<p>The student will carry out a mini project relevant to the course. The project must be development of an application (Hardware/Software). It is preferable if the project is based on mobile application development.</p>			
<p>Course outcomes:</p> <ul style="list-style-type: none"> • Design, develop and to analyze an application development. • Prepare report of the project. 			
<p>Conduction of Practical Examination:</p> <p>The student shall prepare the report by including:</p> <ol style="list-style-type: none"> 1. Define project (Problem Definition) 2. Prepare requirements document <ol style="list-style-type: none"> a. Statement of work b. Functional requirements c. Software / Hardware requirements 3. Develop use cases 4. Research, analyze and evaluate existing learning materials on the application 5. Develop user interface and implement code 6. Prepare for final demo 			
<p>Evaluation:</p> <p>Evaluation shall be taken up at the end of the semester. Project work evaluation and viva-voce examination shall be conducted. Internal evaluation shall be carried by the Guide and Head of the department for 20 marks. Final examination which includes demonstration of the project and viva-voce shall be conducted for 80 Marks viz report + Outputs of the project + presentation = 30+30+20</p>			

= 80 marks.

SEMINAR
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)

SEMESTER – II

Subject Code	16SCE27 / 16SCN27 / 16LNI27 / 16SIT27 / 16SSE27 / 16SCS27 / 16SFC27	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-

CREDITS – 01

Course objectives: This course will enable students to

- Motivate the students to read technical article
- Discover recent technology developments

Descriptions

The students should read a recent technical article (try to narrow down the topic as much as possible) from any of the leading reputed and refereed journals like:

1. IEEE Transactions, journals, magazines, etc.
2. ACM Transactions, journals, magazines, SIG series, etc.
3. Springer
4. Elsevier publications etc

In the area of (to name few and not limited to)

- Web Technology
- Cloud Computing
- Artificial Intelligent
- Networking
- Security
- Data mining

Course Outcomes

The students should be able to:

- Conduct survey on recent technologies
- Infer and interpret the information from the survey conducted
- Motivated towards research

Conduction:

The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.

Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).

CLIENT SERVER PROGRAMMING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV			
Subject Code	16SIT151 / 16LNI41 / 16SCN41	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain Client-Server software, Context Switching and Protocol Software, I/o. • Define System Calls, Basic I/O Functions available in UNIX • Illustrate socket interface, TCP, UDP in detail. • Compare various client Software and various algorithms issue related to server software design. 			
Module 1			Teaching Hours
The Client Server Model and Software Design: Introduction, Motivation, Terminology and Concepts. Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in Servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing New Code, Context Switching and Protocol Software Design, Concurrency and Asynchronous I/O. Program Interface to Protocols: Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches to Network Communication, The Basic I/O Functions available in UNIX, Using UNIX I/O with TCP/IP.			10 Hours
Module 2			
The Socket Interface: Introduction, Berkley Sockets, Specifying a Protocol Interface, The Socket Abstraction, Specifying an End Point Address, A Generic Address Structure, Major System Calls used with Sockets, Utility Routines for Integer Conversion, Using Socket Calls in a Program, Symbolic Constants for Socket Call Parameters. Algorithms and Issues in Client Software Design: Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Parsing an Address Argument, Looking up a Domain Name, Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by Name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port Number, A fundamental Problem in choosing a Local IP Address, Connecting a TCP Socket to a Server, Communicating with the Server using TCP, Reading a response from a TCP Connection, Closing a TCP Connection, Programming a UDP Client, Connected and Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability.			10 Hours
Module 3			
Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure that Forms Connections, Using the Example Library, The DAYTIME Service, Implementation of a TCP Client for DAYTIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, Accurate Times and Network Delays, A UDP Client for the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.			10 Hours
Module 4			
Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection-Oriented Vs			10 Hours

<p>Connectionless Access, Connection-Oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Iterative Server Algorithms, An Iterative Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY, Placing the Socket in Passive Mode, Accepting Connections and using them. An Iterative Connectionless Server Algorithm, Forming a Reply Address in a Connectionless Server, Concurrent Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a Single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations.</p>	
<p>Module 5</p>	
<p>Iterative, Connectionless Servers (UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. Iterative, Connection-Oriented Servers (TCP): Introduction, Allocating a Passive TCP Socket, A Server for the DAYTIME Service, Process Structure, An Example DAYTIME Server, Closing Connections, Connection Termination and Server Vulnerability. Concurrent, Connection-Oriented Servers (TCP): Introduction, Concurrent ECHO, Iterative Vs Concurrent Implementations, Process Structure, An example Concurrent ECHO Server, Cleaning up Errant Processes.</p>	<p>10 Hours</p>
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Explain Client-Server software, Context Switching and Protocol Software, I/O. • Demonstrate programming System Calls, Basic I/O Functions available in UNIX • Implement Socket interface, TCP, UDP in detail. • Compare and contrast Client Software Various applications and their issues 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Douglas E.Comer, David L. Stevens: Internetworking with TCP/IP – Vol. 3, Client-Server Programming and Applications, BSD Socket Version with ANSI C, 2nd Edition, Pearson, 2001. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. NIL 	

