an automobile manufacturing organization.

RECOMMENDED BOOKS:

- Compensation & Reward Management, BD Singh, 2ndedition, Excel BOOKS, 2012.
- Compensation, Milkovich& Newman, 6thedition, Irwin/McGraw-Hill.
- Compensation and Benefit Design, Bashker D. Biswas, FT Press, 2012.
- An Introduction to Executive Compensation, Steven Balsam, Academic Press, 2002.

REFERENCE BOOKS:

- Strategic Compensation, Joseph J. Martocchio, 3rd Edition, Prentice Hall, 2004.
- Compensation Management in a Knowledge based world, Richard I. Anderson, 10th edition, Pearson Education
- Compensation Management, ErSoniShyam Singh, Excel Books.

LEARNING AND DEVELOPMENT

Subject Code	: 16MBA HR304	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To enable students to be aware of the field of learning and development and its role in optimizing performance.
- To make students understand the process of analyzing training needs and evaluating training programs
- To provide the students an overview of the various Training and Management Development Method

Course Outcomes:

The Students will be able to

- Understand the concepts of learning and development and its role.
- Learn various contemporary methods of learning and development.
- Gain insights of various training evaluation methods and career planning.

Unit 1:

(8 Hours)

Introduction to Employee learning and Development, learning, Meaning and significance, The Forces Influencing Working and Learning, classification of learning capabilities, learning theories- Reinforcement Theory, Social Learning Theory, Goal Theories, Expectancy Theory, Adult Learning Theory, pedagogy and andragogy; The basic principles of learning, The Learning Process , Mental and Physical Processes, The Learning Cycle, Instructional Emphasis for Learning Outcomes.

Unit 2: (6 Hours)

Training and Learning: Introduction, Relationship, meaning, Designing Effective Training, Forces influencing working & learning, Strategic Training, Work Environment, Characteristics influencing transfer of training, organizational environments encouraging transfer.

Unit 3: (7 Hours)

Training Needs Analysis: Meaning and significance of training needs, types of needs, components of needs, data collection, analysis and interpretation. Meaning and significance of training design and development, principles of training design, design process, identifying the training objectives, determining structure, content, duration, method, learning activities,

Unit 4: (11 Hours)

Training implementation & Methods: Meaning and significance of implementation, making or buying decision, implementation process for making and buying decisions, skills of effective trainer.

Training Methods: Presentation Methods, Hands-on Methods, Group Building Methods. Choosing Training methods. E-Learning & Use of Technology in Training: Technology's Influence on Training, Technology & Multimedia, Computer-Based Training, Developing Effective Online Learning, Blended Learning, Simulations, Mobile Technology & Training Methods, Intelligent Tutoring Systems, Distance Learning, Technologies for Training Support, Technologies for Training Administration, Learning Management Systems (LMSs), Systems for Training Delivery, Support & Administration, Choosing New Technology Training Methods.

Outward bound methods: Meaning and significance of outward bound learning (OBL) methods, process of OBL, risk, safety and ethical issues. Training aids.

Unit 5: (8 Hours)

Training Evaluation: Meaning, Reasons for Evaluating Training and significance of training evaluation, Donald Kirkpatrick's Evaluation Model, Return on investment in Training, Types of Evaluation Designs, Considerations in Choosing an Evaluation Design, data collection for training evaluation, Threats to Validity, Determining Costs, Evaluation Practices in different organizations, Measuring Human Capital and Training Activity

Unit 6: (16 Hours)

Executive Development/ Management Development/Career Management

Need, factors affecting MDP, methods, process, administration, delivery, costing & pricing, Company Strategies for Providing Development, Increased Use of New Technologies for Learning, Increased Demand for Learning for Virtual Work Arrangements, Increased Use of Training Partnerships & Outsourcing Training,

Careers and Career Management: Introduction, Importance, Career: meaning, A Model of Career Development (Career Stages), Career Management Systems

Practical Components:

- Study training programs and processes in different organizations and analyze their effectiveness.
- Students to design a training program for a specific job role.
- Students are expected to conduct a mock training session including need identification and a set of
- Students to evaluate the effectiveness of the same.
- Give a training needs analysis case and ask the students to find out the training needs
- Implement various training methods, observe and submit a report on its effectiveness.

RECOMMENDED BOOKS:

- Effective Training, P Nick and Blanchard, 2nd Edition, Pearson Education/PHI, 2005
- Training & Development, Dr. B. Janakiraman, Biztantra/Wiley Dreamtech, 2005
- Employee Training & Development, Noe A Raymond, 2nd edition, McGraw Hill Publication.
- Management Training and Development, Gupta B.L, 1st Edition, Vrinda Publications, 2011.
- Training and Development Methods, Dr. Rishipal, 1st Edition, S. Chand, 2011.
- Personal Growth and Training & Development, Ruchi Srivastava, 1st Edition, Vrinda Publications,
- 2011.

REFERENCE BOOKS:

- Training for development– Rolf Lynton & Udai Pareek, Sage Publications, 2011.
- Effective HR Training Development Strategy – Ratan Reddy, HPH, 2005.
- Training in organizations - Goldstein, 4th Edition, Cengage learning.

KNOWLEDGE MANAGEMENT

Subject Code	: 16MBA HR305	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To understand the fundamental concepts of Knowledge management.
- To discuss the current trends in knowledge management and their manifestation in business
- To analyze and build communities of practice to contribute and share knowledge

Course Outcomes:

The students will be able to

- Gain insights about the concepts of knowledge management.
- Enable with the architecture and models of knowledge management
- Learn knowledge management lifecycle and dissemination

Unit 1:

(9 hours)

Understanding knowledge: the core of business: What Is Knowledge Management, Multidisciplinary Nature of KM, Drivers of KM, The Two Major Types of Knowledge, The Concept Analysis Technique, History of Knowledge Management, From Physical Assets to Knowledge Assets, Organizational Perspectives on Knowledge Management, Knowledge, Intelligence,

Experience, Common sense. Cognition and KM. Types of Knowledge, Knowledge Management architecture and Implementation Strategies.

Knowledge creation and capture: Knowledge Creation, Nonaka's Model, Major Theoretical KM Models, Takeuchi Knowledge Spiral Model, Knowledge Conversion.

Unit 2: (7 hours)

The knowledge management cycle: Knowledge Management System Life Cycle, Major Approaches to the KM Cycle, The Zack KM Cycle, The Bukowitz and Williams KM Cycle.

Unit 3: (6 hours)

Knowledge sharing and communities of practice: The Social Nature of Knowledge, Sharing Communities, Types of Communities, Roles and Responsibilities in CoPs, Knowledge Sharing in Virtual CoPs, Data Mining and Knowledge Discovery, Blogs, Content Management Tools, Knowledge Sharing and Dissemination Tools.

Unit 4: (12 hours)

Knowledge application: KM for Individuals, Communities and Organizations, Future Challenges for KM. Knowledge Application at the Individual, Group & Organizational Levels, Characteristics of Individual Knowledge Workers, Task Analysis and Modelling, EPSS, Knowledge Reuse, Knowledge Repositories, Strategic & Practical Implications of Knowledge Application

The role of organizational culture: Different Types of Cultures, Organizational Culture Analysis, Culture at the Foundation of KM, The Effects of Culture on Individuals, Cultural Transformation to a Knowledge-Sharing Culture, Organizational Maturity Models, KM Maturity Models, CoP Maturity Models,

Unit 5: (12 hours)

KM strategy and metrics: Knowledge Management Strategy, Knowledge Audit, Gap Analysis, The KM Strategy Road Map, The Management of Organizational Memory, Balancing Innovation and Organizational Structure, Historical Overview of Metrics in KM, KM Metrics, The Benchmarking Method, The Balanced Scorecard Method.

Unit 6: (10 hours)

The KM team & learning organizations: learning organization: The mystique of learning organization, learning and change, RICE Model. Major Categories of KM Roles, Senior Management Roles, KM Roles and Responsibilities within Organizations, the KM Profession. Ethical, legal and managerial issues.

Practical Components:

- To expose and make students to prepare a report on knowledge management practices implemented by successful companies.
- Make a team of 2-3 students and asking them to conduct a telephonic interview or survey regarding local businesses familiarity with and level of literacy in KM.
- To do a comparison on the KM Life Cycle Models and seeing their applicability in organizations.
- To organize a group discussion for students and enable them to go through the knowledge acquisition phases.

- Asking students to compare and contrast on different COPs.

RECOMMENDED BOOKS:

- Knowledge Management, Elias M Awad, Hassan M Ghaziri, PHI, 3rd Edition.
- Knowledge Management in Theory and Practice, KimizDalkir, 2nd Edition, PHI.
- Knowledge Management: Tool for Business Development, Dr. B. Rathana Reddy, Himalaya Publishing House.
- Knowledge Management, Sudhir Warier, Vikas Publishing House.

REFERENCE BOOKS:

- Knowledge Management, RatnajaGogula, ICFAI University Press, 2002.
- Handbook on knowledge management, Holsapple, Springer Verlag, 2003.
- Knowledge Management: Systems and Processes, Fernandez Irma Becerra, Sabherwal Rajiv, Prentice Hall India.

CONFLICT AND NEGOTIATION MANAGEMENT

Subject Code	: 16MBA HR306	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To understand the nature of various dimensions of conflict
- To learn various strategies and techniques to manage conflicts
- To understand the importance and role of negotiation in conflict resolution
- To understand the importance of cross-cultural and gender dimensions of negotiation

Course Outcomes:

The students will be able to

- Gain insights of various dimensions of conflicts in an organization
- Know the various strategies and techniques of managing conflicts.
- Learn the process of negotiation and its relevance in conflict resolution.

Unit 1:

(8 Hours)

Introduction: Understanding conflict, components, perspectives of conflict, types of conflict, models of conflict – Process and Structural Models, functional & dysfunctional conflict, relationship between conflict and performance in team, levels of conflict – intrapersonal, interpersonal, group &

organizational conflicts, sources of conflict - intrapersonal, interpersonal, group & organizational sources.

Unit2: (8 Hours)

Conflict Management Design: Nature of conflict Management, contingency approach, conflict management process, the conflict domain, conflict trends, conflict distribution, conflict mapping and tracking.

Unit 3: (10Hours)

Managing Conflict: Managing interpersonal conflict: Thomas conflict resolution approach, behavioral style and conflict handling, the CosierSchank model of conflict resolution, collaboration & conflict resolution, dealing with difficult subordinates, boss & colleagues, 1 to 1 dispute resolution.

Managing team & organization conflict: techniques to resolve team conflict, strategies to resolve organizational conflict, effective listening and dialogue skills, humor and conflict resolution, negotiation as a tool for conflict resolution.

Unit 4: (8 Hours)

Conflict resolution and Cost: Conflict resolution models, framework model, classical ideas, new developments in conflict resolution. Environmental conflict resolution, gender and conflict resolution. Assessing the cost of workplace conflict.

Unit 5: (14 Hours)

Negotiations/Negotiation strategies -Types of Negotiations, negotiation process, factors for successful negotiations, essential skills for negotiation, tricks used in negotiation process, psychological advantage of negotiations, Techniques of negotiation, issues in negotiations.

Negotiation strategies: Strategy and tactics for distributive bargaining, strategy and tactics for integrative negotiation, negotiation strategy and planning. Finding and using negotiation power, sources of power, Ethics in negotiation.

Unit 6: (8Hours)

Managing difficult negotiations: Third party approaches: Third party interventions, formal intervention methods – Arbitration, Mediation and Process Consultation, Informal intervention methods, best practices in negotiation.

Practical Components

- Survey the conflict resolution techniques adopted by individuals based on individual personality types.
- Dividing students into groups and give a scenario to negotiate and reach conclusion.
- Reading: 8 Habits of Highly Effective People; apply the concepts to understand how people approach negotiation through different mind – sets.
- Conduct Role Plays for different scenarios.
- Solve various case studies dealing with conflict between teams and organizations.

- Ask students to identify three unconscious factors that may affect their negotiation effectiveness and ask them to explain why or how that phenomenon may occur.
- Management games like two dollar game, cross the line games can be played in the class to develop negotiation skills among the students.

RECOMMENDED BOOKS:

- Corporate Conflict Management - Concepts and Skills, Eirene Leela Rout, Nelson Omiko, Prentice India, 2007.
- Negotiations, Roy J. Lewicki, David M. Saunders, Bruce Barry, 5/e, Mc Graw Hill, 2005
- Contemporary Conflict Resolution, Oliver Ramsbotham, Hugh Miall, Tom Woodhouse, 3rd edition, Polity publishers, 2011.
- Handling Conflict and Negotiation, Manchester Open Learning, illustrated edition, Kogan Page, 1993.

REFERENCE BOOKS:

- Managing conflict and negotiation, B.D. Singh, 1st edition, Excel books, 2008.
- Conflict Management: Practical guide to develop negotiation strategies, Barbara A Budjac Corvette, Pearson Prentice Hall, 2006.
- Managing Conflict in Organizations, M. Afzalur Rahim, 4th Edition, Transaction Publishers, 2011.

SEMESTER IV MARKETING SPECIALISATION SALES MANAGEMENT

Subject Code	: 16MBA MM401	IA Marks : 20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To provide an understanding of the concepts, techniques and approaches in Sales Management.
- To emphasize on the Sales Manager's problems and dilemmas.
- To develop skills for generating, evaluating and selecting sales strategies.

Outcomes:

The student should be able to:

- Know the distinction between the skills required for selling and sales management.
- Develop a plan for organizing, staffing and training the sales force.
- Organize sales territories to maximize selling effectiveness.

- Evaluate sales management strategies

Unit 1: (8 hours)

Introduction to sales management: Meaning, Evaluation, Importance, Personal Selling, Emerging Trends in Sales Management, elementary study of sales organizations, qualities and responsibilities of sales manager. Types of sales organizations.

Unit 2: (8 hours)

Selling skills & Selling strategies: Selling and business Styles, selling skills, situations, selling process, sales presentation, Handling customer objections, Follow-up action.

Unit 3: (8 hours)

Management of Sales Territory & Sales Quota: Sales territory, meaning, size, designing, sales quota, procedure for sales quota. Types of sales quota, Methods of setting quota. Recruitment and selection of sales force, Training of sales force.

Unit 4: (10 hours)

Sales force motivation and compensation: Nature of motivation, Importance, Process and factors in the motivation, Compensation-Meaning, Types of compensation plans and evaluation of sales force by performance and appraisal process. **Sales management job:** Standard sales management process-international sales management -international market selection-market survey approach or strategy

Unit 5: (8 hours)

Sales Manager and Sales Person: Role of sales manager and sales people; functions of sales manager, functions of sales person, types and characteristics of sales manager and sales people-Time management for sales manager and sales person.

Unit 6 (8 hours)

Selling on the internet: Selling agents for internet trading-net selling, advertising in net trading, payment system in internet trading-smart card, credit card, debit card- payment by card: advantages and disadvantages; How to make internet selling safe-Digital signature, biometric method and legal or regulatory environment; Growth of internet trading in India.

Case Studies in Sales Management (6 hours)

Practical component:

- Interview a salesperson and write a brief report about what they like and dislike about their jobs, their salary, travelling allowances, sales quotas, why chose sales career, and what does it take to succeed in this profession
- Ask your friends if they would buy certain goods like groceries, vegetables, socks, mobile, pens etc from the roadside vendor as against a regular shop. Group the products

into low risk and high risk ones. Does this buying behaviour also depend on the personality of the individual doing the buying? Or the one doing the selling?

- Students can make a presentation on any product or the services of student choice, covering selling strategies and one day work exposure towards merchandising in any big retail outlets of respective places where the institute is operating. Rural colleges can send the students to the city nearby to observe the merchandising planning in retail outlets and to make a small report.
- Roles and functions of sales manager and sales people are different in every organization. Sales people view the roles of sales managers in their own way and vice versa. You are the sales manager of a company. You make an analysis of what you feel should be roles of a sales manager and a salesperson for maximizing sales of the organization.
- Your company is active in internet trading. A current issue in internet trading is : how to make internet selling safe. Different methods have been suggested for safety or security of internet trading. You have to analyze different methods and recommend a method for your company.

- Salesmanship and Sales Management-P.K. Sahu & K. C. Raut, 3/e, Vikas Publishing House.
- Sales Management-Douglas J Dalrymple, William L Crowe-John Wiley & Co.
- Sales & Distribution Management- Text and Cases, 2nd Ed, McGraw Hill.

INTEGRATED MARKETING COMMUNICATIONS

Subject Code	: 16MBA MM402	IA Marks	: 20
Number of Lecture Hours/Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours/ Week		

Objectives:

- To build a comprehensive framework for integrated marketing communications.
- To study the advertising, publicity, personal selling, direct marketing and sales promotion.
- To enhance knowledge of emerging trends in integrated marketing communications.

Outcomes:

The student should be able to:

- Define and apply knowledge of various aspects of managerial decision making related to marketing communications strategy and tactics.
- Ability to create an integrated marketing communications plan which includes promotional strategies.
- Explain the role of IMC in the overall marketing & Use effectiveness measures to evaluate IMC strategies

Unit 1:

(10 Hours)

Role of IMC in marketing process, IMC planning model, Marketing and promotion process model. Communication process, steps involved in developing IMC programme, Effectiveness of marketing communications Purpose, Role, Functions, Types, Advertising Vs Marketing mix, Advertising appeal in various stages of PLC

Unit 2:

(8 Hours)

Advertising Agency: Type of agencies, Services offered by various agencies, Criteria for selecting the agencies and evaluation.

Advertising objectives and Budgeting: Goal setting – DAGMAR approach, various budgeting methods used.

Unit 3:

(8 Hours)

Media planning: Developing Media plan, Problems encountered, Media Evaluation- Print, Broadcast media, Support media in advertising.

Media strategy: Creativity, Elements of creative strategies and its implementation, Importance of Headline and body copy.

Unit 4:

(8 Hours)

Direct Marketing: Features, Functions, Growth, Advantages/Disadvantages, And Direct Marketing Strategies.

Promotion: Meaning, Importance, tools used, Conventional/unconventional, drawbacks, push/pull strategies, Co-operative advertising, Integration with advertising and publicity

Public relation/ Publicity:- Meaning, Objectives, tools of public relations, Public relation strategies, Goals of publicity, Corporate Advertising – Role, Types, Limitations, PR Vs Publicity.

Unit 5:

(8 Hours)

- Advertising Basics, Vilanilam, Varghese, Response BOOKS, 2007
- Advertising, Sangeeta Sharma & Raghuvir Singh, PHI, 2006.

E-MARKETING

Subject Code	: 16MBA MM403	IA Marks : 20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To understand the important concepts related to e-marketing
- To learn the use of different electronic media for designing marketing activities.
- To acquaint the students with the latest techniques of e-marketing.

Objectives:

The student should be able to:

- Recognize appropriate e-marketing objectives.
- Appreciate the e-commerce framework and technology.
- Illustrate the use of search engine marketing, online advertising and marketing strategies.

Unit 1: (10 Hours)

Introduction to E-Marketing: Landscape – Past – Today – Future – Internet Marketing Paradigm – Internet Infrastructure Stack

Business Models & Strategies: Strategic Planning – Strategy to Electronic Planning – Strategic Drivers of the Internet Economy – Business Models to E-Business Models – E-Business Models – Performance Metrics – The Balanced Scorecard

Unit 2: (12 Hours)

E-Marketing Plan: Overview of the E-Marketing Planning Process – Creating an E-Marketing Plan – A Seven-Step E-Marketing Plan

The E-Marketing Environment: Overview of Global E-Marketing Issues – Country and Market Opportunity Analysis – Technological Readiness Influences Marketing – Wireless Internet Access – The Digital Divide Ethical and Legal Issues – Privacy – Digital Property – Online Expression – Cyber Security – Cyber Crime

Unit 3: (8 Hours)

E-Marketing Research: Data Drive Strategy – Marketing Knowledge Management – Monitoring Social Media – Technology-Enabled Approaches – Real-Space Approaches – Marketing Databases and Data Warehouses – Data Analysis and Distribution – Knowledge Management Metrics – Consumer Behaviour Online – Segmentation – Targeting – Differentiation – Positioning Strategies

Unit 4: (10 Hours)

E-Marketing Management: Product – Products on Internet – Creating Customer Value Online – Product Benefits – E-Marketing Enhanced Product Development – Price – Change in Pricing Strategies – Buyer and Seller Perspectives – Payment Options – Pricing Strategies – Distribution – Online Channel Intermediaries – Distribution Channel Length and Functions – Channel Management and Power – Distribution Channel Metrics – Promotion – Integrated Marketing Communication (IMC) – Internet Advertising – Marketing Public Relations – Sales Promotion Offers – Direct Marketing – Personal Selling – IMC Metrics

Unit 5: (8 Hours)

Customer Acquisition and Retention: Profile of Consumers – Browsing Behaviour Model – Elements of Social Media – Social Media Strategies – Social Media Performance Metrics – Building Customer Relationships – Relationship Marketing – Stakeholders – Three Pillars of Relationship Marketing – Customer Relationship Management (CRM) – CRM Building Blocks – Ten rules for CRM Success

Unit 6: (8 Hours)

Evaluating Performance and Opportunities: Measuring and evaluating web marketing programs – Social and Regulatory Issues – Privacy – Security – Intellectual Property – Mobile Marketing – Media Coverage

Emerging Issues: Online Governance and ICANN – Jurisdiction – Fraud – Consumer Loyalty of Website-Services – The Quadratic Effect of Flow – Role of Technology Readiness in Developing Trust and Loyalty for E-Services in Developing Countries

Practical Component:

- Students can form a team and identify Internet Properties & its Marketing Implication
- Students can choose a Website for analysis based on its content, design, usability, attractiveness and other website properties
- Students can conduct a survey on Consumer who use internet marketing to identify the pros and cons of e-marketing.
- Students can do a project on branding strategies using internet marketing.
- Students can write a report on Google advertising strategies
- Students can discuss about traditional offline business in the online world.

RECOMMENDED BOOKS:

- E-Marketing, Judy Strauss and Raymond Frost, Prentice Hall, 6th Edition, 2013
- Internet Marketing: Integrating Online and Offline Strategies. M. L. Roberts and Debra Zahay, 3rd edition, Cengage Publishing, 2013

FINANCIAL DERIVATIVES

Subject Code	: 16MBA FM405	IA Marks	:20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To understand the features of financial derivatives.
- To hedge risk and practice risk management using derivatives.
- Explain the use of options and futures contracts for tactical portfolio strategies purpose
- To provide an understanding of pricing financial derivatives, including familiarity with some central techniques, like the binomial model, and the Black-Scholes model
- To explain the fundamentals of credit risk management and Value at Risk

Course Outcome:

At the end of the course, the students are able to:

- Know the features of financial derivatives.
- Understand the risk management process using derivatives.
- Realize use of options and futures contracts
- Understand the pricing of financial derivatives.
- Be aware of fundamentals of credit risk management and Value at Risk

Unit 1:

(6 Hours)

Financial Derivatives - Introduction, economic benefits of derivatives - Types of financial derivatives - Features of derivatives market - Factors contributing to the growth of derivatives - functions of derivative markets - Exchange traded versus OTC derivatives - traders in derivatives markets - Derivatives market in India

Unit 2:

(12 Hours)

Futures and forwards - differences-valuation of futures, valuation of long and short forward contract. Mechanics of buying & selling futures, Margins, Hedging using futures - specification of futures - Commodity futures, Index futures, interest rate futures - arbitrage opportunities.

Interest rate markets - Type of rates, Determining Zero rates, Forward rate agreements (FRA), Interest rate derivatives.

Unit 3:

(10 Hours)

Financial Swaps - features and uses of swaps - Mechanics of interest rate swaps – valuation of interest rate swaps – currency swaps – valuation of currency swaps.

Unit 4:**(12 Hours)**

Options: Types of options, option pricing, factors affecting option pricing – call and put options on dividend and non-dividend paying stocks put-call parity - mechanics of options - stock options - options on stock index - options on futures – interest rate options. Concept of exotic option. Hedging & Trading strategies involving options, valuation of option: basic model, one step binomial model, Black and Scholes Model, option Greeks. Arbitrage profits in options.

Unit 5:**(8 Hours)**

Commodity derivatives: commodity futures market-exchanges for commodity futures in India, Forward Market Commissions and regulation-commodities traded – trading and settlements – physical delivery of commodities.

Unit 6:**(8 Hours)**

Credit risk - Bond prices and the probability of default, Historical default experience, reducing exposure to Credit risk, Credit default swaps, Total return swaps, Credit spread options, Collateralized debt obligation. Basics of Interest rate risk and risk management strategies.

Value at Risk (VAR) - Measure, Historical simulation, Model building approach, linear approach, Quadratic model, Monte Carlo simulation, stress testing and back testing

(Question Paper: 50% Theory and 50% Problems)

Practical Components:

- Students can visit a financial institution dealing in derivatives and study the products offered by them
- Students should individually select various futures or options and watch the behavior of these futures and options on a day to day for 15 days to see how futures and options might help mitigate the risks of investors.

RECOMMENDED BOOKS:

- Options Futures & Other Derivatives - John C. Hull, 6/e, Pearson Education.
- Derivatives and Risk Management, Rajiv Srivastava, Oxford University Press, 2010
- Options & Futures- Vohra & Bagri, 2/e, TMH
- Derivatives- Valuation & Risk Management - Dubofsky& Miller, Oxford University Press, 2005.
- An introduction to derivatives and risk management, Chance, Cengage, 9th edition.

REFERENCE BOOKS:

- Derivatives, Principles and Practice, Sundaram& Das, Mc Graw Hill, 2013
- Risk Management, VaijanathBabshetti& Prakash B. Yaragol, 1st edition, Kalyani Publishers, 2014.

CORPORATE VALUATION

Subject Code	: 16MBA FM406	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To identify the purpose of corporate valuation and to obtain an overview of the basic corporate valuation process
- To familiarize the students with the standard techniques of corporate valuation.
- To develop analytical skills and communication strategies for discussing corporate valuation.
- To assess a firm's business and competitive strategy and whether it is creating value for shareholders

Course Outcome:

At the end of the course, the students are able to

- Get an overview of the basic corporate valuation process
- Be familiar with the standard techniques of corporate valuation.
- Understand analytical skills and communication strategies for corporate valuation.

Unit 1: (8 Hours)

Corporate valuation-an Overview-Context of valuation-Approaches to Valuation-Features of the valuation process: Book value approach, Stock and debt approach, discounted cash flow approach, Relative valuation approach, option valuation approach-Features of the valuation process-Corporate valuation in practice.

Unit 2: (12 Hours)

Enterprise DCF Model-Analysing historical performance-Estimating the cost of Capital-Forecasting performance-Estimating the continuing value-Calculating and interpreting the results-Other DCF models: Equity DCF Model: Dividend discount model, free cash flow to Equity (FCFE) model-Adjusted present value model-Economic profit model-Applicability and Limitations of DCF analysis

Unit 3: (10 Hours)

Relative valuation-Steps involved in Relative valuation-Equity valuation multiples-Enterprise valuation multiples-Choice of multiple-Best practices using multiples-Assessment of relative valuation.

Other Non DCF Approaches-Book Value approach-Stock and Debt approach-Strategic approach to valuation-Guidelines for corporate valuation

Unit 4: (8 Hours)

Advanced issues in valuation-Valuation of companies of different kinds-valuation in different contexts-Loose ends of valuation-Valuation of intangible assets: Patents, trademarks, copyrights and licenses; Franchises; Brands

Unit 5: (10 Hours)

Value Based Management- Methods and Key premises of VBM-Marakon approach-Alcar approach-Mckinsey approach-Stern Stewart approach-BCG approach-Lessons from the experiences of VBM adopters.

Unit 6: (8 Hours)

Case studies in Valuation - Bharat Hotels company - Bharat Heavy Electricals Limited - Bhoruka Power Corporation Limited - Valuation in the Merger of ICICI with ICICI Bank - Sasken Communication Technologies - Valuation of Infosys Brand

(Question Paper: 50% Theory and 50% Problems)

Practical Component:

- Obtain last three years' balance sheet of any firm that has debt and equity and find out the free cash flow to the firm and free cash flow to the equity for the last three years. Also determine if there is any growth in the cash flows to the firm and to the equity holders. Find beta of the firm and compute cost of equity and WACC to finally find the value of the firm

RECOMMENDED BOOKS

- Corporate Valuation and Value Creation, Prasanna Chandra, Tata McGraw Hill, 2011.
- Valuation, AswathDamodaran, Damodaran, 2/e, John Wiley and Sons, 2006.

- The Valuation Handbook: Valuation Techniques from Today's Top Practitioners, Rawley Thomas, Benton E. Gup, John Wiley & Sons, 2010
- Financial Management, Rajiv Srivastava and Anil Misra, 2/e, Oxford University Press, 2011.

**SEMESTER IV
Human Resources Management**

PUBLIC RELATIONS

Subject Code	: 16MBA HR401	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03

Total Number of Lecture Hours : 56
Practical Component : 02 Hours / Week

Exam Marks : 80

Course Objective:

- To provide an understanding of the fundamentals tools of public relations practice
- To provide a multidisciplinary understanding of the emerging trends in the field of public relations.

Course Outcomes:

The students will be able to

- Gain the insights of Public relations principles and practices.
- Learn the various theories of mass communication
- Understand the various issues in crisis management

Unit 1: (8 Hours)

Public Relation: Meaning, Concepts of PR -Proactive and Reactive Approaches – Public Relations Process – Behavioral Public Relations Model – Persuasion Model – Two way symmetrical Communications Model – 20 great truths about Public Relations

Unit 2: (8 Hours)

Theoretical basis for Public Relations –Theories of Relationships –Systems Theory – situational Theory – Theories of Persuasion and Social Influence – Social Exchange Theory – Diffusion Theory – Social Learning Theory – Elaborated Likelihood Theory - Theories of Mass communication – Uses and Gratification Theory – Agenda Setting Theory – Public Relations roles – Models of Public Relations – Approaches to Conflict Resolutions

Unit 3: (10 Hours)

Employee communications – Role of employee communication – concept of Organizational culture – Establishing Communication Policy – Organizational change – Importance of employee communication – Special employee Communication Situations – Media of Employee communications – Objectives of Internal media – Starting internal media – controlling internal media - Occasional and Special media Rules of Effective Employee Relations. Frontline supervisors as the key communicators

Case: Investing in Employees Pays Off (CJSS)

Case: Southwest Airlines – Where Fun, LUV, and Profit Go Hand –in Hand (CJSS)

Case: Employee Retention: It is the employer who is on probation (LLHT)

Case: Maintaining Employee Relationship in a Tragedy (LLHT)

Kodak Communicates One - on - One with All of its Employees (CJSS)

Unit 4: (8 Hours)

Community Relations – Importance of Public Relations – Community Relations Process – Guidelines for Effective Relations Programs -Specific Functions of Public Relations – Criteria for Community relations Activities – Corporate Social Responsibility & Philanthropy-Emerging Challenge of Community Activism

Case: Community Relationships Maintained During Hospital Closing (CJSS)

Unit 5: (8 Hours)

Media Relations – Media Relations –Role of Media in Public Relations – Social Media – working with the media –Media Relations Program Elements –Role of Technology in Public Relations

Case: Fatal Tiger Attack at San Francisco Zoo (LLHT)

Case: There's a Syringe in My Pepsi Can (CJSS)

Unit 6:

(14 Hours)

Issues in Public Relations/Crisis Management – public relations challenges –Types of Issues - target audiences-Public Service as Preventive Public Relations – Special Interests – Importance of Compromise –Issue Anticipation – Scenario Technique.

Crisis Management – Understanding how people typically react to issues – Human Nature – Role of communications – Types of crises – News media influence - Fundamental guidelines

Case: Take your choice – Tobacco or Health (CJSS)

Case: Bhopal – A Nightmare for Union Carbide (CJSS)

Practical Component:

- Related cases for each module to be discussed in the classes and presentation can be done for each case by group of students.
- Team of students can be made and asked to report the media personalities about the event held in the college. Different styles of reporting the same event can be discussed in the class with its possible reactions from the media.
- Collect the newspaper articles about various messages from organizations through spokespersons and analyze the effect of each type of delivery and impact on the audience.
- Conduct a CSR Programme for the college like Blood donation, Eye camps in association with Lions, Rotary clubs etc and gather the information's about various challenges these organizations face during such community oriented programmes.

RECOMMENDED BOOKS

- “Public Relations – The Profession and Practice”, Lattimore, Laskin, Heiman &Toth, third edition, Tata McGraw Hill, 2012 (LLHT)
- “Public Relations Practices – Managerial Case Studies and Problems” Center, Jackson, Smith and Stansbury, Seventh Edition, Prentice Hall of India, 2008 (CJSS).

WORKPLACE ETHICS AND VALUE SYSTEMS

Subject Code	: 16MBA HR402	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03

Total Number of Lecture Hours : 56
Practical Component : 02 Hours / Week

Exam Marks : 80

Course Objectives:

- To understand the ethical practices at workplace.
- To address the ethical issues which arise in the work environment.
- To acquaint students with various ethical problems at work place.

Course Outcomes:

The students will be able to

- Learn the principles and practices of workplace ethics.
- Understand the concepts of corporate governance and ethics.
- Gain insights of Discrimination and Harassment at Workplace

Unit 1: (8 Hours)

Workplace Ethics: Introduction, Needs, Principles, Development of Personal Ethics, Workplace Ethics for Employees-Ethical behavior in workplace- Professionalism, Ethical violations by employees, Employee Attitude and Ethics, Employee Etiquettes. Benefits of ethics in Workplace-employee commitment, investor loyalty, customer satisfaction, profits

Unit 2; (8 Hours)

Professionalism at Workplace: Unethical Conduct for employees and employers. Factors leading to Unethical Behaviors. Different unethical behaviors. Measures to control unethical behaviors. Rewarding ethical behavior

Unit 3: (10 Hours)

Business Ethics and Corporate Governance: Overview of Business Ethics, Corporate Governance, Ethical issues in human resource management- The principal of ethical hiring, Firing, worker safety, whistle blowing, Equality of opportunity, Discrimination, Ethics and remuneration, Ethics in retrenchment. Ethical Dilemmas at workplace, Ethical issues in global business, corporate responsibility of employers.

Unit 4: (10 Hours)

Workplace Privacy & Ethics: Watching what you say and what you do in the workplace, Hardware, Software and Spyware, Plagiarism and Computer Crimes, Convenience and Death of Privacy, Defence of employee privacy rights.

Unit 5; (12 Hours)

Teamwork in the Workplace, Ethics, Discrimination and Harassment at Workplace & Ethics: Teams, Elements of team, Stages of team development, team meetings, team rules, and teams work and professional responsibility, rules of professional responsibility, ASME code of ethics. Discrimination, sexual harassment, creating awareness about workplace harassment, Vishaka Dutta vs. State of Rajasthan –Supreme Court directions, Compulsory workplace guidelines.

Unit 6: (8 Hours)

Managing Change in Workplace through Ethics: Introduction to Change Management, Models of change, the Ethics of Managing Change, the role of ethics and responsibilities in leading innovation and change, ethics based model for change management, ethics and risks of change management

Practical Components:

- To solve case studies on Workplace Ethics
- To visit organizations and find out the problems and causes for unethical behavior at workplace.
- To visit organizations and find out the measures adopted to control unethical behavior of employees.
- To compare and contrast the various ethical codes of conduct practiced in organizations.
- To study the recent cases on breach of workplace privacy.

RECOMMENDED TEXT BOOKS:

- Ethical Theory and Business, Tom L. Beauchamp, Norman E. Bowie and Denis Arnold, 8th Edition.
- Business Ethics – Ethical Decision making and cases O.C. Ferrell, John Fraedrich, and Linda Ferrell, 9th Edition, Cengage Learning.
- How technology is compromising Workplace Privacy, Fredrick S Lane 111, AMACOM Div American Mgmt Assn, 2003
- Ethics in the Workplace, Dean Bredeson, Keith Goree, Cengage Learning, 2011.

INTERNATIONAL HUMAN RESOURCE MANAGEMENT

Subject Code	: 16MBA HR403	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To analyze the impact of contemporary issues and global imperatives on Human Resource concepts
- To learn the policies and practices in multinational organizations
- To compare, contrast and explain a variety of strategic approaches to the management of Human Resources in multinational organizations.

Course Outcomes:

The students will be able to

- Apply the concepts and knowledge about the range of Human Resource functions.
- Deploy the expatriate employees and expatriate failures on international assignments.
- Evaluate the effects of different Human Resource and International Industrial Relations strategies adopted by multinational organizations

Unit 1: (10 Hours)

Introduction to IHRM Definition, The drivers of internationalization of business. The different setting of International Human Resource Management. Development of IHRM. Difference between IHRM and Domestic HRM. Models of IHRM-Matching model, Harvard Model, Contextual Model, 5P Model European Model. SHRM: Evolution of MNE's, Business strategies, IHRM Strategies, SIHRM. Barriers in effective global HRM. Socio-cultural context, Organizational dynamics and IHRM: Role of culture in International HRM, Country and Regional Cultures, Country Culture versus MNE Culture. Culture and employee management issues/ impact of Country culture on IHRM.

Unit 2: (7 Hours)

Strategies for International Growth: Exploiting global integration-The logic of global integration, differentiation, Mastering expatriation, beyond the traditional expatriate model, the limits of global integration. Becoming locally responsive: The roots of responsiveness, understanding diversity, responding to diversity, the challenges of localization. Managing alliances and joint ventures - IHRM and International Alliances, IHRM and International Joint Ventures.

Unit 3: (10 Hours)

International Workforce planning and staffing: International labour market International Recruitment function; head-hunters, cross-national advertising, e-recruitment; International staffing choice, different approaches to multinational staffing decisions, Types of international assignments, Selection criteria and techniques, use of selection tests, interviews for international selection, international staffing issues, Successful expatriation, role of an expatriate, female expatriation, repatriation, re-entry and career issues.

Unit 4: (7 Hours)

Developing Global Mindset: Global Leadership, Cross cultural context and international assignees, Current scenario in international training and development, training & development of international staff, types of expatriate training, sensitivity training, Career Development, repatriate training, developing international staff and multinational teams, knowledge transfer in multinational companies.

Unit 5: (8 Hours)

Performance Management: Performance Management and MNE, Constraints in goal attainment, performance management cycle, Performance Management of International Assignees, third and host country employees, issues and challenges in international performance management, country specific performance management practices.

Unit 6: (14 Hours)

International Compensation and International Employment Laws and HRIS: International compensation and international assignees, Forms of compensation, key components of international compensation, Approaches to international compensation, compensation practices across the

countries, emerging issues in compensation management. Establishment of labour standards by International Institutions, The global legal and regulatory context of MNE, The International framework of Ethics and Labour standards, Key issues in International Industrial Relations, Trade Unions and MNE's, Response of Trade Unions to MNE's, Non-Union worker representation. HRIS: Meaning, Role of IT in HR, Designing of HRIS, Applications of HRIS in Employee Management, Limitation of HRIS.

Practical Component:

- Study the Socio-Political-Economic System in U.S, U.K, Japan and India and prepare a comparative analysis.
- Visit an MNE organization and study the HR shared services operations performed.
- Solve a case study to understand the challenges faced by organizations in evaluating the performance of international assignees.
- Study and compare Recruitment, Selection and Training practices in various countries.
- Study Indian and US legal aspects involved when deploying an employee on an International Assignment.

RECOMMENDED BOOKS:

- International Human Resource Management - Peter J. Dowling, MavinFesting, Allen D Englesr Cengage Learning.
- International Human Resource Management - Monir H. Tayeb, Oxford University Press, 2005.
- Human Resource Information Systems: Basics, Applications, and Future Directions: Basics, Applications, and Future Directions, Michael J. Kavanagh, Mohan Thite, Richard D. Johnson SAGE, 2011, 2/e.
- Strategic International Human Resource Management: Choices and Consequences in Multinational People Management - Stephen J. Perkins, Susan M. Shortland – Kogan Page Publishers, 2006.
- Strategic Human Resource Management, Schuler, 2/e, Wiley.

REFERENCE BOOKS:

- International Human Resource Management: Policies and Practices By Dennis Briscoe, Randall Schuler, IbraizTarique, Taylor & Francis, 4/e, 2012.
- International Human Resource Management - Anne-Wil Harzing, Joris Van Ruysseveldt - SAGE, 2004.
- International human resource management: think globally, act locally – Derek Torrington - Prentice Hall, 1994.

ORGANISATION CHANGE AND DEVELOPMENT

Subject Code	: 16MBA HR404	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To understand the concepts of change management and to acquire the skills required to manage any change effectively.
- To understand the various components and constraints involved in Change management.
- To learn the various tools & techniques for Organization Development
- To understand the different OD interventions and its effectiveness.

Course Outcomes:

The students will be able to

- Gain insights of change management components, process and its functions
- Enable with various OD diagnosing models
- Ability to handle various OD interventions.

Unit 1: (8 Hours)

Organizational change- Introduction, nature of change, Internal & External changes, types of change, **Models of change-** Lewis's Force field, Systems Model, Action research model, organizational vision and strategic planning.

Unit 2: (8 Hours)

Resistance to change- reasons for the resistance, overcoming resistance for the change, change and person and manager, systematic approach to making change- factors for effective change, skills of leaders in change management, designing the change.

Unit 3: (8 Hours)

Organization development-Introduction, history, evolution of OD, OD interventions: Definition, actors to be considered, choosing and sequencing, intervention activities, classification of OD interventions, results of OD, typology of interventions based on target groups.

Process of Organization Development: Entering into OD relationship, developing a contract.

Unit 4: (8 Hours)

Diagnosing Organizations- Need for diagnostic models, organization, group, individual level diagnosis, Collecting and analyzing the diagnostic information, Feeding Back of diagnostic information, Designing interventions, overview of interventions, evaluating and Institutionalizing OD Interventions.

Unit 5: (12 Hours)

Human Process Interventions: Human process interventions (individual, group and inter-group human relations): **Individual based:** coaching, counselling, training, behavioral modelling, delegating, leading, morale boosting, mentoring, motivation, etc., **Group based:** conflict management, dialoguing, group facilitation, group learning, self-directed work teams, large scale interventions, team building, and virtual teams.

Inter-group based: Organization mirroring, third party peacemaking interventions.

Unit 6: (12 Hours)

Techno-structural Interventions and Future of OD: Restructuring Organizations, Employee Involvement, work Design, Balanced scorecard; business process reengineering; downsizing and outsourcing; **Strategic Interventions:** Competitive and Collaborative Strategies, Organization Transformation.

The Future of OD: The changing environment, Fundamental strengths of OD, Implications of OD for the client, ethical standards in OD, OD's future. **OD Consultant's role**, issues in consultant-client relationship, Power, Politics & OD, Research on OD.

Practical Component:

- To conduct Force field analysis for MBA department
- Group activity-Identify the need for OD intervention for your college and call the director/principal of your college to the classroom to explore the possibility for OD intervention.
- Presentation by students: Identify and explore the possibility for OD intervention in your college level, group level and individual level.
- Hold a debate in the classroom about downsizing the workforce.
- Organization change questionnaire data collection and analyzation.
- Group Presentation: Health care, FOO, Education, PSU, Retail, Manufacturing Industries.
- Design a role play event for students, so that they will play it out to mobilize support for a change implementation programme.

RECOMMENDED BOOKS:

- Theory of Organization Development and Change. Thomas G. Cummings, Christopher G. Worli, Cengage Learning.
- Understanding the theory and design of organization, Richard L Draft, Cengage Learning.
- Organization Development, behavioral science interventions for Organization Improvement, Wendell French, Cecil H.Bell, Veena, Jr, Pearson, PHI.
- Organization Change and Development, Kavith Singh, Excel BOOKS.

REFERENCE BOOKS:

- Change & Knowledge Management-R.L. Nandeshwar, Bala Krishna Jayasimha, Excel BOOKS, 1st Ed.
- Management of Organizational Change – K Harigopal – Response BOOKS, 2001
- Organizational, Design, and Change-Gareth R. Jones, 5th Edition, Pearson Education

STRATEGIC TALENT MANAGEMENT

Subject Code	: 16MBA HR405	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To aware the challenges of acquisition and retention of talents for the competitive advantage of the organization.
- To develop a conceptual understanding of the management of talents in the competitive environment.
- To understand how important is to develop and retain the best talents in the industry.
- To understand the concepts of competency and its usage in evaluating a person's work.
- To get an idea about different tools in identifying required competencies in a person.

Course Outcomes:

The students will be able to

- Gain the insights of talent management practices in organization.
- Learn the techniques and retail the best talent in industry.
- Prepare competency mapping.

Unit 1: (10 hours)

Basics of Talent Management: Talent- engine of new economy, difference between talents and knowledge workers, leveraging talent, the talent value chain, elements of talent friendly organizations, talent management process, **Talent Management System** – Components and benefits of Talent Management System; creating TMS, challenges of TMS, **Building blocks of talents management:** competencies – performance management, conducting performance reviews, Appraising executive talent, selecting the right appraisal.

Unit 2: (8 hours)

Talent Planning – Concept, succession management process, Integrating succession planning and career planning, designing succession planning program, strategic accountability approach in developing the workforce, balanced scorecard, talent development budget, contingency plan for talent; building a reservoir of talent, compensation management within the context of talent management, CEO Succession planning,

Unit 3: (6 hours)

Developing and Retaining Talent – Potential identification and development, coaching for sustained & desired change, integrating coaching, training and development with talent management ,employee retention- motivation and engagement, Return on talent; age of analytics, making outplacement as a part of talent strategy, developing talent management information system.

Unit 4: (6 hours)

Competency mapping: Concepts and definition of competency; types of competencies, competency based HR systems, competency and performance, 5 level competency model, developing various competency models, how competencies relate to career development and organizational goals.

Unit 5: (14 hours)

Methodology of competency mapping : competency model development ,competency models, people capability maturity model ,developing competency framework , competency profiling , competency mapping tools , use of psychological testing in competency mapping , competency based interviewing , assessment of competencies through 360 degree feedback, BEI, CIT, validation of competencies.

Unit 6: (12 hours)

Measuring Performance, Assessment and Development Centre: background and approaches to performance assessment, competency based performance assessment, diagnosing reasons for performance problems, designing an effective performance management systems, sources of errors in performance measurement.

Assessment and Development Centre : concepts , importance and uses of assessments centre in selecting employees , difference between assessment and development centre, assessment centre

approach to competence building , profile of the assessors, steps in assessment centre, designing the assessment centre.

Practical Component:

- Students are expected to conduct a study on how talents are acquired and retained – in various industries – and various strategies followed by the respective companies.
- Discussion on “How to have/ evaluate the performance of the MBA students”
- Ask the students to find out the best employer surveys conducted during the past one year and make a presentation.
- Identify the important positions in your college or any other organization and ascertain the measures if any taken to develop second line of leadership
- Ask the students to collect data about the position of principal, director, and other teachers in your college and prepare a competency dictionary for the said positions
- Presentation by students about the competency directory profiling of various positions.
- Ask the students to role play the behavioural event interview to collect data for competency mapping for the position of management professor.
- Presentation by students about the competency directory profiling of various positions.

RECOMMENDED BOOKS:

- The Talent Management Hand Book – Lance A. Berger & Dorothy R. Berger, Tata McGraw Hill
- Competence at work – Lyle M. Spencer, Signe M. Spencer. John Wiley, 1993.
- A Handbook of Competency Mapping – Seema Sangi, Response BOOKS, 2004.
- Competency mapping, Assessment and Growth – Naik G.P, IHRM, 2010.

REFERENCE BOOKS:

- The Talent Era, Chowdhary, Subir, Pearson Education, New Delhi.
- Appraising & Developing Managerial Performance- Rao T. V, Excel BOOKS
- Performance Management – Herman Aguinis, Pearson Education, 2007.
- Performance Management, Rao, Wiley.

PERSONAL GROWTH AND INTERPERSONAL EFFECTIVENESS

Subject Code	: 16MBA HR406	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To identify strengths and weaknesses as an individual, as a member of a group/organization using personality types.
- To understand the concepts of self awareness, self esteem, NLP and Locus of Control.
- To understand Interpersonal growth and effectiveness.

Course Outcomes:

The Students will be able to:

- Understand the components of personal growth.
- Gain insights in the aspects of interpersonal growth and handling conflicts, managing time, self analysis to name a few.

Unit 1: (12 Hours)

Personal growth: Meaning, nature and scope of personal growth. Self-awareness and self-esteem, life roles, social roles and organizational roles, role clarity and role boundaries. Ego states- Id, ego and super ego and defense mechanisms; developing a self improvement plan.

Interpersonal Trust: Discovering facets of interpersonal trust through Johari Window (Openness, confidentiality, blind spot and unknown part of personality); Self disclosure, seeking feedback, self reflection and practicing new behaviors.

Unit 2: (8 Hours)

Understanding Human Personality: Personality – Meaning & Determinants; Personality theories, Carl Jung's theory of personality Types and Myers Briggs Type Indicator test (MBTI), Trait theories- Guilford Peogut, PF 16 and Type A and B Personalities; Emotional intelligence – Meaning, Dimensions, and Emotionally intelligent Organizations.

Unit 3: (8 Hours)

Attitudes, beliefs, Values and their impact on behavior; Personal change- meaning, nature and requisites. Locus of control. **Habit Formation** - Habits of personal effectiveness. Seven habits of highly effective people.

Unit 4: (8 Hours)

Basic functions of mind: Creativity and innovation. Blocks to creativity. Creativity processes and tools- convergent and divergent thinking. Six thinking Hats, Neuro Linguistic Programming (NLP).

Unit 5: (6 Hours)

Interpersonal relations and personal growth: Interpersonal needs for openness, inclusion and control. Discovering the interpersonal orientation through FIRO-B. Conflict resolution and negotiation, Time management and honoring the commitments

Unit 6: (14 Hours)

Transactional Analysis: Ego states, types of transactions and time structuring. Life position, scripts and games; strokes and stamps

Experiential learning methodologies: T-group sensitivity training, encounter groups and appreciative enquiry.

Practical Components:

- Students are expected to conduct an in depth study about various personality traits & TA and submit a detailed report.
- Students have to undergo psychometric test like MBTI, FIRO-B, Big Five etc , conduct SWOT analysis and prepare a personal growth plan based on the results

- Ask the individual students to seek multisource feedback about their interpersonal effectiveness from peers, teachers, and parents; understand and reflect the feedback and prepare a development plan for interpersonal effectiveness.
- Discuss a Johari Window case in the class to identify how it can help each individual student to promote his/ her personal growth.
- Organize a workshop on MBTI for the students to know their type and to understand the type dynamics.
- Organize a neuro linguistic programming workshop for the participation of all HR students.

- Organizational Behaviour: Human Behavior at work – John W. Newstrom and Keith Davis, 11/e, Tata McGraw Hill, 2003.
- Human Relations in organizations - Robert N. Lussier, 6/e, Mc-Graw Hill Education.
- Development of Management Skills - Whetten& Cameron, 7/e, PHI.
- Competency Mapping Assessment and Growth - Naik G.P, IHRM, 2010.

REFERENCE BOOKS:

- Understanding OB - Udai Pareek, Oxford University Press.
- Theories of Personality- Calvin S Hall, 4/e, Wiley India Pvt. Ltd.
- Seven habits of highly effective people - Stephen R Covey, Pocket Books.
- Training in interpersonal Skills- Stephen Robbins, Pearson Education.

**GUIDELINES FOR INTERNSHIP STUDY (16MBAIN307)
(BETWEEN 2ND AND 3RD SEMESTER MBA)**

OBJECTIVE

To expose the students to understand the working culture of the organization and apply theoretical concepts in real life situation at the work place for various functions of the organization.

STRUCTURE

The Internship shall consist of Study of an organization for 4 weeks.

GENERAL GUIDELINES

- The Internship shall be for a period of 4 weeks immediately after the completion of 2nd Semester Examinations but before the commencement of the 3rd semester classes
- The Subject code of the project work report shall be 16MBAIN307 and shall be compulsory for all the students.
- No two students of an institute shall work on the same organization.
- The student shall seek the guidance of the internal guide on a continuous basis, and the guide shall give a certificate to the effect that the candidate has worked satisfactorily under his/her guidance. Student need to identify an external guide (Working in the organization) and seek guidance from him/her.

Format of the internship report shall be prepared using the word processor viz., MS Word, Times New Roman font sized 12, on a page layout of A4 size with 1” margin all sides and 1.5line spacing. The internship report shall not exceed 60 pages.

Submission of Report: Students shall submit one hard copy of the report to the college and a soft copy in PDF file (Un-editable Format).

Evaluation:

- Internal evaluation will be done by the internal guide.

- Viva-Voce / Presentation: A viva-voce examination shall be conducted at the respective institution where a student is expected to give a presentation of his/ her work. The viva –voce examination will be conducted by the respective HOD or Senior Professor or internal Guide of the department and an external evaluator drawn from industry. In case of non availability of industry person, a senior professor or a faculty with more than 10 years of experience may be invited to conduct the viva-voce. Internship work carries 100 marks consisting of 50 marks for internship report (evaluated by internal guide and 50 marks for viva-voce examination)

Contents of the Internship Report

- Cover page
- Certificate from the Organization (scanned copy)
- Certificate from the guide, HOD and Head of the Institution(scanned copy) indicating bonafide performance of internship by the student
- Declaration by the student (scanned copy)
- Acknowledgement
- Table of contents
- List of tables and graphs
- Executive summary

Chapter 1: Introduction about the internship, Industry Profile.

Chapter 2: Organization Profile:

- i. Back ground,
- ii. Nature of business,
- iii. Vision mission, quality policy
- iv. Product/service profile
- v. Ownership pattern
- vi. Achievements/awards if any
- vii. Future growth and prospects

Chapter 3: Mckensy's 7S framework with special reference to organization under study.

Chapter 4: SWOT Analysis

Chapter 5: Analysis of financial statement. in brief.

Chapter 6: Learning experience.

GUIDELINES FOR 10 WEEK PROJECT WORK (16MBAPR407) (BETWEEN 3RD AND 4TH SEMESTER MBA)

OBJECTIVE

To expose the students to understand the working of the organization/ company / industry and take up an in-depth study of an issue / problem in the area of specialization.

GENERAL GUIDELINES

- The project work shall be for a period of 10 weeks immediately after the completion of 3rd Semester Examinations but before the commencement of the 4th semester classes
- The Subject code of the project work report shall be 16MBAPR407 and shall be compulsory for all the students opting for all specializations.
- The University shall receive 3 copies of project reports prior to the commencement of the 4th semester examination. Copies of the project report should be sent to the concerned Regional Office with an intimation to the Registrar (Evaluation)
- No two students of an institute shall work on the same problem in the same organization
- The student shall seek the guidance of the internal guide on a continuous basis, and the guide shall give a certificate to the effect that the candidate has worked satisfactorily under his/her guidance.
- On completion of the project work, student shall prepare a report with the following format.
- The Project report shall be prepared using word processor viz. MS Word with New Times Roman, 12 font size
- All the reports shall be printed in the A4 size 1” margin on all the sides.

- The report shall be hard bound facing sheet indicating the title of college and month & year of admission (spiral binding not permitted)
- A certificate by the guide, HOD and Head of the institution indicating the bonafide performance of the project by the student to be enclosed.
- An undertaking by the student to the effect that the work is independently carried out by him.
- The certificate from the organization.
- Acknowledgement
- Executive Summary

Schedule to be followed before commencement of Project

Activity	Time line	Remarks
<ul style="list-style-type: none"> • Identifying the organization • Problem identification 	First two weeks	Student individually identifies an organization and identifies problem for his/her study, according to his/her interest.
Problem statement	3rd week	His/ Her interests are discussed with selected guides
Research Design	4th week	Discussion with Internal Guide to decide on suitable design for the research
Synopsis Preparation	5th and 6th week	Preparation of Synopsis* incorporating the objectives

Presentation of Synopsis	7th and 8th week	The student will present the synopsis with the detailed execution plan to the Internal Guide and HOD who will review and may: a. Approve b. Approve with modification or c. Reject for fresh synopsis
Approval Status	9th and 10th week	The approval status is submitted to HOD who will officially give concurrence for the execution of the Project

*Synopsis: It is a three page document or hard copy to be submitted to the HOD with the signatures of the Guide and the student.

Page 1	Title, Contact Address of student- with details of Internal and External Guide
Page 2	Short introduction with objectives and summary (300 words). Review

	of Articles / Literature about the topic with source of information
Page 3	Time Activity Chart

Schedule to be followed during Project work

Activity	Time Line	Remarks
Understanding Structure, Culture and functioning of the organization	First 2 weeks of Project	Student should understand products/services and the problems of the organization.
Preparation of Research instrument for data collection	3rd and 4th week of Project	Discussion with the guide for finalization of research instrument in his/her domain and present the same to the guide. (First Presentation)
Data collection	5th and 6th week of Project	Data collected to be edited, coded, tabulated and presented to the guide for suggestions for analysis. (Second Presentation)
Analysis and finalization of report	7th and 8th week of Project	Students must use appropriate and latest statistical tools and techniques for analyzing the data. (It is must to use Statistical Package whose

		result should be shown in the report) (Third Presentation)
Submission of Report	9th and 10th of Project	Final Report should be submitted to the University before one week of the commencement of theory examination

Evaluation:

- Internal evaluation will be done by the internal guide.
- External valuation shall be done by a faculty member of other institute drawn from VTU affiliated institute with minimum of 10 years of experience.
- Viva-Voce / Presentation: A viva-voce examination shall be conducted at the respective Institution where a student is expected to give a presentation of his/ her work.
- The viva –voce examination will be conducted by the respective HOD / Senior Professor of the department and an expert drawn from the VTU affiliated institutes with minimum of 10 years of experience as appointed by the University.
- Project work carries 200 marks consisting of 50 marks for internal valuation by the internal guide, 50 marks for external evaluation and 100 marks for viva-voce examination.
- **Format of the project report** shall be prepared using the word processor viz., MS Word, Times New Roman font sized 12, on a page layout

of A4 size with 1” margin all sides and 1.5 line spacing. The Project report shall not exceed 100 pages.

- **Submission of Report:** Students should submit the Project Report in electronic data form only, in **PDF** file (Un-editable Format) to the Institute. The Institute in turn shall submit all the CD’s of their students along with a consolidated master list as per specialization containing USN, Name of the student, and Title of the Report to Registrar (Evaluation) one week before the commencement of the Theory Examinations.
- **Plagiarism:** Plagiarism is considered as academically fraudulent, and an offence against University academic discipline. The University considers plagiarism to be a major offence, and subject to the corrective procedures. It is compulsory for the student to get the plagiarism check done before submission of the project report. Plagiarism of up to 25% is allowed in the project work and report should consist 75% of original content/work.
- **Publication of Research Findings:** Students are expected to present their research findings in Seminars/Conferences/Technical/Management Fests or publish their research work in Journals in association with their Internal Guide. Appropriate Weightage should be given to this in the internal evaluation of the project report.

Contents of the Project Report

- Cover page
- Certificate from the Organization (scanned copy)
- Certificate from the guide, HOD and Head of the Institution (scanned copy)
- indicating bonafide performance of Project by the student

- Declaration by the student (scanned copy)
- Acknowledgement

Regulations Governing

THE MASTER OF BUSINESS ADMINISTRATION

OMB 1 TITLE OF THE COURSE

OMB 1.1 The course shall be called Master of Business Administration course which is abbreviated as MBA.

OMB 2 DURATION OF THE COURSE

OMB 2.1 The MBA course shall be of two years' duration, extended over four semesters.

OMB 2.2 The candidates shall be allowed a maximum of four years (8 semesters) of duration to be eligible for the award of MBA degree, failing which he / she shall have to register once again as a fresh candidate.

OMB 3 ELIGIBILITY FOR ADMISSION

OMB 3.1 Admission is open, to the Master of Business Administration Course, to all the candidates who possess a Bachelor's Degree of minimum three years' duration recognized by this university or who have passed any other examination recognized by this university as equivalent thereto.

OMB 3.2 The candidates shall have passed the prescribed qualifying examinations with not less than 50% of the marks in aggregate of all the years / semesters of the degree examinations. However, in the case of candidate belonging to SC/ST and any other groups classified by the Government of Karnataka for such purpose from time to time, the aggregate percentage of marks in the qualifying examinations shall be not less than 45%.

OMB 3.3 Government seats and Management seats in colleges shall be filled as per the Government Order issued from time to time in this regard.

OMB 3.4 All graduates other than the graduates of VTU shall have to obtain Eligibility Certificate from the VTU to seek MBA admissions in any of the colleges affiliated to VTU.

OMB 3.5 The Calendar of events in respect of the course shall be fixed by the University from time to time.

OMB 4 ATTENDANCE REQUIREMENT

OMB 4.1 Each semester of the course shall be treated as a separate unit for calculation of the attendance.

OMB 4.2 A candidate shall be considered to have satisfied the attendance requirement if he / she has attended not less than 85% of the classes in each subject of the respective semesters (Theory, Seminars, Practical Training, etc) actually conducted up to the end of the semester.

OMB 4.3 A candidate, who does not satisfy the attendance requirement, mentioned as above, shall not be eligible to appear for the Examination of the semester and shall be required to repeat that semester along with regular students during the subsequent year.

OMB 4.4 If a candidate, for any reason, discontinues the course after the first / third semester he / she may be permitted to register for the second / fourth semester, after one year with the immediate subsequent batch, subject to the condition that he / she shall complete the class work and seminar including the project / internship within maximum stipulated period of four years from the date of commencement of the course.

OMB 4.5 The Principals of the concerned Colleges shall display regularly, the list of such candidates who fall short of attendance, on the notice boards.

OMB 4.6 The list of the candidates falling short of attendance shall be sent to the University at least one week prior to the commencement of examination.

OMB 5 INTERNAL ASSESSMENT

OMB 5.1 Each candidate shall obtain not less than 50% of the marks prescribed for the Internal Assessment of each subject, including seminars.

OMB 5.2 Internal Assessment Marks shall be based on assignments / tests / oral examinations / Practical Components and seminar conducted in respective subjects.

OMB 5.3 Candidates obtaining less than 50% of the Internal Assessment marks in any subject shall not be eligible to appear for the examination in that subject. However, the Head of the Department may arrange for the improvement of Internal Assessment marks in the subject / subjects in subsequent semesters and the candidate be provided an opportunity for taking the examination at the end of the immediate subsequent semester to fulfill the provisions of OMB 5.1.

OMB 5.4 The student shall write the Internal Assessment Test in Blue Books which shall be maintained by the Principal for at least one month after the announcement of result for verification by the University Officials.

OMB 5.5 Every sheet of Internal Assessment marks list shall bear the signatures of the concerned Teacher, Head of the Department and the Principal of the Institution.

OMB 5.6 The Internal Assessment marks list shall be displayed on the Notice Board and corrections, if any, shall be incorporated before sending to the University.

OMB 5.7 No corrections of the Internal Assessment marks shall be entertained after the submission of marks list to the University.

OMB 6 PAPER SETTING AND EVALUATION OF THEORY ANSWER PAPER

OMB 6.1 Question papers in theory subjects shall be set by the Examiners appointed for that purpose by the University.

OMB 6.2 There shall be double valuation of theory papers in the University Examinations. The Answer Papers shall be valued by two examiners appointed by the University.

OMB 6.3 If the difference between the marks awarded by the two Examiners is not more than 15 per cent of the maximum marks, the marks awarded to the candidate shall be the average of two evaluations.

If the difference between the marks awarded by two examiners is more than 15, the script shall be evaluated by a third examiner. The average of marks of nearest two valuations shall be considered as marks secured by the candidate. However, if one of the three marks falls exactly midway between the other two, then the highest two marks shall be taken for averaging.

OMB 7 INTERNSHIP (PROJECT WORK)

OMB 7.1 All the candidates shall undertake an Internship (Project Work) of twelve weeks' duration during the fourth semester. The Internship should have industry orientation and the work should be certified by the concerned organization where the student has undertaken the Internship.

OMB 7.2 The Internship report shall be submitted by the students as per the guidelines prescribed by the university from time to time.

OMB 7.3 For the Project work (Internship), the Internal Guide shall carry out the internal assessment for 100 marks.

OMB 7.4 An external examiner shall separately value the Internship report for 100 marks. A Viva voce examination for 100 marks shall be jointly conducted by a panel of examiners consisting of an external and internal examiner. This examination has to be conducted in batches of 5 students. The Internship marks will be included in the 4th semester scheme.

OMB 7.5 A candidate shall secure a minimum of 50% of marks in aggregate (in the internal assessment, evaluation of Internship report and viva voce examination). In the event of his failing to secure the 50% marks, he shall have to re-do the Internship.

OMB 8 ELIGIBILITY FOR PASSING

OMB 8.1 There shall be a university examination at the end of each semester.

OMB 8.2 A candidate shall obtain a minimum of 40% of marks in the University Examination and a minimum of 50% of marks in the aggregate including the Internal Assessment marks for passing in a theory subject. The passing marks in the internship shall be as provided under OMB 7.5 and 8.4.

OMB 8.3 There shall be no restriction for promotion of a candidate from the first semester to the second semester and from the third semester to the fourth semester provided he/she has fulfilled the attendance requirement as per OMB 4.2.

OMB 8.4 A candidate who has not failed in more than four heads of passing from the first and second semester put together shall be eligible for promotion from the second semester to the third semester.

OMB 9 AWARD OF CLASS & RANK

OMB 9.1 The candidates, who have passed in all the subjects of all four semesters and in the internship, shall be declared to have passed the course.

OMB 9.2 Classes shall be awarded to the candidates who have passed in all subjects at each semester on the aggregate marks obtained by them in the first attempt at the respective semester.

OMB 9.3 A candidate who secures 70% and above marks in aggregate in first attempt shall be declared to have passed in first class with distinction.

OMB 9.4 A candidate who secures 60% or more marks but less than 70% in aggregate in first attempt shall be declared to have passed in first class.

OMB 9.5 A candidate who secures 50% or more marks but less than 60% in aggregate in first attempt shall be declared to have passed in second class.

OMB 9.6 Classes shall be awarded at the degree level to the candidates who have completed the Course based on the first attempt aggregate of all four semesters taken together.

OMB 9.7 The number of ranks declared at degree level shall be 10 or 1% of students appeared for examination whichever is less. The ranks shall be declared on the basis of the aggregate marks of all the four semesters taken together, provided the candidates has passed in all these four semesters in first attempt only.

OMB 10 SPECIALISATION OF STREAMS

OMB 10.1 A student may opt for any one of the specialization streams.

OMB 10.2 Every student shall be required to take four papers in the specialization stream in the third semester and four in the fourth semester.

OMB 11 REJECTION OF RESULTS

OMB 11.1 A candidate may at his / her desire reject his / her latest semester results of University Examination with respect to all subjects of that particular semester examination. Rejection of result of individual subjects shall not be permitted. Rejection shall be permitted only once during the entire course. Provided that earlier sessional marks of the rejected semester shall be retained. Provided further that in 4th semester the rejection shall not include Internship Work.

If the rejection of the University examination results of the semester happens to be of an odd semester, the candidate can take admission to the immediate next even semester. However, if the rejection of the University result is of even semester, the candidate cannot take admission to the next odd semester.

OMB 11.2 Application for rejection shall be submitted to the Registrar (Evaluation) of the University, through the Principal of the college, within thirty days from the date of announcement of results.

OMB 11.3 A candidate, who opts for rejection is eligible for the award of class and distinction, but is not eligible for the award of ranks.

Note: Guidelines on Practical components:

The objective of Practical components is to make the students understand how theory is applied in business. This should help the students to develop their skills required to become industry ready. Practical component mentioned under each subject are only indicative. Faculty may adopt any other relevant practical tasks / activities focusing on practical application of the theory.

Important: Questions should not be set from practical components area in the University theory examination of the concerned subject.

SEMESTER I

MANAGING ORGANIZATIONS

Sub Code : 12MBA11	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Part A- Principles of Management

Module I : Introduction (6 Hours)

Management: Introduction, definition of management, nature, purpose and functions, levels and types of managers, managerial roles, skills for managers, evolution of management thought, Fayol's fourteen principles of management and recent trends in management.

Module II: Planning and organizing (12 Hours)

Planning: Nature of planning, planning process, objectives, MBO, strategies, level of strategies, policies, methods and programs, planning premises, decision making, process of decision making, types of decisions, techniques in decision making.

Organizing: Organization structure, formal and informal organizations, principles of organizations-chain of command, span of control, delegation, decentralization, empowerment.

Functional, divisional, geographical, customer based and matrix organizations, team based structures, virtual organizations, boundary less organizations.

Module III: Controlling (4 Hours)

Controlling, importance of controlling, controlling process, types of control, factors influencing control effectiveness.

Recommended Books

1. Essentials of Management-Koontz, 8/e, McGraw Hill
2. Management: Text and Cases-VSP Rao, Excel Books
3. MGMT, An Innovative approach to teaching and learning Principles of Management, Chuck Williams, Cengage Publications, 2010
4. Principles and practices of Management, Kiran Nerkar, Vilas Chopde, Dreamtech Press, 2011
5. Management Theory & practice – Chandan J. S, Vikas Publishing House.
6. Management Theory & Practice Text & Cases – Subba Rao P & Hima Bindu, Himalaya Publication.

Part B- Organizational Behaviour

Module IV: Introduction

(4 hours)

Organizational Behaviour: Introduction, definition, historical development, fundamental principles of OB, contributing disciplines, challenges and opportunities.

Module V: Foundations of Individual Behaviour

(14 Hours)

Individual behaviour: Foundations of individual behavior.

Ability: Intellectual abilities, Physical ability, the role of disabilities.

Personality: Meaning, formation, determinants, traits of personality, Big five and MBTI, personality attributes influencing OB.

Attitude: Formation, components of attitudes, relation between attitude and behaviour.

Perception: Process of perception, factors influencing perception, link between perception and individual decision making.

Emotions: Affect, mood and emotion and their significance, basic emotions, emotional intelligence, self awareness, self management, social awareness, relationship management.

Module VI: Motivation and Leadership (8 Hours)

Motivation: Meaning, theories of motivation-needs theory, two factor theory, Theory X and Y, application of motivational theories.

Leadership: Meaning, styles of leadership, leadership theories, trait theory, behavioural theories, managerial grid, situational theories-Fiedler's model, SLT, transactional and transformation leadership.

Module VII: Group Behaviour (4 Hours)

Definition, types, formation of groups, building effective teams.

Conflict: Meaning, nature, types, process of conflict, conflict resolution.

Power and politics: Basis of power, effectiveness of power tactics. The ethics of behaving politically.

Module VIII: Organizational culture (4 Hours)

Importance, managing culture. Work stress and its management.

Practical Component

- Studying organizational structures of any 10 companies and classifying them into different types of organizations which are studied in Module 2 and justifying why such structures are chosen by those organizations.
- Preparing the leadership profiles of any 5 business leaders and studying their leadership qualities and behaviours with respects to the trait, behavioural and contingency theories studied.
- Identifying any five job profiles and listing the various types abilities required for those jobs and also the personality traits/attributes required for the jobs identified.

Note: Faculty can either identify the organizations/ leaders/jobs or students can be allowed to choose the same.

RECOMMENDED BOOKS:

1. Organizational behaviour, Stephen P Robbins, Timothy A. Judge, Neharika Vohra, Pearson, 14th Edition, 2012.
2. Introduction to Organisational Behaviour – Michael Butler, Jaico Publishing House,
3. Organization Behaviour – Ashwathappa, Himalaya Publication House
4. ORGB - Nelson, Quick, Khanelwal, 2/e, Cengage Learning, 2012.
5. Organizational behaviour - Anada Das Gupta, Biztantra, 2011.
6. Organizational behaviour: A modern approach - Arun Kumar and Meenakshi, Vikas Publishing House, 2011.
7. Organizational behaviour – Rao V. S. P, Excel Books, 2009.

REFERENCE BOOKS:

1. Organizational Behaviour - Fred Luthans, 12/e, Mc-Graw Hill International, 2011.
2. Management and organizational Behaviour - Laurie J Mullins, Pearson education
3. Fundamentals of organizational behaviour - Slocum/Hillriegel. Cengage Learning
4. Organizational Behaviour - Aquinas P. G, Excel Books.

MANAGERIAL ECONOMICS

Sub Code : 12MBA12	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I: Introduction to Economic (8 Hours)
Managerial Economics: Meaning, Nature, Scope, & Significance. Uses of Managerial Economics. Role and Responsibilities of Managerial Economist. Relationship of Managerial Economics with Statistics, Accounting and Operations Research. The Basic process of decision making.

Module II: Fundamental Concepts of Managerial Economics (6 Hours)
Opportunity Costs, Incremental Principle, Time perspective, Discounting and Equi-Marginal principles.

Theory of the Firm: Firm and Industry, Forms of Ownership, Objectives of the firm, alternate objectives of firm. Managerial theories: Baumol's Model, Marris's Hypothesis, Williamson's Model. Behavioural theories: Simon's Satisficing Model, Cyert and March Model. Agency theory.

Module III: Demand analysis (10 Hours)

Law of Demand, Exceptions to the Law of Demand, Elasticity of Demand – Classification of Price, Income & Cross elasticity, Advertising and promotional elasticity of demand. Uses of elasticity of demand for Managerial decision making, Measurement of elasticity of demand. Law of supply, Elasticity of supply. Demand forecasting: Meaning & Significance, Methods of demand forecasting. **(No problems)**

Note: Illustrative numerical examples to be used to explain the concepts.

Module IV: Cost Analysis (6 Hours)

Concepts, Types of cost, Cost curves, Cost – Output Relationship in the short run and in the long run, LAC curve.

Module V: Production analysis (8 Hours)

Concepts, production function with one variable input - Law of Variable Proportions. Production function with 2 variable inputs and Laws of returns to scale. Indifference Curves, ISO-Quants & ISO-Cost line. Economies of scale, Diseconomies of scale.

Module VI: Market structure and pricing practices: (8 Hours)

Perfect Competition, Features, Determination of price under perfect competition.

Monopoly: Features, Pricing under monopoly. Price Discrimination.

Monopolistic Competition: Features, Pricing Under monopolistic competition, Product differentiation.

Oligopoly: Features, Kinked demand Curve, Cartels, Price leadership.

Module VII Descriptive Pricing Approaches (4 hours)

Full cost pricing, Product line pricing, Product life cycle pricing.

Pricing Strategies: Price Skimming, Penetration Pricing, Loss leader pricing, Peak Load pricing.

Module VIII: Profits (6 Hours)

Determinants of Short-term & Long-term profits. Classification – Measurement of Profit. Break Even Analysis – Meaning, Assumptions, Determination of BEA, Limitations, Uses of BEA in Managerial decisions.

Practical Components:

- Assessment of Impact of advertisement or sales promotion on the demand of a product (Preferably FMCG goods)
- Study of demand elasticity for a product when there is a price increase or price decrease.
- Market surveys/ consumer intention survey for an existing or a new product/service.
- Opinion polls to understand the buyer behavior for a product or a service.
- Demand forecasting – Mini project may be given to students to assess the demand for a product or a service using any method.
- Preparing a project proposal for a new business venture to understand the BEP using real time data.
- Exploring application and usage of econometric models by using appropriate software packages.

RECOMMENDED BOOKS:

1. Managerial Economics –D M Mithani, 5/e, Himalaya Publication. 2011.
2. Managerial Economics – D N Dwivedi, 7/e, Vikas Publication. 2008
3. Managerial Economics – Geethika, Ghosh&Choudhury, 2/e, McGraw Hill. 2011
4. Managerial Economics – Dominick Salvatore, 6/e, Oxford Publishers, 2010.
5. Managerial Economics - Craig H Petersen, W. Chris Lewis & Sudhir K Jain, 4/e, Pearson Education, 2006.
6. Managerial Economics: Analysis, Problems and Cases – Truet & Truet, 8/e, Wiley, 2009.

REFERENCE BOOKS:

1. Managerial Economics-Atmanand, 2/e, Excel Books, 2010.
2. Managerial Economics-Allen, Weisgelt, Doherty and Mansfield, 7/e,Viva, 2010.
3. Managerial Economics – Yogeshmaheswari, 2/e,PHI, 2011
4. Managerial Economics – Samuelson & Marks, 5/e, Wiley, 2009.
5. Managerial Economics – Keating & Wilson, 2/e, Biztantra, 2009.
6. Managerial Economics – Hirschey, 2/e, Cengage Learning, 2010.
7. Managerial Economics: Case Study solutions – Kaushal H, 1/e, Macmillan, 2011.
8. Managerial Economics – Nadar & Vijayan, 2/e, PHI, 2010.

QUANTITATIVE METHODS : I

Sub Code : 12MBA13	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I: Business Research (6 Hours)

An overview: Research process and Types of Research, problem formulation, management problem v/s. research problem, .Approaches to Research, Importance of literature review.

Business Research Design: Steps involved in a research design.

Exploratory research: Meaning, suitability, collection.

Descriptive research: Meaning, types of descriptive studies, data collection methods

Causal research: Meaning, various types of experimental designs, types of errors affecting research design.

Analytical research: Introduction to analytical research.

Module II: Sampling and Data Collection (8 Hours)

Sampling and sampling distribution: Meaning, Steps in Sampling process, Types of Sampling - Probability and non probability Sampling Techniques.

Data collection: Primary and Secondary data – Sources – advantages/disadvantages.

Data collection Methods: Observations, Survey, Interview and Questionnaire design, Qualitative Techniques of data collection.

Module III: Measurement & Scaling Techniques (6 hours)

Nominal Scale, Ordinal Scale, Interval Scale, Ratio Scale, Criteria for good measurement, attitude measurement – Likert's Scale, Semantic Differential Scale, Thurstone-equal appearing interval scale. (Theory Only)

Module IV: Descriptive statistics (6 hours)

Measures of central tendency: Average: Concept, Types – Mathematical Averages: Arithmetic Mean, Median, Mode (No grouping table method). Partition Values: Quartiles, Deciles and Percentiles - Comparison of the Various Measures of Central Tendencies.

Module V: (6 Hours)

Measures of Dispersion: Standard Deviation – Variance – Coefficient of Variance, Skewness: Relative measures of skewness- Karl- Pearson Co-efficient of skewness.

Correlation and regression: Scatter Diagram, Karl Pearson's coefficient of Correlation (One way table only), Rank Correlation, Concurrent Deviation - Regression: Method of Least Squares,

Module VI: Inferential Statistics (8 Hours)

Probability: Concept and Definition - Relevance to Management Decisions - Sample Space and Events - Relevance of Permutations and Combinations to Probability - Rules of Probability, Random Variables and Concept of Probability Distribution. Theoretical Probability Distributions: Binomial, Poisson and Normal and problems on it. Baye's Theorem (No derivation)

Module VII: Hypothesis (10 Hours)

Formulation of hypothesis, Testing of hypothesis and inferences: Procedure of testing hypothesis, Type I and Type II Errors.

Parametric tests: Z-Test, t-test, F-test, Analysis of Variance – One-Way and Two-way classification.

Module VIII: Non parametric tests (6 Hours)

Chi-Square test (Problems), Multivariate analysis (Theory only). Report writing

Practical Components:

Students are expected to Find the following parameters or Prepare for a given dataset using MS Excel and SPSS.

- Draw all types of Diagrams and Graphs
- Construction of one way and two way tables
- Arithmetic Mean
- Geometric Mean
- Harmonic Mean
- Median, Mode
- Quartiles, Deciles, Percentiles
- Minimum, Maximum, Range
- Quartile Deviation, Mean Deviation, Standard Deviation, Variance, Coefficient of Variance
- Co-efficient of Skewness: - Karl- Pearson, Bowley, Kelly,
- Correlation coefficient
- Regression coefficient – Slope (b in $y = a + bx$)
- Regression Constant – Intercept (a in $y = a + bx$)
- Z-Test, t-test, F-test Values
- Chi-Square test Values
- Analysis of Variance (ANOVA) Values
- Research Proposal writing
- Data Interpretation and report writing: Short and Long reports: Report presentation methods, ex: Power Point Presentation, etc

RECOMMENDED BOOKS:

1. Fundamentals of Statistics, S. C. Gupta, Himalaya Publishing House, 7/e, 2012.
2. Research Methodology: Concepts and Cases – Deepak Chawla & Neena Sondhi, Vikas, 2011
3. Marketing Research by Naresh K. Malhotra, Pearson publishers, 2012
4. Business Research Methods–Donald R. Cooper & Pamela S Schindler, 9/e, TMH,2007.
5. Statistics for Business and Economics - Anderson, Sweeney, William, 11/e, Cengage Learning, 2012.
6. Methodology of Research in Social Sciences – Krishnaswami O. R, Ranganatham M, HPH, 2007.
7. Statistics for Management, Levin and Rubin

8. Research Methods for Business, Uma Sekaran, Wiley India, 5/e,2011.

REFERENCE BOOKS:

1. Statistical Methods - Gupta S. P, Sultan Chand & Sons, 2002.
2. Complete Business Statistics - Aczel & Sounderpandian, 7/e, Tata-McGraw Hill, 2006.
3. Research Methodology- Kothari C. R, 2/e,Vishwa Prakashan, 2002.
4. Statistical Tools for Managers – Apte D. P, Excel Books, 2009.

ACCOUNTING FOR MANAGEMENT

Sub Code : 12MBA14	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	
Ratio of Theory to problems = 40:60	

Module I: Introduction to Accounting (4 Hours)

Need and Types of Accounting, Users of Accounting, concepts and conventions of Accounting, Accounting Equations.

Module II: Preparation of Books of Accounts (10 Hours)

Journals, Subsidiary books, three column cash book, ledgers and trial balance. (Problems only on three column cash book)

Module III: Preparation of Financial Statements (12 Hours)

Preparation of final accounts of sole traders and companies (excluding partnership) in horizontal format (students are to be introduced to vertical formats also)

Module IV: Analysis of Financial Statements (14 Hours)

Comparative, common size and trend analysis, Ratio Analysis, Preparation of financial statements using ratios, Cash flow Statement.

Module V: Accounting Standards and IFRS (4 Hours)

IFRS and proposed changes in Indian Accounting Standards.

Module VI: Audit Report (4 Hours)
Audit Report, Directors' Report and basics of MAOCARO 1998 (Amended 2003)

Module VII: (2 Hours)
Corporate Governance, Human Resource Accounting, Forensic Accounting
Window Dressing

Module VIII: Income Tax (6 Hours)
Heads of Income, Salary, Profit in lieu of salary, Perquisites, deductions u/s 80C, Income Tax Rates – For Individuals only (Only Theory)

Practical Components:

- Collecting Annual reports of the companies and analyzing the financial statements using different techniques and presenting the same in the class.
- Analyzing the companies' cash flow statements and presenting the same in the class.
- Exposing the students to usage of accounting software's (Preferably Tally)
- Filling up of ITR forms

RECOMMENDED BOOKS:

1. Financial Accounting: A Managerial Perspective - Narayanaswamy R, 4/e ,PHI, 2011 (Based on IFRS).
2. Accounting For Managers – Jawaralal, 5/e, Himalaya Publishing House, 2011.
3. Financial Accounting – Dhanesh K. Khatri, – McGraw Hill, 2011
4. A Text book of Accounting For Management – Maheswari S. N, Maheswari Sharad K. Maheswari, 2/e, Vikas Publishing house (P) Ltd.
5. Financial Accounting For Management-Ramachandran N & Ram Kumar Kakani, 3/e TMH Publications, 2011.
6. Financial Accounting - Tulsian P. C, 1/e, Pearson Education.
7. Accounting for managers –Madegowda J, Himalaya Publishing House.
8. Advanced Accountancy- Gupta R. L & Radhaswamy M–Sultan Chand Publications
9. Financial Accounting - Jain and Narang, Kalyani Publishers
10. Direct Taxes – Vinod Singhanian and Kapil Singhanian, Taxman Publications

REFERENCE BOOKS:

1. Financial Accounting for Management: An Analytical Perspective – Ambrish Gupta, 1/e, Pearson Education.
2. Introduction to Financial Statement Analysis – Ashish K Bhatta charya, Elsevier India
3. Accounting for Managers: Text & Cases - Bhattacharya, 3/e, Vikas Publications, 2004.
4. Financial Accounting for Business Managers - Ashish K. Bhattacharya, 2/e, PHI, 2005.
5. Financial Accounting – Raman B. S, Vol I & Vol II, United Publishers,1/e, 2009.
6. Financial Accounting (IFRS update)– Gary A. Porter & Curtis L. Norton, 6/e, Cengage Learning.
7. Accounting For Business Managers – Sakshi Vasudeva, Himalaya Publishing House.
8. Accounting For Management – Arora M. N., Himalaya Publishing House.
9. Essentials of Financial Accounting – Bhattacharya, 2/e, Prentice Hall India, (Based on IFRS)
10. Comdex (Computer and Financial Accounting with Tally 9.0 Course Kit). - Dream Tech.
11. Comdex – Tally 9, Namrata Agrawal- DreamTech.
12. IFRS: A Practical approach – Jasmine Kaur, McGraw Hill.
13. Income Tax - Gaur & Narang, Kalyani Publishers.
14. Financial Accounting - Paul Kimmet, Jerry Weygant & Donald Kieso - Wiley Publications.

IT FOR MANAGERS

Sub Code : 12MBA15	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I: Foundation concepts**(8Hours)**

Foundations of information systems (IS) in business: Data & Information, Information as a Resource, Information in organizational Functions, System

concepts – Components of an IS – IS resources – Fundamental roles of IS applications in business – Trends in IS.

Module II: Kinds of Information Systems (8Hours)

TPS, OAS, MIS, DSS, GDSS, ES, EIS or ESS, Parameters for selecting a suitable Information System.

Module III: Building and Managing Systems (8Hours)

System Analysis and Design – Systems Development Life Cycle – System Building Approaches – Prototyping – Rapid Application Development Models.

Module IV: Business value of telecommunication networks (6 Hours)

The basics of doing business on the Internet- the Internet revolution – the business value of Internet, Intranet and Extranet.

Module V: Business applications (6 Hours)

IT in business: functional business systems – cross-functional enterprise systems – Enterprise resource planning (ERP)- Customer relationship management (CRM) and Supply chain management (SCM).

Module VI: e-Business and e-Commerce (6 Hours)

E-Business systems: e-Business models – Enterprise e-Business systems –E-Commerce systems – Essential e-Commerce processes – electronic payment processes – e-commerce application trends – Web store requirements.

Module VII: Organization & Information Technology (7 Hours)

IT Capabilities and their organizational impact Fundamentals of strategic advantage — using IT for strategic advantages.

Module VIII: Management challenges (7 Hours)

Management Issues in MIS: Information Security and Control – Quality Assurance -Ethical and Social Dimensions – Intellectual Property Rights as related to IT Services / IT Products – Managing Global Information Systems

Practical Components :

Lab Sessions relating to

- MS Word
- Developing business presentation with MS-PowerPoint
- MS Excel up to Lookups

RECOMMENDED BOOKS:

1. Management Information Systems: Managing the Digital Firm - Loudon, Kenneth C., and Jane P. Loudon. 10/e, Prentice-Hall, 2007.
2. Management Information Systems: Text & Cases – Jawadekar W. S, 4/e, Tata McGraw Hill, 2010.
3. Computer Application in Business – Sudalaimuthu, Anthony Raj, HPH.
4. MIS Managing Information Systems in Business, Government and Society - Rahul De ,1/e, Wiley India, 2012.
5. Information Technology for Management: Transforming Organizations in the Digital Economy - Efraim Turban, & Linda Volonino. 7/e, Wiley India. 2007.
6. Management Information Systems – Nirmalya bagchi, Vikas Publishing House, 2011.

REFERENCE BOOKS:

1. Computer Applications in Management - Niranjan Shrivastava. Dreamtech Press, 2011.
2. Business Driven Technology - Haag, Baltzan, & Philips. 2/e, Tata McGraw-Hill, 2009.
3. Fundamentals of Information Technology - Alexis Leon, & Mathews Leon , 2/e, Vikas, 2009.

MANAGERIAL COMMUNICATION

Sub Code	: 12MBA16	IA Marks	: 50
No. of Lecture Hrs /week	: 04	Exam Hrs.	: 03
Total No. of Lecture Hrs.	: 56	Exam Marks	: 100
Practical Component : 01 Hr/ Week			

Module I: Introduction**(6Hours)**

Meaning & Definition, Role, Classification – Purpose of communication – Communication Process – Characteristics of successful communication – Importance of communication in management – Communication structure in organization – Communication in conflict resolution - Communication in

crisis. Communication and negotiation. Communication in a cross-cultural setting

Module II: Oral Communication (6Hours)

Meaning – Principles of successful oral communication – Barriers to communication – Conversation control – Reflection and Empathy: two sides of effective oral communication. Modes of Oral Communication.

Listening as a Communication Skill, Non verbal communication.

Module III: Written Communication (6Hours)

Purpose of writing – Clarity in writing – Principles of effective writing – Approaching the writing process systematically: The 3X3 writing process for business communication: Pre writing – Writing – Revising – Specific writing features – Coherence – Electronic writing process.

Module IV: Business Letters and Reports (8Hours)

Introduction to business letters – Types of Business Letters - Writing routine and persuasive letters – Positive and Negative messages

Writing Reports: Purpose, Kinds and Objectives of reports – Organization & Preparing reports, Short and Long reports

Writing Proposals: Structure & preparation.

Writing memos

Module V: Case Method of Learning (8Hours)

Understanding the case method of learning – Different types of cases – Difficulties and overcoming the difficulties of the case method – Reading a case properly (previewing, skimming, reading, scanning) – Case analysis approaches (Systems, Behavioural, Decision, Strategy) – Analyzing the case – Dos and don'ts for case preparation – Discussing and Presenting a Case Study

Module VI (6Hours)

Presentation skills: What is a presentation – Elements of presentation – Designing & Delivering Business Presentations – Advanced Visual Support for Managers

Negotiation skills: What is negotiation – Nature and need for negotiation – Factors affecting negotiation – Stages of negotiation process – Negotiation strategies

Module VII**(6Hours)****Employment communication:** Introduction – Composing Application Messages - Writing CVs – Group discussions – Interview skills**Impact of Technological Advancement on Business Communication –** Technology-enabled Communication - **Communication networks** – Intranet – Internet – e mails – SMS – teleconferencing – videoconferencing**Module VIII: Group Communication****(10Hours)**

Meetings – Planning meetings – objectives – participants – timing – venue of meetings – leading meetings. Meeting Documentation: Notice, Agenda, Resolution & Minutes.

Seminars – workshop – conferences**Media management** – The press release – Press conference – Media interviews**Etiquette Advantage in Business Communication****Practical Components:**

- Demonstrate the effect of noise as a barrier to communication
- Make students enact and analyze the non-verbal cues
- Give exercises for clarity and conciseness in written communication.
- Group Activity: Form Student groups and ask them to write a persuasive letter and proposal for an innovative product or service. Circulate the work from each group among all other groups and ask them to evaluate the letter and proposal in line with possible responses to a letter (pleased, displeased, neither pleased nor displeased but interested, not interested)
- A suitable case is to be selected and administered in the class sticking to all the guidelines of case administering and analysis. Demonstrate using Communication Equipments like Fax, Telex, Intercoms, etc,
- Demonstrating Video conferencing & teleconferencing in the class.
- Conduct a mock meeting of students in the class identifying an issue of their concern. The students should prepare notice, agenda and minutes of the meeting.

- Business etiquettes to be demonstrated in role play by students
- Each student to give presentation of 5 minutes (this can be spread throughout the semester) and to be evaluated by the faculty

RECOMMENDED BOOKS:

1. Business Communication : Concepts, Cases And Applications – Chaturvedi P. D, & Mukesh Chaturvedi ,2/e, Pearson Education, 2011 (Module 1, 2, 4, 5, & 7).
2. Business Communication: Process And Product – Mary Ellen Guffey, 3/e, Cengage Learning, 2002. (Module 3)
3. Communication – Rayudu C. S, HPH.
4. Business Communication – Lesikar, Flatley, Rentz & Pande, 11/e, TMH, 2010 (Module 1, 2, 4, 5, & 7).
5. Advanced Business Communication – Penrose, Rasberry, Myers, 5/e, Cengage Learning, 2004 (Module 1, 5, 6 & 8).
6. BCOM – Lehman, DuFrene, Sinha, Cengage Learning, 2/e 2012
7. Business Communication – Madhukar R. K, 2/e, Vikas Publishing House.

REFERENCE BOOKS:

1. Effective Technical Communication - Ashraf Rizvi M, TMH, 2005.
2. Business Communication - Sehgal M. K & Khetrapal V, Excel Books.
3. Business Communication – Krizan, Merrier, Jones, 8/e, Cengage Learning, 2012.
4. Basic Business Communication – Raj Kumar, Excel Books, 2010.

SEMESTER II

BUSINESS, GOVERNMENT AND SOCIETY

Sub Code: 12MBA21	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I: The Study of Business, Government and Society (BGS)
(4 Hours)

Importance of BGS to Managers – Models of BGS relationships – Market Capitalism Model, Dominance Model, Countervailing Forces Model and Stakeholder Model – Global perspective – Historical Perspective

Module II: The Dynamic Environment **(4 Hours)**

Historical Forces changing the Business Environment – Key environments of Business – Power dimensions of Business – Theoretical perspective – Sociological perspective

Module III: Corporate Governance **(8 Hours)**

Introduction, Definition, Market model and control model, OECD on corporate governance, A historical perspective of corporate governance, Issues in corporate governance, relevance of corporate governance, need and importance of corporate governance, benefits of good corporate governance, the concept of corporate, the concept of governance, theoretical basis for corporate governance, obligation to society, obligation to investors, obligation to employees, obligation to customers, managerial obligation, Indian cases

Module IV: Public Policies **(8 Hours)**

The role of public policies in governing business, Government and public policy, classification of public policy, areas of public policy, need for public policy in business, levels of public policy, elements of public policy, the corporation and public policy, framing of public policy, business and politics- levels of involvement, business, government, society and media relationship

government regulations in business, justification of regulation, types of regulation, problems of regulation

Module V: Environmental concerns and corporations (6 Hours)

History of environmentalism, environmental preservation-role of stakeholders, international issues, sustainable development, costs and benefits of environmental regulation, industrial pollution, role of corporate in environmental management, waste management and pollution control, key strategies for prevention of pollution, environmental audit, Laws governing environment

Module VI: Business Ethics (6 Hours)

Meaning of ethics, business ethics, relation between ethics and business ethics, evolution of business ethics, nature of business ethics, scope, need and purpose, importance, approaches to business ethics, sources of ethical knowledge for business roots of unethical behavior, ethical decision making, some unethical issues, benefits from managing ethics at workplace, ethical organizations

Module VII: Corporate Social Responsibility (6 Hours)

Types and nature of social responsibilities, CSR principles and strategies, models of CSR, Best practices of CSR, Need of CSR, Arguments for and against CSR, CSR Indian perspective, Indian examples

Module VIII: Business Law (14 Hours)

Law of contract, meaning of contract, agreement, essential elements of a valid contract, classification of contracts, proposal and acceptance, free consent, void agreements

Negotiable instruments act 1881: Nature and Characteristics of Negotiable instruments, Kinds of Negotiable Instruments – Promissory Notes, Bills of Exchange and Cheques. Parties to Negotiable Instruments, Negotiation, Presentment, Discharge and Dishonor of Negotiable Instrument, Law of agency, Bailment & Pledge:

Sale of goods act 1930: Definition of Sale, Sale v/s Agreement to Sell, Goods, price and Time, Condition and Warranties, Express and Implied Condition, “Doctrine of Caveat Emptor”, Performance of Contract of sale, Right of Unpaid Seller.

Intellectual property law, law relating to patents, law relating to copyrights, law relating to trade mark

Practical Component:

- Students are expected to study any five CSR initiatives by Indian organizations and submit a report for the same.
- A group assignment on “The relationship between Business, Government and Society in Indian Context and relating the same with respect the models studied in module 1.
- Case studies/Role plays related ethical issues in business with respect to Indian context.

RECOMMENDED BOOKS:

1. Business, Government, and Society: A Managerial Perspective, Text and Cases – John F. Steiner, 12/e, McGraw-Hill, 2011.
2. Business and Government – Francis Cherunilam, HPH.
3. Corporate Governance: principles, policies and practices – Fernando A. C, 2/e, Pearson, 2011.
4. Business Ethics and Corporate Governance - Ghosh B. N, Tata McGraw-Hill, 2012.
5. Business Law for Managers, Goel P. K, Biztantra, 2012.
6. Corporate Social Responsibility: A Study of CSR Practices in Indian Industry, Baxi C. V & Rupamanjari Sinha Ray, Vikas Publishing House, 2012.

REFERENCE BOOKS:

1. Business and Society - Lawrence and Weber, 12/e, Tata McGraw-Hill, 2010.
2. Business Ethics - Bajaj P. S & Raj Agarwal, Biztantra, 2012.
3. Corporate Governance - Keshoo Prasad, 2/e, PHI.
4. Corporate Governance, Ethics and social responsibility - Balachandran V, & Chandrashekharan V, 2/e, PHI, 2011.
5. Corporate Governance – Machiraju H. R, HPH.
6. Business Ethics and Corporate Governance – Prabakaran S, Excel Books.
7. Corporate Governance – Badi N. V, Vrinda Publications, 2012.
8. Civic Sense – Prakash Pillappa, Excel Books, 2012.

QUANTITATIVE METHODS- II

Sub Cod : 12MBA22	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (6 Hours)

Introduction to Operations Research. Definition, scope of Operations Research, characteristics, advantages and limitations. Quantitative approach to decision making, models & modeling in Operations Research.

Module II (8 Hours)

Linear programming, Structure of linear program model, Assumption, Advantages, Limitations, General mathematical model, Guidelines for formulation of linear programming model, graphical method, algorithm (Only illustrative problems) Duality in linear programming..

Module III (8 Hours)

Transportation problem, General structure of transportation problem, methods of finding initial basic feasible solution (NWCM, LCM & VAM), test for optimality (MODI Method), degeneracy (theory only), Assignment problems, Introduction, General structure. problems on minimization & maximization

Module IV (8 Hours)

Decision theory – decision under uncertainty- Maxmin & Minmax, decision under Risk- Expected Value, decision tree problems.

Job Sequencing- N Jobs-two machines and N Jobs-three machines, 2 jobs-M machines cases.

Module V**(8 Hours)**

Theory of games- formulation of game models, Two person Zero sum games & their solution, $2 \times N$ and $M \times 2$ games, pure strategy games with saddle point, Mixed strategies (Graphical and algebraic methods), Limitations of game theory.

Module VI**(6 Hours)**

Simulation, process of simulation, types of simulation, steps in simulation process, Monte Carlo simulation, application in queuing, inventory, finance, marketing and HR areas, Advantages & Disadvantages .

Module VII**(4 Hours)**

Queuing theory, General structure of queuing system, Operating characteristics of queuing system, Queuing models (Problems on M/M/1)

Module VIII**(8 Hours)**

Project management, Structure of projects ,phases of project management-planning, scheduling, controlling phase, work break down structure, project control charts, network planning, PERT & CPM ,Network components & precedence relationships, critical path analysis, probability in PERT analysis, theory of crashing.

Practical Components:

- Solving and analyzing theoretical problems by using software packages like excel- data analysis, TORA and MS-Project.

RECOMMENDED BOOKS:

1. Operations Research: Theory, Methods and Applications - Sharma S. D, Kedar Nath, Ram Nath & Co.
2. Operations Research : An Introduction - Taha H. A, 9/e, PHI

3. Operations Research: Theory and Applications - Sharma J. K, 4/e , Macmilan, 2010
4. Operations Research - Vohra N. D, 4/e, TMH, 2010.
5. Operations Research – Anand Sharma, HPH.

REFERENCE BOOKS:

1. Quantitative Methods for Business - Anderson Sweeney, Williams, 10th edition, Cengage, 2011
2. Introduction to Operations Research - Frederick S. Hillier, Gerald J. Lieberman, 9/e, Tata McGraw-Hill, 2011.
3. Operations Research – Kalavathy S, 3/e, Vikas Publishing House.
4. Project Management - Samuel J. Mantel, Jr, Jack R. Meredith, Scott M. Shafer, Margrett M. Sutton with MR Gopalan, Wiley India, 2011.
5. An Introduction to Operations Research - Kothari C R, 3/e, Vikas Publishing House, 2011.
6. Operations Research – Anitha H. S, Excel Books, 2010.

MACRO BUSINESS ENVIRONMENT

Sub Code: 12MBA23	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I

(8 Hours)

Indian Economy and Business environment: Nature and Scope, Structure of the Business Environment – Internal and External environment.
 Political and Legal Environment: overview, Philosophies, Political System, Judiciary, Constitution of India.
 Economic Environment: overview, Nature of Indian Economy, Features of Indian Economy, Charges in recent times.
 Socio – Cultural Environment: Socio Cultural factors affecting the Business.

Module II

(8 Hours)

Globalisation and Indian Business Environment: Meaning and Implications, Phases, Globalisation Impact on Indian Economy across Sectors. Modes of entry strategies.

India's Foreign Trade Policies – Recent Developments, Global outsourcing, MNCs and FDI in Retail, Infrastructure, Pharma. Insurance, Banking & Finance and Automobile. Impact of WTO ON India's foreign trade. Technological Environment: Technology and Development, Integrating technology with Business. India and Global Knowledge Market.

Module III

(6 Hours)

International Business Environment: Review of the global economy, The global recession, Business environment in Developed and Developing Countries.

International trade theories.

GATT and WTO: Agreements and Implications.

International cultural aspects- Values and norms, religion and ethics, language, education, impact of cultural differences on business.

Module IV

(8 Hours)

Measuring the Economy: Basic economic Concepts, Open and Closed Economies, Primary, Secondary and Tertiary sectors and their contribution to the economy. SWOT Analysis for the Indian economy. Measuring GDP and GDP Growth rate. Components of GDP.

Business Cycle- Features, Phases, Economic Time series – Economic indicators, Correlation, persistence, coherence.

Inflation: Types, Measurement, Kinds of Price Indices.

Employment and unemployment rates: Measurement.

National Income: Estimates, Trends, Measurement, Problems in measuring National Income.

Module V

(8 Hours)

Industrial Policies and Structure: Planning- Problems in industrial development during the plan period, Classification of industries based on ownership. Industrial policies, Industrial strategy for the future, New industrial policy 1991.

Structure of Indian Industry: Public and Private Sector Enterprises, Objectives of PSUs, Performance and shortcomings. Private Sector– growth, problems and prospects. SSI – Role in Indian Economy. Disinvestments in Indian public sector Units since 1991.

Industry Analysis: Textiles, Electronics, Automobile, FMCG, Telecom, Pharma Sectors.

Module VI**(8 Hours)**

Economic policies: Privatisation-Problems and prospects.

Fiscal Policy: Objectives, Instruments, Union Budget, Reforms -Raja Chelliah Committee Recommendations, Taxes, Role of Government.

Monetary Policy: Money, Measures of money supply, Monetary system in India, Monetary policy- Tools for credit control. Structure of the Banking system, RBI and its functions, Banking structure reforms - Narasimham committee recommendations.

MODULE VII**(6 Hours)**

Infrastructure in the Indian Economy- Infrastructure and economic Development, Energy, Power, Transport system- Railways, Road transport, Water transport and Air Transport.Power.

Communication System in India, Development of IT Sector in India – its contributions to Indian economy.

Importance of Human resources development- Measures of Human development, Human Development index. Major thrust areas in human resource development.

Module VIII**(4 hours)**

Agriculture and Business: Role of Agriculture in Economic Development, Trends in Agricultural Production, Agro based Industries, Dependence of Business on Agriculture, Corporate India Initiatives.

Practical Component

- A Debate on 'Should the government allow cultivation of BT crops in India'.
- 'Indian Shining' a debate on for and against.
- International Cultural environment- The problems faced by MNC's – A Case study.
- 'Disinvestment in PSU's since 1991' - A case study
- Exposure of INR to the Fluctuation of USD and the impact on Indian companies receivables and payables.
- Tracking of business cycle for India using GDP data.
- A case study on Bangalore Metro Rail project.
- Corporate India initiatives for rural developments

RECOMMENDED BOOKS:

1. Economic Environment of Business – Misra S. K & Puri V. K. , 6/e, Himalaya publishing house, 2010.
2. Business Environment :Text and Cases - Justin Paul, 3/e, McGraw Hill, 2011.
3. Macro Economic Theory – Vaish M. C, 14/e, Vikas Publishing House, 2010
4. Business Environment - Fernando, 1/e, Pearson, 2011.
5. Indian Economy – Datt and Sundharam, 64th Edition, S Chand, 2011.
6. International Business: Competing in the Global Marketplace - Charles W. L. Hill & Jain, 6/e, TMH, 2009.

REFERENCE BOOKS:

1. Principles of Macro Economics –Mankiw, 4/e, Cengage Learning, 2011.
2. Macro Economics – Andrew. B. Abel, & Ben S. Bernanke, 7/e, Pearson Education, 2011.
3. Macro Economic Theory – Kennedy,1/e , PHI, 2011.
4. Macro Economics: Theory and Policy – Vanitha Agarwal, 1/e, Pearson, 2010.
5. Macro Economics- Hall & Papell, 6/e, Viva Books, 2010.
6. The Business Environment – Wetherly & Otter, 1/e, Oxford University Press, 2010.
7. Business Environment – Suresh Bedi, Excel Books.

Exam: Only Theory questions.

MARKETING MANAGEMENT

Sub Code: 12MBA24	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I**(7 Hours)**

Introduction: Nature and scope of marketing, Evolution, Various marketing orientations, Marketing Vs Selling concepts, Consumer need, Want and

demand concepts, Marketing Environment – Assessing the impact of micro and macro environment. Marketing challenges in the globalized economic scenario.

Module II

(7 Hours)

Understanding Consumer Behaviour: Buying motives, Factors influencing buying behaviour, Buying habits, Stages in consumer buying decision process, Types of consumer buying decisions, Organizational buying Vs House hold buying, Consumer Protection Act, 1986 – An Introduction.

Module III

(8 Hours)

Market Segmentation, Targeting, Positioning & Branding

Segmentation: Meaning, Factors influencing segmentation, Market Aggregation, Basis for segmentation, Segmentation of Consumer and Industrial markets.

Targeting: Meaning , Basis for identifying target customers, Target Market Strategies,

Positioning: Meaning, Product differentiation strategies, Tasks involved in positioning

Branding: Concept of Branding, Brand Types, Brand equity, Branding Strategies

Module IV

(7 Hours)

Product Decisions: Concept, product hierarchy, New product development, diffusion process, Product Life cycle, Product mix strategies and merchandise planning and strategies.

Packaging / Labeling: Packaging as a marketing tool, requirement of good packaging, Role of labeling in packaging

Module V

(4 Hours)

Pricing Decisions: Pricing concepts for establishing value, Pricing strategies-Value based, Cost based, Market based, Competitor based, New

product pricing – Price Skimming & Penetration pricing,

Module VI

(5 Hours)

Distribution Decisions: Meaning, Purpose, Channel alternatives, Factors affecting channel choice, Channel design and Channel management decisions, Channel conflict, Distribution system, Multilevel Marketing (Network Marketing)

Module VII

(9 Hours)

Integrated Marketing Communications: Concept of communication mix, communication objectives, steps in developing effective communication, Stages in designing message

Advertising: Advertising Objectives, Advertising Budget, Advertising Copy, AIDA model, Advertising Agency Decisions

Sales Promotion: Sales Promotion Mix, Kinds of promotion, Tools and Techniques of sales promotion, Push-pull strategies of promotion.

Personal selling: Concept, Features, Functions, Steps/process involved in Personal Selling,

Publicity / Public Relation: Meaning, Objectives, Types, Functions of Public Relations

Direct Marketing: Meaning, Features, Functions, Basic concepts of e-commerce, e-business, e-marketing, m-Commerce, m-marketing, e-networking.

Module VIII

(5 Hours)

Marketing Planning: Meaning, Concepts of Marketing plan, Steps involved in planning.

Marketing Organisation: Factors influencing the size of the marketing organization, various types of marketing structures/organisation

Marketing Audit: Meaning, Features of marketing audit, various components of marketing audit.

CASE STUDIES ON INDIAN CONTEXT ONLY (4 Hours)

Practical Components:

- Consider a few products like mobile phone, shoes, clothes etc and analyse their buying motives.
- Analyse the various colleges in a city – how are they segmented? If you were to start a new MBA college, how would you position it? What would your parameters be?
- Analyse the product life cycle of a few common products like jeans, pagers, desktop computers etc etc.
- Go to a supermarket and study the pricing, packaging and advertising strategy of some FMCG companies like Levers, Godrej, ITC, Britannia, Parle, and others in some products like soaps, biscuits, juices etc.
- Take any consumer product like soaps, biscuits etc and study the marketing organization of the company producing it.

RECOMMENDED BOOKS:

1. Marketing Management: A South Asian Perspective - Kotler, Keller, Koshy & Jha, 13/e, Pearson Education, 2012.

FINANCIAL MANAGEMENT

Sub Code: 12MBA25	IA Marks : 50
No. of Lecture Hrs /week : 04	Exam Hrs. : 03
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I

(5 Hours)

Financial management – Introduction to financial management, objectives of financial management – profit maximization and wealth maximization. Changing role of finance managers. Interface of Financial Management with other functional areas. **Indian financial system** – Primary market, Secondary market – stocks & commodities market, Money market, Forex markets. (Theory Only)

Module II

(5 Hours)

Sources of Financing: Shares, Debentures, Term loans, Lease financing, Hybrid financing, Venture capital investing, Warrants. Angel investing Private equity, Warrants and convertibles (Theory Only)

Module III

(10 Hours)

Time value of money –Future value of single cash flow & annuity, present value of single cash flow, annuity & perpetuity. Simple interest & Compound interest, Capital recovery & loan amortization.

Module IV**(8 Hours)**

Cost of Capital Cost of capital – basic concepts. Cost of debenture capital, cost of preferential capital, cost of term loans, cost of equity capital (Dividend discounting and CAPM model). Cost of retained earnings. Determination of Weighted average cost of capital (WACC) and Marginal cost of capital.

Module V**(10 Hours)**

Investment decisions – Investment evaluation techniques – Net present value, Internal rate of return, Modified internal rate of return, Profitability index, Payback period, Discounted pay back period , Accounting rate of return. Estimation of cash flow for new project, replacement projects.

Module VI**(6 Hours)**

Working capital management – factors influencing working capital requirements. Current asset policy and current asset finance policy. Determination of operating cycle and cash cycle. Estimation of working capital requirements of a firm.(Does not include Cash, Inventory & Receivables Management)

Module VII**(8 Hours)**

Capital structure and dividend decisions – Planning the capital structure. (No capital structure theories to be covered) Leverages – Determination of operating leverage, financial leverage and total leverage. Dividend policy – Factors affecting the dividend policy - dividend policies- stable dividend, stable payout. (No dividend theories to be covered).

Module VIII**(4 Hours)**

Emerging Issues in Financial management: Derivatives, Mergers and Acquisitions, Behavioral Finance, Financial Modelling, Financial engineering, risk management. (Theory Only).

Practical Components:

- Identifying the small or medium sized companies and understanding the Investment evaluation techniques used by them.

- Using the annual reports of selected companies, students can study the working capital management employed by them. Students can also compare the working capital management of companies in the same sector.
- Students can choose the companies that have gone for stock split and Bonus issue in the last few years and study the impact of the same on the stock price.

RECOMMENDED BOOKS:

1. Financial Management - Khan M. Y.& Jain P. K, 6/e, TMH, 2011.
2. Financial Management - Pandey I. M, 10/e, Vikas.
3. Financial Management - Prasanna Chandra, 8/e, TMH, 2011.
4. Financial Management, Kapil, Pearson Education, 2011.
5. Financial Management, Srivastav, Oxford University press, 2011.

HUMAN RESOURCE MANAGEMENT

Sub Code: 12MBA26	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I **(6 Hours)**

Introduction, meaning and significance of HRM. Historical evolution of HRM. Major functions of HRM. Line functions and staff functions. Principles of HRM. HR Competencies. Institutions of repute which impart HRM education in India. Professional Associations in HRM. Career opportunities in HRM.

Module II **(6 Hours)**

Pre-recruitment functions of HRM- Organizational structure, Job analysis, HR Planning and budget approval. Strategic decision to outsource, engage contract workers or to recruit people on company role.

Module III **(8 Hours)**

Recruitment, selection and appointment: Meaning and significance of recruitment, process of recruitment, sources of recruitment, cost-benefit analysis of recruitment. Meaning and significance of selection, process of selection, selection techniques- tests, interviews and salary negotiation. Meaning and significance of appointment, process of appointment, legal aspects of employment contract, joining formalities and induction.

Module IV **(8 Hours)**

Training and development: Meaning and significance of training and development, Process of training development, needs analysis, training design, training implementation and training evaluation. Methods of training- on the job methods and off the job methods.

Module V**(6 Hours)**

Compensation and benefits: Meaning and significance of compensation and benefits. Basic salary, allowances, incentives, perks, and benefits. Structured pay scales of the government sector and cost to company approach of the private consultant. Statutory aspects of compensation and benefits.

Module VI**(8 Hours)**

Performance management: Meaning and significance of performance management. Process of performance management. Types of performance appraisal system. Performance goal setting, performance coaching and monitoring, performance evaluation and performance feedback. Aligning performance outcome to career and succession planning.

Module VII**(8 Hours)**

Employee Relations: Meaning and significance of employee relations. Employee relation in unionized and non-unionized organizations. Handling employee grievances. Employee discipline and domestic enquiry. Legal aspects of employee relations with reference to trade union Act, industrial employment standing orders Act and Industrial Disputes Act. Statutory aspects of health, welfare and safety of employees.

Module VIII**(6 Hours)**

Career and succession planning: Meaning, significance and process of career planning. Career stages, responsibility for career planning and career anchors. Meaning, significance and process of succession planning. Continuity of leadership and its impact on business.

Practical Component:

- Expose students to simulated recruitment exercises- Job profile, personal profile, advertisements etc.
- Expose students to standard selection tests followed in various sectors.
- Exploring performance appraisal practices in various sectors.
- Exploring training and development practices.
- Exploring employee separation practices.

- Give a job analysis case and ask the students to prepare job description and job specification.
- Conduct a debate on company employees versus contract employees.
- Give a case and ask the students to prepare the recruitment advertisement for a news paper.
- Ask the students to prepare an appointment letter for the post of office manager of a company known to you.
- Give a performance goal setting case and ask the students to perform dyadic role playing.

RECOMMENDED BOOKS:

1. Essentials of Human Resource Management and Industrial Relations – P Subba Rao, HPH.
2. Human Resource Management - Seema Sanghi, Macmillan, 2011.
3. Human Resource Management - Cynthia D. Fisher, 1/e, Cengage Learning..
4. Human Resource Management - Biswajeet Pattanayak, 3/e, PHI.
5. Human Resources Management: A South Asian Perspective, Snell, Bohlander, & Vohra, Cengage Learning, 16th Rep., 2012.
6. Human Resource Management - Lawrence S. Kleeman, Biztantra , 2012.
7. A Text Book of Human Resource Management – Dwivedi R. S, Vikas Publishing House.
8. Human Resource Management – Rao V. S. P, Excel Books, 2010.

REFERENCE BOOKS:

1. Human Resource Management - John M. Ivancevich, 10/e, McGraw Hill.
2. Human Resource Management in practice - Srinivas R. Kandula, PHI, 2009
3. Managing Human Resources - Luis R Gomez-Mejia, David B. Balkin, Robert L. Cardy, 6/e, PHI, 2010.
4. Human Resource Management - David A. Decenzo, Stephen P. Robbins, 10/e, Wiley India Pvt. Ltd., 2011.
5. Personnel Management – Memoria, HPH.

SEMESTER III

STRATEGIC MANAGEMENT

Sub Code: 12MBA31	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (7 Hours)

Meaning and Nature of Strategic Management, its importance and relevance. Characteristics of Strategic Management. The Strategic Management Process. Relationship between a Company's Strategy and its Business Model.

Module II (7 Hours)

Strategy Formulation – Developing Strategic Vision and Mission for a Company – Setting Objectives – Strategic Objectives and Financial Objectives – Balanced Scorecard. Company Goals and Company Philosophy. The hierarchy of Strategic Intent – Merging the Strategic Vision, Objectives and Strategy into a Strategic Plan.

Module III (7 Hours)

Analyzing a Company's External Environment – The Strategically relevant components of a Company's External Environment – Industry Analysis – Industry Analysis – Porter's dominant economic features – Competitive Environment Analysis – Porter's Five Forces model – Industry driving forces – Key Success Factors – concept and implementation.

Module IV (6 Hours)

Analyzing a company's resources and competitive position – Analysis of a Company's present strategies – SWOT analysis – Value Chain Analysis – Benchmarking

Module V (7 Hours)

Generic Competitive Strategies – Low cost provider Strategy – Differentiation Strategy – Best cost provider Strategy – Focused Strategy – Strategic Alliances and Collaborative Partnerships – Mergers and Acquisition Strategies – Outsourcing Strategies – International Business level Strategies.

Module VI**(7 Hours)**

Business Planning in different environments – Entrepreneurial Level Business planning – Multi stage wealth creation model for entrepreneurs– Planning for large and diversified companies – brief overview of Innovation, integration, Diversification, Turnaround Strategies - GE nine cell planning grid and BCG matrix.

Module VII**(7 Hours)**

Strategy Implementation – Operationalizing strategy, Annual Objectives, Developing Functional Strategies, Developing and communicating concise policies. Institutionalizing the strategy. Strategy, Leadership and Culture. Ethical Process and Corporate Social Responsibility.

Module VIII**(8 Hours)**

Strategic Control, guiding and evaluating strategies. Establishing Strategic Controls. Operational Control Systems. Monitoring performance and evaluating deviations, challenges of Strategy Implementation. Role of Corporate Governance

Practical Components:

- Business Plan: Students should be asked to prepare a Business Plan and present it at the end of the semester. This should include the following:
 - Executive Summary
 - Overview of Business and industry analysis
 - Description of recommended strategy and justification
 - Broad functional objectives and Key Result Areas.
 - Spreadsheet with 5-year P&L, Balance Sheet, Cash Flow projections, with detailed worksheets for the revenue and expenses forecasts.
- Analysing Mission and Vision statements of a few companies and comparing them
- Applying Michael Porter's model to an industry (Retail, Telecom, Infrastructure, FMCG, Insurance, Banking etc)

- Pick a successful growing company. Do a web-search of all news related to that company over a one-year period. Analyse the news items to understand and write down the company's strategy and execution efficiency.
- Pick a company that has performed very badly compared to its competitors. Collect information on why the company failed. What were the issues in strategy and execution that were responsible for the company's failure in the market. Analyse the internal and external factors
- Map out GE 9-cell matrix and BCG matrix for some companies and compare them
- Conduct SWOT analysis of your institution and validate it by discussing with faculty
- Conduct SWOT analysis of companies around your campus by talking to them

RECOMMENDED BOOKS:

1. Crafting and Executing Strategy - Arthur A. Thompson Jr., AJ Strickland III, John E Gamble, 18/e, Tata McGraw Hill, 2012.
2. Strategic Management: Analysis, Implementation, Control – Nag A, 1/e, Vikas, 2011.
3. Strategic Management : An Integrated Approach - Charles W. L. Hill, Gareth R. Jones, Cengage Learning.
4. Business Policy and Strategic Management – Subba Rao P, HPH.
5. Strategic Management - Kachru U, Excel Books, 2009.

REFERENCE BOOKS:

1. Strategic Management: Concepts and Cases - David R ,13/e, PHI.
2. Strategic Management: Building and Sustaining Competitive Advantage- Robert A. Pitts & David Lei, 4/e, Cengage Learning.
3. Competitive Advantage - Michael E Porter, Free Press NY
4. Essentials of Strategic Management - Hunger, J. David, 5/e, Pearson.
5. Strategic Management – Saroj Datta, jaico Publishing House, 2011.
6. Business Environment for Strategic Management – Ashwathappa, HPH.
7. Contemporary Strategic Management-, Grant, 6/e, 2012, Wiley India.

OPERATIONS MANAGEMENT

Sub Code: 12MBA32	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I: Introduction to Operations Management (6 Hours)

What is operations management? Production system concept, Transformation process, difference between products and services, OM in the organizational chart, operations as service, Historical development of OM, Current issues in operations management, Operations strategy, competitive dimensions, operations strategy in manufacturing, developing manufacturing strategy, operations strategy in services

Module II: Introduction and Break even analysis (6 Hours)

Break even analysis - Break even analysis in terms of physical units, sales value, and percentage of full capacity. Break even for Multi Product situations, Capacity expansion decisions, Make or Buy decisions, Equipment Selection decisions, Production process selection decisions, Managerial uses of break even analysis, Limitations of Breakeven analysis.

Module III: Forecasting (7 Hours)

Forecasting as a planning tool, forecasting time horizon, short and long range forecasting, sources of data, types of forecasting, qualitative forecasting techniques, quantitative forecasting models - Linear regression, Moving average, Weighted moving average, Exponential smoothing, Exponential smoothing with trends, Measurement of errors, Monitoring and Controlling forecasting models.

Module IV: Facility Planning (7 Hours)

Facilities location decisions, factors affecting facility location decisions and their relative importance for different types of facilities, Facility location models.

Facility layout planning. Layout and its objectives for manufacturing operations, warehouse operations, service operations, and office operations., principles, types of plant layouts – product layout, process layout, fixed position layout, cellular manufacturing layouts, hybrid layouts, Factors influencing layout changes.

Module V: Employee Productivity (6 Hours)

Productivity and work study

Productivity and the standard of living, Productivity and the organization, productivity, variables affecting labour productivity, work content and time, Work Study and related working conditions and human factors.

Method Study

Introduction to Method Study, Data collection, recording, examining, and improving work, Material flow and material handling study, Worker flow study, Worker area study,

Work Measurement

Introduction to Work Measurement, Work sampling study, Time study and setting standards

Module VI: Capacity Planning (6 Hours)

Introduction to capacity planning – CRP, MRP, MRP 2. MPS. Managerial importance of aggregate plans, alternatives for managing demand and supply, capacity augmentation strategies. Matching demand and capacity, demand chase aggregate planning, level production aggregate planning.

Module VII: Materials Management (10 Hours)

Role of Materials Management- materials and profitability, Purchase functions, Procurement procedures including bid systems, Vendor selection and development, Vendor rating, ethics in purchasing. Roles and responsibilities of purchase professionals. Concepts of lead time, purchase requisition, purchase order, amendments, forms used and records maintained.

Inventory Management: Concepts of inventory, types, Classification, selective inventory management, ABC VED, and FSN analysis. Inventory costs, Inventory models – EOQ, safety stocks, Re order point, Quantity discounts.

Stores- types, functions, roles responsibilities, Inventory records,

Module VIII: Designing Service Delivery systems (8Hours)

Introduction, distinctive characteristics of service operations, Service/product mix, intangible nature of services, simultaneous provision and consumption of services, time dependent capacity, customer management, multi site management, factors involved in delivering services, categories of services,

service delivery systems, design, IT based and other service delivery systems design, Issues to considered in delivery system design service profiling management

The course will cover both theory and numerical problems (theory and numerical in the ratio of 40 : 60 ratio)

Practical Component

- Students have to study plant layouts used for various types of organizations like manufacturing firms, retail outlets, hospitals, hotels, etc and prepare a report.
- Students have to identify different types of services and study how their delivery systems are designed
- Students have to prepare formats of different documents used in stores, purchase and inventory management like bin card, ledger, tender, quotation, indent etc

RECOMMENDED BOOKS:

1. Production and Operations Management – Ashwathappa K, & Sridhar Bhat K,Himalaya Publications.
2. Operations Management - Norman Gaither, Greg Frazier, 9/e, Cengage learning,2011.
3. Operations Management - Richard B. Chase, 11/e, TMH.
4. Operations Management-Terry Hill, Second edition, Palgrave Macmilan
5. Operations Management: Along the supply chain - Russel and Taylor, 6/e, Wiley India,2009.
6. Introduction to Operations and Supply Chain Management - Cecil Bozarth, Pearson,2011.
7. Production and Operations Management - Everette E. Adam, Jr, and Ronald J. Ebert,5/e, PHI, 2010.
8. Operations Management, Mahadevan, 2/e Pearson

REFERENCE BOOKS:

1. Production and Operations Management: Text and cases - Upendra kachru, 1/e, Excel Books.
2. Operations Now - Byron J. Finch, 3/e, Tata Mc-GrawHill, 2008.

3. Production and Operations management - Ajay K. Garg, Tata McGraw Hill, 2012.
4. Production and Operations Management – Chunawalla, Himalaya Publications.
5. Operations Management - William J. Stevenson, 9/e, The McGraw Hill, 2011.

12. Financial Management – Srivastava R. M, HPH.

INVESTMENT MANAGEMENT

Sub Code: 12MBAFM322/ 12MBABI332	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I Theory (6 Hours)
Investment: Attributes, Economic vs. Financial Investment, Investment and speculation, Features of a good investment, Investment Process.
Financial Instruments: Money Market Instruments, Capital Market Instruments, Derivatives.

Module II Theory (6 Hours)
Securities Market: Primary Market - Factors to be considered to enter the primary market, Modes of raising funds, Issue Management-Pre and Post Issue Management. Secondary Market- Major Players in the secondary market, Functioning of Stock Exchanges, Trading and Settlement Procedures, Leading Stock Exchanges in India.
Stock Market Indicators- Types of stock market Indices, Indices of Indian Stock Exchanges.
Mutual Funds: Functions of Investment companies, Classification of Investment companies, Mutual Fund types, Performance of Mutual Funds-NAV.

Module III Theory & Problems (8 Hours)
Risk and Return Concepts: Concept of Risk, Types of Risk- Systematic risk, Unsystematic risk, Calculation of Risk and returns.
Portfolio Risk and Return: Expected returns of a portfolio, Calculation of Portfolio Risk and Return, Portfolio with 2 assets, Portfolio with more than 2 assets.

Module IV Theory & Problems (8 Hours)
Valuation of securities: Bond- Bond features, Types of Bonds, Determinants of interest rates, Bond Management Strategies, Bond Valuation, Bond Duration.
Preference Shares- Concept, Features, Yields.
Equity shares- Concept, Valuation, Dividend Valuation models.

Module V (10 Hours)
Macro-Economic and Industry Analysis: Fundamental analysis-EIC Frame Work, Global Economy, Domestic Economy, Business Cycles, Industry Analysis.
Company Analysis- Financial Statement Analysis, Ratio Analysis.
Technical Analysis – Concept, Theories- Dow Theory, Eliot wave theory. Charts-Types, Trend and Trend Reversal Patterns. Mathematical Indicators – Moving averages, ROC, RSI, Market Indicators. (Problems in company analysis & Technical analysis)

Module VI Theory & Problems (8 Hours)

Modern Portfolio Theory: Markowitz Model -Portfolio Selection, Opportunity set, Efficient Frontier.

Capital Asset pricing model: Basic Assumptions, CAPM Equation, Security Market line, Extension of Capital Asset pricing Model - Capital market line, SML VS CML.

Arbitrage Pricing Theory: Arbitrage, Equation, Assumption, Equilibrium, APT and CAPM.

Module VII Theory (4 Hours).

Market Efficiency and Behavioral Finance: Random walk and Efficient Market Hypothesis, Forms of Market Efficiency, Empirical test for different forms of market efficiency. Behavioral Finance – Interpretation, Biases and critiques.

Module VIII Theory & Problems (6 Hours)

Portfolio Management: Diversification- Investment objectives, Risk Assessment, Selection of asset mix, Risk, Return and benefits from diversification.

Portfolio Management Strategies: Active and Passive Portfolio Management strategy.

Portfolio Revision: Portfolio Revision Strategies – Objectives, Performance plans.

Portfolio Evaluation: Holding periods returns, Measures of portfolio performance.

(QUESTION PAPER- 50% Problems, 50% Theory)

Practical Components:

- A Student is expected to trade in stocks. It involves an investment of a virtual amount of Rs.10 lakhs in a diversified portfolio and manage the portfolio. At the end of the Semester the Net worth is to be assessed and marks may be given (to beat an index).
- Student has to Understand the functioning of stock exchange.
- Students can Study of the current Bond Issues in the market and present the same in the class.
- Students can do 1.Macro Economic Analysis for the Indian economy. 2. Industry Analysis for Specific Sectors. 3. Company Analysis for select companies.4.Practice Technical Analysis
- Students can study the mutual funds schemes available in the market and do their Performance evaluation.

RECOMMENDED BOOKS:

1. Investment Analysis and Portfolio management – Prasanna Chandra, 3/e, TMH, 2010.
2. Security Analysis & Portfolio Management – Punithavathy Pandian, 2/e, Vikas, 2005.
3. Investments – ZviBodie, Kane, Marcus & Mohanty, 8/e, TMH, 2010.
4. Investment Management – Bhalla V. K, 17/e, S.Chand, 2011.

COST MANAGEMENT

Sub Code: 12MBAFM324	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	
Ratio of theory to problems= 40:60	

Module I

(5 Hours)

Introduction to Cost Management- Cost Accounting to Cost Management- Cost Management Tools- A Strategic View to Cost Management.

Module II (10 Hours)
Overheads, Classification and Collection, Difference between Cost Allocation and Cost Apportionment, (Full fledged Problems on Primary and secondary distribution, Simultaneous equations, Absorption of Overhead, Theory on Under and Over absorption of Overhead

Module III (10 Hours)

MARGINAL COSTING – Nature and Scope- Applications-Break even charts and Point, Decision Making (all types with full problems)Differential Cost Analysis, Advantages and Disadvantages of Marginal Costing.

Module IV (8 Hours)

Budgetary Control :- Objectives of Budgetary control, Functional Budgets, Master Budgets, Key Factor Problems on Production Budgets and Flexible Budgets.

Standard Costing :- Comparison with Budgetary control, analysis of Variances, Simple Problems on Material and Labour variances only .

Module V (8 Hours)

Demerits of Traditional Costing, Activity Based Costing, Cost Drivers, Cost Analysis Under ABC (Unit level, Batch Level and Product Sustaining Activities), Benefits and weaknesses of ABC, Simple Problems under ABC.

Module VI (5 Hours)

Cost Audit,-objectives,, Advantages, Areas and Scope of Cost Audit , Cost Audit in India --Practical—Read the contents of the report of Cost Audit and the annexure to the Cost Audit report.

Management Audit- Aims and the objectives, Scope of Management Audit.

Module VII (5 Hours)

Reporting to Management – Purpose of reporting-Requisites of a good report,, Classifications of Report, Segment reporting, Applicability of Accounting Standard 17, Objectives, Users of Segment reporting.

Module VIII**(5 Hours)**

Cost Reduction, and Cost Control, Target Costing – its Principles, Balanced Scorecard as a performance measure- Features- Purpose, Reasons for use of Balanced scorecard.

Proportion of problems to theory 50%

Practical components:

- Students can taken up a product and get details about the actual cost of raw material, wages and other cost and prepare a cost statement. Standard cost of each component has to be obtained and the variance can be calculated to find the efficiency of Purchase, Operations and Production in charge.

RECOMMENDED BOOKS:

1. Cost Accounting :Theory and Practice - Bhabatosh Banerjee, 12/e, PHI.
2. A Text book of Cost and Management Accounting – Arora M. N, 11/e, Vikas.
3. Financial Statement Analysis and Reporting - Mohana Rao P, PHI, 2011.

4. Managerial Accounting- James Jiambalvo, 2/e, Wiley India Pvt. Ltd.
5. Management Accounting - Khan M. Y and Jain P. K, 6/e, McGraw Hill, 2012.
6. Advanced Cost Accounting – Madegowda J, HPH.
7. Cost and Management Accounting – Arora M. N, 3/e, HPH.

SEMESTER III: BANKING AND INSURANCE AREA

PRINCIPLES AND PRACTICE OF BANKING AND INSURANCE

Sub Code: 12MBABI331	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (6 Hours)
Banking system and structure in India- Types of banks in operation – Role of Reserve Bank and GOI as regulator of banking system – Provisions of Banking Regulation Act & Reserve Bank of India Act

Module II (9 Hours)
The terms banker and customer – Types of relationship between banker and customer – Bankers obligations to customers – Right of lien, setoff, appropriation– Provisions of Negotiable Instrument Act, 1881 – Bankers legal duty of disclosure and related matters

Module III (4 Hours)
Customers` accounts with banks – Opening- operation – KYC norms and operation – Types of accounts and customers – Nomination – Settlement of death claims

Module IV (6 Hours)
Banking Technology- Home banking – ATMs- Internet banking – Mobile banking- Core banking solutions – Debit, Credit, and Smart cards – EFD – RTGS

Module V (4 Hours)
International banking – Exchange rates – Documentary letter of credit – financing exporters and importers – ECGC Policies and guarantees

Module VI (6 Hours)
Banker as lender – Types of loans – Overdraft facilities – Discounting of bills – Financing book dates and supply bills- Charging of Security bills-pledge – mortgage – assignment.

Module VII (9 Hours)

Introduction to Insurance – Insurable Interest- Human Life value Concept- Elements of Insurance Risk – Principles of indemnity – Principles of Utmost good faith- Principle of Subrogation- Insurable interest – Proximate Cause- Players in Life and Non-Life Insurance sector – Insurance documents – Procedure for issue – Alterations- Duplicate policy – Nomination- Assignment – Lapse and revivals- Assignment – Foreclosure

Module VIII (12 Hours)

Types of Insurance – Life Insurance and General Insurance Products including unit linked plans – Re-Insurance – Nature of Re-Insurance risk – Types of Re -Insurance – Reinsurance Agreements -Legal framework of life and general insurance – Underwriting (Process and Principles) – underwriting in Life insurance – Underwriting in Nonlife insurance

Bancassurance- concepts – critical issues – functional aspects – Indian Scenario – Future Prospects –Insurance Accounting – Financial Analysis and valuations- Solvency and performance measures.

Practical Components:

- Students can Understand Universal Banking & Cross Selling concepts adopted by banks
- Students can Understand Customer Profiling aspects adopted by banks
- Students can Understand Advertisement & Publicity efforts done by banks using ATMs (making a checklist of the publicity material found in an ATM – preferably in a private bank ATM)
- Study an issued insurance policy
- List out all the insurance companies operating in India in both PSU & Private space and submit the report on the same
- List out the names of banks that have tie-ups with various insurance companies (for example – Karnataka Bank tie-up with Met Life Insurance Co.) and submit the report on the same
- Write about Third Party Administrator (TPA) in a mediclaim policy

RECOMMENDED BOOKS:

1. Fundamentals of Insurance –Gupta P. K, Himalaya Publishing House, 2011
2. Principles and practices of Banking - IIBF, 2/e, Macmillan, New Delhi.

3. Elements of Banking & Insurance – Jyothsna Sethi & Nishwan Bhatia, PHI, 2009.
4. Bank Management - Koch W, Timothy, & S. Scott, Cengage Learning, New Delhi.
5. Banking and Insurance, Mohapatra and Acharya, Pearson, 2012.

REFERENCE BOOKS:

1. Insurance & Risk management - Gupta P. K, Himalaya Publishing House, 2011.
2. Managing Life Insurance – Shashidharan K Kutty- Prentice Hall of India.
3. Banking Theory, Law and practice - Sunderaram and Varshney, Sultan Chand & Sons, New Delhi.
4. Banking and Financial System - Prasad K, Nirmala, Chandradas J. Himalaya Publishing House, Mumbai.
5. Management of Banking and Insurance – Sondhi N. K, Vrinda Publications.
6. Banking and Insurance – Aggarwal O. P, HPH.

INVESTMENT MANAGEMENT

Sub Code: 12MBABI332/ 12MBAFM322	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I -Theory (6 Hours)

Investment: Attributes, Economic vs. Financial Investment, Investment and speculation, Features of a good investment, Investment Process.
 Financial Instruments: Money Market Instruments, Capital Market Instruments, Derivatives.

Module II -Theory (6 Hours)

Securities Market: Primary Market - Factors to be considered to enter the primary market, Modes of raising funds, Issue Management-Pre and Post Issue Management. 5. Security Analysis & Portfolio Management – Sayesh N. Bhat , 1/e, Biztantra, 2011.
6. Security Analysis & Portfolio Management– DhaneshKhatri , Macmillan , 1/e, 2010.
7. Security Analysis & Portfolio Management – Avadhani V. A, HPH.

BANKING & FINANCIAL SERVICES

Sub Code: 12MBABI333/12MBAFM323	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I

(8 Hours)

Banking: Meaning and Definition, Evolution of Indian Banks.

Types of banks -Public Sector, Regional Banks, Performance of Public Sector banks, Private Sector Banks.

Commercial banking: Structure, Functions - Primary & secondary function, Role of commercial banks in socio economic development, Services rendered. Credit creation and Deployment of Funds. Bank Clearing House: Clearing Procedure.

Hi-tech Banking: Modern technology in Banking, Core banking, E Banking, ATM, EFTS, RTGS, Internet Banking, Mobile Banking.

Module II (8 Hours)
Bank and Customer: Relationship between the Banker and the Customer. Types of accounts and Deposits, Forms of lending. Bank`s obligation to customers. Documents & Procedure for loan.
Asset Liability Management in banks: Components of Liabilities and Components of Asstes, Significance of Asset Liability management, Purpose and objectives. ALM as co ordinated Balance Sheet management.
Banking Instruments- Cheque, bank draft, e-cheque, Travellers cheque, credit card, cheque cards, Debit card.
Concepts of Universal Banking

Module III (6 Hours)
International Banking: Exchange rates and Forex Business, Correspondent banking and NRI Accounts, Letters of Credit, Foreign currency Loans, Facilities for Exporters and Importers, Role of ECGC, RBI and EXIM Bank.

Module IV (6 Hours)
Merchant banking: Origin, Services rendered by Merchant bankers, Functions of Lead managers, SEBI Guidelines for Merchant bankers.
Non-Banking Finance Companies: Functions, RBI Guidelines, Prudential Norms.

Module V (8 Hours)
Money Market: Structure – Organised and Un organized Market, Call Money Market, Bills market, Market for Government Securities.
Money market Instruments: Treasury Bills, Repurchase Agreements / Reverse Repo, Commercial bills, Commercial papers, Certificate of deposit.

Module VI (8 Hours)
Housing Finance: Types, Institutions and banks offering Housing Finance, Procedure and Interest rates. Income Tax Implication.
Leasing: Concept, Steps in Leasing Transactions, Types of Lease, Legal frameworks, Advantages and dis advantages of Leasing, Contents of a Lease Agreement, Matters on Depreciation and Tax, Problems in leasing, Factors influencing Buy or Borrow or Lease Decision.
Hire Purchasing: Concepts and features, Hire Purchase Agreement, Comparison of Hire Purchase with Credit sale, Installment sale and Leasing. Banks and Hire Purchase. Reverse mortgage.
Problems related to outright purchase, Hire purchase and Leasing.

Module VII (6 Hours)
Credit rating: Definition and meaning, Process of credit rating of financial instruments, Rating methodology, Rating agencies, Rating symbols of

different companies. Securitization of debt: Meaning, Features, Special Purpose Vehicle, Types of securitisable assets, Benefits of Securitization, Issues in Securitization.

Factoring: Meaning, Definition, Functions, Types, Cost of Factoring. Forfeiting.

Module VIII

(6 Hours)

Venture Capital: Concept, features, Origin in India and the current Indian Scenario.

Depository System: Objectives, activities, interacting systems, role of depositories and their services, Advantages of depository system -NSDL and CDSL. The process of clearing and settlement through Depositories, Depository Participants.

Practical Components:

- Students can study the procedure for opening a Savings account and a Current Account.
- Students can understand the criteria to be noted to Identify a true currency note.
- How to write and present a cheque.
- Students can study the Procedure to open a Demat account and an Online Trading Account.
- Students can study the Calculation of EMI.
- Students can study functioning of net Banking
- Students can study the Credit card and debit card procedure and account statements.

(QUESTION PAPER: Full theory. Case study-Problem on leasing, hire purchase, outright purchase.)

RECOMMENDED BOOKS:

1. Banking and Finance: Theory and Practice —Clifford Gomez, 1/e, PHI, 2011.
2. Bank Financial Management-Indian Institute of Banking and Finance, 1/e, Macmillan, 2010.
3. Management of Banking and financial services – Padmalatha & Justin Paul, 2/e, Pearson, 2010.
4. Financial Markets and Services – Gordon & Natarajan, 7/e, Himalaya publishing, 2011.

BANKING AND INSURANCE PRODUCTS

Sub Code: 12MBABI334	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (5 Hours)
Deposit Products – Savings Bank – Current Account – Demand deposits – Term Deposits – Concepts of low cost deposits – Certificate of deposit – Bulk deposit.

Module II (7 Hours)
Remittance Products: Demand draft – Travelers’ Cheques – Gift Cheque – Mail Transfer – Telegraphic Transfer – Multicity cheques – EFD – RTGS

Module III (9 Hours)
IT Products: MICR Cheques – Channel Banking – Core Banking – Internet Banking Mobile Banking – ATMS – Debit card – Credit card – RTGS – EFD.

Module IV (9 Hours)
Loan Products: Short term loans- Long term loans – Consumer loans- Education loans – Housing loans – Business loans – Farm loans- Kisan Credit cards – Corporate loans – Syndication – Micro Finance.

Module V (10 Hours)
Life Insurance Products: Types of insurance policies -Features of term insurance – Features of Endowment Assurance – Role of Term and Endowment in product designing – Types of Life Insurance policies – Annuity & pension policies – Whole life policies – Money back policies – Market-Linked Insurance products, Riders, Pension Products, Marketing of Life Insurance

Module VI (4 Hours)
Health Insurance Products: Individual Medical expense Insurance – Long term care coverage – Disability Income Insurance – Mediclaim Policy – Group Mediclaim Policy – Personal Accident policy

Module VII (6 Hours)
Fire Insurance – Fundamental principles – Fire insurance Contracts - Proposals Fire insurance proposals – Special Coverages –Fire Insurance claims
Motor Vehicles Insurance: Need – Types – Factors to be considered for premium fixing –Motor Insurance claims

Module VIII (6 Hours)
Miscellaneous Products: Burglary – Jeweller’s Block Insurance – Baggage Insurance – Banker’s Indemnity Insurance – Aviation Insurance – Fidelity guarantee insurance – Public liability insurance.

Practical Components:

- Students can prepare a matrix on the risk cover required by an individual under Life Insurance product
- Students can prepare a matrix on the health cover (mediclaim) insurance required by a family under general insurance product
- Students can analyse and report “During a life time what all insurance products that an individual under life & non-life insurance would they avail”

RECOMMENDED BOOKS:

Banking

1. Principles and practices of Banking – IIBF, 2/e, Macmillan, 2011.
2. Elements of Banking & Insurance - Jyothsna Sethi & Nishwan Bhatia Prentice Hall of India, 2009.

Insurance

1. Fundamentals of Insurance - Gupta, P K, 2/e, Himalaya Publishing House, 2011.
2. Fundamentals of Insurance – Kaninika Mishra, Prentice Hall of India, 2010.
3. Insurance Management: Text & Cases - Sahoo, S C and Das S C – Himalaya Publishing House, 2011.
4. Principle and Practice of insurance - Periswamy - Himalaya publishing House, 2011.
5. Insurance: Theory & Practice - Nalini Tripathi & Prabir Pal, PHI, 2010.
6. Insurance Management - Ganguly, Anand, New Age International, New Delhi.

SEMESTER III: HUMAN RESOURCES AREA

RECRUITMENT AND SELECTION

Sub Code: 12MBAHR341	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I **(5 Hours)**

Job analysis: Meaning and significance, approaches in job analysis, methods of data collection and analysis. Job description and job specification. Contents of job description and job specification.

Module II **(5 Hours)**

Legal Aspects and Organization Policy: Nationality, gender, age, job reservation for weaker sections of the society, equal opportunity employment, employment of foreign workers and visa restrictions, agreement with employee unions, organizational policy on hiring.

Practical Component : 01 Hr/ Week	

Module I (5 Hours)

Introduction to Compensation and Benefits: Meaning and Significance, purpose, components, types. Piece rated, time rated and skills based approaches. Daily, weekly and monthly payments. Characteristics of best compensation plans. Fixed pay and variable pay, Understanding the terminologies- compensation, benefit, salary, pay, basic pay, wage, allowance, incentive, commission, reward, recognition, perquisite, fringe benefit, , subsistence allowance, reimbursement, consolidated pay, stipend, service charges, pay scales, severance pay, terminal benefit, bonus, joining bonus, retention bonus, relocation pay, increment, and stagnation increment. Workers compensation, managerial compensation and executive compensation.

Module II (5 Hours)

Economic theories of wages: Importance of economic theories in the understanding of compensation and benefits, the evolution of just wage doctrine of Thomas Aquinas, subsistence wage theory of Adam Smith and David Ricardo, wage fund theory of John Stuart Mill and Nassau Senior, marginal productivity theory of Alfred Marshal and John Bates Clark, bargaining theory by Arthur Cecil Pigou, residual claimant theory by Francis A. Walker, surplus value theory by Carl Marx, and other theories.

Module III (6 Hours)
Principles of compensation determination: Meaning and Significance compensation principles. Equity (internal and external), bargaining ability of employee unions and individual employees, statutory requirements, ability to pay, worth of the job, demand-supply conditions in job market. Job evaluation and salary survey

Module IV (8 Hours)
Cost to Company (CTC) Method: Meaning and significance, advantages and limitations, CTC, Gross salary and Net salary. Components of CTC- Monthly, quarterly, annual and one time components. Advance components and deferred components. Attendance linked components, seniority linked components, and performance linked components. Paid leave and holidays, conveyance, leave travel concession, food coupons, housing, Benefits, perquisites and statutory components.

Module V (14 Hours)
Benefits and incentives: Meaning, significance and characteristics, basis for benefits payment, statutory benefits- employees state insurance, provident fund, gratuity, unemployment benefits, skills up gradation benefits, pension, employees compensation and Maternity benefit, non statutory benefits- insurance against injury, illness, disability, fatal accident and death. Meaning and significance of incentives, basis for incentives payment, purpose and types- regular, periodical and occasional incentives, cash incentives and incentives as fringe benefits. Stock options.

Module VI (6 Hours)
Executive compensation: Meaning and significance of executive compensation, unique features of executive compensation, fixed components and variable components, perquisites and benefits basis for determining executive compensation, statutory upper limit on executive compensation as per Companies Act 1956, stock options, joining bonus, retention bonus and severance pay.

Module VII (6 Hours)
Law Relating to compensation: Payment of wages Act 1936, Minimum wages Act 1948, Payment of Bonus Act 1965, and Equal Remuneration Act 1976.

Module VIII (6 Hours)
Taxation on salary and benefits: Meaning and significance of taxation on salary, Professional tax of state government on salaries people, income tax of

central government on salaries people. Components of salary and benefits which are exempted from payment of tax. Approaches to create salary structures to minimize the tax liability. Procedure for deduction and remittance of taxes. Responsibilities of employer and employee in complying with taxation law.

Practical components:

- Students have prepare questionnaire for conducting wage survey and carry out wage survey for any selected sector and prepare a report for the same.
- Students are expected to conduct a survey regarding the effective utilization of resources within the campus and find out the flaws in the existing compensation system.
- Give a wage determination case and ask the students to suggest solution.
- Give a cost to company case and ask the students to role play for negotiating with a prospective job applicant to distribute the CTC under various components.
- Give a case to Identify and prepare the, notices to be displayed, returns to be submitted and the registers to be maintained as per the above legislations.

RECOMMENDED BOOKS:

1. Compensation- Milkovich G. T, Newman J .M, & Venkata Ratnam C. S., McGrawhill Irwin, 2009.
2. Compensation Management - Deb Tapomoy, Excel Books, 2009.
3. Employee Reward - Michael Armstrong, Universities Press, 2007.

REFERENCE BOOKS:

1. Strategic compensation - Martocchio J. J. Pearson Education, 2004.
2. Compensation - Gerhart B & Rynes S L, Sage Publishers, 2003.
3. Understanding Wages and Compensation Management – Sarma A. M, HPH.

LEARNING AND DEVELOPMENT

Sub Code: 12MBAHR343	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (5 Hours)
Introduction to training and development: Meaning and significance, theories of adult learning, pedagogy and andragogy, classification of learning capabilities, Bloom's taxonomy, Learning enhancement factors, facilitation theory, nine events of instruction, different approaches to adult learning

Module II (5 Hours)
Training Needs Analysis : Meaning and significance of training needs, types of needs, components of needs, data collection, analysis and interpretation.

Module III (5 Hours)
Training Design and Development : Meaning and significance, principles of training design, design process, identifying the training objectives, determining structure, content, duration, method, learning activities, follow up activities and lesson plan

Module IV (5 Hours)
Training implementation: Meaning and significance of implementation, making or buying decision, selecting the training provider, implementation of in-house programme, blocking the dates, mobilizing the resources, logistic requirements, boarding and lodging facilities, identification of trainers, managing contingences, accommodating the changes.

Module V (6 Hours)
Training Evaluation: Meaning and significance of training evaluation, Donald Kirkpatrick's Evaluation Model, Return on investment in Training, data collection for training evaluation, designs of training evaluation.

Module VI (10 Hours)
Teaching and facilitation skills: Competencies for trainers, personal conduct, social practices and subject expertise, handling questions, feedback skills, motivating the trainees, managing time, maintaining decorum, drawing attention, handling post lunch session, frames of reference, communication skills, eye contact, facial expression, gestures, distance zones, presentation and facilitation skills.

Module VII (8 Hours)
On the job methods: Meaning and significance of on the job training(OJT), historical evolution, Allen's four step model, Kane's seven step model, five

needs of supervisors, advantages and limitations of OJT, skills of OJT trainers, OJT process, OJT methods and OJT effectiveness.

Module VIII

(12 Hours)

Other methods: Classroom methods: Meaning and significance of classroom training, advantages and limitations, bringing life to classroom, fundamentals of classroom effectiveness, types of classrooms, methods of classroom learning, technology based classrooms, interaction techniques. **E-Learning methods:** Meaning and significance of e learning, process of e-learning, types of e-learning, advantages and limitations of e-learning. **Outward bound methods:** Meaning and significance of outward bound learning (OBL) methods, process of OBL, risk, safety and ethical issues.

Practical component:

- Students can prepare skill matrix for few selected jobs and identify the types of training needed to impart those skills
- Students can be given case studies/ role plays to understand how these methodologies can be effectively used for training
- Students are expected to conduct a mock training session including need identification and a set of students to evaluate the effectiveness of the same.
- Give a training needs analysis case and ask the students to find out the training needs.
- Ask the individual students to play a role for about 15 minutes to show their teaching and facilitation skills as trainers.

RECOMMENDED BOOKS:

1. Training and Development, Pandu Naik G, Excel Books, 2007.
2. Employee Training & Development – Noe A. Raymond, McGraw Hill, 2008.
3. Training and Development - Janakiram B, Biztantra, 2007.

REFERENCE BOOKS:

1. Effective training Systems, strategies and practices – Blanchard, 2/e, Pearson education.
2. Training for development– Rolf Lynton & Udai Pareek, Sage Publications, 2011.
3. Effective HR Training Development Strategy – Ratan Reddy, HPH, 2005.
4. Training in organizations - Goldstein, 4/e, Cengage learning.

LABOUR LAW AND EMPLOYEE RELATIONS

Sub Code: 12MBAHR344	IA Marks	: 50
No.of Lecture Hrs/week : 04	Exam Hrs.	: 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks	: 100
Practical Component : 01 Hr/ Week		

Module I **(4 Hours)**
Evolution of Labour Law and Industrial Relation: History of labour movement in India, Constitutional provisions of labour law, Labour Commissions and their recommendations.

Module II **(4 Hours)**
International Labour Organization and its role, tripartite approach to industrial relation- Employee unions, Employer unions and Labour department of the government.

Module III **(4 Hours)**
Collective bargaining and negotiation: Collective bargaining and negotiation of service conditions, Non unionized organizations and industrial relation with non unionized workers.

Module IV **(10 Hours)**
Law Relating to Service conditions: Factories Act 1948, Karnataka Shops and Commercial Establishment Act 1961, Contract Labour (Regulation & Abolition) Act 1970, Apprentice Act 1961.

Module V **(10 Hours)**
Law Relating to Social Security Benefits: Employees State Insurance Act 1948, Employees Compensation Act 1923, Maternity Benefit Act 1961, Employees Provident Fund and Miscellaneous Provisions Act 1952, Payment of Gratuity Act 1972,

Module VI **(10 Hours)**
Law Relating to Industrial Relation: Trade Union Act 1926, Industrial Employment (Standing Orders Act) 1946, Industrial Disputes Act 1947.

Module VII **(10 Hours)**
Law and procedure for employee discipline: Meaning and significance of employee discipline, service rules and standing orders, misconduct, suspension and subsistence allowance, show cause notice, investigation, enquiry and charge sheet, principles of natural justice and enquiry procedure.

Sections 11A, 17B, 33 and schedule 5 of Industrial Disputes Act and Section 10A of Industrial Employment standing orders Act.

Module VIII

(4 Hours)

Prevention of Sexual harassment at workplace: Meaning and significance, Supreme Court verdict in Vishaka Versus State of Rajasthan case, employer responsibility to create harassment free work place, training employees for good behavior, modifying service rules to include sexual harassment as misconduct. Punishing the perpetrator and protecting the victim.

Practical Components:

- Arrange a debate on constitutional provisions of labour law.
- Give a case of collective bargaining and ask the students to role play.
- Give an industrial disputes case pending before conciliation officer and ask the students to prepare the written reply of the employer for the said case,
- Arrange a debate in the classroom about rights and duties of trade union of workers. Ask the students to draft a standing order for certification for a newly started garments factory employing 300 workers.
- Give a list of allegations reported against an employee of an organization and ask the students to draft the charge sheet.
- Ask the students to prepare a policy document to prevent sexual harassment at workplace.

RECOMMENDED BOOKS:

1. Relevant Acts with Rules – Reputed Law book publishers.
2. Industrial Relations, Trade Unions and Labour Legislation - Sinha P R N, Sinha I. B and Shekhar S. P, Pearson education, 2010.
3. Industrial Relations and Labour Laws - Srivastava S. C, 5/e, Vikas Publishing, 2010.
4. Industrial Relations and Labour Law - Singh B.D, Excel Books, 2011.

REFERENCE BOOKS:

1. Industrial and Labour Legislation - Porwal L. M. and Sanjeev Kumar, Vrinda Publications, 2010.
2. Industrial Relations - Ratna Sen, Macmillan Publishers, 2010.
3. Industrial Jurisprudence and Labour Legislation, Sarma A. M, 5/e, HPH.

SEMESTER III: CREATIVE MANAGEMENT AREA

IDEATION, BRANDS AND BUSINESS

Sub Code: 12MBACM351	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (6 Hours)

Definition of an Idea; what is the construct of an Idea; how best to identify & describe an Idea; what makes an Idea sustainable & growing; basic principles of Ideation; recognizing & nurturing Ideas; impact of culture, history, language & folklore on Ideas, The Idea in Art, Ideas in Nature, Ideas in Science, What are the Best Ideas of the 20th Century? Articulating the problem, How to look at ideas as problem solvers?

Module II (6 Hours)

Ideas across domains like FMCG, durables, services, corporate & individual branding; translation of the principles across B2C, B2B, G2C & P2P; implications in non-traditional marketing fields like charity, spirituality & politics; do's & don'ts of Ideation across all situations, The Origin of the Word – Brand, Difference between a Product and a Brand, The Connection between a Brand and its Advertising, Brand Ideas as Owned or Seen by Consumers.

Module III (6 Hours)

What is an Advertising Positioning? How to write a Creative Brief? The need to articulate the Idea and how to ensure its expression across multi-media? Carrying an Idea to flawless execution; selling an Idea – Conflict Resolution and the Art of Compromise, Wit in Advertising and Design, Shades of Humour and Indian and Global Culture.

Module IV (8 Hours)

Implications across different touch points & tasks & budgets; execution mandatories; techniques for Idea generation & evaluation; Mind Mapping, Brainstorming, Random Association, Problem Reversal, Forced Analogy, Assumption Smashing, Attribute Listing, Lateral Thinking, 100 Boxes, Hive Mind; Six Thinking Hats; Branding touch point # 1---Brand name & its packaging & its logo & its colors & its font.

Module V**(8 Hours)**

Branding touch point---The channel & placement & retail; Modern trade versus kirana; The role of the channel and brand pull; Monitoring and Managing Channels; Branding touch point # 3---The Strategic role of Pricing; Price and Consumer profile and Brand image. Branding touch point # 4---Brand promotion including PR. Brand Positioning, Brand Positioning Process, Product Positioning Process, Brand Positioning and the Consumer Mind

Module VI**(6 Hours)**

The role of media mix and tapping the inherent synergy; The ROI of promotions; The inter-play between Marketing & Sales & Distribution & After-sale service & Operations & manufacturing; The Role of New Media in Brand Promotion, Direct Marketing, Interactive Marketing, Personal Communication; Market Entry Method, Licensing and Franchising, and Contracting, Non-profit Marketing

Module VII**(8 Hours)**

Strategic Brand Management; Brand portfolios; Brand extensions; Sub-brands; Mother brands; Umbrella brands; Brand Integration Strategy; Brand folk-lore & Myths & Icons; Brand disasters & Revitalizing & refreshing brands; The emerging philosophy of Brand influence and Brand Advocacy; How can brands have meaningful & exciting & mutually advantageous conversations with their current & prospective consumers?

Module VIII**(8 Hours)**

The impact of technology & Internet & social networks; New media and brand-consumer relationships; Promiscuity on the rise---brand switch at the click of the mouse; The resulting lowering of exit barriers & vanishing of geographic borders; Global and Local Brand Management; The Impact of Technology and Internet and Social Networks; Search Engines Impact and Perception of Brands; Blog Impact on Brands.

Practical Components:

- Look for 5 unique & highly persuasive ideas around you and imagine what would have been the underlying consumer need that these ideas seek to solve.

- Survey 6 service brands---3 successful & 3 failures and identify through a field study among their users the reasons for their success & failure.
- Write an essay on the similarities & differences among brands & their ideas in rural vs urban markets.
- Do a secondary research about the global & Indian experiences of the impact of ideas on men vs. women.
- Identify 5 recent advertising campaigns and articulate what would have been their tasks, the insights, the ideas & their creative expression along with the choice of media.

RECOMMENDED BOOKS:

1. How to have Kick-ass Ideas - Chris Barez- Brown, Sky Horse Publishing, 2008.
2. A Whack on the Side of the Head, Creative Think - Roger Van Oech 1/e, 1973.
3. Lateral Thinking - Edward de Bono, Harper Colophon, 1973.
4. Six Thinking Hats - Edward de Bono, Penguin India, 2010.
5. How to Have Creative Ideas - Edward de Bono, Vermilion, 2007.
6. A Technique for Producing Ideas - James Webb Young, National Textbook Co.

REFERENCE BOOKS:

1. The Riddle - Andrew Razeghi, Times Books, Bennett Coleman, 2008.
2. A Terrible Beauty: The People and Ideas that Shaped the Modern Mind - A History - Peter Watson, Weidenfeld & Nicolson History, 2001.
3. How to think Like Leonardo da Vinci, Gelb, Michael J, Harper, 2008.
4. Mind Mapping, Plume , 1996
5. Teaching Thinking - Edward de Bono, Penguin, 1976.
6. Textbook of Wisdom - Edward de Bono, Penguin, 1994.
7. Intelligence is Not Enough - Edward de Bono , Westland, 2007.
8. The Handbook of New Media - Leah A. Lievrouw, Sonia Livingstone (ed.), SAGE, 2002
9. Understanding New Media: Extending Marshall McLuhan, Logan, Robert Peter Lang Publishing. 2010.
10. The New Media Reader - Wardrip-Fruin, Noah and Nick Montfort, ed. The MIT Press. 2003.
11. Media Society: Industries, Images and Audiences, Croteau and Hoynes. 3/e, Pine Forge Press: Thousand Oakes. 2003.

ENGAGEMENT PLANNING AND NEW MEDIA

Sub Code: 12MBACM352	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (8 Hours)

Introduction to basic concepts like media reach, frequency; effective reach & OTS; GRPs & CPRP; Relationship between Media and Audience; Offering Choices---Media and Advocacy; Media and Propaganda; Public Relations & Media; Types of Audiences; Effects of Media; Effects of Media in Day-to-Day Life; Media's Effects on Attitudes and Opinions.

Module II (8 Hours)

The concepts of media exposure; media mappings; media mix; media apertures; media intensity & media stickiness; Learning from Media, Digital Media Effects; Convergence of Media; Offering Choices---Media and Advocacy, Media and Propaganda, Public Relations & Media.

Module III (6 Hours)

Similarities & differences between traditional & new media; the implications for brand building; innovations in planning, budgeting, executing, reporting & evaluating multi media campaigns; Changing Patterns of Media Consumption Habits

Module IV (4 Hours)

New media & consumers; the shifting nature of the relationships between them; push vs pull media; role of technology in these.

Module V (8 Hours)

What is truly inter-active media Difference between media in the traditional sense & new thinking in terms of engagement; Integrated Media; What Makes Integration Successful? - Fit, focus, fame, Permission Marketing, Reality Marketing, Experiential Marketing, Branded Content and Sponsorship – What's The Difference?

Module VI (6 Hours)

media as interface & channel of brand relationship building; opportunities &

challenges in case of traditional vs new media; strategic implications for brand building; Fragmentation of Media and Implications for Media Planning and Buying

Module VII

(8 Hours)

User generated content; Implications of User Generated Content; media neutrality; media credibility; source authority; blogs vs twitter vs face book vs google vs yahoo; Punk Marketing, Word of Mouth and Subversive User Content, Cross-platform User Content.

Module VIII

(8 Hours)

Types of Media Bias, Media Neutrality in India, Commercialization/ Commodification of Values in Media, Advertorial, Media Literacy and Media Neutrality; Media metrics & measurement both from planning & buying perspectives; ROI for traditional vs. new media; implications for budgeting & campaign planning & MIS; Branded Content: From Placement to Entertainment – Advertainment, Looking to the Future, Extending the Reach of Branded Entertainment.

Practical Components:

- Do a project on the impact of twitter on brand building using successful as well as weak brands.
- Interview 5 marketers about their current & intended strategies to exploit social media and make a presentation to a panel of these companies.
- Identify the daily media calendars for 3 different audiences---successful male corporate executive; middle class home maker; teenagers—either sex.
- Do a survey about the impact of technology on television---the challenges & opportunities.
- Do a comprehensive secondary research – global & Indian – On how print media can monetize their content without going bankrupt, in an era where the consumers are most unwilling to pay for any content online. Make a presentation of your findings to a panel of local print media owners

RECOMMENDED BOOKS:

1. Ogilvy on Advertising - David Ogilvy, First Vintage Books edition, 1985
2. No Logo - Naomi Klein, Picador; Tenth Anniversary Edition. ,2009

3. The Substance of Style - Virginia Postrel, Perennial, 2004
4. Cutting Edge Advertising - Jim Aitchison, Pearson Education Canada, 2008
5. Cutting Edge Commercials - Jim Aitchison, Prentice Hall, 2008

REFERENCE BOOKS:

1. The Advertising Concept Book - Pete Barry ,Thames and Hudson, 2008.
2. Twenty Ads That Shook the World - James Twitchell, Three Rivers Press, 2001.
3. Visual Communication - Paul Martin Lester, 5/e, Wadsworth Publishing , 2004.
4. UnSpecial Effects - Bob Gill, Graphis (NY), 2001.
5. Creative Advertising - Mario Pricken, Thames and Hudson, 2008.
6. The Fifth Discipline Fieldbook - Peter M. Senge, Doubleday/Currency, 2006.
7. The History of Arts – Gombrich E. H and E.H. Gombrich E.H. Gombrich,1980.
8. Authenticity - David Boyle, Flamingo, 2003.
9. The Millennials Rising: The Next Great Generation - Neil Howe, William Strauss and R.J. Matson, 1/e, Vintage , 2000.

PROJECT MANAGEMENT AND BUDGETING

Sub Code: 12MBACM353	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I

(6 Hours)

Project management: concepts & key terms, evolution of integrated project management system, aligning projects with organization strategy; Introduction to key concepts: project characteristics Emerging International trends; Project scheduling: Gantt chart, Pert- ADM Networks, and three time estimation.

Module II

(6 Hours)

Effective project portfolio management system, project life cycle, feasibilities of projects-different forms of project contracting; Resource Allocation – Resource estimation, allocation & Leveling.

Module III (6 Hours)
Project Scope management & Budgeting: defining project scope, creating work break down structure (WBS); Project cost estimation methods; project budgeting and cost breakdown structure (CBS)

Module IV (6 Hours)
Project roll up; process break down structure; responsibility matrix; Project Monitoring and control: assessment of current status of activity completion and updating, details and frequency of reporting, system of weighted average completion

Module V (8 Hours)
Project scheduling and Risk Management: network models, PERT & CPM using software; Project performance evaluation : ‘S’ curves for project completion and cost comparison Concept of earned value, cost and schedule performance indices, estimates at completion

Module VI (8 Hours)
Measuring risk; Contingency planning; scheduling resources; reducing project duration; Project performance evaluation: ‘S’ curves for project completion and cost comparison; Concept of earned value, cost and schedule performance indices, estimates at completion

Module VII (8 Hours)
Project Team Management: building high-performance project teams, managing virtual project teams, project control process; Basic essential and desirable features for Project management packages; assessing and evaluating organizational needs and matching of features; overview of different packages available; demonstration of the use packages

Module VIII (8 Hours)
Performance measurement and evaluation, project quality, planning, quality assurance, quality audit, project closure, post completion audit; Project procurement and contract management: Project purchasing – special characteristic, material controls, codification and storage

Practical Components:

- Take 3 regular college based events e.g. Annual day; cultural festival and the convocation, and do a full fledged project plan for these and “sell” them to the college authorities.
- Take 5 family projects like an annual holiday; religious festival and birthdays and apply the principles of budgeting to these.

- Take a local festival or a sports tournament and demonstrate to the organizers the benefit of scientific project management.
- Take any project of your choice, including social development, and successfully complete an end-to-end planning to implementation. Then share the lessons learnt on the challenges & your strategy to overcome these to a panel of external NGO's.

RECOMMENDED BOOKS:

1. The Wiley Project Engineer's Desk Reference: Project Engineering, Operations, And Management - Sanford I. Heisler, Heisler, Wiley-interscience,1994.
2. Fundamentals of Project Management - James P Lewis, Heritage Publishers, 20f03.
3. Managing Projects Large and Small: The Fundamental Skills to Deliver on budget and on Time - Harvard Business Press, 2003.
4. An Introduction to IT Project Financials - Budgeting, Cost Management and Chargebacks - Michael Gentle, Lulu. Com, 2010.

REFERENCE BOOKS:

1. Project Management: a Reference for Professionals: Cost Engineering - Robert L Kimmons, James H Loweree, CRC Press. 2000.
2. Project Management: The 12 Predictable and Avoidable Pitfalls Every Project Faces, Happy About, - Kimberley Wiefeling, Scrappy 2003.
3. Earned Value Project Management - Quentin W. Fleming, Project Management Institute, 2009.
4. Project Management Accounting: Budgeting, Tracking, And Reporting Costs And Profitability - Kevin R. Callahan, Gary S. Stetz, Lynne M. Brooks, John Wiley & Sons, 2007.
5. Project Management: Getting The Job Done On Time And In Budget - Patrick L. Healy, Patrick Healey, Butterworth Heinemann Limited, 1998.
6. Project Management – Vasant Desai, HPH.

MARKET RESEARCH AND INSIGHTS

Sub Code: 12MBACM354	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (8 Hours)

Market Research and Marketing Research, Types of Market Research, Qualitative Research and Quantitative Research, Decisions that can be Guided by Market Research, Importance of Marketing Research, Consumer Insight, Divisions of Marketing Research Market Research, Advertising or Promotion Research, Product Research, Distribution Research, Sales Research, Marketing Research and Marketing Management

Module II (8 Hours)

The Marketing Research Process, Commissioning Market Research, Research Brief, Marketing Information System, Components of Marketing Information System, Internal Reports System, Marketing Research System: Marketing Intelligence System, Analytical Marketing System; Competitive Intelligence, Common Errors in Using Competitive Intelligence, Decision Making

Module III (8 Hours)

Importance of Marketing Research in Business, Marketing Research and Decision Making, the Characteristics of Valuable Information, Types of Marketing Research Studies, Stages in the Research Design Process, Quantitative Research Sampling, Measurement Techniques, Attitude Measurement, Self-Reporting Methods, Methods for Rating Attributes

Module IV (6 Hours)

Measurement Techniques: Nominal Scale, Ordinal Scale, Interval Scale, Ratio Scale; Scale Types: Comparative Scaling, Non-comparative Scaling; Attitude Measurement, Self-Reporting Methods, Methods for Rating Attributes, Data Analysis, Customer Research, Advertising Research, Product Research, Distribution Research, Sales Research, Marketing Environment Research, Internet Marketing Research, and International Marketing Research

Module V (7 Hours)

Qualitative Market Research, Types of Qualitative Market Research, Newer and Emerging Qualitative Researches, Morphological Psychology and Market Research, When to Employ Qualitative Research; Ethics and Qualitative Market Research; Case Studies for Qualitative Research.

Module VI**(7Hours)**

Qualitative Research Employed and It's Suitability, Types of Observational Research, Advantages and Disadvantages of Observational Research, Ethnography, Explicit – Implicit Triggers, Researching Values – Attitude – Behaviour; Analysis of Information, Outcomes, Research Reports and Presentations, Direction for Management, Findings Interpretation

Module VII**(8 Hours)**

What is an insight and where are the available and how to search for them? The Role of an Insight in Product Development and Marketing; Marketing Research and Marketing Management, The Marketing Research Process, Commissioning Market Research, Research Brief, Developing the Research Plan, Market Research for Small Businesses; Research process at each stage – brief, design, execution, and interpretation;

Module VIII**(4Hours)**

Research trends, Behavioural Science Based Approach, Economic and Competitive Pressures, Consumer Insight Groups, Quantifying Emotions, Impact of the Social Media, Do-it-Yourself (DIY) Research; Research ethics, typical research errors, Research and culture;

Practical Components:

- Choose 5 successful products or services and identify the insight behind them through a field survey.
- Do a comprehensive essay on the difference between consumer vs. trade vs. competition insights & how best to exploit them.
- Take 5 recent digital innovations e.g. twitter or facebook and identify the insights. Locate 5 non-users of search or mail and interview their reasons.
- Choose 5 recent successful campaigns and identify their insights through consumer interviews. Present your findings to the class
- Choose 3 successful movies eg. Dabang & Zindagi na milegi & My name is Khan--and interview consumers about the reasons for their success. Similarly repeat this with 3 recent expensive flops. Present your findings to the class

RECOMMENDED BOOKS:

1. Ethnographic Research: A Guide to General Conduct - Ellen R. F, Academic Press, 1987.
2. Essentials of Marketing Research – 4/e, Tony Proctor, PHI, 2005.

3. Essentials of Marketing Research – William G. Zikmund, Barry J. Babin, 4/e, Cengage Learning, 2010.
4. Marketing Management – S. K. Sarangi, 2/e, Asian Books Private Limited, 2009.
5. Research Skills for Students: Transferable and Learning Skills - Allison, B, O’Sullivan, T, Owen, A, Rice, J, Rothwell, A and Saunders, C Kogan Page, 1996.
6. Market Research - Robin Birn, Patrick Forsyth, John Wiley and Sons Inc. 2002.

REFERENCE BOOKS:

1. Ethnographic Research: A Reader - Stephanie Taylor. Sage. 2002.
2. The Observational Research Handbook: Understanding How Consumers Live With Your Product - Bill Abrams and American Marketing Association, Mc-Graw Hill Professional. 2000.
3. Doing Ethnographic and Observational Research - Michael V. Angrosino, Steinar Kvale, Rosaline S. Barbour, Marcus Banks, Graham Gibbs, Tim Rapley, Sage, 2007.
4. Marketing - Paul Baines, Chris Fill, Kelly Page, Oxford University Press, 2008.
5. Marketing: An Introduction - Gary Armstrong, Michael Harker, Philip Kotler, Ross Brennan, Financial Times Prentice Hall. 2009.
6. Marketing: the basics - Karl Moore, Niketh Pareek, Routledge. 2010.
7. Market Research: a guide to planning, methodology & evaluation - Paul Hague, Kogan Page, 1996.
8. Market Research Best Practice. 30 Visions of the Future - Peter Mouncey, Frank Wimmer. John Wiley and Sons Inc. 2007.

SEMESTER IV

SUPPLY CHAIN MANAGEMENT

Sub Code: 12MBA41	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

MODULE 1 (8 Hours)
Introduction to Supply Chain Management
Supply chain – objectives – importance – decision phases – process view – competitive and supply chain strategies – achieving strategic fit – supply chain drivers – obstacles – framework – facilities – inventory – transportation – information – sourcing – pricing.

MODULE 2 (10 Hours)
Designing the supply chain network
Designing the distribution network – role of distribution – factors influencing distribution – design options – e-business and its impact – distribution networks in practice – network design in the supply chain – role of network – factors affecting the network design decisions – modelling for supply chain.

MODULE 3 (5 Hours)
Designing and Planning Transportation Networks.
Role of transportation - modes and their performance – transportation infrastructure and policies - design options and their trade-offs – Tailored transportation.

MODULE 4 (8 Hours)
Sourcing and Pricing.
Sourcing – In-house or Outsource – 3rd and 4th PLs – supplier scoring and assessment, selection – design collaboration – procurement process – sourcing planning and analysis.
Pricing and revenue management for multiple customers, perishable products, seasonal demand, bulk and spot contracts.

MODULE 5 (5 Hours)
Information Technology in the supply chain
IT Framework – customer relationship management – internal supply chain management – supplier relationship management – transaction management – future of IT.

MODULE 6 (6 Hours)
Coordination in a Supply Chain

Lack of supply chain coordination and the Bullwhip effect – obstacle to coordination – managerial levers – building partnerships and trust – continuous replenishment and vendor managed inventories – collaborative planning, forecasting and replenishment.

MODULE 7 (7 Hours)

Dimensions of Logistics

Introduction: A macro and micro dimension – logistics interfaces with other areas – approach

to analyzing logistics systems – logistics and systems analysis – techniques of logistics

system analysis – factors affecting the cost and importance of logistics.

MODULE 8 (7 Hours)

Demand Management and Customer Service

Outbound to customer logistics systems – Demand Management – Traditional Forecasting –

CPFRP – customer service – expected cost of stockouts – channels of distribution.

Practical Components:

- Students are expected to choose any 2 Indian Organization and study their supply chain in terms of drivers of the Supply chain and submit a report
- Students can study TPL and FPL service providers in India and develop the profile of various services provided by them
- Students can identify any product/service and study the type of distribution system used and understand the reason for using that particular type.
- Students can identify the various types of IT applications employed by Indian Organizations in their Supply chain.

RECOMMENDED TEXT BOOKS:

1. Sunil Chopra and Peter Meindl, Supply Chain Management – Strategy, Planning and Operation, Pearson/PHI, 3rd Edition, 2007.
2. Supply Chain Management by Janat Shah Pearson Publication 2008.

TOTAL QUALITY MANAGEMENT

Sub Code: 12MBA42	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (6 hours)
 Introduction to TQM, Meaning of the terms quality, quality control and quality assurance, importance of quality, quality dimensions of products and services, quality and competitive advantage, cost of quality, TQM, Evolution of TQM, Basic principles of TQM, TQM VS Traditional management, advantages of TQM

Module II (10 Hours)
 Philosophical Framework to TQM Contribution of various gurus of TQM, Deming-Deming's chain reaction, Deming's principles, deadly sins, PDCA cycle, Juran's Quality trilogy, Juran's breakthrough sequence, Philips crosby- Quality is free, Taguchi's Quality loss function, Ishikawa's contributions and Quality Circles.

Module III (6 Hours)
 Benchmarking Definition, reasons for benchmarking, types of benchmarking, process of benchmarking what to benchmark, understanding current performance, planning, studying others, using findings, Xerox model of benchmarking, Advantages and pitfalls of benchmarking Concept of Kaizen and its applications

Module IV (6 Hours)
 Business Process Re-engineering(BPR) Introduction, Need for BPR, Implementing BPR, Steps in BPR, Re-engineering Vs. TQM, BPR Vs. Kaizen, Re-engineering the structure, change management and BPR, BPR and IT, Advantages and Limitations, Indian examples of BPR

Module V (8 Hours)

Quality Management Systems(QMS) Introduction, meaning of QMS, ISO 9000, Benefits of ISO, ISO 9000-2008 series, implementation of ISO 9000, Problems related to ISO 9000, QS 9000, Need for QS 9000, QS 9000 series ENVIRONMENTAL MANAGEMENT SYSTEM (EMS), ISO 14000 series, Benefits of ISO 14000, Integrating ISO 9000 & 14000, SEI-CMM level 5,

Module VI

(6 Hours)

Quality Awards : Introduction, Need for Quality Awards, Deming Prize and its features, MBNQA and its features, European quality award and its features, Golden peacock award, TQM models.

Module VII

(8 Hours)

Quality Control tools: Introduction, 7 tools of quality control (Old & New), Poka-yoke, Quality Function Deployment.

Module VIII

(6 Hours)

Introduction to Six Sigma Historical developments, statistical framework for six sigma, DPU and DPMO concepts, DMAIC methodology, Training for Six Sigma, Benefits of Six Sigma, Six sigma and TQM.

Practical Component:

- Students have to study any Indian organization which has won Deming prize and identify the quality initiatives of that organization
- Students are expected to study various quality awards given in India like CII Business excellence award , Rajiv Ghandi national quality award and Tata groups Excellence Award and compare with international awards
- Students can identify any 2 products and 2 services and develop Quality attributes for the same.
- Students can identify industry from any sector and conduct a benchmark study with respect to best in the class.

RECOMMENDED TEXT BOOKS:

1. Management and Control of Quality, James R. Evans, 8/e 2012, Cengage Learning
2. Total Quality Management, Dale.H. Besterfield, 3rd Edition, Pearson Education
3. Total Quality Management Text and Cases, G. Nagalingappa & Manjunath VS, Excel books.
4. Total Quality Management, Shridhar Bhat, Himalaya Publication

REFERENCE BOOKS:

- 1.Total Quality Management by Poornima M.Charantimath, Pearson Education.
2. Quality Control Handbook by JURAN, Mc.Graw Hill Publication

SEMESTER IV: MARKETING AREA**RURAL MARKETING**

Sub Code: 12MBAMM415	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (4 Hours)

Introduction: Definition, scope of rural marketing, concepts, components of rural markets, classification of rural markets, rural vs. urban markets

7. Global Marketing Strategies – Jean, Pierre Jeannet, 6/e, Biztantra.
8. International Marketing -Naragundkar R, Excel Books.