SERVICE ORIENTED ARCHITECTURE [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV			
Subject Code	16SSE13 /16SIT153 / 16SCN421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Interpret various architecture for application development • Demonstrate the importance of SOA in Application Integration • To learn web service and SOA related tools • To Learn implementation details of SOA • To understand various case studies 			
Module 1			Teaching Hours
SOA BASICS :Software Architecture – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models.			8 Hours
Module 2			
SOA ANALYSIS AND DESIGN: Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder OBJECTIVES – benefits of SPA – Cost Savings.			8 Hours
Module 3			
SOA GOVERNANCE: SOA implementation and Governance – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – SOA best practices.			8 Hours
Module 4			
SOA IMPLEMENTATION: SOA based integration – integrating existing application – development of web services – Integration - SOA using REST – RESTful services – RESTful services with and without JWS – Role of WSDL,SOAP and Java/XML mapping in SOA – JAXB Data binding.			8 Hours
Module 5			
APPLICATION INTEGRATION: JAX –WS 2.0 client side/server side development – Packaging and Deployment of SOA component – SOA shopper case study –WSDL centric java WS with SOA-J – related software – integration through service composition (BPEL) – case study - current trends.			8 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Compare different IT architecture • Analyze and design of SOA based applications • Implement web service and realize of SOA • Implement REST full services • Design and implement of SOA based Application Integration using BPEL 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Shankar Kambhampaly, "Service-Oriented Architecture for Enterprise Applications", Wiley 2008.

Reference Books:

1. Mark D. Hansen, "SOA using Java Web Services", Practice Hall, 2007.
2. Waseem Roshen, "SOA-Based Enterprise Integration", Tata McGraw-HILL, 2009.

ANALYSIS OF COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN422	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain with the concepts of computer networks • What is a computer network and what are the fundamental protocols. • Analyze network architectures in stochastic and deterministic way. • Illustrate RSVP, Principles of TCP • Discover more on different network protocols. • Explain multiplexing, streaming sessions in computer network. 			
Module -1			Teaching Hours
Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks.			8 Hours
Module -2			
Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.			8 Hours
Module – 3			
Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).			8 Hours
Module-4			
Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little’s theorem, Brumelle’s theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic			8 Hours
Module-5			
Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet’s Adaptive			8 Hours

Window Protocol; Bandwidth sharing in a Network.	
Course outcomes:	
On completion, student will be able to:	
<ul style="list-style-type: none"> List and classify network services, protocols and architectures, explain why they are layered. Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API. 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
Text Books:

NETWORK ROUTING ALGORITHMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN423	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> Discuss layered architecture for communication networks and the specific functionality of the network layer. Explain the basic principles of routing and the manner, this is implemented in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network. Compare and contrast different routing algorithms existing and their performance characteristics. 			