REFERENCE BOOKS:

1. International Marketing: Analysis And Strategy - Sak Onkvisit, Johnshaw , 4/e Biztantra.
2. International Marketing – Rakesh Mohan Joshi, Oxford, 2004.
3. International Marketing – Michael Czinkota, Illka A. Ronkainen, Cenage Learning.
4. International Marketing – Srinivasan R, 2/e, PHI.
5. International Logistics – Pierre David, Biztantra, 2005.
6. International Management: A Strategic prespective, John B Cullen & K Praveen Parboteeah, 1/e, Thomson.

SEMESTER IV: FINANCE AREA**PROJECT APPRAISAL, PLANNING & CONTROL**

Sub Code: 12MBAFM425	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I**(4 Hours)**

Planning & Analysis Overview: Phases of capital budgeting – Levels of decision making – objective.

Resource Allocation Framework: Key criteria for allocation of resource – elementary investment strategies – portfolio planning tools – strategic position and action evaluation – aspects relating to conglomerate diversification – interface between strategic planning and capital budgeting.

Module II**(6 Hours)**

Generation and screening of project ideas: Generation of ideas – monitoring the environment – regulatory framework for projects – corporate appraisal – preliminary screening – project rating index – sources of positive NPV – qualities of a successful entrepreneur – the porter model for estimation of profit potential of industries.

Market and demand analysis: Situational analysis and specification of objectives – collection of secondary information – conduct of market survey – characterization of the market – demand forecasting – market planning.

Technical analysis: Study of material inputs and utilities – manufacturing process and technology – product mixes – plant capacity – location and site – machinery and equipment – structures and civil works – project charts and layouts – work schedule

Module III**(12 Hours)**

Financial Analysis: Estimation of cost of project and means of financing – estimates of sales and production – cost of production – working capital requirement and its financing – estimates of working results – breakeven points – projected cash flow statement – projected balance sheet.

Project cash flows: Basic principles of measurement of cash flows – components of the cash flow streams – viewing a project from different points of view – definition of cash flows by financial institutions and planning commission – biases in cash flow estimation.

Appraisal criteria: Net Present Value – benefit cost ratio – internal rate of returns urgency – payback period – accounting rate of returns – investment appraisal in practice.

Module IV**(10 Hours)**

Types and measure of risk – simple estimation of risk – sensitivity analysis – scenario analysis – montecarlo simulation – decision tree analysis – selection of project – risk analysis in practice.

Special decision situations: Choice between mutually exclusive projects of unequal life – optimal timing decision – determination of economic life – inter-relationships between investment and financing aspects – inflation and capital budgeting.

Analysis of firm and market risk: Portfolio theory and capital budgeting – capital asset pricing model – estimation of key factors – CAPM and Capital budgeting

Module V (5 Hours)

Social Cost Benefit Analysis(SCBA): Rationale for SCBA – UNIDO approach to SCBA – Little and Mirle approach to SCBA.

Module VI (4 Hours)

Multiple projects and constraints: Constraints – methods of ranking – mathematical programming approach – linear programming model –

Qualitative Analysis: Qualitative factors in capital budgeting – strategic aspects – strategic planning and financial analysis – informational asymmetry and capital budgeting – organizational considerations.

Environmental appraisal of projects: types and dimensions of a project – meaning and scope of environment – Environment – Environmental resources values – environmental impact assessment and environmental impact statement.

Module VII (5 Hours)

Project financing in India: Means of finance – norms and policies of financial institutions – SEBI guidelines – Sample financing plans – structure of financial institutions in India – schemes of assistance – term loans procedures – project appraisal by financial institutions.

Module VIII (10 Hours)

Project Management: Forms of project organization – project planning – project control – human aspects of project management – prerequisites for successful project implementation.

Network techniques for project management – development of project network – time estimation – determination of critical path – scheduling when resources are limit – PERT and CPM models – Network cost system (Only problems on resources allocation and resources leveling)

Project review and administrative aspects: Initial review – performance evaluation – abandonment analysis – administrative aspects of capital budgeting – evaluating the capital budgeting system of an organization.

Practical Component:

- Students can be asked to identify how the approaches to project appraisal differ between commercial projects in the private sector and a public sector.
- Students can visit a bank/financial institution and study the project appraisal criteria adopted by them
- Students can visit the organizations which have undertaken large projects (For eg: Bangalore Metro Rail Project) and study the risk associated with such projects and also study how they assess and manage such risks.
- Students can study the project financing provided by banks in India.

RECOMMENDED BOOKS:

1. Project Planning: Analysis, Selection, Implementation and Review – Prasanna Chandra, 7/e, TMH, 2011.
2. Project Management and Control – Narendra Singh, HPH, 2003.

REFERENCE BOOKS:

1. Project Management – Bhavesh M. Patel, 2/e, Vikas.
2. Project Management for Business and Technology: Principles and Practice – Nicholas, John M., 2/e, Pearson.
3. Project Management: The Managerial Process – Gray & Larson, 4/e, TMH, 2011.
4. Project Management: Small Steps Towards a Big Journey – Vasant Desai, HPH, 2009.

5. Construction Project Management, Planning, Scheduling and Control – Chitkara, 1/e, TMH.
6. Project Management – Choudhury, 1/e, TMH.
7. Project Management – K Nagarajan, New Age International, 2004.
8. Project Management – Merdith & Gopalan, Wiley India (P) Ltd. 2011.

6. International Financial Management – Madhu Vij, Excel Books, 2010.

REFERENCE BOOKS:

1. International Financial Management – Siddaiah T, 1/e, Pearson, 2011.
2. International Finance – Imad Moosa, 3/e, Tata McGraw Hill, 2011.
3. International Finance – Shailaja G, 2/e, University Press, 2011.
4. International Financial Management – Apte P. G, 6/e, TMH, 2011.
5. International Finance – Maurice Levi, 5/e, Routledge, 2009.
6. International Financial Management – Jain, Peyrard & Yadav, Macmillan 2010
7. International Finance – Thomas O'Brien, Oxford University Press, 2010.

RISK MANAGEMENT

Sub Code: 12MBAFM427	IA Marks	: 50
No.of Lecture Hrs/week : 04	Exam Hrs.	: 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks	: 100
Practical Component : 01 Hr/ Week		

Module I (4 Hours)

Over view of Risk, Risk identification, Risk, Insurance and Management: Introduction to Risk and Insurance. Risk identification and Risk Evaluation,

Risk assessment & Management- Risk analysis: Exposure of physical assets, financial assets, and Human assets, Exposure to legal liability. Risk Management, Risk control.

Module II (7 Hours)

Risk Management using futures and forwards differences-valuation of futures, valuation of long and short forward contract. Mechanics of buying & selling futures, Margins, Hedging using futures -specification of futures -Commodity futures, Index futures interest rate futures-arbitrage opportunities.

Module III (8 Hours)

Risk Management using Swaps: Mechanics of interest rate swaps – volatility of interest rate swaps –currency swaps –valuation of currency swaps.

Module IV (10 Hours)

Risk Management using Options: Types of options, option pricing, factors affecting option pricing – call and put options on dividend and non-dividend paying stocks put-call parity-mechanics of options- stock options- options on stock index- options on futures – interest rate options. Concept of exocotic option. Hedging & Trading strategies involving options, valuation of option: basic model, one step binomial model, Black and Scholes analysis, option Greeks. Arbitrage profits in options.

Module V (7 Hours)

Commodity derivatives: commodity futures market-exchanges for commodity futures in India, Forward markets, commissions and regulation-commodities traded – trading and settlements – physical delivery of commodities.

Module VI (7 Hours)
Interest rate markets-Type of rates, Zero rates, Bond pricing, Determining Zero rates, Forward rates, Forward rate agreements (FRA), Treasury bond & Treasury note futures, Interest rate derivatives (Black model).

Module VII (5 Hours)
Credit risk-Bond prices and the probability of default, Historical default experience, Reducing exposure to Credit risk, Credit default swaps, Total return swaps, Credit spread options, Collateralized debt obligation.

Module VIII (8 Hours)
Value at Risk (VAR)-Measure, Historical simulation, Model building approach, linear approach, Quadratic model, Monte Carlo simulation, stress testing and back testing

Practical Components:

- Students can visit a financial institution dealing in commodity derivatives and study the products offered by him.
- Students should individually select various futures or options and watch the behavior of these futures and options on a day to day for 15 days to see how futures and options might help mitigate the risks of investors.

RECOMMENDED BOOKS:

1. Options Futures & Other Derivatives - John C. Hull, 6/e, Pearson Education.
2. Options & Futures- Vohra & Bagri, 2/e, TMH
3. Derivatives- Valuation & Risk Management - Dubofsky & Miller, Oxford University Press, 2005.
4. Financial Derivatives – Mishra V, Excel Books.
5. Derivative and Risk management, Sundaram Janakiram, Pearson, 2011.

REFERENCE BOOKS:

1. Risk Management & Insurance – Harrington & Niehaus, 2/e, TMH.
2. Risk Management & Derivative – Shulz, Cengage Learning.
3. Principles of Risk Management & Insurance – George E. Rejda, 11/e, Pearson Education, 2011.
4. Introduction to Derivatives and Risk Management – Don M. Chance, Cengage Learning, 2008.

5. Introduction to Risk Management & Insurance – Mark S. Dorfman, 9/e, Pearson, 2008
6. International Risk & Insurance –Skipper, TMH
7. Options & Futures –Edwards & Ma, 1/e, MacGraw Hill.
8. Derivatives & Financial Innovations – Bansal, TMH.
9. Credit Risk Management – Anderw Fight , 1/e, Elsevier.
10. Financial Derivatives –Kumar S. S. S, PHI, 2007.
11. Risk Management – Koteswar, HPH.
12. Futures, Options and Swaps – Robert W. Kolb, 5/e, Wiley India Pvt Ltd. 2011.
13. Risk Management and Insurance, Treishumann, James S., 12/e, Cengage Learning.
14. Risk Accounting & Risk Management for Accountants – Chorafas D, 1/e, Elsevier.

TAX MANAGEMENT

Sub Code: 12MBAFM428	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	
Ratio of Theory to problems = 40:60	

Module I **(7 Hours)**

Basic concepts: assessment year, previous year, person, assessee, Income, charges on income, gross total income, capital and revenue receipts, residential status, receipt and accrual of income, connotation of income deemed to accrue or arise in India. Tax Planning, Tax Evasion and Tax Management. (Problems on residential Status of Individual assessee)

Module II **(8 Hours)**

Explanation under various heads of income. Income from salary (Theory and full fledged Problems) Income from House Property (Theory Only)

Module III **(10 Hours)**

Income under the head profit and gains of business or professions and its computation- basis- method of accounting- scheme of business deductions/ allowance- deemed profits- maintenance of books, Depreciation (Problems)

on computation of income from business/ profession of Individual assessee and Depreciation).

Module IV (8 Hours)

Income under capital gain, basis of charge, transfer of capital asset, inclusion & exclusion from capital asset, capital gain, computation of capital gain (theory & problems), deductions from capital gains.

Module V (6 Hours)

Income from Other Sources (Theory Only) Permissible deductions under section 80C to 80U. Setoff and carry forward of losses and clubbing of Incomes.

Module VI (6 Hours)

Computation of tax liability of a firm and partners.

Module VII (6 Hours)

Computation of taxable income of a company with special reference to MAT. Corporate dividend Tax.

Module VIII (5 Hours)

Central excise act- objects and provisions of the act in brief (theory)- goods, excisable, CENVAT- **Customs act** - Basic definition, charge. **Central sales tax and VAT** (Only basic Concept).

Practical Components:

- Understanding the usage of software package while calculating different taxes
- Preparation of Income tax returns of Individual assesses.
- Preparation of sales tax returns
- Studying the online submission of Income tax returns

RECOMMENDED BOOKS:

1. Direct Taxes – Vinod Singhania and Kapil Singhania, Taxman Publications
2. Indirect Taxes – V S Datey, Taxman Publications.

REFERENCE BOOKS:

1. Students Guide to Income Tax – Vinod Singhania, Taxman Publications.
2. Direct Tax – Mehrotra, Sahitya Bhavan
3. Students Guide to Income Tax – Manoharan T. N, Snow White.

4. How to deal with VAT- Kul Bushan, 1/e, Pearson Education/PHI, 2004.
5. Income Tax Law & Practice - Mahesh Chandra & Shukla, Pragathi Publications
6. VAT – Pillai, Jaico Publications, 2004
7. Direct Tax – Lal & Vashisht, Pearson Education
8. Direct Taxation – Meena Goyal, Biztantra publication,

SEMESTER IV: BANKING AND INSURANCE AREA

TREASURY AND RISK MANAGEMENT

Sub Code: 12MBABI435	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (4 Hours)
Introduction to treasury management – Objectives – Concept – Functions of integrated treasury – Process of Globalization – Evolving role of Treasury as profit centre - Organization of treasury

Module II (6 Hours)

Treasury products – Short term funds and investment management – Financial marketing – Money market – Capital market – Call money – Government securities – REPOs – Repo Rate – Repo Pricing –Types of Repos -Certificate of deposits – Rediscounting bills - Commercial papers – Inter- Bank Participation Certificate –Collaterised Borrowing and Lending Obligations (CBLO) -Foreign Exchange Markets & treasury – Linkage of domestic operations with foreign operations.

Module III (8 Hours)
Asset Liability Management – I: Risk Management Process – Risk Organization – Asset Liability Management (ALM) – Objectives – Organization – Functions of ALCO – Risks – Interest Rate Risk – Liquidity Risk – Assessment of Liquidity – Maturity Profile & Interest Rate Ladder Credit Risk – Currency Risk – Capital Risk – Contingent Risk – BASEL Norms I, II and III

Module IV (8 Hours)
Asset Liability Management – II: Interest rate risk and management (IRRM) Interest rate risk – GAP analysis –Rate sensitive Gap Report - Duration & Immunization – Managing IRRM with Derivatives - Simulation technique. – Asset Securitization

Module V (6 Hours)
Asset Liability Management – III: Risk Exposure analysis – Stress Testing – Exposure Document - Open position – Stop-loss Limit - – Modified Duration – Convexity - Risk Adjusted Return on Capital (RAROC) – Audit Risk Management

Module VI (12 Hours)
Financial futures – Forwards - FRA and interest rate swaps – Cross currency swaps – Options – Caps - Floors and Complex swaps for managing interest rate risk – Foreign Exchange risk management using derivatives.

Module VII (6 Hours)
Sound practices for management and supervision of operational risk (SPOR)
– Three approaches to SPOR
Operational risks – Identification – Effects and Causes – Assessment – Measurement – Scenario Analysis
Market Risk – Types - Market Risk Identification – Model Risk – Risk Identification in practice

Module VIII (6 Hours)
Risk Measurement – Nominal Amount Approach – Sensitivity Based Approach – Basis Point Value –Value at Risk (VaR) – Computation of VaR –VaR and Absolute VaR – Usefulness and Limitations of VaR - Back Testing – Stress Testing

Practical Components:

- Students can visit a treasury department of a bank and study the treasury management activities and submit a report.
- Students can study the risk management criteria adopted by banks relating to Asset backed and non asset backed (Housingloan/Personal loan)

RECOMMENDED BOOKS:

1. Risk Management – IIBF, Macmillan, New Delhi, 2011.
2. Financial Risk Management – Vivek & Asthana, Himalaya Publishers, 2011.
3. Theory & Practice of Treasury & Risk management in Banks - IIBF, Taxmann Publications (P) Ltd (For Problems on Module 6 Refer chapter 7 to 10).
4. Managing Life Insurance – Shashidharan K Kutty, PHI Learning.

REFERENCE BOOKS:

1. Treasury Management – IIBF, Macmillan, New Delhi, 2011.
2. Risk management: Insurance & Derivatives- Kotreshwar G, 2/e, Himalaya Publishing House, 2012.
3. Commercial Banking - Benton Gup & James Kolari, 3/e, Wiley India Pvt. Ltd., 2010.
4. Introduction to Derivatives & Risk Management – Chance, Cengage Learning, New Delhi.

INTERNATIONAL FINANCIAL MANAGEMENT

Sub Code: 12MBABI436/ 12MBAFM426	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I**(4Hours)**

International financial Environment- The Importance, rewards & risk of international finance- Goals of MNC- International Business methods – Exposure to international risk- International Monetary system- Multilateral financial institution

Module II**(8Hours)****International flow of funds and International Monetary system:-**

International Flow of Funds: Balance of Payments (BoP), Fundamentals of BoP, Accounting components of BOP, Factors affecting International Trade and capital flows, Agencies that facilitate International flows. BOP,

Equilibrium & Disequilibrium. Trade deficits. Capital account convertibility.(problems on BOP)

International Monetary System: Evolution, Gold Standard, Bretton Woods system, the flexible exchange rate regime, the current exchange rate arrangements, the Economic and Monetary Union (EMU).

Module III (7Hours)

Foreign Exchange Market: Function and Structure of the Forex markets, Foreign exchange market participants, Types of transactions and Settlements Dates, Exchange rate quotations, Nominal , Real and Effective exchange rates, Determination of Exchange rates in Spot markets. Exchange rates determinations in Forward markets. Exchange rate behavior-Cross Rates- - Arbitrage profit in foreign exchange markets, Swift Mechanism. Triangular and locational arbitrage.

Module IV (7Hours)

International Financial Markets and Instruments :- Foreign Portfolio Investment. International Bond & Equity market. GDR, ADR, Cross listing of shares Global registered shares. International Financial Instruments: Foreign Bonds & Eurobonds , Global Bonds. Floating rate Notes, Zero coupon Bonds International Money Markets International Banking services –Correspondent Bank, Representative offices, Foreign Branches. Forward Rate Agreements

Module V (8 Hours)

International Parity Relationships & Forecasting Foreign Exchange rate:- Measuring exchange rate movements-Exchange rate equilibrium – Factors effecting foreign exchange rate- Forecasting foreign exchange rates .Interest Rate Parity, Purchasing Power Parity & International Fisher effects. Covered Interest Arbitrage

Module VI (8Hours)

Foreign Exchange exposure:- Management of Transaction exposure- Management of Translation exposure- Management of Economic exposure- Management of political Exposure- Management of Interest rate exposure.

Module VII (8Hours)
Foreign exchange risk Management: Hedging against foreign exchange exposure – Forward Market- Futures Market- Options Market- Currency Swaps-Interest Rate Swap- problems on both two way and three way swaps. Cross currency Swaps-Hedging through currency of invoicing- Hedging through mixed currency invoicing –Country risk analysis.

Module VIII (6Hours)
International Capital Budgeting: Concept, Evaluation of a project, Factors affecting, Risk Evaluation, Impact on Value, Adjusted Present Value Method

Practical Component:

- Students can study the Balance of Payment statistics of India for the last five year and present the same in the class.
- Students can carry out a survey of Exporters and report the foreign exchange risk management practices adopted by them.
- Students can study the impact of exchange rate movement on the stock Index.
- Students can predicting exchange rates using technical analysis and find arbitrage opportunities using newspaper quotes present the same in the class.
- Students can visit a bank and study the foreign exchange derivatives offered by them.

RECOMMENDED BOOKS:

1. International Finance Management - Eun & Resnick, 4/e, Tata McGraw Hill.
2. Multinational Business Finance – Eiteman, Moffett and Stonehill, 12/e, Pearson, 2011.
3. International Corporate Finance - Jeff Madura, Cengage Learning, 10/e 2012.
4. International Financial Management – Vyuphakesh Sharan, 5/e, PHI, 2011.
5. Multinational Financial Management – Alan C. Shapiro, 8/e, Wiley India Pvt. Ltd., 2011.
6. International Financial Management – Madhu Vij, Excel Books, 2010.

REFERENCE BOOKS:

1. International Financial Management – Siddaiah T, 1/e, Pearson, 2011.
2. International Finance – Imad Moosa, 3/e, Tata McGraw Hill, 2011.
3. International Finance – Shailaja G, 2/e, University Press, 2011.
4. International Financial Management – Apte P. G, 6/e, TMH, 2011.
5. International Finance – Maurice Levi, 5/e, Routledge, 2009.
6. International Financial Management – Jain, Peyrard & Yadav, Macmillan 2010
7. International Finance – Thomas O'Brien, Oxford University Press, 2010.

LEGAL ASPECTS OF BANKING & INSURANCE

Sub Code: 12MBABI437	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (9 Hours)
Legal framework of regulation of banks – Control over organization of banks – Regulation of banking business- Returns- Inspection and winding up – Banking Regulation Act,1949 - RBI Act, 1934.

Module II (9 Hours)
Legal aspects of banking operations – Responsibility of paying banker- Collecting banker - Indemnities- Bank Guarantees- Letters of Credit – Bill Finance

Module III (7 Hours)
Law relating to securities and modes of charging – Types of borrowers – Types of credit facilities – Secured & unsecured loans – Registration and satisfaction of charges

Module IV (9 Hours)
SARFAESI Act, 2002: Introduction – Securitization of financial assets – Enforcement of security interest – Banking Ombudsman Scheme, 2002- Procedure for redressal of grievances – Arbitration procedure- Conciliation

Module V (5 Hours)
Recovery of assets due to Banks and FIs Act,1993- Tribunal and appellate tribunals – Provisions and procedure of tribunals – Bankers Book Evidence Act 1891

Module VI (5 Hours)
Insurance Contract Analysis – Legal framework of Insurance Business - Claims Negotiation – Understanding contracts structure – Standard contract provisions of Life Insurance

Module VII (8 Hours)
Legal aspects of Insurance – Insurance Act 1938 – Indian contract Act 1872 – Consumer Protection Act, 1986 – Life insurance Act 1956 – Insurance Regulatory and Development Authority Act, 1999 –Re-Insurance and Double-Insurance - Motors Vehicles Act 1938 & 1988- Public Liability Insurance Act,1991

Module VIII (4Hours)
Insurance Documents – Insurance forms –Proposal forms – Cover Notes – Certificate of Insurance – Policy Forms – Endorsements – Other Documents

Practical Components:

- Students can study the regulatory framework of insurance under IRDA act and present the same in the class.
- Students can study the regulatory framework of Banks under Banking Regulations act 1949.

RECOMMENDED BOOKS:

1. Legal and Regulatory Aspects of Banking Operations – IIBF, 2/e, Macmillan, New Delhi.
2. Insurance & Risk management – P K Gupta, 2/e, Himalaya Publishing House 2011.

REFERENCE BOOKS:

1. Banking Theory& Practice - Srivastava P. K. Himalaya publishing House, Mumbai.
2. Banking Theory Law and Practice – Natarajan K and Gorden E., HPH.

STRATEGIC CREDIT MANAGEMENT

Sub Code: 12MBABI438	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (8 Hours)
Credit management in banks-Screening of applications-Appraisal of credit-Sanction limit- Post sanction compliance – Monitoring supervision –Review-Government policies for credit extension- Credit institutions- Principles of good lending- Borrower study and bankers opinion- Credit policy by banks-Government regulation of credit -Prudential norms.

Module II (8 Hours)
Over view of credit policy and loan characteristics-The credit process – Characteristics of different types of loans- Evaluating commercial loan requests – Financial statement analysis-Cash flow analysis- Projections-Management of the firm and other factors –Feasibility study – Fundamental credit issues - Credit analysis-Different types of borrowers – Balance sheet analysis for lending – Forms of advances secured and unsecured advances-Short term and long term advances.

Module III (5 Hours)
Evaluating consumer loans – Types- Credit analysis of consumer loans-Risk–return analysis of consumer loans- Customer profitability analysis and loan pricing- Fixed Vs floating rates

Module IV (6 Hours)
Loan and advances against pledge- Hypothecation- Mortgage – Lien-Advances against goods- Document to title to goods – Life insurance policies – Stock exchange securities-Fixed deposit receipts –Book debts- Supply bills- Real estates – Advance against collateral securities

Module V (7 Hours)
Agricultural finances and Retail lending- Crop loans- Crop insurance schemes- Dairy- Sericulture- Poultry- Animal husbandry – Horticulture – Gobar gas – Kissan credit cards – NABARD initiatives – Lead bank schemes – Retail banking advances – Concept – Retail banking products – Consumer credit financing

Module VI (8 Hours)
Financing to small scale industries and large scale industries- Term lending- Syndicated loan system- Role of development banks in industrial finance- Working capital finances- Turnover method – Modified version of MPBF – Cash budget approach- Long term finance-Project financing – Industrial sickness and BIFR.

Module VII (5 Hours)
Import and export credit- ECGC- EXIM Bank – Venture capital financing –Documentation for credit extension – Charge creation – Law of limitation

Module VIII (9 Hours)
NPA management – Introduction- Identification of NPA"s- CC-OD-Term loans-Bills purchased-Other accounts-Asset classification- Prudential norms-Capital adequacy – International Banking Regulation-Basel II – asset classification provisioning – effect of NPA on profitability - Assessment procedure- Pre-sanction appraisal – Post sanction supervision- Monitoring systems for existing and likely NPA"s-Rehabilitation of sick NP units – Recovery of NPA"s- Compromise and negotiated settlements- Securitization of Debts-Credit derivatives - Credit portfolio management (concentration risks)

Practical Components:

- Students can visit a bank and study the lending process adopted relating to Agricultural loan, consumer financing.
- Students can visit a bank and study the loan appraisal system followed.
- Students can study the NPA status of leading five PSU banks and five private banks.

RECOMMENDED BOOKS:

1. Banking Theory and Practice - Shekar and Shekar, 19/e, Vikas Publishing House, 2009.
2. Bank Management - W. Koch Scott, Timothy, Cengage Learning, New Delhi.
3. Commercial Banking -Benton Gup & James Kolari, 3/e, Wiley India, 2010.

REFERENCE BOOKS:

1. Industrial Finance - Vishwanathan R, Macmillan, New Delhi.
2. Banking and Financial System - Prasad K, Nirmala and Chandradas. Himalaya Publishing House, Mumbai.
3. Managing Banking Risks - Cade, Eddic, Woodhead Publishers, England.

SEMESTER IV: HUMAN RESOURCES AREA

INTERNATIONAL HUMAN RESOURCE MANAGEMENT

Sub Code: 12MBAHR445	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I (8 Hours)
Introduction to IHRM Definition, reasons for going global, Approaches to IHRM, Difference between IHRM and Domestic HRM, Reasons for emergence of IHRM, Models of IHRM-Matching model, Harvard Model, Contextual Model, 5P Model European Model, Models of SHRM in Multinational Companies, Internationalization of HRM: Socio-cultural context, Organizational dynamics and IHRM: Role of culture in International HRM, Culture and employee management issues, Organizational Processes in IHRM, Linking HR to International expansion strategies, The Challenges of International Human Resource Management.

Module II (6 Hours)
Strategies for International Growth: Exploiting global integration-The logic of global integration, differentiation, Mastering expatriation, beyond the traditional expatriate model, the limits of global integration. Becoming locally responsive: The roots of responsiveness, understanding diversity, responding to diversity, the challenges of localization. Managing alliances and joint ventures- meaning, need, different kinds of alliances, planning and negotiating alliances, implementing alliances, supporting alliance learning, the evolving role of alliances.

Module III (8 Hours)
Recruitment, Selection and staffing in International context: International Managers- parent country nationals, third country nationals, host country nationals, advantages and disadvantages of different selection methods, different approaches to multinational staffing decisions, recruitment methods- using head-hunters, cross-national advertising, e-recruitment; Selection criteria and techniques, use of selection tests, interviews for international selection, international staffing issues.

Module IV (6 Hours)
Performance Management: A conceptual background, Constraints in goal attainment, performance management cycle, models, performance and appraisal in IHRM appraisal of expatriate, third and host country employees, issues and challenges in international performance management, country-specific performance management practices.

Module V (7 Hours)
Training and development in international context: Context Backdrop of international training, Current scenario in international training and development, training & development of international staff, types of expatriate training, HCN training, Career Development, repatriate training, developing international staff and multinational teams, knowledge transfer in multinational companies.

Module VI (8 Hours)
International Compensation: Forms of compensation and factors that influence compensation policy, key components of international compensation, Approaches to international compensation, compensation practices across the countries, social security systems across the countries, global compensation: emerging issues.

Module VII (5 Hours)
International Labour Relations: Key issues, response of labour unions to MNCs. HRM practices in different countries- Japan, USA, UK, Turkey, Middle East, India and China.

Module VIII (8 Hours)
HRM practices in different countries- Japan, USA, UK, Turkey, Middle East, India and China.

Practical components:

- Write an essay on the challenges faced by Indian multinational companies in deploying employees from one country to another.
- Give a MNC recruitment case and ask the students to design and present a recruitment strategy.
- Debate on the challenges involved in measuring performance of employees in multinational context.

- Give a case and role play it, to negotiate the compensation of a software engineer to be posted from Bangalore to Seattle.
- Debate the Visa policy of India for hiring foreign workers.

RECOMMENDED BOOKS

1. International Human Resource Management - Monir H. Tayeb, Oxford University Press, 2005.
2. International Human Resource Management - Peter J. Dowling, Denice E. Welch, Cengage Learning

REFERENCE BOOKS:

1. International Human Resource Management - Aswathappa K, Sadhna Das, Mc Graw Hill.
2. The Global Challenge : ramework for international human resource management - Evans, Pucik, Barsoux, Tata McGraw-Hill Irwin.
3. International Human Resource Management - Tony Edwards, Chris Rees, Person Education.
4. International Human resource Management – Rao P. L, Excel Books.
5. International Human resource Management – Chris Brewster, University Press.

PERSONAL GROWTH AND INTERPERSONAL EFFECTIVENESS

Sub Code: 12MBAHR446	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week	

Module I

(5 Hours)

Personal growth: Meaning, nature and scope of personal growth. Self-awareness and self-esteem, life roles, social roles and organizational roles, role clarity and role boundaries. Ego states- Id, ego and super ego and defense mechanism. Developing a self improvement plan.

Module II (6 Hours)
Interpersonal Trust: Openness, confidentiality, blind spot and unknown part of personality. Self disclosure, seeking feedback, self reflection and practicing new behaviors. Discovering facets of interpersonal trust through Johari Window.

Module III (8 Hours)
Understanding human personality: Personality theories, Carl Jung's theory of personality types and Myers Briggs Type Indicator test (MBTI), Trait theories- Guilford Peogut, PF 16 and Type A and B, Emotional intelligence.

Module IV (8 Hours)
Attitudes, beliefs, Values and their impact on behavior: Personal change-meaning, nature and requisites. Social adjustments and habit formation. Locus of control. Habits of personal effectiveness. Seven habits of highly effective people.

Module V (8 Hours)
Basic functions of mind: Creativity and innovation. Blocks to creativity. Creativity processes and tools- convergent and divergent thinking. Six thinking Hats, Neuro Linguistic Programming.

Module VI (6 Hours)
Interpersonal relations and personal growth: Interpersonal needs for openness, inclusion and control. Discovering the interpersonal orientation through FIRO-B. Conflict resolution and negotiation, time management and honoring the commitments,

Module VII (7 Hours)
Transactional Analysis: Ego states, types of transactions and time structuring. Life position, scripts and games.

Module VIII (8 Hours)
Experiential learning methodologies-T-group sensitivity training, encounter groups, appreciative enquiry and group relations conference (students may go through three days personal growth lab for experiential learning)

Practical components:

- Students are expected to conduct an in depth study about various personality traits & TA and submit a detailed report.

- Students have to undergo psychometric test like MBTI, FIRO-B, Big Five etc , conduct SWOT analysis and prepare a personal growth plan based on the results
- Ask the individual students to seek multisource feedback about their interpersonal effectiveness from peers, teachers, and parents; understand and reflect the feedback and prepare a development plan for interpersonal effectiveness.
- Discuss a Johari Window case in the class to identify how it can help each individual student to promote his/ her personal growth.
- Organize a workshop on MBTI for the students to know their type and to understand the type dynamics.
- Organize a neuro linguistic programming workshop for the participation of all HR students.

RECOMMENDED BOOKS:

1. Organizational Behaviour: Human Behavior at work – John W. Newstrom and Keith Davis, 11/e, Tata McGraw Hill, 2003.
2. Human Relations in organizations - Robert N. Lussier, 6/e, McGraw Hill Education.
3. Development of Management Skills - Whetten & Cameron, 7/e, PHI.
4. Competency Mapping Assessment and Growth - Naik G. P, IIHRM, 2010.

REFERENCE BOOKS:

1. Understanding OB - Udai Pareek, Oxford University Press.
2. Theories of Personality- Calvin S Hall, 4/e, Wiley India Pvt. Ltd.
3. Seven habits of highly effective people - Stephen R Covey, Pocket Books.
4. Training in interpersonal Skills- Stephen Robbins, Pearson Education.

ORGANIZATION DEVELOPMENT AND CHANGE

Sub Code: 12MBAHR447	IA Marks	: 50
No.of Lecture Hrs/week : 04	Exam Hrs.	: 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks	: 100
Practical Component : 01 Hr/ Week		

Module I (6 Hours)
Introduction to organizational Development: Definition, growth and relevance, history and evolution. Theories of planned change, general model of planned change, different types of planned change and critique of planned change. OD practitioner role, competencies and professional ethics.

Module II (6 Hours)
OD process: Initiating OD relationship, contracting and diagnosing the problem. Diagnosing models, open systems, individual level group level and organizational level diagnosis; collection and analysis for diagnostic information, feeding back the diagnosed information.

Module III (9 Hours)
Designing OD interventions: Human process interventions:- coaching, training and development, process consultation, third part intervention, and team building. Organization confrontation meeting, intergroup relations intervention, and large group intervention.
Techno structural interventions:- Structural design , downsizing, reengineering, employee involvement, work design, socio technical systems approach,

Module IV (9 Hours)
HR and Strategic interventions : HRM interventions:- performance management, goal setting, performance coaching, appraising and rewarding. Career planning, workforce diversity interventions, wellness and work-life balance,
Strategic interventions: Competitive strategies, collaborative strategies, organizational transformation, culture change, self designing organizations, learning and knowledge management.

Module V (6 Hours)
Special applications of OD : OD in, health care organizations, family owned organizations, educational institutions, public sector organizations and future directions in OD.

Module VI (8 Hours)
Introduction to organizational change: Nature of change, forces of change, reinventing Kurt Levin, organizational routines and mental models, change need analysis, content of change, types and styles of change, building capability for change, providing leadership to change, action research and dialogue, types of change, organizational vision, cultural change, strategic planning, creating support systems and managing transition, process oriented strategies and competitor oriented strategies and customer oriented strategies.

Module VII (6 Hours)
Appreciating change: External environment as drivers of change, business cycles, industry cycles, technology and strategic change, industry evolution and concentration, developing a change agenda. Cognition and organizational change, mental models, organizational learning, Senge's five disciplines, business models and value propositions, refining the change agenda

Module VIII (6 Hours)
Mobilizing support and executing change: Four approaches to change, parallel organization, ownership and involvement in change, dealing with political aspects of change, the psychology of persuasion, communicating to influence, targeting influence efforts, framing change, making difficult choices, negotiating change. Executing change: challenges of execution, execution framework, developing cross functional linkages, aligning policies, and removing structural impediments, developing new routines for innovation and improvement, considering human element.

Practical components:

- Students are expected to study the changes that have taken place in various industries over a period of ten years and submit a report.
- Hold a debate in the classroom about downsizing the workforce.
- Identify the need for OD intervention for your college and call the director/ principal of your college to the classroom to explore the possibility for OD intervention.
- Debate the phrase "change is the only constant thing" along with the field-force theory of Kurt Levin.
- Design a role play event for students, so that they will play it out to mobilize support for a change implementation programme.

RECOMMENDED BOOKS

1. Organizational Development and Change - Cummings T.G. and Worley C. G., Cengage Learning, 2005.
2. Managing organizational change - Harigopal K, Response Books, 2006.
3. Change management - Nilakant V. and Ramnarayan S. Response books 2006.
4. Managing organizational change - Palmer, Dunford and Akin, 2011.
5. Organizational Change and Development – Kavitha Singh, Excel Books,2010.

REFERENCE BOOKS:

1. Organizational development - Ramnarayan S and Rao T V, Sage Publicatin, 2011.
2. Organization Development - Wendell L. French, Cecil H. Bell, Veena, Jr, Pearson Education.
3. Change Management - Radha Sharma, Tata McGraw Hill, 2007.

STRATEGIC TALENT MANAGEMENT

Sub Code: 12MBAHR448	IA Marks : 50
No.of Lecture Hrs/week : 04	Exam Hrs. : 03 Hours
Total No. of Lecture Hrs. : 56	Exam Marks : 100
Practical Component : 01 Hr/ Week

3. Get Content Get Customers: Turn Prospects into Buyers with Content Marketing - Joe Pulizzi, McGraw-Hill, 2006
4. Guerrilla Advertising: Unconventional Brand Communication - Gavin Lucas and Michael Dorrian, Laurence King Publishers, 2006.

**The guidelines for 12 Weeks' Internship (Project Work)
(12MBA47) during 4th Semester MBA**

INTRODUCTION:

Internship (project work) is an integral part of the academic curriculum of VTU MBA. It is an initiative to bridge the gap between knowledge and its application through a series of interventions that will enable students of VTU MBA program to gain insights and exposure to the industry.

The 12 week Internship (project work) has been positioned during 4th semester of the MBA program as it serves the twin purposes of providing critical business insights to students as well providing industry with graduates of a high caliber who are ready to get ahead in the world from day one.

OBJECTIVES:

The objectives of conducting Internship (project work) during 4th semester of MBA program are:

- To provide an opportunity for students to apply theoretical concepts in real life situations at the work place;
- To sensitize students to the nuances of corporate culture and familiarize them with the corporate code of behavior;
- To enable students to manage resources, work under deadlines, identify and carry out specific goal oriented tasks;
- To enable students discover their professional strengths and weaknesses and align them with the changing business environment;
- To sharpen domain knowledge and provide cross functional skills

General Guidelines:

- A. Nature of Internship (project work):** The student will have to identify an Internship (project work) in a business enterprise that matches the student's area of specialization. Internship (project work) is a combination of In-plant study and a research project. Students are expected to study the functioning of an organization, identify a problem area and provide suggestions to overcome the problems.
- B. Duration of Internship (project work):** The Internship (project work) shall be for a period of 12 weeks immediately after completion of 6 theory papers during the first 12 weeks of the 4th semester but before the commencement of the University Examinations. Students are expected to take up the preliminary

work such as identifying the organization, finalization of topic and review of literature during the first 12 weeks of fourth semester and start the Internship (project work) immediately after this.

- C. Guide:** Internal guide of the Internship (project work) is a full time faculty member working in management department of respective institution with minimum of three years of experience. External guide is from the business organization where the student is carrying out his/her Internship (project work). Maximum of ten students can work under an internal guide. Internal guide is expected to be in continuous interaction with external guide during the course of the Internship.
- D.** No two students of an institute shall work on the same problem in the same organization.

E. Schedule to be followed before commencement of Internship

Activity	Time-line	Remarks
<ul style="list-style-type: none"> • Identifying the Organization • Problem Identification 	First two weeks of 4 th semester.	Student individually identifies an organization and identifies problem for his / her study, according to his / her interest
Problem Statement	3 rd week of 4 th semester.	His / her interests are discussed with selected guides
Research design	4 th week of 4 th semester.	Discussion with internal guide to decide on suitable design for the research
Synopsis preparation	5 th and 6 th week of 4 th semester.	Preparation of synopsis* incorporating the Objectives
Presentation of synopsis	7 th and 8 th week of 4 th semester.	The student will present Synopsis with the detailed execution-plan to the internship committee** who will review and may

		(a) approve, (b) approve with modification or (c) Reject for fresh synopsis.
Approval status	9 th and 10 th week of 4 th semester.	The approval status is submitted to HOD who will officially give concurrence for execution of the internship

***Synopsis: It is a 3 page document / hard copy to be submitted to the HOD with the signatures of Guide and the Student.**

Page 1	Title, contact addresses of student - with details of internal & External Guide
Page 2	Short Introduction with objectives and summary (300 words), Review of articles/literature about the topic with source of information.
Page 3	Time-Activity Chart

****Composition of the Internship committee**

1. Director/HOD
2. Domain expert from the department
3. Internal Guide

F. Schedule to be followed during Internship

Activity	Time-line	Remarks
Understanding structure, culture and functioning of the organisation.	First two weeks of internship.	Student should understand products/services and problems of the organization.
Preparation of research instrument for data collection	3 rd to 4 th week of internship.	Discussion with the guide for finalization of research instrument in his/her domain and present the same to the guide. (First presentation)

Data collection	5 th to 8 th week of internship	Data collected to be edited, coded, tabulated and presented to the guide for suggestions for analysis. (Second presentation)
Analysis and finalisation of report	9 th to 11 th week of internship	Students must use appropriate and latest statistical tools and techniques for analyzing the data (It is must to use latest statistical packages whose results should be shown in the report) (Third presentation)
Submission of report	12 th week of internship	Final report should be submitted to the university before one week of the commencement of theory examination.

G. Evaluation:

- **Internal Evaluation:** Internal evaluation will be done by the internal guide.
- **External Evaluation:** External evaluation shall be done by a faculty member of other institute drawn from VTU institutions with minimum of 10 years' of experience.
- **Viva-voce / Presentation:** A viva-voce examination will be conducted at the respective institution where student is expected to give a presentation of his/her work. The viva-voce examination will be conducted by the respective HOD / Sr. Professor of the department and an expert drawn from VTU institutions with minimum of 10 years of experience as appointed by the University.

Internship (Project) work carries 300 marks consisting of 100 marks for internal evaluation by the internal guide, 100 marks for external evaluation and 100 marks for viva-voce examination

Format of the Internship report: The internship report shall be prepared using word processor Viz., MS word, using Times New Roman font sized 12, on a page layout of A4 size with 1" margin on

all sides and 1.5 line spacing. The internship report shall not exceed 75 pages.

- H. Submission of report:** Students should submit the internship report in electronic data form only, in PDF file (Un-editable format) to the Institute. Institute in turn shall submit all the CDs of their students along with a consolidated master list as per specialization containing USN, Name of the student, Title of the report to Registrar (Evaluation) one week before the commencement of the theory examinations.
- I. Publication of research findings:** Students are expected to present their research findings in seminars / conferences / technical fests or publish their research work in journals in association with their internal guide. Appropriate weightage should be given to this in the internal evaluation of the project report.

Contents of the Internship (Project) Report

- Cover page
- A certificate from the Organization (Scanned copy of the certificate)
- A certificate from the guide, HOD and Head of the Institution (Scanned copy of the certificate) indicating the bonafide performance of Internship by the student.
- Declaration (Scanned copy of the declaration) – An undertaking by the student to the effect that the work is independently carried out by him/her.
- Acknowledgement
- Table of contents
- List of Tables and Graphs
- Executive summary
- **Chapter 1** Introduction: Introduction about the Internship, Topic chosen for study, Need for the study, Objectives of the study, Scope of the study, Methodology adopted, Literature review and Limitations of the study
- **Chapter 2:** Industry profile and company profile: (Promoters, Vision, Mission & Quality Policy, Products / Services profile, Areas of Operation, Infrastructure facilities, Competitors' information, SWOT analysis, Future growth and prospects and Financial Statement
- **Chapter 3:** Theoretical background of the study – elaborative information on the subject chosen for better understanding and usage in the analysis.
- **Chapter 4:** Analysis and interpretation of the data Collected with relevant tables and graphs. Results obtained by using statistical tools must be included.

- **Chapter 5:** Summary of Findings, Conclusion and Suggestions / recommendations.
- Bibliography
- Annexure relevant to the project such as figures, graphs, photographs etc.

SEMESTER III MARKETING SPECIALISATION

CONSUMER BEHAVIOR

Subject Code	: 16MBA MM301	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To understand the concept of consumer behavior, decision making by consumers, behavioral variables and its influences on consumer behavior.
- To comprehend the social and cultural dimensions of consumer behavior.
- To provide an insight of the psychological and behavioral concepts of consumers.

Outcomes:

The student should be able to:

- Explain the background and concepts vital for understanding Consumer Behaviour.
- Identify the role of variables that determines Consumer Behaviour in Social & cultural domain.
- Identifying the psychological and behavioral practices adopted by organizations to enhance the Consumer Behaviour.

Unit 1:

(5 Hours)

Introduction to the study of Consumer Behaviour: Meaning & Definition of CB, Difference between consumer & Customer, Nature & characteristics of Indian Consumers, Consumer Movement in India, Rights & Responsibilities of consumers in India, Benefits of consumerism.

Unit 2:

(9 Hours)

Role of Research in understanding consumer behaviour: Consumer Research: Consumer Research Paradigms (Qualitative & Quantitative Research Methods) Developing research objectives, collecting secondary data, designing primary research, data analysis and reporting research findings.

Models of Consumer Behaviour: Input-Process-Output Model, Nicosia Model, Howard Sheth Model, Engel-Kollat-Blackwell Models of Consumer Behaviour, Internal Influences: Motivation, Personality, Perception, Learning, Attitude, Communications, External Influences: Social Class, Culture, REFERENCE Groups, Family members.

Levels of Consumer Decision Making – Consumer Buying Decision Process, Complex Decision Making or Extensive Problem Solving Model, Low Involvement Decision Making or Limited Problem Solving Model, Routinised Response Behaviour, Four views of consumer decision making. On-line Decision Making: Meaning & Process/Stages
Situational Influences- Nature of Situational Influence (The communication Situation, The Purchase Situation, The usage situation, The disposition situation) Situational Characteristics and consumption behaviour (Physical features, Social Surroundings, Temporal Perspectives, Task Definition, Antecedent States.)

Unit 3:

(10 Hours)

Individual Influences on Consumer Behaviour and CRM: Part 1

A) Motivation: Basics of Motivation, Needs, Goals, Positive & Negative Motivation, Rational Vs Emotional motives, Motivation Process, Arousal of motives, Selection of goals.

Motivation Theories and Marketing Strategy - Maslow's Hierarchy of Needs, McGuire's Psychological Motives (Cognitive Preservation Motives, Cognitive Growth Motives, Affective Preservation Motives, Affective Growth Motives).

B) Personality: Basics of Personality, Theories of Personality and Marketing Strategy (Freudian Theory, Neo-Freudian Theory, Trait Theory), Applications of Personality concepts in Marketing, Personality and understanding consumer diversity (Consumer Innovativeness and related personality traits, Cognitive personality factors, Consumer Materialism, Consumer Ethnocentrism), Brand Personality (Brand Personification, Gender, Geography, Colour), Self and Self-Image (One or Multiple selves, The extended self, Altering the self).

C) Perception: Basics of Perception & Marketing implications, Elements of Perception (Sensation, Absolute Threshold, Differential Threshold, Subliminal Perception), Dynamics of Perception (Perceptual Selection, Perceptual Interpretation, Perceptual Organization, perceived price, perceived quality, price/quality relationship, Perceived Risk, Types of risk, How consumers' handle risk.

Customer Relationship Management

Meaning & Significance of CRM, Types of CRM (Operational, Collaborative, Analytical), Strategies for building relationship marketing, e-CRM, Meaning, Importance of e-CRM, Difference Between CRM & e-CRM

Unit 4:

(08 Hours)

Individual Influences on Consumer Behaviour: Part 2

A) Learning: Elements of Consumer Learning, Motivation, Cues, Response, Reinforcement, Marketing Applications of Behavioural Learning Theories, Classical Conditioning Pavlovian Model, Neo-Pavlovian Model), Instrumental Conditioning, Elaboration Likelihood Model.

B) Attitude: Basics of attitude, the nature of attitude, Models of Attitude and Marketing Implication, (Tri-component Model of attitude, Multi attribute attitude models.

C) Persuasive Communication: Communications strategy, Target Audience, Media Strategy, Message strategies, Message structure and presentation.

Unit 5:

(12 Hours)

External Influences on Consumer Behaviour

Social Class: Social Class Basics, What is Social Class? (Social class & Social status, the dynamics of status consumption, Features of Social Class, Five Social-Class Categories in India

Culture and Subculture - Major Focus on Indian Perspective

Culture: Basics, Meaning, Characteristics, Factors affecting culture, Role of customs, values and beliefs in Consumer Behaviour.

Subculture: Meaning, Subculture division and consumption pattern in India, Types of subcultures

- Consumer behavior - Jay D. Lindquist, Joseph Sirgy, 1/e, Cengage Learning.
- Consumer Behavior in Indian Perspective – Suja Nair, Himalaya Publications

REFERENCE BOOKS:

- Consumer Behavior - Henry Asseal, Cengage Learning.
- Consumer Behavior- Satish K. Batra & S H HKazmi, Excel Books.
- CRM – Alok Kumar, Chhabi Sinha, 7/e, Biztantra.
- Customer Relationship Management - Peru Ahamed & Sagadevan, Vikas Publishing.
- Consumer Behavior – Kumar Rajeev, Himalaya Publisher.

RETAIL MANAGEMENT

Subject Code	: 16MBA MM302	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To develop an understanding of the contemporary retail management, issues, strategies and trends.
- To highlight the importance of retailing and its role in the success of modern business.
- To acclimatize with the insights of retailing, key activities and relationships.

Outcomes:**The student should be able to:**

- Find out the contemporary retail management, issues, and strategies.
- Evaluate the recent trends in retailing and its impact in the success of modern business.
- Relate store management and visual merchandising practices for effective retailing.

Unit 1:**(8 Hours)**

Introduction and Perspectives on Retailing World of Retailing, Retail management, introduction, meaning, characteristics, emergence of organizations of retailing - Types of Retailers (Retail Formats) - Multichannel Retailing - Customer Buying Behaviour, Historical Perspective, role of retailing, trends in retailing, FDI in Retail - Problems of Indian Retailing - Current Scenario

Unit 2:**(5 Hours)****Theories of Retailing**

Wheel of retailing, The Retail Accordion, Melting Pot Theory, Polarization theory.

Unit 3: (14 Hours)

Retailing strategy for Setting up Retail organization and planning: Retail Market Strategy - Financial Strategy - Site & Locations (Size and space allocation, location strategy, factors Affecting the location of Retail, Retail location Research and Techniques, Objectives of Good store Design.) – Human Resource Management, Information Systems and supply chain management & Logistics.

Retail Pricing and Promotion: Factors influencing retail pricing, Retail pricing strategies, Retail promotion strategies.

Unit 4: (10 Hours)

Store Management and Visual Merchandising:

Store Management: Responsibilities of Store Manager, Store Security, Parking Space Problem at Retail Centres, Store Record and Accounting System, Coding System, Material Handling in Stores, Management of Modern retails –Store Layout, design: Types of Layouts, role of Visual Merchandiser, Visual Merchandising Techniques, Controlling Costs and Reducing Inventories Loss, Exteriors, Interiors Customer Service, Planning Merchandise Assortments -Buying systems -Buying merchandise and Retail Communication Mix.

Unit 5: (9 Hours)

Relationship Marketing & International Retailing: Management & Evaluation of Relationships in Retailing, Retail Research in Retailing: Importance of Research in Retailing, Trends in Retail Research, Areas of Retail Research. Customer Audits, Brand Management in retailing, Internationalization of Retailing and Evolution of International Retailing, Motives of International Retailing, International Retail Environment – Socio-Cultural, Economic, Political, Legal, Technological and issues in international retailing

Unit 6: (6 Hours)

Retail Audit and ethics in Retailing

Undertaking an audit, responding to a retail Audit, problems in conducting a retail audit. Ethics in retailing, social responsibility and consumerism

Case Studies (4 Hours)

Practical Components:

- Interview a salesperson in a retail store and write a brief report about what they like and dislike about their jobs, their salary, travelling allowances, sales quotas, why they chose a sales career, and what does it take to succeed in this profession.
- Go to a kirana store and a supermarket and compare the following: a) store arrangement b) No of brands carried c) pricing policies – are discounts given? d) Service – personal or impersonal? Etc.
- Go to at least three kirana stores in your neighborhood (around 2 kms) and discuss with them the importance of location, pricing, credit policy, etc. What percentages of goods are sold 'loose' in each locality and compare this with the approximate income range of

the customers? What are the retailer's losses when a customer defaults in payment? Does he make up for it by increasing his prices to other customers?

- Ask your friends if they would buy certain goods like groceries, vegetables, socks, mobile, pens etc from the roadside vendor as against a regular shop. Group the products into low risk and high risk ones. Does this buying behavior also depend on the personality of the individual doing the buying? Or the one doing the selling?
- Student can make a presentation on any product or the services of student choice, covering selling strategies and one day work exposure towards merchandising in any big retail outlets of respective places where institute is operating. Rural colleges can send the students to the city nearby to observe the merchandising planning in retail outlets and to make a small report.

RECOMMENDED BOOKS:

- Retail Management - Levy & Weitz, 8/e, TMH, 2012.
- Retail Management - Chetan Bajaj, Oxford University press.
- Retailing, James R Carver, Patrick m Dunne, Robert F Lusch, 8/e

Unit 2: (8 Hours)

Understanding customer expectation through market research: Key reasons for GAP 1, using marketing research to understand customer expectation, Types of service research, Building customer relationship through retention strategies –Relationship marketing, Evaluation of customer relationships, Benefits of customer relationship, levels of retention strategies, Market segmentation-Basis & targeting in services.

Unit 3: (10 Hours)

Customer defined service standards: “Hard” & “Soft” standards, challenges of matching supply & demand in capacity, four common types of constraints facing services, optimum v/s maximum use of capacity, strategies for matching capacity & demand.

Yield management-balancing capacity utilization, pricing. Waiting line strategies- four basic Waiting line strategies.

Leadership & Measurement system for market driven service performance-key reasons for GAP-2 service leadership- Creation of service vision and implementation, Service quality as profit strategy, Role of service quality In offensive and defensive marketing.

Unit 4: (8 Hours)

Employee role in service designing: importance of service employee, Boundary spanning roles, Emotional labour, Source of conflict, Quality- productivity trade off, Strategies for closing GAP 3.

Customer’s role in service delivery-Importance of customer & customer’s role in service delivery, Strategies for enhancing-Customer participation, Delivery through intermediaries-Key intermediaries for service delivery, Intermediary control strategies.

Unit 5: (8 Hours)

Role of marketing communication-Key reasons for GAP 4 involving communication, four categories of strategies to match service promises with delivery, Methodology to exceed customer expectation.

Pricing of services-Role of price and value in provider GAP 4, Role of non-monitory cost, Priceas an indicator of service quality –Approaches to pricing services, pricing strategies.

Unit 6: (6 Hours)

Physical evidence in services: Types of service spaces- Role of service scapes, Frame work forunderstanding service scapes& its effect on behaviour-Guidance for physical evidence strategies.

Case Studies in Indian context only (6 hours)

Practical component:

- Ask students to choose a service industry of their choice at the beginning of the semester
- Ask them to do an in-depth study of the industry and give a presentation at the end of theevery Module relating to the concepts of that Module to the industry
- Students can prepare service blueprints for any service of their choice
- Students can do a role play on service recovery
- Identify any existing services. Locate loopholes in their design and suggest modifications

RECOMMENDED BOOKS:

- Services Marketing-Valarie A Zeithmal& Mary Jo Bitner, 5/e, TMH, 2011
- Services Marketing-Christopher Lovelock, Pearson Education.

REFERENCE BOOKS:

- Services Marketing - RajendraNargundkar, 3/e, TMH, 2010
- Services Marketing - GovindApte, Oxford.
- Services Marketing - Hoffman & Bateson, 4/e, Cengage Learning-2007
- Services Marketing: Operation, Management and Strategy-Kenneth E Clow& David L. Kurtz, 2/e, Biztantra, 2007

MARKETING RESEARCH

Subject Code	: 16MBA MM304	IA Marks : 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To provide an understanding of the basics of marketing research process.
- To orient on the theoretical and practical aspects of marketing research.
- Encourage the students to take up analytical thinking through research.
- To highlight importance marketing research for enhancing marketing strategies.

Outcomes:

The student should be able to:

- Comprehend the objectives of Market research & its application in solving marketing problems

- Appreciate the use of different data collection methods, sampling design techniques, measurement methods to analyze the data.
- Generalize and interpret the data with the help of various measurement techniques.
- To understand the emergence of new trends in research.

Unit 1: (8 Hours)

Introduction: Meaning, scope and importance of marketing research; own vs. agency marketing research; marketing information system; meaning, need and components, marketing information system and marketing research; marketing research process-an overview; problem definition, formulation and preparation of research proposal.

Unit 2: (10 Hours)

Research Design and Data Collection

Research Design: Meaning and scope of research design; types of research designs, exploratory, descriptive and conclusive

Secondary Data: Sources and uses of secondary data, collection of secondary data.

Primary Data Collection: Primary data collection methods; mail survey, telephone survey and interviews and their evaluation; observations; experimental methods, questionnaire administering, organizing fieldwork for collecting data.

Unit 3: (9 Hours)

Sample Design and Sampling: Determining universe, sampling frame and sampling unit; determining sampling method; sample size determination; sampling errors vs. non-sampling errors.

Sampling: Steps & Types: Probability / non probability (simple, systematic; stratified proportionate, disproportionate), Sample size determination

Unit 4: (9 Hours)

Questionnaire design: Steps in Q.D. with examples for each step. Rating Scales, Juster, Likert, Semantic Differential, Thurston, Attitude Scales, Scales for illiterate respondents

Unit 5: (10 Hours)

Measurement Techniques: Nominal Scale, Ordinal Scale, Interval Scale, Ratio Scale; Scale Types: Comparative Scaling, Non-comparative Scaling; Attitude Measurement, Self-Reporting Methods, Methods for Rating Attributes, Data Analysis, Customer Research, Advertising Research, Product Research, Distribution Research, Sales Research, Marketing Environment Research, Internet Marketing Research, and International Marketing Research

Unit 6: (10 Hours)

Research trends, Behavioral Science Based Approach, Economic and Competitive Pressures, Consumer Insight Groups, Quantifying Emotions, Impact of the Social Media, Do-it-Yourself (DIY) Research; Research ethics, typical research errors, Research and culture;

Practical Components:

- Choose 5 successful products or services and identify the insight behind them through a field survey.
- Do a comprehensive essay on the difference between consumer vs. trade vs. competition insights & how best to exploit them.
- Take 5 recent digital innovations e.g. twitter or face book and identify the insights. Locate 5 non-users of search or mail and Interview their reasons.
- Choose 5 recent successful campaigns and identify their insights through consumer interviews. Present your findings to the class
- Choose 3 successful movies e.g. Dabang & Zindaginamilegi & My name is Khan---and interview consumers about the reasons for their success. Similarly repeat this with 3 recent expensive flop movies and Present your findings to the class

RECOMMENDED BOOKS:

- Marketing Research contemporary approach- Naraynreddy and GVRK Acharyalu, Excel publications
- Marketing Research and consumer Behavior Saravanel et.al, Vikas publishing house
- Essentials of Marketing Research – 4/e, Tony Proctor, PHI, 2005
- Essentials of Marketing Research – William G. Zikmund et.al. 4/e, Cengage Learning, 2010.
- Research Skills for Students: Transferable and Learning Skills - Allison, et.al. 1996.
- Market Research – Aekar, 11/e, Wiley publications, 2002.

REFERENCE BOOKS:

- Market Research: a guide to planning, methodology & evaluation - Paul Hague, KoganPage, 1996.
- Market Research Best Practice. 30 Visions of the Future – Peter Mouncey, et.al, 2007.

BUSINESS MARKETING

Subject Code	: 16MBA MM305	IA Marks: 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To develop an understanding of the various concepts of Industrial Marketing.
- To understand the buying process and marketing channels for industrial goods.
- To acquaint with B-2-B-2-C Strategies and their implementation.
- To analyze various pricing strategies of industrial goods & their implications.
- To understand the significance of E-commerce in Business Marketing.

Outcomes:

The student should be able to:

- Describe the nature of business markets and the related concepts.
- Familiarize the business buying behavior of industrial customers.
- Analyze business situations in the context of buyer-seller relationships.
- Apply concepts of pricing strategies for industrial goods

- To evaluate the significance of E –Commerce in Business Marketing.

Unit 1: (8 Hours)

Nature of Business Marketing: Business Marketing Concept, Business vs. Consumer Marketing, Economics of Industrial demand, Types of Industrial Markets, Types of Business Customers, Classifying Industrial Products & Services, Business customers purchase orientations, Organizational Procurement Characteristics, Environment Analysis in Business Marketing.

Units 2: (10 Hours)

- Industrial Marketing – Mukherjee H S; Latest Edition; Excel BOOKS Publication.
- Industrial Marketing – PK Ghosh, Latest Edition; Oxford University Press.

SUPPLY CHAIN MANAGEMENT

Subject Code	: 16MBA MM306	IA Marks	: 20
Number of Lecture Hours/Week	: 03	Exam Hours	: 03
Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours/ Week		

Objectives:

- To understand the basic concepts, processes and key elements of a supply chain.
- To provide insights for establishing efficient, effective, and sustainable supply chains.
- To explain the role of technology in supply chain planning, visibility, and execution.

Outcomes:

The student should be able to:

- Demonstrate knowledge of the functions of logistics and supply chain management.
- To relate concepts and activities of the supply chain to actual organizations.
- Highlight the role of technology in logistics and supply chain management.

- Evaluate cases for effective supply chain management and its implementation.

Unit 1: (7 Hours)

Introduction: Basic concepts & philosophy of SCM, essential features, decision phases – process view, supply chain framework, key issues in SCM and benefits.

Unit 2: (8 Hours)

Designing the supply chain network: Designing the distribution network, role of distribution, factors influencing distribution, design options, distribution networks in practice, network design in the supply chain, factors affecting the network design decisions. Designing and Planning Transportation Networks, role of transportation, modes and their performance, transportation Infrastructure and policies, design options and their trade-offs, tailored transportation.

Unit 3: (10 Hours)

Inventory Management: Concept, various costs associated with inventory, EOQ, buffer stock, lead time reduction, reorder point / re-order level fixation, ABC analysis, SDE/VED Analysis. [Simple problems only for understanding the concept]

Unit 4: (8 Hours)

Purchasing and vendor management: Centralized and decentralized purchasing, function of purchase department and purchase policies, vendor rating/ evaluation, single vendor concept, management of stores, account for materials, just in time & Kanban systems of inventory management

Unit 5: (10 Hours)

Logistics Management: Logistics of part of SCM, logistics costs, different models, logistics, sub-systems, inbound and out bound logistics bullwhip effects in logistics, distribution and warehousing management. Demand Management and Customer Service: Demand Management, traditional forecasting, CPFRP, customer service, expected cost of stockouts.

Unit 6: (8 Hours)

Recent issues in SCM: Role of computer/ IT in supply chain management, CRM Vs SCM, Benchmarking concept, features and implementation, outsourcing – basic concepts, value addition in SCM – concept of demand chain management

Case Studies in Indian context only. (5 Hours)

Practical Components:

- Students are expected to choose any 2 Indian Organization and study their supply chain in terms of drivers of the Supply chain and submit a report
- Students can study different logistics companies and services provided by them.
- Students can identify any product/service and study the type of distribution system used and understand the reason for using that particular type.
- Students can identify the various types of IT applications employed by Indian Organizations in their Supply chain.

RECOMMENDED BOOKS:

- Supply chain management, Chopra Sunil and Peter Meindl - 3rd edition, Pearson, 2007.
- A Logistic approach to Supply Chain Management – Coyle, Bardi, Longley, 1st Edition, Cengage Learning.
- Supply Chain Logistics Management, Donald J Bowersox, Dand J Closs, M Bixby Coluper, 2nd Edition, TMH, 2008.
- Supply Chain Management-A Managerial Approach, Amith Sinha, Herbert, 2nd edition, TMH.

- Logistics and supply chain management, G. Raghuram (I.I.M.A.), Macmillan, 2000
- Harnessing value in supply chain, Emiko Bonafield, John Wiley, Singapore, 1999
- Material Management rearview, Dr. Gopal Krishnan, Pearson New Delhi, 2002
- Supply Chain Management, B.S. Sahay, Macmillan, Pearson Education, 2004
- A Text Book of Logistics and Supply chain management, Agarwal D.K. - 1st edition, Macmillan.

Semester: III Finance Specialisation

PRINCIPLES AND PRACTICES OF BANKING

Subject Code	: 16MBA FM301	IA Marks: 20
Number of Lecture Hours/Week:	03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To discuss the Structure and System of Banking in India
- To discuss the features of Negotiable Instrument Act of 1881
- To familiarize the students with Universal Banking
- To discuss the Asset Liability Management in banks

Course Outcomes:

At the end of the course students are able to:

- Understand the banking system in India
- Know the nature of banker – customer relationship
- Make use of Negotiable instruments practically
- Have familiarity in using banking technologies like internet banking, Mobile banking, NEFT, ECS etc.
- Understand the concept of international banking and management of asset and liability in banks

Unit 1:**(10 Hours)**

Banking system and structure in India- Evolution of Indian Banks-Types of banks - Public Sector, Regional Banks, Performance of Public Sector banks, Private Sector Banks.

Commercial banking: Structure, Functions - Primary & secondary function, Role of commercial banks in socio economic development, Services rendered. Credit creation and Deployment of

Funds.-Role of Reserve Bank and GOI as regulator of banking system – Provisions of Banking Regulation Act & Reserve Bank of India Act.

Unit 2: (10 Hours)

Banker and customer – Types of relationship between banker and customer – Bankers obligations to customers – Right of lien, setoff, appropriation–Bankers legal duty of disclosure and related matters.

Customers` accounts with banks – Opening- operation – KYC norms and operation –Types of accounts and customers – Nomination – Settlement of death claims.

The Negotiable Instruments Act 1881: The Paying Banker and The Collecting Banker- Negligence-Bills of exchange and promissory note-Discharge of Negotiable instruments- Hundis.

Unit 3: (10 Hours)

Banking Technology- Concept of Universal Banking-Home banking–ATMs-Internet banking– Mobile banking-Core banking solutions–Debit, Credit and Smart cards– Electronic Payment systems-MICR- Cheque Truncation-ECS- EFT – NEFT-RTGS.

Unit 4: (9 Hours)

International banking–International Banking: Exchange rates and Forex Business, Correspondent banking and NRI Accounts, Letters of Credit, Foreign currency Loans, Facilities for Exporters and Importers, Role of ECGC, RBI and EXIM Bank.

Unit 5: (8 Hours)
Banker as lender – Types of loans – Overdraft facilities – Discounting of bills – Financing book dates and supply bills- Charging of Security bills- pledge – mortgage – assignment

Unit 6: (9Hours)

Asset Liability Management (ALM) in banks: Components of Liabilities and Components of Assets, Significance of Asset Liability management, Purpose and objectives. Prerequisites for ALM, Assets and Liabilities Committee (ALCO)- Activities of ALCO

Practical Components:

- Students can study Universal Banking & Cross Selling concepts adopted by banks
- Students can study Customer Profiling aspects adopted by banks
- Students can analyze Advertisement & Publicity efforts done by banks using ATMs (making a checklist of the publicity material found in an ATM – preferably in a private bank ATM)

RECOMMENDED BOOKS:

- Principles and practices of Banking - IIBF, 2/e, Macmillan, New Delhi.
- Elements of Banking & Insurance – JyothsnaSethi&Nishwan Bhatia, PHI, 2009.
- Bank Management - Koch W, Timothy, & S. Scott, Cengage Learning, New Delhi.

- Management of Banking and Financial Services, Padmalatha Suresh and Justin Paul, Second edition, Pearson, 2011
- Banking Theory and Practice, K.C. Shekhar and LekshmyShekhar, Vikas Publishing House,2011.
- Modern Banking: Theory and Practice, Muraleedharan D, PHI,2013.

REFERENCE BOOKS:

- Banking Theory, Law and practice - Sunderaram and Varshney, Sultan Chand & Sons, New Delhi.
- Banking and Financial System - Prasad K, Nirmala, Chandradas J. Himalaya Publishing House, Mumbai.
- Banking and Financial services- Sharma, Mukund, 1st edition, Himalaya Publishing House, Mumbai.

INVESTMENT BANKING AND FINANCIAL SERVICES

Subject Code	: 16MBA FM302	IA Marks: 20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To provide an understanding of the functioning of investment banking
- To explain the role of depositories and custodians
- To provide an in depth understanding of the financial services like factoring, venture capital, leasing and hire purchase.
- To familiarize the students with working of Housing finance and non banking finance companies
- To explain the concept and developments in micro finance, credit rating and securitization

Course Outcome:

At the end of the course, the students are able to:-

- Understand the functioning of Investment banking
- Be aware of operation connected with depositories and custodians
- Know how financial services like factoring, venture capital, leasing and hire purchase are provided in the financial system.
- Understand the working of Housing finance and non-banking finance companies.
- Identify the developments happening in micro finance, credit rating and securitization system.

Unit 1:

(10 Hours)

Investment Banking- Introduction-Functions of Investment Banks- Types of Investment Banks- Investment Banking Services- Merchant Banking Services-Issue Management-Pre issue and Post

issue obligations-Changing landscape of Investment Banking. Regulation of the Capital Market-SEBI regulations for merchant bankers, brokers and sub brokers, intermediaries and portfolio managers.

Underwriting: Concept – Devolvement - Business model - Underwriting in fixed price offers and book built offers.

Unit 2: (9 Hours)

Depository System: Objectives, activities, interacting systems, role of depositories and their services, Advantages of depository system -NSDL and CDSL. The process of clearing and settlement through Depositories, Depository Participants.

Regulations relating to Depositories-SEBI (Depositories and Participants) Regulations 1996-Registration of depository and participant- Rights and Obligations of depositories and Participants.

Unit 3: (7 Hours)

Housing Finance: Role, Types of housing loans, Institutions and banks offering Housing Finance, Procedure and Interest rates. Income Tax Implication. Reverse mortgage loan.

Non-Banking Finance Companies: Types, Growth, Functions, RBI Guidelines, Prudential Norms.

Unit 4: (9 Hours)

Factoring: Origin, Types, Factoring mechanism, advantages, factoring charges, International factoring, Factoring in India. **Forfeiting:** Origin, characteristics, benefits, difference between factoring and forfeiting, growth of forfeiting in India. **Securitization of debt:** Meaning, Features, Special Purpose Vehicle, Types of securitisable assets, Benefits of Securitization, Issues in Securitization.

Unit 5: (9 Hours)

Venture Capital: Concept, features, Origin and the current Indian Scenario. Private equity-Investment banking perspectives in private equity

Microfinance: The paradigm - NGOs and SHGs - Microfinance delivery mechanisms – Future of micro finance.

Credit rating: Definition and meaning, Process of credit rating of financial instruments, Rating methodology, Rating agencies, Rating symbols of different companies. Rating agencies for SMEs.

Unit 6: (12 Hours)

Leasing: Concept, Steps in Leasing Transactions, Types of Lease, Legal frameworks, Advantages and disadvantages of Leasing, Contents of a Lease Agreement, Matters on Depreciation and Tax, Problems in leasing, Factors influencing Buy or Borrow or Lease Decision.

Hire Purchasing: Concepts and features, Hire Purchase Agreement, Comparison of Hire Purchase with Credit sale, Instalment sale and Leasing. Banks and Hire Purchase. Problems related to outright purchase, Hire purchase and Leasing.

(Question Paper: Case study-Problem on financial evaluation of leasing and hire purchase.)

Practical Components:

- Students can study the procedure for the sanction of housing loans by a bank
- Students can study the Procedure to open a Demat account and an Online Trading Account.
- Students can visit a NBFC and study their operations
- Students may visit a SHG/NGO and study the micro finance aspects
- Visit a bank/financial institution providing factoring service and submit a report.

RECOMMENDED BOOKS:

- Indian Financial System—Khan M. Y, 7/e, TMH, 2011
- Indian Financial System – Machiraju, 4/e, Vikas, 2010
- Financial Markets and Services – Gordon & Natarajan, 7/e, Himalaya publishing, 2011.
- Financial services - Khan M.Y, 6/e, McGraw Hill, 2011.
- Banking and Financial services- Sharma, Mukund, 1/e edition, Himalaya Publishing House, Mumbai.

REFERENCE BOOKS:

- Dynamics of Financial Markets and Institutions in India – Srivastava R. M, Excel Books, 2010.
- Indian Financial System – Bharati V. Pathak, 3/e, Pearson Education, 2011.
- Investment Banking- Pratap G Subramanyam, Tata McGraw Hill, 2012.
- Merchant Banking & Financial services - Vij&Dhavan, 1/e, McGraw Hill, 2011.

INVESTMENT MANAGEMENT

Subject Code	: 16MBA FM303	IA Marks: 20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Objectives:

- To develop a thorough understanding of the process of investments.
- To familiarize the students with the stock markets in India and abroad.
- To provide conceptual insights into the valuation of securities.
- To provide insight about the relationship of the risk and return and how risk should be measured to bring about a return according to the expectations of the investors.
- To familiarize the students with the fundamental and technical analysis of the diverse investment avenues
- To learn the Theories of Portfolio management and also the tools and techniques for efficient portfolio management.

Course Outcome:

At the end of the course, the students are able to:-

- Understand the process of investments.
- Get an insight into functioning of stock markets in India and abroad.
- Have insight into the relationship of the risk and return.
- Have familiarity of the fundamental and technical analysis
- Learn the Theories of Portfolio management and also the tools and techniques for efficient portfolio management.

Unit 1: (Theory)

(6 Hours)

Investment: Attributes, Economic vs. Financial Investment, Investment and speculation, Features of a good investment, Investment Process. Financial Instruments: Money Market Instruments, Capital Market Instruments, Derivatives. Mutual Funds: Functions of Investment companies, Classification of Investment companies, Mutual Fund types, Performance of Mutual Funds-NAV.

Unit 2: (Theory)

(6 Hours)

Securities Market: Primary Market - Factors to be considered to enter the primary market, Modes of raising funds, Secondary Market- Major Players in the secondary market, Functioning of Stock Exchanges, Trading and Settlement Procedures, Leading Stock Exchanges in India. Stock Market Indicators- Types of stock market Indices, Indices of Indian Stock Exchanges.

Unit 3: (Theory & Problems)

(10 Hours)

Risk and Return Concepts: Concept of Risk, Types of Risk- Systematic risk, Unsystematic risk, Calculation of Risk and returns of individual security, Portfolio Risk and Return

Unit 4: (Theory & Problems)

(10 Hours)

Valuation of securities: Bond- Bond features, Types of Bonds, Determinants of interest rates, Bond Management Strategies, Bond Valuation, Bond Duration. Preference Shares- Concept, Features, Yields. Equity shares- Concept, Valuation, Dividend Valuation models

Unit:5 (Theory& Problems)

(12 Hours)

Macro-Economic and Industry Analysis: Fundamental analysis-EIC Frame Work, Global Economy, Domestic Economy, Business Cycles, Industry Analysis.

Company Analysis- Financial Statement Analysis, Ratio Analysis.

Technical Analysis – Concept, Theories- Dow Theory, Eliot wave theory. Charts-Types, Trend and Trend Reversal Patterns. Mathematical Indicators – Moving averages, ROC, RSI, and Market Indicators. (Problems in company analysis & Technical analysis)

Market Efficiency and Behavioral Finance: Random walk and Efficient Market Hypothesis, Forms of Market Efficiency, Empirical test for different forms of market efficiency. Behavioral Finance – Interpretation, Biases and critiques. (Theory only)

Unit 6: (Theory & Problems)

(12 Hours)

Modern Portfolio Theory: Markowitz Model -Portfolio Selection, Opportunity set, Efficient Frontier. Capital Asset pricing model: Basic Assumptions, CAPM Equation, Security Market line, Extension of Capital Asset pricing Model - Capital market line, SML VS CML. Arbitrage Pricing Theory: Arbitrage, Equation, Assumption, Equilibrium, APT AND CAPM.

Portfolio Management: Diversification- Investment objectives, Risk Assessment, Selection of asset mix, Risk, Return and benefits from diversification. Portfolio Management Strategies: Active and Passive Portfolio Management strategy. Portfolio Revision: Portfolio Revision Strategies – Objectives, Performance plans.

Portfolio Evaluation: Holding period's returns, Measures of portfolio performance. Sharpe's, Treynor's and Jensen's.

(QUESTION PAPER- 50% Problems, 50% Theory)

Practical Components:

- A Student is expected to trade in stocks. It involves an investment of a virtual amount of Rs.10 lakhs in a diversified portfolio and managing the portfolio. At the end of the Semester the Net worth is to be assessed and marks may be given (to beat an index).
- Students should study the functioning of stock exchange.
- Students can do:-
 - Macro Economic Analysis for the Indian economy.
 - Industry Analysis for Specific Sectors.
 - Company Analysis for select companies.
 - Practice Technical Analysis
- Students can study the mutual funds schemes available in the market and do their Performance evaluation.

RECOMMENDED BOOKS:

- Investments – ZviBodie, Kane, Marcus &Mohanty, 8/e, TMH, 2010.
- Investment Analysis and Portfolio management – Prasanna Chandra, 3/e, TMH, 2010.
- Security Analysis & Portfolio Management- Kevin S, PHI, 2011.
- Investment Management – Bhalla V. K, 17/e, S.Chand, 2011.
- Security Analysis & Portfolio Management – Fisher and Jordan, 6/e, Pearson, 2011.
- Security Analysis & Portfolio Management – Punithavathy Pandian, 2/e, Vikas, 2005.
- Investment Management – Preethi Singh, 17/e, Himalaya Publishing House 2010.

- Security Analysis & Portfolio Management– Dhanesh Khatri, 1st Edition, Macmillan, 2010.
- Security Analysis & Portfolio Management– Talwar, 1st Edition, Cengage, 2016.

ADVANCED FINANCIAL MANAGEMENT

Subject Code	: 16MBA FM304	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To understand the management of working capital.
- To understand the techniques of cash, inventory and receivables management
- To comprehend the capital structure
- To assess the dividend policy of the firm

Course Outcome:

At the end of the course, the students are able to:

- Realize the importance of management of working capital in an organization.
- Be aware of the techniques of cash, inventory and receivables management
- Get an overview of capital structure theories
- Understand and assess the dividend policy of the firm

Unit 1: (8 Hours)

Working capital management – Determination of level of current assets. Sources for financing working capital. Bank finance for working capital. (No problems on estimation of working capital). Working capital financing: Short term financing of working capital, long term financing of working capital. Working capital leverage.

Unit 2: (10 Hours)

Cash Management – Forecasting cash flows – Cash budgets, long-term cash forecasting, monitoring collections and receivables, optimal cash balances – Baumol model, Miller-Orr model, Strategies for managing surplus fund.

Unit 3: (9 Hours)

Receivables Management – Credit management through credit policy variables, marginal analysis, Credit evaluation: Numerical credit scoring and Discriminate analysis. Control of accounts receivables, Problems on credit granting decision.

Unit 4: (9 Hours)

Inventory Management: Determinations of inventory control levels : ordering, reordering, danger level. EOQ model. Pricing of raw material. Monitoring and control of inventories, ABC Analysis.

Unit 5: (10 Hours)

Capital structure decisions – capital structure & market value of a firm. Theories of capital structure – NI approach, NOI approach, Modigliani Miller approach, Traditional approach. Arbitrage process in capital structure. Planning the capital structure: EBIT and EPS analysis. ROI & ROE analysis. Capital structure policy

Unit 6: (10Hours)

Dividend policy – Theories of dividend policy : relevance and irrelevance dividend decision. Walter's & Gordon's model, Modigliani & Miller approach. Dividend policies – stable dividend, stable payout and growth. Bonus shares and stock split corporate dividend behavior. Legal and procedural aspects of dividends Corporate Dividend Tax.

(Question paper: 40% theory and 60% problems)

Practical Components:

- Study the working capital financing provided by a Bank and submit the report on the same
- Study the annual report of any two companies and prepare a cash budget for next year.
- Study dividend policy of companies and its impact on shareholders' wealth
- Study implications of bonus issues/stock splits of companies

RECOMMENDED BOOKS:

- Financial Management - M.Y. Khan & P.K. Jain, 6/e, TMH, 2011
- Financial Management - Prasanna Chandra, 8/e, TMH, 2011.
- Financial Management - I.M. Pandey, 10/e, Vikas, 2011.
- Financial Management: Comprehensive Text Book with Case Studies – Ravi M. Kishore, 7/e, Taxmann.
- Principle of Corporate Finance– Brearly and Myers, 10/e, TMH, 2012

REFERENCE BOOKS:

- Financial Management: Theory & Practice - Brigham & Ehrhardt, 10/e, Cenage Learning, 2004.
- Corporate Finance: Ross, Westerfield & Jaffe, – TMH – 8/e, 2010
- Financial Management & Policy - Vanhorne, 12/e, Pearson
- Corporate Finance: Theory & Practice – Ashwath Damodaran, 2/e, Wiley India Pvt. Ltd., 2009.
- Cases in Financial Management - Pandey & Bhatt, 2/e, TMH, 2012.

COST MANAGEMENT

Subject Code	: 16MBA FM305	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To describe the cost concepts, cost behaviors, and cost accounting techniques that are applied to manufacturing and service businesses
- To provide an understanding of the use of cost information in support of different strategies
- To demonstrate costing methods and techniques appropriate to a variety of businesses
- To prepare and interpret budgets and operating results through variance analysis
- To describe the use of balanced scorecard and explain how the balanced scorecard supports strategic cost management

Course Outcome:

At the end of the course, the students are able to :

- Understand the cost concepts, cost behaviors, and cost accounting techniques
- Get an insight into the use of cost information in support of different strategies

- Comprehend costing methods and techniques appropriate to a variety of businesses
- prepare and interpret budgets and operating results through variance analysis

Unit 1:(10 Hours)

Introduction to Cost Management- Cost Accounting to Cost Management- Elements of costs- Classification of costs-Methods of costing-Cost Management Tools- A Strategic View to Cost Management- Preparation of a cost sheet

Unit 2:(10 Hours)

Overheads, Classification and Collection, Difference between Cost Allocation and Cost Apportionment, (Full fledged Problems on Primary and secondary distribution, Simultaneous equations, Absorption of Overhead, Theory on Under and Over absorption of Overhead)

Unit 3:(10 Hours)

Marginal Costing – Nature and Scope- Applications-Break even charts and Point, Decision Making (all types with full problems) Differential Cost Analysis, Advantages and Disadvantages of Marginal Costing.

Unit 4:(10 Hours)

Budgetary Control:- Objectives of Budgetary control, Functional Budgets, Master Budgets, Key Factor Problems on Production Budgets and Flexible Budgets.

Standard Costing:- Comparison with Budgetary control, analysis of Variances, Simple Problems on Material and Labour variances only .

Unit 5:(8 Hours)

Demerits of Traditional Costing, Activity Based Costing, Cost Drivers, Cost Analysis Under ABC (Unit level, Batch Level and Product Sustaining Activities), Benefits and weaknesses of ABC

Unit 6: (8 Hours)

Cost Audit& Reporting to Management:-objectives and advantages of Cost Audit , Cost Audit report .Management Audit- Objectives and Scope.

Reporting to Management – Purpose of reporting-Requisites of a good report,, Classifications of Report, Segment reporting, Cost Reduction and Cost Control, Target Costing – its Principles, Balanced Scorecard: Features and Purpose

(Question Paper:50% Theory and 50% Problems)

Practical components:

- Students can take up a product and get details about the actual cost of raw material, wages and other cost and prepare a cost statement. Standard cost of each component has to be obtained and the variance can be calculated to find the efficiency of Purchase, Operations and Production in charge.

RECOMMENDED BOOKS:

- Cost Accounting – Khan M. Y and Jain P. K, TMH.
- Management Accounting - Khan M. Y and Jain P. K, 6th Edition, McGraw Hill, 2012.
- A Text book of Cost and Management Accounting – Arora M. N, 11th Edition, Vikas.
- Cost Management: A strategic Approach - Vaidya S. C, Suveera Gill, Macmillan, 2010.
- Cost Accounting- Jawaharlal, & Seema Srivastava, 4th Edition, TMH.
- Accounting & Costing for Management – Sinha P. K, Excel Books, 2010.
- A Textbook of Cost Management- G.V Kesava Rao, D Gopinath, M.G. Krishnamurthy and Anita S. Yadav, Paramount Publishing House, 2013

REFERENCE BOOKS:

- Principles and Practice of Cost Accounting - Bhattacharyya, 3rd Edition, PHI.
- Managerial Accounting- James Jiambalvo, 4th Edition, Wiley India Pvt. Ltd.
- Advanced Cost Accounting – Madegowda J, HPH.
- Cost and Management Accounting – Arora M. N, 3rd Edition, HPH.
- Cost Accounting: Theory and Practice - Bhabatosh Banerjee, 13th Edition, PHI.

STRATEGIC CREDIT MANAGEMENT

Subject Code	: 16MBA FM306	IA Marks	:20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To provide an overview of the sound lending decisions by a bank
- To explain the process of evaluation of the loan proposal
- To provide an insight into the different types of loans
- To describe the aspects of NPA management

Course Outcome:

At the end of the course, the students are able to:

- Understand and evaluate the lending decisions by a bank
- Realize the process of evaluation of the loan proposal by banks
- Get an insight into the different types of loans
- Understand management of NPA

Unit 1:**(10 Hours)**

Credit management in banks-Screening of applications-Appraisal of credit-Sanction limit-Post sanction compliance – Monitoring supervision –Review- Government policies for credit extension- Credit institutions- Principles of good lending- Borrower study and bankers opinion-Credit policy by banks- Government regulation of credit -Prudential norms.

Unit 2: (10 Hours)

Over view of credit policy and loan characteristics-The credit process –Characteristics of different types of loans- Evaluating commercial loan requests – Financial statement analysis- Cash flow analysis- Projections-Management of the firm and other factors –Feasibility study – Fundamental credit issues - Credit analysis-Different types of borrowers – Balance sheet analysis for lending – Forms of advances secured and unsecured advances- Short term and long term advances.

Unit 3: (8 Hours)

Evaluating consumer loans – Types- Credit analysis of consumer loans- Risk–return analysis of consumer loans- Customer profitability analysis and loan pricing- Fixed Vs floating rates

Unit 4: (8 Hours)

Loan and advances against pledge- Hypothecation- Mortgage – Lien- Advances against goods- Document to title to goods – Life insurance policies – Stock exchange securities-Fixed deposit receipts –Book debts- Supply bills- Real estates – Advance against collateral securities

Unit 5: (8 Hours)

Agricultural finances and Retail lending- Crop loans- Crop insurance schemes- Dairy- Sericulture- Poultry- Animal husbandry – Horticulture – Gobar gas – Kissan credit cards – NABARD initiatives – Lead bank schemes – Retail banking advances – Concept – Retail banking products – Consumer credit financing

Unit 6: (12 Hours)

NPA management – Introduction- Identification of NPAs- Asset classification- Prudential norms- Capital adequacy – International Banking Regulation-Basel Norms – asset classification provisioning – effect of NPA on profitability - Assessment procedure- Pre-sanction appraisal – Post sanction supervision- Monitoring systems for existing and likely NPAs—Tools to manage NPAs –Compromise scheme, LokAdalats, Debt Recovery Tribunals, Corporate Debt Restructuring, Willful defaulters, SARFAESI Act, Asset Reconstruction Companies-CIBIL

Practical Components:

- Students can visit a bank and study the lending and loan appraisal system relating to Agricultural loan, consumer financing etc.
- Students can study the NPA status of leading two PSU banks and two private banks.
- Students can study and submit a report on different retail banking products

RECOMMENDED BOOKS:

- Strategic Credit Management in Banks, Popli.G.S. and Puri S. K. , PHI, 2013
- Banking Theory and Practice - Shekar and Shekar, 19th Edition, Vikas Publishing House, 2009.
- Bank Management - W. Koch Scott, Timothy, Cengage Learning, New Delhi.
- Commercial Banking -Benton Gup & James Kolari, 3rd Edition, Wiley India, 2010.
- Indian Financial System, Bharati V. Pathak, 3rd Edition, Pearson, 2012.
- Bank Credit Management, G. Vijayaragavan, Himalaya Publishing House, 2009.

REFERENCE BOOKS:

- Industrial Finance - Vishwanathan R, Macmillan, New Delhi.
- Banking and Financial System - Prasad K, Nirmala and Chandradas. Himalaya Publishing House, Mumbai.
- Managing Banking Risks - Cade, Eddic, Woodhead Publishers, England.

SEMESTER III Human Resource Management Specialisation

INDUSTRIAL RELATIONS AND LEGISLATIONS

Subject Code	: 16MBA HR301	IA Marks :20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To enable students to understand and apply the principles of IR and develop an awareness of the significance of industrial peace.
- To provide a conceptual basis of Industrial Relations.
- To give an understanding of the components and meaning of sustaining Industrial peace anchored on harmonious Employee-Management relations.
- To discuss the various Industrial acts.

Course Outcomes:

The students should be able to

- Gain the insights of IR practices in the industry.
- Develop the knowledge related to employee-management relations
- Implementation of various industrial acts

PART A:

INDUSTRIAL RELATIONS

(32 hours)

Unit 1

(8 hours)

Introduction:

Background of Industrial Relations – Definition, scope, objectives, factors affecting IR, participants of IR, importance of IR. Approaches to Industrial relations, system of IR in India –Historical perspective & post-independence period, Code of Discipline and historical initiatives for harmonious IR, Government policies relating to labor, ILO and its influence on Legal enactments in India.

Grievance procedure and Discipline management:

Grievance - Meaning and forms, sources of grievance, approaches to grievance machinery, Grievance procedures, model grievance procedure. Disciplinary procedures, approaches to manage discipline in Industry, Principles of Hot stove rule.

RECOMMENDED BOOKS:

- Employee Relations Management, P N Singh, Singh P. N., - Pearson Publications, 2011.
- Dynamics of Industrial Relations, Mamoria&Mamoria, Himalaya Publications, 2012
- Human Resource Management Principles & Practice, Aquinas, Vikas Publication.
- Personnel Management & Industrial Relations, Nair N G, Nair L, S. Chand Limited, 2001
- Essentials of Human Resource Management and Industrial Relations, Subba Rao, 3rd Revised edition, Himalaya Publishing House, 2010.

REFERENCE BOOKS:

- Industrial Relations, Trade Unions & Labour Legislation, P R N Sinha et al, Pearson Education, 2004.
- Bare Acts
 - Industrial Relations and labor laws, ArunMonappa, RanjeetNambudiri, PatturajuSelvaraj, TMH, 1997.
 - Industrial relations, trade unions and labor legislations, P R N Sinha, InduBala Sinha, Seema PriyadarshiniShekar, Pearson Education, 2013, ISBN: 9788131731642

PART B: (24 Hours)

Unit 5

INDUSTRIAL LEGISLATIONS (16 hours)

Only basic objectives and major provisions of the following legislations:

- Factories Act 1948,
- Industrial Employment (Standing orders) Act, 1946
- Employees' State Insurance (ESI) Act, 1948,
- Maternity Benefit Act, 1961
- Contract Labour Act,
- Shops and Establishments Act
- Child Labour (Prohibition & Regulation) Act, 1986
- Industrial disputes act of 1947

Unit 6 (8 Hours)

- Minimum Wages Act, 1948
- Payment of Wages Act, 1936

- Payment of Gratuity Act 1972,
- Employees' Provident Fund and Miscellaneous Provisions Act 1952;
- Payment of Bonus Act, 1965.
- Employees Compensation Act in 2013

NO PRACTICAL COMPONENT

RECOMMENDED BOOKS:

- Labor Laws for Managers, BD Singh, Excel Books, 2009
- Industrial Relations and Labor laws, SC Srivatava, 5th Edition, Vikas Publications.
- Elements of Mercantile Law - N. D Kapoor, Sultan Chand, 2004.
- Industrial Relations and Labour Legislations, Piyali Ghosh & Shefali Nandan, TMH.
- Labor Industrial Laws, Dr. V. G. Goswami, Eighth Edition, Central Law Agency, Allahabad

REFERENCE BOOKS:

- Industrial Relations, Trade Unions & Labour Legislation, P R N Sinha et al, Pearson Education, 2004.
- Bare Acts
- Industrial Relations and labor laws, Arun Monappa, Ranjeet Nambudiri, Patturaju Selvaraj, TMH, 1997.
- Industrial relations, trade unions and labor legislations, P R N Sinha, Indu Bala Sinha, Seema Priyadarshini Shekar, Pearson Education, 2013.

RECRUITMENT & SELECTION

Subject Code	: 16MBA HR302	IA Marks	: 20
Number of Lecture Hours/Week	: 03	Exam Hours:	03
Number of Lecture Hours	: 56	Exam Marks:	80
Practical Component	: 02 Hours/ Week		

Course Objectives:

To understand and apply the policies and procedures of recruitment

- To provide a conceptual framework of Selection Procedure in the Industry.
- To understand the new concepts and techniques of recruitment and Selection in the Corporate.

Course Outcomes:

The students should be able to

- Learn the various recruitment policies and procedures.
- Equip with conceptual framework of selection procedures.
- Gain insights of the latest concepts and techniques used in recruitment and selection.

Unit 1:

(6 Hours)

Job Analysis: Meaning, definition and purpose. Methods of job analysis: job analysis interviews, job analysis questionnaire, task analysis inventory, position analysis questionnaire, subject expert

workshops, critical incident technique, Fleisclunann job analysis survey, functional job analysis, job element method, repertory grid, critical incident technique

Unit 2: (9 Hours)

Hiring Process & Hiring decision: Nature of hiring: regular, temporary, full time, part time, apprentice, contractual, and outsourcing, Existing post or new post to be created, Need analysis, cost analysis and job analysis.

Unit 3: (7 Hours)

Hiring internally: Meaning and definition of internal recruitment, Advantages and disadvantages in terms of cost, time, quality and suitability. Sources of internal recruitment: - circulars, intranet advertisements, employee referrals, Appointment or promotion, Policy guidelines and union settlements.

Unit 4: (10 Hours)

External Hiring: Meaning and definition of external recruitment. Sources of recruitment:- advertisement, in newspaper, TV/Radio, Internet, search on the internet, wanted signboards, consultants, employment exchange, campus recruitment, employee referrals and unsolicited applications. Advantages and disadvantages of the above sources in terms of cost, time, convenience, reach of the targeted population, and quality of applicant pool.

Job advertisement: drafting, size and contents. Contents of public sector recruitment: single or multiple sources and choosing the best source

Unit 5: (8 Hours)

Screening the candidates: Application Forms: bio-data / resume / curriculum vitae and Weighted application blanks: meaning definition, purpose, advantages and disadvantages – taking a Behavioral approach to recruitment: spotting personality patterns, making basic assumptions, Predicting the future, strategy Vs. Technique, Pinning down what is needed: targeted interviewing, focusing on behavior, assessing how person performs, assuming they have been hired. – Identifying the ingredients of success: the winning candidate's profile, challenges in the Interview, the starting point, day to day execution, dealing with people, the inner person, additional characteristics. Studying the CV.

Unit 6: (16 Hours)

Testing, Reference checking & Appointment orders: Meaning, definition, purpose, advantages and disadvantages, Ability tests clerical ability test, mechanical ability test, mental ability test, physical ability test, personality assessment test, typing test, shorthand test, computer proficiency test

Interviewing: Planning the interview, Interview process - Interview in public sector undertaking. Statutory requirements.

Reference checking: meaning, definition and purpose. Verification of character, criminal antecedents, previous work behavior and education qualifications. Verification of community certificates in public sector companies.

Appointment orders: Meaning, definition, and purpose. Contents of appointment letter, hard copy (or soft copy),

Practical Components:

- Students need to identify two jobs in the college and need to do job analysis for those positions using any of the job analysis methods.

- In teams students can be asked to give presentations about various types of jobs (regular, temporary, full time, part time, apprentice, contractual, and outsourcing) in different industries along with its advantages and disadvantages
- In Teams, select and analyze any two of the Job postings advertisements in Newspapers to know more about job description and job specification mentioned in each advertisement for every post.
- Obtain online access to the resume data base of Naukri.com or Monsterindia.com for a week give at least four Job Descriptions and specification to each student, to search and download from the data base at least five resumes for each positions.
- Students can identify 4 or 5 jobs of their interest and can create Advertisements for the same imagining that they are Proprietors of the companies and hiring for these positions.
- Debate on Advantages and disadvantages of hiring external and Internal for the selected jobs like
- Police Constable, Doctor, CEO, Mechanical Engineer, Professor etc.,
- Role play: Students can do the role play for the entire process of hiring and selecting 3 or 4 selected roles in a specific industry.

RECOMMENDED BOOKS:

COMPENSATION AND BENEFITS

Subject Code	: 16MBA HR303	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives

- To know the theoretical and practical developments in the area of compensation and benefits.
- To discuss the strategic importance of compensation for the achievement of organizational goals.

- To understand the relationship between compensation objectives and business strategy.
- To discuss the role of compensation in attracting, motivating, and retaining a high-quality workforce.

Course Outcomes:

The students will be able to

- Gain insights of various conceptual aspects of Compensation and Benefits.
- Determine the performance based compensation system for business excellence.
- Understand the Legal & Administrative Issues in Compensation Global Compensation

Unit 1: (7 Hours)

Introduction to Compensation: Definition of Compensation, Basic concepts of Compensation (wages, salary, benefits, DA, consolidated pay, Equity based programs, commission, reward, remuneration, bonus etc.), Types of Compensation Management - The Pay Model, Strategic Pay Policies, Strategic Perspectives of Pay, Strategic Pay Decisions, Best Practices vs. Best Fit Options

Unit 2: (5 Hours)

Internal Alignment: Definition of Internal Alignment, Internal Pay Structures, Strategic Choices In Internal Alignment Design, Internal Structure

Unit 3: (7Hours)

Job Evaluation: Definition of Job Evaluation, Major Decisions in Job Evaluation, Job Evaluation Methods, Final Result – Pay Structure- various methods of calculation of compensation: Straight Piece Rate Method, Flat Time Rate Method, Halsey Premium Bonus Plan, Rowan Premium Bonus Plan, Taylor Differential Piece Rate Method

Unit 4: (8Hours)

Determining External Competitiveness and Benefits Management:

Competitiveness: Definition of Competitiveness, Pay Policy Alternatives, Wage Surveys, Interpreting Survey Results, Pay Policy Line, Pay Grades

Benefits: Benefits Determination Process, Value of Benefits, Legally Required Benefits, Retirement, Medical, & Other Benefits

Unit 5: (9 Hours)

Performance Based Compensation System:

Employee Contributions: Pay For Performance (PFP): Rewarding Desired Behaviors, Designing PFP Plans, Merit Pay/Variable Pay, Individual vs. Group Incentives, Long Term Incentives. Compensation of Special Groups, Compensation Strategies for Special Groups

Unit 6: (20 Hours)

Legal & Administrative Issues in Compensation Global Compensation: Legal Issues, Pay Discrimination, Comparable Worth, Budgets and Administration: Recognizing Variations, Social Contract, Culture & Pay, Strategic Choices in Global Compensation, Comparing Systems, Expatriate Pay

Practical Components

- Students must prepare a comprehensive compensation plan to be offered to a Sales Executive, A General Manager and The CEO of an organization.

- Students to collect information from an IT organization regarding the Cost To Company of an employee.
- Students have to prepare questionnaire for conducting wage survey and carry out wage survey for any selected sector and prepare a report for the same.
- Solve various case studies.
- Students must compare and analyze compensation practices in different countries.
- Students to calculate the bonus amount eligible to an employee working as a HR Executive for the past 10 years in an automobile manufacturing organization.

RECOMMENDED BOOKS:

- Compensation & Reward Management, BD Singh, 2ndedition, Excel BOOKS, 2012.
- Compensation, Milkovich& Newman, 6thedition, Irwin/McGraw-Hill.
- Compensation and Benefit Design, Bashker D. Biswas, FT Press, 2012.
- An Introduction to Executive Compensation, Steven Balsam, Academic Press, 2002.

REFERENCE BOOKS:

- Strategic Compensation, Joseph J. Martocchio, 3rd Edition, Prentice Hall, 2004.
- Compensation Management in a Knowledge based world, Richard I. Anderson, 10th edition, Pearson Education
- Compensation Management, ErSoniShyam Singh, Excel Books.

LEARNING AND DEVELOPMENT

Subject Code	: 16MBA HR304	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To enable students to be aware of the field of learning and development and its role in optimizing performance.
- To make students understand the process of analyzing training needs and evaluating training programs
- To provide the students an overview of the various Training and Management Development Method

Course Outcomes:

The Students will be able to

- Understand the concepts of learning and development and its role.
- Learn various contemporary methods of learning and development.
- Gain insights of various training evaluation methods and career planning.

Unit 1:

(8 Hours)

Introduction to Employee learning and Development, learning, Meaning and significance, The Forces Influencing Working and Learning, classification of learning capabilities, learning theories- Reinforcement Theory, Social Learning Theory, Goal Theories, Expectancy Theory, Adult Learning Theory, pedagogy and andragogy; The basic principles of learning, The Learning Process , Mental and Physical Processes, The Learning Cycle, Instructional Emphasis for Learning Outcomes.

Unit 2: (6 Hours)

Training and Learning: Introduction, Relationship, meaning, Designing Effective Training, Forces influencing working & learning, Strategic Training, Work Environment, Characteristics influencing transfer of training, organizational environments encouraging transfer.

Unit 3: (7 Hours)

Training Needs Analysis: Meaning and significance of training needs, types of needs, components of needs, data collection, analysis and interpretation. Meaning and significance of training design and development, principles of training design, design process, identifying the training objectives, determining structure, content, duration, method, learning activities,

Unit 4: (11 Hours)

Training implementation & Methods: Meaning and significance of implementation, making or buying decision, implementation process for making and buying decisions, skills of effective trainer.

Training Methods: Presentation Methods, Hands-on Methods, Group Building Methods. Choosing Training methods. E-Learning & Use of Technology in Training: Technology's Influence on Training, Technology & Multimedia, Computer-Based Training, Developing Effective Online Learning, Blended Learning, Simulations, Mobile Technology & Training Methods, Intelligent Tutoring Systems, Distance Learning, Technologies for Training Support, Technologies for Training Administration, Learning Management Systems (LMSs), Systems for Training Delivery, Support & Administration, Choosing New Technology Training Methods.

Outward bound methods: Meaning and significance of outward bound learning (OBL) methods, process of OBL, risk, safety and ethical issues. Training aids.

Unit 5: (8 Hours)

Training Evaluation: Meaning, Reasons for Evaluating Training and significance of training evaluation, Donald Kirkpatrick's Evaluation Model, Return on investment in Training, Types of Evaluation Designs, Considerations in Choosing an Evaluation Design, data collection for training evaluation, Threats to Validity, Determining Costs, Evaluation Practices in different organizations, Measuring Human Capital and Training Activity

Unit 6: (16 Hours)

Executive Development/ Management Development/Career Management

Need, factors affecting MDP, methods, process, administration, delivery, costing & pricing, Company Strategies for Providing Development, Increased Use of New Technologies for Learning, Increased Demand for Learning for Virtual Work Arrangements, Increased Use of Training Partnerships & Outsourcing Training,

Careers and Career Management: Introduction, Importance, Career: meaning, A Model of Career Development (Career Stages), Career Management Systems

Practical Components:

- Study training programs and processes in different organizations and analyze their effectiveness.
- Students to design a training program for a specific job role.
- Students are expected to conduct a mock training session including need identification and a set of
- Students to evaluate the effectiveness of the same.
- Give a training needs analysis case and ask the students to find out the training needs
- Implement various training methods, observe and submit a report on its effectiveness.

RECOMMENDED BOOKS:

- Effective Training, P Nick and Blanchard, 2nd Edition, Pearson Education/PHI, 2005
- Training & Development, Dr. B. Janakiraman, Biztantra/Wiley Dreamtech, 2005
- Employee Training & Development, Noe A Raymond, 2nd edition, McGraw Hill Publication.
- Management Training and Development, Gupta B.L, 1st Edition, Vrinda Publications, 2011.
- Training and Development Methods, Dr. Rishipal, 1st Edition, S. Chand, 2011.
- Personal Growth and Training & Development, Ruchi Srivastava, 1st Edition, Vrinda Publications,
- 2011.

REFERENCE BOOKS:

- Training for development– Rolf Lynton & Udai Pareek, Sage Publications, 2011.
- Effective HR Training Development Strategy – Ratan Reddy, HPH, 2005.
- Training in organizations - Goldstein, 4th Edition, Cengage learning.

KNOWLEDGE MANAGEMENT

Subject Code	: 16MBA HR305	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To understand the fundamental concepts of Knowledge management.
- To discuss the current trends in knowledge management and their manifestation in business
- To analyze and build communities of practice to contribute and share knowledge

Course Outcomes:

The students will be able to

- Gain insights about the concepts of knowledge management.
- Enable with the architecture and models of knowledge management
- Learn knowledge management lifecycle and dissemination

Unit 1:

(9 hours)

Understanding knowledge: the core of business: What Is Knowledge Management, Multidisciplinary Nature of KM, Drivers of KM, The Two Major Types of Knowledge, The Concept Analysis Technique, History of Knowledge Management, From Physical Assets to Knowledge Assets, Organizational Perspectives on Knowledge Management, Knowledge, Intelligence,

Experience, Common sense. Cognition and KM. Types of Knowledge, Knowledge Management architecture and Implementation Strategies.

Knowledge creation and capture: Knowledge Creation, Nonaka's Model, Major Theoretical KM Models, Takeuchi Knowledge Spiral Model, Knowledge Conversion.

Unit 2: (7 hours)

The knowledge management cycle: Knowledge Management System Life Cycle, Major Approaches to the KM Cycle, The Zack KM Cycle, The Bukowitz and Williams KM Cycle.

Unit 3: (6 hours)

Knowledge sharing and communities of practice: The Social Nature of Knowledge, Sharing Communities, Types of Communities, Roles and Responsibilities in CoPs, Knowledge Sharing in Virtual CoPs, Data Mining and Knowledge Discovery, Blogs, Content Management Tools, Knowledge Sharing and Dissemination Tools.

Unit 4: (12 hours)

Knowledge application: KM for Individuals, Communities and Organizations, Future Challenges for KM. Knowledge Application at the Individual, Group & Organizational Levels, Characteristics of Individual Knowledge Workers, Task Analysis and Modelling, EPSS, Knowledge Reuse, Knowledge Repositories, Strategic & Practical Implications of Knowledge Application

The role of organizational culture: Different Types of Cultures, Organizational Culture Analysis, Culture at the Foundation of KM, The Effects of Culture on Individuals, Cultural Transformation to a Knowledge-Sharing Culture, Organizational Maturity Models, KM Maturity Models, CoP Maturity Models,

Unit 5: (12 hours)

KM strategy and metrics: Knowledge Management Strategy, Knowledge Audit, Gap Analysis, The KM Strategy Road Map, The Management of Organizational Memory, Balancing Innovation and Organizational Structure, Historical Overview of Metrics in KM, KM Metrics, The Benchmarking Method, The Balanced Scorecard Method.

Unit 6: (10 hours)

The KM team & learning organizations: learning organization: The mystique of learning organization, learning and change, RICE Model. Major Categories of KM Roles, Senior Management Roles, KM Roles and Responsibilities within Organizations, the KM Profession. Ethical, legal and managerial issues.

Practical Components:

- To expose and make students to prepare a report on knowledge management practices implemented by successful companies.
- Make a team of 2-3 students and asking them to conduct a telephonic interview or survey regarding local businesses familiarity with and level of literacy in KM.
- To do a comparison on the KM Life Cycle Models and seeing their applicability in organizations.
- To organize a group discussion for students and enable them to go through the knowledge acquisition phases.

- Asking students to compare and contrast on different COPs.

RECOMMENDED BOOKS:

- Knowledge Management, Elias M Awad, Hassan M Ghaziri, PHI, 3rd Edition.
- Knowledge Management in Theory and Practice, KimizDalkir, 2nd Edition, PHI.
- Knowledge Management: Tool for Business Development, Dr. B. Rathan Reddy, Himalaya Publishing House.
- Knowledge Management, Sudhir Warier, Vikas Publishing House.

REFERENCE BOOKS:

- Knowledge Management, RatnajaGogula, ICFAI University Press, 2002.
- Handbook on knowledge management, Holsapple, Springer Verlag, 2003.
- Knowledge Management: Systems and Processes, Fernandez Irma Becerra, Sabherwal Rajiv, Prentice Hall India.

CONFLICT AND NEGOTIATION MANAGEMENT

Subject Code	: 16MBA HR306	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To understand the nature of various dimensions of conflict
- To learn various strategies and techniques to manage conflicts
- To understand the importance and role of negotiation in conflict resolution
- To understand the importance of cross-cultural and gender dimensions of negotiation

Course Outcomes:

The students will be able to

- Gain insights of various dimensions of conflicts in an organization
- Know the various strategies and techniques of managing conflicts.
- Learn the process of negotiation and its relevance in conflict resolution.

Unit 1:

(8 Hours)

Introduction: Understanding conflict, components, perspectives of conflict, types of conflict, models of conflict – Process and Structural Models, functional & dysfunctional conflict, relationship between conflict and performance in team, levels of conflict – intrapersonal, interpersonal, group &

organizational conflicts, sources of conflict - intrapersonal, interpersonal, group & organizational sources.

Unit2: (8 Hours)

Conflict Management Design: Nature of conflict Management, contingency approach, conflict management process, the conflict domain, conflict trends, conflict distribution, conflict mapping and tracking.

Unit 3: (10Hours)

Managing Conflict: Managing interpersonal conflict: Thomas conflict resolution approach, behavioral style and conflict handling, the CosierSchank model of conflict resolution, collaboration & conflict resolution, dealing with difficult subordinates, boss & colleagues, 1 to 1 dispute resolution.

Managing team & organization conflict: techniques to resolve team conflict, strategies to resolve organizational conflict, effective listening and dialogue skills, humor and conflict resolution, negotiation as a tool for conflict resolution.

Unit 4: (8 Hours)

Conflict resolution and Cost: Conflict resolution models, framework model, classical ideas, new developments in conflict resolution. Environmental conflict resolution, gender and conflict resolution. Assessing the cost of workplace conflict.

Unit 5: (14 Hours)

Negotiations/Negotiation strategies -Types of Negotiations, negotiation process, factors for successful negotiations, essential skills for negotiation, tricks used in negotiation process, psychological advantage of negotiations, Techniques of negotiation, issues in negotiations.

Negotiation strategies: Strategy and tactics for distributive bargaining, strategy and tactics for integrative negotiation, negotiation strategy and planning. Finding and using negotiation power, sources of power, Ethics in negotiation.

Unit 6: (8Hours)

Managing difficult negotiations: Third party approaches: Third party interventions, formal intervention methods – Arbitration, Mediation and Process Consultation, Informal intervention methods, best practices in negotiation.

Practical Components

- Survey the conflict resolution techniques adopted by individuals based on individual personality types.
- Dividing students into groups and give a scenario to negotiate and reach conclusion.
- Reading: 8 Habits of Highly Effective People; apply the concepts to understand how people approach negotiation through different mind – sets.
- Conduct Role Plays for different scenarios.
- Solve various case studies dealing with conflict between teams and organizations.

- Ask students to identify three unconscious factors that may affect their negotiation effectiveness and ask them to explain why or how that phenomenon may occur.
- Management games like two dollar game, cross the line games can be played in the class to develop negotiation skills among the students.

RECOMMENDED BOOKS:

- Corporate Conflict Management - Concepts and Skills, Eirene Leela Rout, Nelson Omiko, Prentice India, 2007.
- Negotiations, Roy J. Lewicki, David M. Saunders, Bruce Barry, 5/e, Mc Graw Hill, 2005
- Contemporary Conflict Resolution, Oliver Ramsbotham, Hugh Miall, Tom Woodhouse, 3rd edition, Polity publishers, 2011.
- Handling Conflict and Negotiation, Manchester Open Learning, illustrated edition, Kogan Page, 1993.

REFERENCE BOOKS:

- Managing conflict and negotiation, B.D. Singh, 1st edition, Excel books, 2008.
- Conflict Management: Practical guide to develop negotiation strategies, Barbara A Budjac Corvette, Pearson Prentice Hall, 2006.
- Managing Conflict in Organizations, M. Afzalur Rahim, 4th Edition, Transaction Publishers, 2011.

**SEMESTER IV
MARKETING SPECIALISATION
SALES MANAGEMENT**

Subject Code	: 16MBA MM401	IA Marks	: 20
Number of Lecture Hours/Week	: 03	Exam Hours:	03
Number of Lecture Hours	: 56	Exam Marks:	80
Practical Component	: 02 Hours/ Week		

Objectives:

- To provide an understanding of the concepts, techniques and approaches in Sales Management.
- To emphasize on the Sales Manager's problems and dilemmas.
- To develop skills for generating, evaluating and selecting sales strategies.

Outcomes:

The student should be able to:

- Know the distinction between the skills required for selling and sales management.
- Develop a plan for organizing, staffing and training the sales force.
- Organize sales territories to maximize selling effectiveness.

- Evaluate sales management strategies

Unit 1: (8 hours)

Introduction to sales management: Meaning, Evaluation, Importance, Personal Selling, Emerging Trends in Sales Management, elementary study of sales organizations, qualities and responsibilities of sales manager. Types of sales organizations.

Unit 2: (8 hours)

Selling skills & Selling strategies: Selling and business Styles, selling skills, situations, selling process, sales presentation, Handling customer objections, Follow-up action.

Unit 3: (8 hours)

Management of Sales Territory & Sales Quota: Sales territory, meaning, size, designing, sales quota, procedure for sales quota. Types of sales quota, Methods of setting quota. Recruitment and selection of sales force, Training of sales force.

Unit 4: (10 hours)

Sales force motivation and compensation: Nature of motivation, Importance, Process and factors in the motivation, Compensation-Meaning, Types of compensation plans and evaluation of sales force by performance and appraisal process. **Sales management job:** Standard sales management process-international sales management -international market selection-market survey approach or strategy

Unit 5: (8 hours)

Sales Manager and Sales Person: Role of sales manager and sales people; functions of sales manager, functions of sales person, types and characteristics of sales manager and sales people-Time management for sales manager and sales person.

Unit 6 (8 hours)

Selling on the internet: Selling agents for internet trading-net selling, advertising in net trading, payment system in internet trading-smart card, credit card, debit card- payment by card: advantages and disadvantages; How to make internet selling safe-Digital signature, biometric method and legal or regulatory environment; Growth of internet trading in India.

Case Studies in Sales Management (6 hours)

Practical component:

- Interview a salesperson and write a brief report about what they like and dislike about their jobs, their salary, travelling allowances, sales quotas, why chose sales career, and what does it take to succeed in this profession
- Ask your friends if they would buy certain goods like groceries, vegetables, socks, mobile, pens etc from the roadside vendor as against a regular shop. Group the products

into low risk and high risk ones. Does this buying behaviour also depend on the personality of the individual doing the buying? Or the one doing the selling?

- Students can make a presentation on any product or the services of student choice, covering selling strategies and one day work exposure towards merchandising in any big retail outlets of respective places where the institute is operating. Rural colleges can send the students to the city nearby to observe the merchandising planning in retail outlets and to make a small report.
- Roles and functions of sales manager and sales people are different in every organization. Sales people view the roles of sales managers in their own way and vice versa. You are the sales manager of a company. You make an analysis of what you feel should be roles of a sales manager and a salesperson for maximizing sales of the organization.
- Your company is active in internet trading. A current issue in internet trading is : how to make internet selling safe. Different methods have been suggested for safety or security of internet trading. You have to analyze different methods and recommend a method for your company.

TAX MANAGEMENT

Subject Code	: 16 MBA FM403	IA Marks :20
Number of Lecture Hours/Week	: 03	Exam Hours: 03
Number of Lecture Hours	: 56	Exam Marks: 80
Practical Component	: 02 Hours/ Week	

Course Objectives:

- To provide the students with a comprehensive understanding of residential status in tax laws
- To acclimatize the students with process of computing tax liability of Individuals
- To understand corporate taxation system in the country
- To know the deductions and exemptions available in the tax laws
- To Provide Insight into GST

Course Outcome:

At the end of the course, the students are able to:

- Understand the process of computing residential status.
- Realize the complexities involved in tax liability of Individuals
- Know the corporate tax system.
- Be aware of deductions and exemptions of taxes
- Understand working of GST system in the country

Unit 1:

(8 Hours)

Basic concepts: assessment year, previous year, person, assessee, Income, charges on income, gross total income, capital and revenue receipts, residential status, receipt and accrual of income, connotation of income deemed to accrue or arise in India. Tax Planning, Tax Evasion and Tax Management. (Problems on residential Status of Individual assessee)

Unit 2:

(10 Hours)

Explanation under various heads of income. Income from salary (Basic problems), Income from House Property (Theory Only)

Unit 3: (10 Hours)

Income under the head Profit and Gains of Business or Professions and its computation- basic method of accounting- scheme of business deductions/ allowance- deemed profits- maintenance of books, Depreciation (Problems on computation of income from business/ profession of Individual assessee and Depreciation).

Unit 4: (12 Hours)

Income under capital gain, basis of charge, transfer of capital asset, inclusion & exclusion from capital asset, capital gain, computation of capital gain(theory & problems), deductions from capital gains. Income from Other Sources (Theory Only) Permissible deductions under section 80C to 80U. Setoff and carry forward of losses.

Unit 5: (10 Hours)

Computation of tax liability of a firm and partners. Computation of taxable income of a company with special reference to MAT. Corporate dividend Tax

Unit 6: (6 Hours)

Introduction to GST, Levy and exemption, Time and value of supply, Administration of GST. Introduction to **Customs duty**.

Practical Components:

- Understanding the usage of software package while calculating different taxes
- Preparation of Income tax returns of Individual assesses.
- Preparation of sales tax returns
- Studying the online submission of Income tax returns

Recommended Books :

- Direct Taxes Law and practice, Vinod Singhania and Kapil Singhania, Taxman Publications,
- Direct Tax – Lal & Vashisht – Pearson Ed. 28E.
- Students Guide to Income Tax Vinod Singhania and Kapil Singhania, – Taxman Publications
- V S Datey – Indirect Taxes – Taxman Publications.

(12 Hours)

Futures and forwards - differences-valuation of futures, valuation of long and short forward contract. Mechanics of buying & selling futures, Margins, Hedging using futures - specification of futures - Commodity futures, Index futures, interest rate futures - arbitrage opportunities.

Interest rate markets - Type of rates, Determining Zero rates, Forward rate agreements (FRA), Interest rate derivatives.

Unit 3:

(10 Hours)

Financial Swaps - features and uses of swaps - Mechanics of interest rate swaps – valuation of interest rate swaps – currency swaps – valuation of currency swaps.

Unit 4:**(12 Hours)**

Options: Types of options, option pricing, factors affecting option pricing – call and put options on dividend and non-dividend paying stocks put-call parity - mechanics of options - stock options - options on stock index - options on futures – interest rate options. Concept of exotic option. Hedging & Trading strategies involving options, valuation of option: basic model, one step binomial model, Black and Scholes Model, option Greeks. Arbitrage profits in options.

Unit 5:**(8 Hours)**

Commodity derivatives: commodity futures market-exchanges for commodity futures in India, Forward Market Commissions and regulation-commodities traded – trading and settlements – physical delivery of commodities.

Unit 6:**(8 Hours)**

Credit risk - Bond prices and the probability of default, Historical default experience, reducing exposure to Credit risk, Credit default swaps, Total return swaps, Credit spread options, Collateralized debt obligation. Basics of Interest rate risk and risk management strategies.

Value at Risk (VAR) - Measure, Historical simulation, Model building approach, linear approach, Quadratic model, Monte Carlo simulation, stress testing and back testing

(Question Paper: 50% Theory and 50% Problems)

Practical Components:

- Students can visit a financial institution dealing in derivatives and study the products offered by them
- Students should individually select various futures or options and watch the behavior of these futures and options on a day to day for 15 days to see how futures and options might help mitigate the risks of investors.

RECOMMENDED BOOKS:

- Options Futures & Other Derivatives - John C. Hull, 6/e, Pearson Education.
- Derivatives and Risk Management, Rajiv Srivastava, Oxford University Press, 2010
- Options & Futures- Vohra & Bagri, 2/e, TMH
- Derivatives- Valuation & Risk Management - Dubofsky& Miller, Oxford University Press, 2005.
- An introduction to derivatives and risk management, Chance, Cengage, 9th edition.

REFERENCE BOOKS:

- Derivatives, Principles and Practice, Sundaram& Das, Mc Graw Hill, 2013
- Risk Management, VaijanathBabshetti& Prakash B. Yaragol, 1st edition, Kalyani Publishers, 2014.
- Introduction to Derivatives and Risk Management – Don M. Chance, Cengage Learning, 2008.
- Financial Derivatives- Bishnupriya Mishra and SathyaSwaroopDebashish, Excel BOOKS, 2007.
- Options & Futures –Edwards & Ma, 1/e, McGraw Hill.

- Derivatives & Financial Innovations - Bansal, TMH.
- Financial Derivatives –Kumar S. S. S, PHI, 2007.
- Futures, Options and Swaps – Robert W. Kolb, 5/e, Wiley India Pvt. Ltd. 2011.

CORPORATE VALUATION

Subject Code	: 16MBA FM406	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Objectives:

- To identify the purpose of corporate valuation and to obtain an overview of the basic corporate valuation process
- To familiarize the students with the standard techniques of corporate valuation.
- To develop analytical skills and communication strategies for discussing corporate valuation.
- To assess a firm's business and competitive strategy and whether it is creating value for shareholders

Course Outcome:

At the end of the course, the students are able to

- Get an overview of the basic corporate valuation process
- Be familiar with the standard techniques of corporate valuation.
- Understand analytical skills and communication strategies for corporate valuation.

Unit 1: (8 Hours)

Corporate valuation-an Overview-Context of valuation-Approaches to Valuation-Features of the valuation process: Book value approach, Stock and debt approach, discounted cash flow approach, Relative valuation approach, option valuation approach-Features of the valuation process-Corporate valuation in practice.

Unit 2: (12 Hours)

Enterprise DCF Model-Analysing historical performance-Estimating the cost of Capital-Forecasting performance-Estimating the continuing value-Calculating and interpreting the results-Other DCF models: Equity DCF Model: Dividend discount model, free cash flow to Equity (FCFE) model-Adjusted present value model-Economic profit model-Applicability and Limitations of DCF analysis

Unit 3: (10 Hours)

Relative valuation-Steps involved in Relative valuation-Equity valuation multiples-Enterprise valuation multiples-Choice of multiple-Best practices using multiples-Assessment of relative valuation.

Other Non DCF Approaches-Book Value approach-Stock and Debt approach-Strategic approach to valuation-Guidelines for corporate valuation

Unit 4: (8 Hours)

Advanced issues in valuation-Valuation of companies of different kinds-valuation in different contexts-Loose ends of valuation-Valuation of intangible assets: Patents, trademarks, copyrights and licenses; Franchises; Brands

Unit 5: (10 Hours)

Value Based Management- Methods and Key premises of VBM-Marakon approach-Alcar approach-Mckinsey approach-Stern Stewart approach-BCG approach-Lessons from the experiences of VBM adopters.

Unit 6: (8 Hours)

Case studies in Valuation - Bharat Hotels company - Bharat Heavy Electricals Limited - Bhoruka Power Corporation Limited - Valuation in the Merger of ICICI with ICICI Bank - Sasken Communication Technologies - Valuation of Infosys Brand

(Question Paper: 50% Theory and 50% Problems)

Practical Component:

- Obtain last three years' balance sheet of any firm that has debt and equity and find out the free cash flow to the firm and free cash flow to the equity for the last three years. Also determine if there is any growth in the cash flows to the firm and to the equity holders. Find beta of the firm and compute cost of equity and WACC to finally find the value of the firm

RECOMMENDED BOOKS

- Corporate Valuation and Value Creation, Prasanna Chandra, Tata McGraw Hill, 2011.
- Valuation, AswathDamodaran, Damodaran, 2/e, John Wiley and Sons, 2006.

REFERENCE BOOKS

- Corporate Valuation: A Guide for Managers and Investors, Philip R Daves, Michael C. Ehrhardt, and Ron E. Shrieves, , Cengage Learning,2003
- Corporate Valuation Financial Times, David Frykman, JakobTolleryd, Prentice Hall, 2003.
- The Valuation Handbook: Valuation Techniques from Today's Top Practitioners, Rawley Thomas, Benton E. Gup, John Wiley & Sons, 2010
- Financial Management, Rajiv Srivastava and Anil Misra, 2/e, Oxford University Press, 2011.

**SEMESTER IV
Human Resources Management**

PUBLIC RELATIONS

Subject Code	: 16MBA HR401	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03

Total Number of Lecture Hours : 56
Practical Component : 02 Hours / Week

Exam Marks : 80

Course Objective:

- To provide an understanding of the fundamentals tools of public relations practice
- To provide a multidisciplinary understanding of the emerging trends in the field of public relations.

Course Outcomes:

The students will be able to

- Gain the insights of Public relations principles and practices.
- Learn the various theories of mass communication
- Understand the various issues in crisis management

Unit 1: (8 Hours)

Public Relation: Meaning, Concepts of PR -Proactive and Reactive Approaches – Public Relations Process – Behavioral Public Relations Model – Persuasion Model – Two way symmetrical Communications Model – 20 great truths about Public Relations

Unit 2: (8 Hours)

Theoretical basis for Public Relations –Theories of Relationships –Systems Theory – situational Theory – Theories of Persuasion and Social Influence – Social Exchange Theory – Diffusion Theory – Social Learning Theory – Elaborated Likelihood Theory - Theories of Mass communication – Uses and Gratification Theory – Agenda Setting Theory – Public Relations roles – Models of Public Relations – Approaches to Conflict Resolutions

Unit 3: (10 Hours)

Employee communications – Role of employee communication – concept of Organizational culture – Establishing Communication Policy – Organizational change – Importance of employee communication – Special employee Communication Situations – Media of Employee communications – Objectives of Internal media – Starting internal media – controlling internal media - Occasional and Special media Rules of Effective Employee Relations. Frontline supervisors as the key communicators

Case: Investing in Employees Pays Off (CJSS)

Case: Southwest Airlines – Where Fun, LUV, and Profit Go Hand –in Hand (CJSS)

Case: Employee Retention: It is the employer who is on probation (LLHT)

Case: Maintaining Employee Relationship in a Tragedy (LLHT)

Kodak Communicates One - on - One with All of its Employees (CJSS)

Unit 4: (8 Hours)

Community Relations – Importance of Public Relations – Community Relations Process – Guidelines for Effective Relations Programs -Specific Functions of Public Relations – Criteria for Community relations Activities – Corporate Social Responsibility & Philanthropy-Emerging Challenge of Community Activism

Case: Community Relationships Maintained During Hospital Closing (CJSS)

Unit 5: (8 Hours)

Media Relations – Media Relations –Role of Media in Public Relations – Social Media – working with the media –Media Relations Program Elements –Role of Technology in Public Relations

Case: Fatal Tiger Attack at San Francisco Zoo (LLHT)

Case: There's a Syringe in My Pepsi Can (CJSS)

Unit 6:

(14 Hours)

Issues in Public Relations/Crisis Management – public relations challenges –Types of Issues - target audiences-Public Service as Preventive Public Relations – Special Interests – Importance of Compromise –Issue Anticipation – Scenario Technique.

Crisis Management – Understanding how people typically react to issues – Human Nature – Role of communications – Types of crises – News media influence - Fundamental guidelines

Case: Take your choice – Tobacco or Health (CJSS)

Case: Bhopal – A Nightmare for Union Carbide (CJSS)

Practical Component:

- Related cases for each module to be discussed in the classes and presentation can be done for each case by group of students.
- Team of students can be made and asked to report the media personalities about the event held in the college. Different styles of reporting the same event can be discussed in the class with its possible reactions from the media.
- Collect the newspaper articles about various messages from organizations through spokespersons and analyze the effect of each type of delivery and impact on the audience.
- Conduct a CSR Programme for the college like Blood donation, Eye camps in association with Lions, Rotary clubs etc and gather the information's about various challenges these organizations face during such community oriented programmes.

RECOMMENDED BOOKS

- “Public Relations – The Profession and Practice”, Lattimore, Laskin, Heiman &Toth, third edition, Tata McGraw Hill, 2012 (LLHT)
- “Public Relations Practices – Managerial Case Studies and Problems” Center, Jackson, Smith and Stansbury, Seventh Edition, Prentice Hall of India, 2008 (CJSS).
- Public Relations - Paul Baines, John Egan, Frank Jefkins, Routledge, 3rd edition, 2007.
- Public Relations: Concepts, Practice and Critique, Jacquie L'Etang, SAGE, 2007.
- Public Management – Organizations, Governance and Performance, Laurence J. O' Toole Jr, Kenneth J Meier, 1st edition, Cambridge Publications, 2011.

REFERENCE BOOKS:

- Strategic Planning for Public Relations, Ronald D. Smith, revised edition, Taylor & Francis, 2004.
- Public Relations: A Practical Guide to the Basics, Philip Henslowe, 1st edition, Kogan Page Publishers, 2003.
- An Overview of the Public Relations Function - Shannon A. Bowen, Reprint Edition, Business Expert Press, 2010.
- Public Relations Practices, Managerial Case Studies and Problems, Allen H Center, Patrick Jackson, Stacey Smith, Frank R Stansberry, 7th Edition.

WORKPLACE ETHICS AND VALUE SYSTEMS

Subject Code	: 16MBA HR402	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03

Total Number of Lecture Hours : 56
Practical Component : 02 Hours / Week

Exam Marks : 80

Course Objectives:

- To understand the ethical practices at workplace.
- To address the ethical issues which arise in the work environment.
- To acquaint students with various ethical problems at work place.

Course Outcomes:

The students will be able to

- Learn the principles and practices of workplace ethics.
- Understand the concepts of corporate governance and ethics.
- Gain insights of Discrimination and Harassment at Workplace

Unit 1: (8 Hours)

Workplace Ethics: Introduction, Needs, Principles, Development of Personal Ethics, Workplace Ethics for Employees-Ethical behavior in workplace- Professionalism, Ethical violations by employees, Employee Attitude and Ethics, Employee Etiquettes. Benefits of ethics in Workplace-employee commitment, investor loyalty, customer satisfaction, profits

Unit 2; (8 Hours)

Professionalism at Workplace: Unethical Conduct for employees and employers. Factors leading to Unethical Behaviors. Different unethical behaviors. Measures to control unethical behaviors. Rewarding ethical behavior

Unit 3: (10 Hours)

Business Ethics and Corporate Governance: Overview of Business Ethics, Corporate Governance, Ethical issues in human resource management- The principal of ethical hiring, Firing, worker safety, whistle blowing, Equality of opportunity, Discrimination, Ethics and remuneration, Ethics in retrenchment. Ethical Dilemmas at workplace, Ethical issues in global business, corporate responsibility of employers.

Unit 4: (10 Hours)

Workplace Privacy & Ethics: Watching what you say and what you do in the workplace, Hardware, Software and Spyware, Plagiarism and Computer Crimes, Convenience and Death of Privacy, Defence of employee privacy rights.

Unit 5; (12 Hours)

Teamwork in the Workplace, Ethics, Discrimination and Harassment at Workplace & Ethics: Teams, Elements of team, Stages of team development, team meetings, team rules, and teams work and professional responsibility, rules of professional responsibility, ASME code of ethics. Discrimination, sexual harassment, creating awareness about workplace harassment, Vishaka Dutta vs. State of Rajasthan –Supreme Court directions, Compulsory workplace guidelines.

Unit 6: (8 Hours)

Managing Change in Workplace through Ethics: Introduction to Change Management, Models of change, the Ethics of Managing Change, the role of ethics and responsibilities in leading innovation and change, ethics based model for change management, ethics and risks of change management

Practical Components:

- To solve case studies on Workplace Ethics
- To visit organizations and find out the problems and causes for unethical behavior at workplace.
- To visit organizations and find out the measures adopted to control unethical behavior of employees.
- To compare and contrast the various ethical codes of conduct practiced in organizations.
- To study the recent cases on breach of workplace privacy.

RECOMMENDED TEXT BOOKS:

- Ethical Theory and Business, Tom L. Beauchamp, Norman E. Bowie and Denis Arnold, 8th Edition.
- Business Ethics – Ethical Decision making and cases O.C. Ferrell, John Fraedrich, and Linda Ferrell, 9th Edition, Cengage Learning.
- How technology is compromising Workplace Privacy, Fredrick S Lane 111, AMACOM Div American Mgmt Assn, 2003
- Ethics in the Workplace, Dean Bredeson, Keith Goree, Cengage Learning, 2011.

REFERENCE BOOKS:

- Ethics in 21st Century, Mary Alice Trent, Oral Roberts University, longman.
- Ethics in workplace, Elizabeth P Tierney, Oak tree press
- Ethics in Workplace: System Perspective, William F Roth, Pearson, 2014.

INTERNATIONAL HUMAN RESOURCE MANAGEMENT

Subject Code	: 16MBA HR403	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To analyze the impact of contemporary issues and global imperatives on Human Resource concepts
- To learn the policies and practices in multinational organizations
- To compare, contrast and explain a variety of strategic approaches to the management of Human Resources in multinational organizations.

Course Outcomes:

The students will be able to

- Apply the concepts and knowledge about the range of Human Resource functions.
- Deploy the expatriate employees and expatriate failures on international assignments.
- Evaluate the effects of different Human Resource and International Industrial Relations strategies adopted by multinational organizations

Unit 1: (10 Hours)

Introduction to IHRM Definition, The drivers of internationalization of business. The different setting of International Human Resource Management. Development of IHRM. Difference between IHRM and Domestic HRM. Models of IHRM-Matching model, Harvard Model, Contextual Model, 5P Model European Model. SHRM: Evolution of MNE's, Business strategies, IHRM Strategies, SIHRM. Barriers in effective global HRM. Socio-cultural context, Organizational dynamics and IHRM: Role of culture in International HRM, Country and Regional Cultures, Country Culture versus MNE Culture. Culture and employee management issues/ impact of Country culture on IHRM.

Unit 2: (7 Hours)

Strategies for International Growth: Exploiting global integration-The logic of global integration, differentiation, Mastering expatriation, beyond the traditional expatriate model, the limits of global integration. Becoming locally responsive: The roots of responsiveness, understanding diversity, responding to diversity, the challenges of localization. Managing alliances and joint ventures - IHRM and International Alliances, IHRM and International Joint Ventures.

Unit 3: (10 Hours)

International Workforce planning and staffing: International labour market International Recruitment function; head-hunters, cross-national advertising, e-recruitment; International staffing choice, different approaches to multinational staffing decisions, Types of international assignments, Selection criteria and techniques, use of selection tests, interviews for international selection, international staffing issues, Successful expatriation, role of an expatriate, female expatriation, repatriation, re-entry and career issues.

Unit 4: (7 Hours)

Developing Global Mindset: Global Leadership, Cross cultural context and international assignees, Current scenario in international training and development, training & development of international staff, types of expatriate training, sensitivity training, Career Development, repatriate training, developing international staff and multinational teams, knowledge transfer in multinational companies.

Unit 5: (8 Hours)

Performance Management: Performance Management and MNE, Constraints in goal attainment, performance management cycle, Performance Management of International Assignees, third and host country employees, issues and challenges in international performance management, country specific performance management practices.

Unit 6: (14 Hours)

International Compensation and International Employment Laws and HRIS: International compensation and international assignees, Forms of compensation, key components of international compensation, Approaches to international compensation, compensation practices across the

countries, emerging issues in compensation management. Establishment of labour standards by International Institutions, The global legal and regulatory context of MNE, The International framework of Ethics and Labour standards, Key issues in International Industrial Relations, Trade Unions and MNE's, Response of Trade Unions to MNE's, Non-Union worker representation. HRIS: Meaning, Role of IT in HR, Designing of HRIS, Applications of HRIS in Employee Management, Limitation of HRIS.

Practical Component:

- Study the Socio-Political-Economic System in U.S, U.K, Japan and India and prepare a comparative analysis.
- Visit an MNE organization and study the HR shared services operations performed.
- Solve a case study to understand the challenges faced by organizations in evaluating the performance of international assignees.
- Study and compare Recruitment, Selection and Training practices in various countries.
- Study Indian and US legal aspects involved when deploying an employee on an International Assignment.

RECOMMENDED BOOKS:

- International Human Resource Management - Peter J. Dowling, MavinFesting, Allen D Englesr Cengage Learning.
- International Human Resource Management - Monir H. Tayeb, Oxford University Press, 2005.
- Human Resource Information Systems: Basics, Applications, and Future Directions: Basics, Applications, and Future Directions, Michael J. Kavanagh, Mohan Thite, Richard D. Johnson SAGE, 2011, 2/e.
- Strategic International Human Resource Management: Choices and Consequences in Multinational People Management - Stephen J. Perkins, Susan M. Shortland – Kogan Page Publishers, 2006.
- Strategic Human Resource Management, Schuler, 2/e, Wiley.

REFERENCE BOOKS:

- International Human Resource Management: Text and Cases By P. L. Rao, Excel Books, Reprint
- International Human Resource Management: Policies and Practices By Dennis Briscoe, Randall Schuler, IbraizTarique, Taylor & Francis, 4/e, 2012.
- International Human Resource Management - Anne-Wil Harzing, Joris Van Ruysseveldt - SAGE, 2004.
- International human resource management: think globally, act locally – Derek Torrington - Prentice Hall, 1994.

ORGANISATION CHANGE AND DEVELOPMENT

Subject Code	: 16MBA HR404	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To understand the concepts of change management and to acquire the skills required to manage any change effectively.
- To understand the various components and constraints involved in Change management.
- To learn the various tools & techniques for Organization Development
- To understand the different OD interventions and its effectiveness.

Course Outcomes:

The students will be able to

- Gain insights of change management components, process and its functions
- Enable with various OD diagnosing models
- Ability to handle various OD interventions.

Unit 1: (8 Hours)

Organizational change- Introduction, nature of change, Internal & External changes, types of change, **Models of change-** Lewis's Force field, Systems Model, Action research model, organizational vision and strategic planning.

Unit 2: (8 Hours)

Resistance to change- reasons for the resistance, overcoming resistance for the change, change and person and manager, systematic approach to making change- factors for effective change, skills of leaders in change management, designing the change.

Unit 3: (8 Hours)

Organization development-Introduction, history, evolution of OD, OD interventions: Definition, actors to be considered, choosing and sequencing, intervention activities, classification of OD interventions, results of OD, typology of interventions based on target groups.

Process of Organization Development: Entering into OD relationship, developing a contract.

Unit 4: (8 Hours)

Diagnosing Organizations- Need for diagnostic models, organization, group, individual level diagnosis, Collecting and analyzing the diagnostic information, Feeding Back of diagnostic information, Designing interventions, overview of interventions, evaluating and Institutionalizing OD Interventions.

Unit 5: (12 Hours)

Human Process Interventions: Human process interventions (individual, group and inter-group human relations): **Individual based:** coaching, counselling, training, behavioral modelling, delegating, leading, morale boosting, mentoring, motivation, etc., **Group based:** conflict management, dialoguing, group facilitation, group learning, self-directed work teams, large scale interventions, team building, and virtual teams.

Inter-group based: Organization mirroring, third party peacemaking interventions.

Unit 6: (12 Hours)

Techno-structural Interventions and Future of OD: Restructuring Organizations, Employee Involvement, work Design, Balanced scorecard; business process reengineering; downsizing and outsourcing; **Strategic Interventions:** Competitive and Collaborative Strategies, Organization Transformation.

The Future of OD: The changing environment, Fundamental strengths of OD, Implications of OD for the client, ethical standards in OD, OD's future. **OD Consultant's role**, issues in consultant-client relationship, Power, Politics & OD, Research on OD.

Practical Component:

- To conduct Force field analysis for MBA department
- Group activity-Identify the need for OD intervention for your college and call the director/principal of your college to the classroom to explore the possibility for OD intervention.
- Presentation by students: Identify and explore the possibility for OD intervention in your college level, group level and individual level.
- Hold a debate in the classroom about downsizing the workforce.
- Organization change questionnaire data collection and analyzation.
- Group Presentation: Health care, FOO, Education, PSU, Retail, Manufacturing Industries.
- Design a role play event for students, so that they will play it out to mobilize support for a change implementation programme.

RECOMMENDED BOOKS:

- Theory of Organization Development and Change. Thomas G. Cummings, Christopher G. Worli, Cengage Learning.
- Understanding the theory and design of organization, Richard L Draft, Cengage Learning.
- Organization Development, behavioral science interventions for Organization Improvement, Wendell French, Cecil H.Bell, Veena, Jr, Pearson, PHI.
- Organization Change and Development, Kavith Singh, Excel BOOKS.

REFERENCE BOOKS:

- Change & Knowledge Management-R.L. Nandeshwar, Bala Krishna Jayasimha, Excel BOOKS, 1st Ed.
- Management of Organizational Change – K Harigopal – Response BOOKS, 2001
- Organizational, Design, and Change-Gareth R. Jones, 5th Edition, Pearson Education

STRATEGIC TALENT MANAGEMENT

Subject Code	: 16MBA HR405	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To aware the challenges of acquisition and retention of talents for the competitive advantage of the organization.
- To develop a conceptual understanding of the management of talents in the competitive environment.
- To understand how important is to develop and retain the best talents in the industry.
- To understand the concepts of competency and its usage in evaluating a person's work.
- To get an idea about different tools in identifying required competencies in a person.

Course Outcomes:

The students will be able to

- Gain the insights of talent management practices in organization.
- Learn the techniques and retail the best talent in industry.
- Prepare competency mapping.

Unit 1: (10 hours)

Basics of Talent Management: Talent- engine of new economy, difference between talents and knowledge workers, leveraging talent, the talent value chain, elements of talent friendly organizations, talent management process, **Talent Management System** – Components and benefits of Talent Management System; creating TMS, challenges of TMS, **Building blocks of talents management:** competencies – performance management, conducting performance reviews, Appraising executive talent, selecting the right appraisal.

Unit 2: (8 hours)

Talent Planning – Concept, succession management process, Integrating succession planning and career planning, designing succession planning program, strategic accountability approach in developing the workforce, balanced scorecard, talent development budget, contingency plan for talent; building a reservoir of talent, compensation management within the context of talent management, CEO Succession planning,

Unit 3: (6 hours)

Developing and Retaining Talent – Potential identification and development, coaching for sustained & desired change, integrating coaching, training and development with talent management ,employee retention- motivation and engagement, Return on talent; age of analytics, making outplacement as a part of talent strategy, developing talent management information system.

Unit 4: (6 hours)

Competency mapping: Concepts and definition of competency; types of competencies, competency based HR systems, competency and performance, 5 level competency model, developing various competency models, how competencies relate to career development and organizational goals.

Unit 5: (14 hours)

Methodology of competency mapping : competency model development ,competency models, people capability maturity model ,developing competency framework , competency profiling , competency mapping tools , use of psychological testing in competency mapping , competency based interviewing , assessment of competencies through 360 degree feedback, BEI, CIT, validation of competencies.

Unit 6: (12 hours)

Measuring Performance, Assessment and Development Centre: background and approaches to performance assessment, competency based performance assessment, diagnosing reasons for performance problems, designing an effective performance management systems, sources of errors in performance measurement.

Assessment and Development Centre : concepts , importance and uses of assessments centre in selecting employees , difference between assessment and development centre, assessment centre

approach to competence building , profile of the assessors, steps in assessment centre, designing the assessment centre.

Practical Component:

- Students are expected to conduct a study on how talents are acquired and retained – in various industries – and various strategies followed by the respective companies.
- Discussion on “How to have/ evaluate the performance of the MBA students”
- Ask the students to find out the best employer surveys conducted during the past one year and make a presentation.
- Identify the important positions in your college or any other organization and ascertain the measures if any taken to develop second line of leadership
- Ask the students to collect data about the position of principal, director, and other teachers in your college and prepare a competency dictionary for the said positions
- Presentation by students about the competency directory profiling of various positions.
- Ask the students to role play the behavioural event interview to collect data for competency mapping for the position of management professor.
- Presentation by students about the competency directory profiling of various positions.

RECOMMENDED BOOKS:

- The Talent Management Hand Book – Lance A. Berger & Dorothy R. Berger, Tata McGraw Hill
- Competence at work – Lyle M. Spencer, Signe M. Spencer. John Wiley, 1993.
- A Handbook of Competency Mapping – Seema Sangi, Response BOOKS, 2004.
- Competency mapping, Assessment and Growth – Naik G.P, IIHRM, 2010.

REFERENCE BOOKS:

- The Talent Era, Chowdhary, Subir, Pearson Education, New Delhi.
- Appraising & Developing Managerial Performance- Rao T. V, Excel BOOKS
- Performance Management – Herman Aguinis, Pearson Education, 2007.
- Performance Management, Rao, Wiley.

PERSONAL GROWTH AND INTERPERSONAL EFFECTIVENESS

Subject Code	: 16MBA HR406	IA Marks	: 20
No. of Lecture Hours / Week	: 03	Exam Hours	: 03
Total Number of Lecture Hours	: 56	Exam Marks	: 80
Practical Component	: 02 Hours / Week		

Course Objectives:

- To identify strengths and weaknesses as an individual, as a member of a group/organization using personality types.
- To understand the concepts of self awareness, self esteem, NLP and Locus of Control.
- To understand Interpersonal growth and effectiveness.

Course Outcomes:

The Students will be able to:

- Understand the components of personal growth.
- Gain insights in the aspects of interpersonal growth and handling conflicts, managing time, self analysis to name a few.

Unit 1: (12 Hours)

Personal growth: Meaning, nature and scope of personal growth. Self-awareness and self-esteem, life roles, social roles and organizational roles, role clarity and role boundaries. Ego states- Id, ego and super ego and defense mechanisms; developing a self improvement plan.

Interpersonal Trust: Discovering facets of interpersonal trust through Johari Window (Openness, confidentiality, blind spot and unknown part of personality); Self disclosure, seeking feedback, self reflection and practicing new behaviors.

Unit 2: (8 Hours)

Understanding Human Personality: Personality – Meaning & Determinants; Personality theories, Carl Jung's theory of personality Types and Myers Briggs Type Indicator test (MBTI), Trait theories- Guilford Peogut, PF 16 and Type A and B Personalities; Emotional intelligence – Meaning, Dimensions, and Emotionally intelligent Organizations.

Unit 3: (8 Hours)

Attitudes, beliefs, Values and their impact on behavior; Personal change- meaning, nature and requisites. Locus of control. **Habit Formation** - Habits of personal effectiveness. Seven habits of highly effective people.

Unit 4: (8 Hours)

Basic functions of mind: Creativity and innovation. Blocks to creativity. Creativity processes and tools- convergent and divergent thinking. Six thinking Hats, Neuro Linguistic Programming (NLP).

Unit 5: (6 Hours)

Interpersonal relations and personal growth: Interpersonal needs for openness, inclusion and control. Discovering the interpersonal orientation through FIRO-B. Conflict resolution and negotiation, Time management and honoring the commitments

Unit 6: (14 Hours)

Transactional Analysis: Ego states, types of transactions and time structuring. Life position, scripts and games; strokes and stamps

Experiential learning methodologies: T-group sensitivity training, encounter groups and appreciative enquiry.

Practical Components:

- Students are expected to conduct an in depth study about various personality traits & TA and submit a detailed report.
- Students have to undergo psychometric test like MBTI, FIRO-B, Big Five etc , conduct SWOT analysis and prepare a personal growth plan based on the results

- Ask the individual students to seek multisource feedback about their interpersonal effectiveness from peers, teachers, and parents; understand and reflect the feedback and prepare a development plan for interpersonal effectiveness.
- Discuss a Johari Window case in the class to identify how it can help each individual student to promote his/ her personal growth.
- Organize a workshop on MBTI for the students to know their type and to understand the type dynamics.
- Organize a neuro linguistic programming workshop for the participation of all HR students.

RECOMMENDED BOOKS:

- Organizational Behaviour: Human Behavior at work – John W. Newstrom and Keith Davis, 11/e, Tata McGraw Hill, 2003.
- Human Relations in organizations - Robert N. Lussier, 6/e, Mc-Graw Hill Education.
- Development of Management Skills - Whetten& Cameron, 7/e, PHI.
- Competency Mapping Assessment and Growth - Naik G.P, IHRM, 2010.

REFERENCE BOOKS:

- Understanding OB - Udai Pareek, Oxford University Press.
- Theories of Personality- Calvin S Hall, 4/e, Wiley India Pvt. Ltd.
- Seven habits of highly effective people - Stephen R Covey, Pocket Books.
- Training in interpersonal Skills- Stephen Robbins, Pearson Education.

**GUIDELINES FOR INTERNSHIP STUDY (16MBAIN307)
(BETWEEN 2ND AND 3RD SEMESTER MBA)**

OBJECTIVE

To expose the students to understand the working culture of the organization and apply theoretical concepts in real life situation at the work place for various functions of the organization.

STRUCTURE

The Internship shall consist of Study of an organization for 4 weeks.

GENERAL GUIDELINES

- The Internship shall be for a period of 4 weeks immediately after the completion of 2nd Semester Examinations but before the commencement of the 3rd semester classes
- The Subject code of the project work report shall be 16MBAIN307 and shall be compulsory for all the students.
- No two students of an institute shall work on the same organization.
- The student shall seek the guidance of the internal guide on a continuous basis, and the guide shall give a certificate to the effect that the candidate has worked satisfactorily under his/her guidance. Student need to identify an external guide (Working in the organization) and seek guidance from him/her.

Format of the internship report shall be prepared using the word processor viz., MS Word, Times New Roman font sized 12, on a page layout of A4 size with 1” margin all sides and 1.5line spacing. The internship report shall not exceed 60 pages.

Submission of Report: Students shall submit one hard copy of the report to the college and a soft copy in PDF file (Un-editable Format).

Evaluation:

- Internal evaluation will be done by the internal guide.

- Viva-Voce / Presentation: A viva-voce examination shall be conducted at the respective institution where a student is expected to give a presentation of his/ her work. The viva –voce examination will be conducted by the respective HOD or Senior Professor or internal Guide of the department and an external evaluator drawn from industry. In case of non availability of industry person, a senior professor or a faculty with more than 10 years of experience may be invited to conduct the viva-voce. Internship work carries 100 marks consisting of 50 marks for internship report (evaluated by internal guide and 50 marks for viva-voce examination)

Contents of the Internship Report

- Cover page
- Certificate from the Organization (scanned copy)
- Certificate from the guide, HOD and Head of the Institution(scanned copy) indicating bonafide performance of internship by the student
- Declaration by the student (scanned copy)
- Acknowledgement
- Table of contents
- List of tables and graphs
- Executive summary

Chapter 1: Introduction about the internship, Industry Profile.

Chapter 2: Organization Profile:

- i. Back ground,
- ii. Nature of business,
- iii. Vision mission, quality policy
- iv. Product/service profile
- v. Ownership pattern
- vi. Achievements/awards if any
- vii. Future growth and prospects

Chapter 3: Mckensy's 7S framework with special reference to organization under study.

Chapter 4: SWOT Analysis

Chapter 5: Analysis of financial statement. in brief.

Chapter 6: Learning experience.

GUIDELINES FOR 10 WEEK PROJECT WORK (16MBAPR407) (BETWEEN 3RD AND 4TH SEMESTER MBA)

OBJECTIVE

To expose the students to understand the working of the organization/ company / industry and take up an in-depth study of an issue / problem in the area of specialization.

GENERAL GUIDELINES

- The project work shall be for a period of 10 weeks immediately after the completion of 3rd Semester Examinations but before the commencement of the 4th semester classes
- The Subject code of the project work report shall be 16MBAPR407 and shall be compulsory for all the students opting for all specializations.
- The University shall receive 3 copies of project reports prior to the commencement of the 4th semester examination. Copies of the project report should be sent to the concerned Regional Office with an intimation to the Registrar (Evaluation)
- No two students of an institute shall work on the same problem in the same organization
- The student shall seek the guidance of the internal guide on a continuous basis, and the guide shall give a certificate to the effect that the candidate has worked satisfactorily under his/her guidance.
- On completion of the project work, student shall prepare a report with the following format.
- The Project report shall be prepared using word processor viz. MS Word with New Times Roman, 12 font size
- All the reports shall be printed in the A4 size 1” margin on all the sides.

- The report shall be hard bound facing sheet indicating the title of college and month & year of admission (spiral binding not permitted)
- A certificate by the guide, HOD and Head of the institution indicating the bonafide performance of the project by the student to be enclosed.
- An undertaking by the student to the effect that the work is independently carried out by him.
- The certificate from the organization.
- Acknowledgement
- Executive Summary

Schedule to be followed before commencement of Project

Activity	Time line	Remarks
<ul style="list-style-type: none"> • Identifying the organization • Problem identification 	First two weeks	Student individually identifies an organization and identifies problem for his/her study, according to his/her interest.
Problem statement	3rd week	His/ Her interests are discussed with selected guides
Research Design	4th week	Discussion with Internal Guide to decide on suitable design for the research
Synopsis Preparation	5th and 6th week	Preparation of Synopsis* incorporating the objectives

Presentation of Synopsis	7th and 8th week	The student will present the synopsis with the detailed execution plan to the Internal Guide and HOD who will review and may: a. Approve b. Approve with modification or c. Reject for fresh synopsis
Approval Status	9th and 10th week	The approval status is submitted to HOD who will officially give concurrence for the execution of the Project

*Synopsis: It is a three page document or hard copy to be submitted to the HOD with the signatures of the Guide and the student.

Page 1	Title, Contact Address of student- with details of Internal and External Guide
Page 2	Short introduction with objectives and summary (300 words). Review

	of Articles / Literature about the topic with source of information
Page 3	Time Activity Chart

Schedule to be followed during Project work

Activity	Time Line	Remarks
Understanding Structure, Culture and functioning of the organization	First 2 weeks of Project	Student should understand products/services and the problems of the organization.
Preparation of Research instrument for data collection	3rd and 4th week of Project	Discussion with the guide for finalization of research instrument in his/her domain and present the same to the guide. (First Presentation)
Data collection	5th and 6th week of Project	Data collected to be edited, coded, tabulated and presented to the guide for suggestions for analysis. (Second Presentation)
Analysis and finalization of report	7th and 8th week of Project	Students must use appropriate and latest statistical tools and techniques for analyzing the data. (It is must to use Statistical Package whose

		result should be shown in the report) (Third Presentation)
Submission of Report	9th and 10th of Project	Final Report should be submitted to the University before one week of the commencement of theory examination

Evaluation:

- Internal evaluation will be done by the internal guide.
- External valuation shall be done by a faculty member of other institute drawn from VTU affiliated institute with minimum of 10 years of experience.
- Viva-Voce / Presentation: A viva-voce examination shall be conducted at the respective Institution where a student is expected to give a presentation of his/ her work.
- The viva –voce examination will be conducted by the respective HOD / Senior Professor of the department and an expert drawn from the VTU affiliated institutes with minimum of 10 years of experience as appointed by the University.
- Project work carries 200 marks consisting of 50 marks for internal valuation by the internal guide, 50 marks for external evaluation and 100 marks for viva-voce examination.
- **Format of the project report** shall be prepared using the word processor viz., MS Word, Times New Roman font sized 12, on a page layout

of A4 size with 1” margin all sides and 1.5 line spacing. The Project report shall not exceed 100 pages.

- **Submission of Report:** Students should submit the Project Report in electronic data form only, in **PDF** file (Un-editable Format) to the Institute. The Institute in turn shall submit all the CD’s of their students along with a consolidated master list as per specialization containing USN, Name of the student, and Title of the Report to Registrar (Evaluation) one week before the commencement of the Theory Examinations.
- **Plagiarism:** Plagiarism is considered as academically fraudulent, and an offence against University academic discipline. The University considers plagiarism to be a major offence, and subject to the corrective procedures. It is compulsory for the student to get the plagiarism check done before submission of the project report. Plagiarism of up to 25% is allowed in the project work and report should consist 75% of original content/work.
- **Publication of Research Findings:** Students are expected to present their research findings in Seminars/Conferences/Technical/Management Fests or publish their research work in Journals in association with their Internal Guide. Appropriate Weightage should be given to this in the internal evaluation of the project report.

Contents of the Project Report

- Cover page
- Certificate from the Organization (scanned copy)
- Certificate from the guide, HOD and Head of the Institution (scanned copy)
- indicating bonafide performance of Project by the student

- Declaration by the student (scanned copy)
- Acknowledgement
- Table of contents
- List of tables and graphs
- Executive summary

Chapter 1: Introduction

Introduction, Industry profile and company profile: Promoters, vision, Mission & Quality Policy. Products / services profile areas of operation, infrastructure facilities, competitors' information, SWOT Analysis, Future growth and prospects and Financial Statement

Chapter 2: Conceptual background and Literature review

Theoretical background of the study, Literature review with research gap (with minimum 20 literature reviews).

Chapter 3: Research Design

Statement of the problem, Need for the study, Objectives, Scope of the study, Research methodology, Hypotheses, Limitations, Chapter scheme.

Chapter 4: Analysis and Interpretation

Analysis and interpretation of the data- collected with relevant tables and graphs. Results obtained by the using statistical tools must be included.

Chapter 5: Findings, Conclusion and Suggestions

Summary of findings, Conclusion and Suggestions / Recommendations

Plan of action (proposed)

1. Implementation of CBCS for MBA Programme will be effective from next academic year, i.e., 2016-17
2. Review of Scheme of Teaching and Examinations being finalized
3. Award of Credits for various components of MBA Programme
4. Allotment of marks for the subjects/papers, seminar and summer project.
80:20 patterns of marks for external examination and internal (IA) marks respectively is to be adopted for all the subjects, except Internship, for which the pattern will be 50:50 basis for internal and external assessments respectively.

Question paper for theory examination shall consist of Part A and B as under:

- Part A shall consist of 5 questions subdivided into a, b, c in 3+7+10 mixed pattern
- Part B shall be a *compulsory* question on Case study/ Practical problem for 20 marks (may contain a maximum of 4 sub-questions).

IA Pattern: 20 marks in each subject, comprising of 10 marks for tests and 10 marks for assignments/seminars/practical exercises/quiz/oral exams

MBA Program Structure and Credits			
Year	Particulars	Credits	Total Credits
I	I Semester	24	48
	II Semester	24	
II	III Semester	24	52
	Internship (III Semester)	4	
	IV Semester	18	
	Project Work(IV Semester)	6	
Total		100	100

PROGRAMME OUTCOMES STUDENT WILL BE ABLE CO (POS)

PO1. Acquire Sufficient theoretical knowledge and are enabled to apply them to solve practical problems in business and other organizations / institutions of importance.

PO2. Apply Effective communication skills with a high degree of lateral and critical thinking that enhances learn ability, developed for being continuously employable.

PO3. Demonstrate leadership qualities, ethically sound, enabled with decision making skills that reflect a high degree of social consciousness

PO4. Recognise the need for sustained research orientation to comprehend a growingly complex, economic, legal and ethical environment

PO5. Possess self-sustaining entrepreneurship qualities that encourages calculated risk taking.

I SEMESTER

MANAGEMENT AND ORGANIGATIONAL BEHAVIOR

Semester	I	CIE Marks	: 40
Course Code	18MBA11	SEE Marks	: 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours	: 03
Credits : 04			

COURSE OBJECTIVES:

1. To make students understand fundamental concepts and principles of management, including the basic roles, skills, and functions of management
2. To make students knowledgeable of historical development, theoretical aspects and practice applications of managerial process
3. To understand the basic concepts and theories underlying individual behavior besides developing better insights into one's own self.
4. To make students aware of Individual behavior in groups, dynamics of groups, team building and interpersonal effectiveness besides developing a better awareness of how they can be better facilitators for building effective teams as leaders themselves

PART A - PRINCIPLES OF MANAGEMENT

Unit 1:

Introduction: Management: Introduction, Definition of management, Nature, Purpose and Functions, Levels and types of managers, managerial roles, skills for managers, evolution of management thought, Fayol's fourteen principles of management, Recent trends in management.

Unit 2:

Planning and Organizing:

Planning: Meaning, Nature of Planning, Planning Process, Objectives, MBO, Strategies, level of strategies, policies, methods and programs, Planning Premises, Decision-making, Process of decision-making, Types of decisions, Techniques in decision-making.

Organizing: Organization structure, Formal and informal organizations, Functional, divisional, geographical, customer based and matrix organizations, team based structures, virtual organizations, boundary less organizations. Principles of organizations-chain of command, span of control, delegation, decentralization, and empowerment.

Case Study: Principles of Management, Cengagelearning, William, Manjunath, Sandhya

Unit 3:

Controlling: Meaning, importance of controlling, controlling process, types of control, factors influencing control effectiveness.

RECOMMENDED BOOKS

- Management and Organizational Behaviors, Chuck Williams, James Cambell, Manjunath & Sandhya Cengage Publications, 2018
- Essentials of Management-Koontz, 8/e, McGraw Hill
- Management: Text and Cases-VSP Rao, Excel Books

REFERENCE BOOKS:

- Masters of Management Thought – Mahanand Charati & M M Munshi, Sapna Book House, Bangalore, 2015.
- Principles and practices of Management, KiranNerkar, Vilas Chopde, Dreamtech Press, 2011
- Management Theory & practice – Chandan J. S, Vikas Publishing House.

PART B - ORGANIZATIONAL BEHAVIOUR

Unit 4:

Introduction: Organizational Behaviour: Introduction, definition, fundamental principles of OB, contributing disciplines, challenges and opportunities. Evolution & Organizational Behavior in India.

Case study: Organizational Behavior by Steven L McShane, Mary Ann Von Glinow and Radha R Sharma, TaTa McGraw Hill companies, Fourth Edition, Pg-6.

Unit 5:

Foundations of Individual Behaviour: Individual behaviour: Foundations of individual behaviour. Ability: Intellectual abilities, Physical ability, the role of disabilities.

Personality: Meaning, formation, determinants, traits of personality, big five and MBTI, personality attributes influencing OB.

Perception: Meaning, Process of perception, factors influencing perception, link between perception and individual decision-making.

Attitude: Meaning, Formation, components of attitudes, relation between attitude and behaviour.

Unit 6:

Motivation: Meaning, theories of motivation-needs theory, two factor theory, Theory X and Y, application of motivational theories.

Leadership: Meaning, styles of leadership, leadership theories, trait theory, behavioural theories, managerial grid, situational theories.

Case Study: "Nuts and Bolts", Principles of Management, Cengagelearning, William, Manjunath, Sandhya Page no 531-532.

PRACTICAL COMPONENTS:

- Studying organizational structures of any 10 companies and classifying them into different types of organizations which are

studied in Unit 2 and justifying why such structures are chosen by those organizations.

- Preparing the leadership profiles of any 5 business leaders and studying their leadership qualities and behaviors with respects to the trait, behavioural and contingency theories studied.
- Identifying any five job profiles and listing the various types, abilities required for those jobs and also the personality traits/attributes required for the jobs identified.

Note: Faculty can either identify the organizations/ leaders/job profile or students can be allowed to choose the same.

COURSE OUTCOMES:

1. Comprehend & correlate all the management functions which are happening around with fundamental concepts and principles of management.
2. Understand the overview of management, theory of management and practical applications of the same.
3. Effectively use their skills for self-grooming, working in groups and to achieve organizational goals .
4. Demonstrate their acumen in applying managerial and behavioral concept in real world/situation.
5. Understand and demonstrate their exposure on recent trends in management.

RECOMMENDED BOOKS:

- Organizational behaviour, Stephen P Robbins, Timothy A. Judge, Neharika Vohra, 14th Edition, Pearson, 2012.
- Introduction to Organisational Behaviour – Michael Butler, Jaico Publishing House.
- Organizational Behaviour - Anada Das Gupta, Biztantra, 2011.

REFERENCE BOOKS:

- Organizational Behaviour - Fred Luthans, 12/e, McGraw Hill International, 2011.
- Management and Organizational Behaviour - Laurie J Mullins, Pearson education.
- Organizational Behaviour, Aquinas P. G, Excel Books.

MANAGERIAL ECONOMICS

Semester	I	CIE Marks : 40
Course Code	18MBA12	SEE Marks : 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours : 03
Credits : 04		

Course Objectives:

1. To introduce the fundamentals, tools and theories of managerial economics.
2. To provide an understanding of the application of Economics in Business.
3. To learn the basic economic concepts.
4. To have an understanding of Demand, Production, Cost, Profit and Market competitions with reference to a firm and industry.

Introduction to Economics

Unit 1:

Managerial Economics: Meaning, Nature, Scope, & Significance, Uses of Managerial Economics, Role and Responsibilities of Managerial Economist, Relationship of Managerial Economics with Statistics, Accounting and Operations Research, The Basic process of decision making.

Fundamental Concepts of Managerial Economic

Unit 2:

Opportunity Costs, Incremental Principle, Time perspective, Discounting and Equi-Marginal principles, Theory of the Firm: Firm and Industry, Forms of Ownership, Objectives of the firm, alternate objectives of firm. Managerial theories: Baumol’s Model, Marris’s Hypothesis, Williamson’s Model. Behavioral theories: Simon’s Satisficing Model, Cyert and March Model, Agency theory.

Case Study: Dabur India Limited: Growing Big and Global.

Source: Managerial Economics – Geethika, Ghosh & Choudhury, 2/e, McGraw Hill. 2011. Pp 64-65.

Demand analysis

Unit 3:

Law of Demand, Exceptions to the Law of Demand, Elasticity of Demand –Classification of Price, Income & Cross elasticity, Advertising and promotional elasticity of demand. Uses of elasticity of demand for Managerial decision making, Measurement of elasticity of demand. Law of supply, Elasticity of supply, Demand forecasting: Meaning & Significance, Methods of demand forecasting. (No problems)

Cost Analysis & Production analysis

Unit 4:

Concepts, Types of cost, Cost curves, Cost–Output Relationship in the short run and in the long run, LAC curve. Concepts, production function with one variable input - Law of Variable Proportions. Production function with 2 variable inputs and Laws of returns to scale, Indifference Curves, ISO-Quants & ISO-Cost line, Least cost combination factor, Economies of scale, Diseconomies of scale. Technological progress and production function

Case Study: Automobile Industry in India: New Production paradigm.

Source: Managerial Economics – Geethika, Ghosh & Choudhury, 2/e, McGraw Hill. 2011. Pp 234-236.

Market structure and pricing practices

Unit 5:

Perfect Competition, Features, Determination of price under perfect competition, Monopoly: Features, Pricing under monopoly, Price Discrimination. Monopolistic Competition: Features, Pricing Under monopolistic competition, Product differentiation. Oligopoly: Features, Kinked demand Curve, Cartels, Price leadership.

Descriptive Pricing Approaches: Full cost pricing, Product line pricing, Product life cycle pricing, Pricing Strategies: Price Skimming, Penetration Pricing, Loss leader pricing, Peak Load pricing.

Case Study: David Fights Goliath: The Nirma Story.

Source: Managerial Economics – Geethika, Ghosh & Choudhury, 2/e, McGraw Hill. 2011. Pp 349-351.

Unit 6: Profits

Profits: Determinants of Short-Term & Long Term Profits, Measurement of Profit.

Break Even Analysis – Meaning, Assumptions, Determination of BEA, Limitations, Uses of BEA in Managerial decisions.

PRACTICAL COMPONENTS:

- Assessment of Demand Elasticity – Price, Income, Cross, Advertising.
- Demand Forecasting
- Preparing a Project proposal for a Business Venture.

COURSE OUTCOMES:

1. The student will understand the application of Economic Principles in Management decision making.
2. The student will learn the micro economic concepts and apply them for effective functioning of a Firm and Industry.
3. The Student will be able to understand, assess and forecast Demand.
4. The student will apply the concepts of production and cost for optimization of production.

5. The student will design Competitive strategies like pricing, product differentiation etc. and marketing according to the market structure.
6. The student will be able to identify, assess profits and apply BEP for decision making.

RECOMMENDED BOOKS:

- Managerial Economics – Geethika, Ghosh & Choudhury, 2/e, McGraw Hill. 2011
- Managerial Economics – Dominick Salvatore, 7/e, Oxford Publishers, 2010.
- Managerial Economics – R. Panneerselvam, P. Sivasankaran, P. Senthilkumar, Cengage, 2018.

REFERENCE BOOKS:

- Managerial Economics – Samuelson & Marks, 5/e, Wiley, 2009.
- Managerial Economics – Hirschey, 2/e, Cengage Learning, 2010.
- Managerial Economics: Case Study solutions – Kaushal H, 1/e, Macmillan, 2011.

ACCOUNTING FOR MANAGERS

Semester	I	CIE Marks	: 40
Course Code	18MBA13	SEE Marks	: 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours	: 03
Credits : 04			

Course Objectives:

1. Explain fundamental accounting concepts, the elements of financial statements, and basic accounting vocabulary.
2. Explain and use the accounting equation in basic financial analysis and explain how the equation is related to the financial statements.
3. Prepare basic entries for business transactions and present the data in an accurate and meaningful manner.
4. Prepare basic financial statements and explain the articulation between the basic statements.
5. To analyze a company's financial statements and come to a reasoned conclusion about the financial situation of the company.

Unit 1:

Introduction to Accounting: Need and Types of Accounting, Users of Accounting, concepts and conventions of Accounting, Relation of Accounting with other disciplines, Capital and Revenue Expenditure and Receipt, Accounting Equation.

Case study: Problem on Accounting Equation .

Unit 2:

Preparation of books of Accounts: Journals, ledgers 3 column cash book and trial balance, Depreciation- Straight line and Written down Value Methods.

Case Study on Change of Method of Depreciation.

Unit 3:

Preparation of Financial Statements: Preparation of final accounts of sole traders in horizontal form, Preparation of final accounts of companies in vertical form as per Companies Act of 2013 (Basic problems of Final Accounts), Window dressing.

Case Study problem on Final Accounts of Company and Firm.

Unit 4:

Analysis of Financial Statements: Ratio Analysis, Preparation of financial statements using ratios, Preparation of Cash flow Statement (only indirect method).

Case Study on Ratio analysis.

Unit 5:

Emerging issues in Accounting: Human Resource Accounting, Forensic Accounting, Sustainability Reporting. Accounting Standards and IFRS: Nature and significance.

Unit 6:

Fundamentals of Taxation: Basic concepts of Direct & Indirect Tax. Heads of Income, Deductions u/s 80C, Rate of Income Tax of current assessment Year for Individuals only (only theory) .

PRACTICAL COMPONENTS:

- Collecting Annual reports of the companies and analyzing the financial statements using different techniques and presenting the same in the class.
- Analyzing the companies' cash flow statements and presenting the same in the class.
- Exposing the students to usage of accounting software's (Preferably Tally).
- Filling up of ITR forms.
- Identify the sustainability report of a company and study the contents.

COURSE OUTCOME:

1. Demonstrate theoretical knowledge and its application in real time accounting.
2. Demonstrate knowledge regarding accounting principles and its application.
3. Capable of preparing financial statement of sole trading concerns and companies.
4. Independently undertake financial statement analysis and take decisions.
5. Comprehend emerging trends in accounting and taxation.

RECOMMENDED BOOKS:

- Financial Accounting: A Managerial Perspective, Narayanaswamy R, 5/e, PHI, 2014.
- A Text book of Accounting For Management, Maheswari S. N, Maheswari Sharad K. Maheswari, 2/e, Vikas Publishing house (P) Ltd.
- Financial Accounting, Tulsian P. C, 1/e, Pearson Education.

REFERENCE BOOKS:

- Financial Accounting for Management: An Analytical Perspective,

Ambrish Gupta, 4/e, Pearson Education.

- Introduction to Financial Statement Analysis, Ashish K Bhattacharya, Elsevier India.
- Financial Accounting – Raman B. S, Vol I & Vol II, 1/e, United Publishers, 2009.

BUSINESS STATISTICS & ANALYTICS

Semester	I	CIE Marks	: 40
Course Code	18MBA14	SEE Marks	: 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours	: 03
Credits : 04			

Course Objectives:

1. To make the students learn about the applications of statistical tools and techniques in decision making.
2. To emphasize the need for statistics and decision models in solving business problems.
3. To enhance the knowledge on descriptive and inferential statistics.
4. To familiarize the students with analytical package MS Excel.
5. To develop analytical skills in students in order to comprehend and practice data analysis at different levels.

Unit 1:

Introduction to Statistics: Meaning and Definition, functions, scope and limitations, Collection and presentation of data, frequency distribution, measures of central tendency - Mean, Median, Mode, Geometric mean, Harmonic mean.

Measures of dispersion: Range – Quartile Deviation – Mean Deviation - Standard Deviation – Variance-Coefficient of Variance - Comparison of various measures of Dispersion.

Unit 2:

Correlation and Regression: Scatter Diagram, Karl Pearson correlation, Spearman's Rank correlation(one way table only), simple and multiple regression(problems on simple regression only).

Unit 3:

Probability Distribution: Concept and definition - Rules of probability – Random variables – Concept of probability distribution – Theoretical probability distributions: Binomial, Poisson, Normal and Exponential – Baye's theorem (No derivation) (Problems only on Binomial, Poisson and Normal).

Unit 4:

Time Series Analysis: Introduction - Objectives Of Studying Time Series Analysis - Variations In Time Series - Methods Of Estimating Trend: Freehand Method - Moving Average Method - Semi-Average Method -

Least Square Method. Methods of Estimating Seasonal Index: Method Of Simple Averages - Ratio To Trend Method - Ratio To Moving Average Method.

Unit 5:

Linear Programming: structure, advantages, disadvantages, formulation of LPP, solution using Graphical method. Transportation problem: basic feasible solution using NWCM, LCM, and VAM unbalanced, restricted and maximization problems.

Unit 6:

Project Management: Introduction – Basic difference between PERT & CPM – Network components and precedence relationships – Critical path analysis – Project scheduling – Project time-cost trade off – Resource allocation, Concept of project crashing.

PRACTICAL COMPONENT :(Student-Centered Learning)

- Students are expected to have a basic excel classes.
- Students should be able to relate the concepts which can highly enhance an application scenario in your profession.
- Student should demonstrate the application of the techniques covered in this course.

COURSE OUTCOMES:

1. Facilitate objective solutions in business decision making under subjective conditions.
2. Demonstrate different statistical techniques in business/real-life situations.
3. Understand the importance of probability in decision making.
4. Understand the need and application of analytics.
5. Understand and apply various data analysis functions for business problems.

RECOMMENDED BOOKS:

- Business Statistics and Analytics – Pannerselvam, Nagesh, Senthilkumar, Cengage Learning, 2018.
- BStat: A South Asian Perspective with Course Mate – Keller & Arora Cengage Learning, 2016.
- Quantitative Methods for Business, Anderson, Sweeney and Williams, Thomson, 2005 ISBN 981-240-641-7.

REFERENCE BOOKS:

- Statistical Method s – Dr S. P Gupta, Sulthan Chand & sons, fourth Edition, ISBN 81-8054298-X.
- Fundamentals of Statistics, S.C Gupta, 6th edition, Himalaya Publishing House, 2007, ISBN, 978-81-8318-755-8.
- Analyzing Multivariate Data, James Lattin, Douglas Carroll and Paul Green, Thomson Learning, 2003, ISBN 0-534-34974-9.

II SEMESTER HUMAN RESOURCE MANAGEMENT

Semester	II	CIE Marks	: 40
Course Code	18MBA21	SEE Marks	: 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours	: 03
Credits : 04			

COURSE OBJECTIVES:

- To understand the HRM concepts and theory.
- To obtain an overview of various HRM functions and practices.
- To gain an insight into the basic statutory provisions.

Unit 1:

Human Resource Management: Introduction, meaning, nature, scope of HRM - Importance and Evolution of the concept of HRM - Major functions of HRM - Principles of HRM.

Case Study on “ Enterprise Builds on People”, Human Resource Management, Angelo S Denis / Ricky W Griffin / Anita Sarkar, Cengage Learning, Page 22-23.

Unit 2:

Job Analysis: Meaning, process of Job Analysis, methods of collecting job analysis data, Job Description and Job Specification, Role Analysis.

Human Resource Planning: Objectives, Importance and process of Human Resource Planning, Effective HRP.

Unit 3:

Recruitment: Definition, Constraints and Challenges, Sources and Methods of Recruitment, Recent trends and Approaches to recruitment.

Selection: Definition and Process of Selection.

Placement: Meaning, Induction/Orientation, Internal Mobility, Transfer, Promotion, Demotion and Employee Separation.

Case Study on “ Jayram’s Dilemma”, Human Resource Management, Angelo S Denis / Ricky W Griffin / Anita Sarkar, Cengage Learning, Page 123.

Unit 4:

Training and development: Training v/s development, Systematic Approach to Training, Training Methods; one the job and off the job.

Case Study on “ Training Program at ABC Cement”, Human Resource Management, Angelo S Denis / Ricky W Griffin / Anita Sarkar, Cengage Learning, Page 140.

Unit 5:

Performance Appraisal : Concept of Performance Appraisal, the Performance Appraisal Process, Methods of Performance Appraisal.

Employee Turnover & Employee Retention: Meaning, Strategies to manage employee turnover, Employee retention strategies.

Compensation: Meaning of Job Evaluation, Objectives of Compensation Planning, components of compensation, Compensation Pay Structure in India.

Unit 6:

Employee Welfare: Introduction, Types of Welfare Facilities and Statutory Provisions in India.

Employee Grievances: Employee Grievance procedure, Grievances Management in Indian Industry.

Discipline: Meaning, approaches to discipline, essential of a good disciplinary system, managing difficult employees.

PRACTICAL COMPONENTS:

- Give a case and ask the students to prepare the recruitment advertisement for a newspaper.
- Expose students to standard selection tests followed in various sectors.
- Exploring training and development practices.
- Exploring performance appraisal practices in various sectors.
- Exploring employee separation practices.
- Give a job analysis case and ask the students to prepare job description and job specification.
- Ask the students to prepare an appointment letter for the post of office manager of a company known to you.

COURSE OUTCOME:

1. Understanding of HRM functions, principles, Job analysis that facilitates students to design a job description and job specification for various levels of employees.
2. Synthesize knowledge on effectiveness of recruitment process, sources & understanding of systematic selection procedure.
3. Identify the various training methods and design a training program.
4. Understand the concept of performance appraisal process in an organization.
5. List out the regulations governing employee benefit practices.

RECOMMENDED BOOKS:

- Human Resources Management: A South Asian Perspective, Denski/Griffin/Sarkar- Cengage Learning, 2012.
- Human Resource Management – Rao V. S. P, Excel BOOKS, 2010.