Module -1	Teaching Hours
<p>NETWORK ROUTING: BASICS AND FOUNDATIONS: Networking and Network Routing: An Introduction: Addressing and Internet Service: An Overview, Network Routing: An Overview, IP Addressing, On Architectures, Service Architecture, Protocol Stack Architecture, Router Architecture, Network Topology Architecture, Network Management Architecture, Public Switched Telephone Network, Communication Technologies, Standards Committees, Last Two Bits.</p> <p>Routing Algorithms: Shortest Path and Widest Path: Bellman–Ford Algorithm and the Distance Vector Approach, Dijkstra’s Algorithm, Comparison of the Bellman–Ford Algorithm and Dijkstra’s Algorithm, Shortest Path Computation with Candidate Path Caching, Widest Path Computation with Candidate Path Caching, Widest Path Algorithm, k-Shortest Paths Algorithm</p> <p>Routing Protocols: Framework and Principles: Routing Protocol, Routing Algorithm, and Routing Table, Routing Information Representation and Protocol Messages, Distance Vector Routing Protocol, Link State Routing Protocol, Path Vector Routing Protocol, Link Cost</p>	8 Hours
Module -2	
<p>ROUTING IN IP NETWORKS: IP Routing and Distance Vector Protocol Family : Routers, Networks, and Routing Information: Some Basics, Static Routes, Routing Information Protocol, Version 1 (RIPv1), Routing Information Protocol, Version 2 (RIPv2), Interior Gateway Routing Protocol (IGRP), Enhanced Interior Gateway Routing Protocol (EIGRP), Route Redistribution</p> <p>OSPF and Integrated IS-IS :From a Protocol Family to an Instance of a Protocol, OSPF: Protocol Features, OSPF Packet Format, Examples of Router LSAs and Network LSAs, Integrated IS-IS, Similarities and Differences Between IS-IS and OSPF</p> <p>Internet Routing Architectures: Internet Routing Evolution, Addressing and Routing: Illustrations, Current Architectural View of the Internet, Allocation of IP Prefixes and AS Number, Policy-Based Routing, Point of Presence, Traffic Engineering Implications, Internet Routing Instability</p>	8 Hours
Module – 3	
<p>Router Architectures: Functions of a Router, Types of Routers, Elements of a Router, Packet Flow, Packet Processing: Fast Path versus Slow Path, Router Architectures. IP Address Lookup Algorithms: Impact of Addressing on Lookup, Longest Prefix Matching, Naïve Algorithms, Binary Tries, Multibit Tries, Compressing Multibit Tries, Search by Length Algorithms, Search by Value Approaches, Hardware Algorithms, Comparing Different Approaches. IP Packet Filtering and Classification: Importance of Packet Classification, Packet Classification Problem, Packet Classification Algorithms, Naïve Solutions, Two-Dimensional Solutions, Approaches for Dimensions, Extending Two-Dimensional Solutions, Divide and Conquer Approaches, Tuple Space Approaches, Decision Tree Approaches, Hardware-Based Solutions.</p>	8 Hours
Module-4	
<p>ADVANCED ROUTING PROTOCOLS FOR WIRELESS NETWORKS: Wireless networking basic aspects, Basic routing concepts, Ad hoc routing, Mesh routing, Vehicular routing, Sensor routing</p>	8 Hours
Module-5	

<p>TOWARD NEXT GENERATION ROUTING: Quality of Service Routing: QoS Attributes, Adapting Shortest Path and Widest Path Routing: A Basic Framework, Update Frequency, Information Inaccuracy, and Impact on Routing, Lessons from Dynamic Call Routing in the Telephone Network, Heterogeneous Service, Single-Link Case, A General Framework for Source-Based QoS Routing with Path Caching, Routing Protocols for QoS Routing</p> <p>MPLS and GMPLS: Traffic Engineering Extension to Routing Protocols, Multiprotocol Label Switching, Generalized MPLS, MPLS Virtual Private Networks. Routing and Traffic Engineering with MPLS: Traffic Engineering of IP/MPLS Networks, VPN Traffic Engineering, Routing/Traffic Engineering for Voice Over MPLS. VoIP Routing: Interoperability through IP and PSTN : PSTN Call Routing Using the Internet, PSTN Call Routing: Managed IP Approach, IP-PSTN Interworking for VoIP, IP Multimedia Subsystem, Multiple Heterogeneous Providers Environment and All-IP Environment of VoIP Services.</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<ul style="list-style-type: none"> • Given the network and user requirements and the type of channel over which the network has to operate, the student would be in a position to apply his knowledge for identifying a suitable routing algorithm, implementing it and analyzing its performance. • The student would also be able to design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications. 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. WEB MINING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCN424	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Compare and contrast different knowledge discovery issues in Web mining. • Analyze the different algorithms commonly used by Web application. • Apply the role played by Web mining in Information retrieval and extraction • Demonstrate the documents structures and grouping, • Use the probabilistic model for web mining • Illustrate applications using Web mining 			
Module -1			Teaching Hours
<p>INTRODUCTION: Crawling and Indexing, Topic Directories, Clustering and Classification, Hyperlink Analysis, Resource Discovery and VerticalPortals, Structured vs. Unstructured DataMining . INFRASTRUCTURE and WEB SEARCH -- Crawling the web – HTML and HTTP Basics – Crawling Basics – Engineering Large ScaleCrawlers- Putting together a Crawler- Boolean Queries and the Inverted Index – RelevanceRanking – Similarity Search.</p>			8 Hours
Module -2			
<p>INFORMATION RETRIEVAL: Information Retrieval and Text Mining - Keyword Search - Nearest-Neighbor Methods -Measuring Similarity - Web-Based Document Search - Document–Matching - Inverted Lists -Evaluation of Performance - Structure in a Document Collection - Clustering Documents by Similarity- Evaluation of Performance - Information Extraction - Patterns and Entities from Text- Co reference and Relationship Extraction - Template Filling and Database Construction</p>			8 Hours
Module – 3			
<p>LEARNING I: Similarity and Clustering – Formulations and approaches- Bottom up and Top down Partitioning Paradigms – Clustering and Visualization via Embedding’s – Probabilistic Approaches to clustering – Collaborative Filtering, SUPERVISED LEARNING: The Supervised Learning Scenario, Overview of Classification Strategies, Evaluating Text Classifiers, Nearest Neighbor Learners, Feature Selection.</p>			8 Hours
Module-4			