- Human Resource Management – Dr. T.P RenukaMurthy HPH.

REFERENCE BOOKS:

- Human Resource Management - John M. Ivancevich, 10/e, McGraw Hill.
- Human Resource Management in practice - Srinivas R. Kandula, PHI, 2009

FINANCIAL MANAGEMENT

Semester	II	CIE Marks : 40
Course Code	18MBA22	SEE Marks : 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours : 03
Credits : 04		

Course Objectives:

- To familiarize the students with basic concepts of financial management and financial system.
- To understand concept of time value of money and its uses.
- To evaluate the investment proposals.
- To analyze capital structure and dividend decision.
- To understand the management of working capital in an organization.

Unit 1:

Financial management – Introduction to financial management, objectives of financial management. Changing role of finance managers. Interface of Financial Management with other functional areas.

Emerging Issues in financial management: Risk management, Behavioral finance and financial engineering.

Introduction to Financial System. Financial markets, Financial Instruments, Financial institutions and financial services. Introduction to derivatives.

Unit 2:

Time value of money –Future value of single cash flow & annuity, present value of single cash flow, annuity & perpetuity. Simple interest & Compound interest, Capital recovery & loan amortization. (Theory & Problem).

Case Study on Loan amortization.

Unit 3:

Sources of Financing: Shares, Debentures, Term loans, Lease financing, Hybrid financing, Venture Capital, Angel investing and private equity, Warrants and convertibles (Theory Only).

Cost of Capital: Basic concepts. Cost of debenture capital, cost of preferential capital, cost of term loans, cost of equity capital (Dividend discounting and CAPM model) - Cost of retained earnings - Determination of Weighted average cost of capital (WACC) and Marginal cost of capital. (Theory & Problem).

Case Study on WACC.

Unit 4:

Investment decisions – Capital budgeting process, Investment evaluation

techniques – Net present value, Internal rate of return, Modified internal rate of return, Profitability index, Payback period, discounted payback period, accounting rate of return (Theory & Problem). Capital rationing; Risk analysis in capital budgeting (Theory only).

Case Study on replacement of capital project.

Unit 5:

Working capital management – factors influencing working capital requirements - Current asset policy and current asset finance policy- Determination of operating cycle and cash cycle - Estimation of working capital requirements of a firm. (Does not include Cash, Inventory & Receivables Management).

Case study on Working Capital Determination.

Unit 6:

Capital structure and dividend decisions – Planning the capital structure. (No capital structure theories to be covered) Leverages, EBIT and EPS analysis. ROI & ROE analysis. Capital structure policy. Dividend policy – Factors affecting the dividend policy - Dividend Policies- Stable Dividend, Stable Payout (No dividend theories to be covered).

Case Study on EBIT-EPS analysis & Leverages.

PRACTICAL COMPONENTS:

- Study the different financial services offered by a bank.
- Identifying the small or medium sized companies and understanding the Investment evaluation techniques used by them.
- Using the annual reports of selected companies, students can study the working capital management employed by them. Students can also compare the working capital management of companies in the same sector.
- Students can choose the companies that have gone for stock split and Bonus issue in the last few years and study the impact of the same on the stock price.

COURSE OUTCOME:

1. Understand the basic financial concepts.
2. Apply time value of money.
3. Evaluate the investment decisions.
4. Analyze the capital structure and dividend decisions.
5. Estimate working capital requirements.

RECOMMENDED BOOKS:

- Financial Management -Prasanna Chandra, 9/e, TMH.
- Financial Management,Khan M. Y.& Jain P. K, 7/e, TMH.

- Financial Management ,I M Pandey, 11th Edition, Vikas Publishing House.

REFERENCE BOOKS:

RESEARCH METHODOLOGY

Semester	II	CIE Marks	: 40
Course Code	18MBA23	SEE Marks	: 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours	: 03
Credits : 04			

Course Objectives:

1. To understand the basic components of research design.
2. To Gain an insight into the applications of research methods.
3. To equip students with various research analytical tools used in business research.

Unit 1:

Business Research – Meaning, types, process of research- management problem, defining the research problem, formulating the research Hypothesis, developing the research proposals, research design formulation, sampling design, planning and collecting the data for research, data analysis and interpretation. Research Application in business decisions, Features of good research study.

Case Study 1: Business Research Methods: S.N.Murthy & U.Bhojanna. Excel Books-page 458.

Unit 2:

Business Research Design: Meaning and significance - Types: Exploratory and Conclusive Research Design.

Exploratory Research: Meaning, purpose, methods- Literature search, experience survey, focus groups and comprehensive case methods.

Conclusive Research Design - Descriptive Research - Meaning, Types – Cross sectional studies and longitudinal studies.

Experimental Research Design – Meaning and classification of experimental designs- formal and informal, Pre experimental design, Quasi-experimental design, True experimental design, statistical experimental design.

Case Study 2: Business Research Methods: S.N.Murthy & U.Bhojanna. Excel Books-page 455.

Unit 3:

Sampling: Concepts- Types of Sampling - Probability Sampling – simple random sampling, systematic sampling, stratified random sampling, cluster sampling -Non Probability Sampling –convenience sampling- judgemental sampling, snowball sampling- quota sampling - Errors in sampling.

Case Study 3: Business Research Methods: S.N.Murthy & U.Bhojanna. Excel Books-page 461.

Unit 4:

Data Collection: Primary and Secondary data Primary data collection methods - Observations, survey, Interview and Questionnaire, Qualitative Techniques of data collection, Questionnaire design – Meaning - process of designing questionnaire. Secondary data -Sources – advantages and disadvantages.

Case Study 4: Business Research Methods: S.N.Murthy &U.Bhojanna. Excel Books-page 457.

Measurement and Scaling Techniques: Basic measurement scales- Nominal scale, Ordinal scale, Interval scale, Ratio scale. Attitude measurement scale - Likert's Scale, Semantic Differential Scale, Thurstone scale, Multi-Dimensional Scaling.

Case Study 5: Business Research Methods: S.N.Murthy & U.Bhojanna. Excel Books-page 452 & 463.

Unit 5:

Hypothesis - types, characteristics, source, formulation of hypotheses, errors in hypotheses. Parametric and Non-Parametric Tests- t-test, z-test, f-test, u-test, K-W Test (problems on all tests) Statistical analysis- Bivariate and Multivariate Analysis- ANOVA-one-way and two-way classification (theory only).

Case Study 6: Business Research Methods: S.N.Murthy & U.Bhojanna. Excel Books-page 301.

Unit 6:

Data Analysis and Report Writing: Editing, Coding, Classification, Tabulation, Validation Analysis and Interpretation- Report writing and presentation of results: Importance of report writing, types of research report, report structure, guidelines for effective documentation.

Case Study 7: Business Research Methods: S.N.Murthy & U.Bhojanna. Excel Books-page 470.

PRACTICAL COMPONENTS:

- To identify research problem and collect relevant literatures for data analysis.
- To write the research design by using Exploratory and Descriptive Research methods.
- To prepare the questionnaire on brand awareness, effectiveness of training in public sector organization, Investors attitude towards Mutual funds in any financial institutions.
- To conduct Market survey and to investigate consumer perception towards any FMCG.
- To demonstrate Report writing and Presentation methods.

COURSE OUTCOME:

1. Understand various research approaches, techniques and strategies in the appropriate in business.
2. Apply a range of quantitative / qualitative research techniques to business and day to day management problems.
3. Demonstrate knowledge and understanding of data analysis, interpretation and report writing.
4. Develop necessary critical thinking skills in order to evaluate different research approaches in Business.

RECOMMENDED BOOKS

- Business Research Methods: A South-Asian Perspective with course Mate William G.Zikmund/Barry J.Babin/Jon C.Carr/AtanuAdhikari/Mitch Griffin, Cengage learning.
- Business Research Methods: S.N.Murthy&U.Bhojanna. Excel Books.
- Business Research Methods. Donald R. Cooper & Pamela s Schindler, 9/e, TMH/2007.

REFERENCE BOOKS

- Research Methodology – C.R.Kothari, Vishwa Prakashan.
- Research Methods – M MMunshi& K Gayathri Reddy, Himalaya Publishing House, 2015.
- Marketing Research- Naresh K Malhotrs- 5th Edition, Pearson Education/PHI 2007.

LEGAL AND BUSINESS ENVIRONMENT

Semester	II	CIE Marks	: 40
Course Code	18MBA24	SEE Marks	: 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours	: 03
Credits : 04			

Course Objectives:

1. To provide insights into the core concepts of incorporation of company.
2. To understand various policies and procedures of the company Act.
3. To gain insights into various procedure of Investigation & Winding up of Companies.

Part-A (Legal Environment)

Unit I:

Indian Contract Act, 1872-Meaning of contract, agreement, essential elements of a valid contract. Law of agency-meaning, creation and termination of agency.

Unit 2 :

Corporate Incorporation and Management

Definition of company, characteristics, types of company, lifting of corporate veil (i) Incorporation of company (ii) Memorandum and Articles of Association (iii) Doctrine of Ultra Vires (iv) Doctrine of Indoor Management and constructive notices Management - (i) Directors: Appointment, Removal, Position, Powers and Duties of Directors. (ii) Auditor and audit Committee: Its Role. Directors – qualification and Appointment, Liabilities and duties.

Mini case Presentation and Discussion on Saloman v/s A Soloman & Company Ltd.

Unit 3:

Oppression, Mismanagement and Investigation:

(i) Prospectus, membership and shareholding in a company.(ii) Prevention of Oppression (iii) Prevention of Mismanagement (iv) Role & Powers of the Company Law Board (v) Role & Powers of Central Government. Meeting : (i) Types of Meetings (ii) Procedure of calling for a meeting (iii) Company's resolutions and its kinds, proxies.

Corporate Liquidation: (i). Winding up of Companies (ii). Mode of winding up of the companies (iii). Compulsory Winding up under the Order of the Tribunal (iv). Voluntary winding up (v). Contributories (vi). Payment of liabilities.

Mini case Presentation and Discussion on Rule in Foss v. Harbottle.

PRACTICAL COMPONENTS:

- Students to collect analyze and discuss MOA, AOA & Prospectus of a company.
- Students to produce a report on the working of reputed agency including its formation, nature of relations with the outside world and such other issues of relevance.

COURSE OUTCOME:

1. Students should get clear idea about the concept of incorporation of company, its relevance, characteristics, types of company, lifting of corporate.
2. Student to acquire knowledge about conducting meeting, duties of directors and Investigation of the company.
3. To give the students an insight on Winding up of the companies , Mode of winding up of the companies.

RECOMMENDED BOOKS:

- Elements of Mercantile law, Sultanchand publications, 34th Edition, 2014
- Legal & Business Environment, Racvindra Kumar & Renukamurthy, Cengage learning, 2018.

Part-B (Business Environment)

Course Objectives:

1. To provide an understanding about the Macro Economic Environment of Business.
2. To have an understanding of the basic macro-economic concepts.
3. To study the various economic policies of our country.

Unit-4

Indian Business environment: Nature and Scope, Structure of the Business Environment – Internal and External environment. Political and Legal Environment, Economic Environment, Socio – Cultural Environment, Global environment: WTO and global relations.

Basic economic Concepts: Open and Closed Economies, Primary, secondary and Tertiary sectors and their contribution to the economy. SWOT Analysis for the Indian economy. Measuring the Economy: Measuring GDP and GDP Growth rate, Components of GDP, Business Cycle- Features, and Phases.

Unit-5

Industrial Policies and Structure: Planning- Problems in industrial development during the plan period, Classification of industries based on ownership. Industrial policies, Industrial strategy for the future, New Industrial policy 1991.

Structure of Indian Industry: Public and Private Sector Enterprises, Objectives of PSUs, Performance and shortcomings. Private Sector–growth, problems and prospects. SSI – Role in Indian Economy. Startups and their current state in India.Privatisation-Problems and prospects, Disinvestments in Indian public sector Units since 1991.

Case Study : Privatization of Airport and Airline Industry, Source: Business Environment: Text and cases – Justin Paul, 2/e, McGraw Hill. 2008. Pp 166-168.

Unit-6

Economic policies: Fiscal Policy: Objectives, Instruments, Union Budget, Taxes, Role of Government.

Monetary Policy: Money, Measures of money supply, Monetary system in India, Tools for credit control. Structure of the Banking system, RBI and its functions, Banking structure reforms –Narasimham committee recommendations.

India Foreign Trade Policy: Objectives, Features, Policy of 2015-2020-salient features.

PRACTICAL COMPONENTS:

- Students are expected to give a report on how the economic

environment has affected the performance of any five large Indian Business Houses.

- Students are expected to analyze the major economic and financial indicators such as GDP, Inflation, CPI, BSE, NSE, Currency, Gold rate, Oil barrel price etc., for a particular period of time and submit the report on the same.

COURSE OUTCOMES:

1. To student will have an understanding of the macro environment of Business and various macroeconomic concepts.
2. The student will understand the industrial policies of the past and the present and the evolution over time, and how Indian Industrial structure evolved over time.
3. The student will be exposed to various economic policies of the country and the state of economy.

RECOMMENDED BOOKS:

STRATEGIC MANAGEMENT

Semester	II	CIE Marks : 40
Course Code	18MBA25	SEE Marks : 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours : 03
Credits : 04		

Course Objectives:

1. To provide insights into the core concepts of strategic management.
2. To evaluate various business strategies in dynamic market environments.
3. To gain insights into various strategic management models.

Unit 1:

Meaning and Nature of Strategic Management, its Importance and relevance and . Characteristics of Strategic Management, The Strategic Management Process. Relationship between a Company ‘ s Strategy and its Business Model.

Minicase Presentation and Discussion: Business model of Amul and KMF , Suggested questions for case presentation: a. Discuss competitive strategy of Amul b. what are the difference between Amul business model and KMF.

Unit 2:

Strategy Formulation- Understand strategic management process business definition & Organization values that build mission statement. Describe strategic vision, mission, goals, long term objectives, short term objectives and discuss their value to the strategic management process. Balanced Score card.

Minicase Presentation and Discussion: Shanghai GM , Suggested questions for case presentation: a. Introducing China’s auto industry, including opportunities & threats b. Why joint venture with SAIC? c. What makes Shanghai GM successful? d. Lessons learnt to other Western MNEs.

Unit 3:

Analyzing a Company’ s External Environment – The Strategically relevant components of a Company’s External Environment – Industry Analysis - what factors are driving industry change and its impact - Porter’s dominant economic feature - Competitive Environment Analysis - Porter’s Five Forces model – Key Success Factors concept and implementation.

Mini-Case Presentations and Discussions: Jet Blue Airlines Suggested topics for case presentation and discussion: a. Analyzing the general (national/global) environment b. Assessing five forces of the industry c. Identifying opportunities & threats of the industry d. Jet Blue’s capability analysis.

Unit 4:

Analyzing a company's resources and competitive position – Analysis of a Company's present strategies - SWOT Analysis – Value Chain Analysis - Benchmarking . Generic Competitive Strategic – Low cost provider Strategy - Differentiation Strategy - Best cost provider Strategy - Focused Strategy - Strategic Alliance and Collaborative Partnerships - Mergers and Acquisition Strategic - Outsourcing Strategic - International Business level.

Minicase presentation and discussion: Wal-Mart Stores Inc. Suggested topics for case presentation and discussion: a. what competitive strategy does the firm use? Why? b. How does the firm achieve competitive advantages via four-building blocks (quality, innovation, efficiency and customer responsiveness)? c. Any evidence or efforts about value-chain activities? d. Recommendations?

Unit:5

Business planning in different environment - Entrepreneurial level Business planning – Multistage wealth creation model for entrepreneurs – Planning for large and diversified companies – brief overview of Innovation, integration, Diversification, Turnaround Strategic – GE nine cell planning grid and BCG matrix.

Minicase Presentation and Discussion: Siemens's Global Development Strategy Suggested topics for presentation and discussion: 1. Why does Siemens need global coordination and integration? 2. How did Siemens coordinate and orchestrate project development and operations dispersed in various regions? 3. Do you think that different foreign subsidiaries should vary in their autonomy and corporate support, why and how? 4. Takeaway lessons and your recommendations.

Unit:6 Strategy Implementation

Organizational design, structures and controls. Importance of integrating strategy implementation and strategy formulation. Organizational structures used to implement different business level strategies. Organizational structures used to implement different corporate level strategy. How corporate culture promotes implementation of strategy, types of control systems.

Minicase presentation and discussion: Infosys Pvt Ltd. Suggested topics for case presentation and discussion: a. Discuss strategy formulation and implementation of recent year.

PRACTICAL COMPONENTS

- Analyzing the Mission and Vision statements of selected Indian companies.
- Applying Michael Porter's model to an industry (Retail, Telecom, Infrastructure, FMCG, Insurance, Banking etc).
- Pick a successful growing company. Do a web-search of all news related to that company over a one-year period.. Analyze the news

items to understand and write down the company's strategy and execution efficiency.

- Pick a company that has performed very badly compared to its competitors. Collect information on why the company failed. What were the issues in strategy and execution that were responsible for the company's failure in the market; Analyze the internal and external factors.
- Map out GE 9-cell matrix and BCG matrix for some companies and compare them.
- Conduct SWOT analysis of companies around your campus.

COURSE OUTCOME:

- Students should get clear idea about the concept of Strategic Management, its relevance, Characteristics, process nature and purpose.
- Student to acquire an understanding of how firms successfully institutionalize a strategy and create an organizational structure for domestic and overseas operations and gain competitive advantage.
- To give the students an insight on strategy at different levels of an organization to gain competitive advantage.
- To help students understand the strategic drive in multinational firms and their decisions in different markets.
- To enable the students to gain knowledge of strategy implementation and the control measures for effective decision-making.

RECOMMENDED BOOKS:

- Crafting and executing Strategy. A Thompson Jr, Margaret A. and John E Gamble. Mc Graw Hill Publication, New Delhi.
- Strategic Management – Hitt & Manikutti, Cengage learning, 2018.
- Strategic Management – Fred R David, PHI Learning Private Ltd, New Delhi.

REFERENCE BOOKS:

- Strategy and the Business Landscape – Pankaj Ghemawat.
- Strategic Management – Competitiveness and Globalization: Michael A. Hitt, Duane Ireland, Robert E. Hokinson, : South Western, Thomson Learning.
- Crafting and Executing Strategy, Arthur Thompson, A.J.Strickland, Arun Jain, Mc Grawhill.

ENTREPRENEURSHIP DEVELOPMENT

Semester	II	CIE Marks : 40
Course Code	18MBA26	SEE Marks : 60
Teaching Hours / week (L:T:P)	4-0-0	Exam Hours : 03
Credits : 04		

Course Objectives:

1. To develop and strengthen entrepreneurial quality and motivation in students.
2. To impart basic entrepreneurial skills and understandings to run a business efficiently and effectively.
3. To provide insights to students on entrepreneurship opportunities, sources of funding and institutions supporting entrepreneurs.
4. To understand the contribution of the entrepreneurs towards Rural, Society and Socio Economic Development of the country.

Unit 1:

Entrepreneur & Entrepreneurship: Meaning of entrepreneur - Evolution of the concept - Functions of an Entrepreneur - Types of Entrepreneur - Intrapreneur- an emerging class - Concept of Entrepreneurship - Evolution of Entrepreneurship - Development of Entrepreneurship - Entrepreneurial Culture - Stages in entrepreneurial process.

Unit 2:

Business Planning Process: Meaning of business plan - Business plan process - Advantages of business planning - Marketing plan - Production/operations plan - Organization plan - Financial plan - Final Project Report with Feasibility Study - preparing a model project report for starting a new venture.

Unit 3:

Institutions supporting Entrepreneurs: Small industry financing developing countries - A brief overview of financial institutions in India - Central level and state level institutions - SIDBI - NABARD - IDBI - SIDCO - Indian Institute of Entrepreneurship - DIC - Single Window - Latest Industrial Policy of Government of India.

Unit 4:

Family Business: Importance of family business - Types - History - Responsibilities and rights of shareholders of a family business - Succession in family business - Pitfalls of the family business - strategies for improving the capability of family business - improving family business performance.

Unit 5:

International Entrepreneurship Opportunities: The nature of international entrepreneurship - Importance of international business to the firm - International versus domestic entrepreneurship - Stages of economic development - Entrepreneurship entry into international business - exporting - Direct foreign investment - barriers to international trade.

Unit 6:

Informal Risk Capital and Venture Capital: Informal risk capital market- venture capital - nature and overview - venture capital process - locating venture capitalists - approaching venture capitalists.

Social Entrepreneurship: Social enterprise-need - types - characteristics and benefits of social enterprises-Social entrepreneurship - Rural entrepreneurship-need and problems of rural entrepreneurship - challenges and opportunities-Role of government. Make in India, Smart India, Digitalized India.

Case studies in Entrepreneurship Development.

PRACTICAL COMPONENTS:

- Make a business plan for your intended business - talk to bankers to find out what they look for in a business plan - modify accordingly and present it in the class.
- Analyze the performance of listed family firms. How is their performance compared to the performance of other firms? Does a family firm successfully manage to create wealth for non-family investors?
- Interview a local entrepreneur to find out his/her major motivations to start a business - which of the skills and characteristics do you find in the entrepreneur?
- Study a local for-profit business and try to list out the positive social impacts of the business.
- Visit a trade show and try to compare the marketing activities of various stalls in that show - make a list of good practices you come across in the show.
- Choose an NGO in your locality. Interview the founder and present the case in class on the motivations - challenges - ecosystem support and their impacts - arrive at possible solutions and convey back to NGO.

COURSE OUTCOMES:

1. Display keen interest and orientation towards entrepreneurship, entrepreneurial opportunities in order to setup a business.
2. As an entrepreneur learn to think creatively and understand the components in developing a Business plan.
3. Become aware about various sources of funding and institutions supporting entrepreneurs.

4. Gain consciousness towards social entrepreneurship and rural entrepreneurship opportunities.

RECOMMENDED BOOKS:

- Entrepreneurship- A South-Asian Perspective, D.F.Kuratko, T.V.Rao – Cengage Learning -2018.
- Entrepreneurship Development-Small Business Enterprise- Poornima Charantimath Pearson Education - 2007.
- Entrepreneurship- Rober D Hisrich - Michael P Peters - Dean A Shepherd - 6/e- The McGraw-Hill companies - 2007.

REFERENCE BOOKS:

- Entrepreneurship Theory at crossroads - Mathew J Manimala - 2/e - Biztantra - 2007.
- Entrepreneurship -Rajiv Roy - 2/e- Oxford University Press 2011.
- Entrepreneurship-Principles and Practices - Kurakto - 7/e- Thomson Publication - 2007.

MARKETING SPECIALISATION III SEMESTER CONSUMER BEHAVIOR

Semester	III	CIE Marks : 40
Course Code	18MBAMM301	SEE Marks : 60
Teaching Hours / week (L:T:P)	3-0-2	Exam Hours : 03
Credits : 04		

Course Objectives:

1. To understand the concept of consumer behaviour, decision making by consumers, behavioural variables and its influences on consumer behaviour.
2. To comprehend the social and cultural dimensions of consumer behaviour.
3. To provide an insight of the psychological and behavioural concepts of consumers.

Unit 1:

Introduction to the study of Consumer Behaviour: Meaning & Definition of Consumer Behaviour, Difference between Consumer & Customer, Nature & characteristics of Indian Consumers, Consumerism: meaning, Consumer Movement in India, Rights & Responsibilities of consumers in India, Benefits of consumerism.

Unit 2:

Models of Consumer Behaviour: Input-Process-Output Model, Nicosia Model, Howard Sheth Model, Engel-Kollat-Blackwell Models of Consumer Behaviour, Internal Influences, External Influences.

Consumer Decision Making: Consumer Buying Decision Process, Levels of Consumer Decision Making – Four views of consumer decision making. On-line Decision Making: Meaning & Process/Stages.

Situational Influences- Nature of Situational Influence, Situational Characteristics and consumption behaviour.

Part 1

Unit 3:

Individual Influences on Consumer Behaviour and CRM

A) Motivation: Basics of Motivation, Needs, Goals, Positive & Negative Motivation, Rational Vs Emotional motives, Motivation Process, Arousal of motives, Selection of goals. Motivation Theories and Marketing Strategy - Maslow's Hierarchy of Needs, McGuire's Psychological Motives.

B) Personality: Basics of Personality, Theories of Personality and Marketing Strategy (Freudian Theory, Neo-Freudian Theory, Trait Theory), Applications of Personality concepts in Marketing, Personality and understanding consumer diversity, Brand Personality, Self and Self-Image.

Grand Total (I to IV Sem.)		Marks: 2400; Credits : 94							

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or technical paper.

1).Project Phase – I : 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase – III : Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be $50+50+100=200$ (50 Marks for Internal Guide, 50 Marks for External and 100 for Viva-Voce)

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Course Title: Wireless Ad-hoc Networks	Course Code: 14SCN11
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To explore the design space and conduct trade-off analysis between performance and resources.
- To Determine suitable medium access protocols and radio hardware.
- To learn Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.
- To explore the Ad-hoc network concepts by using network simulators.

TOPICS

MODULE I

Ad hoc Wireless Networks: Introduction, Issues in Ad hoc Wireless Networks, Ad hoc Wireless Internet;
MAC Protocols for Ad hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas
 (Chapter 5: 5.1-5.3, Chapter 6: 6.1-6.8) **10 Hours**

MODULE II

Routing Protocols for Ad Hoc Wireless Networks: Introduction, Issues in Designing a Routing Protocol for Ad hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols
 (Chapter 7: 7.1-7.6, 7.8, 7.9) **10 Hours**

MODULE III

Multicast Routing in Ad hoc Wireless Networks: Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.
 (Chapter 8: 8.1-8.7) **10 Hours**

MODULE IV

Transport Layer and Security Protocols for Ad hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad hoc Networks; Security in Ad hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad hoc Wireless Networks.
 (Chapter 9: 9.1-9.6, 9.7-9.12) **10 Hours**

MODULE V

Quality of Service and Energy Management in Ad hoc Wireless Networks

Introduction, Issues and Challenges in Providing QoS in Ad hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad hoc Wireless Networks: Introduction, Need for Energy Management in Ad hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.

(Chapter 10: 10.1-10.5, Chapter 11: 11.1-11.6)

10 Hours

LABORATORY WORK

Note: Standard Network Parameters and supporting protocols may be assumed for simulation. Any suitable network simulator may be used. (Preferably NS2 or NS3 Simulator)

1. Develop unicast routing protocols using any suitable Network Simulator for (Mobile Ad hoc Networks) MANET to find the best route using the any one of routing protocols from each category from table-driven (e.g., link state or DSDV) on demand (e.g., DSR, AODV, TORA), hybrid (e.g., ZRP, contact-based architectures) and hierarchical (e.g., cluster based.) The efficient path/route should be established for source and destination data transmission using routing protocols. Understand the advantages and disadvantages of each routing protocol types by observing the performance metrics of the routing protocol. In that way the best application/environment suitable routing protocol can be identified in each category.
- 2: Develop multicast routing protocols using any suitable Network Simulator for MANET in which session nodes are connecting through either tree(MAODV, MCEDAR) or mesh (ODMRP, CAMP, FGMP) structure. Analyze the performance metrics of multicast routing protocols with unicast routing protocols.
3. Develop MAC Protocol using any suitable Network Simulator for MANETs to send the packet without any contention through wireless link using the following MAC protocols; (CSMA/CA (802.11), MACA, MACAW, PAMAS, SMAC). Analyze its performance with increasing node density and mobility.
4. Develop and Analyze the performance of TCP connection when it is used for wireless networks. You will find performance of TCP decreases dramatically when a TCP connection traverses a wireless link on which packets may be lost due to wireless transmission errors. Make use of Active Queue Management Technique to control congestion on Wireless Networks. Evaluate the performance of FIFO, RED and WFQ over wireless networks using suitable Network Simulator.
5. Simulate MANET environment using suitable Network Simulator and test with various mobility model such as Random way point, group mobility, highway model, Manhattan model, hybrid models) (Spatial correlation, temporal correlation, relative speed, link durations). Analyze throughput, PDR and delay with respect to different mobility models.

COURSE OUTCOMES

Students will be able to

- Apply knowledge of wireless Ad-hoc networks to various application areas.
- Design, implement and maintain wireless Ad-hoc networks.
- Formulate and solve problems creatively.
- Practical knowledge acquired by hands-on session.

TEXT BOOKS:

1. C. Siva Ram Murthy & B. S. Manoj: Ad hoc Wireless Networks, 2nd Edition, Pearson Education, 2011

REFERENCES:

1. Ozan K. Tonguz and Gianguigi Ferrari: Ad hoc Wireless Networks, John Wiley, 2007.
2. Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du: Ad hoc Wireless Networking, Kluwer Academic Publishers, 2004.

Semester I

Year: 2014-2015

Course Title: Advances in Computer Networks	Course Code: 14SCN12
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To become familiar with the basics of Computer Networks.
- To learn Network architectures.
- To learn Concepts of fundamental protocols.
- To gain the knowledge of internetworking concepts.
- To understand the knowledge of internetworking concepts in various applications.
- To acquire knowledge of implementation concepts in congestion control and error detections.

TOPICS

MODULE I

Foundation

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1:Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2:Chapter 4

10 Hours

MODULE II

Internetworking- I

Switching and Bridging, Datagrams, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, subnetting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2.

10 Hours

MODULE III

Internetworking- II

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP

T1: Chapter 3.3, 4.1.1, 4.1.3 **T2:** Chapter 13.1 to 13.18, Chapter 18.

10 Hours

MODULE IV

End-to-End Protocols

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3

10 Hours

MODULE V

Congestion Control and Resource Allocation

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance.

The Domain Name System(DNS), Electronic Mail(SMTP, POP, IMAP, MIME), World Wide Web(HTTP), Network Management(SNMP).

T1: Chapter 6.4 **T2:** Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8

10 Hours

LABORATORY WORK

PART A: Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

COURSE OUTCOMES

Students will be able to

- Classify network services, protocols and architectures, explain why they are layered.
- Knowledge on key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Practical knowledge gained by hands-on sessions.
- Gain the knowledge of application layer protocol.

Text books:

1. **T1: Larry Peterson and Bruce S Davis** “Computer Networks :A System Approach” 5th Edition , Elsevier - 2014
2. **T2: Douglas E Comer,** “ Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI - 2014

References:

2. **Behrouz A Forouzan** “TCP/IP Protocol Suite” 4th Edition – Tata McGraw-Hill.

Semester I

Year: 2014-2015

Course Title: Information and Network Security	Course Code: 14SCN13
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology.

TOPICS

MODULE I

Classical Encryption Techniques

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad.

Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours

MODULE II

Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours

MODULE III

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours

MODULE IV

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, ..

Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer** :SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication

plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits. **10 Hours**

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition.

1. V k Pachghare: Cryptography and Information Security. PHI Learning. ISBN 978-81-203-3521-9

Semester I

Year: 2014-2015

Course Title: Advances in Storage area Network	Course Code: 14SCN14
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre’s maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems
- To appreciate the use of cables technologies used in SAN technology.

TOPICS

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems. **10 Hours**

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS. **10 Hours**

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network;

Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch’s Operating system; Device Drivers; Supporting the switch’s components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management, Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Have Knowledge on various RAID levels.
- Apply the techniques used for data maintenance.
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2013.

Reference Books:

1. Robert Spalding: “Storage Networks The Complete Reference”, Tata McGraw-Hill, 2011.
2. Marc Farley: Storage Networking Fundamentals – An Introduction to Storage Devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005.
3. Richard Barker and Paul Massiglia: “Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs”, Wiley India, 2006.

Semester I

Year: 2014-2015

Course Title: Advanced algorithms	Course Code: 14SCN151
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.
- To get an awareness of probabilistic and randomize algorithms.

TOPICS

MODULE I

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours

MODULE II

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours

MODULE III

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours

MODULE IV

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours

MODULE V

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours

COURSE OUTCOMES:

The students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.
- Get knowledge about different application based algorithm.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007

Course Title: Computer Systems Performance Analysis	Course Code: 14SCN152
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the mathematical foundations needed for performance evaluation of computer systems
- To understand the metrics used for performance evaluation
- To understand the analytical modeling of computer systems
- To enable the students to develop new queuing analysis for both simple and complex systems
- To understand the concept of planning and design in computer system.

TOPICS

TOPICS:

MODULE I

Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.

10 Hours

MODULE II

Workloads, Workload Selection and Characterization: Types of Workloads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, Popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.

10 Hours

MODULE III

Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.

10 Hours

MODULE IV

Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote- Terminal Emulation; Components of an RTE; Limitations of RTEs. **Experimental Design and Analysis: Introduction:** Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.

10 Hours

MODULE V

Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow

Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Define Little's law and other operational laws
- Apply the operational laws to open and closed systems
- Use discrete-time and continuous-time Markov chains to model real world systems
- Develop analytical techniques for evaluating scheduling policies

Text Book:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2013.

Reference Books:

1. Paul J Fortier, Howard E Michel: computer Systems Performance Evaluation and prediction, Elsevier, 2003.
2. Trivedi K S: Probability and Statistics with Reliability, Queuing and Computer Science Applications, 2nd Edition, Wiley India, 2001.

Semester I

Year: 2014-2015

Course Title: Multi-core Architecture and Programming	Course Code: 14SCN153
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To expose the students to the problems related to multiprocessing
- To understand the different types of multi core architectures
- To expose the students to warehouse-scale and embedded architectures

TOPICS

MODULE I

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper-Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

10 Hours

MODULE II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours

MODULE III

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours

MODULE IV

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.
- Critically analyze the different types of inter connection networks.
- Knowledge on architecture of GPUs, warehouse-scale computers and embedded processors.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006.

Semester I

Year: 2014-2015

Course Title: Soft Computing	Course Code: 14SCN154
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the key aspects of Soft computing
- To know about the components and building block hypothesis of Genetic algorithm.
- To understand the features of neural network and its applications
- To study the fuzzy logic components
- To gain insight onto Neuro Fuzzy modeling and control.
- To gain knowledge in machine learning through Support vector machines.

Topics:

MODULE I

Introduction to Soft computing, Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model. **10 Hours**

MODULE II

Perceptron Network, Adaptive linear neuron, Multiple adaptive linear neurons, Back propogation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models) **10 Hours**

MODULE III

Introduction to classical sets and fuzzy sets, Classical relations and fuzzy relations, Membership functions, **10 Hours**

MODULE IV

Defuzzification, Fuzzy decision making, and applications **10 Hours**

MODULE V

Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA
General genetic algorithms, The schema theorem, Genetic programming, applications

10 Hours

Course Outcomes:

The student will be able to:

- Implement machine learning through neural networks.

- Write Genetic Algorithm to solve the optimization problem
- Develop a Fuzzy expert system.
- Model Neuro Fuzzy system for clustering and classification.

Text book:

1. Principles of Soft computing, Shivanandam, Deepa S. N Wiley India, Jun-2007
(Chapters 1, 2, 3(Upto 3.5), 7, 8, 9, 10, 13, 15 (upto 15.6 & 15.9,15,10)

Reference Books:

1. Neuro-fuzzy and soft computing, J.S.R. JANG, C.T. SUN, E. MIZUTANI, PHI (EEE edition) ISBN: 978-81-203-2243-1

Semester I

Year: 2014-2015

Course Title: Information and Network security Lab	Course Code: 14SCN16
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives:

- To understand the fundamentals of Cryptography through practical implementation.
- To implement standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to use cutting edge simulation tools
- To design security applications in the field of Information technology.

LABORATORY WORK

Note: Use C/C++/Java or equivalent tool to implement the following experiment

1. Consider a file with composite data, substitute the content and transpose the ciphers.
2. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
3. Apply the RSA algorithm on a text file to produce cipher text file.
4. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
5. Implementation of Message Authentication Code using cryptography VMAC function.
6. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change in the input results in a substantial change in the output
7. Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN [Subnetting].
8. Develop a mechanism to setup(configure) a port scanner and identify the intrusion.

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.

- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Semester II

Year: 2014-2015

Course Title: Multimedia Communications	Course Code: 14SCN21
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

Course Objectives:

- To understand the Multimedia Communication Models
- To study the Multimedia Transport in Wireless Networks
- To solve the Security issues in multimedia networks
- To explore real-time multimedia network applications.
- To explore different network layer based application.

TOPICS

MODULE I

Introduction to Multimedia Communications: Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework. **10 Hours**

MODULE II

Framework for Multimedia Standardization: Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards. **10 Hours**

MODULE III

Application Layer: Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access. **10 Hours**

MODULE IV

Middleware Layer: Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution. **10 Hours**

MODULE V

Network Layer: Introduction, QoS in Network Multimedia Systems. **10 Hours**

LABORATORY WORK

The following experiments should be practiced (Tools such as HTML/Frontpage/Dreamweaver/ equivalent, Multimedia application enabling software ,System software support for multimedia, Performance measurement tools for multimedia ,Multimedia authoring tools, Web tools and applications)

1. Audio and video editing
2. Image editing
3. 2D and 3D animation.

.The case studies are:

- Video on-demand
- Interactive TV
- Home shopping
- Remote home care
- Electronic album
- Personalized electronic journals.

COURSE OUTCOMES:

Students will be able to:

- Deploy the right multimedia communication models.
- Apply QoS to multimedia network applications with efficient routing techniques.
- Solve the security threats in the multimedia networks.
- Develop the real-time multimedia network applications.

TEXT BOOKS:

1. K.R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic: Introduction to Multimedia Communications – Applications, Middleware, Networking, Wiley India, 2006.

REFERENCE BOOKS:

1. Fred Halsall: Multimedia Communications – Applications, Networks, Protocols, and Standards, Pearson, 2001.
2. Nalin K Sharad: Multimedia information Networking, PHI, 2002.

Semester II

Year:2014-2015

Course Title: Distributed Computing	Course Code: 14SCN22
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To learn Basic Concepts of DSM, Hardware DSM
- To understand File Sharing, DFS Implementation, Replication in DFS,
- To understand the concepts of Cryptanalysis, Secure channels, Access control.
- To understand some of the security concepts in distributed computing.

TOPICS

MODULE I

Distributed System management: Introduction, Resource management, Task Assignment Approach, Load-Balancing Approach, Load-Sharing Approach, Process management in a Distributed Environment, Process Migration, Threads, Fault Tolerance.

10 hours

MODULE II

Distributed Shared Memory :Introduction, Basic Concepts of DSM, Hardware DSM, Design Issue in DSM Systems, Issue in Implementing DSM Systems, Heterogeneous and Other DSM Systems, Case Studies.

10 hours

MODULE III

Distributed File System: Introduction to DFS, File Models, Distributed File System Design, Semantics of File Sharing, DFS Implementation, File Caching in DFS, Replication in DFS, Case studies. **Naming**: Introduction, Desirable features of a good naming system, Basic concepts, System-oriented names, Object-locating mechanisms, Issues in designing human-oriented names, Name caches, Naming and security, Case study: Domain name service.

10 hours

MODULE IV

Security in distributed systems: Introduction, Cryptography, Secure channels, Access control, Security Management, Case studies.

10 hours

MODULE V

Real-Time Distributed operating Systems: Introduction, Design issues in real-time distributed systems, Real-time communication, Real-time scheduling, Case study: Real-time communication in MARS. **Emerging Trends in distributed Computing**: Introduction to emerging trends, Grid Computing, SOA, Cloud computing, the future of emerging Trends.

10 hours

COURSE OUTCOMES:

The student will be able to

- Realize shared memory concept.
- Realize Advantages of DFS.
- Implement mechanisms to manage security in DS

Text Book.

1. Sunitha Mahajan, Seema Shah: Distributing Computing, Published by Oxford University press 2010

Semester II

Year:2014-2015

Course Title: Network Management	Course Code: 14SCN23
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the need for interoperable network management.
- To learn to the concepts and architecture behind standards based network management.
- To understand the concepts and terminology associated with SNMP and TMN.
- To understand network management as a typical distributed application

TOPICS

MODULE I

Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards- Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology, Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management.

10 Hours

MODULE II

Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1- Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model.

10 Hours

MODULE III

SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model
SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications.

10 Hours

MODULE IV

Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles.

10 Hours

MODULE V

Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation

Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case-Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management. **10 Hours**

LABORATORY WORK:

1. Capture packets transferred while browsing a selected website (e.g. a page from the course website, a search engine home page). Investigate the protocols used in each packet, the values of the header fields and the packet sizes.
2. Explore at least the following features of Wireshark: filters, Flow Graphs (TCP), statistics, protocol hierarchies.
3. Create several example files for your Apache web server to serve. Configure your web server, and then ask a friend to test your web server by accessing the files. Capture the packets and observe the log file.
4. Configure authentication for a specific directory on your web server. Test, captured packets and observe the log file.
5. Login to another computer in the lab, capture and investigate the data exchanged.
6. Trace the path between several pairs of source/destination nodes.
7. Create fire wall rule(s) that will drop TCP packets destined to a specific computer on the lab network (e.g. yours neighbors computer).
8. Using the supplied client/server sockets programs, implement a third proxy server.

Note: NS2 or equivalent tool to be used.

Course Outcomes:

Upon completion of this course, the students will be able to

- Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets.
- Apply network management standards to manage practical networks.
- Formulate possible approaches for managing OSI network model.
- Use on SNMP for managing the network
- Use RMON for monitoring the behavior of the network
- Identify the various components of network and formulate the scheme for the managing them

TEXT BOOKS:

1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.

REFERENCE BOOKS:

1. J. Richard Burke: Network management Concepts and Practices: a Hands-On Approach, PHI, 2008.

Semester II

Year:2014-2015

Course Title: Switching & Statistical Multiplexing in Telecommunications	Course Code: 14SCN24
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand Switching and multiplexing.
- To understand the transmission technology.
- To understand the transmission control.
- To understand basic knowledge on telecommunication.

Topics:

MODULE I

Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. **Why Digital:** Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks.

10 Hours

MODULE II

Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization.

10 Hours

MODULE III

Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. **Digital Transmission and Multiplexing:** Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing.

10 Hours

MODULE IV

Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching.

10 Hours

MODULE V

Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems.

10 Hours

Course Outcomes:

The student will be able to:

- Gain the knowledge about switching and multiplexing
- Gain the knowledge about telecommunication.
- Learn transmission control in telecommunication.

TEXT BOOKS:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Semester II

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCN251
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To gain knowledge Virtualization
- To gain knowledge Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.
- To gain knowledge in cloud resource virtualization and scheduling.

TOPICS:

MODULE I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

MODULE II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

MODULE III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study:Xen a VMM based

paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

MODULE IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

MODULE V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

Course Outcomes:

The student will be able to:

- Demonstrate simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.

Text Book:

1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.
2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Semester II

Year:2014-2015

Course Title: Wireless Sensor Networks	Course Code: 14SCN252
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- Architect sensor networks for various application setups.
- Explore the design space and conduct trade-off analysis between performance and resources.
- Devise appropriate data dissemination protocols and model links cost.
- Determine suitable medium access protocols and radio hardware.
- Prototype sensor networks using commercial components.

- Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.

TOPICS:

MODULE I

Introduction, Overview and Applications of Wireless Sensor Networks

Introduction, Basic overview of the Technology, **Applications of Wireless Sensor Networks:** Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology

(Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)

10 Hours

MODULE II

Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, **Wireless Transmission Technology and Systems:** Introduction, Radio Technology Primer, Available Wireless Technologies

(Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)

10 Hours

MODULE III

MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. **Routing Protocols for Wireless Sensor Networks:** Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs.

(Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)

10 Hours

MODULE IV

Transport Control and Middleware for Wireless Sensor Networks

Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. **Middleware for Wireless Sensor Networks:** Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware.

(Chapter 7: 7.1-7.4, Chapter 8: 8.1-8.4)

10 Hours

MODULE V

Network Management and Operating System for Wireless Sensor Networks

Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. **Operating Systems for Wireless Sensor Networks:** Introduction, Operating System Design Issues, Examples of Operating Systems.

(Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)

10 Hours

COURSE OUTCOMES

The student will be able to:

- Develop applications of wireless sensor actuator networks
- Implement the elements of distributed computing and network protocol .

- Explore various hardware, software platforms that exist for sensor networks

TEXT BOOKS:

1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, “Wireless Sensor Networks: Technology, Protocols and Applications”, WILEY , Second Edition (Indian) , 2014

REFERENCE BOOKS:

1. Ian F. Akyildiz, Mehmet Can Vuran "Wireless Sensor Networks", Wiley 2010
2. Feng Zhao & Leonidas J. Guibas, “Wireless Sensor Networks- An Information Processing Approach”, Elsevier, 2007.

Semester II

Year: 2014-2015

Course Title: Optical Networks	Course Code: 14SCN253
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM
- To acquire knowledge about fault and congestion management.

Topics

MODULE I

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, SONET/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

10 Hours

MODULE II

WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations.

10 Hours

MODULE III

Control and Management

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours

MODULE IV

Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCh-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum Load **Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Design a system, component or process as per needs and specification.
- Gain knowledge on optical network architectures ranging from optical access networks to backbone optical transport networks.
- Gain the knowledge on methodologies of optical network design optimization;
- Explore techniques of optical network survivability.
- Solve the Problems in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Course Title: Advances in VLSI Design and Algorithms	Course Code: 14SCN254
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- Able to understand the fundamentals of CMOS VLSI and associated technologies.
- Able to solve problems in the design of CMOS logic circuits, with particular reference to speed and power consumption.
- Able to appreciate the design process in VLSI, GALS.
- Able to explain basic operation principles of diodes and MOS FPGAs; PLA.
- Able to design the fundamental blocks of a VLSI circuits, both by circuit schematic and physical layout

TOPICS:**MODULE I**

Introduction to Digital systems and VLSI: Why Design Integrated Circuits? Integrated Circuits manufacturing; Integrated Circuit Design Techniques; IP-Based Design.

Fabrication and Devices: Introduction; Fabrication processes; Fabrication theory and practice; Reliability.

10 Hours**MODULE II**

Sequential Machines: Introduction; Latches and Flip-flops; Sequential systems and clocking disciplines; Performance analysis; Clock generators; Sequential systems design, Power optimization, Design validation, Sequential testing.

10 Hours**MODULE III**

Subsystem Design: Introduction; Combinational shifters; Adders; ALUs; Multipliers; High-density memory; Image sensors; FPGAs; PLA; Buses and networks on chips; Data paths; Subsystems as IP.

10 Hours**MODULE IV**

Architecture Design: Introduction; Hardware description languages; Register Transfer design; Pipelining; High-level synthesis; Architecture for low power; GALS systems; Architecture testing; IP components; Design methodologies; Multiprocessor system-on-Chip design.

10 Hours**MODULE V**

Simulations: General remarks; Gate-level modeling and simulations; Switch-level modeling and simulation.

10 Hours

Course Outcomes:

The student will be able to:

- Clear understanding of important concepts in CMOS technology and fabrication that affect design.
- Apply two-level and multi-level logic minimization techniques to the given Boolean logic function.
- Design and develop Layout a gate in CMOS VLSI technology.

TEXT BOOKS:

1. Wayne Wolf: “Modern VLSI design”, 4th Edition, P HI Learning, 2007.
2. Sabih H Gerez: “Algorithms for VLSI Design Autom ation”, Wiley India, 2007.

Semester II

Year: 2014-2015

Course Title: Distributed Computing Lab	Course Code: 14SCN26
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives

- To understand the main ideas and concepts on web services.
- Studying and working on a related topic of internet applications such as information hiding, system security and E-learning.
- To understand the concepts of UDDI, SOAP, JMS remote procedure calls.

LIST OF EXPERIMENTS:

Note: Use appropriate tools/language to implement the following experiment:

1. Design and implement client server application using RMI (Remote Method Invocation) to invoke a service to calculate the income tax.
2. Design and implement EJB (Entity Java Beans) session bean business logic to calculate income tax and invoke the service using stub, i.e., client side proxy object.
3. Design and implement an EJB entity bean to persist the client submitted data into an enterprise information system.
4. Design and implement an offline database communication system using JMS (Java Message Service) to service the client request.
5. Design and implement the client code to call the Micro soft service like free service from UDDI (Universal Description Discovery Protocol).
6. Design and implement business logic and bind it as service using SOAP (Simple Object Access Protocol), also implement client to call service.

NOTE: Use EJB 3.X or any equivalent tool.

COURSE OUTCOMES:

The student will be able to

- Develop and debug RPC based client-Server programs in UNIX.
- Realize the partial implementation of UDDI, SOAP, JMS in Web applications.

Semester IV

Year: 2014-2015

Course Title: Client-Server Programming	Course Code: 14SCN41
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand **Client-Server software**, Context Switching and Protocol Software, I/o.
- To understand System Calls, Basic I/O Functions available in UNIX
- To understand the Socket interface, TCP, UDP in detail.
- Various client software applications and their issues.
- To understand the concept of Socket interface in client server programming.

TOPICS:

MODULE I

The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts
Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. **Program Interface to Protocols:** Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP. **10 Hours**

MODULE II

The Socket Interface: Introduction, Berkeley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. **Algorithms and Issues in Client Software Design:** Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability. **10 Hours**

MODULE III

Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays,

A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.

10 Hours

MODULE IV

Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.

10 Hours

MODULE V

Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. **Iterative, Connection-Oriented Servers (TCP):** Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability.

Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.

10 Hours

LABORATORY WORK:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connectionless server and demonstrate its functioning.
2. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connection-oriented server and demonstrate its functioning.
3. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple concurrent connection-oriented server and demonstrate its functioning.
4. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple Day / Time Server and demonstrate its functioning.
5. Design, develop, and execute a program using JAVA networking facilities to implement a simple Day / Time Server and demonstrate its functioning. Repeat the above problems.

COURSE OUTCOMES

The student will be able to:

- Gain in depth knowledge about Client-Server software, Context Switching and Protocol Software, I/o.
- Programming System Calls, Basic I/O Functions available in UNIX
- Gain the knowledge on Socket interface, TCP, UDP in details.
- Pros and cons of Client Software Various applications and their issues.

TEXT BOOK:

1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001

Course Title: Analysis of Computer Networks	Course Code: 14SCN421
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To Become familiar with the concepts of computer networks
- What is a computer network and what are the fundamental protocols.
- To analyze network architectures in stochastic and deterministic way.
- RSVP, Principles of TCP
- To explore more on different network protocols.
- To understand the knowledge of multiplexing, streaming sessions in computer network.

TOPICS:**MODULE I**

Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.

10 Hours**MODULE II**

Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

10 Hours**MODULE III**

Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

10 Hours**MODULE IV**

Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

10 Hours**MODULE V**

Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

10 Hours**Course Outcomes:**

On completion, student will be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.

TEXT BOOKS:

1. Anurag Kumar, D. Manjunath, Joy Kuri: Communication Networking An Analytical Approach, Elsevier, 2004.

REFERENCE BOOKS:

1. M. Schwartz: Broadband Integrated Networks, Prentice Hall PTR, 1996.

2. J. Walrand, P. Varaiya: High Performance Communication Networks, 2nd Edition, Morgan Kaufmann, 1999

Semester IV

Year:2014-2015

Course Title: Service Oriented Architecture	Course Code: 14SCN422
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand various architecture for application development
- To understand the importance of SOA in Application Integration
- To learn web service and SOA related tools.
- To learn the concepts of SOA governance.

Topics:

MODULE I

SOA BASICS: Software Architecture – Types of IT Architecture – S OA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architec ture – Enterprise Applications – Solution Architect ure for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models

10 Hours

MODULE II

SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Ac tivity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits o f SPA – Cost Savings

10 Hours

MODULE III

SOA GOVERNANCE :SOA implementation and Governance – strategy – SOA d evelopment – SOA governance – trends in SOA – event-driven architect ure – software s a service – SOA technologies – pro of-of-concept – process orchestration – SOA best practice s

10 Hours

MODULE IV

SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL, SOAP and Java/XML mapping in SOA – JAXB Data binding.

10 Hours

MODULE V

APPLICATION INTEGRATION: JAX-WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study – WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Compare the different IT architecture
- Analysis and design of SOA based applications
- Implementation of web service and realization of SOA
- Implementation of RESTful services
- Design and implementation of SOA based Application Integration using BPEL

Text Book:

1. Shankar Kambhampaly, “Service-Oriented Architecture for Enterprise Applications”, Wiley 2008.

2. Mark D. Hansen, “SOA using Java Web Services”, Practice Hall, 2007.
3. Waseem Roshen, “SOA-Based Enterprise Integration”, Tata McGraw-HILL, 2009.

Semester IV

Year: 2014-2015

Course Title: Mobile Application Development	Course Code: 14SCN423
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To Understand system requirements for mobile applications
- To Generate suitable design using specific mobile development frameworks
- To Generate mobile application design
- To Implement the design using specific mobile development frameworks
- To acquire knowledge of android applications development.

Topics:

MODULE I

Introduction to mobile communication and computing:, Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover

and security. Smart phone operating systems and smart phones applications.

10 Hours

MODULE II

Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator, The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control .

10 Hours

MODULE III

The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control Building Blocks for Android Application Design, Laying Out Controls in Containers, Utilizing Resources and Media, Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments

10 Hours

MODULE IV

Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments Advanced Android Programming: Internet, Entertainment, and Services, Implementing drawing and animations,

10 Hours

MODULE V

Displaying web pages and maps, communicating with sms and emails,. creating and using content providers: Creating and consuming services, Publishing android applications.

10 Hours

Course Outcomes:

The student will be able to:

- Describe the requirements for mobile applications
- Explain the challenges in mobile application design and development
- Develop and design for mobile applications for specific requirements
- Implement the design using Android SDK
- Implement the design using Objective C and iOS

Text Books:

1. Mobile Computing: Technologies and Applications- N. N. Jani S chand,2009.
2. B.M.Hirwani- Android programming Pearson publications-2013

Course Title: Cybercrime and Digital Forensic	Course Code: 14SCN424
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To understand Accounting Forensics
- To analyze the nature and effect of cyber crime in society.
- To understand Sarbanes-Oxley Financial and Accounting Disclosure Information
- To understand Computer Crime and Criminals
- To understand Liturgical Procedures

Topics:**MODULE I**

INTRODUCTION: Introduction and Overview of Cyber Crime, Nature and Scope of Cyber Crime, Types of Cyber Crime: Social Engineering, Categories of Cyber Crime, Property Cyber Crime.

10 Hours**MODULE II**

CYBER CRIME ISSUES: Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks, Pornography, Software Piracy, Intellectual Property, Mail Bombs, Exploitation, Stalking and Obscenity in Internet, Digital laws and legislation, Law Enforcement Roles and Responses.

10 Hours**MODULE III**

INVESTIGATION: Introduction to Cyber Crime Investigation, Investigation Tools, e-Discovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Hands on Case Studies. Encryption and Decryption Methods, Search and Seizure of Computers, Recovering Deleted Evidences, Password Cracking.

10 Hours**MODULE IV**

DIGITAL FORENSICS: Introduction to Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Audio Video Analysis, Windows System Forensics, Linux System Forensics, Network Forensics. **10 Hours**

MODULE V

LAWS AND ACTS: Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC , Electronic Communication Privacy ACT, Legal Policies.

10 Hours

Course Outcomes

The student will be able to:

- Understand financial and accounting forensics, and explain their role in preventing various forms of fraud.
- Distinguish various types of computer crime, and use computer forensic techniques to identify the digital fingerprints associated with criminal activities.
- Know how to apply forensic analysis tools to recover important evidence for identifying computer crime.
- Develop a custom computer forensic analysis tool.

12SCN41	Evaluation of Project Phase – II	-	-	-	50	-	50
12SCN42	Evaluation of Project work – III	-	-	-	50	-	50
12SCN43	Project work evaluation and Viva-voce	-	-	03	-	100+100	200
	Total	-	-	03	100	200	300
Grand Total (I to IV Sem.) : 2400							

Note: Project work shall be continuously evaluated for phase I, phase II and after completion of the project.

Note:

* Lab Classes for any two core subjects are compulsory (practical will be evaluated for 20 marks and internal assessment for 30 marks. Lab journals should be maintained).

For the remaining two core subjects, it can be field work, assignment, tutorials.

- 1) Project Phase – I : 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalize the topic of dissertation. Evaluation of the same shall be taken up during beginning of III Semester. Total Marks shall be 50. Colleges have to send the synopsis after Phase – I.
- 2) Project Phase – II: 16 weeks duration. 3 days for project work in a week during III Semester. Evaluation shall be taken during the first two weeks of the IV Semester. Total Marks shall be 50.
- 3) Project Phase– III: 24 weeks duration in IV Semester. Evaluation shall be taken up during the middle of IV Semester. Total Marks shall be 50. At the end of the Semester Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be 50 + 50 + 100 = 200 (50 marks for guide, 50 marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

The Marks of Project Phase – I shall be sent to the University along with III Semester I.A. Marks of other subjects.

The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.

- 4) During the final viva, students have to submit all the reports.
- 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (out of two external examiners at least one should be present).

ADVANCED DIGITAL COMMUNICATION

Subject Code: 12SCN11

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Digital Transmission Fundamentals: Digital Representation of Information: Block-Oriented Information, Stream Information; Why Digital Communications? Comparison of Analog and Digital Transmission, Basic properties of Digital Transmission Systems; Digital Representation of Analog Signals: Bandwidth of Analog Signals, Sampling of an Analog Signal, Digital Transmission of Analog Signals; Characterization of Communication

Channels: Frequency Domain Characterization, Time Domain Characterization;

Fundamental Limits in Digital Transmission: The Nyquist Signaling Rate, The Shannon Channel Capacity; Line Coding; Modems and Digital Modulation: Binary Phase Modulation, QAM and Signal Constellations, Telephone Modem Standards; Properties of Media and Digital Transmission Systems: Twisted Pair, Coaxial Cable, Optical Fiber, Radio Transmission, Infrared Light; Error Detection and Correction: Error Detection, Two Dimensional Parity Checks, Internet Checksum, Polynomial Codes, Standardized Polynomial Codes, Error Detecting Capability of a Polynomial Code.

2. Brief Review of digital communication systems: Elements of Digital communication systems; Communication channels and their characteristics; Historical perspective in the development of digital communication; Review of the features of a decreases memory less channel and the channel capacity theorem

3. Wave form Coding Techniques: PCM, Channel. Noise and error probability, DPCM, DM, coding speech at low bit rates, Applications.

4. Base band Shaping for data transmission: Discrete PAM signals, Inter-symbol interference (ISI) Nyquist criterion for distortion-less Base band binary transmission, correlative coding, Eye-pattern, transmission, correlative coding, Eye-patterns Based and M-ary PAM system, Adaptive Equalization, The zero forcing algorithm, The LMA algorithm

TEXT BOOKS:

1. Alberto Leon – Garcia and Indra Widjaja: Communication Networks – Fundamental Concepts and Key architectures, 2nd Edition, Tata McGrawHill, 2006.
2. Simon Haykin: Digital Communication, Wiley India, 2007.

REFERENCE BOOKS:

1. John G Proakis: Digital Communications, 3rd Edition, McGraw Hill, 2008.
2. Leon W Couch: Analog / Digital Communication, 5th Edition, PHI, 2008.

COMPUTER NETWORKS

Subject Code: 12SCN12

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Review of Basic Concepts: Building a Network; Requirements- Connectivity, Cost-Effective Resource Sharing, Support for Common Services; Network Architecture- Layering and Protocols, OSI Architecture, Internet Architecture; Performance- Bandwidth and Latency, Delay× Bandwidth Product, High-Speed Networks.

2. Direct link networks: Hardware Building Blocks-nodes, links; error Detection- Two-Dimensional Parity, Internet checksum Algorithm, cyclic Redundancy Check; reliable Transmission- Stop-and-Wait, Sliding Window, Concurrent Logical Channels; Rings (802.5, FDDI) –Token Ring Media Access Control, Token Ring Maintenance, FDDI.

3. Packet Switching: Switching and forwarding – Datagrams, Virtual Circuit Switching, Source Routing; Bridges and LAN Switches – Learning Bridges, Spanning Tree Algorithm, Broadcast and Multicast, Limitations of Bridges; cell switching (ATM) – Cells, Segmentation and Reassembly, Virtual Paths, Physical Layers for ATM.

4. Internetworking: Simple internetworking (IP) – What Is an Internetwork?, Service Model, Global Address, Datagram Forwarding in IP, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels; Routing – Network as a Graph, distance Vector(RIP), Link State(OSPF), Metrics, Routing for Mobile Hosts, Global Internet – Subnetting, Classless Routing(CIDR), Interdomain Routing(BGP), Routing Areas, IP Version 6(IPv6).

5. End –to-End Protocols: Simple demultiplexer (UDP); Reliable byte stream (TCP) – End-to-End Issues, Segment Format, Connection Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Alternative Design Choices.

6. Congestion Control and Resource Allocation: Issues in resource allocation – Network Model, Taxonomy, Evaluation Criteria; Queuing discipline – FIFO, Fair Queuing; TCP Congestion Control – Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery; Congestion-Avoidance mechanisms – DECbit, Random Early Detection (RED), Source-Based Congestion Control.

7. Applications: Traditional applications – Electronic Mail (SMTP, MIME, IMAP), World Wide Web (HTTP), Name Service (DNS), Network management (SNMP); Web services – Custom APPLICATION Protocols (WSDL, SOAP), A Generic application Protocol (REST).

Laboratory Work:

Using any Protocol Analyzer like Ethereal, perform the following experiments:

1. Capture the packets that are transmitted after clicking on the URL of the web site of your college. Analyze the packets at the highest level and prepare a brief report of your analysis.
2. Analyze the data captured above at lower levels and demonstrate the layering of the protocols.
3. Capture the packets in the LAN, & filter for a unique subscriber
4. Capture the ARP packets and find the MAC addresses in the LAN in your laboratory.

Using either NS228/OPNET or any other suitable simulator, perform the following experiments:

1. Simulate an Ethernet LAN using 10 node , change error rate and data rate , and compare throughput
2. Simulate a three nodes point – to – point network with duplex links between them. Set the queue size and vary the bandwidth and find the number of packets dropped.
3. Simulate the transmission of ping messages over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion.
4. Simulate an Ethernet LAN using n nodes and set multiple traffic nodes and plot congestion window for different source / destination.

Implement the following in C/C++:

1. Write a program for distance vector algorithm to find suitable path for transmission.
2. Write a program for error detecting code using CRC-CCITT (16-bit)
3. Write a program for congestion control using leaky bucket algorithm.

TEXT BOOKS:

1. Larry L. Peterson and Bruce S. Davie: Computer Networks – A Systems Approach, 4th Edition, Elsevier, 2007.

REFERENCE BOOKS:

1. Behrouz A. Forouzan: Data Communications and Networking, 4th Edition, Tata McGraw Hill, 2006.
2. William Stallings: Data and Computer Communication, 8th Edition, Pearson Education, 2007.
3. Alberto Leon-Garcia and Indra Widjaja: Communication Networks –Fundamental Concepts and Key Architectures, 2nd Edition Tata McGraw-Hill, 2004.

NETWORK PROGRAMMING

Subject Code: 12SCN13

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Review of Basic Concepts:** Layering, OSI model, Processes, A simplified model, Client-Server model, A history of Unix Networking; Review of TCP/IP.
- 2. Sockets:** Introduction, Unix domain protocols, socket addresses, elementary socket system calls, advanced socket system calls, reserved ports, stream pipes, passing file descriptions, socket options, asynchronous I/O, Input/Output Multiplexing, Out-of-Band data, sockets and signals, Internet superservers, socket implementation.
- 3. TFTP Protocol:** Introduction, protocol, security, data formats, connections, client user interface, UDP implementation, TCP implementation.
- 4. Remote Command Execution:** Introduction, Security issues, rcmd function and rshd server, rexec function and rexecd server.
- 5. Remote Login:** Introduction, Terminal line disciplines, pseudo terminal, terminal modes, control terminals rlogin overview, rlogin client, rlogin server.
- 6. JAVA Network Programming:** Introduction, Client-Server Computing, The InetAddress class, Serving multiple clients, Applet clients, Sending and receiving objects, Retrieving objects from Web servers, Datagram sockets.

TEXT BOOKS:

1. W. Richard Stevens: Unix Network Programming, PHI, 2001.
2. Y. Daniel Liang: Introduction to JAVA Programming, 6th Edition, Pearson, 2007.

REFERENCE BOOKS:

1. W. Richard Stevens: TCP/IP Illustrated, Volumes 1, 2, and 3, Pearson, 2000.

Laboratory Work:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple echo server and demonstrate its working. Both the server and client are to be connection-oriented and use TCP. The system works as follows: Client reads a line from the standard input and writes the line to the server; the server reads a line from its network input and echoes the line back to the client; the client reads the echoed line and prints it on its standard output.
2. Repeat the above experiment using UDP instead of TCP.
3. Repeat the Experiment 1 using JAVA network programming facilities.
4. Modify the above program such that the client sends an integer value supposed to represent the radius of a circle and the server is to compute and return the corresponding area.
5. Extend the above program such that the server responds to multiple clients.

Mini Project: Design, develop, and execute a program in C under UNIX / LINUX environment to implement any utility in TCP/IP suite like PING, TFTP etc.

Information Security

Subject Code: 12SCN14

IA Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

1. Introduction to Information Security: Introduction; What is security? Critical characteristics of information; NSTISSC security model; Approaches to information security implementation; The Security System Development Life Cycle; Information Security Terminology.

2. Planning for Security: Introduction; Information Security Policy, Standards, and Practices; The Information Security Blue Print.

3. Security Technology: Firewalls and VPNs: Introduction, Physical design, Firewalls, Protecting Remote Connections. Intrusion Detection, Access control and Other Security Tools: Introduction; Intrusion Detection Systems (IDS); Honey Pots, Honey Nets, and Padded cell systems; Scanning and Analysis Tools; Access Control Devices.

4. Information Security maintenance: Introduction; Security Management Models; The Maintenance Model.

5. Introduction to Network Security: Attacks, Services, and Mechanisms; Security Attacks; Security Services; A model for Internetwork Security; Internet Standards and RFCs; Wireless network security.

6. Cryptography: Conventional Encryption Principles and Algorithms; Cipher Block Modes of Operation; Location of encryption devices; Key distribution; Approaches to message authentication; Secure Hash functions and HMAC; Public Key Cryptography Principles and Algorithms; Digital Signatures; Key management.

7. Authentication Applications: Kerberos, X.509 Directory Authentication Service.

8. Electronic Mail Security: Pretty Good Privacy (PGP), S/MIME.

9. IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management.

10. Web Security: Web security requirements, Secure Socket layer (SSL) and Transport layer Security (TLS), Secure Electronic Transaction (SET).

11. Software: Introduction; Software flaws; Malware; Software-based attacks; Digital Rights Management;

TEXT BOOKS:

1. Michael E. Whitman and Herbert J. Mattord: Principles of Information Security, 2nd Edition, Cengage Learning, 2005.
2. William Stallings: Network Security Essentials Applications and Standards, Person, 2000.
3. Deven N. Shah: Information Security – Principles and Practice, Wiley India, 2009.

REFERENCE BOOKS:

1. Behrouz A. Forouzan: Cryptography and Network Security, Tata McGraw-Hill, 2007.

Elective I

12SCN151 C# and .Net

12SCN152 Stochastic Models and Applications

12SCN153 System Modeling and Simulation

12SCN154 Embedded Systems

C# and .Net

Subject Code: 12SCN151

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. The Philosophy of .NET: Understanding the Previous State of Affairs, The .NET Solution, The Building Block of the .NET Platform (CLR,CTS, and CLS), The Role of the.NET Base Class Libraries, What C# Brings to the Table, An Overview of.NET Binaries (aka Assemblies), the Role of the Common Intermediate Language , The Role of .NET Type Metadata, The Role of the Assembly Manifest, Compiling CIL to Platform –Specific Instructions, Understanding the Common Type System, Intrinsic CTS Data Types, Understanding the Common Languages Specification, Understanding the Common Language Runtime A tour of the.NET Namespaces, Increasing Your Namespace Nomenclature, Deploying the .NET Runtime.

2. Building C# Applications: The Role of the Command Line Compiler (csc.exe), Building C # Application using csc.exe Working with csc.exe Response Files, Generating Bug Reports , Remaining C# Compiler Options, The Command Line Debugger (cordbg.exe) Using the, Visual Studio .NET IDE, Other Key Aspects of the VS.NET IDE, C# “Preprocessor:” Directives, An Interesting Aside: The System. Environment Class

3. C# Language Fundamentals: The Anatomy of a Basic C# Class, Creating objects: Constructor Basics, The Composition of a C# Application, Default Assignment and Variable Scope, The C# Member Initialization Syntax, Basic Input and Output with the Console Class, Understanding Value Types and Reference Types, The Master Node: System, Object, The System Data Types (and C# Aliases),Converting Between Value Types and Reference Types: Boxing and Unboxing, Defining Program Constants, C# Iteration Constructs, C# Controls Flow Constructs, The Complete Set of C# Operators, Defining Custom Class Methods, Understating Static Methods, Methods Parameter Modifies, Array Manipulation in C #, String Manipulation in C#, C# Enumerations, Defining Structures in C#, Defining

Custom Namespaces.

4. Object- Oriented Programming with C#: Forms defining of the C# Class, Definition the “Default Public Interface” of a Type, Recapping the Pillars of OOP, The First Pillars: C#’s Encapsulation Services, Pseudo- Encapsulation: Creating Read-Only Fields, The Second Pillar: C#’s Inheritance Supports, keeping Family Secrets: The “Protected” Keyword, Nested Type Definitions, The Third Pillar: C #’s Polymorphic Support, Casting Between

5. Exceptions and Object Lifetime: Ode to Errors, Bugs, and Exceptions, The Role of .NET Exception Handling, the System, Exception Base Class, Throwing a Generic Exception, Catching Exception, CLR System – Level Exception (System. System Exception), Custom Application- Level Exception (System. System Exception), Handling Multiple Exception, the Family Block, the Last Chance Exception. Dynamically Identifying Application and System Level Exception Debugging System Exception Using VS.NET, Understanding Object

Lifetime, the CIT of “new’, The Basics of Garbage Collection,, Finalization a Type, The Finalization Process, Building an Ad Hoc Destruction Method, Garbage Collection Optimizations, The System. GC Type.

6. Interfaces and Collections: Defining Interfaces Using C# Invoking Interface Members at the object Level, Exercising the Shapes Hierarchy, Understanding Explicit Interface Implementation, Interfaces As Polymorphic Agents, Building Interface Hierarchies, Implementing, Implementation, Interfaces Using VS .NET, understanding the IConvertible Interface, Building a Custom Enumerator(IEnumerable and Enumerator), Building Cloneable objects (ICloneable), Building Comparable Objects (IComparable), Exploring the system. Collections Namespace, Building a Custom Container (Retrofitting the Cars Type). Callback Interfaces, Delegates, and Events, Advanced Techniques Understanding Callback Interfaces, Understanding the .NET Delegate Type, Members of System. Multicast Delegate, The Simplest Possible Delegate Example, Building More a Elaborate Delegate Example,

Understanding Asynchronous Delegates, Understanding (and Using)Events. The Advances Keywords of C#, A Catalog of C# Keywords Building a Custom Indexer, A Variation of the Cars Indexer Internal Representation of Type Indexer. Using C# Indexer

from VB.NET. Overloading operators, The Internal Representation of Overloading Operators,

interacting with Overload Operator from Overloaded- Operator- Challenged Languages, Creating Custom, Conversion Routines, Defining Implicit Conversion Routines, The Internal\Representations of Customs Conversion Routines

7. Understanding .NET Assemblies: Problems with Classic COM Binaries, An Overview of .NET Assembly, Building a Simple File Test Assembly, A C#, Client Application, A Visual Basic .NET Client Application, Cross Language Inheritance, Exploring the CarLibrary's, Manifest, Exploring the CarLibrary's Types, Building the Multifile Assembly ,Using Assembly, Understanding Private Assemblies, Probing for Private Assemblies (The Basics), Private A Assemblies XML Configurations Files, Probing for Private Assemblies (The Details),Understanding Shared Assembly, Understanding Shared Names, Building a Shared Assembly, Understanding Delay Signing, Installing/Removing Shared Assembly, Using a Shared Assembly.

TEXT BOOKS:

1. Andrew Troelsen: Programming C# with .NET 3.0, 4th Edition, Wiley India, 2009.
2. E. Balagurusamy: Programming in C#, 2nd Edition, Tata McGraw Hill, 2008.

REFERENCE BOOKS:

1. Tom Archer: Inside C#, WP Publishers, 2001.
2. Herbert Schildt: C# - The Complete Reference, Tata McGraw Hill, 2004.

STOCHASTIC MODELS AND APPLICATIONS

Subject Code: 12SCN152

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: A Speech Recognition System, A Radar System, A Communication Network.

2. Introduction to Probability Theory: Experiments, Sample Spaces, and Events, Axioms of Probability, Assigning Probabilities, Joint and Conditional Probabilities, Bayes's Theorem, independence, Discrete random Variables, Engineering Application: An Optimal Communication System

3. Random variables, Distributions, and Density Functions: The Cumulative Distribution Function, The Probability Density Function, The Gaussian Random Variable, Other Important Random Variables, Conditional Distribution and Density Functions, Engineering Application: Reliability and Failure Rates

4. Random Processes: Definition and Classification of Processes, Mathematical Tools for Studying Random Processes, Stationary and Ergodic Random Processes, Properties of the Autocorrelation Function, Gaussian random Processes, Poisson Processes, Engineering Application: Shot Noise in a p-n Junction Diode

5. Markov Processes: Definition and Examples of Markov Processes, Calculating Transition and State Probabilities in Markov Chains, Characterization of Markov Chains, Continuous Time Markov Processes, Engineering Application: A Telephone Exchange

6. Poisson Processes, Queuing Theory: The non-stationary Poisson process; The stationary Poisson process; Some Poisson process computations; Classifying the events of a non-stationary Poisson process; Conditional distribution of the arrival times. Queuing Theory: Introduction; Preliminaries; Exponential models; Birth-and-Death exponential queuing systems; The backwards approach in exponential queues; A closed queuing network; An open queuing network; The M/G/1 queue; Priority queues.

7. Simulation Techniques: Computer Generation of Random Variables, Generation of Random Processes, Simulation of Rare Events, Engineering Application: Simulation of a Coded Digital Communication System.

TEXT BOOKS:

1. Scott L. Miller, Donald G. Childers: Probability and Random Processes With Applications to Signal Processing and Communications, Elsevier, 2004.
2. Sheldon M. Ross: Probability Models for Computer Science, Elsevier, 2002.

REFERENCE BOOKS:

1. R. W. Wolff: "Stochastic Modeling and Queuing Theory", Prentice Hall, 1989.
2. B. R. Bhat: "Stochastic Models Analysis and Applications", New Age International, 2000.

SYSTEM MODELING AND SIMULATION

Subject Code: 12SCN153

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: When simulation is the appropriate tool and when it is not appropriate; Advantages and disadvantages of Simulation; Areas of application; Some recent applications of Simulation; Systems and system environment; Components of a system; Discrete and continuous systems; Model of a system; Types of Models; Discrete-Event System Simulation; Steps in a Simulation Study.

2. General Principles: Concepts in Discrete-Event Simulation, List processing.

3. Statistical Models in Simulation: Review of terminology and concepts; Useful statistical models; Discrete distributions; Continuous distributions; Poisson process; Empirical distributions.

4. Queuing Models: Characteristics of queuing systems; Queuing notation; Long-run measures of performance of queuing systems; Steady-state behavior of M/G/1 queue; Networks of queues.

5. Random-Number Generation, Random-Variate Generation: Properties of random numbers; Generation of pseudo-random numbers; Techniques for generating random numbers; Tests for Random Numbers

Random-Variate Generation: Inverse transform technique; Acceptance-Rejection technique; Special properties.

6. Input Modeling: Data Collection; Identifying the distribution with data; Parameter estimation; Goodness of Fit Tests; Fitting a non-stationary Poisson process; Selecting input models without data; Multivariate and Time-Series input models.

7. Verification, Calibration, and Validation of Simulation Models: Model building, verification, and validation; Verification of simulation models; Calibration and validation of

models. Optimization via Simulation

8. Estimation of Absolute Performance: Types of simulations with respect to output analysis; Stochastic nature of output data; Absolute measures of performance and their estimation; Output analysis for terminating simulations; Output analysis for steady-state simulations.

9. Case Study: Simulation of networked computer systems.

TEXT BOOKS:

1. Jerry Banks, John S. Carson II, Barry L. Nelson, David M. Nicol: Discrete-Event System Simulation, 5th Edition, Pearson Education, 2010.

REFERENCE BOOKS:

1. Lawrence M. Leemis, Stephen K. Park: "Discrete – Event Simulation: A First Course", Pearson Education, 2006.
2. Averill M. "Law: Simulation Modeling and Analysis", 4th Edition", Tata McGraw-Hill, 2007.

EMBEDDED SYSTEMS

Subject Code : 12SCN154

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

- 1. Custom single-purpose processor design;** RT level custom single-purpose processor design, optimizing custom single-purpose processors: Optimizing the original program, optimizing the FSM, Optimizing the data path, optimizing the FSM.
- 2. Timers, counters, and watchdog timers. State machine models:** introduction; An introductory example, A basic state machine model: finite-state machines(FSM);finite-state machines with data path model (FSMD);using state machines: Describing a system as a state machine, Comparing state machine and sequential program models, Capturing a state machine model in a sequential programming language; hierarchical/concurrent state machine model (HCFSM) and the state charts language; program state machine model(PSM);The role of an appropriate model and language.
- 3. Concurrent process models: concurrent processes:** process create and terminate ,process suspend and resume, Process join; Communication among processes: shared memory, Message passing; synchronization among processes: Condition variables, monitors. Interrupts: interrupt Basics; The Shared Data Problem; interrupt latency
- 4. Survey of Software Architecture:** Round Robin, Round Robin with interrupts, Function queue scheduling architecture, Real time operating system architecture, selecting architecture. Introduction to RTOS: Tasks and task states, tasks and Data, semaphores and shared data.
- 5. Operating systems services:** Message queues, mailboxes, and pipes; Timer functions; Events; memory management, Interrupt routines in an RTOS environment. Basic design using an RTOS; Overview, principles, an example, encapsulating semaphores and queues, Hard Real-time scheduling considerations, saving power.

6. **Embedded software development tools:** Host and target machines; Linker/locator for Embedded software, getting embedded software into the target system. Debugging Techniques: Testing on host machine, instruction set simulators, macros and tools.
7. **An example system:** what the program does, environment in which the program operates.

Text Books:

1. Embedded system design : A unified Hardware/software introduction – Frank Vahid, Tony Givargis, John Wiley and Sons, Inc. 2002 (Articles : 2.4, 2.5, 2.6; 4.2, 8.3 to 8.13)
2. An Embedded software Primer – David E. Simon; Pearson Education, 1999. (Chapters: 4, 5, 6, 7, 8, 9, 10 and 11)

Reference books:

1. Embedded C: Michael J. Pont, Pearson Education (2002)
2. Real-Time systems and programming languages : Alan Burns and Andy Wellings, Addison Wesley-Longman (1997)
3. Real Time programming: A guide to 32 bit embedded development, Grehan, Moore and Cyliax, Addison-Wesley-longman.

WIRELESS & MOBILE NETWORKS

Subject Code: 12SCN21

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction to Wireless Communication Systems: Evolution of Mobile Radio Communications Mobil Radio Systems around the world examples of Wireless Communication Systems, Paging System, Cordless Telephone System. Cellular Telephone Systems, Comparison of Common Wireless Communications Systems

2. Wireless Communications Modern Systems: Second generation (2G), Cellular Networks, evolution of 2.5G, TDMA Standards, Third Generation (3G) Wireless Networks, Wireless Local Loop (WLL) and LMDS, Wireless Local Area Networks (WLANs), Bluetooth and Personal Area Networks (PANS)

3. The Cellular Concept: System Design Fundamentals, Introduction, Frequency reuse, channel assignment strategies, handoff strategies – prioritizing handoffs, Practical Handoff considerations, Interference and system capacity, co-channel interference and system capacity, channel planning for wireless systems, adjacent channel interference, power control for reducing interference

4. Mobile Radio Propagation: Introduction to radio wave propagation, Free space propagation model, Relating power to electric field, Reflection, Diffraction, Scattering.

5. Modulation Techniques for Mobile Radio: Frequency modulation Vs amplitude modulation, Amplitude modulation, Angle modulation, Digital Modulation, Linear Modulation techniques – Binary phases shift keying (BPSK), Differential Phase Shift Keying (DPSK), Quadrature Phase Shift Keying (QPSK), Constant envelope modulation – Binary Frequency Shift Keying, Minimum Shift Keying (MSK), Gaussian Minimum Shift Keying (GMSK).

6. Multiple Access Techniques for Wireless Communications: Introduction to Multiple access, Frequency Division Multiple Access (FDMA), Time Division Multiple

Access (TDMA), Spread Spectrum Multiple Access, Space Division Multiple Access (SDMA), Packet Radio. Protocols, Reservation Protocols – Reservation ALOHA, Packet Reservation Multiple Access (PRMA), Capacity of cellular systems

7. Wireless Networking: Introduction, Difference between Wireless and Fixed Telephone Networks, Development of Wireless Networks, First generation, second generation, third generation.

Laboratory Work:

1. Using any package like MATLAB or using any programming language of your choice, implement the BPSK algorithm and study its performance.
2. Repeat the above experiment for QPSK algorithm and compare its performance with that of BPSK.
3. Using any Network simulation package or using any programming language of your choice, implement and study the performance of PRMA.

Mini Project: Using any platform like ANDROID, J2ME etc, implement any mobile application like Location Based Services, Emergency Services, Remote Monitoring etc.

TEXT BOOKS:

1. Theodore S Rappaport: Wireless Communications, Principles and Practice, 2nd Edition, Pearson Education Asia, 2002.

REFERENCE BOOKS:

1. William C Y Lee: Mobile Communications Engineering Theory and Applications, 2nd Edition, McGraw Hill Telecommunications 1998.
2. William Stallings: Wireless Communications and Networks, Pearson Education Asia, 2002.

CLIENT-SERVER PROGRAMMING

Subject Code: 12SCN22

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. The Client Server Model and Software Design:** Introduction, Motivation, Terminology and Concepts
- 2. Concurrent Processing in Client-Server software:** Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O.
- 3. Program Interface to Protocols:** Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP.
- 4. The Socket Interface:** Introduction, Berkley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters.
- 5. Algorithms and Issues in Client Software Design:** Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using

UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability.

6. Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays, A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.

7. Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.

8. Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server.

9. Iterative, Connection-Oriented Servers (TCP): Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability.

10. Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes

Laboratory Work:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connectionless server and demonstrate its functioning.
2. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connection-oriented server and demonstrate its functioning.
3. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple concurrent connection-oriented server and demonstrate its functioning.
4. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple Day / Time Server and demonstrate its functioning.
5. Repeat the above problems using JAVA networking facilities.

TEXT BOOK:

1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001.

OPTICAL NETWORKS

Subject Code: 12SCN23

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: Three generations of Digital Transport Networks; A brief introduction to WDM and TDM; The Optical Marketplace; Wireless Optical Systems; Key Optical Nodes; Other Key Terms; Evolution of Optical Systems; Key attributes of Optical Fiber.

2. Telecommunications Infrastructure: The Local Connections; The Backbone Connections; The Digital Multiplexing Hierarchy; The Digital Signaling Hierarchies; T1 / DS1 and T3 / DS3; The Layered Protocol Model in the Transport Network; considerations for Interworking Layer1, Layer 2, and Layer 3 Networks.

3. Characteristics of Optical Fiber: The Basics; The Wavelength; The Basic Components; Structure of the Fiber; Fiber Types; Key Performance Properties of Fiber; Attenuation; Amplifier Spontaneous Emission; Chromatic Dispersion; Lasers.

4. Timing and Synchronization: Timing and Synchronization in Digital Networks; Effect of a Timing error; The Clocking Signal; Types of Timing in Networks; Timing Variations; Methods of Clock Exchange; Distribution of Timing Using SONET and DS1; Timing Downstream Devices; Building Integrated Timing Supply; Synchronization Status Messages and Timing Loops.

5. SONET and SDH: Introduction; The SONET Multiplexing Hierarchy; SONET and SDH Multiplexing Structure; The SONET / SDH Frame Structure; SONET and SDH Functional Components; SONET and SDH Problem Detection; Locating and Adjusting Payload with Pointers; Virtual Tributaries in more detail; Virtual Tributaries in Virtual Containers; The Overhead Bytes; SONET and SDH Concatenation.

6. Architecture of Optical Transport Networks: The Digital Wrapper; Control Planes; In-Band and Out-Band Control Signaling; Importance of Multiplexing and Multiplexing Hierarchies; Current Digital Transport Hierarchy; SONET Multiplexing Hierarchy; SDH

Multiplexing Hierarchy; Key Indexes and Other Terms; The New Optical Transport and Digital Transport Hierarchy; The OTN Layered Model; Encapsulation and Decapsulation Operations; Generic Framing Procedure

7. WDM: The WDM Operation; DWDM, TDM and WDM Topologies; Relationship of WDM to SONET / SDH; EDF; WDM Amplifiers; Add-Drop Multiplexers; WDM Cross-Connects; Wavelength Continuity Property; Examples of DWDM Wavelength Plan; Higher Dispersion for DWDM; Tunable DWDM Lasers.

8. Network Topologies and Protection Schemes: The Non-Negotiable Requirement Robust Networks; Diversity in the Network; Line and Path Protection Switching; Types of Topologies; Working and Protection Fibers; Point-to-Point Topology; BLSR; Protection Switching on Four-Fiber BLSR; Meshed Topologies; PONs; Ethernet in the Wide Area Backbone? Metro Optical Networking

9. MPLS and Optical Networks: Label Switching; FEC; Types of MPLS Nodes; Label Distribution and Binding; Label Switching and Traffic Forwarding; MPLS Support of VPNs; MPLS Traffic Engineering; Multiprotocol Lambda Switching; MPLS and Optical TE Similarities; Possibilities for the MPIS Network; Control and Data Planes Interworking

10. Architecture of IP and MPLS-Based OTNs: IP, MPLS, and Optical Control Planes; Interworking the three Control Planes; Management of the Planes; A Framework for the IP over Optical Networks; An Opposing View; Generalized MPLS use in Optical Networks; Bi-Directional LSPs in Optical Networks; GMPLS Extensions for G.709; GMPLS with SONET and SDH.

11. The Link Management Protocol: Keep the Optical Link up and running; What is managed? Data-bearing Links; Clarification of terms; Basic functions of LMP; Control Channel Management; Link Property Correlation; Fault Management; Extending LMP operations for Optical Link Systems.

12. Optical Routers: Optical Switching; Implementation Preferences; Key Terms;

Evolution of Switching Networks; Optical Router; Optical Switching Technologies; Optical Resources; Protecting the Label Switched Paths; Protection of the OSP; Wavelength OSP and MPLS LSP; Nesting the LSPs and OSPs; Topologies for a Node Failure; Plane Coupling 31

and De-Coupling; Some End-to-End Wavelengths and Node-to-Node Wavelengths; Granularity of Labels versus Wavelength Support; Approach to the Problem of LSP and OSP Interworking; MEMS and Optical Switching; Thermo-Optic Switches.

13. ASON Operation at the UNI and NNI: Objectives of ASON; UNI and NNI; Managing the Optical Bandwidth in the ASON; General approach to Optical Bandwidth Management; IETF Optical Carrier Framework for the UNI; Types of Connections; NNI; UNI and NNI Signaling Services.

14. ATM versus IP in Optical Internets: IP over ATM over SONET; The OSI and Internet Layered Models; ATM in the SONET / SDH Payload Envelope; PPP in the SONET Payload Envelope; Encapsulation / Framing Rules; The PPP Packet; The ATM versus IP; Overhead of IP and ATM; Three encapsulation methods

15. Evolving to 3G Architecture: Migration of IP Optical Networking; IP and the Optical Backbones; Placing MPLS into the Picture; Putting it together.

TEXT BOOKS:

SWITCHING & STATISTICAL MULTIPLEXING IN TELECOMMUNICATIONS

Subject Code: 12SCN24

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks
- 2. Why Digital?** Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks.
- 3. Switching:** Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization
- 4. Electronic Space Division Switching:** Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks.
- 5. Digital Transmission and Multiplexing:** Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vcoders, Pulse Transmission, Line Coding, Time Division Multiplexing.
- 6. Time Division Switching:** Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching.
- 7. Traffic Engineering:** Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems.

TEXT BOOKS:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Elective – II

12SCN251	Distributed systems
12SCN252	Computer Systems Performance Analysis
12SCN253	Web Engineering
12SCN254	Cloud Computing
12SCN255	Web Commerce

DISTRIBUTED SYSTEMS

Subject Code: 12SCN251

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Characterization of Distributed Systems and System Models:** Introduction, Examples of distributed systems, Resource sharing and the Web, Challenges, Architectural models, Fundamental models.
- 2. Networking and Internetworking:** Types of Networks, Networks principles, Internet protocols
- 3. Interprocess Communication:** Introduction, The API for the Internet protocols, External data representation and marshalling, Client -Server communication, Group communication, Case study: Interprocess communication in UNIX
- 4. Distributed Objects and Remote Invocation:** Communication between distributed objects, Remote procedure call, events and notifications
- 5. Operating System Support and Security:** The Operating system layer, protection, processes and threads, communication and invocation, operating system architecture
- 6. Transactions and Concurrency Control:** Transactions, nested transactions, locks, Optimistic concurrency control, timestamp ordering, comparison of methods for concurrency control.
- 7. Distributed Shared Memory:** Design and Implementation issues, sequential consistency and lvy.