<p>LEARNING II : SUPERVISED LEARNING – Bayesian Learners, Exploiting Hierarchy among Topics, Maximum Entropy Learners, Discriminative Classification, Hypertext Classification, SEMI SUPERVISED LEARNING-- Expectation Maximization, Labeling Hypertext Graphs and Co- training.</p>	<p>8 Hours</p>
<p>Module-5</p>	
<p>APPLICATIONS: Social Network Analysis- Social Sciences and Bibliometry – Page Rank and HITS – Shortcomings of coarse Grained Graph model- Enhanced Models and Techniques- Evaluation of Topic Distillation- Measuring and Modeling the Web – Resource Discovery – Collecting Important Pages Preferentially – Similarity Search Using Link Topology – Topical Locality and Focused Crawling – Discovering Communities- The Future of Web Mining.</p>	<p>8 Hours</p>
<p>Course outcomes:</p>	
<p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> • Identify the application areas for web content mining, web structure mining and webusage mining. • Design to retrieval the web data • Develop schemes to crawl the web data, organize and index • Cluster the documents for fast access • Develop algorithms used by web mining applications. • Select between different approaches and techniques of web mining 	
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sholom Weiss, “Text Mining: Predictive Methods for Analyzing Unstructured Information”, Springer, 2005 2. Soumen Chakrabarti, “Mining the Web: Discovery Knowledge from Hypertext Data,” Elsevier Science 2003

<p>Note:</p> <p>1. Project Phase-2:</p> <p>CIE marks shall be awarded by a committee comprising of HoD as Chairman, Guide/co-guide, if any, and a Senior faculty of the department. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report subjected to plagiarism check, Project Presentation skill and Question and Answer session in the ratio 50:25:25.</p> <p>SEE shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the University norms.</p>										

MATHEMATICAL FOUNDATION OF COMPUTER SCIENCE [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – I			
Subject Code	18SFC11 / 18LNI11 / 18SCE11 / 18SCS11 / 18SCN11 / 18SSE11 / 18SIT11	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • To acquaint the students with mathematical/logical fundamentals including numerical techniques, • To understand probability, sampling and graph theory that serve as an essential tool for applications of computer and information sciences. 			
Module 1			Contact Hours
Numerical Methods: Significant figures, Error definitions, Approximations and round off errors, accuracy and precision. Roots of Equations: Bairstow-Lin’s Method, Graeffe’s Root Squaring Method. Computation of Eigen values of real symmetric matrices: Jacobi and Givensrotation method.			10 Hours
RBT: L1, L2, L3			
Module 2			
Statistical Inference: Introduction to multivariate statistical models: Correlation and Regression analysis, Curve fitting (Linear and Non linear)			10 Hours
RBT: L1, L2, L3			
Module 3			
Probability Theory: Probability mass function (p.m.f), density function (p.d.f), Random variable: discrete and continuous, Mathematical expectation, Sampling theory: testing of hypothesis by t-test and chi - square distribution.			10 Hours
RBT: L1, L2, L3			
Module 4			
Graph Theory: Isomorphism, Planar graphs, graph coloring, Hamilton circuits and Euler cycle. Specialized techniques to solve combinatorial enumeration problems.			10 Hours
RBT: L1, L2, L3			
Module 5			
Vector Spaces: Vector spaces; subspaces; Linearly independent and dependent vectors ; Bases and dimension; coordinate vectors-Illustrative examples. Linear transformations; Representation of transformations by matrices; linear functional; Non singular Linear transformations; inverse of a linear transformation- Problems.			10 Hours
RBT: L1, L2, L3			
Course Outcomes			
<ul style="list-style-type: none"> • Emphasize the numerical methods to solve and find the roots of the equations. • Utilize the statistical tools in multi variable distributions. • Use probability formulations for new predictions with discrete and continuous RV’s. • To make use of graphs in different geometries related to edges. • Apply vector spaces and related topics arising in magnification and rotation of images. 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCES IN COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – I			
Subject Code	18LNI321 / 18SCN12 / 18SCS151	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Discuss with the basics of Computer Networks. • Compare various Network architectures. • Discuss fundamental protocols. • Define and analyze network traffic, congestion, controlling and resource allocation. 			
Module 1			Contact Hours
Foundation: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels. T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4 RBT: L1, L2, L3			10 Hours
Module 2			
Internetworking I: Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. T1: Chapter 3.1, 3.2, RBT: L1, L2, L3			10 Hours
Module 3			
Internetworking- II: Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP T1: Chapter 3.3, 4.1.1,4.1.3 T2:Chapter 13.1 to 13.18 , Ch 18. RBT: L1, L2, L3			10 Hours
Module 4			
End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3 RBT: L1, L2, L3			10 Hours
Module 5			
Congestion Control and Resource Allocation Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System (DNS), Electronic Mail (SMTP,POP,IMAP,MIME), World Wide Web			10 Hours

(HTTP), Network Management (SNMP) T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8 RBT: L1, L2, L3	
Course Outcomes The students should be able to: <ul style="list-style-type: none"> • List and classify network services, protocols and architectures, explain why they are layered. • Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API. • Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc. • Explain various congestion control techniques. 	
Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books: <ol style="list-style-type: none"> 1. Larry Peterson and Bruce S Davis “Computer Networks :A System Approach” 5th Edition , Elsevier -2014. 2. Douglas E Comer, “Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI – 2014. 	
Reference Books: <ol style="list-style-type: none"> 1. Uyles Black, “Computer Networks, Protocols , Standards and Interfaces” 2 nd Edition -PHI. 2. Behrouz A Forouzan, “TCP /IP Protocol Suite” 4th Edition – Tata McGraw-Hill. 	

INFORMATION AND NETWORK SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – I			
Subject Code	18LNI13 / 18SCN13 / 18SCS322	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain standard algorithms used to provide confidentiality, integrity and authenticity. • Distinguish key distribution and management schemes. • Deploy encryption techniques to secure data in transit across data networks • Implement security applications in the field of Information technology 			
Module 1			Contact Hours
Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm RBT: L1, L2, L3			10 Hours
Module 2			Contact Hours
Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA. RBT: L1, L2, L3			10 Hours
Module 3			Contact Hours
Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. User Authentication: Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption,			10 Hours

Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification. RBT: L1, L2, L3	
Module 4 Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function. Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. Secure Sockets Layer: SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. Transport Layer Security: Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. HTTPS Connection Initiation, Connection Closure. Secure Shell(SSH) Transport Layer Protocol, User Authentication Protocol, Connection Protocol RBT: L1, L2, L3	10 Hours
Module 5 Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits. RBT: L1, L2, L3	10 Hours
Course Outcomes	
The students should be able to: <ul style="list-style-type: none"> Analyze the vulnerabilities in any computing system and hence be able to design a security solution. Identify the security issues in the network and resolve it. Evaluate security mechanisms using rigorous approaches, including theoretical. 	
Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books: 1. William Stallings, Cryptography and Network Security, Pearson 6 th edition.	
Reference Books: 1. V K Pachghare: Cryptography and Information Security.	

INTERNET OF THINGS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – I			
Subject Code	18LNI22 / 18SCE23 / 18SCN14 / 18SCS14 / 18SSE321	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define and explain basic issues, policy and challenges in the IoT • Illustrate Mechanism and Key Technologies in IoT • Explain the Standard of the IoT • Explain resources in the IoT and deploy of resources into business • Demonstrate data analytics for IoT 			
Module -1			Contact Hours
What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples-Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications. RBT: L1, L2, L3			10 Hours
Module -2			Contact Hours
Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards-Overview and Approaches, IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol, Representational State Transfer, ETSI M2M, Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPv6 Over Low power WPAN, Zigbee IP(ZIP), IPSO RBT: L1, L2, L3			10 Hours
Module – 3			Contact Hours
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M, Layer 3 Connectivity :IPv6 Technologies for the IoT: Overview and Motivations. Address Capabilities, IPv6 Protocol Overview, IPv6 Tunneling, IPsec in IPv6, Header Compression Schemes, Quality of Service in IPv6, Migration Strategies to IPv6. RBT: L1, L2, L3			10 Hours
Module-4			Contact Hours
Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications. RBT: L1, L2, L3			10 Hours
Module-5			Contact Hours
Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis, Structural Health Monitoring Case Study. RBT: L1, L2, L3			10 Hours

Course outcomes:

At the end of this course the students will be able to:

- Develop schemes for the applications of IOT in real time scenarios
- Manage the Internet resources
- Model the Internet of things to business
- Understand the practical knowledge through different case studies
- Understand data sets received through IoT devices and tools used for analysis

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6: The Evolving World of M2M Communications", Wiley, 2013.
2. Arshdeep Bahga, Vijay Madisetti, "Internet of Things: A Hands on Approach" Universities Press., 2015

Reference Books:

1. Michael Miller, "The Internet of Things", First Edition, Pearson, 2015.
2. Claire Rowland, Elizabeth Goodman et.al., "Designing Connected Products", First Edition, O'Reilly, 2015.