TEXT BOOKS:

1. George Coulouris, Jean Dollimore, Tim Kindberg: Distributed Systems, Concept and Design, 3rd Edition, Pearson Education, 2005.

REFERENCE BOOKS:

1. Sukumar Ghosh: Distributed Systems, An Algorithmic Approach, Chapman & Hall / CRC, 2007.
2. Pradeep K. Sinha: Distributed Operating Systems, Concepts and Design, PHI, 2007.
3. Randy Chow, Theodore Johnson: Distributed Operating Systems and Algorithm Analysis, Pearson, 2009.

COMPUTER SYSTEMS PERFORMANCE ANALYSIS

Subject Code: 12SCN252

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: The art of Performance Evaluation; Common mistakes in Performance Evaluation; A systematic approach to Performance Evaluation; Selecting an evaluation technique; Selecting performance metrics; Commonly used performance metrics; Utility classification of performance metrics; Setting performance requirements.

2. Workloads, Workload Selection and Characterization: Types of workloads: addition instructions; Instruction mixes; Kernels; Synthetic programs; Application benchmarks; Popular benchmarks. Work load selection: Services exercised; Level of detail; Representativeness; Timeliness; Other considerations in workload selection.

Work load characterization techniques: Terminology; Averaging; Specifying dispersion; Single-parameter histograms; Multi-parameter histograms; Principle-component analysis; Markov models; Clustering.

3. Monitors, Program Execution Monitors, and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors; Software versus hardware monitors; Firmware and hybrid monitors; Distributed system monitors. Program execution monitors and accounting logs: Program execution monitors; Techniques for improving program performance; Accounting logs; Analysis and interpretation of accounting log data; Using accounting logs to answer commonly asked questions.

4. Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in capacity planning; Common mistakes in benchmarking; Benchmarking games; Load drivers; Remote-terminal emulation; Components of an RTE; Limitations of RTEs

5. Experimental Design and Analysis: Introduction: Terminology; Common mistakes in experiments; Types of experimental designs. 2k Factorial Designs: Concepts; Computation of effects; Sign table method for computing effects; Allocation of variance; General 2k

Factorial Designs. General full factorial designs with k factors: Model; Analysis of a general design; Informal methods.

6. Queuing Models: Introduction: Queuing notation; Rules for all Queues; Little's law; Types of stochastic processes. Analysis of Single Queue: Birth-Death processes; M / M / 1 Queue; M / M / m Queue; M / M / m / B Queue with finite buffers; Results for other M / M / 1 Queuing Systems.

Queuing Networks: Open and closed Queuing Networks; Product form networks;

Queuing Network models of Computer Systems. Operational Laws: Utilization law; Forced flow law; Little's law; General response time law; Interactive response time law; Bottleneck analysis. Mean Value analysis and related techniques: Analysis of open queuing networks; Mean value analysis; Approximate MVA; Balanced job bounds.

Convolution Algorithm: Distribution of jobs in a system; Convolution algorithm for computing G(N); Computing performance using G(N); Timesharing systems. Hierarchical decomposition of Large Queuing Networks: Load-dependent service centers; Hierarchical decomposition; Limitations of Queuing Theory.

TEXT BOOKS:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2007.

REFERENCE BOOKS:

1. Paul J. Fortier, Howard E. Michel: Computer Systems Performance Evaluation and Prediction, Elsevier, 2003.
2. Trivedi, KS: Probability and Statistics with Reliability, Queuing and computer science Applications, 2nd Edition, Wiley India, 2001.

WEB ENGINEERING

Subject Code: 12SCN253

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Motivation, Categories of web applications, Characteristics of web applications.
- 2. Requirements Engineering:** Introduction, Fundamentals, RE specifics in web engineering, Principles of RE for web applications, Adapting RE methods to web application development, Outlook.
- 3. Modeling Web Application:** Introduction, Fundamentals, Modeling specifics in web engineering, Modeling requirements, Content modeling, Hypertext modeling, Presentation modeling, Customization modeling, Methods and tools, Outlook.
- 4. Web Application Architectures:** Introduction, Fundamentals, Specifics of web application architectures, Components of a generic web application architecture, Layered architectures, Data-aspect architectures.
- 5. Technology-Aware Web Application Design:** Introduction, Web design from an evolutionary perspective, Presentation design, Interaction design, Functional design, Outlook.
- 6. Technologies for Web Applications:** Introduction, Fundamentals, Client/Server communication on the web, Client side technologies, Document-specific technologies, Server-side technologies, Outlook.
- 7. Testing Web Applications:** Introduction, Fundamentals, Testing specifics in web engineering, Test approaches, Test scheme, Test methods and techniques, Test automation, Outlook.
- 8. Operation and Maintenance of Web Applications:** Introduction, Challenges following the launch of a web application, Content management, Usage analysis, Outlook.

- 9. Web Project Management:** From software project management to web project management, Challenges in web project management, Managing web teams, Managing the development process of a web application, Outlook.
- 10. The Web Application Development Process:** Motivation, Fundamentals, Requirements for a web application development process, Analysis of the rational unified process, Analysis of extreme programming, Outlook.
- 11. Usability of Web Applications:** Motivation, What is usability? What characterizes the usability of web applications? Design guidelines, Web usability engineering methods, Web usability engineering trends, Outlook.
- 12. Performance of Web Applications:** Introduction, What is performance? What characterizes performance of web applications, System definition and indicators, Characterizing the work load, Analytical techniques, Representing and interpreting results, Performance optimization methods, Outlook.
- 13. Security for web Applications:** Introduction, Aspects of security, Encryption, digital signatures, and certificates, Secure Client/Server interaction, Client security issues, Service provider security issues, Outlook.
- 14. The Semantic Web:** Fundamentals of the semantic web, Technological concepts, Specifics of semantic web applications, Tools, Outlook.

Text Book:

1. Gerti Kappel, Birgit Proll, Siegfried Reich, Werner Retschitzgeer (Editors): Web Engineering, Wiley India, 2007.

Reference Books:

1. Roger Pressman, David Lowe: Web Engineering: A Practitioner's Approach, McGraw Hill, 2008.

CLOUD COMPUTING

Subject Code: 12SCN254

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Business and IT perspective, Cloud and virtualization, Cloud services requirements, cloud and dynamic infrastructure, cloud computing characteristics, cloud adoption.
- 2. Cloud models:** Cloud characteristics, Measured Service, Cloud models, security in a public cloud, public versus private clouds, cloud infrastructure self service.
- 3. Cloud at a service:** Gamut of cloud solutions, principal technologies, cloud strategy, cloud design and implementation using SOA, Conceptual cloud model, cloud service demand.
- 4. Cloud solutions:** Cloud ecosystem, cloud business process management, cloud service management, cloud stack, computing on demand, cloud sourcing.
- 5. Cloud offerings:** Cloud analytics, Testing under cloud, information security, virtual desktop infrastructure, Storage cloud.
- 6. Cloud management:** Resiliency, Provisioning, Asset management, cloud governance, high availability and disaster recovery, charging models, usage reporting, billing and metering.
- 7. Cloud virtualization technology:** Virtualization defined, virtualization benefits, server virtualization, virtualization for x86 architecture, Hypervisor management software, Logical partitioning, VIO server, Virtual infrastructure requirements. Storage virtualization, storage area networks, network attached storage, cloud server virtualization, virtualized data center.
- 8. Cloud and SOA:** SOA journey to infrastructure, SOA and cloud, SOA defined, SOA defined, SOA and IAAS, SOA based cloud infrastructure steps, SOA business and IT services.

TEXT BOOKS:

1. Cloud Computing by Dr. Kumar Saurabh, Wiley India, 2011.

Reference Books

1. Michael Miller, Cloud Computing: Web based applications that change the way you work and collaborate online, Que publishing , August 2009.
2. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On Demand computing applications and data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

WEB-COMMERCE

Subject Code: 12SCN255

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. E-commerce in Indian business context:** Definition of e-commerce advantages of e-commerce, disadvantages of e-commerce, e-commerce opportunities for industries, e-transition challenges for Indian corporate.
- 2. Business models for e-commerce:** e-business models based on relationship of transaction parties – B2C, B2B, C2C and C2B; e-business models based on relationship of transaction types – Brokerage model, Aggregator model, Info-mediary model, community model, value chain model, advertising model, subscription model.
- 3. Enabling Technologies of www :** Internet client-server applications, Networks and Internets, IPV4, IPV6, Search Engines, software agents, Internet standards and specifications, ISP, Broadband technologies – types of broadband technology.
- 4. E-marketing:** Traditional marketing, identifying web-presence goods, Browsing behavior model, online marketing, e-advertising, e-branding, Marketing strategies.
- 5. E-payment Systems:** Main concerns in Internet banking, Digital payment, requirements, Digital token based e-payment systems, classification of new payment systems, Properties of e-cash, cheque payment on Internet, Risk of e-payment systems, Designing e-payment systems, digital signatures.
- 6. Other issues:** E-CRM solutions; e-supply chain management – strategic advantage, ESCM components; Information and Strategy – The virtual value chain, seven dimensions of e-commerce strategy.

Text Books

1. P.T. Joseph, S.J. *“E Commerce – and Indian perspective”* – Third edition, PHI 2010. Ch. 1,2,3,4,6 and related sections of 7,8 and 9 only.
2. Ravi Kalakota and Andrew Winston *“Frontiers of E-commerce”* 12th edition, Pearson Education, 2004.

NETWORK MANAGEMENT

Subject Code: 12SCN31

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards-Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology , Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management.
- 2. Basic Foundations: Standards, Models, and Language:** Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1- Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model
- 3. SNMPv1 Network Management:** Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model

- 4. SNMP Management – RMON:** Remote Monitoring, RMON SMI and MIB, RMON1-RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications.
- 5 . Broadband Network Management:** Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles.
- 6. Network Management Applications:** Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case-Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management.

TEXT BOOKS:

1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.

REFERENCE BOOKS:

1. J. Richard Burke: Network management Concepts and Practices: a Hands-On Approach, PHI, 2008.

Elective – III

12SCN321	Protocols Engineering
12SCN332	Advances in Digital image processing
12SCN323	Advances in Storage Area Networks

PROTOCOLS ENGINEERING

Subject Code: 12SCN321

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Communication model, Communication Software, Communication Subsystems, Communication Protocol Definition/Representation, Formal and Informal Protocol Development Methods, Protocol Engineering Phases
- 2. Error Control, Flow Control:** Type of Transmission Errors, Linear Block Code, Cyclic Redundancy Checks, Introduction to Flow Control, Window Protocols, Sequence Numbers, Negative Acknowledgments, Congestion Avoidance
- 3. Network Reference Model:** Layered Architecture, Network Services and Interfaces, Protocol Functions: Encapsulation, Segmentation, Reassembly, Multiplexing, Addressing, OSI Model Layer Functions, TCP/IP Protocol Suite, Application Protocols.
- 4. Protocol Specification:** Components of specification, Service specification, Communication Service Specification Protocol entity specification: Sender, Receiver and Channel specification, Interface specifications, Interactions, Multimedia specifications, Alternating Bit Protocol Specification, RSVP specification.
- 5. Protocol Specification Language (SDL):** Salient Features. Communication System Description using SDL, Structure of SDL. Data types and communication paths, Examples of SDL based Protocol Specifications: Question and answer protocol, X-on-X-off protocol, Alternating bit protocol, Sliding window protocol specification, TCP protocol specification, SDL based platform for network, OSPF, BGP Multi Protocol Label Switching SDL components.
- 6. Protocol Verification / Validation:** Protocol Verification using FSM, ABP Verification, Protocol Design Errors, Deadlocks, Unspecified Reception, Non-executable Interactions, State Ambiguities, Protocol Validation Approaches: Perturbation Technique, Reachability Analysis, Fair Reachability Graphs, Process Algebra based Validation, SDL

Based Protocol Verification: ABP Verification, Liveness Properties, SDL Based Protocol

Validation: ABP Validation.

7. Protocol Conformance and Performance Testing: Conformance Testing

Methodology and Framework, Local and Distributed Conformance Test Architectures, Test Sequence Generation Methods: T, U, D and W methods, Distributed Architecture by Local Methods, Synchronizable Test Sequence, Conformance testing with Tree and Tabular Combined Notation (TTCN), Conformance Testing of RIP, Testing Multimedia Systems, quality of service test architecture(QOS), Performance Test methods, SDL Based Performance Testing of TCP, OSPF, Interoperability testing, Scalability testing protocol synthesis problem

8. Protocol Synthesis and Implementation: Synthesis methods, Interactive Synthesis Algorithm, Automatic Synthesis Algorithm, Automatic Synthesis of SDL from MSC, Protocol Re-synthesis, Requirements of Protocol Implementation, Objects Based Approach To Protocol Implementation, Protocol Compilers, Code generation from Estelle, LOTOS, SDL and CVOPS.

TEXT BOOKS:

1. Pallapa Venkataram and Sunilkumar S. Manvi: Communication Protocol Engineering, PHI, 2004.

REFERENCE BOOKS:

1. Mohammed G. Gouda: Elements of Protocol Design, Wiley Student Edition, 2004.

TOPICS IN MULTIMEDIA COMMUNICATIONS

Subject Code: 12SCN322

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

- 1. Introduction to Multimedia Communications:** Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework.
- 2. Framework for Multimedia Standardization:** Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards.
- 3. Application Layer:** Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access.
- 4. Middleware Layer:** Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution.
- 5. Network Layer:** Introduction, QoS in Network Multimedia Systems.

TEXT BOOKS:

1. K.R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic: Introduction to Multimedia Communications – Applications, Middleware, Networking, Wiley India, 2006.

ADVANCES IN STORAGE AREA NETWORKS

Subject Code: 12SCN323

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

1. Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access.

2. Intelligent Disk Subsystems: Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

3. I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage.

4. Network Attached Storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system.

5. File System and NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

6. Storage Virtualization: Definition of Storage virtualization; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

7. SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective.

8. Software Components of SAN: The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

9. Management: Planning Business Continuity; Managing availability; Managing Serviceability; Capacity planning; Security considerations.

Text Book:

Elective – IV

12SCN331	Wireless Sensor Networks
12SCN332	Advances in Digital image processing
12SCN333	Topics in Analysis of Computer Networks

WIRELESS SENSOR NETWORKS

Subject Code: 12SCN331

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: Unique Constraints and Challenges, Advantages of Sensor Networks, Energy advantage, Detection advantage, Sensor Network Applications, Habitat monitoring, Wildlife conservation through autonomous, non-intrusive sensing, Tracking chemical plumes, Ad hoc, just-in-time deployment mitigating disasters, Smart transportation: networked sensors making roads safer and less congested, Collaborative Processing.

2. Key Definitions and The Problem: Key Definitions of Sensor Networks, Canonical Problem: Localization and Tracking, Tracking Scenario, Problem Formulation, Sensing model, Collaborative localization, Bayesian state estimation, Distributed Representation and Inference of States, Impact of choice of representation, Design desiderata in distributed tracking, Tracking Multiple Objects, State space decomposition, Data association, Sensor Models, Performance Comparison and Metrics.

3. Networking and Protocols: Networking Sensors, Key Assumptions, Medium Access Control, The SMAC Protocol, IEEE 802.15.4 Standard and ZigBee, General Issues, Geographic, Energy-Aware Routing, Unicast Geographic Routing, Routing on a Curve, Energy-Minimizing Broadcast, Energy-Aware Routing to a Region, Attribute-Based Routing, Directed Diffusion, Rumor Routing, Geographic Hash Tables. Infrastructure Establishment, Topology Control, Clustering, Time Synchronization, Clocks and Communication Delays, Interval Methods, Broadcasts, Localization and Localization Services, Ranging Techniques, Range-Based Localization Algorithms, Other Localization Algorithms, Location Services. Sensor Tasking and Control, Task-Driven Sensing, Roles of Sensor Nodes and Utilities, Information-Based Sensor Tasking, Sensor selection, IDSQ: Information-driven sensor querying, Cluster leader based protocol, Sensor tasking in tracking relations, Joint Routing and Information Aggregation, Moving center of

aggregation, Multi-step information-directed routing, Sensor group management, Case study: Sensing global phenomena.

4. Databases: Sensor Network Databases, Sensor Database Challenges, Querying The Physical Environment, Query Interfaces, Cougar sensor database and abstract data types, Probabilistic queries, High-level Database Organization, In- Network Aggregation, Query propagation and aggregation, Tiny DB query processing, Query processing scheduling and optimization, Data-Centric Storage, Data Indices and Range Queries, One-dimensional indices, Multidimensional indices for orthogonal range searching, Non-orthogonal range searching, Distributed Hierarchical Aggregation, Multi-resolution, Partitioning, Fractional cascading, Locality preserving hashing, Temporal Data, Data aging, Indexing motion data.

5. Platforms and Tools: Sensor Network Platforms and Tools, Sensor Network Hardware, Berkeley motes, Sensor Network Programming Challenges, Node-Level Software Platforms, Operating system: Tiny OS, Imperative language: nesC, Dataflow style language: Tiny GALS, Node-Level Simulators, ns-2 and its sensor network extensions, TOSSIM, Programming Beyond Individual Nodes: State-centric programming, Collaboration groups, PIECES: A state-centric design framework, Multi-target tracking problem revisited. Applications and Future Directions.

TEXT BOOKS:

1. Feng Zhao, Leonidas Guibas: Wireless Sensor Networks – An Information Processing Approach, Elsevier, 2004.

ADVANCES IN DIGITAL IMAGE PROCESSING

Subject Code: 12SCN332

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

1. Introduction: Origins of Digital Image Processing, examples, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image analysis and computer vision, spatial feature extraction, transform features, Edge detection, gradient operators, compass operators, stochastic gradients, line and spot detection.

2. Digital Image Fundamentals: Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.

3. Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial

4. Image Enhancement in the Frequency Domain: Background, Image Enhancement in the Frequency Domain, Introduction to the Fourier Transform and the Frequency, Domain, Smoothing Frequency- Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering.

5. Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering.

6. Color Fundamentals: Color Models, Pseudo color Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color

Segmentation, Noise in Color Images, Color Image Compression.

7. Image Transformation: Discrete Cosine Transforms, Walsh Hadmard Transforms, Wavelet Transforms and Multiprocessing, Background, Multiresolution Expansions, Wavelet Transforms in one Dimension, Wavelet Transforms in Two Dimensions, Wavelet Packets, an overview of Second Generation Wavelet Transforms.

8. Image and Video Compression: Fundamentals, Image Compression Models, Lossless compression Methods: Huffman coding, run length coding, LZ coding, Arithmetic coding, Lossy Compression: Gray level Run length coding, Block truncation coding, vector quantization, Differential predictive coding, Transform coding , Hybrid coding, Video Compression Techniques – Motion compensation, Search for motion vectors, H.261, H.263, MPEG I, MPEG 2, MPEG 4, MPEG 7 .

9. Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms.

10. Image Segmentation and Object Recognition: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation, Patterns and Pattern Classes, Recognition Based on Decision-Theoretic Methods, Structural Methods.

TEXT BOOKS

1. Rafael C Gonzalez and Richard E. Woods: Digital Image Processing, PHI 2nd Edition 2005
2. Scott.E.Umbaugh: Computer Vision and Image Processing, Prentice Hall, 1997

TOPICS IN ANALYSIS OF COMPUTER NETWORKS

Subject Code: 12SCN333

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.

2. Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

3. Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

4. Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

5. Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

ELECTIVE- III

14SCN422

Service Oriented Architecture

***The student shall make a midterm presentation of the activities undertaken during the first 8 weeks of internship to a panel comprising Internship Guide, a senior faculty from the department and Head of the Department.**

The College shall facilitate and monitor the student internship program.

The internship report of each student shall be submitted to the University.

****Between the III Semester and IV Semester after availing a vacation of 2 weeks.**

VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM

SCHEME OF TEACHING AND EXAMINATION FOR M.TECH (COMPUTER NETWORK ENGINEERING)

IV Semester

Total Credits: 28

Total		08	07	09	150	400	550	28	
Grand Total (I to IV Sem.)		Marks: 2400; Credits : 94							

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or technical paper.

1).Project Phase – I : 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase – III : Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be $50+50+100=200$ (50 Marks for Internal Guide, 50 Marks for External and 100 for Viva-Voce)

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Course Title: Wireless Ad-hoc Networks	Course Code: 14SCN11
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To explore the design space and conduct trade-off analysis between performance and resources.
- To Determine suitable medium access protocols and radio hardware.
- To learn Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.
- To explore the Ad-hoc network concepts by using network simulators.

TOPICS

MODULE I

Ad hoc Wireless Networks: Introduction, Issues in Ad hoc Wireless Networks, Ad hoc Wireless Internet;
MAC Protocols for Ad hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas
 (Chapter 5: 5.1-5.3, Chapter 6: 6.1-6.8) **10 Hours**

MODULE II

Routing Protocols for Ad Hoc Wireless Networks: Introduction, Issues in Designing a Routing Protocol for Ad hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols
 (Chapter 7: 7.1-7.6, 7.8, 7.9) **10 Hours**

MODULE III

Multicast Routing in Ad hoc Wireless Networks: Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.
 (Chapter 8: 8.1-8.7) **10 Hours**

MODULE IV

Transport Layer and Security Protocols for Ad hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad hoc Networks; Security in Ad hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Touting Ad hoc Wireless Networks.
 (Chapter 9: 9.1-9.6, 9.7-9.12) **10 Hours**

MODULE V

Quality of Service and Energy Management in Ad hoc Wireless Networks

Introduction, Issues and Challenges in Providing QoS in Ad hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad hoc Wireless Networks: Introduction, Need for Energy Management in Ad hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.

(Chapter 10: 10.1-10.5, Chapter 11: 11.1-11.6)

10 Hours

LABORATORY WORK

Note: Standard Network Parameters and supporting protocols may be assumed for simulation. Any suitable network simulator may be used. (Preferably NS2 or NS3 Simulator)

1. Develop unicast routing protocols using any suitable Network Simulator for (Mobile Ad hoc Networks) MANET to find the best route using the any one of routing protocols from each category from table-driven (e.g., link state or DSDV) on demand (e.g., DSR, AODV, TORA), hybrid (e.g., ZRP, contact-based architectures) and hierarchical (e.g., cluster based.) The efficient path/route should be established for source and destination data transmission using routing protocols. Understand the advantages and disadvantages of each routing protocol types by observing the performance metrics of the routing protocol. In that way the best application/environment suitable routing protocol can be identified in each category.
- 2: Develop multicast routing protocols using any suitable Network Simulator for MANET in which session nodes are connecting through either tree(MAODV, MCEDAR) or mesh (ODMRP, CAMP, FGMP) structure. Analyze the performance metrics of multicast routing protocols with unicast routing protocols.
3. Develop MAC Protocol using any suitable Network Simulator for MANETs to send the packet without any contention through wireless link using the following MAC protocols; (CSMA/CA (802.11), MACA, MACAW, PAMAS, SMAC). Analyze its performance with increasing node density and mobility.
4. Develop and Analyze the performance of TCP connection when it is used for wireless networks. You will find performance of TCP decreases dramatically when a TCP connection traverses a wireless link on which packets may be lost due to wireless transmission errors. Make use of Active Queue Management Technique to control congestion on Wireless Networks. Evaluate the performance of FIFO, RED and WFQ over wireless networks using suitable Network Simulator.
5. Simulate MANET environment using suitable Network Simulator and test with various mobility model such as Random way point, group mobility, highway model, Manhattan model, hybrid models) (Spatial correlation, temporal correlation, relative speed, link durations). Analyze throughput, PDR and delay with respect to different mobility models.

COURSE OUTCOMES

Students will be able to

- Apply knowledge of wireless Ad-hoc networks to various application areas.
- Design, implement and maintain wireless Ad-hoc networks.
- Formulate and solve problems creatively.
- Practical knowledge acquired by hands-on session.

TEXT BOOKS:

1. C. Siva Ram Murthy & B. S. Manoj: Ad hoc Wireless Networks, 2nd Edition, Pearson Education, 2011

REFERENCES:

1. Ozan K. Tonguz and Gianguigi Ferrari: Ad hoc Wireless Networks, John Wiley, 2007.
2. Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du: Ad hoc Wireless Networking, Kluwer Academic Publishers, 2004.

Semester I

Year: 2014-2015

Course Title: Advances in Computer Networks	Course Code: 14SCN12
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To become familiar with the basics of Computer Networks.
- To learn Network architectures.
- To learn Concepts of fundamental protocols.
- To gain the knowledge of internetworking concepts.
- To understand the knowledge of internetworking concepts in various applications.
- To acquire knowledge of implementation concepts in congestion control and error detections.

TOPICS

MODULE I

Foundation

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1:Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 **T2:Chapter 4**

10 Hours

MODULE II

Internetworking- I

Switching and Bridging, Datagrams, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, subnetting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2.

10 Hours

MODULE III

Internetworking- II

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP

T1: Chapter 3.3, 4.1.1, 4.1.3 **T2:** Chapter 13.1 to 13.18, Chapter 18.

10 Hours

MODULE IV

End-to-End Protocols

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3

10 Hours

MODULE V

Congestion Control and Resource Allocation

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance.

The Domain Name System(DNS), Electronic Mail(SMTP, POP, IMAP, MIME), World Wide Web(HTTP), Network Management(SNMP).

T1: Chapter 6.4 **T2:** Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8

10 Hours

LABORATORY WORK

PART A: Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

COURSE OUTCOMES

Students will be able to

- Classify network services, protocols and architectures, explain why they are layered.
- Knowledge on key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Practical knowledge gained by hands-on sessions.
- Gain the knowledge of application layer protocol.

Text books:

2. **Behrouz A Forouzan** “TCP/IP Protocol Suite” 4th Edition – Tata McGraw-Hill.

Semester I

Year: 2014-2015

Course Title: Information and Network Security	Course Code: 14SCN13
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology.

TOPICS

MODULE I

Classical Encryption Techniques

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad.

Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours

MODULE II

Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours

MODULE III

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours

MODULE IV

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, ..

Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer** :SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication

plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits. **10 Hours**

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition.

Semester I

Year: 2014-2015

Course Title: Advances in Storage area Network	Course Code: 14SCN14
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre’s maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems
- To appreciate the use of cables technologies used in SAN technology.

TOPICS

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems. **10 Hours**

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS. **10 Hours**

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network;

Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management, Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Have Knowledge on various RAID levels.
- Apply the techniques used for data maintenance.
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2013.

Reference Books:

1. Robert Spalding: "Storage Networks The Complete Reference", Tata McGraw-Hill, 2011.
2. Marc Farley: Storage Networking Fundamentals – An Introduction to Storage Devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005.
3. Richard Barker and Paul Massiglia: "Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs", Wiley India, 2006.

Semester I

Year: 2014-2015

Course Title: Advanced algorithms	Course Code: 14SCN151
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.
- To get an awareness of probabilistic and randomize algorithms.

TOPICS

MODULE I

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours

MODULE II

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours

MODULE III

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours

MODULE IV

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours

MODULE V

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours

COURSE OUTCOMES:

The students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.
- Get knowledge about different application based algorithm.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007

Course Title: Computer Systems Performance Analysis	Course Code: 14SCN152
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the mathematical foundations needed for performance evaluation of computer systems
- To understand the metrics used for performance evaluation
- To understand the analytical modeling of computer systems
- To enable the students to develop new queuing analysis for both simple and complex systems
- To understand the concept of planning and design in computer system.

TOPICS

TOPICS:

MODULE I

Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.

10 Hours

MODULE II

Workloads, Workload Selection and Characterization: Types of Workloads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, Popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.

10 Hours

MODULE III

Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.

10 Hours

MODULE IV

Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote- Terminal Emulation; Components of an RTE; Limitations of RTEs. **Experimental Design and Analysis: Introduction:** Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.

10 Hours

MODULE V

Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow

Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Define Little's law and other operational laws
- Apply the operational laws to open and closed systems
- Use discrete-time and continuous-time Markov chains to model real world systems
- Develop analytical techniques for evaluating scheduling policies

2. Trivedi K S: Probability and Statistics with Reliability, Queuing and Computer Science Applications, 2nd Edition, Wiley India, 2001.

Semester I

Year: 2014-2015

Course Title: Multi-core Architecture and Programming	Course Code: 14SCN153
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To expose the students to the problems related to multiprocessing
- To understand the different types of multi core architectures
- To expose the students to warehouse-scale and embedded architectures

TOPICS

MODULE I

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper-Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

10 Hours

MODULE II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours

MODULE III

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours

MODULE IV

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.
- Critically analyze the different types of inter connection networks.
- Knowledge on architecture of GPUs, warehouse-scale computers and embedded processors.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006.

Semester I

Year: 2014-2015

Course Title: Soft Computing	Course Code: 14SCN154
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the key aspects of Soft computing
- To know about the components and building block hypothesis of Genetic algorithm.
- To understand the features of neural network and its applications
- To study the fuzzy logic components
- To gain insight onto Neuro Fuzzy modeling and control.
- To gain knowledge in machine learning through Support vector machines.

Topics:

MODULE I

Introduction to Soft computing, Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model. **10 Hours**

MODULE II

Perceptron Network, Adaptive linear neuron, Multiple adaptive linear neurons, Back propogation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models) **10 Hours**

MODULE III

Introduction to classical sets and fuzzy sets, Classical relations and fuzzy relations, Membership functions, **10 Hours**

MODULE IV

Defuzzification, Fuzzy decision making, and applications **10 Hours**

MODULE V

Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA
General genetic algorithms, The schema theorem, Genetic programming, applications

10 Hours

Course Outcomes:

The student will be able to:

- Implement machine learning through neural networks.

- Write Genetic Algorithm to solve the optimization problem
- Develop a Fuzzy expert system.
- Model Neuro Fuzzy system for clustering and classification.

Text book:

1. Principles of Soft computing, Shivanandam, Deepa S. N Wiley India, Jun-2007
(Chapters 1, 2, 3(Upto 3.5), 7, 8, 9, 10, 13, 15 (upto 15.6 & 15.9,15,10)

Reference Books:

1. Neuro-fuzzy and soft computing, J.S.R. JANG, C.T. SUN, E. MIZUTANI, PHI (EEE edition) ISBN: 978-81-203-2243-1

Semester I

Year: 2014-2015

Course Title: Information and Network security Lab	Course Code: 14SCN16
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives:

- To understand the fundamentals of Cryptography through practical implementation.
- To implement standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to use cutting edge simulation tools
- To design security applications in the field of Information technology.

LABORATORY WORK

Note: Use C/C++/Java or equivalent tool to implement the following experiment

1. Consider a file with composite data, substitute the content and transpose the ciphers.
2. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
3. Apply the RSA algorithm on a text file to produce cipher text file.
4. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
5. Implementation of Message Authentication Code using cryptography VMAC function.
6. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change in the input results in a substantial change in the output
7. Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN [Subnetting].
8. Develop a mechanism to setup(configure) a port scanner and identify the intrusion.

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.

- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Semester II

Year: 2014-2015

Course Title: Multimedia Communications	Course Code: 14SCN21
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

Course Objectives:

- To understand the Multimedia Communication Models
- To study the Multimedia Transport in Wireless Networks
- To solve the Security issues in multimedia networks
- To explore real-time multimedia network applications.
- To explore different network layer based application.

TOPICS

MODULE I

Introduction to Multimedia Communications: Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework. **10 Hours**

MODULE II

Framework for Multimedia Standardization: Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards. **10 Hours**

MODULE III

Application Layer: Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access. **10 Hours**

MODULE IV

Middleware Layer: Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution. **10 Hours**

MODULE V

Network Layer: Introduction, QoS in Network Multimedia Systems. **10 Hours**

LABORATORY WORK

The following experiments should be practiced (Tools such as HTML/Frontpage/Dreamweaver/ equivalent, Multimedia application enabling software ,System software support for multimedia, Performance measurement tools for multimedia ,Multimedia authoring tools, Web tools and applications)

1. Audio and video editing
2. Image editing
3. 2D and 3D animation.

.The case studies are:

- Video on-demand
- Interactive TV
- Home shopping
- Remote home care
- Electronic album
- Personalized electronic journals.

COURSE OUTCOMES:

Students will be able to:

- Deploy the right multimedia communication models.
- Apply QoS to multimedia network applications with efficient routing techniques.
- Solve the security threats in the multimedia networks.
- Develop the real-time multimedia network applications.

TEXT BOOKS:

1. K.R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic: Introduction to Multimedia Communications – Applications, Middleware, Networking, Wiley India, 2006.

REFERENCE BOOKS:

1. Fred Halsall: Multimedia Communications – Applications, Networks, Protocols, and Standards, Pearson, 2001.
2. Nalin K Sharad: Multimedia information Networking, PHI, 2002.

Semester II

Year:2014-2015

Course Title: Distributed Computing	Course Code: 14SCN22
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To learn Basic Concepts of DSM, Hardware DSM
- To understand File Sharing, DFS Implementation, Replication in DFS,
- To understand the concepts of Cryptanalysis, Secure channels, Access control.
- To understand some of the security concepts in distributed computing.

TOPICS

MODULE I

Distributed System management: Introduction, Resource management, Task Assignment Approach, Load-Balancing Approach, Load-Sharing Approach, Process management in a Distributed Environment, Process Migration, Threads, Fault Tolerance.

10 hours

MODULE II

Distributed Shared Memory :Introduction, Basic Concepts of DSM, Hardware DSM, Design Issue in DSM Systems, Issue in Implementing DSM Systems, Heterogeneous and Other DSM Systems, Case Studies.

10 hours

MODULE III

Distributed File System: Introduction to DFS, File Models, Distributed File System Design, Semantics of File Sharing, DFS Implementation, File Caching in DFS, Replication in DFS, Case studies. **Naming**: Introduction, Desirable features of a good naming system, Basic concepts, System-oriented names, Object-locating mechanisms, Issues in designing human-oriented names, Name caches, Naming and security, Case study: Domain name service.

10 hours

MODULE IV

Security in distributed systems: Introduction, Cryptography, Secure channels, Access control, Security Management, Case studies.

10 hours

MODULE V

Real-Time Distributed operating Systems: Introduction, Design issues in real-time distributed systems, Real-time communication, Real-time scheduling, Case study: Real-time communication in MARS. **Emerging Trends in distributed Computing**: Introduction to emerging trends, Grid Computing, SOA, Cloud computing, the future of emerging Trends.

10 hours

COURSE OUTCOMES:

The student will be able to

- Realize shared memory concept.
- Realize Advantages of DFS.
- Implement mechanisms to manage security in DS

Text Book.

1. Sunitha Mahajan, Seema Shah: Distributing Computing, Published by Oxford University press 2010

Semester II

Year:2014-2015

Course Title: Network Management	Course Code: 14SCN23
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the need for interoperable network management.
- To learn to the concepts and architecture behind standards based network management.
- To understand the concepts and terminology associated with SNMP and TMN.
- To understand network management as a typical distributed application

TOPICS

MODULE I

Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards- Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology, Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management. **10 Hours**

MODULE II

Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1- Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model. **10 Hours**

MODULE III

SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model
SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications. **10 Hours**

MODULE IV

Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles. **10 Hours**

MODULE V

Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation

Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case-Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management. **10 Hours**

LABORATORY WORK:

1. Capture packets transferred while browsing a selected website (e.g. a page from the course website, a search engine home page). Investigate the protocols used in each packet, the values of the header fields and the packet sizes.
2. Explore at least the following features of Wireshark: filters, Flow Graphs (TCP), statistics, protocol hierarchies.
3. Create several example files for your Apache web server to serve. Configure your web server, and then ask a friend to test your web server by accessing the files. Capture the packets and observe the log file.
4. Configure authentication for a specific directory on your web server. Test, captured packets and observe the log file.
5. Login to another computer in the lab, capture and investigate the data exchanged.
6. Trace the path between several pairs of source/destination nodes.
7. Create fire wall rule(s) that will drop TCP packets destined to a specific computer on the lab network (e.g. yours neighbors computer).
8. Using the supplied client/server sockets programs, implement a third proxy server.

Note: NS2 or equivalent tool to be used.

Course Outcomes:

Upon completion of this course, the students will be able to

- Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets.
- Apply network management standards to manage practical networks.
- Formulate possible approaches for managing OSI network model.
- Use on SNMP for managing the network
- Use RMON for monitoring the behavior of the network
- Identify the various components of network and formulate the scheme for the managing them

Semester II

Year:2014-2015

Course Title: Switching & Statistical Multiplexing in Telecommunications	Course Code: 14SCN24
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand Switching and multiplexing.
- To understand the transmission technology.
- To understand the transmission control.
- To understand basic knowledge on telecommunication.

Topics:

MODULE I

Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. **Why Digital:** Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks.

10 Hours

MODULE II

Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization.

10 Hours

MODULE III

Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. **Digital Transmission and Multiplexing:** Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing.

10 Hours

MODULE IV

Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching.

10 Hours

MODULE V

Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems.

10 Hours

Course Outcomes:

The student will be able to:

- Gain the knowledge about switching and multiplexing
- Gain the knowledge about telecommunication.
- Learn transmission control in telecommunication.

TEXT BOOKS:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Semester II

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCN251
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To gain knowledge Virtualization
- To gain knowledge Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.
- To gain knowledge in cloud resource virtualization and scheduling.

TOPICS:

MODULE I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

MODULE II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

MODULE III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study:Xen a VMM based

paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

MODULE IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

MODULE V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

Course Outcomes:

The student will be able to:

- Demonstrate simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.

Text Book:

1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.

Semester II

Year:2014-2015

Course Title: Wireless Sensor Networks	Course Code: 14SCN252
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- Architect sensor networks for various application setups.
- Explore the design space and conduct trade-off analysis between performance and resources.
- Devise appropriate data dissemination protocols and model links cost.
- Determine suitable medium access protocols and radio hardware.
- Prototype sensor networks using commercial components.

- Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.

TOPICS:

MODULE I

Introduction, Overview and Applications of Wireless Sensor Networks

Introduction, Basic overview of the Technology, **Applications of Wireless Sensor Networks:** Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology

(Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)

10 Hours

MODULE II

Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, **Wireless Transmission Technology and Systems:** Introduction, Radio Technology Primer, Available Wireless Technologies

(Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)

10 Hours

MODULE III

MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. **Routing Protocols for Wireless Sensor Networks:** Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs.

(Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)

10 Hours

MODULE IV

Transport Control and Middleware for Wireless Sensor Networks

Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. **Middleware for Wireless Sensor Networks:** Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware.

(Chapter 7: 7.1-7.4, Chapter 8: 8.1-8.4)

10 Hours

MODULE V

Network Management and Operating System for Wireless Sensor Networks

Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. **Operating Systems for Wireless Sensor Networks:** Introduction, Operating System Design Issues, Examples of Operating Systems.

(Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)

10 Hours

COURSE OUTCOMES

The student will be able to:

- Develop applications of wireless sensor actuator networks
- Implement the elements of distributed computing and network protocol .

- Explore various hardware, software platforms that exist for sensor networks

TEXT BOOKS:

1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, “Wireless Sensor Networks: Technology, Protocols and Applications”, WILEY , Second Edition (Indian) , 2014

REFERENCE BOOKS:

1. Ian F. Akyildiz, Mehmet Can Vuran "Wireless Sensor Networks", Wiley 2010
2. Feng Zhao & Leonidas J. Guibas, “Wireless Sensor Networks- An Information Processing Approach”, Elsevier, 2007.

Semester II

Year: 2014-2015

Course Title: Optical Networks	Course Code: 14SCN253
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM
- To acquire knowledge about fault and congestion management.

Topics

MODULE I

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, SONET/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

10 Hours

MODULE II

WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations.

10 Hours

MODULE III

Control and Management

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours

MODULE IV

Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum Load **Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Design a system, component or process as per needs and specification.
- Gain knowledge on optical network architectures ranging from optical access networks to backbone optical transport networks.
- Gain the knowledge on methodologies of optical network design optimization;
- Explore techniques of optical network survivability.
- Solve the Problems in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Course Title: Advances in VLSI Design and Algorithms	Course Code: 14SCN254
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- Able to understand the fundamentals of CMOS VLSI and associated technologies.
- Able to solve problems in the design of CMOS logic circuits, with particular reference to speed and power consumption.
- Able to appreciate the design process in VLSI, GALS.
- Able to explain basic operation principles of diodes and MOS FPGAs; PLA.
- Able to design the fundamental blocks of a VLSI circuits, both by circuit schematic and physical layout

TOPICS:**MODULE I**

Introduction to Digital systems and VLSI: Why Design Integrated Circuits? Integrated Circuits manufacturing; Integrated Circuit Design Techniques; IP-Based Design.

Fabrication and Devices: Introduction; Fabrication processes; Fabrication theory and practice; Reliability.

10 Hours**MODULE II**

Sequential Machines: Introduction; Latches and Flip-flops; Sequential systems and clocking disciplines; Performance analysis; Clock generators; Sequential systems design, Power optimization, Design validation, Sequential testing.

10 Hours**MODULE III**

Subsystem Design: Introduction; Combinational shifters; Adders; ALUs; Multipliers; High-density memory; Image sensors; FPGAs; PLA; Buses and networks on chips; Data paths; Subsystems as IP.

10 Hours**MODULE IV**

Architecture Design: Introduction; Hardware description languages; Register Transfer design; Pipelining; High-level synthesis; Architecture for low power; GALS systems; Architecture testing; IP components; Design methodologies; Multiprocessor system-on-Chip design.

10 Hours**MODULE V**

Simulations: General remarks; Gate-level modeling and simulations; Switch-level modeling and simulation.

10 Hours

Course Outcomes:

The student will be able to:

- Clear understanding of important concepts in CMOS technology and fabrication that affect design.
- Apply two-level and multi-level logic minimization techniques to the given Boolean logic function.
- Design and develop Layout a gate in CMOS VLSI technology.

TEXT BOOKS:

1. Wayne Wolf: “Modern VLSI design”, 4th Edition, P HI Learning, 2007.
2. Sabih H Gerez: “Algorithms for VLSI Design Autom ation”, Wiley India, 2007.

Semester II

Year: 2014-2015

Course Title: Distributed Computing Lab	Course Code: 14SCN26
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives

- To understand the main ideas and concepts on web services.
- Studying and working on a related topic of internet applications such as information hiding, system security and E-learning.
- To understand the concepts of UDDI, SOAP, JMS remote procedure calls.

LIST OF EXPERIMENTS:

Note: Use appropriate tools/language to implement the following experiment:

1. Design and implement client server application using RMI (Remote Method Invocation) to invoke a service to calculate the income tax.
2. Design and implement EJB (Entity Java Beans) session bean business logic to calculate income tax and invoke the service using stub, i.e., client side proxy object.
3. Design and implement an EJB entity bean to persist the client submitted data into an enterprise information system.
4. Design and implement an offline database communication system using JMS (Java Message Service) to service the client request.
5. Design and implement the client code to call the Micro soft service like free service from UDDI (Universal Description Discovery Protocol).
6. Design and implement business logic and bind it as service using SOAP (Simple Object Access Protocol), also implement client to call service.

NOTE: Use EJB 3.X or any equivalent tool.

COURSE OUTCOMES:

The student will be able to

- Develop and debug RPC based client-Server programs in UNIX.
- Realize the partial implementation of UDDI, SOAP, JMS in Web applications.

Semester IV

Year: 2014-2015

Course Title: Client-Server Programming	Course Code: 14SCN41
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand **Client-Server software**, Context Switching and Protocol Software, I/o.
- To understand System Calls, Basic I/O Functions available in UNIX
- To understand the Socket interface, TCP, UDP in detail.
- Various client software applications and their issues.
- To understand the concept of Socket interface in client server programming.

TOPICS:

MODULE I

The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts
Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. **Program Interface to Protocols:** Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP. **10 Hours**

MODULE II

The Socket Interface: Introduction, Berkeley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. **Algorithms and Issues in Client Software Design:** Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability. **10 Hours**

MODULE III

Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays,

A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.

10 Hours

MODULE IV

Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.

10 Hours

MODULE V

Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. **Iterative, Connection-Oriented Servers (TCP):** Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability.

Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.

10 Hours

LABORATORY WORK:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connectionless server and demonstrate its functioning.
2. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connection-oriented server and demonstrate its functioning.
3. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple concurrent connection-oriented server and demonstrate its functioning.
4. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple Day / Time Server and demonstrate its functioning.
5. Design, develop, and execute a program using JAVA networking facilities to implement a simple Day / Time Server and demonstrate its functioning. Repeat the above problems.

COURSE OUTCOMES

The student will be able to:

- Gain in depth knowledge about Client-Server software, Context Switching and Protocol Software, I/o.
- Programming System Calls, Basic I/O Functions available in UNIX
- Gain the knowledge on Socket interface, TCP, UDP in details.
- Pros and cons of Client Software Various applications and their issues.

TEXT BOOK:

1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001

Course Title: Analysis of Computer Networks	Course Code: 14SCN421
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To Become familiar with the concepts of computer networks
- What is a computer network and what are the fundamental protocols.
- To analyze network architectures in stochastic and deterministic way.
- RSVP, Principles of TCP
- To explore more on different network protocols.
- To understand the knowledge of multiplexing, streaming sessions in computer network.

TOPICS:**MODULE I**

Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.

10 Hours**MODULE II**

Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

10 Hours**MODULE III**

Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

10 Hours**MODULE IV**

Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

10 Hours**MODULE V**

Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

10 Hours**Course Outcomes:**

On completion, student will be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.

TEXT BOOKS:

1. Anurag Kumar, D. Manjunath, Joy Kuri: Communication Networking An Analytical Approach, Elsevier, 2004.

REFERENCE BOOKS:

1. M. Schwartz: Broadband Integrated Networks, Prentice Hall PTR, 1996.

2. J. Walrand, P. Varaiya: High Performance Communication Networks, 2nd Edition, Morgan Kaufmann, 1999

Semester IV

Year:2014-2015

Course Title: Service Oriented Architecture	Course Code: 14SCN422
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand various architecture for application development
- To understand the importance of SOA in Application Integration
- To learn web service and SOA related tools.
- To learn the concepts of SOA governance.

Topics:

MODULE I

SOA BASICS: Software Architecture – Types of IT Architecture – S OA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architec ture – Enterprise Applications – Solution Architect ure for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models

10 Hours

MODULE II

SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Ac tivity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits o f SPA – Cost Savings

10 Hours

MODULE III

SOA GOVERNANCE :SOA implementation and Governance – strategy – SOA d evelopment – SOA governance – trends in SOA – event-driven architect ure – software s a service – SOA technologies – pro of-of-concept – process orchestration – SOA best practice s

10 Hours

MODULE IV

SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL, SOAP and Java/XML mapping in SOA – JAXB Data binding.

10 Hours

MODULE V

APPLICATION INTEGRATION: JAX-WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study – WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Compare the different IT architecture
- Analysis and design of SOA based applications
- Implementation of web service and realization of SOA
- Implementation of RESTful services
- Design and implementation of SOA based Application Integration using BPEL

Text Book:

1. Shankar Kambhampaly, “Service-Oriented Architecture for Enterprise Applications”, Wiley 2008.

REFERENCES:

2. Mark D. Hansen, “SOA using Java Web Services”, Practice Hall, 2007.
3. Waseem Roshen, “SOA-Based Enterprise Integration”, Tata McGraw-HILL, 2009.

Semester IV

Year: 2014-2015

Course Title: Mobile Application Development	Course Code: 14SCN423
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To Understand system requirements for mobile applications
- To Generate suitable design using specific mobile development frameworks
- To Generate mobile application design
- To Implement the design using specific mobile development frameworks
- To acquire knowledge of android applications development.

Topics:

MODULE I

Introduction to mobile communication and computing:, Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover

and security. Smart phone operating systems and smart phones applications.

10 Hours

MODULE II

Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator, The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control .

10 Hours

MODULE III

The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control Building Blocks for Android Application Design, Laying Out Controls in Containers, Utilizing Resources and Media, Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments

10 Hours

MODULE IV

Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments Advanced Android Programming: Internet, Entertainment, and Services, Implementing drawing and animations,

10 Hours

MODULE V

Displaying web pages and maps, communicating with sms and emails,. creating and using content providers: Creating and consuming services, Publishing android applications.

10 Hours

Course Outcomes:

The student will be able to:

- Describe the requirements for mobile applications
- Explain the challenges in mobile application design and development
- Develop and design for mobile applications for specific requirements
- Implement the design using Android SDK
- Implement the design using Objective C and iOS

Text Books:

1. Mobile Computing: Technologies and Applications- N. N. Jani S chand,2009.
2. B.M.Hirwani- Android programming Pearson publications-2013

Course Title: Cybercrime and Digital Forensic	Course Code: 14SCN424
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To understand Accounting Forensics
- To analyze the nature and effect of cyber crime in society.
- To understand Sarbanes-Oxley Financial and Accounting Disclosure Information
- To understand Computer Crime and Criminals
- To understand Liturgical Procedures

Topics:**MODULE I**

INTRODUCTION: Introduction and Overview of Cyber Crime, Nature and Scope of Cyber Crime, Types of Cyber Crime: Social Engineering, Categories of Cyber Crime, Property Cyber Crime.

10 Hours**MODULE II**

CYBER CRIME ISSUES: Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks, Pornography, Software Piracy, Intellectual Property, Mail Bombs, Exploitation, Stalking and Obscenity in Internet, Digital laws and legislation, Law Enforcement Roles and Responses.

10 Hours**MODULE III**

INVESTIGATION: Introduction to Cyber Crime Investigation, Investigation Tools, e-Discovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Hands on Case Studies. Encryption and Decryption Methods, Search and Seizure of Computers, Recovering Deleted Evidences, Password Cracking.

10 Hours**MODULE IV**

DIGITAL FORENSICS: Introduction to Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Audio Video Analysis, Windows System Forensics, Linux System Forensics, Network Forensics. **10 Hours**

MODULE V

LAWS AND ACTS: Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC , Electronic Communication Privacy ACT, Legal Policies.

10 Hours

Course Outcomes

The student will be able to:

- Understand financial and accounting forensics, and explain their role in preventing various forms of fraud.
- Distinguish various types of computer crime, and use computer forensic techniques to identify the digital fingerprints associated with criminal activities.
- Know how to apply forensic analysis tools to recover important evidence for identifying computer crime.
- Develop a custom computer forensic analysis tool.

		Lecture	Practical / Field Work		I.A.	Exam	
12SCN41	Evaluation of Project Phase – II	-	-	-	50	-	50
12SCN42	Evaluation of Project work – III	-	-	-	50	-	50
12SCN43	Project work evaluation and Viva-voce	-	-	03	-	100+100	200
	Total	-	-	03	100	200	300
Grand Total (I to IV Sem.) : 2400							

Note: Project work shall be continuously evaluated for phase I, phase II and after completion of the project.

Note:

* Lab Classes for any two core subjects are compulsory (practical will be evaluated for 20 marks and internal assessment for 30 marks. Lab journals should be maintained).

For the remaining two core subjects, it can be field work, assignment, tutorials.

- 1) Project Phase – I : 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalize the topic of dissertation. Evaluation of the same shall be taken up during beginning of III Semester. Total Marks shall be 50. Colleges have to send the synopsis after Phase – I.
- 2) Project Phase – II: 16 weeks duration. 3 days for project work in a week during III Semester. Evaluation shall be taken during the first two weeks of the IV Semester. Total Marks shall be 50.
- 3) Project Phase– III: 24 weeks duration in IV Semester. Evaluation shall be taken up during the middle of IV Semester. Total Marks shall be 50. At the end of the Semester Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be 50 + 50 + 100 = 200 (50 marks for guide, 50 marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

The Marks of Project Phase – I shall be sent to the University along with III Semester I.A. Marks of other subjects.

The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.

- 4) During the final viva, students have to submit all the reports.
- 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (out of two external examiners at least one should be present).

ADVANCED DIGITAL COMMUNICATION

Subject Code: 12SCN11

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Digital Transmission Fundamentals: Digital Representation of Information: Block-Oriented Information, Stream Information; Why Digital Communications? Comparison of Analog and Digital Transmission , Basic properties of Digital Transmission Systems; Digital Representation of Analog Signals: Bandwidth of Analog Signals, Sampling of an Analog Signal, Digital Transmission of Analog Signals; Characterization of Communication

Channels: Frequency Domain Characterization, Time Domain Characterization;

Fundamental Limits in Digital Transmission: The Nyquist Signaling Rate, The Shannon Channel Capacity; Line Coding ; Modems and Digital Modulation: Binary Phase Modulation, QAM and Signal Constellations, Telephone Modem Standards; Properties of Media and Digital Transmission Systems: Twisted Pair, Coaxial Cable, Optical Fiber, Radio Transmission, Infrared Light; Error Detection and Correction: Error Detection, Two Dimensional Parity Checks, Internet Checksum, Polynomial Codes, Standardized Polynomial Codes, Error Detecting Capability of a Polynomial Code.

2. Brief Review of digital communication systems: Elements of Digital communication systems; Communication channels and their characteristics; Historical perspective in the development of digital communication; Review of the features of a decreases memory less channel and the channel capacity theorem

3. Wave form Coding Techniques: PCM, Channel. Noise and error probability, DPCM, DM, coding speech at low bit rates, Applications.

4. Base band Shaping for data transmission: Discrete PAM signals, Inter-symbol interference (ISI) Nyquist criterion for distortion-less Base band binary transmission, correlative coding, Eye-pattern, transmission, correlative coding, Eye-patterns Based and M-ary PAM system, Adaptive Equalization, The zero forcing algorithm, The LMA algorithm

TEXT BOOKS:

1. Alberto Leon – Garcia and Indra Widjaja: Communication Networks – Fundamental Concepts and Key architectures, 2nd Edition, Tata McGrawHill, 2006.
2. Simon Haykin: Digital Communication, Wiley India, 2007.

REFERENCE BOOKS:

1. John G Proakis: Digital Communications, 3rd Edition, McGraw Hill, 2008.
2. Leon W Couch: Analog / Digital Communication, 5th Edition, PHI, 2008.

COMPUTER NETWORKS

Subject Code: 12SCN12

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Review of Basic Concepts: Building a Network; Requirements- Connectivity, Cost-Effective Resource Sharing, Support for Common Services; Network Architecture- Layering and Protocols, OSI Architecture, Internet Architecture; Performance- Bandwidth and Latency, Delay× Bandwidth Product, High-Speed Networks.

2. Direct link networks: Hardware Building Blocks-nodes, links; error Detection- Two-Dimensional Parity, Internet checksum Algorithm, cyclic Redundancy Check; reliable Transmission- Stop-and-Wait, Sliding Window, Concurrent Logical Channels; Rings (802.5, FDDI) –Token Ring Media Access Control, Token Ring Maintenance, FDDI.

3. Packet Switching: Switching and forwarding – Datagrams, Virtual Circuit Switching, Source Routing; Bridges and LAN Switches – Learning Bridges, Spanning Tree Algorithm, Broadcast and Multicast, Limitations of Bridges; cell switching (ATM) – Cells, Segmentation and Reassembly, Virtual Paths, Physical Layers for ATM.

4. Internetworking: Simple internetworking (IP) – What Is an Internetwork?, Service Model, Global Address, Datagram Forwarding in IP, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels; Routing – Network as a Graph, distance Vector(RIP), Link State(OSPF), Metrics, Routing for Mobile Hosts, Global Internet – Subnetting, Classless Routing(CIDR), Interdomain Routing(BGP), Routing Areas, IP Version 6(IPv6).

5. End –to-End Protocols: Simple demultiplexer (UDP); Reliable byte stream (TCP) – End-to-End Issues, Segment Format, Connection Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Alternative Design Choices.

6. Congestion Control and Resource Allocation: Issues in resource allocation – Network Model, Taxonomy, Evaluation Criteria; Queuing discipline – FIFO, Fair Queuing; TCP Congestion Control – Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery; Congestion-Avoidance mechanisms – DECbit, Random Early Detection (RED), Source-Based Congestion Control.

7. Applications: Traditional applications – Electronic Mail (SMTP, MIME, IMAP), World Wide Web (HTTP), Name Service (DNS), Network management (SNMP); Web services – Custom APPLICATION Protocols (WSDL, SOAP), A Generic application Protocol (REST).

Laboratory Work:

Using any Protocol Analyzer like Ethereal, perform the following experiments:

1. Capture the packets that are transmitted after clicking on the URL of the web site of your college. Analyze the packets at the highest level and prepare a brief report of your analysis.
2. Analyze the data captured above at lower levels and demonstrate the layering of the protocols.
3. Capture the packets in the LAN, & filter for a unique subscriber
4. Capture the ARP packets and find the MAC addresses in the LAN in your laboratory.

Using either NS228/OPNET or any other suitable simulator, perform the following experiments:

1. Simulate an Ethernet LAN using 10 nodes, change error rate and data rate, and compare throughput
2. Simulate a three nodes point-to-point network with duplex links between them. Set the queue size and vary the bandwidth and find the number of packets dropped.
3. Simulate the transmission of ping messages over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion.
4. Simulate an Ethernet LAN using n nodes and set multiple traffic nodes and plot congestion window for different source / destination.

Implement the following in C/C++:

1. Write a program for distance vector algorithm to find suitable path for transmission.
2. Write a program for error detecting code using CRC-CCITT (16-bit)
3. Write a program for congestion control using leaky bucket algorithm.

NETWORK PROGRAMMING

Subject Code: 12SCN13

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Review of Basic Concepts:** Layering, OSI model, Processes, A simplified model, Client-Server model, A history of Unix Networking; Review of TCP/IP.
- 2. Sockets:** Introduction, Unix domain protocols, socket addresses, elementary socket system calls, advanced socket system calls, reserved ports, stream pipes, passing file descriptions, socket options, asynchronous I/O, Input/Output Multiplexing, Out-of-Band data, sockets and signals, Internet superservers, socket implementation.
- 3. TFTP Protocol:** Introduction, protocol, security, data formats, connections, client user interface, UDP implementation, TCP implementation.
- 4. Remote Command Execution:** Introduction, Security issues, rcmd function and rshd server, rexec function and rexecd server.
- 5. Remote Login:** Introduction, Terminal line disciplines, pseudo terminal, terminal modes, control terminals rlogin overview, rlogin client, rlogin server.
- 6. JAVA Network Programming:** Introduction, Client-Server Computing, The InetAddress class, Serving multiple clients, Applet clients, Sending and receiving objects, Retrieving objects from Web servers, Datagram sockets.

TEXT BOOKS:

1. W. Richard Stevens: Unix Network Programming, PHI, 2001.
2. Y. Daniel Liang: Introduction to JAVA Programming, 6th Edition, Pearson, 2007.

REFERENCE BOOKS:

1. W. Richard Stevens: TCP/IP Illustrated, Volumes 1, 2, and 3, Pearson, 2000.

Laboratory Work:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple echo server and demonstrate its working. Both the server and client are to be connection-oriented and use TCP. The system works as follows: Client reads a line from the standard input and writes the line to the server; the server reads a line from its network input and echoes the line back to the client; the client reads the echoed line and prints it on its standard output.
2. Repeat the above experiment using UDP instead of TCP.
3. Repeat the Experiment 1 using JAVA network programming facilities.
4. Modify the above program such that the client sends an integer value supposed to represent the radius of a circle and the server is to compute and return the corresponding area.
5. Extend the above program such that the server responds to multiple clients.

Mini Project: Design, develop, and execute a program in C under UNIX / LINUX environment to implement any utility in TCP/IP suite like PING, TFTP etc.

Information Security

Subject Code: 12SCN14

IA Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

1. Introduction to Information Security: Introduction; What is security? Critical characteristics of information; NSTISSC security model; Approaches to information security implementation; The Security System Development Life Cycle; Information Security Terminology.

2. Planning for Security: Introduction; Information Security Policy, Standards, and Practices; The Information Security Blue Print.

3. Security Technology: Firewalls and VPNs: Introduction, Physical design, Firewalls, Protecting Remote Connections. Intrusion Detection, Access control and Other Security Tools: Introduction; Intrusion Detection Systems (IDS); Honey Pots, Honey Nets, and Padded cell systems; Scanning and Analysis Tools; Access Control Devices.

4. Information Security maintenance: Introduction; Security Management Models; The Maintenance Model.

5. Introduction to Network Security: Attacks, Services, and Mechanisms; Security Attacks; Security Services; A model for Internetwork Security; Internet Standards and RFCs; Wireless network security.

6. Cryptography: Conventional Encryption Principles and Algorithms; Cipher Block Modes of Operation; Location of encryption devices; Key distribution; Approaches to message authentication; Secure Hash functions and HMAC; Public Key Cryptography Principles and Algorithms; Digital Signatures; Key management.

7. Authentication Applications: Kerberos, X.509 Directory Authentication Service.

8. Electronic Mail Security: Pretty Good Privacy (PGP), S/MIME.

9. IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management.

10. Web Security: Web security requirements, Secure Socket layer (SSL) and Transport layer Security (TLS), Secure Electronic Transaction (SET).

11. Software: Introduction; Software flaws; Malware; Software-based attacks; Digital Rights Management;

TEXT BOOKS:

1. Michael E. Whitman and Herbert J. Mattord: Principles of Information Security, 2nd Edition, Cengage Learning, 2005.
2. William Stallings: Network Security Essentials Applications and Standards, Person, 2000.
3. Deven N. Shah: Information Security – Principles and Practice, Wiley India, 2009.

REFERENCE BOOKS:

1. Behrouz A. Forouzan: Cryptography and Network Security, Tata McGraw-Hill, 2007.

Elective I

12SCN151 C# and .Net

12SCN152 Stochastic Models and Applications

12SCN153 System Modeling and Simulation

12SCN154 Embedded Systems

C# and .Net

Subject Code: 12SCN151

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. The Philosophy of .NET: Understanding the Previous State of Affairs, The .NET Solution, The Building Block of the .NET Platform (CLR,CTS, and CLS), The Role of the.NET Base Class Libraries, What C# Brings to the Table, An Overview of.NET Binaries (aka Assemblies), the Role of the Common Intermediate Language , The Role of .NET Type Metadata, The Role of the Assembly Manifest, Compiling CIL to Platform –Specific Instructions, Understanding the Common Type System, Intrinsic CTS Data Types, Understanding the Common Languages Specification, Understanding the Common Language Runtime A tour of the.NET Namespaces, Increasing Your Namespace Nomenclature, Deploying the .NET Runtime.

2. Building C# Applications: The Role of the Command Line Compiler (csc.exe), Building C # Application using csc.exe Working with csc.exe Response Files, Generating Bug Reports , Remaining C# Compiler Options, The Command Line Debugger (cordbg.exe) Using the, Visual Studio .NET IDE, Other Key Aspects of the VS.NET IDE, C# “Preprocessor:” Directives, An Interesting Aside: The System. Environment Class

3. C# Language Fundamentals: The Anatomy of a Basic C# Class, Creating objects: Constructor Basics, The Composition of a C# Application, Default Assignment and Variable Scope, The C# Member Initialization Syntax, Basic Input and Output with the Console Class, Understanding Value Types and Reference Types, The Master Node: System, Object, The System Data Types (and C# Aliases),Converting Between Value Types and Reference Types: Boxing and Unboxing, Defining Program Constants, C# Iteration Constructs, C# Controls Flow Constructs, The Complete Set of C# Operators, Defining Custom Class Methods, Understating Static Methods, Methods Parameter Modifies, Array Manipulation in C #, String Manipulation in C#, C# Enumerations, Defining Structures in C#, Defining

Custom Namespaces.

4. Object- Oriented Programming with C#: Forms defining of the C# Class, Definition the “Default Public Interface” of a Type, Recapping the Pillars of OOP, The First Pillars: C#’s Encapsulation Services, Pseudo- Encapsulation: Creating Read-Only Fields, The Second Pillar: C#’s Inheritance Supports, keeping Family Secrets: The “Protected” Keyword, Nested Type Definitions, The Third Pillar: C #’s Polymorphic Support, Casting Between

5. Exceptions and Object Lifetime: Ode to Errors, Bugs, and Exceptions, The Role of .NET Exception Handling, the System, Exception Base Class, Throwing a Generic Exception, Catching Exception, CLR System – Level Exception (System. System Exception), Custom Application- Level Exception (System. System Exception), Handling Multiple Exception, the Family Block, the Last Chance Exception. Dynamically Identifying Application and System Level Exception Debugging System Exception Using VS.NET, Understanding Object

Lifetime, the CIT of “new’, The Basics of Garbage Collection,, Finalization a Type, The Finalization Process, Building an Ad Hoc Destruction Method, Garbage Collection Optimizations, The System. GC Type.

6. Interfaces and Collections: Defining Interfaces Using C# Invoking Interface Members at the object Level, Exercising the Shapes Hierarchy, Understanding Explicit Interface Implementation, Interfaces As Polymorphic Agents, Building Interface Hierarchies, Implementing, Implementation, Interfaces Using VS .NET, understanding the IConvertible Interface, Building a Custom Enumerator(IEnumerable and Enumerator), Building Cloneable objects (ICloneable), Building Comparable Objects (IComparable), Exploring the system. Collections Namespace, Building a Custom Container (Retrofitting the Cars Type). Callback Interfaces, Delegates, and Events, Advanced Techniques Understanding Callback Interfaces, Understanding the .NET Delegate Type, Members of System. Multicast Delegate, The Simplest Possible Delegate Example, Building More a Elaborate Delegate Example,

Understanding Asynchronous Delegates, Understanding (and Using)Events. The Advances Keywords of C#, A Catalog of C# Keywords Building a Custom Indexer, A Variation of the Cars Indexer Internal Representation of Type Indexer. Using C# Indexer

from VB.NET. Overloading operators, The Internal Representation of Overloading Operators,

interacting with Overload Operator from Overloaded- Operator- Challenged Languages, Creating Custom, Conversion Routines, Defining Implicit Conversion Routines, The Internal\Representations of Customs Conversion Routines

7. Understanding .NET Assemblies: Problems with Classic COM Binaries, An Overview of .NET Assembly, Building a Simple File Test Assembly, A C#, Client Application, A Visual Basic .NET Client Application, Cross Language Inheritance, Exploring the CarLibrary's, Manifest, Exploring the CarLibrary's Types, Building the Multifile Assembly ,Using Assembly, Understanding Private Assemblies, Probing for Private Assemblies (The Basics), Private A Assemblies XML Configurations Files, Probing for Private Assemblies (The Details),Understanding Shared Assembly, Understanding Shared Names, Building a Shared Assembly, Understanding Delay Signing, Installing/Removing Shared Assembly, Using a Shared Assembly.

TEXT BOOKS:

1. Andrew Troelsen: Programming C# with .NET 3.0, 4th Edition, Wiley India, 2009.
2. E. Balagurusamy: Programming in C#, 2nd Edition, Tata McGraw Hill, 2008.

REFERENCE BOOKS:

1. Tom Archer: Inside C#, WP Publishers, 2001.
2. Herbert Schildt: C# - The Complete Reference, Tata McGraw Hill, 2004.

STOCHASTIC MODELS AND APPLICATIONS

Subject Code: 12SCN152

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: A Speech Recognition System, A Radar System, A Communication Network.

2. Introduction to Probability Theory: Experiments, Sample Spaces, and Events, Axioms of Probability, Assigning Probabilities, Joint and Conditional Probabilities, Bayes's Theorem, independence, Discrete random Variables, Engineering Application: An Optimal Communication System

3. Random variables, Distributions, and Density Functions: The Cumulative Distribution Function, The Probability Density Function, The Gaussian Random Variable, Other Important Random Variables, Conditional Distribution and Density Functions, Engineering Application: Reliability and Failure Rates

4. Random Processes: Definition and Classification of Processes, Mathematical Tools for Studying Random Processes, Stationary and Ergodic Random Processes, Properties of the Autocorrelation Function, Gaussian random Processes, Poisson Processes, Engineering Application: Shot Noise in a p-n Junction Diode

5. Markov Processes: Definition and Examples of Markov Processes, Calculating Transition and State Probabilities in Markov Chains, Characterization of Markov Chains, Continuous Time Markov Processes, Engineering Application: A Telephone Exchange

6. Poisson Processes, Queuing Theory: The non-stationary Poisson process; The stationary Poisson process; Some Poisson process computations; Classifying the events of a non-stationary Poisson process; Conditional distribution of the arrival times. Queuing Theory: Introduction; Preliminaries; Exponential models; Birth-and-Death exponential queuing systems; The backwards approach in exponential queues; A closed queuing network; An open queuing network; The M/G/1 queue; Priority queues.

7. Simulation Techniques: Computer Generation of Random Variables, Generation of Random Processes, Simulation of Rare Events, Engineering Application: Simulation of a Coded Digital Communication System.

TEXT BOOKS:

1. Scott L. Miller, Donald G. Childers: Probability and Random Processes With Applications to Signal Processing and Communications, Elsevier, 2004.
2. Sheldon M. Ross: Probability Models for Computer Science, Elsevier, 2002.

REFERENCE BOOKS:

1. R. W. Wolff: "Stochastic Modeling and Queuing Theory", Prentice Hall, 1989.
2. B. R. Bhat: "Stochastic Models Analysis and Applications", New Age International, 2000.

SYSTEM MODELING AND SIMULATION

Subject Code: 12SCN153

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: When simulation is the appropriate tool and when it is not appropriate; Advantages and disadvantages of Simulation; Areas of application; Some recent applications of Simulation; Systems and system environment; Components of a system; Discrete and continuous systems; Model of a system; Types of Models; Discrete-Event System Simulation; Steps in a Simulation Study.

2. General Principles: Concepts in Discrete-Event Simulation, List processing.

3. Statistical Models in Simulation: Review of terminology and concepts; Useful statistical models; Discrete distributions; Continuous distributions; Poisson process; Empirical distributions.

4. Queuing Models: Characteristics of queuing systems; Queuing notation; Long-run measures of performance of queuing systems; Steady-state behavior of M/G/1 queue; Networks of queues.

5. Random-Number Generation, Random-Variate Generation: Properties of random numbers; Generation of pseudo-random numbers; Techniques for generating random numbers; Tests for Random Numbers

Random-Variate Generation: Inverse transform technique; Acceptance-Rejection technique; Special properties.

6. Input Modeling: Data Collection; Identifying the distribution with data; Parameter estimation; Goodness of Fit Tests; Fitting a non-stationary Poisson process; Selecting input models without data; Multivariate and Time-Series input models.

7. Verification, Calibration, and Validation of Simulation Models: Model building, verification, and validation; Verification of simulation models; Calibration and validation of

models. Optimization via Simulation

8. Estimation of Absolute Performance: Types of simulations with respect to output analysis; Stochastic nature of output data; Absolute measures of performance and their estimation; Output analysis for terminating simulations; Output analysis for steady-state simulations.

9. Case Study: Simulation of networked computer systems.

TEXT BOOKS:

1. Jerry Banks, John S. Carson II, Barry L. Nelson, David M. Nicol: Discrete-Event System Simulation, 5th Edition, Pearson Education, 2010.

REFERENCE BOOKS:

1. Lawrence M. Leemis, Stephen K. Park: "Discrete – Event Simulation: A First Course", Pearson Education, 2006.
2. Averill M. "Law: Simulation Modeling and Analysis", 4th Edition", Tata McGraw-Hill, 2007.

EMBEDDED SYSTEMS

Subject Code : 12SCN154

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

- 1. Custom single-purpose processor design;** RT level custom single-purpose processor design, optimizing custom single-purpose processors: Optimizing the original program, optimizing the FSM, Optimizing the data path, optimizing the FSM.
- 2. Timers, counters, and watchdog timers. State machine models:** introduction; An introductory example, A basic state machine model: finite-state machines(FSM);finite-state machines with data path model (FSMD);using state machines: Describing a system as a state machine, Comparing state machine and sequential program models, Capturing a state machine model in a sequential programming language; hierarchical/concurrent state machine model (HCFSM) and the state charts language; program state machine model(PSM);The role of an appropriate model and language.
- 3. Concurrent process models: concurrent processes:** process create and terminate ,process suspend and resume, Process join; Communication among processes: shared memory, Message passing; synchronization among processes: Condition variables, monitors. Interrupts: interrupt Basics; The Shared Data Problem; interrupt latency
- 4. Survey of Software Architecture:** Round Robin, Round Robin with interrupts, Function queue scheduling architecture, Real time operating system architecture, selecting architecture. Introduction to RTOS: Tasks and task states, tasks and Data, semaphores and shared data.
- 5. Operating systems services:** Message queues, mailboxes, and pipes; Timer functions; Events; memory management, Interrupt routines in an RTOS environment. Basic design using an RTOS; Overview, principles, an example, encapsulating semaphores and queues, Hard Real-time scheduling considerations, saving power.

6. **Embedded software development tools:** Host and target machines; Linker/locator for Embedded software, getting embedded software into the target system. Debugging Techniques: Testing on host machine, instruction set simulators, macros and tools.
7. **An example system:** what the program does, environment in which the program operates.

Text Books:

1. Embedded system design : A unified Hardware/software introduction – Frank Vahid, Tony Givargis, John Wiley and Sons, Inc. 2002 (Articles : 2.4, 2.5, 2.6; 4.2, 8.3 to 8.13)
2. An Embedded software Primer – David E. Simon; Pearson Education, 1999. (Chapters: 4, 5, 6, 7, 8, 9, 10 and 11)

Reference books:

1. Embedded C: Michael J. Pont, Pearson Education (2002)
2. Real-Time systems and programming languages : Alan Burns and Andy Wellings, Addison Wesley-Longman (1997)
3. Real Time programming: A guide to 32 bit embedded development, Grehan, Moore and Cyliax, Addison-Wesley-longman.

WIRELESS & MOBILE NETWORKS

Subject Code: 12SCN21

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction to Wireless Communication Systems: Evolution of Mobile Radio Communications Mobil Radio Systems around the world examples of Wireless Communication Systems, Paging System, Cordless Telephone System. Cellular Telephone Systems, Comparison of Common Wireless Communications Systems

2. Wireless Communications Modern Systems: Second generation (2G), Cellular Networks, evolution of 2.5G, TDMA Standards, Third Generation (3G) Wireless Networks, Wireless Local Loop (WLL) and LMDS, Wireless Local Area Networks (WLANs), Bluetooth and Personal Area Networks (PANS)

3. The Cellular Concept: System Design Fundamentals, Introduction, Frequency reuse, channel assignment strategies, handoff strategies – prioritizing handoffs, Practical Handoff considerations, Interference and system capacity, co-channel interference and system capacity, channel planning for wireless systems, adjacent channel interference, power control for reducing interference

4. Mobile Radio Propagation: Introduction to radio wave propagation, Free space propagation model, Relating power to electric field, Reflection, Diffraction, Scattering.

5. Modulation Techniques for Mobile Radio: Frequency modulation Vs amplitude modulation, Amplitude modulation, Angle modulation, Digital Modulation, Linear Modulation techniques – Binary phases shift keying (BPSK), Differential Phase Shift Keying (DPSK), Quadrature Phase Shift Keying (QPSK), Constant envelope modulation – Binary Frequency Shift Keying, Minimum Shift Keying (MSK), Gaussian Minimum Shift Keying (GMSK).

6. Multiple Access Techniques for Wireless Communications: Introduction to Multiple access, Frequency Division Multiple Access (FDMA), Time Division Multiple

Access (TDMA), Spread Spectrum Multiple Access, Space Division Multiple Access (SDMA), Packet Radio. Protocols, Reservation Protocols – Reservation ALOHA, Packet Reservation Multiple Access (PRMA), Capacity of cellular systems

7. Wireless Networking: Introduction, Difference between Wireless and Fixed Telephone Networks, Development of Wireless Networks, First generation, second generation, third generation.

Laboratory Work:

1. Using any package like MATLAB or using any programming language of your choice, implement the BPSK algorithm and study its performance.
2. Repeat the above experiment for QPSK algorithm and compare its performance with that of BPSK.
3. Using any Network simulation package or using any programming language of your choice, implement and study the performance of PRMA.

Mini Project: Using any platform like ANDROID, J2ME etc, implement any mobile application like Location Based Services, Emergency Services, Remote Monitoring etc.

TEXT BOOKS:

1. Theodore S Rappaport: Wireless Communications, Principles and Practice, 2nd Edition, Pearson Education Asia, 2002.

REFERENCE BOOKS:

1. William C Y Lee: Mobile Communications Engineering Theory and Applications, 2nd Edition, McGraw Hill Telecommunications 1998.
2. William Stallings: Wireless Communications and Networks, Pearson Education Asia, 2002.

CLIENT-SERVER PROGRAMMING

Subject Code: 12SCN22

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. The Client Server Model and Software Design:** Introduction, Motivation, Terminology and Concepts
- 2. Concurrent Processing in Client-Server software:** Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O.
- 3. Program Interface to Protocols:** Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP.
- 4. The Socket Interface:** Introduction, Berkley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters.
- 5. Algorithms and Issues in Client Software Design:** Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using

UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability.

6. Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays, A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.

7. Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.

8. Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server.

9. Iterative, Connection-Oriented Servers (TCP): Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability.

10. Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes

Laboratory Work:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connectionless server and demonstrate its functioning.
2. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connection-oriented server and demonstrate its functioning.
3. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple concurrent connection-oriented server and demonstrate its functioning.
4. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple Day / Time Server and demonstrate its functioning.
5. Repeat the above problems using JAVA networking facilities.

TEXT BOOK:

1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001.

OPTICAL NETWORKS

Subject Code: 12SCN23

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: Three generations of Digital Transport Networks; A brief introduction to WDM and TDM; The Optical Marketplace; Wireless Optical Systems; Key Optical Nodes; Other Key Terms; Evolution of Optical Systems; Key attributes of Optical Fiber.

2. Telecommunications Infrastructure: The Local Connections; The Backbone Connections; The Digital Multiplexing Hierarchy; The Digital Signaling Hierarchies; T1 / DS1 and T3 / DS3; The Layered Protocol Model in the Transport Network; considerations for Interworking Layer1, Layer 2, and Layer 3 Networks.

3. Characteristics of Optical Fiber: The Basics; The Wavelength; The Basic Components; Structure of the Fiber; Fiber Types; Key Performance Properties of Fiber; Attenuation; Amplifier Spontaneous Emission; Chromatic Dispersion; Lasers.

4. Timing and Synchronization: Timing and Synchronization in Digital Networks; Effect of a Timing error; The Clocking Signal; Types of Timing in Networks; Timing Variations; Methods of Clock Exchange; Distribution of Timing Using SONET and DS1; Timing Downstream Devices; Building Integrated Timing Supply; Synchronization Status Messages and Timing Loops.

5. SONET and SDH: Introduction; The SONET Multiplexing Hierarchy; SONET and SDH Multiplexing Structure; The SONET / SDH Frame Structure; SONET and SDH Functional Components; SONET and SDH Problem Detection; Locating and Adjusting Payload with Pointers; Virtual Tributaries in more detail; Virtual Tributaries in Virtual Containers; The Overhead Bytes; SONET and SDH Concatenation.

6. Architecture of Optical Transport Networks: The Digital Wrapper; Control Planes; In-Band and Out-Band Control Signaling; Importance of Multiplexing and Multiplexing Hierarchies; Current Digital Transport Hierarchy; SONET Multiplexing Hierarchy; SDH

Multiplexing Hierarchy; Key Indexes and Other Terms; The New Optical Transport and Digital Transport Hierarchy; The OTN Layered Model; Encapsulation and Decapsulation Operations; Generic Framing Procedure

7. WDM: The WDM Operation; DWDM, TDM and WDM Topologies; Relationship of WDM to SONET / SDH; EDF; WDM Amplifiers; Add-Drop Multiplexers; WDM Cross-Connects; Wavelength Continuity Property; Examples of DWDM Wavelength Plan; Higher Dispersion for DWDM; Tunable DWDM Lasers.

8. Network Topologies and Protection Schemes: The Non-Negotiable Requirement Robust Networks; Diversity in the Network; Line and Path Protection Switching; Types of Topologies; Working and Protection Fibers; Point-to-Point Topology; BLSR; Protection Switching on Four-Fiber BLSR; Meshed Topologies; PONs; Ethernet in the Wide Area Backbone? Metro Optical Networking

9. MPLS and Optical Networks: Label Switching; FEC; Types of MPLS Nodes; Label Distribution and Binding; Label Switching and Traffic Forwarding; MPLS Support of VPNs; MPLS Traffic Engineering; Multiprotocol Lambda Switching; MPLS and Optical TE Similarities; Possibilities for the MPIS Network; Control and Data Planes Interworking

10. Architecture of IP and MPLS-Based OTNs: IP, MPLS, and Optical Control Planes; Interworking the three Control Planes; Management of the Planes; A Framework for the IP over Optical Networks; An Opposing View; Generalized MPLS use in Optical Networks; Bi-Directional LSPs in Optical Networks; GMPLS Extensions for G.709; GMPLS with SONET and SDH.

11. The Link Management Protocol: Keep the Optical Link up and running; What is managed? Data-bearing Links; Clarification of terms; Basic functions of LMP; Control Channel Management; Link Property Correlation; Fault Management; Extending LMP operations for Optical Link Systems.

12. Optical Routers: Optical Switching; Implementation Preferences; Key Terms;

Evolution of Switching Networks; Optical Router; Optical Switching Technologies; Optical Resources; Protecting the Label Switched Paths; Protection of the OSP; Wavelength OSP and MPLS LSP; Nesting the LSPs and OSPs; Topologies for a Node Failure; Plane Coupling 31

and De-Coupling; Some End-to-End Wavelengths and Node-to-Node Wavelengths; Granularity of Labels versus Wavelength Support; Approach to the Problem of LSP and OSP Interworking; MEMS and Optical Switching; Thermo-Optic Switches.

13. ASON Operation at the UNI and NNI: Objectives of ASON; UNI and NNI; Managing the Optical Bandwidth in the ASON; General approach to Optical Bandwidth Management; IETF Optical Carrier Framework for the UNI; Types of Connections; NNI; UNI and NNI Signaling Services.

14. ATM versus IP in Optical Internets: IP over ATM over SONET; The OSI and Internet Layered Models; ATM in the SONET / SDH Payload Envelope; PPP in the SONET Payload Envelope; Encapsulation / Framing Rules; The PPP Packet; The ATM versus IP; Overhead of IP and ATM; Three encapsulation methods

15. Evolving to 3G Architecture: Migration of IP Optical Networking; IP and the Optical Backbones; Placing MPLS into the Picture; Putting it together.

TEXT BOOKS:

1. Uyles Black: Optical Networks, Pearson Education Asia, 2002.

REFERENCE BOOKS:

1. Rajiv Ramaswami and Kumar N.Sivaranjan: Optical Networks - A Practical Perspective, Morgan Kaufmann, 2000.
2. Paul E.Green Jr.: Fiber Optic Network, Prentice Hall, 1993.
3. Jeff Hecht: Understanding Fiber Optics, 4th Edition, PHI 1999.

SWITCHING & STATISTICAL MULTIPLEXING IN TELECOMMUNICATIONS

Subject Code: 12SCN24

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks
- 2. Why Digital?** Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks.
- 3. Switching:** Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization
- 4. Electronic Space Division Switching:** Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks.
- 5. Digital Transmission and Multiplexing:** Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoder, Pulse Transmission, Line Coding, Time Division Multiplexing.
- 6. Time Division Switching:** Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching.
- 7. Traffic Engineering:** Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems.

TEXT BOOKS:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Elective – II

12SCN251	Distributed systems
12SCN252	Computer Systems Performance Analysis
12SCN253	Web Engineering
12SCN254	Cloud Computing
12SCN255	Web Commerce

DISTRIBUTED SYSTEMS

Subject Code: 12SCN251

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Characterization of Distributed Systems and System Models:** Introduction, Examples of distributed systems, Resource sharing and the Web, Challenges, Architectural models, Fundamental models.
- 2. Networking and Internetworking:** Types of Networks, Networks principles, Internet protocols
- 3. Interprocess Communication:** Introduction, The API for the Internet protocols, External data representation and marshalling, Client -Server communication, Group communication, Case study: Interprocess communication in UNIX
- 4. Distributed Objects and Remote Invocation:** Communication between distributed objects, Remote procedure call, events and notifications
- 5. Operating System Support and Security:** The Operating system layer, protection, processes and threads, communication and invocation, operating system architecture
- 6. Transactions and Concurrency Control:** Transactions, nested transactions, locks, Optimistic concurrency control, timestamp ordering, comparison of methods for concurrency control.
- 7. Distributed Shared Memory:** Design and Implementation issues, sequential consistency and lvy.

TEXT BOOKS:

1. George Coulouris, Jean Dollimore, Tim Kindberg: Distributed Systems, Concept and Design, 3rd Edition, Pearson Education, 2005.

REFERENCE BOOKS:

1. Sukumar Ghosh: Distributed Systems, An Algorithmic Approach, Chapman & Hall / CRC, 2007.
2. Pradeep K. Sinha: Distributed Operating Systems, Concepts and Design, PHI, 2007.
3. Randy Chow, Theodore Johnson: Distributed Operating Systems and Algorithm Analysis, Pearson, 2009.

COMPUTER SYSTEMS PERFORMANCE ANALYSIS

Subject Code: 12SCN252

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: The art of Performance Evaluation; Common mistakes in Performance Evaluation; A systematic approach to Performance Evaluation; Selecting an evaluation technique; Selecting performance metrics; Commonly used performance metrics; Utility classification of performance metrics; Setting performance requirements.

2. Workloads, Workload Selection and Characterization: Types of workloads: addition instructions; Instruction mixes; Kernels; Synthetic programs; Application benchmarks; Popular benchmarks. Work load selection: Services exercised; Level of detail; Representativeness; Timeliness; Other considerations in workload selection.

Work load characterization techniques: Terminology; Averaging; Specifying dispersion; Single-parameter histograms; Multi-parameter histograms; Principle-component analysis; Markov models; Clustering.

3. Monitors, Program Execution Monitors, and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors; Software versus hardware monitors; Firmware and hybrid monitors; Distributed system monitors. Program execution monitors and accounting logs: Program execution monitors; Techniques for improving program performance; Accounting logs; Analysis and interpretation of accounting log data; Using accounting logs to answer commonly asked questions.

4. Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in capacity planning; Common mistakes in benchmarking; Benchmarking games; Load drivers; Remote-terminal emulation; Components of an RTE; Limitations of RTEs

5. Experimental Design and Analysis: Introduction: Terminology; Common mistakes in experiments; Types of experimental designs. 2k Factorial Designs: Concepts; Computation of effects; Sign table method for computing effects; Allocation of variance; General 2k

Factorial Designs. General full factorial designs with k factors: Model; Analysis of a general design; Informal methods.

6. Queuing Models: Introduction: Queuing notation; Rules for all Queues; Little's law; Types of stochastic processes. Analysis of Single Queue: Birth-Death processes; M / M / 1 Queue; M / M / m Queue; M / M / m / B Queue with finite buffers; Results for other M / M / 1 Queuing Systems.

Queuing Networks: Open and closed Queuing Networks; Product form networks;

Queuing Network models of Computer Systems. Operational Laws: Utilization law; Forced flow law; Little's law; General response time law; Interactive response time law; Bottleneck analysis. Mean Value analysis and related techniques: Analysis of open queuing networks; Mean value analysis; Approximate MVA; Balanced job bounds.

Convolution Algorithm: Distribution of jobs in a system; Convolution algorithm for computing G(N); Computing performance using G(N); Timesharing systems. Hierarchical decomposition of Large Queuing Networks: Load-dependent service centers; Hierarchical decomposition; Limitations of Queuing Theory.

TEXT BOOKS:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2007.

WEB ENGINEERING

Subject Code: 12SCN253

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Motivation, Categories of web applications, Characteristics of web applications.
- 2. Requirements Engineering:** Introduction, Fundamentals, RE specifics in web engineering, Principles of RE for web applications, Adapting RE methods to web application development, Outlook.
- 3. Modeling Web Application:** Introduction, Fundamentals, Modeling specifics in web engineering, Modeling requirements, Content modeling, Hypertext modeling, Presentation modeling, Customization modeling, Methods and tools, Outlook.
- 4. Web Application Architectures:** Introduction, Fundamentals, Specifics of web application architectures, Components of a generic web application architecture, Layered architectures, Data-aspect architectures.
- 5. Technology-Aware Web Application Design:** Introduction, Web design from an evolutionary perspective, Presentation design, Interaction design, Functional design, Outlook.
- 6. Technologies for Web Applications:** Introduction, Fundamentals, Client/Server communication on the web, Client side technologies, Document-specific technologies, Server-side technologies, Outlook.
- 7. Testing Web Applications:** Introduction, Fundamentals, Testing specifics in web engineering, Test approaches, Test scheme, Test methods and techniques, Test automation, Outlook.
- 8. Operation and Maintenance of Web Applications:** Introduction, Challenges following the launch of a web application, Content management, Usage analysis, Outlook.

- 9. Web Project Management:** From software project management to web project management, Challenges in web project management, Managing web teams, Managing the development process of a web application, Outlook.
- 10. The Web Application Development Process:** Motivation, Fundamentals, Requirements for a web application development process, Analysis of the rational unified process, Analysis of extreme programming, Outlook.
- 11. Usability of Web Applications:** Motivation, What is usability? What characterizes the usability of web applications? Design guidelines, Web usability engineering methods, Web usability engineering trends, Outlook.
- 12. Performance of Web Applications:** Introduction, What is performance? What characterizes performance of web applications, System definition and indicators, Characterizing the work load, Analytical techniques, Representing and interpreting results, Performance optimization methods, Outlook.
- 13. Security for web Applications:** Introduction, Aspects of security, Encryption, digital signatures, and certificates, Secure Client/Server interaction, Client security issues, Service provider security issues, Outlook.
- 14. The Semantic Web:** Fundamentals of the semantic web, Technological concepts, Specifics of semantic web applications, Tools, Outlook.

CLOUD COMPUTING

Subject Code: 12SCN254

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Business and IT perspective, Cloud and virtualization, Cloud services requirements, cloud and dynamic infrastructure, cloud computing characteristics, cloud adoption.
- 2. Cloud models:** Cloud characteristics, Measured Service, Cloud models, security in a public cloud, public versus private clouds, cloud infrastructure self service.
- 3. Cloud at a service:** Gamut of cloud solutions, principal technologies, cloud strategy, cloud design and implementation using SOA, Conceptual cloud model, cloud service demand.
- 4. Cloud solutions:** Cloud ecosystem, cloud business process management, cloud service management, cloud stack, computing on demand, cloud sourcing.
- 5. Cloud offerings:** Cloud analytics, Testing under cloud, information security, virtual desktop infrastructure, Storage cloud.
- 6. Cloud management:** Resiliency, Provisioning, Asset management, cloud governance, high availability and disaster recovery, charging models, usage reporting, billing and metering.
- 7. Cloud virtualization technology:** Virtualization defined, virtualization benefits, server virtualization, virtualization for x86 architecture, Hypervisor management software, Logical partitioning, VIO server, Virtual infrastructure requirements. Storage virtualization, storage area networks, network attached storage, cloud server virtualization, virtualized data center.
- 8. Cloud and SOA:** SOA journey to infrastructure, SOA and cloud, SOA defined, SOA defined, SOA and IAAS, SOA based cloud infrastructure steps, SOA business and IT services.

TEXT BOOKS:

1. Cloud Computing by Dr. Kumar Saurabh, Wiley India, 2011.

WEB-COMMERCE

Subject Code: 12SCN255

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. E-commerce in Indian business context:** Definition of e-commerce advantages of e-commerce, disadvantages of e-commerce, e-commerce opportunities for industries, e-transition challenges for Indian corporate.
- 2. Business models for e-commerce:** e-business models based on relationship of transaction parties – B2C, B2B, C2C and C2B; e-business models based on relationship of transaction types – Brokerage model, Aggregator model, Info-mediary model, community model, value chain model, advertising model, subscription model.
- 3. Enabling Technologies of www :** Internet client-server applications, Networks and Internets, IPV4, IPV6, Search Engines, software agents, Internet standards and specifications, ISP, Broadband technologies – types of broadband technology.
- 4. E-marketing:** Traditional marketing, identifying web-presence goods, Browsing behavior model, online marketing, e-advertising, e-branding, Marketing strategies.
- 5. E-payment Systems:** Main concerns in Internet banking, Digital payment, requirements, Digital token based e-payment systems, classification of new payment systems, Properties of e-cash, cheque payment on Internet, Risk of e-payment systems, Designing e-payment systems, digital signatures.
- 6. Other issues:** E-CRM solutions; e-supply chain management – strategic advantage, ESCM components; Information and Strategy – The virtual value chain, seven dimensions of e-commerce strategy.

Text Books

1. P.T. Joseph, S.J. *“E Commerce – and Indian perspective”* – Third edition, PHI 2010. Ch. 1,2,3,4,6 and related sections of 7,8 and 9 only.

NETWORK MANAGEMENT

Subject Code: 12SCN31

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards-Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology , Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management.
- 2. Basic Foundations: Standards, Models, and Language:** Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1- Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model
- 3. SNMPv1 Network Management:** Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model

- 4. SNMP Management – RMON:** Remote Monitoring, RMON SMI and MIB, RMON1-RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications.
- 5 . Broadband Network Management:** Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles.
- 6. Network Management Applications:** Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case-Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management.

Elective – III

12SCN321	Protocols Engineering
12SCN332	Advances in Digital image processing
12SCN323	Advances in Storage Area Networks

PROTOCOLS ENGINEERING

Subject Code: 12SCN321

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

- 1. Introduction:** Communication model, Communication Software, Communication Subsystems, Communication Protocol Definition/Representation, Formal and Informal Protocol Development Methods, Protocol Engineering Phases
- 2. Error Control, Flow Control:** Type of Transmission Errors, Linear Block Code, Cyclic Redundancy Checks, Introduction to Flow Control, Window Protocols, Sequence Numbers, Negative Acknowledgments, Congestion Avoidance
- 3. Network Reference Model:** Layered Architecture, Network Services and Interfaces, Protocol Functions: Encapsulation, Segmentation, Reassembly, Multiplexing, Addressing, OSI Model Layer Functions, TCP/IP Protocol Suite, Application Protocols.
- 4. Protocol Specification:** Components of specification, Service specification, Communication Service Specification Protocol entity specification: Sender, Receiver and Channel specification, Interface specifications, Interactions, Multimedia specifications, Alternating Bit Protocol Specification, RSVP specification.
- 5. Protocol Specification Language (SDL):** Salient Features. Communication System Description using SDL, Structure of SDL. Data types and communication paths, Examples of SDL based Protocol Specifications: Question and answer protocol, X-on-X-off protocol, Alternating bit protocol, Sliding window protocol specification, TCP protocol specification, SDL based platform for network, OSPF, BGP Multi Protocol Label Switching SDL components.
- 6. Protocol Verification / Validation:** Protocol Verification using FSM, ABP Verification, Protocol Design Errors, Deadlocks, Unspecified Reception, Non-executable Interactions, State Ambiguities, Protocol Validation Approaches: Perturbation Technique, Reachability Analysis, Fair Reachability Graphs, Process Algebra based Validation, SDL

Based Protocol Verification: ABP Verification, Liveness Properties, SDL Based Protocol

Validation: ABP Validation.

7. Protocol Conformance and Performance Testing: Conformance Testing

Methodology and Framework, Local and Distributed Conformance Test Architectures, Test Sequence Generation Methods: T, U, D and W methods, Distributed Architecture by Local Methods, Synchronizable Test Sequence, Conformance testing with Tree and Tabular Combined Notation (TTCN), Conformance Testing of RIP, Testing Multimedia Systems, quality of service test architecture(QOS), Performance Test methods, SDL Based Performance Testing of TCP, OSPF, Interoperability testing, Scalability testing protocol synthesis problem

8. Protocol Synthesis and Implementation: Synthesis methods, Interactive Synthesis Algorithm, Automatic Synthesis Algorithm, Automatic Synthesis of SDL from MSC, Protocol Re-synthesis, Requirements of Protocol Implementation, Objects Based Approach To Protocol Implementation, Protocol Compilers, Code generation from Estelle, LOTOS, SDL and CVOPS.

TEXT BOOKS:

TOPICS IN MULTIMEDIA COMMUNICATIONS

Subject Code: 12SCN322

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

- 1. Introduction to Multimedia Communications:** Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework.
- 2. Framework for Multimedia Standardization:** Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards.
- 3. Application Layer:** Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access.
- 4. Middleware Layer:** Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution.
- 5. Network Layer:** Introduction, QoS in Network Multimedia Systems.

TEXT BOOKS:

ADVANCES IN STORAGE AREA NETWORKS

Subject Code: 12SCN323

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

1. Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access.

2. Intelligent Disk Subsystems: Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

3. I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage.

4. Network Attached Storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system.

5. File System and NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

6. Storage Virtualization: Definition of Storage virtualization; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

7. SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective.

8. Software Components of SAN: The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

9. Management: Planning Business Continuity; Managing availability; Managing Serviceability; Capacity planning; Security considerations.

Elective – IV

12SCN331	Wireless Sensor Networks
12SCN332	Advances in Digital image processing
12SCN333	Topics in Analysis of Computer Networks

WIRELESS SENSOR NETWORKS

Subject Code: 12SCN331

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: Unique Constraints and Challenges, Advantages of Sensor Networks, Energy advantage, Detection advantage, Sensor Network Applications, Habitat monitoring, Wildlife conservation through autonomous, non-intrusive sensing, Tracking chemical plumes, Ad hoc, just-in-time deployment mitigating disasters, Smart transportation: networked sensors making roads safer and less congested, Collaborative Processing.

2. Key Definitions and The Problem: Key Definitions of Sensor Networks, Canonical Problem: Localization and Tracking, Tracking Scenario, Problem Formulation, Sensing model, Collaborative localization, Bayesian state estimation, Distributed Representation and Inference of States, Impact of choice of representation, Design desiderata in distributed tracking, Tracking Multiple Objects, State space decomposition, Data association, Sensor Models, Performance Comparison and Metrics.

3. Networking and Protocols: Networking Sensors, Key Assumptions, Medium Access Control, The SMAC Protocol, IEEE 802.15.4 Standard and ZigBee, General Issues, Geographic, Energy-Aware Routing, Unicast Geographic Routing, Routing on a Curve, Energy-Minimizing Broadcast, Energy- Aware Routing to a Region, Attribute-Based Routing, Directed Diffusion, Rumor Routing, Geographic Hash Tables. Infrastructure Establishment, Topology Control, Clustering, Time Synchronization, Clocks and Communication Delays, Interval Methods, Broadcasts, Localization and Localization Services, Ranging Techniques, Range-Based Localization Algorithms, Other Localization Algorithms, Location Services. Sensor Tasking and Control, Task-Driven Sensing, Roles of Sensor Nodes and Utilities, Information- Based Sensor Tasking, Sensor selection, IDSQ: Information-driven sensor querying, Cluster leader based protocol, Sensor tasking in tracking relations, Joint Routing and Information Aggregation, Moving center of

aggregation, Multi-step information-directed routing, Sensor group management, Case study: Sensing global phenomena.

4. Databases: Sensor Network Databases, Sensor Database Challenges, Querying The Physical Environment, Query Interfaces, Cougar sensor database and abstract data types, Probabilistic queries, High-level Database Organization, In- Network Aggregation, Query propagation and aggregation, Tiny DB query processing, Query processing scheduling and optimization, Data-Centric Storage, Data Indices and Range Queries, One-dimensional indices, Multidimensional indices for orthogonal range searching, Non-orthogonal range searching, Distributed Hierarchical Aggregation, Multi-resolution, Partitioning, Fractional cascading, Locality preserving hashing, Temporal Data, Data aging, Indexing motion data.

5. Platforms and Tools: Sensor Network Platforms and Tools, Sensor Network Hardware, Berkeley motes, Sensor Network Programming Challenges, Node-Level Software Platforms, Operating system: Tiny OS, Imperative language: nesC, Dataflow style language: Tiny GALS, Node-Level Simulators, ns-2 and its sensor network extensions, TOSSIM, Programming Beyond Individual Nodes: State-centric programming, Collaboration groups, PIECES: A state-centric design framework, Multi-target tracking problem revisited. Applications and Future Directions.

TEXT BOOKS:

1. Feng Zhao, Leonidas Guibas: Wireless Sensor Networks – An Information Processing Approach, Elsevier, 2004.

ADVANCES IN DIGITAL IMAGE PROCESSING

Subject Code: 12SCN332

I.A. Marks: 50

No of Lecture Hrs/Week: 04

Exam hours: 03

Total No of Lecture Hours: 52

Exam Marks: 100

1. Introduction: Origins of Digital Image Processing, examples, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image analysis and computer vision, spatial feature extraction, transform features, Edge detection, gradient operators, compass operators, stochastic gradients, line and spot detection.

2. Digital Image Fundamentals: Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.

3. Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial

4. Image Enhancement in the Frequency Domain: Background, Image Enhancement in the Frequency Domain, Introduction to the Fourier Transform and the Frequency, Domain, Smoothing Frequency- Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering.

5. Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering.

6. Color Fundamentals: Color Models, Pseudo color Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color

Segmentation, Noise in Color Images, Color Image Compression.

7. Image Transformation: Discrete Cosine Transforms, Walsh Hadmard Transforms, Wavelet Transforms and Multiprocessing, Background, Multiresolution Expansions, Wavelet Transforms in one Dimension, Wavelet Transforms in Two Dimensions, Wavelet Packets, an overview of Second Generation Wavelet Transforms.

8. Image and Video Compression: Fundamentals, Image Compression Models, Lossless compression Methods: Huffman coding, run length coding, LZ coding, Arithmetic coding, Lossy Compression: Gray level Run length coding, Block truncation coding, vector quantization, Differential predictive coding, Transform coding , Hybrid coding, Video Compression Techniques – Motion compensation, Search for motion vectors, H.261, H.263, MPEG I, MPEG 2, MPEG 4, MPEG 7 .

9. Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms.

10. Image Segmentation and Object Recognition: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation, Patterns and Pattern Classes, Recognition Based on Decision-Theoretic Methods, Structural Methods.

TEXT BOOKS

TOPICS IN ANALYSIS OF COMPUTER NETWORKS

Subject Code: 12SCN333

I.A. Marks: 50

Hours/Week: 04

Exam Hours: 03

Total Hours: 52

Exam Marks: 100

1. Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.

2. Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

3. Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

4. Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

5. Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

WIRELESS AD-HOC NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI251 / 16SCE421 / 16SCN11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain fundamental principles of Ad-hoc Networks • Discuss a comprehensive understanding of Ad-hoc network protocols • Outline current and emerging trends in Ad-hoc Wireless Networks. • Analyze energy management in ad-hoc wireless networks. 			
Module -1			Teaching Hours
Ad-hoc Wireless Networks Introduction, Issues in Ad-hoc Wireless Networks, Ad-hoc Wireless Internet; MAC Protocols for Ad-hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas.			10Hours
Module -2			10 Hours
Routing Protocols for Ad-hoc Wireless Networks Introduction, Issues in Designing a Routing Protocol for Ad-hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols.			
Module – 3			10 Hours
Multicast Routing in Ad-hoc Wireless Networks Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.			
Module-4			10 Hours
Transport Layer and Security Protocols for Ad-hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad-hoc Networks; Security in Ad-hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad-hoc Wireless Networks.			
Module-5			10 Hours
Quality of Service and Energy Management in Ad-hoc Wireless Networks: Introduction, Issues and Challenges in Providing QoS in Ad-hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad-hoc Wireless Networks: Introduction, Need for Energy Management in Ad-hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.			
Course outcomes:			
The students shall able to:			
<ul style="list-style-type: none"> • Design their own wireless network • Evaluate the existing network and improve its quality of service • Choose appropriate protocol for various applications • Examine security measures present at different level 			

- Analyze energy consumption and management

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCES IN COMPUTER NETWORKS
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)

SEMESTER – I

Subject Code	16SCN12/16SCS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Discuss with the basics of Computer Networks.
- Compare various Network architectures.
- Discuss fundamental protocols.
- Define and analyze network traffic, congestion, controlling and resource allocation.

Module 1	Teaching Hours
<p>Foundation: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels. T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4</p>	10 Hours
<p>Module 2</p> <p>Internetworking I: Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. T1: Chapter 3.1, 3.2,</p>	10 Hours
<p>Module 3</p> <p>Internetworking- II: Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP T1: Chapter 3.3, 4.1.1,4.1.3 T2:Chapter 13.1 to 13.18 , Ch 18.</p>	10 Hours
<p>Module 4</p> <p>End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3</p>	10 Hours
<p>Module 5</p> <p>Congestion Control and Resource Allocation Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System (DNS), Electronic Mail (SMTP,POP,IMAP,MIME), World Wide Web (HTTP), Network Management (SNMP) T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8</p>	10 Hours
Course Outcomes	
The students should be able to:	

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Larry Peterson and Bruce S Davis “Computer Networks :A System Approach” 5th Edition , Elsevier -2014.
2. Douglas E Comer, “Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI – 2014.

Reference Books:

1. Uyles Black, “Computer Networks, Protocols , Standards and Inte rfaces” 2 nd Edition - PHI.
2. Behrouz A Forouzan, “TCP /IP Protocol Suite” 4 th Edition – Tata McGraw-Hill.

INFORMATION AND NETWORK SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI12/16SCN13/16SCS253	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain standard algorithms used to provide confidentiality, integrity and authenticity. • Distinguish key distribution and management schemes. • Deploy encryption techniques to secure data in transit across data networks • Implement security applications in the field of Information technology 			
Module 1			Teaching Hours
Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm			10 Hours
Module 2			
Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.			10 Hours
Module 3			
Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. User Authentication: Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.			10 Hours
Module 4			
Wireless network security: Wireless security, Wireless network threats, Wireless			10 Hours

<p>network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function. Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. Secure Sockets Layer: SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. Transport Layer Security: Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. HTTPS Connection Initiation, Connection Closure. Secure Shell(SSH) Transport Layer Protocol, User Authentication Protocol, Connection Protocol</p>	
<p>Module 5</p>	
<p>Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.</p>	<p>10 Hours</p>
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Analyze the vulnerabilities in any computing system and hence be able to design a security solution. • Identify the security issues in the network and resolve it. • Evaluate security mechanisms using rigorous approaches, including theoretical. 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

<p>Reference Books: 1. V K Pachghare: Cryptography and Information Security.</p>	

PROBABILITY STATISTICS AND QUEUING THEORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – I

Subject Code	16LNI14 / 16SCN14/16SCS14/ 16SSE14 / 16SIT14 /16SCE14 / 16SFC14	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Develop analytical capability and to impart knowledge of Probability, Statistics and Queuing.
- Apply above concepts in Engineering and Technology.
- Acquire knowledge of Hypothesis testing and Queuing methods and their applications so as to enable them to apply them for solving real world problems

Module 1	Teaching Hours
Axioms of probability, Conditional probability, Total probability, Baye's theorem, Discrete Random variable, Probability mass function, Continuous Random variable. Probability density function, Cumulative Distribution Function, and its properties, Two-dimensional Random variables, Joint pdf / cdf and their properties	10 Hours

Module 2	Teaching Hours
Probability Distributions / Discrete distributions: Binomial, Poisson Geometric and Hyper-geometric distributions and their properties. Continuous distributions: Uniform, Normal, exponential distributions and their properties.	10 Hours

Module 3	Teaching Hours
Random Processes: Classification, Methods of description, Special classes, Average values of Random Processes, Analytical representation of Random Process, Autocorrelation Function, Cross-correlation function and their properties, Ergodicity, Poisson process, Markov Process, Markov chain.	10 Hours

Module 4	Teaching Hours
Testing Hypothesis: Testing of Hypothesis: Formulation of Null hypothesis, critical region, level of significance, errors in testing, Tests of significance for Large and Small Samples, t-distribution, its properties and uses, F-distribution, its properties and uses, Chi-square distribution, its properties and uses, χ^2 – test for goodness of fit, χ^2 test for Independence	10 Hours

Module 5	Teaching Hours
Symbolic Representation of a Queuing Model, Poisson Queue system, Little Law, Types of Stochastic Processes, Birth-Death Process, The M/M/1 Queuing System, The M/M/s Queuing System, The M/M/s Queuing with Finite buffers.	10 Hours

Course Outcomes

The students should be able to:

- Demonstrate use of probability and characterize probability models using probability mass (density) functions & cumulative distribution functions.
- Explain the techniques of developing discrete & continuous probability distributions and its applications.
- Describe a random process in terms of its mean and correlation functions.
- Outline methods of Hypothesis testing for goodness of fit.
- Define the terminology & nomenclature appropriate queuing theory and also distinguish various queuing models.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Probability, Statistics and Queuing Theory, V. Sundarapandian, Eastern Economy Edition, PHI Learning Pvt. Ltd, 2009.

Reference Books:

1. Probability & Statistics with Reliability, Queuing and Computer Applications, 2nd Edition by Kishor. S. Trivedi , Prentice Hall of India ,2004.
2. Probability, Statistics and Random Processes, 1st Edition by P Kausalya, Pearson Education, 2013.

INTERNET OF THINGS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI253 /16SCE253 / 16SCN151 /16SCS24 /16SIT251 /16SSE421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define and explain basic issues, policy and challenges in the IoT • Illustrate Mechanism and Key Technologies in IoT • Explain the Standard of the IoT • Explain resources in the IoT and deploy of resources into business • Demonstrate data analytics for IoT 			
Module -1			Teaching Hours
What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples- Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications.			8 Hours
Module -2			8 Hours
Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards- Overview and Approaches, IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol, Representational State Transfer, ETSI M2M, Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPv6 Over Lowpower WPAN, Zigbee IP(ZIP), IPSO			8 Hours
Module – 3			8 Hours
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M, Layer 3 Connectivity :IPv6 Technologies for the IoT: Overview and Motivations. Address Capabilities, IPv6 Protocol Overview, IPv6 Tunneling, IPsec in IPv6, Header Compression Schemes, Quality of Service in IPv6, Migration Strategies to IPv6.			8 Hours
Module-4			8 Hours
Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications.			8 Hours
Module-5			8 Hours
Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis, Structural Health Monitoring Case Study.			8 Hours
Course outcomes:			
At the end of this course the students will be able to: <ul style="list-style-type: none"> • Develop schemes for the applications of IOT in real time scenarios • Manage the Internet resources • Model the Internet of things to business 			

- Understand the practical knowledge through different case studies
- Understand data sets received through IoT devices and tools used for analysis

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

SOCIAL NETWORK ANALYSIS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SCN152 / 16SIT252/	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> The learning objective of the course Social Network Analysis is to discuss essential knowledge of network analysis applicable to real world data, with examples from today's most popular social networks. 			
Module 1			Teaching Hours
Introduction to social network analysis and Descriptive network analysis: Introduction to new science of networks. Networks examples. Graph theory basics. Statistical network properties. Degree distribution, clustering coefficient. Frequent patterns. Network motifs. Cliques and k-cores.			8 Hours
Module 2			
Network structure, Node centralities and ranking on network: Nodes and edges, network diameter and average path length. Node centrality metrics: degree, closeness and betweenness centrality. Eigenvector centrality and PageRank. Algorithm HITS.			8 Hours
Module 3			
Network communities and Affiliation networks: Networks communities. Graph partitioning and cut metrics. Edge betweenness. Modularity clustering. Affiliation network and bipartite graphs. 1-mode projections. Recommendation systems.			8 Hours
Module 4			
Information and influence propagation on networks and Network visualization: Social Diffusion. Basic cascade model. Influence maximization. Most influential nodes in network. Network visualization and graph layouts. Graph sampling. Low - dimensional projections			8 Hours
Module 5			
Social media mining and SNA in real world: FB/VK and Twitter analysis: Natural language processing and sentiment mining. Properties of large social networks: friends, connections, likes, re-tweets.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> Define notation and terminology used in network science. Demonstrate, summarize and compare networks. Explain basic principles behind network analysis algorithms. Analyzing real world network. 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

MULTI-CORE ARCHITECTURE AND PROGRAMMING
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER - I

Subject Code	16SCE24 / 16SCN153	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS - 03

Course objectives: This course will enable students to

- Define technologies of multicore architecture and performance measures
- Demonstrate problems related to multiprocessing
- Illustrate windows threading, posix threads, openmp programming
- Analyze the common problems in parallel programming

Module -1	Teaching Hours
------------------	-----------------------

Introduction to Multi-core Architecture Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. System Overview of Threading : Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.	8 Hours
--	----------------

Module -2	
------------------	--

Fundamental Concepts of Parallel Programming :Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives. Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features	8 Hours
--	----------------

Module – 3	
-------------------	--

Threading APIs :Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft. NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.	8 Hours
--	----------------

Module-4	
-----------------	--

OpenMP: A Portable Solution for Threading : Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance	8 Hours
--	----------------

Module-5	
-----------------	--

Solutions to Common Parallel Programming Problems : Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache	8 Hours
--	----------------

<p>Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.</p>	
<p>Course outcomes:</p>	
<p>The students shall be able to:</p> <ul style="list-style-type: none"> • Identify the limitations of ILP and the need for multicore architectures • Define fundamental concepts of parallel programming and its design issues • Solve the issues related to multiprocessing and suggest solutions • Make out the salient features of different multicore architectures and how they exploit parallelism • Demonstrate the role of OpenMP and programming concept 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006 	
<p>Reference Books: NIL</p>	

SOFT COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SSE41 / 16SCS254 / 16SCN154	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain key aspects of soft computing. • Identify the components and building block hypothesis of Genetic algorithm. • Analyze Neuro Fuzzy modeling and control. • Evaluate machine learning through Support vector machines. 			
Module 1			Teaching Hours
Introduction to Soft computing: Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model.			8 Hours
Module 2			
Perceptron Network: Adaptive linear neuron, Multiple adaptive linear neurons, Back propagation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models).			8 Hours
Module 3			
Introduction to classical sets and fuzzy sets: Classical relations and fuzzy relations, Membership functions.			8 Hours
Module 4			
Defuzzification: Fuzzy decision making, and applications.			8 Hours
Module 5			
Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA General genetic algorithms, The schema theorem, Genetic programming, applications.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Implement machine learning through neural networks. • Design Genetic Algorithm to solve the optimization problem. • Develop a Fuzzy expert system. • Model Neuro Fuzzy system for clustering and classification. 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.			
Text Books:			
1. Principles of Soft computing, Shivanandam, Deepa S. N, Wiley India, ISBN 13: 788126527410, 2011

COMPUTER NETWORKS AND INFORMATION SECURITY LABORATORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – I

Subject Code	16SCN16	IA Marks	20
Number of Lecture Hours/Week	01+03	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to

- Demonste Concepts of fundamental protocols.
- Illustrate internetworking concepts.
- Implement concepts in congestion control and error detections.
- Evaluate fundamentals of Cryptography through practical implementation.
- Implement standard algorithms used to provide confidentiality, integrity and authenticity.
- Design security applications in the field of Information technology.

PART – A Computer Network LABORATORY WORK

Note:

Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

Simulation Programs using OPNET /NS2/NS3 or any other equivalent software

8. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
9. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

PART – B INSLABORATORY WORK

2. Consider a file with composite data, substitute the content and transpose the ciphers.
3. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
4. Apply the RSA algorithm on a text file to produce cipher text file.
5. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
6. Implementation of Message Authentication Code using cryptography VMAC function.
7. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change

- in the input results in a substantial change in the output
- Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN (Sub-netting).

Course Outcomes

The students should be able to:

- Apply key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Design and evaluate application layer protocol
- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Conduction of Practical Examination:

- All laboratory experiments (nos) are to be included for practical examination.
- Students are allowed to pick one experiment from **each part and execute both**
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- PART –A:** Procedure + Conduction + Viva: **10 + 20 +10 (40)**
- PART –B:** Procedure + Conduction + Viva: **10 + 20 +10 (40)**
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.**

SEMINAR [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SCE17 / 16SCN17 / 16LNI17 / 16SIT17 / 16SSE17 / 16SCS17 / 16SFC17	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-
CREDITS – 01			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Motivate the students to read technical article • Discover recent technology developments 			
Descriptions			
<p>The students should read a recent technical article (try to narrow down the topic as much as possible) from any of the leading reputed and refereed journals like:</p> <ol style="list-style-type: none"> 1. IEEE Transactions, journals, magazines, etc. 2. ACM Transactions, journals, magazines, SIG series, etc. 3. Springer 4. Elsevier publications etc <p>In the area of (to name few and not limited to)</p> <ul style="list-style-type: none"> • Web Technology • Cloud Computing • Artificial Intelligent • Networking • Security • Data mining 			
Course Outcomes			
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Conduct survey on recent technologies • Infer and interpret the information from the survey conducted • Motivated towards research 			
Conduction:			
<p>The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.</p>			
<p>Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).</p>

Elective

16SCN421 Service Oriented Architecture

Note:

- 1. Project Phase-1:** 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/visit industries to finalize the topic of Project.
- 2. Project Phase-2:** 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
- 3. Project Evaluation:** Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
- 4. Project evaluation:**
 - a. Internal Examiner shall carry out the evaluation for 100 marks.
 - b. External Examiner shall carry out the evaluation for 100 marks.
 - c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
 - d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks

MULTIMEDIA COMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN21/16LNI152	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define the Multimedia Communication Models • Explain Multimedia Transport in Wireless Networks • Solve the Security issues in multimedia networks • Illustrate real-time multimedia network applications. • Explain different network layer based application. 			
Module 1			Teaching Hours
Introduction, multimedia information representation, multimedia networks, multimedia applications, Application and networking terminology, network QoS and application QoS, Digitization principles,. Text, images, audio and video.			10 Hours
Module 2			
Text and image compression,, compression principles, text compression- Runlength, Huffman, LZW, Document Image compression using T2 and T3 coding, image compression- GIF, TIFF and JPEG			10 Hours
Module 3			
Audio and video compression, audio compression – principles, DPCM, ADPCM, Adaptive and Linear predictive coding, Code-Excited LPC, Perceptual coding, MPEG and Dolby coders video compression, video compression principles.			10 Hours
Module 4			
Video compression standards: H.261, H.263, MPEG, MPEG 1, MPEG 2, MPEG-4 and Reversible VLCs, MPEG 7 standardization process of multimedia content description, MPEG 21 multimedia framework.			10 Hours
Module 5			
Notion of synchronization, presentation requirements, reference model for synchronization, Introduction to SMIL, Multimedia operating systems, Resource management, process management techniques.			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Deploy the right multimedia communication models. • Apply QoS to multimedia network applications with efficient routing techniques. • Solve the security threats in the multimedia networks. • Develop the real-time multimedia network applications 			
Question paper pattern:			
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.			
Text Books:			
<ol style="list-style-type: none"> 1. Fred Halsall, “Multimedia Communications”, Pearson education, 2001. 2. Raif Steinmetz, Klara Nahrstedt, “Multimedia: Computing, Communications and Applications”, Pearson education, 2002. 			

Reference Books:

1. K. R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic, "Multimedia Communication Systems", Pearson education, 2004.
2. John Billamil, Louis Molina, "Multimedia : An Introduction", PHI, 2002.

CLOUD COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCS12/16SCE12 16SIT22/16SSE254 16SCN22/16LNI151	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define and Cloud, models and Services. • Compare and contrast programming for cloud and their applications • Explain virtualization, Task Scheduling algorithms. • Apply ZooKeeper, Map-Reduce concept to applications. 			
Module 1			Teaching Hours
Introduction, Cloud Infrastructure: Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.			10 Hours
Module 2			
Cloud Computing: Application Paradigms: Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The Gre The Web application, Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.			10 Hours
Module 3			
Cloud Resource Virtualization: Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems			10 Hours
Module 4			
Cloud Resource Management and Scheduling: Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling MapReduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.			10 Hours
Module 5			
Cloud Security, Cloud Application Development: Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine			10 Hours

<p>monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.</p>	
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Compare the strengths and limitations of cloud computing • Identify the architecture, infrastructure and delivery models of cloud computing • Apply suitable virtualization concept. • Choose the appropriate cloud player • Address the core issues of cloud computing such as security, privacy and interoperability • Design Cloud Services • Set a private cloud 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.</p>	
<p>Reference Books: 1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014. 2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.</p>	

NETWORK MANAGEMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI154 / 16SCN23	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Evaluate need for interoperable network management. • Explain the concepts and architecture behind standards based network management. • Illustrate the concepts and terminology associated with SNMP and TMN • Demonstrate network management as a typical distributed application 			
Module 1			Teaching Hours
Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards-Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology , Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions-Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management.			10 Hours
Module 2			10 Hours
Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1-Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model.			10 Hours
Module 3			10 Hours
SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications.			10 Hours
Module 4			10 Hours
Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL			10 Hours

Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles	
Module 5	
Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation 24 Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management.	10 Hours
Course Outcomes	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets. • Apply network management standards to manage practical networks • Formulate possible approaches for managing OSI network model. • Use on SNMP for managing the network • Use RMON for monitoring the behavior of the network • Identify the various components of network and formulate the scheme for the managing them 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.</p>	
<p>Reference Books: 1. J. Richard Burke: Network management Concepts and Practices: a Hands-On Approach, PHI, 2008.</p>	

MANAGING BIG DATA [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI422 / 16SCE21 / 16SCN24 / 16SCS21 / 16SIT41 / 16SSE422	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define big data for business intelligence • Analyze business case studies for big data analytics • Explain managing of Big data Without SQL • Develop map-reduce analytics using Hadoop and related tools 			
Module -1			Teaching Hours
UNDERSTANDING BIG DATA: What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics.			10Hours
Module -2			
NOSQL DATA MANAGEMENT: Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schema less databases – materialized views – distribution models – shading — version – map reduce – partitioning and combining – composing map-reduce calculations.			10 Hours
Module – 3			
BASICS OF HADOOP: Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures.			10 Hours
Module-4			
MAPREDUCE APPLICATIONS: MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats			10 Hours
Module-5			
HADOOP RELATED TOOLS: Hbase – data model and implementations – Hbase clients – Hbase examples –praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.			10 Hours
Course outcomes:			
The students shall able to: <ul style="list-style-type: none"> • Describe big data and use cases from selected business domains • Explain NoSQL big data management • Install, configure, and run Hadoop and HDFS 			

- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilley, 2012.
2. Eric Sammer, "Hadoop Operations", O'Reilley, 2012.

Reference Books:

1. Vignesh Prajapati, Big data analytics with R and Hadoop, SPD 2013.
2. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilley, 2012.
3. Lars George, "HBase: The Definitive Guide", O'Reilley, 2011.
4. Alan Gates, "Programming Pig", O'Reilley, 2011

SWITCHING & STATISTICAL MULTIPLEXING IN TELECOMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN251	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain switching and multiplexing. • Analyze the transmission technology. And transmission control. • Demonstrate basic knowledge on telecommunication 			
Module -1			Teaching Hours
Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. Why Digital: Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks			8 Hours
Module -2			
Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization			8 Hours
Module – 3			
Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. Digital Transmission and Multiplexing: Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing			8 Hours
Module-4			
Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching			8 Hours
Module-5			
Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems			8 Hours
Course outcomes:			
The student will be able to: <ul style="list-style-type: none"> • Explain basics of telecommunications and digital form • Elaborate switching and multiplexing, telecommunication. • Illustrate transmission control in telecommunication • Design and develop switching, multiplexing and traffic control. 			
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 questions from each module. • Each question will have questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 			

Text Books:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Reference Books:

WIRELESS SENSOR NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN252	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain sensor networks for various application setups. • Demonstrate the design space and conduct trade-off analysis between performance and resources. • Assess coverage and conduct node deployment planning. • Devise appropriate data dissemination protocols and model links cost. • Determine suitable medium access protocols and radio hardware. • Illustrate sensor networks using commercial components. • Discuss quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints. 			
Module -1			Teaching Hours
Introduction, Overview and Applications of Wireless Sensor Networks Introduction, Basic overview of the Technology, Applications of Wireless Sensor Networks: Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology. (Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)			8 Hours
Module -2			Teaching Hours
Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, Wireless Transmission Technology and Systems: Introduction, Radio Technology Primer, Available Wireless Technologies (Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)			8 Hours
Module – 3			Teaching Hours
MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. Routing Protocols for Wireless Sensor Networks: Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs. (Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)			8 Hours
Module-4			Teaching Hours
Transport Control and Middleware for Wireless Sensor Networks: Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. Middleware for Wireless Sensor Networks: Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware. (Chapter 7: 7.1-7.4, Chap. 8: 8.1-8.4)			8 Hours
Module-5			Teaching Hours
Network Management and Operating System for Wireless Sensor Networks: Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. Operating Systems for Wireless Sensor Networks: Introduction, Operating System Design Issues, Examples of Operating Systems. (Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)			8 Hours
Course outcomes:			

The students shall able to:

- Explain existing applications of wireless sensor actuator networks
- Apply in the context of wireless sensor networks and explain elements of distributed computing and network protocol design
- Contrast Various hardware, software platforms that exist for sensor networks
- Summarize various network level protocols for MAC, routing, time synchronization, aggregation, consensus and distributed tracking

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, "Wireless Sensor Networks: Technology, Protocols and Applications:", WILEY , Second Edition (Indian) , 2014

Reference Books:

1. Ian F. Akyildiz, Mehmet Can Vuran "Wireless Sensor Networks", Wiley 2010
2. Feng Zhao & Leonidas J. Guibas, "Wireless Sensor Networks- An Information Processing Approach", Elsevier, 2007.

OPTICAL NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define basic elements of optical fiber transmission link, fiber modes configurations and structures • Compare different kind of losses, signal distortion in optical wave guides and other signal degradation factors • List and explain various optical source materials, LED structures, quantum efficiency, and Laser diodes • Demonstrate fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration and also fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM 			
Module -1			Teaching Hours
Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, Optical Transport Network: Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service Multiprotocol Label Switching: Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.			8 Hours
Module -2			
WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, Reconfigurable OADMs Optical Cross connects: All-Optical OXC Configurations.			8 Hours
Module – 3			
Control and Management: Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability, Performance and Fault Management: The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. Configuration Management: Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol			8 Hours
Module-4			

<p>Basic Concepts: Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. Protection in the Client Layer: Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCh-Mesh Protection, GMPLS Protection, Interworking between Layers.</p>	<p>8 Hours</p>
<p>Module-5</p>	
<p>WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength-Routing Networks, Statistical Dimensioning Models: First-Passage Model, Blocking Model, Maximum Load Dimensioning Models: Offline Light path Requests, Online RWA in Rings</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<p>The students shall able to:</p> <ul style="list-style-type: none"> • Explain fundamentals of optical network. • Analyze optical network architectures ranging from optical access networks to backbone optical transport networks. • Choose approaches and methodologies of optical network for design effective optimization; • Apply Techniques of optical network survivability. • Demonstrate problem solving skills and critical thinking in the discipline of optical networks. 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <p>1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.</p>	
<p>Reference Books:</p> <p>1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.</p>	

MOBILE APPLICATION DEVELOPMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI23/ 16SCE23 16SCN254 / 16SIT23	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Analyze system requirements for mobile applications. • Apply of mobile development frameworks. • Demonstrate mobile application design. • Demonstrate and implement mobile application. 			
Module -1			Teaching Hours
Introduction to mobile communication and computing: Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover and security. Smart phone operating systems and smart phones applications.			8 Hours
Module -2			
Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator.			8 Hours
Module – 3			
The Intent of Android Development, Four kinds of Android Components: Activity, Service, Broadcast Receiver and Content Provider. Building Blocks for Android Application Design, Laying Out Controls in Containers. Graphics and Animation: Drawing graphics in Android, Creating Animation with Android’s Graphics API.			8 Hours
Module-4			
Creating the Activity, Working with views: Exploring common views, using a list view, creating custom views, understanding layout. Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments. Multimedia: Playing Audio, Playing Video and Capturing Media. Advanced Android Programming: Internet, Entertainment, and Services.			8 Hours
Module-5			
Displaying web pages and maps, communicating with SMS and emails. Creating and using content providers: Creating and consuming services, publishing android applications			8 Hours
Course outcomes:			
The students should be able to: <ul style="list-style-type: none"> • Describe the requirements for mobile applications • Explain the challenges in mobile application design and development • Develop design for mobile applications for specific requirements • Implement the design using Android SDK • Implement the design using Objective C and iOS • Deploy mobile applications in Android and iPone marketplace for distribution 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.
 Each question will have questions covering all the topics under a module.
 The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Mobile Computing: (technologies and Applications-N. N. Jani S chand
2. B.M.Hirwani- Android programming Pearson publications-2013
3. W. Frank Ableson, Robi Sen and C. E. Ortiz - **Android in Action**, Third Edition-2012 DreamTech Publisher

MINIPROJECT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Laboratory Code	16LNI26/ 16SCE26 / 16SCN26 /16SCS26 /16SFC26 / 16SIT26 / 16SSE26	IA Marks	20
Number of Lecture Hours/Week	03 hours of lab	Exam Marks	80
Total Number of Lecture Hours	-----	Exam Hours	03
CREDITS – 02			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Enable the student to design, develop and analyze an application development 			
<p>The student will carry out a mini project relevant to the course. The project must be development of an application (Hardware/Software). It is preferable if the project is based on mobile application development.</p>			
<p>Course outcomes:</p> <ul style="list-style-type: none"> • Design, develop and to analyze an application development. • Prepare report of the project. 			
<p>Conduction of Practical Examination:</p> <p>The student shall prepare the report by including:</p> <ol style="list-style-type: none"> 1. Define project (Problem Definition) 2. Prepare requirements document <ol style="list-style-type: none"> a. Statement of work b. Functional requirements c. Software / Hardware requirements 3. Develop use cases 4. Research, analyze and evaluate existing learning materials on the application 5. Develop user interface and implement code 6. Prepare for final demo 			
<p>Evaluation:</p> <p>Evaluation shall be taken up at the end of the semester. Project work evaluation and viva-voce examination shall be conducted. Internal evaluation shall be carried by the Guide and Head of the department for 20 marks. Final examination which includes demonstration of the project and viva-voce shall be conducted for 80 Marks viz report + Outputs of the project + presentation = 30+30+20</p>			

= 80 marks.

SEMINAR
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)

SEMESTER – II

Subject Code	16SCE27 / 16SCN27 / 16LNI27 / 16SIT27 / 16SSE27 / 16SCS27 / 16SFC27	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-

CREDITS – 01

Course objectives: This course will enable students to

- Motivate the students to read technical article
- Discover recent technology developments

Descriptions

The students should read a recent technical article (try to narrow down the topic as much as possible) from any of the leading reputed and refereed journals like:

1. IEEE Transactions, journals, magazines, etc.
2. ACM Transactions, journals, magazines, SIG series, etc.
3. Springer
4. Elsevier publications etc

In the area of (to name few and not limited to)

- Web Technology
- Cloud Computing
- Artificial Intelligent
- Networking
- Security
- Data mining

Course Outcomes

The students should be able to:

- Conduct survey on recent technologies
- Infer and interpret the information from the survey conducted
- Motivated towards research

Conduction:

The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.

Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).

CLIENT SERVER PROGRAMMING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV			
Subject Code	16SIT151 / 16LNI41 / 16SCN41	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain Client-Server software, Context Switching and Protocol Software, I/o. • Define System Calls, Basic I/O Functions available in UNIX • Illustrate socket interface, TCP, UDP in detail. • Compare various client Software and various algorithms issue related to server software design. 			
Module 1			Teaching Hours
The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts. Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. Program Interface to Protocols: Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP.			10 Hours
Module 2			
The Socket Interface: Introduction, Berkley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. Algorithms and Issues in Client Software Design: Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability.			10 Hours
Module 3			
Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays, A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.			10 Hours
Module 4			
Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs			10 Hours

<p>Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.</p>	
<p>Module 5</p>	
<p>Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. Iterative, Connection-Oriented Servers (TCP): Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability. Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.</p>	<p>10 Hours</p>
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Explain Client-Server software, Context Switching and Protocol Software, I/O. • Demonstrate programming System Calls, Basic I/O Functions available in UNIX • Implement Socket interface, TCP, UDP in detail. • Compare and contrast Client Software Various applications and their issues 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001.

SERVICE ORIENTED ARCHITECTURE [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV			
Subject Code	16SSE13 /16SIT153 / 16SCN421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Interpret various architecture for application development • Demonstrate the importance of SOA in Application Integration • To learn web service and SOA related tools • To Learn implementation details of SOA • To understand various case studies 			
Module 1			Teaching Hours
SOA BASICS :Software Architecture – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models.			8 Hours
Module 2			
SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits of SPA – Cost Savings.			8 Hours
Module 3			
SOA GOVERNANCE: SOA implementation and Governance – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – SOA best practices.			8 Hours
Module 4			
SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL,SOAP and Java/XML mapping in SOA – JAXB Data binding.			8 Hours
Module 5			
APPLICATION INTEGRATION: JAX –WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study –WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Compare different IT architecture • Analyze and design of SOA based applications • Implement web service and realize of SOA • Implement REST full services • Design and implement of SOA based Application Integration using BPEL 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Shankar Kambhampaly, "Service-Oriented Architecture for Enterprise Applications", Wiley 2008.

ANALYSIS OF COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN422	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain with the concepts of computer networks • What is a computer network and what are the fundamental protocols. • Analyze network architectures in stochastic and deterministic way. • Illustrate RSVP, Principles of TCP • Discover more on different network protocols. • Explain multiplexing, streaming sessions in computer network. 			
Module -1			Teaching Hours
Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.			8 Hours
Module -2			
Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.			8 Hours
Module – 3			
Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).			8 Hours
Module-4			
Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little’s theorem, Brumelle’s theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic			8 Hours
Module-5			
Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet’s Adaptive			8 Hours

Window Protocol; Bandwidth sharing in a Network.	
Course outcomes:	
On completion, student will be able to:	
<ul style="list-style-type: none"> List and classify network services, protocols and architectures, explain why they are layered. Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API. 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
Text Books:

NETWORK ROUTING ALGORITHMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN423	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> Discuss layered architecture for communication networks and the specific functionality of the network layer. Explain the basic principles of routing and the manner, this is implemented in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network. Compare and contrast different routing algorithms existing and their performance characteristics. 			

Module -1	Teaching Hours
<p>NETWORK ROUTING: BASICS AND FOUNDATIONS: Networking and Network Routing: An Introduction: Addressing and Internet Service: An Overview, Network Routing: An Overview, IP Addressing, On Architectures, Service Architecture, Protocol Stack Architecture, Router Architecture, Network Topology Architecture, Network Management Architecture, Public Switched Telephone Network, Communication Technologies, Standards Committees, Last Two Bits.</p> <p>Routing Algorithms: Shortest Path and Widest Path: Bellman–Ford Algorithm and the Distance Vector Approach, Dijkstra’s Algorithm, Comparison of the Bellman–Ford Algorithm and Dijkstra’s Algorithm, Shortest Path Computation with Candidate Path Caching, Widest Path Computation with Candidate Path Caching, Widest Path Algorithm, k-Shortest Paths Algorithm</p> <p>Routing Protocols: Framework and Principles: Routing Protocol, Routing Algorithm, and Routing Table, Routing Information Representation and Protocol Messages, Distance Vector Routing Protocol, Link State Routing Protocol, Path Vector Routing Protocol, Link Cost</p>	8 Hours
Module -2	
<p>ROUTING IN IP NETWORKS: IP Routing and Distance Vector Protocol Family : Routers, Networks, and Routing Information: Some Basics, Static Routes, Routing Information Protocol, Version 1 (RIPv1), Routing Information Protocol, Version 2 (RIPv2), Interior Gateway Routing Protocol (IGRP), Enhanced Interior Gateway Routing Protocol (EIGRP), Route Redistribution</p> <p>OSPF and Integrated IS-IS :From a Protocol Family to an Instance of a Protocol, OSPF: Protocol Features, OSPF Packet Format, Examples of Router LSAs and Network LSAs, Integrated IS-IS, Similarities and Differences Between IS-IS and OSPF</p> <p>Internet Routing Architectures: Internet Routing Evolution, Addressing and Routing: Illustrations, Current Architectural View of the Internet, Allocation of IP Prefixes and AS Number, Policy-Based Routing, Point of Presence, Traffic Engineering Implications, Internet Routing Instability</p>	8 Hours
Module – 3	
<p>Router Architectures: Functions of a Router, Types of Routers, Elements of a Router, Packet Flow, Packet Processing: Fast Path versus Slow Path, Router Architectures. IP Address Lookup Algorithms: Impact of Addressing on Lookup, Longest Prefix Matching, Naïve Algorithms, Binary Tries, Multibit Tries, Compressing Multibit Tries, Search by Length Algorithms, Search by Value Approaches, Hardware Algorithms, Comparing Different Approaches. IP Packet Filtering and Classification: Importance of Packet Classification, Packet Classification Problem, Packet Classification Algorithms, Naïve Solutions, Two-Dimensional Solutions, Approaches for Dimensions, Extending Two-Dimensional Solutions, Divide and Conquer Approaches, Tuple Space Approaches, Decision Tree Approaches, Hardware-Based Solutions.</p>	8 Hours
Module-4	
<p>ADVANCED ROUTING PROTOCOLS FOR WIRELESS NETWORKS: Wireless networking basic aspects, Basic routing concepts, Ad hoc routing, Mesh routing, Vehicular routing, Sensor routing</p>	8 Hours
Module-5	

<p>TOWARD NEXT GENERATION ROUTING: Quality of Service Routing: QoS Attributes, Adapting Shortest Path and Widest Path Routing: A Basic Framework, Update Frequency, Information Inaccuracy, and Impact on Routing, Lessons from Dynamic Call Routing in the Telephone Network, Heterogeneous Service, Single-Link Case, A General Framework for Source-Based QoS Routing with Path Caching, Routing Protocols for QoS Routing</p> <p>MPLS and GMPLS: Traffic Engineering Extension to Routing Protocols, Multiprotocol Label Switching, Generalized MPLS, MPLS Virtual Private Networks. Routing and Traffic Engineering with MPLS: Traffic Engineering of IP/MPLS Networks, VPN Traffic Engineering, Routing/Traffic Engineering for Voice Over MPLS. VoIP Routing: Interoperability through IP and PSTN : PSTN Call Routing Using the Internet, PSTN Call Routing: Managed IP Approach, IP-PSTN Interworking for VoIP, IP Multimedia Subsystem, Multiple Heterogeneous Providers Environment and All-IP Environment of VoIP Services.</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<ul style="list-style-type: none"> • Given the network and user requirements and the type of channel over which the network has to operate, the student would be in a position to apply his knowledge for identifying a suitable routing algorithm, implementing it and analyzing its performance. • The student would also be able to design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications. 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. WEB MINING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN424	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Compare and contrast different knowledge discovery issues in Web mining. • Analyze the different algorithms commonly used by Web application. • Apply the role played by Web mining in Information retrieval and extraction • Demonstrate the documents structures and grouping, • Use the probabilistic model for web mining • Illustrate applications using Web mining 			
Module -1			Teaching Hours
<p>INTRODUCTION: Crawling and Indexing, Topic Directories, Clustering and Classification, Hyperlink Analysis, Resource Discovery and VerticalPortals, Structured vs. Unstructured DataMining . INFRASTRUCTURE and WEB SEARCH -- Crawling the web – HTML and HTTP Basics – Crawling Basics – Engineering Large ScaleCrawlers- Putting together a Crawler- Boolean Queries and the Inverted Index – RelevanceRanking – Similarity Search.</p>			8 Hours
Module -2			
<p>INFORMATION RETRIEVAL: Information Retrieval and Text Mining - Keyword Search - Nearest-Neighbor Methods -Measuring Similarity - Web-Based Document Search - Document–Matching - Inverted Lists -Evaluation of Performance - Structure in a Document Collection - Clustering Documents by Similarity- Evaluation of Performance - Information Extraction - Patterns and Entities from Text- Co reference and Relationship Extraction - Template Filling and Database Construction</p>			8 Hours
Module – 3			
<p>LEARNING I: Similarity and Clustering – Formulations and approaches- Bottom up and Top down Partitioning Paradigms – Clustering and Visualization via Embedding’s – Probabilistic Approaches to clustering – Collaborative Filtering, SUPERVISED LEARNING: The Supervised Learning Scenario, Overview of Classification Strategies, Evaluating Text Classifiers, Nearest Neighbor Learners, Feature Selection.</p>			8 Hours
Module-4			

<p>LEARNING II : SUPERVISED LEARNING – Bayesian Learners, Exploiting Hierarchy among Topics, Maximum Entropy Learners, Discriminative Classification, Hypertext Classification, SEMI SUPERVISED LEARNING-- Expectation Maximization, Labeling Hypertext Graphs and Co- training.</p>	<p>8 Hours</p>
<p>Module-5</p>	
<p>APPLICATIONS: Social Network Analysis- Social Sciences and Bibliometry – Page Rank and HITS – Shortcomings of coarse Grained Graph model- Enhanced Models and Techniques- Evaluation of Topic Distillation- Measuring and Modeling the Web – Resource Discovery – Collecting Important Pages Preferentially – Similarity Search Using Link Topology – Topical Locality and Focused Crawling – Discovering Communities- The Future of Web Mining.</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> • Identify the application areas for web content mining, web structure mining and webusage mining. • Design to retrieval the web data • Develop schemes to crawl the web data, organize and index • Cluster the documents for fast access • Develop algorithms used by web mining applications. • Select between different approaches and techniques of web mining 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sholom Weiss, “Text Mining: Predictive Methods for Analyzing Unstructured Information”, Springer, 2005 2. Soumen Chakrabarti, “Mining the Web: Discovery Knowledge from Hypertext Data,” Elsevier Science 2003

Grand Total (I to IV Sem.)		Marks: 2400; Credits : 94							

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or technical paper.

1).Project Phase – I : 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase – III : Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be $50+50+100=200$ (50 Marks for Internal Guide, 50 Marks for External and 100 for Viva-Voce)

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Course Title: Wireless Ad-hoc Networks	Course Code: 14SCN11
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To explore the design space and conduct trade-off analysis between performance and resources.
- To Determine suitable medium access protocols and radio hardware.
- To learn Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.
- To explore the Ad-hoc network concepts by using network simulators.

TOPICS

MODULE I

Ad hoc Wireless Networks: Introduction, Issues in Ad hoc Wireless Networks, Ad hoc Wireless Internet;
MAC Protocols for Ad hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas
 (Chapter 5: 5.1-5.3, Chapter 6: 6.1-6.8) **10 Hours**

MODULE II

Routing Protocols for Ad Hoc Wireless Networks: Introduction, Issues in Designing a Routing Protocol for Ad hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols
 (Chapter 7: 7.1-7.6, 7.8, 7.9) **10 Hours**

MODULE III

Multicast Routing in Ad hoc Wireless Networks: Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.
 (Chapter 8: 8.1-8.7) **10 Hours**

MODULE IV

Transport Layer and Security Protocols for Ad hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad hoc Networks; Security in Ad hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad hoc Wireless Networks.
 (Chapter 9: 9.1-9.6, 9.7-9.12) **10 Hours**

MODULE V

Quality of Service and Energy Management in Ad hoc Wireless Networks

Introduction, Issues and Challenges in Providing QoS in Ad hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad hoc Wireless Networks: Introduction, Need for Energy Management in Ad hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.

(Chapter 10: 10.1-10.5, Chapter 11: 11.1-11.6)

10 Hours

LABORATORY WORK

Note: Standard Network Parameters and supporting protocols may be assumed for simulation. Any suitable network simulator may be used. (Preferably NS2 or NS3 Simulator)

1. Develop unicast routing protocols using any suitable Network Simulator for (Mobile Ad hoc Networks) MANET to find the best route using the any one of routing protocols from each category from table-driven (e.g., link state or DSDV) on demand (e.g., DSR, AODV, TORA), hybrid (e.g., ZRP, contact-based architectures) and hierarchical (e.g., cluster based.) The efficient path/route should be established for source and destination data transmission using routing protocols. Understand the advantages and disadvantages of each routing protocol types by observing the performance metrics of the routing protocol. In that way the best application/environment suitable routing protocol can be identified in each category.
- 2: Develop multicast routing protocols using any suitable Network Simulator for MANET in which session nodes are connecting through either tree(MAODV, MCEDAR) or mesh (ODMRP, CAMP, FGMP) structure. Analyze the performance metrics of multicast routing protocols with unicast routing protocols.
3. Develop MAC Protocol using any suitable Network Simulator for MANETs to send the packet without any contention through wireless link using the following MAC protocols; (CSMA/CA (802.11), MACA, MACAW, PAMAS, SMAC). Analyze its performance with increasing node density and mobility.
4. Develop and Analyze the performance of TCP connection when it is used for wireless networks. You will find performance of TCP decreases dramatically when a TCP connection traverses a wireless link on which packets may be lost due to wireless transmission errors. Make use of Active Queue Management Technique to control congestion on Wireless Networks. Evaluate the performance of FIFO, RED and WFQ over wireless networks using suitable Network Simulator.
5. Simulate MANET environment using suitable Network Simulator and test with various mobility model such as Random way point, group mobility, highway model, Manhattan model, hybrid models) (Spatial correlation, temporal correlation, relative speed, link durations). Analyze throughput, PDR and delay with respect to different mobility models.

COURSE OUTCOMES

Students will be able to

- Apply knowledge of wireless Ad-hoc networks to various application areas.
- Design, implement and maintain wireless Ad-hoc networks.
- Formulate and solve problems creatively.
- Practical knowledge acquired by hands-on session.

TEXT BOOKS:

1. C. Siva Ram Murthy & B. S. Manoj: Ad hoc Wireless Networks, 2nd Edition, Pearson Education, 2011

REFERENCES:

1. Ozan K. Tonguz and Gianguigi Ferrari: Ad hoc Wireless Networks, John Wiley, 2007.
2. Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du: Ad hoc Wireless Networking, Kluwer Academic Publishers, 2004.

Semester I

Year: 2014-2015

Course Title: Advances in Computer Networks	Course Code: 14SCN12
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To become familiar with the basics of Computer Networks.
- To learn Network architectures.
- To learn Concepts of fundamental protocols.
- To gain the knowledge of internetworking concepts.
- To understand the knowledge of internetworking concepts in various applications.
- To acquire knowledge of implementation concepts in congestion control and error detections.

TOPICS

MODULE I

Foundation

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1:Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2:Chapter 4

10 Hours

MODULE II

Internetworking- I

Switching and Bridging, Datagrams, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, subnetting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2.

10 Hours

MODULE III

Internetworking- II

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP

T1: Chapter 3.3, 4.1.1, 4.1.3 **T2:** Chapter 13.1 to 13.18 , Chapter 18.

10 Hours

MODULE IV

End-to-End Protocols

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3

10 Hours

MODULE V

Congestion Control and Resource Allocation

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance.

The Domain Name System(DNS), Electronic Mail(SMTP, POP, IMAP, MIME), World Wide Web(HTTP), Network Management(SNMP) .

T1: Chapter 6.4 **T2:** Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8

10 Hours

LABORATORY WORK

PART A: Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

COURSE OUTCOMES

Students will be able to

- Classify network services, protocols and architectures, explain why they are layered.
- Knowledge on key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Practical knowledge gained by hands-on sessions.
- Gain the knowledge of application layer protocol.

Text books:

2. **Behrouz A Forouzan** “TCP/IP Protocol Suite” 4th Edition – Tata McGraw-Hill.

Semester I

Year: 2014-2015

Course Title: Information and Network Security	Course Code: 14SCN13
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology.

TOPICS

MODULE I

Classical Encryption Techniques

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad.

Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours

MODULE II

Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours

MODULE III

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours

MODULE IV

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, ..

Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer** :SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication

plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits. **10 Hours**

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition.

Semester I

Year: 2014-2015

Course Title: Advances in Storage area Network	Course Code: 14SCN14
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre’s maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems
- To appreciate the use of cables technologies used in SAN technology.

TOPICS

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems. **10 Hours**

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS. **10 Hours**

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network;

Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management, Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Have Knowledge on various RAID levels.
- Apply the techniques used for data maintenance.
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2013.

Reference Books:

1. Robert Spalding: "Storage Networks The Complete Reference", Tata McGraw-Hill, 2011.
2. Marc Farley: Storage Networking Fundamentals – An Introduction to Storage Devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005.
3. Richard Barker and Paul Massiglia: "Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs", Wiley India, 2006.

Semester I

Year: 2014-2015

Course Title: Advanced algorithms	Course Code: 14SCN151
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.
- To get an awareness of probabilistic and randomize algorithms.

TOPICS

MODULE I

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours

MODULE II

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours

MODULE III

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours

MODULE IV

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours

MODULE V

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours

COURSE OUTCOMES:

The students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.
- Get knowledge about different application based algorithm.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007

Course Title: Computer Systems Performance Analysis	Course Code: 14SCN152
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the mathematical foundations needed for performance evaluation of computer systems
- To understand the metrics used for performance evaluation
- To understand the analytical modeling of computer systems
- To enable the students to develop new queuing analysis for both simple and complex systems
- To understand the concept of planning and design in computer system.

TOPICS

TOPICS:

MODULE I

Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.

10 Hours

MODULE II

Workloads, Workload Selection and Characterization: Types of Workloads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, Popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.

10 Hours

MODULE III

Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.

10 Hours

MODULE IV

Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote- Terminal Emulation; Components of an RTE; Limitations of RTEs. **Experimental Design and Analysis: Introduction:** Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.

10 Hours

MODULE V

Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow

Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Define Little's law and other operational laws
- Apply the operational laws to open and closed systems
- Use discrete-time and continuous-time Markov chains to model real world systems
- Develop analytical techniques for evaluating scheduling policies

Text Book:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2013.

Reference Books:

1. Paul J Fortier, Howard E Michel: computer Systems Performance Evaluation and prediction, Elsevier, 2003.
2. Trivedi K S: Probability and Statistics with Reliability, Queuing and Computer Science Applications, 2nd Edition, Wiley India, 2001.

Semester I

Year: 2014-2015

Course Title: Multi-core Architecture and Programming	Course Code: 14SCN153
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To expose the students to the problems related to multiprocessing
- To understand the different types of multi core architectures
- To expose the students to warehouse-scale and embedded architectures

TOPICS

MODULE I

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper-Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

10 Hours

MODULE II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours

MODULE III

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours

MODULE IV

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.
- Critically analyze the different types of inter connection networks.
- Knowledge on architecture of GPUs, warehouse-scale computers and embedded processors.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006.

Semester I

Year: 2014-2015

Course Title: Soft Computing	Course Code: 14SCN154
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the key aspects of Soft computing
- To know about the components and building block hypothesis of Genetic algorithm.
- To understand the features of neural network and its applications
- To study the fuzzy logic components
- To gain insight onto Neuro Fuzzy modeling and control.
- To gain knowledge in machine learning through Support vector machines.

Topics:

MODULE I

Introduction to Soft computing, Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model. **10 Hours**

MODULE II

Perceptron Network, Adaptive linear neuron, Multiple adaptive linear neurons, Back propogation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models) **10 Hours**

MODULE III

Introduction to classical sets and fuzzy sets, Classical relations and fuzzy relations, Membership functions, **10 Hours**

MODULE IV

Defuzzification, Fuzzy decision making, and applications **10 Hours**

MODULE V

Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA
General genetic algorithms, The schema theorem, Genetic programming, applications

10 Hours

Course Outcomes:

The student will be able to:

- Implement machine learning through neural networks.

- Write Genetic Algorithm to solve the optimization problem
- Develop a Fuzzy expert system.
- Model Neuro Fuzzy system for clustering and classification.

Text book:

1. Principles of Soft computing, Shivanandam, Deepa S. N Wiley India, Jun-2007
(Chapters 1, 2, 3(Upto 3.5), 7, 8, 9, 10, 13, 15 (upto 15.6 & 15.9,15,10)

Reference Books:

1. Neuro-fuzzy and soft computing, J.S.R. JANG, C.T. SUN, E. MIZUTANI, PHI (EEE edition) ISBN: 978-81-203-2243-1

Semester I

Year: 2014-2015

Course Title: Information and Network security Lab	Course Code: 14SCN16
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives:

- To understand the fundamentals of Cryptography through practical implementation.
- To implement standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to use cutting edge simulation tools
- To design security applications in the field of Information technology.

LABORATORY WORK

Note: Use C/C++/Java or equivalent tool to implement the following experiment

1. Consider a file with composite data, substitute the content and transpose the ciphers.
2. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
3. Apply the RSA algorithm on a text file to produce cipher text file.
4. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
5. Implementation of Message Authentication Code using cryptography VMAC function.
6. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change in the input results in a substantial change in the output
7. Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN [Subnetting].
8. Develop a mechanism to setup(configure) a port scanner and identify the intrusion.

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.

- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Semester II

Year: 2014-2015

Course Title: Multimedia Communications	Course Code: 14SCN21
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

Course Objectives:

- To understand the Multimedia Communication Models
- To study the Multimedia Transport in Wireless Networks
- To solve the Security issues in multimedia networks
- To explore real-time multimedia network applications.
- To explore different network layer based application.

TOPICS

MODULE I

Introduction to Multimedia Communications: Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework. **10 Hours**

MODULE II

Framework for Multimedia Standardization: Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards. **10 Hours**

MODULE III

Application Layer: Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access. **10 Hours**

MODULE IV

Middleware Layer: Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution. **10 Hours**

MODULE V

Network Layer: Introduction, QoS in Network Multimedia Systems. **10 Hours**

LABORATORY WORK

The following experiments should be practiced (Tools such as HTML/Frontpage/Dreamweaver/ equivalent, Multimedia application enabling software ,System software support for multimedia, Performance measurement tools for multimedia ,Multimedia authoring tools, Web tools and applications)

1. Audio and video editing
2. Image editing
3. 2D and 3D animation.

.The case studies are:

- Video on-demand
- Interactive TV
- Home shopping
- Remote home care
- Electronic album
- Personalized electronic journals.

COURSE OUTCOMES:

Students will be able to:

- Deploy the right multimedia communication models.
- Apply QoS to multimedia network applications with efficient routing techniques.
- Solve the security threats in the multimedia networks.
- Develop the real-time multimedia network applications.

TEXT BOOKS:

1. K.R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic: Introduction to Multimedia Communications – Applications, Middleware, Networking, Wiley India, 2006.

REFERENCE BOOKS:

1. Fred Halsall: Multimedia Communications – Applications, Networks, Protocols, and Standards, Pearson, 2001.
2. Nalin K Sharad: Multimedia information Networking, PHI, 2002.

Semester II

Year:2014-2015

Course Title: Distributed Computing	Course Code: 14SCN22
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To learn Basic Concepts of DSM, Hardware DSM
- To understand File Sharing, DFS Implementation, Replication in DFS,
- To understand the concepts of Cryptanalysis, Secure channels, Access control.
- To understand some of the security concepts in distributed computing.

TOPICS

MODULE I

Distributed System management: Introduction, Resource management, Task Assignment Approach, Load-Balancing Approach, Load-Sharing Approach, Process management in a Distributed Environment, Process Migration, Threads, Fault Tolerance.

10 hours

MODULE II

Distributed Shared Memory :Introduction, Basic Concepts of DSM, Hardware DSM, Design Issue in DSM Systems, Issue in Implementing DSM Systems, Heterogeneous and Other DSM Systems, Case Studies.

10 hours

MODULE III

Distributed File System: Introduction to DFS, File Models, Distributed File System Design, Semantics of File Sharing, DFS Implementation, File Caching in DFS, Replication in DFS, Case studies. **Naming**: Introduction, Desirable features of a good naming system, Basic concepts, System-oriented names, Object-locating mechanisms, Issues in designing human-oriented names, Name caches, Naming and security, Case study: Domain name service.

10 hours

MODULE IV

Security in distributed systems: Introduction, Cryptography, Secure channels, Access control, Security Management, Case studies.

10 hours

MODULE V

Real-Time Distributed operating Systems: Introduction, Design issues in real-time distributed systems, Real-time communication, Real-time scheduling, Case study: Real-time communication in MARS. **Emerging Trends in distributed Computing**: Introduction to emerging trends, Grid Computing, SOA, Cloud computing, the future of emerging Trends.

10 hours

COURSE OUTCOMES:

The student will be able to

- Realize shared memory concept.
- Realize Advantages of DFS.
- Implement mechanisms to manage security in DS

Text Book.

1. Sunitha Mahajan, Seema Shah: Distributing Computing, Published by Oxford University press 2010

Semester II

Year:2014-2015

Course Title: Network Management	Course Code: 14SCN23
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the need for interoperable network management.
- To learn to the concepts and architecture behind standards based network management.
- To understand the concepts and terminology associated with SNMP and TMN.
- To understand network management as a typical distributed application

TOPICS

MODULE I

Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards- Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology, Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management. **10 Hours**

MODULE II

Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1- Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model. **10 Hours**

MODULE III

SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model
SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications. **10 Hours**

MODULE IV

Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles. **10 Hours**

MODULE V

Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation

Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case-Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management. **10 Hours**

LABORATORY WORK:

1. Capture packets transferred while browsing a selected website (e.g. a page from the course website, a search engine home page). Investigate the protocols used in each packet, the values of the header fields and the packet sizes.
2. Explore at least the following features of Wireshark: filters, Flow Graphs (TCP), statistics, protocol hierarchies.
3. Create several example files for your Apache web server to serve. Configure your web server, and then ask a friend to test your web server by accessing the files. Capture the packets and observe the log file.
4. Configure authentication for a specific directory on your web server. Test, captured packets and observe the log file.
5. Login to another computer in the lab, capture and investigate the data exchanged.
6. Trace the path between several pairs of source/destination nodes.
7. Create fire wall rule(s) that will drop TCP packets destined to a specific computer on the lab network (e.g. yours neighbors computer).
8. Using the supplied client/server sockets programs, implement a third proxy server.

Note: NS2 or equivalent tool to be used.

Course Outcomes:

Upon completion of this course, the students will be able to

- Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets.
- Apply network management standards to manage practical networks.
- Formulate possible approaches for managing OSI network model.
- Use on SNMP for managing the network
- Use RMON for monitoring the behavior of the network
- Identify the various components of network and formulate the scheme for the managing them

TEXT BOOKS:

1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.

REFERENCE BOOKS:

Semester II

Year:2014-2015

Course Title: Switching & Statistical Multiplexing in Telecommunications	Course Code: 14SCN24
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand Switching and multiplexing.
- To understand the transmission technology.
- To understand the transmission control.
- To understand basic knowledge on telecommunication.

Topics:

MODULE I

Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. **Why Digital:** Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks.

10 Hours

MODULE II

Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization.

10 Hours

MODULE III

Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. **Digital Transmission and Multiplexing:** Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing.

10 Hours

MODULE IV

Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching.

10 Hours

MODULE V

Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems.

10 Hours

Course Outcomes:

The student will be able to:

- Gain the knowledge about switching and multiplexing
- Gain the knowledge about telecommunication.
- Learn transmission control in telecommunication.

TEXT BOOKS:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Semester II

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCN251
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To gain knowledge Virtualization
- To gain knowledge Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.
- To gain knowledge in cloud resource virtualization and scheduling.

TOPICS:

MODULE I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

MODULE II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

MODULE III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study:Xen a VMM based

paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

MODULE IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

MODULE V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

Course Outcomes:

The student will be able to:

- Demonstrate simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.

Text Book:

1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.
2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Semester II

Year:2014-2015

Course Title: Wireless Sensor Networks	Course Code: 14SCN252
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- Architect sensor networks for various application setups.
- Explore the design space and conduct trade-off analysis between performance and resources.
- Devise appropriate data dissemination protocols and model links cost.
- Determine suitable medium access protocols and radio hardware.
- Prototype sensor networks using commercial components.

- Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.

TOPICS:

MODULE I

Introduction, Overview and Applications of Wireless Sensor Networks

Introduction, Basic overview of the Technology, **Applications of Wireless Sensor Networks:** Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology

(Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)

10 Hours

MODULE II

Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, **Wireless Transmission Technology and Systems:** Introduction, Radio Technology Primer, Available Wireless Technologies

(Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)

10 Hours

MODULE III

MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. **Routing Protocols for Wireless Sensor Networks:** Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs.

(Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)

10 Hours

MODULE IV

Transport Control and Middleware for Wireless Sensor Networks

Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. **Middleware for Wireless Sensor Networks:** Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware.

(Chapter 7: 7.1-7.4, Chapter 8: 8.1-8.4)

10 Hours

MODULE V

Network Management and Operating System for Wireless Sensor Networks

Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. **Operating Systems for Wireless Sensor Networks:** Introduction, Operating System Design Issues, Examples of Operating Systems.

(Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)

10 Hours

COURSE OUTCOMES

The student will be able to:

- Develop applications of wireless sensor actuator networks
- Implement the elements of distributed computing and network protocol .

- Explore various hardware, software platforms that exist for sensor networks

TEXT BOOKS:

1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, “Wireless Sensor Networks: Technology, Protocols and Applications”, WILEY , Second Edition (Indian) , 2014

REFERENCE BOOKS:

1. Ian F. Akyildiz, Mehmet Can Vuran "Wireless Sensor Networks", Wiley 2010
2. Feng Zhao & Leonidas J. Guibas, “Wireless Sensor Networks- An Information Processing Approach”, Elsevier, 2007.

Semester II

Year: 2014-2015

Course Title: Optical Networks	Course Code: 14SCN253
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM
- To acquire knowledge about fault and congestion management.

Topics

MODULE I

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, SONET/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel. **10 Hours**

MODULE II

WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations. **10 Hours**

MODULE III

Control and Management

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours

MODULE IV

Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum Load **Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Design a system, component or process as per needs and specification.
- Gain knowledge on optical network architectures ranging from optical access networks to backbone optical transport networks.
- Gain the knowledge on methodologies of optical network design optimization;
- Explore techniques of optical network survivability.
- Solve the Problems in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Course Title: Advances in VLSI Design and Algorithms	Course Code: 14SCN254
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- Able to understand the fundamentals of CMOS VLSI and associated technologies.
- Able to solve problems in the design of CMOS logic circuits, with particular reference to speed and power consumption.
- Able to appreciate the design process in VLSI, GALS.
- Able to explain basic operation principles of diodes and MOS FPGAs; PLA.
- Able to design the fundamental blocks of a VLSI circuits, both by circuit schematic and physical layout

TOPICS:**MODULE I**

Introduction to Digital systems and VLSI: Why Design Integrated Circuits? Integrated Circuits manufacturing; Integrated Circuit Design Techniques; IP-Based Design.

Fabrication and Devices: Introduction; Fabrication processes; Fabrication theory and practice; Reliability.

10 Hours**MODULE II**

Sequential Machines: Introduction; Latches and Flip-flops; Sequential systems and clocking disciplines; Performance analysis; Clock generators; Sequential systems design, Power optimization, Design validation, Sequential testing.

10 Hours**MODULE III**

Subsystem Design: Introduction; Combinational shifters; Adders; ALUs; Multipliers; High-density memory; Image sensors; FPGAs; PLA; Buses and networks on chips; Data paths; Subsystems as IP.

10 Hours**MODULE IV**

Architecture Design: Introduction; Hardware description languages; Register Transfer design; Pipelining; High-level synthesis; Architecture for low power; GALS systems; Architecture testing; IP components; Design methodologies; Multiprocessor system-on-Chip design.

10 Hours**MODULE V**

Simulations: General remarks; Gate-level modeling and simulations; Switch-level modeling and simulation.

10 Hours

Course Outcomes:

The student will be able to:

- Clear understanding of important concepts in CMOS technology and fabrication that affect design.
- Apply two-level and multi-level logic minimization techniques to the given Boolean logic function.
- Design and develop Layout a gate in CMOS VLSI technology.

TEXT BOOKS:

1. Wayne Wolf: “Modern VLSI design”, 4th Edition, P HI Learning, 2007.
2. Sabih H Gerez: “Algorithms for VLSI Design Autom ation”, Wiley India, 2007.

Semester II

Year: 2014-2015

Course Title: Distributed Computing Lab	Course Code: 14SCN26
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives

- To understand the main ideas and concepts on web services.
- Studying and working on a related topic of internet applications such as information hiding, system security and E-learning.
- To understand the concepts of UDDI, SOAP, JMS remote procedure calls.

LIST OF EXPERIMENTS:

Note: Use appropriate tools/language to implement the following experiment:

1. Design and implement client server application using RMI (Remote Method Invocation) to invoke a service to calculate the income tax.
2. Design and implement EJB (Entity Java Beans) session bean business logic to calculate income tax and invoke the service using stub, i.e., client side proxy object.
3. Design and implement an EJB entity bean to persist the client submitted data into an enterprise information system.
4. Design and implement an offline database communication system using JMS (Java Message Service) to service the client request.
5. Design and implement the client code to call the Micro soft service like free service from UDDI (Universal Description Discovery Protocol).
6. Design and implement business logic and bind it as service using SOAP (Simple Object Access Protocol), also implement client to call service.

NOTE: Use EJB 3.X or any equivalent tool.

COURSE OUTCOMES:

The student will be able to

- Develop and debug RPC based client-Server programs in UNIX.
- Realize the partial implementation of UDDI, SOAP, JMS in Web applications.

Semester IV

Year: 2014-2015

Course Title: Client-Server Programming	Course Code: 14SCN41
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand **Client-Server software**, Context Switching and Protocol Software, I/o.
- To understand System Calls, Basic I/O Functions available in UNIX
- To understand the Socket interface, TCP, UDP in detail.
- Various client software applications and their issues.
- To understand the concept of Socket interface in client server programming.

TOPICS:

MODULE I

The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts
Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. **Program Interface to Protocols:** Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP. **10 Hours**

MODULE II

The Socket Interface: Introduction, Berkeley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. **Algorithms and Issues in Client Software Design:** Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability. **10 Hours**

MODULE III

Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays,

A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.

10 Hours

MODULE IV

Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.

10 Hours

MODULE V

Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. **Iterative, Connection-Oriented Servers (TCP):** Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability.

Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.

10 Hours

LABORATORY WORK:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connectionless server and demonstrate its functioning.
2. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connection-oriented server and demonstrate its functioning.
3. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple concurrent connection-oriented server and demonstrate its functioning.
4. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple Day / Time Server and demonstrate its functioning.
5. Design, develop, and execute a program using JAVA networking facilities to implement a simple Day / Time Server and demonstrate its functioning. Repeat the above problems.

COURSE OUTCOMES

The student will be able to:

- Gain in depth knowledge about Client-Server software, Context Switching and Protocol Software, I/o.
- Programming System Calls, Basic I/O Functions available in UNIX
- Gain the knowledge on Socket interface, TCP, UDP in details.
- Pros and cons of Client Software Various applications and their issues.

TEXT BOOK:

1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001

Course Title: Analysis of Computer Networks	Course Code: 14SCN421
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To Become familiar with the concepts of computer networks
- What is a computer network and what are the fundamental protocols.
- To analyze network architectures in stochastic and deterministic way.
- RSVP, Principles of TCP
- To explore more on different network protocols.
- To understand the knowledge of multiplexing, streaming sessions in computer network.

TOPICS:**MODULE I**

Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.

10 Hours**MODULE II**

Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

10 Hours**MODULE III**

Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

10 Hours**MODULE IV**

Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

10 Hours**MODULE V**

Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

10 Hours**Course Outcomes:**

On completion, student will be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.

TEXT BOOKS:

REFERENCE BOOKS:

1. M. Schwartz: Broadband Integrated Networks, Prentice Hall PTR, 1996.

2. J. Walrand, P. Varaiya: High Performance Communication Networks, 2nd Edition, Morgan Kaufmann, 1999

Semester IV

Year:2014-2015

Course Title: Service Oriented Architecture	Course Code: 14SCN422
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand various architecture for application development
- To understand the importance of SOA in Application Integration
- To learn web service and SOA related tools.
- To learn the concepts of SOA governance.

Topics:

MODULE I

SOA BASICS: Software Architecture – Types of IT Architecture – S OA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architec ture – Enterprise Applications – Solution Architect ure for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models

10 Hours

MODULE II

SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Ac tivity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits o f SPA – Cost Savings

10 Hours

MODULE III

SOA GOVERNANCE :SOA implementation and Governance – strategy – SOA d evelopment – SOA governance – trends in SOA – event-driven architect ure – software s a service – SOA technologies – pro of-of-concept – process orchestration – SOA best practice s

10 Hours

MODULE IV

SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL, SOAP and Java/XML mapping in SOA – JAXB Data binding.

10 Hours

MODULE V

APPLICATION INTEGRATION: JAX-WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study – WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Compare the different IT architecture
- Analysis and design of SOA based applications
- Implementation of web service and realization of SOA
- Implementation of RESTful services
- Design and implementation of SOA based Application Integration using BPEL

Text Book:

1. Shankar Kambhampaly, “Service-Oriented Architecture for Enterprise Applications”, Wiley 2008.

REFERENCES:

2. Mark D. Hansen, “SOA using Java Web Services”, Practice Hall, 2007.
3. Waseem Roshen, “SOA-Based Enterprise Integration”, Tata McGraw-HILL, 2009.

Semester IV

Year: 2014-2015

Course Title: Mobile Application Development	Course Code: 14SCN423
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To Understand system requirements for mobile applications
- To Generate suitable design using specific mobile development frameworks
- To Generate mobile application design
- To Implement the design using specific mobile development frameworks
- To acquire knowledge of android applications development.

Topics:

MODULE I

Introduction to mobile communication and computing:, Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover

and security. Smart phone operating systems and smart phones applications.

10 Hours

MODULE II

Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator, The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control .

10 Hours

MODULE III

The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control Building Blocks for Android Application Design, Laying Out Controls in Containers, Utilizing Resources and Media, Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments

10 Hours

MODULE IV

Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments Advanced Android Programming: Internet, Entertainment, and Services, Implementing drawing and animations,

10 Hours

MODULE V

Displaying web pages and maps, communicating with sms and emails,. creating and using content providers: Creating and consuming services, Publishing android applications.

10 Hours

Course Outcomes:

The student will be able to:

- Describe the requirements for mobile applications
- Explain the challenges in mobile application design and development
- Develop and design for mobile applications for specific requirements
- Implement the design using Android SDK
- Implement the design using Objective C and iOS

Text Books:

1. Mobile Computing: Technologies and Applications- N. N. Jani S chand,2009.
2. B.M.Hirwani- Android programming Pearson publications-2013

Course Title: Cybercrime and Digital Forensic	Course Code: 14SCN424
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To understand Accounting Forensics
- To analyze the nature and effect of cyber crime in society.
- To understand Sarbanes-Oxley Financial and Accounting Disclosure Information
- To understand Computer Crime and Criminals
- To understand Liturgical Procedures

Topics:**MODULE I**

INTRODUCTION: Introduction and Overview of Cyber Crime, Nature and Scope of Cyber Crime, Types of Cyber Crime: Social Engineering, Categories of Cyber Crime, Property Cyber Crime.

10 Hours**MODULE II**

CYBER CRIME ISSUES: Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks, Pornography, Software Piracy, Intellectual Property, Mail Bombs, Exploitation, Stalking and Obscenity in Internet, Digital laws and legislation, Law Enforcement Roles and Responses.

10 Hours**MODULE III**

INVESTIGATION: Introduction to Cyber Crime Investigation, Investigation Tools, e-Discovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Hands on Case Studies. Encryption and Decryption Methods, Search and Seizure of Computers, Recovering Deleted Evidences, Password Cracking.

10 Hours**MODULE IV**

DIGITAL FORENSICS: Introduction to Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Audio Video Analysis, Windows System Forensics, Linux System Forensics, Network Forensics. **10 Hours**

MODULE V

LAWS AND ACTS: Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC , Electronic Communication Privacy ACT, Legal Policies.

10 Hours

Course Outcomes

The student will be able to:

- Understand financial and accounting forensics, and explain their role in preventing various forms of fraud.
- Distinguish various types of computer crime, and use computer forensic techniques to identify the digital fingerprints associated with criminal activities.
- Know how to apply forensic analysis tools to recover important evidence for identifying computer crime.
- Develop a custom computer forensic analysis tool.

WIRELESS AD-HOC NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI251 / 16SCE421 / 16SCN11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain fundamental principles of Ad-hoc Networks • Discuss a comprehensive understanding of Ad-hoc network protocols • Outline current and emerging trends in Ad-hoc Wireless Networks. • Analyze energy management in ad-hoc wireless networks. 			
Module -1			Teaching Hours
Ad-hoc Wireless Networks Introduction, Issues in Ad-hoc Wireless Networks, Ad-hoc Wireless Internet; MAC Protocols for Ad-hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas.			10Hours
Module -2			
Routing Protocols for Ad-hoc Wireless Networks Introduction, Issues in Designing a Routing Protocol for Ad-hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols.			10 Hours
Module – 3			
Multicast Routing in Ad-hoc Wireless Networks Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.			10 Hours
Module-4			
Transport Layer and Security Protocols for Ad-hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad-hoc Networks; Security in Ad-hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Touting Ad-hoc Wireless Networks.			10 Hours
Module-5			
Quality of Service and Energy Management in Ad-hoc Wireless Networks: Introduction, Issues and Challenges in Providing QoS in Ad-hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad-hoc Wireless Networks: Introduction, Need for Energy Management in Ad-hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.			10 Hours
Course outcomes:			
The students shall able to:			
<ul style="list-style-type: none"> • Design their own wireless network • Evaluate the existing network and improve its quality of service • Choose appropriate protocol for various applications • Examine security measures present at different level 			

- Analyze energy consumption and management

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

ADVANCES IN COMPUTER NETWORKS
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)

SEMESTER – I

Subject Code	16SCN12/16SCS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Discuss with the basics of Computer Networks.
- Compare various Network architectures.
- Discuss fundamental protocols.
- Define and analyze network traffic, congestion, controlling and resource allocation.

Module 1	Teaching Hours
<p>Foundation: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels. T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4</p>	10 Hours
<p>Module 2</p> <p>Internetworking I: Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. T1: Chapter 3.1, 3.2,</p>	10 Hours
<p>Module 3</p> <p>Internetworking- II: Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP T1: Chapter 3.3, 4.1.1,4.1.3 T2:Chapter 13.1 to 13.18 , Ch 18.</p>	10 Hours
<p>Module 4</p> <p>End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3</p>	10 Hours
<p>Module 5</p> <p>Congestion Control and Resource Allocation Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System (DNS), Electronic Mail (SMTP,POP,IMAP,MIME), World Wide Web (HTTP), Network Management (SNMP) T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8</p>	10 Hours
Course Outcomes	
The students should be able to:	

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Larry Peterson and Bruce S Davis “Computer Networks :A System Approach” 5th Edition , Elsevier -2014.
2. Douglas E Comer, “Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI – 2014.

Reference Books:

1. Uyles Black, “Computer Networks, Protocols , Standards and Inte rfaces” 2 nd Edition - PHI.
2. Behrouz A Forouzan, “TCP /IP Protocol Suite” 4 th Edition – Tata McGraw-Hill.

INFORMATION AND NETWORK SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI12/16SCN13/16SCS253	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain standard algorithms used to provide confidentiality, integrity and authenticity. • Distinguish key distribution and management schemes. • Deploy encryption techniques to secure data in transit across data networks • Implement security applications in the field of Information technology 			
Module 1			Teaching Hours
Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm			10 Hours
Module 2			
Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.			10 Hours
Module 3			
Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. User Authentication: Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.			10 Hours
Module 4			
Wireless network security: Wireless security, Wireless network threats, Wireless			10 Hours

<p>network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function. Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. Secure Sockets Layer: SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. Transport Layer Security: Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. HTTPS Connection Initiation, Connection Closure. Secure Shell(SSH) Transport Layer Protocol, User Authentication Protocol, Connection Protocol</p>	
<p>Module 5</p>	
<p>Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.</p>	<p>10 Hours</p>
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Analyze the vulnerabilities in any computing system and hence be able to design a security solution. • Identify the security issues in the network and resolve it. • Evaluate security mechanisms using rigorous approaches, including theoretical. 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. William Stallings, Cryptography and Network Security, Pearson 6th edition.</p>	
<p>Reference Books: 1. V K Pachghare: Cryptography and Information Security.</p>	

PROBABILITY STATISTICS AND QUEUING THEORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – I

Subject Code	16LNI14 / 16SCN14/16SCS14/ 16SSE14 / 16SIT14 /16SCE14 / 16SFC14	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Develop analytical capability and to impart knowledge of Probability, Statistics and Queuing.
- Apply above concepts in Engineering and Technology.
- Acquire knowledge of Hypothesis testing and Queuing methods and their applications so as to enable them to apply them for solving real world problems

Module 1	Teaching Hours
Axioms of probability, Conditional probability, Total probability, Baye's theorem, Discrete Random variable, Probability mass function, Continuous Random variable. Probability density function, Cumulative Distribution Function, and its properties, Two-dimensional Random variables, Joint pdf / cdf and their properties	10 Hours

Module 2	Teaching Hours
Probability Distributions / Discrete distributions: Binomial, Poisson Geometric and Hyper-geometric distributions and their properties. Continuous distributions: Uniform, Normal, exponential distributions and their properties.	10 Hours

Module 3	Teaching Hours
Random Processes: Classification, Methods of description, Special classes, Average values of Random Processes, Analytical representation of Random Process, Autocorrelation Function, Cross-correlation function and their properties, Ergodicity, Poisson process, Markov Process, Markov chain.	10 Hours

Module 4	Teaching Hours
Testing Hypothesis: Testing of Hypothesis: Formulation of Null hypothesis, critical region, level of significance, errors in testing, Tests of significance for Large and Small Samples, t-distribution, its properties and uses, F-distribution, its properties and uses, Chi-square distribution, its properties and uses, χ^2 – test for goodness of fit, χ^2 test for Independence	10 Hours

Module 5	Teaching Hours
Symbolic Representation of a Queuing Model, Poisson Queue system, Little Law, Types of Stochastic Processes, Birth-Death Process, The M/M/1 Queuing System, The M/M/s Queuing System, The M/M/s Queuing with Finite buffers.	10 Hours

Course Outcomes

The students should be able to:

- Demonstrate use of probability and characterize probability models using probability mass (density) functions & cumulative distribution functions.
- Explain the techniques of developing discrete & continuous probability distributions and its applications.
- Describe a random process in terms of its mean and correlation functions.
- Outline methods of Hypothesis testing for goodness of fit.
- Define the terminology & nomenclature appropriate queuing theory and also distinguish various queuing models.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Probability, Statistics and Queuing Theory, V. Sundarapandian, Eastern Economy Edition, PHI Learning Pvt. Ltd, 2009.

Reference Books:

1. Probability & Statistics with Reliability, Queuing and Computer Applications, 2nd Edition by Kishor. S. Trivedi , Prentice Hall of India ,2004.
2. Probability, Statistics and Random Processes, 1st Edition by P Kausalya, Pearson Education, 2013.