WIRELESS NETWORKS AND MOBILE COMPUTING
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2018 -2019)
SEMESTER – I

Subject Code	18LNI331 / 18SCE241 / 18SCN151 / 18SCS323	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Define concepts of wireless communication.
- Compare and contrast propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication.
- Explain CDMA, GSM, Mobile IP, Wimax and Different Mobile OS
- Illustrate various Markup Languages CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns

Module -1	Contact Hours
<p>Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. Wireless Networks : Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10Hours
<p>Module -2</p> <p>Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
<p>Module – 3</p> <p>Mobile OS and Computing Environment : Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux, Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
<p>Module-4</p> <p>Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
<p>Module-5</p>	

<p>J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
<p>Course outcomes:</p>	
<p>The students shall able to:</p> <ul style="list-style-type: none"> • Explain state of art techniques in wireless communication. • Discover CDMA, GSM, Mobile IP, Wimax • Demonstrate program for CLDC, MIDP let model and security concerns 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Ashok Talukder, RoopaYavagal, Hasan Ahmed: Mobile Computing, Technology, Applications and Service Creation, 2nd Edition, Tata McGraw Hill, 2010. 2. Martyn Mallik: Mobile and Wireless Design Essentials, Wiley India, 2003 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Raj kamal: Mobile Computing, Oxford University Press, 2007. 2. ItiSahaMisra: Wireless Communications and Networks, 3G and Beyond, Tata McGraw Hill, 2009. 	

MULTI-CORE ARCHITECTURE AND PROGRAMMING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - I			
Subject Code	18SCE22 / 18SCN152 / 18SCS152	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS - 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define technologies of multicore architecture and performance measures • Demonstrate problems related to multiprocessing • Illustrate windows threading, posix threads, openmp programming • Analyze the common problems in parallel programming 			
Module -1			Contact Hours
Introduction to Multi-core Architecture Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. System Overview of Threading : Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.			10 Hours
			RBT: L1, L2, L3
Module -2			
Fundamental Concepts of Parallel Programming :Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives. Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features			10 Hours
			RBT: L1, L2, L3
Module – 3			
Threading APIs :ThreadingAPIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft. NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.			10 Hours
			RBT: L1, L2, L3
Module-4			
OpenMP: A Portable Solution for Threading : Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions,			10 Hours

OpenMP Environment Variables, Compilation, Debugging, performance	RBT: L1, L2, L3
Module-5	
Solutions to Common Parallel Programming Problems : Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.	10 Hours
	RBT: L1, L2, L3
Course outcomes:	
<p>The students shall able to:</p> <ul style="list-style-type: none"> • Identify the limitations of ILP and the need for multicore architectures • Define fundamental concepts of parallel programming and its design issues • Solve the issues related to multiprocessing and suggest solutions • Make out the salient features of different multicore architectures and how they exploit parallelism • Demonstrate the role of OpenMP and programming concept 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
Text Books:	
<ol style="list-style-type: none"> 1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006 	
Reference Books: NIL	

SOCIAL NETWORK ANALYSIS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – I			
Subject Code	18LNI332 / 18SCN153 /18SFC333	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> The learning objective of the course Social Network Analysis is to discuss essential knowledge of network analysis applicable to real world data, with examples from today’s most popular social networks. 			
Module 1			Contact Hours
Introduction to social network analysis and Descriptive network analysis: Introduction to new science of networks. Networks examples. Graph theory basics. Statistical network properties. Degree distribution, clustering coefficient. Frequent patterns. Network motifs. Cliques and k-cores. <p style="text-align: right;">RBT: L1, L2</p>			10 Hours
Module 2			
Network structure, Node centralities and ranking on network: Nodes and edges, network diameter and average path length. Node centrality metrics: degree, closeness and betweenness centrality. Eigenvector centrality and PageRank. Algorithm HITS. <p style="text-align: right;">RBT: L1, L2</p>			10 Hours
Module 3			
Network communities and Affiliation networks: Networks communities. Graph partitioning and cut metrics. Edge betweenness. Modularity clustering. Affiliation network and bipartite graphs. 1-mode projections. Recommendation systems. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module 4			
Information and influence propagation on networks and Network visualization: Social Diffusion. Basic cascade model. Influence maximization. Most influential nodes in network. Network visualization and graph layouts. Graph sampling. Low -dimensional projections <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module 5			
Social media mining and SNA in real world: FB/VK and Twitter analysis: Natural language processing and sentiment mining. Properties of large social networks: friends, connections, likes, re-tweets. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> Define notation and terminology used in network science. Demonstrate, summarize and compare networks. Explain basic principles behind network analysis algorithms. Analyzing real world network. 			
Question paper pattern:			
The question paper will have ten questions.			