INTERNET OF THINGS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI253 /16SCE253 / 16SCN151 /16SCS24 /16SIT251 /16SSE421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define and explain basic issues, policy and challenges in the IoT • Illustrate Mechanism and Key Technologies in IoT • Explain the Standard of the IoT • Explain resources in the IoT and deploy of resources into business • Demonstrate data analytics for IoT 			
Module -1			Teaching Hours
What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples- Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications.			8 Hours
Module -2			8 Hours
Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards- Overview and Approaches, IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol, Representational State Transfer, ETSI M2M, Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPv6 Over Lowpower WPAN, Zigbee IP(ZIP), IPSO			8 Hours
Module – 3			8 Hours
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M, Layer 3 Connectivity :IPv6 Technologies for the IoT: Overview and Motivations. Address Capabilities, IPv6 Protocol Overview, IPv6 Tunneling, IPsec in IPv6, Header Compression Schemes, Quality of Service in IPv6, Migration Strategies to IPv6.			8 Hours
Module-4			8 Hours
Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications.			8 Hours
Module-5			8 Hours
Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis, Structural Health Monitoring Case Study.			8 Hours
Course outcomes:			
At the end of this course the students will be able to: <ul style="list-style-type: none"> • Develop schemes for the applications of IOT in real time scenarios • Manage the Internet resources • Model the Internet of things to business 			

- Understand the practical knowledge through different case studies
- Understand data sets received through IoT devices and tools used for analysis

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

SOCIAL NETWORK ANALYSIS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SCN152 / 16SIT252/	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> The learning objective of the course Social Network Analysis is to discuss essential knowledge of network analysis applicable to real world data, with examples from today's most popular social networks. 			
Module 1			Teaching Hours
Introduction to social network analysis and Descriptive network analysis: Introduction to new science of networks. Networks examples. Graph theory basics. Statistical network properties. Degree distribution, clustering coefficient. Frequent patterns. Network motifs. Cliques and k-cores.			8 Hours
Module 2			
Network structure, Node centralities and ranking on network: Nodes and edges, network diameter and average path length. Node centrality metrics: degree, closeness and betweenness centrality. Eigenvector centrality and PageRank. Algorithm HITS.			8 Hours
Module 3			
Network communities and Affiliation networks: Networks communities. Graph partitioning and cut metrics. Edge betweenness. Modularity clustering. Affiliation network and bipartite graphs. 1-mode projections. Recommendation systems.			8 Hours
Module 4			
Information and influence propagation on networks and Network visualization: Social Diffusion. Basic cascade model. Influence maximization. Most influential nodes in network. Network visualization and graph layouts. Graph sampling. Low - dimensional projections			8 Hours
Module 5			
Social media mining and SNA in real world: FB/VK and Twitter analysis: Natural language processing and sentiment mining. Properties of large social networks: friends, connections, likes, re-tweets.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> Define notation and terminology used in network science. Demonstrate, summarize and compare networks. Explain basic principles behind network analysis algorithms. Analyzing real world network. 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

MULTI-CORE ARCHITECTURE AND PROGRAMMING
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER - I

Subject Code	16SCE24 / 16SCN153	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS - 03

Course objectives: This course will enable students to

- Define technologies of multicore architecture and performance measures
- Demonstrate problems related to multiprocessing
- Illustrate windows threading, posix threads, openmp programming
- Analyze the common problems in parallel programming

Module -1

Teaching Hours

Introduction to Multi-core Architecture Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. System Overview of Threading : Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

8 Hours

Module -2

Fundamental Concepts of Parallel Programming :Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives. Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features

8 Hours

Module – 3

Threading APIs :Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft. NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

8 Hours

Module-4

OpenMP: A Portable Solution for Threading : Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance

8 Hours

Module-5

Solutions to Common Parallel Programming Problems : Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache

8 Hours

<p>Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.</p>	
<p>Course outcomes:</p>	
<p>The students shall be able to:</p> <ul style="list-style-type: none"> • Identify the limitations of ILP and the need for multicore architectures • Define fundamental concepts of parallel programming and its design issues • Solve the issues related to multiprocessing and suggest solutions • Make out the salient features of different multicore architectures and how they exploit parallelism • Demonstrate the role of OpenMP and programming concept 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

SOFT COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SSE41 / 16SCS254 / 16SCN154	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain key aspects of soft computing. • Identify the components and building block hypothesis of Genetic algorithm. • Analyze Neuro Fuzzy modeling and control. • Evaluate machine learning through Support vector machines. 			
Module 1			Teaching Hours
Introduction to Soft computing: Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model.			8 Hours
Module 2			
Perceptron Network: Adaptive linear neuron, Multiple adaptive linear neurons, Back propagation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models).			8 Hours
Module 3			
Introduction to classical sets and fuzzy sets: Classical relations and fuzzy relations, Membership functions.			8 Hours
Module 4			
Defuzzification: Fuzzy decision making, and applications.			8 Hours
Module 5			
Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA General genetic algorithms, The schema theorem, Genetic programming, applications.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Implement machine learning through neural networks. • Design Genetic Algorithm to solve the optimization problem. • Develop a Fuzzy expert system. • Model Neuro Fuzzy system for clustering and classification. 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.			
Text Books:			
1. Principles of Soft computing, Shivanandam, Deepa S. N, Wiley India, ISBN 13: 788126527410, 2011

COMPUTER NETWORKS AND INFORMATION SECURITY LABORATORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – I

Subject Code	16SCN16	IA Marks	20
Number of Lecture Hours/Week	01+03	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to

- Demonste Concepts of fundamental protocols.
- Illustrate internetworking concepts.
- Implement concepts in congestion control and error detections.
- Evaluate fundamentals of Cryptography through practical implementation.
- Implement standard algorithms used to provide confidentiality, integrity and authenticity.
- Design security applications in the field of Information technology.

PART – A Computer Network LABORATORY WORK

Note:

Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

Simulation Programs using OPNET /NS2/NS3 or any other equivalent software

8. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
9. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

PART – B INSLABORATORY WORK

2. Consider a file with composite data, substitute the content and transpose the ciphers.
3. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
4. Apply the RSA algorithm on a text file to produce cipher text file.
5. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
6. Implementation of Message Authentication Code using cryptography VMAC function.
7. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change

- in the input results in a substantial change in the output
- Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN (Sub-netting).

Course Outcomes

The students should be able to:

- Apply key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Design and evaluate application layer protocol
- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Conduction of Practical Examination:

- All laboratory experiments (nos) are to be included for practical examination.
- Students are allowed to pick one experiment from **each part and execute both**
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- PART –A:** Procedure + Conduction + Viva: **10 + 20 +10 (40)**
- PART –B:** Procedure + Conduction + Viva: **10 + 20 +10 (40)**
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.**

SEMINAR [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SCE17 / 16SCN17 / 16LNI17 / 16SIT17 / 16SSE17 / 16SCS17 / 16SFC17	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-
CREDITS – 01			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Motivate the students to read technical article • Discover recent technology developments 			
Descriptions			
<p>The students should read a recent technical article (try to narrow down the topic as much as possible) from any of the leading reputed and refereed journals like:</p> <ol style="list-style-type: none"> 1. IEEE Transactions, journals, magazines, etc. 2. ACM Transactions, journals, magazines, SIG series, etc. 3. Springer 4. Elsevier publications etc <p>In the area of (to name few and not limited to)</p> <ul style="list-style-type: none"> • Web Technology • Cloud Computing • Artificial Intelligent • Networking • Security • Data mining 			
Course Outcomes			
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Conduct survey on recent technologies • Infer and interpret the information from the survey conducted • Motivated towards research 			
Conduction:			
<p>The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.</p>			
<p>Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).</p>

Elective

16SCN421 Service Oriented Architecture

Note:

1. **Project Phase-1:** 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/visit industries to finalize the topic of Project.
2. **Project Phase-2:** 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
3. **Project Evaluation:** Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
4. **Project evaluation:**
 - a. Internal Examiner shall carry out the evaluation for 100 marks.
 - b. External Examiner shall carry out the evaluation for 100 marks.
 - c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
 - d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks

MULTIMEDIA COMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN21/16LNI152	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define the Multimedia Communication Models • Explain Multimedia Transport in Wireless Networks • Solve the Security issues in multimedia networks • Illustrate real-time multimedia network applications. • Explain different network layer based application. 			
Module 1			Teaching Hours
Introduction, multimedia information representation, multimedia networks, multimedia applications, Application and networking terminology, network QoS and application QoS, Digitization principles,. Text, images, audio and video.			10 Hours
Module 2			
Text and image compression,, compression principles, text compression- Runlength, Huffman, LZW, Document Image compression using T2 and T3 coding, image compression- GIF, TIFF and JPEG			10 Hours
Module 3			
Audio and video compression, audio compression – principles, DPCM, ADPCM, Adaptive and Linear predictive coding, Code-Excited LPC, Perceptual coding, MPEG and Dolby coders video compression, video compression principles.			10 Hours
Module 4			
Video compression standards: H.261, H.263, MPEG, MPEG 1, MPEG 2, MPEG-4 and Reversible VLCs, MPEG 7 standardization process of multimedia content description, MPEG 21 multimedia framework.			10 Hours
Module 5			
Notion of synchronization, presentation requirements, reference model for synchronization, Introduction to SMIL, Multimedia operating systems, Resource management, process management techniques.			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Deploy the right multimedia communication models. • Apply QoS to multimedia network applications with efficient routing techniques. • Solve the security threats in the multimedia networks. • Develop the real-time multimedia network applications 			
Question paper pattern:			
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.			
Text Books:			
<ol style="list-style-type: none"> 1. Fred Halsall, “Multimedia Communications”, Pearson education, 2001. 2. Raif Steinmetz, Klara Nahrstedt, “Multimedia: Computing, Communications and Applications”, Pearson education, 2002. 			

Reference Books:

1. K. R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic, "Multimedia Communication Systems", Pearson education, 2004.
2. John Billamil, Louis Molina, "Multimedia : An Introduction", PHI, 2002.

CLOUD COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCS12/16SCE12 16SIT22/16SSE254 16SCN22/16LNI151	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define and Cloud, models and Services. • Compare and contrast programming for cloud and their applications • Explain virtualization, Task Scheduling algorithms. • Apply ZooKeeper, Map-Reduce concept to applications. 			
Module 1			Teaching Hours
Introduction, Cloud Infrastructure: Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.			10 Hours
Module 2			
Cloud Computing: Application Paradigms: Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The Gre The Web application, Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.			10 Hours
Module 3			
Cloud Resource Virtualization: Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems			10 Hours
Module 4			
Cloud Resource Management and Scheduling: Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling MapReduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.			10 Hours
Module 5			
Cloud Security, Cloud Application Development: Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine			10 Hours

<p>monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.</p>	
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Compare the strengths and limitations of cloud computing • Identify the architecture, infrastructure and delivery models of cloud computing • Apply suitable virtualization concept. • Choose the appropriate cloud player • Address the core issues of cloud computing such as security, privacy and interoperability • Design Cloud Services • Set a private cloud 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.</p>	
<p>Reference Books: 1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014. 2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.</p>	

NETWORK MANAGEMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI154 / 16SCN23	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Evaluate need for interoperable network management. • Explain the concepts and architecture behind standards based network management. • Illustrate the concepts and terminology associated with SNMP and TMN • Demonstrate network management as a typical distributed application 			
Module 1			Teaching Hours
Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards-Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology , Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions-Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management.			10 Hours
Module 2			10 Hours
Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1-Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model.			10 Hours
Module 3			10 Hours
SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications.			10 Hours
Module 4			10 Hours
Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL			10 Hours

Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles	
Module 5	
Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation 24 Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management.	10 Hours
Course Outcomes	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets. • Apply network management standards to manage practical networks • Formulate possible approaches for managing OSI network model. • Use on SNMP for managing the network • Use RMON for monitoring the behavior of the network • Identify the various components of network and formulate the scheme for the managing them 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.</p>	
<p>Reference Books: 1. J. Richard Burke: Network management Concepts and Practices: a Hands-On Approach, PHI, 2008.</p>	

MANAGING BIG DATA [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI422 / 16SCE21 / 16SCN24 / 16SCS21 / 16SIT41 / 16SSE422	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define big data for business intelligence • Analyze business case studies for big data analytics • Explain managing of Big data Without SQL • Develop map-reduce analytics using Hadoop and related tools 			
Module -1			Teaching Hours
UNDERSTANDING BIG DATA: What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics.			10Hours
Module -2			
NOSQL DATA MANAGEMENT: Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schema less databases – materialized views – distribution models – shading — version – map reduce – partitioning and combining – composing map-reduce calculations.			10 Hours
Module – 3			
BASICS OF HADOOP: Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures.			10 Hours
Module-4			
MAPREDUCE APPLICATIONS: MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats			10 Hours
Module-5			
HADOOP RELATED TOOLS: Hbase – data model and implementations – Hbase clients – Hbase examples –praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.			10 Hours
Course outcomes:			
The students shall able to: <ul style="list-style-type: none"> • Describe big data and use cases from selected business domains • Explain NoSQL big data management • Install, configure, and run Hadoop and HDFS 			

- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

SWITCHING & STATISTICAL MULTIPLEXING IN TELECOMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN251	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain switching and multiplexing. • Analyze the transmission technology. And transmission control. • Demonstrate basic knowledge on telecommunication 			
Module -1			Teaching Hours
Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. Why Digital: Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks			8 Hours
Module -2			
Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization			8 Hours
Module – 3			
Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. Digital Transmission and Multiplexing: Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing			8 Hours
Module-4			
Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching			8 Hours
Module-5			
Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems			8 Hours
Course outcomes:			
The student will be able to:			
<ul style="list-style-type: none"> • Explain basics of telecommunications and digital form • Elaborate switching and multiplexing, telecommunication. • Illustrate transmission control in telecommunication • Design and develop switching, multiplexing and traffic control. 			
Question paper pattern:			
<ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 questions from each module. • Each question will have questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 			

Text Books:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Reference Books:

WIRELESS SENSOR NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN252	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain sensor networks for various application setups. • Demonstrate the design space and conduct trade-off analysis between performance and resources. • Assess coverage and conduct node deployment planning. • Devise appropriate data dissemination protocols and model links cost. • Determine suitable medium access protocols and radio hardware. • Illustrate sensor networks using commercial components. • Discuss quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints. 			
Module -1			Teaching Hours
Introduction, Overview and Applications of Wireless Sensor Networks Introduction, Basic overview of the Technology, Applications of Wireless Sensor Networks: Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology. (Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)			8 Hours
Module -2			Teaching Hours
Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, Wireless Transmission Technology and Systems: Introduction, Radio Technology Primer, Available Wireless Technologies (Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)			8 Hours
Module – 3			Teaching Hours
MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. Routing Protocols for Wireless Sensor Networks: Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs. (Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)			8 Hours
Module-4			Teaching Hours
Transport Control and Middleware for Wireless Sensor Networks: Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. Middleware for Wireless Sensor Networks: Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware. (Chapter 7: 7.1-7.4, Chap. 8: 8.1-8.4)			8 Hours
Module-5			Teaching Hours
Network Management and Operating System for Wireless Sensor Networks: Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. Operating Systems for Wireless Sensor Networks: Introduction, Operating System Design Issues, Examples of Operating Systems. (Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)			8 Hours
Course outcomes:			

The students shall able to:

- Explain existing applications of wireless sensor actuator networks
- Apply in the context of wireless sensor networks and explain elements of distributed computing and network protocol design
- Contrast Various hardware, software platforms that exist for sensor networks
- Summarize various network level protocols for MAC, routing, time synchronization, aggregation, consensus and distributed tracking

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

OPTICAL NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define basic elements of optical fiber transmission link, fiber modes configurations and structures • Compare different kind of losses, signal distortion in optical wave guides and other signal degradation factors • List and explain various optical source materials, LED structures, quantum efficiency, and Laser diodes • Demonstrate fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration and also fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM 			
Module -1			Teaching Hours
Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, Optical Transport Network: Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service Multiprotocol Label Switching: Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.			8 Hours
Module -2			
WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, Reconfigurable OADMs Optical Cross connects: All-Optical OXC Configurations.			8 Hours
Module – 3			
Control and Management: Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability, Performance and Fault Management: The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. Configuration Management: Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol			8 Hours
Module-4			

<p>Basic Concepts: Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. Protection in the Client Layer: Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCh-Mesh Protection, GMPLS Protection, Interworking between Layers.</p>	<p>8 Hours</p>
<p>Module-5</p>	
<p>WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength-Routing Networks, Statistical Dimensioning Models: First-Passage Model, Blocking Model, Maximum Load Dimensioning Models: Offline Light path Requests, Online RWA in Rings</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<p>The students shall able to:</p> <ul style="list-style-type: none"> • Explain fundamentals of optical network. • Analyze optical network architectures ranging from optical access networks to backbone optical transport networks. • Choose approaches and methodologies of optical network for design effective optimization; • Apply Techniques of optical network survivability. • Demonstrate problem solving skills and critical thinking in the discipline of optical networks. 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <p>1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.</p>

MOBILE APPLICATION DEVELOPMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI23/ 16SCE23 16SCN254 / 16SIT23	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Analyze system requirements for mobile applications. • Apply of mobile development frameworks. • Demonstrate mobile application design. • Demonstrate and implement mobile application. 			
Module -1			Teaching Hours
Introduction to mobile communication and computing: Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover and security. Smart phone operating systems and smart phones applications.			8 Hours
Module -2			
Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator.			8 Hours
Module – 3			
The Intent of Android Development, Four kinds of Android Components: Activity, Service, Broadcast Receiver and Content Provider. Building Blocks for Android Application Design, Laying Out Controls in Containers. Graphics and Animation: Drawing graphics in Android, Creating Animation with Android’s Graphics API.			8 Hours
Module-4			
Creating the Activity, Working with views: Exploring common views, using a list view, creating custom views, understanding layout. Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments. Multimedia: Playing Audio, Playing Video and Capturing Media. Advanced Android Programming: Internet, Entertainment, and Services.			8 Hours
Module-5			
Displaying web pages and maps, communicating with SMS and emails. Creating and using content providers: Creating and consuming services, publishing android applications			8 Hours
Course outcomes:			
The students should be able to: <ul style="list-style-type: none"> • Describe the requirements for mobile applications • Explain the challenges in mobile application design and development • Develop design for mobile applications for specific requirements • Implement the design using Android SDK • Implement the design using Objective C and iOS • Deploy mobile applications in Android and iPone marketplace for distribution 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.
 Each question will have questions covering all the topics under a module.
 The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Mobile Computing: (technologies and Applications-N. N. Jani S chand
2. B.M.Hirwani- Android programming Pearson publications-2013
3. W. Frank Ableson, Robi Sen and C. E. Ortiz - **Android in Action**, Third Edition-2012 DreamTech Publisher

MINIPROJECT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Laboratory Code	16LNI26/ 16SCE26 / 16SCN26 /16SCS26 /16SFC26 / 16SIT26 / 16SSE26	IA Marks	20
Number of Lecture Hours/Week	03 hours of lab	Exam Marks	80
Total Number of Lecture Hours	-----	Exam Hours	03
CREDITS – 02			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Enable the student to design, develop and analyze an application development 			
<p>The student will carry out a mini project relevant to the course. The project must be development of an application (Hardware/Software). It is preferable if the project is based on mobile application development.</p>			
<p>Course outcomes:</p> <ul style="list-style-type: none"> • Design, develop and to analyze an application development. • Prepare report of the project. 			
<p>Conduction of Practical Examination:</p> <p>The student shall prepare the report by including:</p> <ol style="list-style-type: none"> 1. Define project (Problem Definition) 2. Prepare requirements document <ol style="list-style-type: none"> a. Statement of work b. Functional requirements c. Software / Hardware requirements 3. Develop use cases 4. Research, analyze and evaluate existing learning materials on the application 5. Develop user interface and implement code 6. Prepare for final demo 			
<p>Evaluation:</p> <p>Evaluation shall be taken up at the end of the semester. Project work evaluation and viva-voce examination shall be conducted. Internal evaluation shall be carried by the Guide and Head of the department for 20 marks. Final examination which includes demonstration of the project and viva-voce shall be conducted for 80 Marks viz report + Outputs of the project + presentation = 30+30+20</p>			

= 80 marks.

SEMINAR
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – II

Subject Code	16SCE27 / 16SCN27 / 16LNI27 / 16SIT27 / 16SSE27 / 16SCS27 / 16SFC27	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-

CREDITS – 01

Course objectives: This course will enable students to

- Motivate the students to read technical article
- Discover recent technology developments

Descriptions

The students should read a recent technical article (try to narrow down the topic as much as possible) from any of the leading reputed and refereed journals like:

1. IEEE Transactions, journals, magazines, etc.
2. ACM Transactions, journals, magazines, SIG series, etc.
3. Springer
4. Elsevier publications etc

In the area of (to name few and not limited to)

- Web Technology
- Cloud Computing
- Artificial Intelligent
- Networking
- Security
- Data mining

Course Outcomes

The students should be able to:

- Conduct survey on recent technologies
- Infer and interpret the information from the survey conducted
- Motivated towards research

Conduction:

The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.

Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).

CLIENT SERVER PROGRAMMING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV			
Subject Code	16SIT151 / 16LNI41 / 16SCN41	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain Client-Server software, Context Switching and Protocol Software, I/o. • Define System Calls, Basic I/O Functions available in UNIX • Illustrate socket interface, TCP, UDP in detail. • Compare various client Software and various algorithms issue related to server software design. 			
Module 1			Teaching Hours
The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts. Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. Program Interface to Protocols: Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP.			10 Hours
Module 2			
The Socket Interface: Introduction, Berkley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. Algorithms and Issues in Client Software Design: Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability.			10 Hours
Module 3			
Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays, A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.			10 Hours
Module 4			
Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs			10 Hours

<p>Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.</p>	
<p>Module 5</p>	
<p>Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. Iterative, Connection-Oriented Servers (TCP): Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability. Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.</p>	<p>10 Hours</p>
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Explain Client-Server software, Context Switching and Protocol Software, I/O. • Demonstrate programming System Calls, Basic I/O Functions available in UNIX • Implement Socket interface, TCP, UDP in detail. • Compare and contrast Client Software Various applications and their issues 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001.

SERVICE ORIENTED ARCHITECTURE [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV			
Subject Code	16SSE13 /16SIT153 / 16SCN421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Interpret various architecture for application development • Demonstrate the importance of SOA in Application Integration • To learn web service and SOA related tools • To Learn implementation details of SOA • To understand various case studies 			
Module 1			Teaching Hours
SOA BASICS :Software Architecture – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models.			8 Hours
Module 2			
SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits of SPA – Cost Savings.			8 Hours
Module 3			
SOA GOVERNANCE: SOA implementation and Governance – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – SOA best practices.			8 Hours
Module 4			
SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL,SOAP and Java/XML mapping in SOA – JAXB Data binding.			8 Hours
Module 5			
APPLICATION INTEGRATION: JAX –WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study –WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Compare different IT architecture • Analyze and design of SOA based applications • Implement web service and realize of SOA • Implement REST full services • Design and implement of SOA based Application Integration using BPEL 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

ANALYSIS OF COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN422	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain with the concepts of computer networks • What is a computer network and what are the fundamental protocols. • Analyze network architectures in stochastic and deterministic way. • Illustrate RSVP, Principles of TCP • Discover more on different network protocols. • Explain multiplexing, streaming sessions in computer network. 			
Module -1			Teaching Hours
Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.			8 Hours
Module -2			
Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.			8 Hours
Module – 3			
Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).			8 Hours
Module-4			
Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little’s theorem, Brumelle’s theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic			8 Hours
Module-5			
Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet’s Adaptive			8 Hours

Window Protocol; Bandwidth sharing in a Network.	
Course outcomes:	
On completion, student will be able to:	
<ul style="list-style-type: none"> List and classify network services, protocols and architectures, explain why they are layered. Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API. 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
Text Books:

NETWORK ROUTING ALGORITHMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN423	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> Discuss layered architecture for communication networks and the specific functionality of the network layer. Explain the basic principles of routing and the manner, this is implemented in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network. Compare and contrast different routing algorithms existing and their performance characteristics. 			

Module -1	Teaching Hours
<p>NETWORK ROUTING: BASICS AND FOUNDATIONS: Networking and Network Routing: An Introduction: Addressing and Internet Service: An Overview, Network Routing: An Overview, IP Addressing, On Architectures, Service Architecture, Protocol Stack Architecture, Router Architecture, Network Topology Architecture, Network Management Architecture, Public Switched Telephone Network, Communication Technologies, Standards Committees, Last Two Bits.</p> <p>Routing Algorithms: Shortest Path and Widest Path: Bellman–Ford Algorithm and the Distance Vector Approach, Dijkstra’s Algorithm, Comparison of the Bellman–Ford Algorithm and Dijkstra’s Algorithm, Shortest Path Computation with Candidate Path Caching, Widest Path Computation with Candidate Path Caching, Widest Path Algorithm, k-Shortest Paths Algorithm</p> <p>Routing Protocols: Framework and Principles: Routing Protocol, Routing Algorithm, and Routing Table, Routing Information Representation and Protocol Messages, Distance Vector Routing Protocol, Link State Routing Protocol, Path Vector Routing Protocol, Link Cost</p>	8 Hours
Module -2	
<p>ROUTING IN IP NETWORKS: IP Routing and Distance Vector Protocol Family : Routers, Networks, and Routing Information: Some Basics, Static Routes, Routing Information Protocol, Version 1 (RIPv1), Routing Information Protocol, Version 2 (RIPv2), Interior Gateway Routing Protocol (IGRP), Enhanced Interior Gateway Routing Protocol (EIGRP), Route Redistribution</p> <p>OSPF and Integrated IS-IS :From a Protocol Family to an Instance of a Protocol, OSPF: Protocol Features, OSPF Packet Format, Examples of Router LSAs and Network LSAs, Integrated IS-IS, Similarities and Differences Between IS-IS and OSPF</p> <p>Internet Routing Architectures: Internet Routing Evolution, Addressing and Routing: Illustrations, Current Architectural View of the Internet, Allocation of IP Prefixes and AS Number, Policy-Based Routing, Point of Presence, Traffic Engineering Implications, Internet Routing Instability</p>	8 Hours
Module – 3	
<p>Router Architectures: Functions of a Router, Types of Routers, Elements of a Router, Packet Flow, Packet Processing: Fast Path versus Slow Path, Router Architectures. IP Address Lookup Algorithms: Impact of Addressing on Lookup, Longest Prefix Matching, Naïve Algorithms, Binary Tries, Multibit Tries, Compressing Multibit Tries, Search by Length Algorithms, Search by Value Approaches, Hardware Algorithms, Comparing Different Approaches. IP Packet Filtering and Classification: Importance of Packet Classification, Packet Classification Problem, Packet Classification Algorithms, Naïve Solutions, Two-Dimensional Solutions, Approaches for Dimensions, Extending Two-Dimensional Solutions, Divide and Conquer Approaches, Tuple Space Approaches, Decision Tree Approaches, Hardware-Based Solutions.</p>	8 Hours
Module-4	
<p>ADVANCED ROUTING PROTOCOLS FOR WIRELESS NETWORKS: Wireless networking basic aspects, Basic routing concepts, Ad hoc routing, Mesh routing, Vehicular routing, Sensor routing</p>	8 Hours
Module-5	

<p>TOWARD NEXT GENERATION ROUTING: Quality of Service Routing: QoS Attributes, Adapting Shortest Path and Widest Path Routing: A Basic Framework, Update Frequency, Information Inaccuracy, and Impact on Routing, Lessons from Dynamic Call Routing in the Telephone Network, Heterogeneous Service, Single-Link Case, A General Framework for Source-Based QoS Routing with Path Caching, Routing Protocols for QoS Routing</p> <p>MPLS and GMPLS: Traffic Engineering Extension to Routing Protocols, Multiprotocol Label Switching, Generalized MPLS, MPLS Virtual Private Networks. Routing and Traffic Engineering with MPLS: Traffic Engineering of IP/MPLS Networks, VPN Traffic Engineering, Routing/Traffic Engineering for Voice Over MPLS. VoIP Routing: Interoperability through IP and PSTN : PSTN Call Routing Using the Internet, PSTN Call Routing: Managed IP Approach, IP-PSTN Interworking for VoIP, IP Multimedia Subsystem, Multiple Heterogeneous Providers Environment and All-IP Environment of VoIP Services.</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<ul style="list-style-type: none"> • Given the network and user requirements and the type of channel over which the network has to operate, the student would be in a position to apply his knowledge for identifying a suitable routing algorithm, implementing it and analyzing its performance. • The student would also be able to design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications. 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. WEB MINING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN424	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Compare and contrast different knowledge discovery issues in Web mining. • Analyze the different algorithms commonly used by Web application. • Apply the role played by Web mining in Information retrieval and extraction • Demonstrate the documents structures and grouping, • Use the probabilistic model for web mining • Illustrate applications using Web mining 			
Module -1			Teaching Hours
<p>INTRODUCTION: Crawling and Indexing, Topic Directories, Clustering and Classification, Hyperlink Analysis, Resource Discovery and VerticalPortals, Structured vs. Unstructured DataMining . INFRASTRUCTURE and WEB SEARCH -- Crawling the web – HTML and HTTP Basics – Crawling Basics – Engineering Large ScaleCrawlers- Putting together a Crawler- Boolean Queries and the Inverted Index – RelevanceRanking – Similarity Search.</p>			8 Hours
Module -2			
<p>INFORMATION RETRIEVAL: Information Retrieval and Text Mining - Keyword Search - Nearest-Neighbor Methods -Measuring Similarity - Web-Based Document Search - Document–Matching - Inverted Lists -Evaluation of Performance - Structure in a Document Collection - Clustering Documents by Similarity- Evaluation of Performance - Information Extraction - Patterns and Entities from Text- Co reference and Relationship Extraction - Template Filling and Database Construction</p>			8 Hours
Module – 3			
<p>LEARNING I: Similarity and Clustering – Formulations and approaches- Bottom up and Top down Partitioning Paradigms – Clustering and Visualization via Embedding’s – Probabilistic Approaches to clustering – Collaborative Filtering, SUPERVISED LEARNING: The Supervised Learning Scenario, Overview of Classification Strategies, Evaluating Text Classifiers, Nearest Neighbor Learners, Feature Selection.</p>			8 Hours
Module-4			

<p>LEARNING II : SUPERVISED LEARNING – Bayesian Learners, Exploiting Hierarchy among Topics, Maximum Entropy Learners, Discriminative Classification, Hypertext Classification, SEMI SUPERVISED LEARNING-- Expectation Maximization, Labeling Hypertext Graphs and Co- training.</p>	<p>8 Hours</p>
<p>Module-5</p>	
<p>APPLICATIONS: Social Network Analysis- Social Sciences and Bibliometry – Page Rank and HITS – Shortcomings of coarse Grained Graph model- Enhanced Models and Techniques- Evaluation of Topic Distillation- Measuring and Modeling the Web – Resource Discovery – Collecting Important Pages Preferentially – Similarity Search Using Link Topology – Topical Locality and Focused Crawling – Discovering Communities- The Future of Web Mining.</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> • Identify the application areas for web content mining, web structure mining and webusage mining. • Design to retrieval the web data • Develop schemes to crawl the web data, organize and index • Cluster the documents for fast access • Develop algorithms used by web mining applications. • Select between different approaches and techniques of web mining 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

Grand Total (I to IV Sem.)		Marks: 2400; Credits : 94							

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or technical paper.

1).Project Phase – I : 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase – III : Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be $50+50+100=200$ (50 Marks for Internal Guide, 50 Marks for External and 100 for Viva-Voce)

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Course Title: Wireless Ad-hoc Networks	Course Code: 14SCN11
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To explore the design space and conduct trade-off analysis between performance and resources.
- To Determine suitable medium access protocols and radio hardware.
- To learn Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.
- To explore the Ad-hoc network concepts by using network simulators.

TOPICS

MODULE I

Ad hoc Wireless Networks: Introduction, Issues in Ad hoc Wireless Networks, Ad hoc Wireless Internet;
MAC Protocols for Ad hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas
 (Chapter 5: 5.1-5.3, Chapter 6: 6.1-6.8) **10 Hours**

MODULE II

Routing Protocols for Ad Hoc Wireless Networks: Introduction, Issues in Designing a Routing Protocol for Ad hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols
 (Chapter 7: 7.1-7.6, 7.8, 7.9) **10 Hours**

MODULE III

Multicast Routing in Ad hoc Wireless Networks: Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.
 (Chapter 8: 8.1-8.7) **10 Hours**

MODULE IV

Transport Layer and Security Protocols for Ad hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad hoc Networks; Security in Ad hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad hoc Wireless Networks.
 (Chapter 9: 9.1-9.6, 9.7-9.12) **10 Hours**

MODULE V

Quality of Service and Energy Management in Ad hoc Wireless Networks

Introduction, Issues and Challenges in Providing QoS in Ad hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad hoc Wireless Networks: Introduction, Need for Energy Management in Ad hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.

(Chapter 10: 10.1-10.5, Chapter 11: 11.1-11.6)

10 Hours

LABORATORY WORK

Note: Standard Network Parameters and supporting protocols may be assumed for simulation. Any suitable network simulator may be used. (Preferably NS2 or NS3 Simulator)

1. Develop unicast routing protocols using any suitable Network Simulator for (Mobile Ad hoc Networks) MANET to find the best route using the any one of routing protocols from each category from table-driven (e.g., link state or DSDV) on demand (e.g., DSR, AODV, TORA), hybrid (e.g., ZRP, contact-based architectures) and hierarchical (e.g., cluster based.) The efficient path/route should be established for source and destination data transmission using routing protocols. Understand the advantages and disadvantages of each routing protocol types by observing the performance metrics of the routing protocol. In that way the best application/environment suitable routing protocol can be identified in each category.
- 2: Develop multicast routing protocols using any suitable Network Simulator for MANET in which session nodes are connecting through either tree(MAODV, MCEDAR) or mesh (ODMRP, CAMP, FGMP) structure. Analyze the performance metrics of multicast routing protocols with unicast routing protocols.
3. Develop MAC Protocol using any suitable Network Simulator for MANETs to send the packet without any contention through wireless link using the following MAC protocols; (CSMA/CA (802.11), MACA, MACAW, PAMAS, SMAC). Analyze its performance with increasing node density and mobility.
4. Develop and Analyze the performance of TCP connection when it is used for wireless networks. You will find performance of TCP decreases dramatically when a TCP connection traverses a wireless link on which packets may be lost due to wireless transmission errors. Make use of Active Queue Management Technique to control congestion on Wireless Networks. Evaluate the performance of FIFO, RED and WFQ over wireless networks using suitable Network Simulator.
5. Simulate MANET environment using suitable Network Simulator and test with various mobility model such as Random way point, group mobility, highway model, Manhattan model, hybrid models) (Spatial correlation, temporal correlation, relative speed, link durations). Analyze throughput, PDR and delay with respect to different mobility models.

COURSE OUTCOMES

Students will be able to

- Apply knowledge of wireless Ad-hoc networks to various application areas.
- Design, implement and maintain wireless Ad-hoc networks.
- Formulate and solve problems creatively.
- Practical knowledge acquired by hands-on session.

TEXT BOOKS:

1. C. Siva Ram Murthy & B. S. Manoj: Ad hoc Wireless Networks, 2nd Edition, Pearson Education, 2011

REFERENCES:

1. Ozan K. Tonguz and Gianguigi Ferrari: Ad hoc Wireless Networks, John Wiley, 2007.
2. Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du: Ad hoc Wireless Networking, Kluwer Academic Publishers, 2004.

Semester I

Year: 2014-2015

Course Title: Advances in Computer Networks	Course Code: 14SCN12
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To become familiar with the basics of Computer Networks.
- To learn Network architectures.
- To learn Concepts of fundamental protocols.
- To gain the knowledge of internetworking concepts.
- To understand the knowledge of internetworking concepts in various applications.
- To acquire knowledge of implementation concepts in congestion control and error detections.

TOPICS

MODULE I

Foundation

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1:Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2:Chapter 4

10 Hours

MODULE II

Internetworking- I

Switching and Bridging, Datagrams, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, subnetting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2.

10 Hours

MODULE III

Internetworking- II

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP

T1: Chapter 3.3, 4.1.1, 4.1.3 **T2:** Chapter 13.1 to 13.18, Chapter 18.

10 Hours

MODULE IV

End-to-End Protocols

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3

10 Hours

MODULE V

Congestion Control and Resource Allocation

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance.

The Domain Name System(DNS), Electronic Mail(SMTP, POP, IMAP, MIME), World Wide Web(HTTP), Network Management(SNMP).

T1: Chapter 6.4 **T2:** Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8

10 Hours

LABORATORY WORK

PART A: Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

COURSE OUTCOMES

Students will be able to

- Classify network services, protocols and architectures, explain why they are layered.
- Knowledge on key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Practical knowledge gained by hands-on sessions.
- Gain the knowledge of application layer protocol.

Text books:

1. **T1: Larry Peterson and Bruce S Davis** “Computer Networks :A System Approach” 5th Edition , Elsevier - 2014
2. **T2: Douglas E Comer,** “ Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI - 2014

References:

1. **Uyless Black** “Computer Networks, Protocols , Standards and Inte rfaces” 2nd Edition - PHI
2. **Behrouz A Forouzan** “TCP/IP Protocol Suite” 4th Edition – Tata McGraw-Hill.

Semester I

Year: 2014-2015

Course Title: Information and Network Security	Course Code: 14SCN13
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology.

TOPICS

MODULE I

Classical Encryption Techniques

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad.

Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours

MODULE II

Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours

MODULE III

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours

MODULE IV

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, ..

Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer** :SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication

plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits. **10 Hours**

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition.

1. V k Pachghare: Cryptography and Information Security. PHI Learning. ISBN 978-81-203-3521-9

Semester I

Year: 2014-2015

Course Title: Advances in Storage area Network	Course Code: 14SCN14
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre’s maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems
- To appreciate the use of cables technologies used in SAN technology.

TOPICS

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems. **10 Hours**

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS. **10 Hours**

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network;

Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management, Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Have Knowledge on various RAID levels.
- Apply the techniques used for data maintenance.
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

3. Richard Barker and Paul Massiglia: "Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs", Wiley India, 2006.

Semester I

Year: 2014-2015

Course Title: Advanced algorithms	Course Code: 14SCN151
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.
- To get an awareness of probabilistic and randomize algorithms.

TOPICS

MODULE I

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours

MODULE II

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours

MODULE III

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours

MODULE IV

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours

MODULE V

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours

COURSE OUTCOMES:

The students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.
- Get knowledge about different application based algorithm.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007

Course Title: Computer Systems Performance Analysis	Course Code: 14SCN152
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the mathematical foundations needed for performance evaluation of computer systems
- To understand the metrics used for performance evaluation
- To understand the analytical modeling of computer systems
- To enable the students to develop new queuing analysis for both simple and complex systems
- To understand the concept of planning and design in computer system.

TOPICS

TOPICS:

MODULE I

Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.

10 Hours

MODULE II

Workloads, Workload Selection and Characterization: Types of Workloads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, Popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.

10 Hours

MODULE III

Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.

10 Hours

MODULE IV

Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote- Terminal Emulation; Components of an RTE; Limitations of RTEs. **Experimental Design and Analysis: Introduction:** Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.

10 Hours

MODULE V

Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow

Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the need for performance evaluation and the metrics used for it
- Define Little's law and other operational laws
- Apply the operational laws to open and closed systems
- Use discrete-time and continuous-time Markov chains to model real world systems
- Develop analytical techniques for evaluating scheduling policies

Text Book:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2013.

Reference Books:

1. Paul J Fortier, Howard E Michel: computer Systems Performance Evaluation and prediction, Elsevier, 2003.
2. Trivedi K S: Probability and Statistics with Reliability, Queuing and Computer Science Applications, 2nd Edition, Wiley India, 2001.

Semester I

Year: 2014-2015

Course Title: Multi-core Architecture and Programming	Course Code: 14SCN153
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To expose the students to the problems related to multiprocessing
- To understand the different types of multi core architectures
- To expose the students to warehouse-scale and embedded architectures

TOPICS

MODULE I

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper-Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

10 Hours

MODULE II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours

MODULE III

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours

MODULE IV

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

COURSE OUTCOMES

Students will be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.
- Critically analyze the different types of inter connection networks.
- Knowledge on architecture of GPUs, warehouse-scale computers and embedded processors.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006.

Semester I

Year: 2014-2015

Course Title: Soft Computing	Course Code: 14SCN154
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the key aspects of Soft computing
- To know about the components and building block hypothesis of Genetic algorithm.
- To understand the features of neural network and its applications
- To study the fuzzy logic components
- To gain insight onto Neuro Fuzzy modeling and control.
- To gain knowledge in machine learning through Support vector machines.

Topics:

MODULE I

Introduction to Soft computing, Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model. **10 Hours**

MODULE II

Perceptron Network, Adaptive linear neuron, Multiple adaptive linear neurons, Back propogation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models) **10 Hours**

MODULE III

Introduction to classical sets and fuzzy sets, Classical relations and fuzzy relations, Membership functions, **10 Hours**

MODULE IV

Defuzzification, Fuzzy decision making, and applications **10 Hours**

MODULE V

Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA
General genetic algorithms, The schema theorem, Genetic programming, applications

10 Hours

Course Outcomes:

The student will be able to:

- Implement machine learning through neural networks.

- Write Genetic Algorithm to solve the optimization problem
- Develop a Fuzzy expert system.
- Model Neuro Fuzzy system for clustering and classification.

Text book:

1. Principles of Soft computing, Shivanandam, Deepa S. N Wiley India, Jun-2007
(Chapters 1, 2, 3(Upto 3.5), 7, 8, 9, 10, 13, 15 (upto 15.6 & 15.9,15,10)

Reference Books:

1. Neuro-fuzzy and soft computing, J.S.R. JANG, C.T. SUN, E. MIZUTANI, PHI (EEE edition) ISBN: 978-81-203-2243-1

Semester I

Year: 2014-2015

Course Title: Information and Network security Lab	Course Code: 14SCN16
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives:

- To understand the fundamentals of Cryptography through practical implementation.
- To implement standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to use cutting edge simulation tools
- To design security applications in the field of Information technology.

LABORATORY WORK

Note: Use C/C++/Java or equivalent tool to implement the following experiment

1. Consider a file with composite data, substitute the content and transpose the ciphers.
2. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
3. Apply the RSA algorithm on a text file to produce cipher text file.
4. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
5. Implementation of Message Authentication Code using cryptography VMAC function.
6. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change in the input results in a substantial change in the output
7. Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN [Subnetting].
8. Develop a mechanism to setup(configure) a port scanner and identify the intrusion.

Course Outcomes:

Students will be able to:

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.

- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Semester II

Year: 2014-2015

Course Title: Multimedia Communications	Course Code: 14SCN21
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

Course Objectives:

- To understand the Multimedia Communication Models
- To study the Multimedia Transport in Wireless Networks
- To solve the Security issues in multimedia networks
- To explore real-time multimedia network applications.
- To explore different network layer based application.

TOPICS

MODULE I

Introduction to Multimedia Communications: Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework. **10 Hours**

MODULE II

Framework for Multimedia Standardization: Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards. **10 Hours**

MODULE III

Application Layer: Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access. **10 Hours**

MODULE IV

Middleware Layer: Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution. **10 Hours**

MODULE V

Network Layer: Introduction, QoS in Network Multimedia Systems. **10 Hours**

LABORATORY WORK

The following experiments should be practiced (Tools such as HTML/Frontpage/Dreamweaver/ equivalent, Multimedia application enabling software ,System software support for multimedia, Performance measurement tools for multimedia ,Multimedia authoring tools, Web tools and applications)

1. Audio and video editing
2. Image editing
3. 2D and 3D animation.

.The case studies are:

- Video on-demand
- Interactive TV
- Home shopping
- Remote home care
- Electronic album
- Personalized electronic journals.

COURSE OUTCOMES:

Students will be able to:

- Deploy the right multimedia communication models.
- Apply QoS to multimedia network applications with efficient routing techniques.
- Solve the security threats in the multimedia networks.
- Develop the real-time multimedia network applications.

TEXT BOOKS:

1. K.R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic: Introduction to Multimedia Communications – Applications, Middleware, Networking, Wiley India, 2006.

REFERENCE BOOKS:

1. Fred Halsall: Multimedia Communications – Applications, Networks, Protocols, and Standards, Pearson, 2001.
2. Nalin K Sharad: Multimedia information Networking, PHI, 2002.

Semester II

Year:2014-2015

Course Title: Distributed Computing	Course Code: 14SCN22
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To learn Basic Concepts of DSM, Hardware DSM
- To understand File Sharing, DFS Implementation, Replication in DFS,
- To understand the concepts of Cryptanalysis, Secure channels, Access control.
- To understand some of the security concepts in distributed computing.

TOPICS

MODULE I

Distributed System management: Introduction, Resource management, Task Assignment Approach, Load-Balancing Approach, Load-Sharing Approach, Process management in a Distributed Environment, Process Migration, Threads, Fault Tolerance.

10 hours

MODULE II

Distributed Shared Memory :Introduction, Basic Concepts of DSM, Hardware DSM, Design Issue in DSM Systems, Issue in Implementing DSM Systems, Heterogeneous and Other DSM Systems, Case Studies.

10 hours

MODULE III

Distributed File System: Introduction to DFS, File Models, Distributed File System Design, Semantics of File Sharing, DFS Implementation, File Caching in DFS, Replication in DFS, Case studies. **Naming**: Introduction, Desirable features of a good naming system, Basic concepts, System-oriented names, Object-locating mechanisms, Issues in designing human-oriented names, Name caches, Naming and security, Case study: Domain name service.

10 hours

MODULE IV

Security in distributed systems: Introduction, Cryptography, Secure channels, Access control, Security Management, Case studies.

10 hours

MODULE V

Real-Time Distributed operating Systems: Introduction, Design issues in real-time distributed systems, Real-time communication, Real-time scheduling, Case study: Real-time communication in MARS. **Emerging Trends in distributed Computing**: Introduction to emerging trends, Grid Computing, SOA, Cloud computing, the future of emerging Trends.

10 hours

COURSE OUTCOMES:

The student will be able to

- Realize shared memory concept.
- Realize Advantages of DFS.
- Implement mechanisms to manage security in DS

Text Book.

1. Sunitha Mahajan, Seema Shah: Distributing Computing, Published by Oxford University press 2010

Semester II

Year:2014-2015

Course Title: Network Management	Course Code: 14SCN23
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand the need for interoperable network management.
- To learn to the concepts and architecture behind standards based network management.
- To understand the concepts and terminology associated with SNMP and TMN.
- To understand network management as a typical distributed application

TOPICS

MODULE I

Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards- Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology, Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management. **10 Hours**

MODULE II

Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1- Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model. **10 Hours**

MODULE III

SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model
SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications. **10 Hours**

MODULE IV

Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles. **10 Hours**

MODULE V

Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation

Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case-Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management. **10 Hours**

LABORATORY WORK:

1. Capture packets transferred while browsing a selected website (e.g. a page from the course website, a search engine home page). Investigate the protocols used in each packet, the values of the header fields and the packet sizes.
2. Explore at least the following features of Wireshark: filters, Flow Graphs (TCP), statistics, protocol hierarchies.
3. Create several example files for your Apache web server to serve. Configure your web server, and then ask a friend to test your web server by accessing the files. Capture the packets and observe the log file.
4. Configure authentication for a specific directory on your web server. Test, captured packets and observe the log file.
5. Login to another computer in the lab, capture and investigate the data exchanged.
6. Trace the path between several pairs of source/destination nodes.
7. Create fire wall rule(s) that will drop TCP packets destined to a specific computer on the lab network (e.g. yours neighbors computer).
8. Using the supplied client/server sockets programs, implement a third proxy server.

Note: NS2 or equivalent tool to be used.

Course Outcomes:

Upon completion of this course, the students will be able to

- Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets.
- Apply network management standards to manage practical networks.
- Formulate possible approaches for managing OSI network model.
- Use on SNMP for managing the network
- Use RMON for monitoring the behavior of the network
- Identify the various components of network and formulate the scheme for the managing them

TEXT BOOKS:

1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.

REFERENCE BOOKS:

Semester II

Year:2014-2015

Course Title: Switching & Statistical Multiplexing in Telecommunications	Course Code: 14SCN24
Credits(L:T:P): 4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand Switching and multiplexing.
- To understand the transmission technology.
- To understand the transmission control.
- To understand basic knowledge on telecommunication.

Topics:

MODULE I

Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. **Why Digital:** Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks.

10 Hours

MODULE II

Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization.

10 Hours

MODULE III

Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. **Digital Transmission and Multiplexing:** Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing.

10 Hours

MODULE IV

Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching.

10 Hours

MODULE V

Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems.

10 Hours

Course Outcomes:

The student will be able to:

- Gain the knowledge about switching and multiplexing
- Gain the knowledge about telecommunication.
- Learn transmission control in telecommunication.

TEXT BOOKS:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Semester II

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCN251
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To gain knowledge Virtualization
- To gain knowledge Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.
- To gain knowledge in cloud resource virtualization and scheduling.

TOPICS:

MODULE I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

MODULE II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

MODULE III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study:Xen a VMM based

paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

MODULE IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

MODULE V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

Course Outcomes:

The student will be able to:

- Demonstrate simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.

Text Book:

1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.
2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Semester II

Year:2014-2015

Course Title: Wireless Sensor Networks	Course Code: 14SCN252
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- Architect sensor networks for various application setups.
- Explore the design space and conduct trade-off analysis between performance and resources.
- Devise appropriate data dissemination protocols and model links cost.
- Determine suitable medium access protocols and radio hardware.
- Prototype sensor networks using commercial components.

- Provision quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints.

TOPICS:

MODULE I

Introduction, Overview and Applications of Wireless Sensor Networks

Introduction, Basic overview of the Technology, **Applications of Wireless Sensor Networks:** Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology

(Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)

10 Hours

MODULE II

Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, **Wireless Transmission Technology and Systems:** Introduction, Radio Technology Primer, Available Wireless Technologies

(Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)

10 Hours

MODULE III

MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. **Routing Protocols for Wireless Sensor Networks:** Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs.

(Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)

10 Hours

MODULE IV

Transport Control and Middleware for Wireless Sensor Networks

Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. **Middleware for Wireless Sensor Networks:** Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware.

(Chapter 7: 7.1-7.4, Chapter 8: 8.1-8.4)

10 Hours

MODULE V

Network Management and Operating System for Wireless Sensor Networks

Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. **Operating Systems for Wireless Sensor Networks:** Introduction, Operating System Design Issues, Examples of Operating Systems.

(Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)

10 Hours

COURSE OUTCOMES

The student will be able to:

- Develop applications of wireless sensor actuator networks
- Implement the elements of distributed computing and network protocol .

- Explore various hardware, software platforms that exist for sensor networks

TEXT BOOKS:

1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, “Wireless Sensor Networks: Technology, Protocols and Applications”, WILEY , Second Edition (Indian) , 2014

REFERENCE BOOKS:

Semester II

Year: 2014-2015

Course Title: Optical Networks	Course Code: 14SCN253
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM
- To acquire knowledge about fault and congestion management.

Topics

MODULE I

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, SONET/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel. **10 Hours**

MODULE II

WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations. **10 Hours**

MODULE III

Control and Management

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours

MODULE IV

Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum Load **Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Design a system, component or process as per needs and specification.
- Gain knowledge on optical network architectures ranging from optical access networks to backbone optical transport networks.
- Gain the knowledge on methodologies of optical network design optimization;
- Explore techniques of optical network survivability.
- Solve the Problems in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Course Title: Advances in VLSI Design and Algorithms	Course Code: 14SCN254
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- Able to understand the fundamentals of CMOS VLSI and associated technologies.
- Able to solve problems in the design of CMOS logic circuits, with particular reference to speed and power consumption.
- Able to appreciate the design process in VLSI, GALS.
- Able to explain basic operation principles of diodes and MOS FPGAs; PLA.
- Able to design the fundamental blocks of a VLSI circuits, both by circuit schematic and physical layout

TOPICS:**MODULE I**

Introduction to Digital systems and VLSI: Why Design Integrated Circuits? Integrated Circuits manufacturing; Integrated Circuit Design Techniques; IP-Based Design.

Fabrication and Devices: Introduction; Fabrication processes; Fabrication theory and practice; Reliability.

10 Hours**MODULE II**

Sequential Machines: Introduction; Latches and Flip-flops; Sequential systems and clocking disciplines; Performance analysis; Clock generators; Sequential systems design, Power optimization, Design validation, Sequential testing.

10 Hours**MODULE III**

Subsystem Design: Introduction; Combinational shifters; Adders; ALUs; Multipliers; High-density memory; Image sensors; FPGAs; PLA; Buses and networks on chips; Data paths; Subsystems as IP.

10 Hours**MODULE IV**

Architecture Design: Introduction; Hardware description languages; Register Transfer design; Pipelining; High-level synthesis; Architecture for low power; GALS systems; Architecture testing; IP components; Design methodologies; Multiprocessor system-on-Chip design.

10 Hours**MODULE V**

Simulations: General remarks; Gate-level modeling and simulations; Switch-level modeling and simulation.

10 Hours

Course Outcomes:

The student will be able to:

- Clear understanding of important concepts in CMOS technology and fabrication that affect design.
- Apply two-level and multi-level logic minimization techniques to the given Boolean logic function.
- Design and develop Layout a gate in CMOS VLSI technology.

TEXT BOOKS:

1. Wayne Wolf: “Modern VLSI design”, 4th Edition, P HI Learning, 2007.
2. Sabih H Gerez: “Algorithms for VLSI Design Autom ation”, Wiley India, 2007.

Semester II

Year: 2014-2015

Course Title: Distributed Computing Lab	Course Code: 14SCN26
Credits(02)(L:T:P): 0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours:42

Course Objectives

- To understand the main ideas and concepts on web services.
- Studying and working on a related topic of internet applications such as information hiding, system security and E-learning.
- To understand the concepts of UDDI, SOAP, JMS remote procedure calls.

LIST OF EXPERIMENTS:

Note: Use appropriate tools/language to implement the following experiment:

1. Design and implement client server application using RMI (Remote Method Invocation) to invoke a service to calculate the income tax.
2. Design and implement EJB (Entity Java Beans) session bean business logic to calculate income tax and invoke the service using stub, i.e., client side proxy object.
3. Design and implement an EJB entity bean to persist the client submitted data into an enterprise information system.
4. Design and implement an offline database communication system using JMS (Java Message Service) to service the client request.
5. Design and implement the client code to call the Micro soft service like free service from UDDI (Universal Description Discovery Protocol).
6. Design and implement business logic and bind it as service using SOAP (Simple Object Access Protocol), also implement client to call service.

NOTE: Use EJB 3.X or any equivalent tool.

COURSE OUTCOMES:

The student will be able to

- Develop and debug RPC based client-Server programs in UNIX.
- Realize the partial implementation of UDDI, SOAP, JMS in Web applications.

Semester IV

Year: 2014-2015

Course Title: Client-Server Programming	Course Code: 14SCN41
Credits(L:T:P): 3:0:1	Core/Elective: Core
Type of Course: Lecture and practical	Total Contact Hours:50

COURSE OBJECTIVES

- To understand **Client-Server software**, Context Switching and Protocol Software, I/o.
- To understand System Calls, Basic I/O Functions available in UNIX
- To understand the Socket interface, TCP, UDP in detail.
- Various client software applications and their issues.
- To understand the concept of Socket interface in client server programming.

TOPICS:

MODULE I

The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts
Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. **Program Interface to Protocols:** Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP. **10 Hours**

MODULE II

The Socket Interface: Introduction, Berkeley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. **Algorithms and Issues in Client Software Design:** Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability. **10 Hours**

MODULE III

Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays,

A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.

10 Hours

MODULE IV

Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.

10 Hours

MODULE V

Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. **Iterative, Connection-Oriented Servers (TCP):** Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability.

Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.

10 Hours

LABORATORY WORK:

1. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connectionless server and demonstrate its functioning.
2. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple iterative connection-oriented server and demonstrate its functioning.
3. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple concurrent connection-oriented server and demonstrate its functioning.
4. Design, develop, and execute a program in C under UNIX / LINUX environment to implement a simple Day / Time Server and demonstrate its functioning.
5. Design, develop, and execute a program using JAVA networking facilities to implement a simple Day / Time Server and demonstrate its functioning. Repeat the above problems.

COURSE OUTCOMES

The student will be able to:

- Gain in depth knowledge about Client-Server software, Context Switching and Protocol Software, I/o.
- Programming System Calls, Basic I/O Functions available in UNIX
- Gain the knowledge on Socket interface, TCP, UDP in details.
- Pros and cons of Client Software Various applications and their issues.

TEXT BOOK:

1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001

Course Title: Analysis of Computer Networks	Course Code: 14SCN421
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

COURSE OBJECTIVES

- To Become familiar with the concepts of computer networks
- What is a computer network and what are the fundamental protocols.
- To analyze network architectures in stochastic and deterministic way.
- RSVP, Principles of TCP
- To explore more on different network protocols.
- To understand the knowledge of multiplexing, streaming sessions in computer network.

TOPICS:**MODULE I**

Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.

10 Hours**MODULE II**

Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

10 Hours**MODULE III**

Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

10 Hours**MODULE IV**

Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

10 Hours**MODULE V**

Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

10 Hours**Course Outcomes:**

On completion, student will be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.

TEXT BOOKS:

1. Anurag Kumar, D. Manjunath, Joy Kuri: Communication Networking An Analytical Approach, Elsevier, 2004.

REFERENCE BOOKS:

1. M. Schwartz: Broadband Integrated Networks, Prentice Hall PTR, 1996.

2. J. Walrand, P. Varaiya: High Performance Communication Networks, 2nd Edition, Morgan Kaufmann, 1999

Semester IV

Year:2014-2015

Course Title: Service Oriented Architecture	Course Code: 14SCN422
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To understand various architecture for application development
- To understand the importance of SOA in Application Integration
- To learn web service and SOA related tools.
- To learn the concepts of SOA governance.

Topics:

MODULE I

SOA BASICS: Software Architecture – Types of IT Architecture – S OA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architec ture – Enterprise Applications – Solution Architect ure for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models

10 Hours

MODULE II

SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Ac tivity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits o f SPA – Cost Savings

10 Hours

MODULE III

SOA GOVERNANCE :SOA implementation and Governance – strategy – SOA d evelopment – SOA governance – trends in SOA – event-driven architect ure – software s a service – SOA technologies – pro of-of-concept – process orchestration – SOA best practice s

10 Hours

MODULE IV

SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL, SOAP and Java/XML mapping in SOA – JAXB Data binding.

10 Hours

MODULE V

APPLICATION INTEGRATION: JAX-WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study – WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.

10 Hours

COURSE OUTCOMES

The student will be able to:

- Compare the different IT architecture
- Analysis and design of SOA based applications
- Implementation of web service and realization of SOA
- Implementation of RESTful services
- Design and implementation of SOA based Application Integration using BPEL

Text Book:

1. Shankar Kambhampaly, “Service-Oriented Architecture for Enterprise Applications”, Wiley 2008.

REFERENCES:

2. Mark D. Hansen, “SOA using Java Web Services”, Practice Hall, 2007.

Semester IV

Year: 2014-2015

Course Title: Mobile Application Development	Course Code: 14SCN423
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives:

- To Understand system requirements for mobile applications
- To Generate suitable design using specific mobile development frameworks
- To Generate mobile application design
- To Implement the design using specific mobile development frameworks
- To acquire knowledge of android applications development.

Topics:

MODULE I

Introduction to mobile communication and computing:, Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover

and security. Smart phone operating systems and smart phones applications.

10 Hours

MODULE II

Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator, The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control .

10 Hours

MODULE III

The Android Debug Bridge (ADB), Basic Widgets Understanding the Role of Android Application Components, Event Handling , Displaying Messages Through Toast, Creating and Starting an Activity, Using the Edit ext Control Building Blocks for Android Application Design, Laying Out Controls in Containers, Utilizing Resources and Media, Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments

10 Hours

MODULE IV

Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments Advanced Android Programming: Internet, Entertainment, and Services, Implementing drawing and animations,

10 Hours

MODULE V

Displaying web pages and maps, communicating with sms and emails,. creating and using content providers: Creating and consuming services, Publishing android applications.

10 Hours

Course Outcomes:

The student will be able to:

- Describe the requirements for mobile applications
- Explain the challenges in mobile application design and development
- Develop and design for mobile applications for specific requirements
- Implement the design using Android SDK
- Implement the design using Objective C and iOS

Text Books:

1. Mobile Computing: Technologies and Applications- N. N. Jani S chand,2009.
2. B.M.Hirwani- Android programming Pearson publications-2013

Course Title: Cybercrime and Digital Forensic	Course Code: 14SCN424
Credits(L:T:P): 4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours:50

Course Objectives

- To understand Accounting Forensics
- To analyze the nature and effect of cyber crime in society.
- To understand Sarbanes-Oxley Financial and Accounting Disclosure Information
- To understand Computer Crime and Criminals
- To understand Liturgical Procedures

Topics:**MODULE I**

INTRODUCTION: Introduction and Overview of Cyber Crime, Nature and Scope of Cyber Crime, Types of Cyber Crime: Social Engineering, Categories of Cyber Crime, Property Cyber Crime.

10 Hours**MODULE II**

CYBER CRIME ISSUES: Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks, Pornography, Software Piracy, Intellectual Property, Mail Bombs, Exploitation, Stalking and Obscenity in Internet, Digital laws and legislation, Law Enforcement Roles and Responses.

10 Hours**MODULE III**

INVESTIGATION: Introduction to Cyber Crime Investigation, Investigation Tools, e-Discovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Hands on Case Studies. Encryption and Decryption Methods, Search and Seizure of Computers, Recovering Deleted Evidences, Password Cracking.

10 Hours**MODULE IV**

DIGITAL FORENSICS: Introduction to Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Audio Video Analysis, Windows System Forensics, Linux System Forensics, Network Forensics. **10 Hours**

MODULE V

LAWS AND ACTS: Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC , Electronic Communication Privacy ACT, Legal Policies.

10 Hours

Course Outcomes

The student will be able to:

- Understand financial and accounting forensics, and explain their role in preventing various forms of fraud.
- Distinguish various types of computer crime, and use computer forensic techniques to identify the digital fingerprints associated with criminal activities.
- Know how to apply forensic analysis tools to recover important evidence for identifying computer crime.
- Develop a custom computer forensic analysis tool.

WIRELESS AD-HOC NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI251 / 16SCE421 / 16SCN11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain fundamental principles of Ad-hoc Networks • Discuss a comprehensive understanding of Ad-hoc network protocols • Outline current and emerging trends in Ad-hoc Wireless Networks. • Analyze energy management in ad-hoc wireless networks. 			
Module -1			Teaching Hours
Ad-hoc Wireless Networks Introduction, Issues in Ad-hoc Wireless Networks, Ad-hoc Wireless Internet; MAC Protocols for Ad-hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas.			10Hours
Module -2			10 Hours
Routing Protocols for Ad-hoc Wireless Networks Introduction, Issues in Designing a Routing Protocol for Ad-hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols.			
Module – 3			10 Hours
Multicast Routing in Ad-hoc Wireless Networks Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols.			
Module-4			10 Hours
Transport Layer and Security Protocols for Ad-hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad-hoc Networks; Security in Ad-hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad-hoc Wireless Networks.			
Module-5			10 Hours
Quality of Service and Energy Management in Ad-hoc Wireless Networks: Introduction, Issues and Challenges in Providing QoS in Ad-hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad-hoc Wireless Networks: Introduction, Need for Energy Management in Ad-hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes, Transmission Management Schemes, System Power Management Schemes.			
Course outcomes:			
The students shall able to:			
<ul style="list-style-type: none"> • Design their own wireless network • Evaluate the existing network and improve its quality of service • Choose appropriate protocol for various applications • Examine security measures present at different level 			

- Analyze energy consumption and management

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCES IN COMPUTER NETWORKS
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)

SEMESTER – I

Subject Code	16SCN12/16SCS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Discuss with the basics of Computer Networks.
- Compare various Network architectures.
- Discuss fundamental protocols.
- Define and analyze network traffic, congestion, controlling and resource allocation.

Module 1	Teaching Hours
-----------------	-----------------------

<p>Foundation: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels. T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4</p>	10 Hours
--	-----------------

Module 2	Teaching Hours
-----------------	-----------------------

<p>Internetworking I: Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. T1: Chapter 3.1, 3.2,</p>	10 Hours
---	-----------------

Module 3	Teaching Hours
-----------------	-----------------------

<p>Internetworking- II: Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP T1: Chapter 3.3, 4.1.1,4.1.3 T2:Chapter 13.1 to 13.18 , Ch 18.</p>	10 Hours
---	-----------------

Module 4	Teaching Hours
-----------------	-----------------------

<p>End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3</p>	10 Hours
---	-----------------

Module 5	Teaching Hours
-----------------	-----------------------

<p>Congestion Control and Resource Allocation Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System (DNS), Electronic Mail (SMTP,POP,IMAP,MIME), World Wide Web (HTTP), Network Management (SNMP) T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8</p>	10 Hours
---	-----------------

Course Outcomes

The students should be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

INFORMATION AND NETWORK SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI12/16SCN13/16SCS253	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain standard algorithms used to provide confidentiality, integrity and authenticity. • Distinguish key distribution and management schemes. • Deploy encryption techniques to secure data in transit across data networks • Implement security applications in the field of Information technology 			
Module 1			Teaching Hours
Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm			10 Hours
Module 2			
Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.			10 Hours
Module 3			
Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. User Authentication: Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.			10 Hours
Module 4			
Wireless network security: Wireless security, Wireless network threats, Wireless			10 Hours

<p>network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function. Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. Secure Sockets Layer: SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. Transport Layer Security: Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. HTTPS Connection Initiation, Connection Closure. Secure Shell(SSH) Transport Layer Protocol, User Authentication Protocol, Connection Protocol</p>	
<p>Module 5</p>	
<p>Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.</p>	<p>10 Hours</p>
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Analyze the vulnerabilities in any computing system and hence be able to design a security solution. • Identify the security issues in the network and resolve it. • Evaluate security mechanisms using rigorous approaches, including theoretical. 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. William Stallings, Cryptography and Network Security, Pearson 6th edition.</p>	
<p>Reference Books: 1. V K Pachghare: Cryptography and Information Security.</p>	

PROBABILITY STATISTICS AND QUEUING THEORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – I

Subject Code	16LNI14 / 16SCN14/16SCS14/ 16SSE14 / 16SIT14 /16SCE14 / 16SFC14	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Develop analytical capability and to impart knowledge of Probability, Statistics and Queuing.
- Apply above concepts in Engineering and Technology.
- Acquire knowledge of Hypothesis testing and Queuing methods and their applications so as to enable them to apply them for solving real world problems

Module 1	Teaching Hours
Axioms of probability, Conditional probability, Total probability, Baye's theorem, Discrete Random variable, Probability mass function, Continuous Random variable. Probability density function, Cumulative Distribution Function, and its properties, Two-dimensional Random variables, Joint pdf / cdf and their properties	10 Hours

Module 2	Teaching Hours
Probability Distributions / Discrete distributions: Binomial, Poisson Geometric and Hyper-geometric distributions and their properties. Continuous distributions: Uniform, Normal, exponential distributions and their properties.	10 Hours

Module 3	Teaching Hours
Random Processes: Classification, Methods of description, Special classes, Average values of Random Processes, Analytical representation of Random Process, Autocorrelation Function, Cross-correlation function and their properties, Ergodicity, Poisson process, Markov Process, Markov chain.	10 Hours

Module 4	Teaching Hours
Testing Hypothesis: Testing of Hypothesis: Formulation of Null hypothesis, critical region, level of significance, errors in testing, Tests of significance for Large and Small Samples, t-distribution, its properties and uses, F-distribution, its properties and uses, Chi-square distribution, its properties and uses, χ^2 – test for goodness of fit, χ^2 test for Independence	10 Hours

Module 5	Teaching Hours
Symbolic Representation of a Queuing Model, Poisson Queue system, Little Law, Types of Stochastic Processes, Birth-Death Process, The M/M/1 Queuing System, The M/M/s Queuing System, The M/M/s Queuing with Finite buffers.	10 Hours

Course Outcomes

The students should be able to:

- Demonstrate use of probability and characterize probability models using probability mass (density) functions & cumulative distribution functions.
- Explain the techniques of developing discrete & continuous probability distributions and its applications.
- Describe a random process in terms of its mean and correlation functions.
- Outline methods of Hypothesis testing for goodness of fit.
- Define the terminology & nomenclature appropriate queuing theory and also distinguish various queuing models.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Probability, Statistics and Queuing Theory, V. Sundarapandian, Eastern Economy Edition, PHI Learning Pvt. Ltd, 2009.

Reference Books:

1. Probability & Statistics with Reliability, Queuing and Computer Applications, 2nd Edition by Kishor. S. Trivedi , Prentice Hall of India ,2004.
2. Probability, Statistics and Random Processes, 1st Edition by P Kausalya, Pearson Education, 2013.

INTERNET OF THINGS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16LNI253 /16SCE253 /16SCN151 /16SCS24 /16SIT251 /16SSE421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define and explain basic issues, policy and challenges in the IoT • Illustrate Mechanism and Key Technologies in IoT • Explain the Standard of the IoT • Explain resources in the IoT and deploy of resources into business • Demonstrate data analytics for IoT 			
Module -1			Teaching Hours
What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples- Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications.			8 Hours
Module -2			8 Hours
Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards- Overview and Approaches, IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol, Representational State Transfer, ETSI M2M, Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPv6 Over Lowpower WPAN, Zigbee IP(ZIP), IPSO			8 Hours
Module – 3			8 Hours
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M, Layer 3 Connectivity :IPv6 Technologies for the IoT: Overview and Motivations. Address Capabilities, IPv6 Protocol Overview, IPv6 Tunneling, IPsec in IPv6, Header Compression Schemes, Quality of Service in IPv6, Migration Strategies to IPv6.			8 Hours
Module-4			8 Hours
Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications.			8 Hours
Module-5			8 Hours
Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis, Structural Health Monitoring Case Study.			8 Hours
Course outcomes:			
At the end of this course the students will be able to: <ul style="list-style-type: none"> • Develop schemes for the applications of IOT in real time scenarios • Manage the Internet resources • Model the Internet of things to business 			

- Understand the practical knowledge through different case studies
- Understand data sets received through IoT devices and tools used for analysis

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

SOCIAL NETWORK ANALYSIS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SCN152 / 16SIT252/	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> The learning objective of the course Social Network Analysis is to discuss essential knowledge of network analysis applicable to real world data, with examples from today's most popular social networks. 			
Module 1			Teaching Hours
Introduction to social network analysis and Descriptive network analysis: Introduction to new science of networks. Networks examples. Graph theory basics. Statistical network properties. Degree distribution, clustering coefficient. Frequent patterns. Network motifs. Cliques and k-cores.			8 Hours
Module 2			
Network structure, Node centralities and ranking on network: Nodes and edges, network diameter and average path length. Node centrality metrics: degree, closeness and betweenness centrality. Eigenvector centrality and PageRank. Algorithm HITS.			8 Hours
Module 3			
Network communities and Affiliation networks: Networks communities. Graph partitioning and cut metrics. Edge betweenness. Modularity clustering. Affiliation network and bipartite graphs. 1-mode projections. Recommendation systems.			8 Hours
Module 4			
Information and influence propagation on networks and Network visualization: Social Diffusion. Basic cascade model. Influence maximization. Most influential nodes in network. Network visualization and graph layouts. Graph sampling. Low - dimensional projections			8 Hours
Module 5			
Social media mining and SNA in real world: FB/VK and Twitter analysis: Natural language processing and sentiment mining. Properties of large social networks: friends, connections, likes, re-tweets.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> Define notation and terminology used in network science. Demonstrate, summarize and compare networks. Explain basic principles behind network analysis algorithms. Analyzing real world network. 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

MULTI-CORE ARCHITECTURE AND PROGRAMMING
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER - I

Subject Code	16SCE24 / 16SCN153	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS - 03

Course objectives: This course will enable students to

- Define technologies of multicore architecture and performance measures
- Demonstrate problems related to multiprocessing
- Illustrate windows threading, posix threads, openmp programming
- Analyze the common problems in parallel programming

Module -1	Teaching Hours
------------------	-----------------------

Introduction to Multi-core Architecture Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. System Overview of Threading : Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.	8 Hours
--	----------------

Module -2	Teaching Hours
------------------	-----------------------

Fundamental Concepts of Parallel Programming :Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives. Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features	8 Hours
--	----------------

Module - 3	Teaching Hours
-------------------	-----------------------

Threading APIs :Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft. NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.	8 Hours
--	----------------

Module-4	Teaching Hours
-----------------	-----------------------

OpenMP: A Portable Solution for Threading : Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance	8 Hours
--	----------------

Module-5	Teaching Hours
-----------------	-----------------------

Solutions to Common Parallel Programming Problems : Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache	8 Hours
--	----------------

Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.	
Course outcomes:	
The students shall be able to: <ul style="list-style-type: none"> • Identify the limitations of ILP and the need for multicore architectures • Define fundamental concepts of parallel programming and its design issues • Solve the issues related to multiprocessing and suggest solutions • Make out the salient features of different multicore architectures and how they exploit parallelism • Demonstrate the role of OpenMP and programming concept 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006	
Reference Books: NIL	

SOFT COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SSE41 / 16SCS254 / 16SCN154	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain key aspects of soft computing. • Identify the components and building block hypothesis of Genetic algorithm. • Analyze Neuro Fuzzy modeling and control. • Evaluate machine learning through Support vector machines. 			
Module 1			Teaching Hours
Introduction to Soft computing: Neural networks, Fuzzy logic, Genetic algorithms, Hybrid systems and its applications. Fundamental concept of ANN, Evolution, basic Model of ANN, Terminologies used in ANN, MP model, Hebb model.			8 Hours
Module 2			
Perceptron Network: Adaptive linear neuron, Multiple adaptive linear neurons, Back propagation Network (Theory, Architecture, Algorithm for training, learning factors, testing and applications of all the above NN models).			8 Hours
Module 3			
Introduction to classical sets and fuzzy sets: Classical relations and fuzzy relations, Membership functions.			8 Hours
Module 4			
Defuzzification: Fuzzy decision making, and applications.			8 Hours
Module 5			
Genetic algorithms: Introduction, Basic operations, Traditional algorithms, Simple GA General genetic algorithms, The schema theorem, Genetic programming, applications.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Implement machine learning through neural networks. • Design Genetic Algorithm to solve the optimization problem. • Develop a Fuzzy expert system. • Model Neuro Fuzzy system for clustering and classification. 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.			
Text Books:			
1. Principles of Soft computing, Shivanandam, Deepa S. N, Wiley India, ISBN 13: 788126527410, 2011

COMPUTER NETWORKS AND INFORMATION SECURITY LABORATORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)
SEMESTER – I

Subject Code	16SCN16	IA Marks	20
Number of Lecture Hours/Week	01+03	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to

- Demonste Concepts of fundamental protocols.
- Illustrate internetworking concepts.
- Implement concepts in congestion control and error detections.
- Evaluate fundamentals of Cryptography through practical implementation.
- Implement standard algorithms used to provide confidentiality, integrity and authenticity.
- Design security applications in the field of Information technology.

PART – A Computer Network LABORATORY WORK

Note:

Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

Simulation Programs using OPNET /NS2/NS3 or any other equivalent software

8. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
9. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

PART – B INSLABORATORY WORK

2. Consider a file with composite data, substitute the content and transpose the ciphers.
3. Consider an alphanumeric data, encrypt and Decrypt the data using advanced encryption standards and verify for the correctness.
4. Apply the RSA algorithm on a text file to produce cipher text file.
5. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
6. Implementation of Message Authentication Code using cryptography VMAC function.
7. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change

- in the input results in a substantial change in the output
- Using any simulation tool: demonstrate packet filtering firewalls, create the ACL, create VLAN (Sub-netting).

Course Outcomes

The students should be able to:

- Apply key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Design and evaluate application layer protocol
- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Conduction of Practical Examination:

- All laboratory experiments (nos) are to be included for practical examination.
- Students are allowed to pick one experiment from **each part and execute both**
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- PART –A:** Procedure + Conduction + Viva: **10 + 20 +10 (40)**
- PART –B:** Procedure + Conduction + Viva: **10 + 20 +10 (40)**
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.**

SEMINAR [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – I			
Subject Code	16SCE17 / 16SCN17 / 16LNI17 / 16SIT17 / 16SSE17 / 16SCS17 / 16SFC17	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-
CREDITS – 01			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Motivate the students to read technical article • Discover recent technology developments 			
Descriptions			
<p>The students should read a recent technical article (try to narrow down the topic as much as possible) from any of the leading reputed and refereed journals like:</p> <ol style="list-style-type: none"> 1. IEEE Transactions, journals, magazines, etc. 2. ACM Transactions, journals, magazines, SIG series, etc. 3. Springer 4. Elsevier publications etc <p>In the area of (to name few and not limited to)</p> <ul style="list-style-type: none"> • Web Technology • Cloud Computing • Artificial Intelligent • Networking • Security • Data mining 			
Course Outcomes			
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Conduct survey on recent technologies • Infer and interpret the information from the survey conducted • Motivated towards research 			
Conduction:			
<p>The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.</p>			
<p>Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).</p>

Elective

16SCN421 Service Oriented Architecture

Note:

- 1. Project Phase-1:** 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.
- 2. Project Phase-2:** 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
- 3. Project Evaluation:** Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
- 4. Project evaluation:**
 - a. Internal Examiner shall carry out the evaluation for 100 marks.
 - b. External Examiner shall carry out the evaluation for 100 marks.
 - c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
 - d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks

MULTIMEDIA COMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN21/16LNI152	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define the Multimedia Communication Models • Explain Multimedia Transport in Wireless Networks • Solve the Security issues in multimedia networks • Illustrate real-time multimedia network applications. • Explain different network layer based application. 			
Module 1			Teaching Hours
Introduction, multimedia information representation, multimedia networks, multimedia applications, Application and networking terminology, network QoS and application QoS, Digitization principles,. Text, images, audio and video.			10 Hours
Module 2			
Text and image compression,, compression principles, text compression- Runlength, Huffman, LZW, Document Image compression using T2 and T3 coding, image compression- GIF, TIFF and JPEG			10 Hours
Module 3			
Audio and video compression, audio compression – principles, DPCM, ADPCM, Adaptive and Linear predictive coding, Code-Excited LPC, Perceptual coding, MPEG and Dolby coders video compression, video compression principles.			10 Hours
Module 4			
Video compression standards: H.261, H.263, MPEG, MPEG 1, MPEG 2, MPEG-4 and Reversible VLCs, MPEG 7 standardization process of multimedia content description, MPEG 21 multimedia framework.			10 Hours
Module 5			
Notion of synchronization, presentation requirements, reference model for synchronization, Introduction to SMIL, Multimedia operating systems, Resource management, process management techniques.			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Deploy the right multimedia communication models. • Apply QoS to multimedia network applications with efficient routing techniques. • Solve the security threats in the multimedia networks. • Develop the real-time multimedia network applications 			
Question paper pattern:			
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.			
Text Books:			
<ol style="list-style-type: none"> 1. Fred Halsall, “Multimedia Communications”, Pearson education, 2001. 2. Raif Steinmetz, Klara Nahrstedt, “Multimedia: Computing, Communications and Applications”, Pearson education, 2002. 			

Reference Books:

1. K. R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic, "Multimedia Communication Systems", Pearson education, 2004.
2. John Billamil, Louis Molina, "Multimedia : An Introduction", PHI, 2002.

CLOUD COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCS12/16SCE12 16SIT22/16SSE254 16SCN22/16LNI151	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define and Cloud, models and Services. • Compare and contrast programming for cloud and their applications • Explain virtualization, Task Scheduling algorithms. • Apply ZooKeeper, Map-Reduce concept to applications. 			
Module 1			Teaching Hours
Introduction, Cloud Infrastructure: Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.			10 Hours
Module 2			
Cloud Computing: Application Paradigms: Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The Gre The Web application, Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.			10 Hours
Module 3			
Cloud Resource Virtualization: Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems			10 Hours
Module 4			
Cloud Resource Management and Scheduling: Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling MapReduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.			10 Hours
Module 5			
Cloud Security, Cloud Application Development: Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine			10 Hours

<p>monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.</p>	
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Compare the strengths and limitations of cloud computing • Identify the architecture, infrastructure and delivery models of cloud computing • Apply suitable virtualization concept. • Choose the appropriate cloud player • Address the core issues of cloud computing such as security, privacy and interoperability • Design Cloud Services • Set a private cloud 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. Dan C Marinescu: Cloud Computing Theory and Practice. Elsevier(MK) 2013.</p>	
<p>Reference Books: 1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014. 2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.</p>	

NETWORK MANAGEMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI154 / 16SCN23	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Evaluate need for interoperable network management. • Explain the concepts and architecture behind standards based network management. • Illustrate the concepts and terminology associated with SNMP and TMN • Demonstrate network management as a typical distributed application 			
Module 1			Teaching Hours
Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards-Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology , Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions-Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management.			10 Hours
Module 2			10 Hours
Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1-Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model.			10 Hours
Module 3			10 Hours
SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications.			10 Hours
Module 4			10 Hours
Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL			10 Hours

Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles	
Module 5	
Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation 24 Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management.	10 Hours
Course Outcomes	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets. • Apply network management standards to manage practical networks • Formulate possible approaches for managing OSI network model. • Use on SNMP for managing the network • Use RMON for monitoring the behavior of the network • Identify the various components of network and formulate the scheme for the managing them 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books: 1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.</p>	
<p>Reference Books: 1. J. Richard Burke: Network management Concepts and Practices: a Hands-On Approach, PHI, 2008.</p>	

MANAGING BIG DATA [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI422 / 16SCE21 / 16SCN24 / 16SCS21 / 16SIT41 / 16SSE422	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define big data for business intelligence • Analyze business case studies for big data analytics • Explain managing of Big data Without SQL • Develop map-reduce analytics using Hadoop and related tools 			
Module -1			Teaching Hours
UNDERSTANDING BIG DATA: What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics.			10Hours
Module -2			
NOSQL DATA MANAGEMENT: Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schema less databases – materialized views – distribution models – shading — version – map reduce – partitioning and combining – composing map-reduce calculations.			10 Hours
Module – 3			
BASICS OF HADOOP: Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures.			10 Hours
Module-4			
MAPREDUCE APPLICATIONS: MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats			10 Hours
Module-5			
HADOOP RELATED TOOLS: Hbase – data model and implementations – Hbase clients – Hbase examples –praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.			10 Hours
Course outcomes:			
The students shall able to: <ul style="list-style-type: none"> • Describe big data and use cases from selected business domains • Explain NoSQL big data management • Install, configure, and run Hadoop and HDFS 			

- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilley, 2012.
2. Eric Sammer, "Hadoop Operations", O'Reilley, 2012.

Reference Books:

1. Vignesh Prajapati, Big data analytics with R and Hadoop, SPD 2013.
2. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilley, 2012.
3. Lars George, "HBase: The Definitive Guide", O'Reilley, 2011.
4. Alan Gates, "Programming Pig", O'Reilley, 2011

SWITCHING & STATISTICAL MULTIPLEXING IN TELECOMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN251	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain switching and multiplexing. • Analyze the transmission technology. And transmission control. • Demonstrate basic knowledge on telecommunication 			
Module -1			Teaching Hours
Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. Why Digital: Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks			8 Hours
Module -2			
Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization			8 Hours
Module – 3			
Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. Digital Transmission and Multiplexing: Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing			8 Hours
Module-4			
Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching			8 Hours
Module-5			
Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems			8 Hours
Course outcomes:			
The student will be able to:			
<ul style="list-style-type: none"> • Explain basics of telecommunications and digital form • Elaborate switching and multiplexing, telecommunication. • Illustrate transmission control in telecommunication • Design and develop switching, multiplexing and traffic control. 			
Question paper pattern:			
<ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 questions from each module. • Each question will have questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 			

Text Books:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

Reference Books:

WIRELESS SENSOR NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN252	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain sensor networks for various application setups. • Demonstrate the design space and conduct trade-off analysis between performance and resources. • Assess coverage and conduct node deployment planning. • Devise appropriate data dissemination protocols and model links cost. • Determine suitable medium access protocols and radio hardware. • Illustrate sensor networks using commercial components. • Discuss quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints. 			
Module -1			Teaching Hours
Introduction, Overview and Applications of Wireless Sensor Networks Introduction, Basic overview of the Technology, Applications of Wireless Sensor Networks: Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology. (Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)			8 Hours
Module -2			Teaching Hours
Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, Wireless Transmission Technology and Systems: Introduction, Radio Technology Primer, Available Wireless Technologies (Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)			8 Hours
Module – 3			Teaching Hours
MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. Routing Protocols for Wireless Sensor Networks: Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs. (Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)			8 Hours
Module-4			Teaching Hours
Transport Control and Middleware for Wireless Sensor Networks: Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. Middleware for Wireless Sensor Networks: Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware. (Chapter 7: 7.1-7.4, Chap. 8: 8.1-8.4)			8 Hours
Module-5			Teaching Hours
Network Management and Operating System for Wireless Sensor Networks: Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. Operating Systems for Wireless Sensor Networks: Introduction, Operating System Design Issues, Examples of Operating Systems. (Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)			8 Hours
Course outcomes:			

The students shall able to:

- Explain existing applications of wireless sensor actuator networks
- Apply in the context of wireless sensor networks and explain elements of distributed computing and network protocol design
- Contrast Various hardware, software platforms that exist for sensor networks
- Summarize various network level protocols for MAC, routing, time synchronization, aggregation, consensus and distributed tracking

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, "Wireless Sensor Networks: Technology, Protocols and Applications:", WILEY , Second Edition (Indian) , 2014

Reference Books:

1. Ian F. Akyildiz, Mehmet Can Vuran "Wireless Sensor Networks", Wiley 2010
2. Feng Zhao & Leonidas J. Guibas, "Wireless Sensor Networks- An Information Processing Approach", Elsevier, 2007.

OPTICAL NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define basic elements of optical fiber transmission link, fiber modes configurations and structures • Compare different kind of losses, signal distortion in optical wave guides and other signal degradation factors • List and explain various optical source materials, LED structures, quantum efficiency, and Laser diodes • Demonstrate fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration and also fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM 			
Module -1			Teaching Hours
Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, Optical Transport Network: Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service Multiprotocol Label Switching: Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.			8 Hours
Module -2			
WDM Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, Reconfigurable OADMs Optical Cross connects: All-Optical OXC Configurations.			8 Hours
Module – 3			
Control and Management: Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability, Performance and Fault Management: The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. Configuration Management: Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol			8 Hours
Module-4			

<p>Basic Concepts: Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. Protection in the Client Layer: Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.</p>	<p>8 Hours</p>
<p>Module-5</p>	
<p>WDM Network Design: Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength-Routing Networks, Statistical Dimensioning Models: First-Passage Model, Blocking Model, Maximum Load Dimensioning Models: Offline Light path Requests, Online RWA in Rings</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<p>The students shall able to:</p> <ul style="list-style-type: none"> • Explain fundamentals of optical network. • Analyze optical network architectures ranging from optical access networks to backbone optical transport networks. • Choose approaches and methodologies of optical network for design effective optimization; • Apply Techniques of optical network survivability. • Demonstrate problem solving skills and critical thinking in the discipline of optical networks. 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <p>1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.</p>	
<p>Reference Books:</p> <p>1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.</p>	

MOBILE APPLICATION DEVELOPMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI23/ 16SCE23 16SCN254 / 16SIT23	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Analyze system requirements for mobile applications. • Apply of mobile development frameworks. • Demonstrate mobile application design. • Demonstrate and implement mobile application. 			
Module -1			Teaching Hours
Introduction to mobile communication and computing: Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover and security. Smart phone operating systems and smart phones applications.			8 Hours
Module -2			
Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator.			8 Hours
Module – 3			
The Intent of Android Development, Four kinds of Android Components: Activity, Service, Broadcast Receiver and Content Provider. Building Blocks for Android Application Design, Laying Out Controls in Containers. Graphics and Animation: Drawing graphics in Android, Creating Animation with Android’s Graphics API.			8 Hours
Module-4			
Creating the Activity, Working with views: Exploring common views, using a list view, creating custom views, understanding layout. Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments. Multimedia: Playing Audio, Playing Video and Capturing Media. Advanced Android Programming: Internet, Entertainment, and Services.			8 Hours
Module-5			
Displaying web pages and maps, communicating with SMS and emails. Creating and using content providers: Creating and consuming services, publishing android applications			8 Hours
Course outcomes:			
The students should be able to: <ul style="list-style-type: none"> • Describe the requirements for mobile applications • Explain the challenges in mobile application design and development • Develop design for mobile applications for specific requirements • Implement the design using Android SDK • Implement the design using Objective C and iOS • Deploy mobile applications in Android and iPone marketplace for distribution 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.
 Each question will have questions covering all the topics under a module.
 The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Mobile Computing: (technologies and Applications-N. N. Jani S chand
2. B.M.Hirwani- Android programming Pearson publications-2013
3. W. Frank Ableson, Robi Sen and C. E. Ortiz - **Android in Action**, Third Edition-2012 DreamTech Publisher

MINIPROJECT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Laboratory Code	16LNI26/ 16SCE26 / 16SCN26 /16SCS26 /16SFC26 / 16SIT26 / 16SSE26	IA Marks	20
Number of Lecture Hours/Week	03 hours of lab	Exam Marks	80
Total Number of Lecture Hours	-----	Exam Hours	03
CREDITS – 02			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Enable the student to design, develop and analyze an application development