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

CLOUD SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – I			
Subject Code	18LNI333 / 18SCE331 / 18SCN154 / 18SFC152	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Describe the fundamentals of Cloud Computing. • Summarize the need of cloud compliance and existing cloud solutions. • Explain the cloud security concepts. • Demonstrate the operations of Data Centre. • Distinguish the concepts of Identity management and virtualization. 			
Module 1			Contact Hours
Cloud Computing Architectural Framework: Cloud Benefits, Business scenarios, Cloud Computing Evolution, cloud vocabulary, Essential Characteristics of Cloud Computing, Cloud deployment models, Cloud Service Models, Multi- Tenancy, Approaches to create a barrier between the Tenants, cloud computing vendors, Cloud Computing threats, Cloud Reference Model, The Cloud Cube Model, Security for Cloud Computing, How Security Gets Integrated. <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module 2			
Compliance and Audit: Cloud customer responsibilities, Compliance and Audit Security Recommendations. Portability and Interoperability: Changing providers reasons, Changing providers expectations, Recommendations all cloud solutions, IaaS Cloud Solutions, PaaS Cloud Solutions, SaaS Cloud Solutions. <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module 3			
Traditional Security, Business Continuity, Disaster Recovery, Risk of insider abuse, Security baseline, Customers actions, Contract, Documentation, Recovery Time Objectives (RTOs), Customers responsibility, Vendor Security Process (VSP). <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module 4			
Data Center Operations: Data Center Operations, Security challenge, Implement Five Principal Characteristics of Cloud Computing, Data center Security Recommendations. Encryption and Key Management: Encryption for Confidentiality and Integrity, Encrypting data at rest, Key Management Lifecycle, Cloud Encryption Standards, Recommendations. <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module 5			
Identity and Access Management: Identity and Access Management in the cloud, Identity and Access Management functions, Identity and Access Management (IAM) Model, Identity Federation, Identity Provisioning Recommendations, Authentication for SaaS and Paas customers, Authentication for IaaS customers, Introducing Identity Services, Enterprise Architecture with IDaaS , IDaaS Security Recommendations. Virtualization: Hardware Virtualization, Software Virtualization, Memory Virtualization, Storage			10 Hours

Virtualization, Data Virtualization, Network Virtualization, Virtualization Security Recommendations.	RBT: L1, L2, L3
Course Outcomes	
The students should be able to: <ul style="list-style-type: none"> • Demonstrate the growth of Cloud computing, architecture and different modules of implementation. • Evaluate the different types of cloud solutions among IaaS, PaaS, SaaS. • Access the security implementation flow, actions and responsibilities of stake holders. • Generalize the Data Centre operations, encryption methods and deployment details. • Provide recommendations for using and managing the customer's identity and choose the type of virtualization to be used. 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. Tim Mather, SubraKumaraswamy, ShahedLatif, "Cloud Security and Privacy, An Enterprise Perspective on Risks and Compliance", Oreilly Media 2009.	
Reference Books:	
1. Vic (J.R.) Winkler, "Securing the Cloud, Cloud Computer Security Techniques and Tactics", Syngress, April 2011.	

COMPUTER NETWORKS AND IOT LABORATORY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2018 -2019)
SEMESTER – I

Subject Code	18SCNL16	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to

- Demonstrate Concepts of fundamental protocols.
- Illustrate internetworking concepts.
- Implement concepts in congestion control and error detections.
- Evaluate fundamentals of Cryptography through practical implementation.
- Implement standard algorithms used to provide confidentiality, integrity and authenticity.
- Design security applications in the field of Information technology.

PART – A Computer Network LABORATORY WORK

Note:

Implement the following using C/C++ or equivalent with LINUX/Windows environment:

1. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
2. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
3. Write a program to implement Link State Routing (Dijkstra Algorithm).
4. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
5. Write a program for encrypting 64 bit playing text using DES algorithm.
6. Apply the RSA algorithm on a text file to produce cipher text file.
7. Develop a mechanism to setup a security channel using Diffie-Hellman Key Exchange between client and server
8. Implement secure hash algorithm for Data Integrity. Implement MD5 and SHA-1 algorithm, which accepts a string input, and produce a fixed size number - 128 bits for MD5; 160 bits for SHA-1, this number is a hash of the input. Show that a small change in the input results in a substantial change in the output.

Simulation Programs using OPNET /NS2/NS3 or any other equivalent software

9. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
10. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP

PART – B IOT LABORATORY WORK

1. Transmit a string using UART
2. Point-to-Point communication of two Motes over the radio frequency.
3. Multi-point to single point communication of Motes over the radio frequency.LAN (Sub-netting).
4. I2C protocol study
5. Reading Temperature and Relative Humidity value from the sensor

Course Outcomes

The students should be able to:

- Apply key Internet applications and their protocols, and ability to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Design and evaluate application layer protocol
- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Conduction of Practical Examination:

1. All laboratory experiments (nos) are to be included for practical examination.
2. Students are allowed to pick one experiment from **each part and execute both**
3. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
4. **Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.**

MULTIMEDIA COMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI152 / 18SCE322 / 18SCN21	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define the Multimedia Communication Models • Explain Multimedia Transport in Wireless Networks • Solve the Security issues in multimedia networks • Illustrate real-time multimedia network applications. • Explain different network layer based application. 			
Module 1			Contact Hours
Introduction, multimedia information representation, multimedia networks, multimedia applications, Application and networking terminology, network QoS and application QoS, Digitization principles,.Text, images, audio and video.			10 Hours
RBT: L1, L2, L3			
Module 2			
Text and image compression,, compression principles, text compression- Runlength, Huffman, LZW, Document Image compression using T2 and T3 coding, image compression- GIF, TIFF and JPEG			10 Hours
RBT: L1, L2, L3			
Module 3			
Audio and video compression, audio compression – principles, DPCM, ADPCM, Adaptive and Linear predictive coding, Code-Excited LPC, Perceptual coding, MPEG and Dolby coders video compression, video compression principles.			10 Hours
RBT: L1, L2, L3			
Module 4			
Video compression standards: H.261, H.263, MPEG, MPEG 1, MPEG 2, MPEG-4 and Reversible VLCs, MPEG 7 standardization process of multimedia content description, MPEG 21 multimedia framework.			10 Hours
RBT: L1, L2, L3			
Module 5			
Notion of synchronization, presentation requirements, reference model for synchronization, Introduction to SMIL, Multimedia operating systems, Resource management, process management techniques.			10 Hours
RBT: L1, L2, L3			
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Deploy the right multimedia communication models. • Apply QoS to multimedia network applications with efficient routing techniques. • Solve the security threats in the multimedia networks. • Develop the real-time multimedia network applications 			
Question paper pattern:			

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Fred Halsall, "Multimedia Communications", Pearson education, 2001.
2. Raif Steinmetz, KlaraNahrstedt, "Multimedia: Computing, Communications and Applications", Pearson education, 2002.

Reference Books:

1. K. R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic, "Multimedia Communication Systems", Pearson education, 2004.
2. John Billamil, Louis Molina, "Multimedia : An Introduction", PHI, 2002.

NETWORK PROGRAMMING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI14 / 18SCE333 / 18SCN22	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define Network Programming. • Demonstrate programming with TCP and SCTP. • Explain key management and routing sockets. • Evaluate advanced Socket Programming APIs. 			
Module 1			Contact Hours
Introduction to network application, client/server communication, OSI Model, BSD Networking history, Test Networks and Hosts, Unix Standards, 64-bit architectures, Transport Layer: TCP, UDP and SCTP.			10 Hours
RBT: L1, L2, L3			
Module 2			10 Hours
Sockets Introduction – socket address structures, value-result arguments, byte ordering and manipulation functions, address conversion functions, Elementary TCP Sockets – socket, connect, bind, listen, accept , fork and concurrent server design, getsockname and getpeername functions and TCP Client/Server Example- client/server programming through TCP sockets, Normal startup, termination, POSIX signal handling, Signal handling in server, Crashing, rebooting of server host, shutdown			10 Hours
RBT: L1, L2, L3			
Module 3			10 Hours
I/O Multiplexing and Socket Options, Elementary SCTP Sockets- Interface Models, sctp_xx functions, shutdown function, Notifications, SCTP Client/Server Examples – One-to-Many, Head-of-Line Blocking, Controlling number of streams and Termination, IPv4 and IPv6 Interoperability–different interoperability scenarios.			10 Hours
RBT: L1, L2, L3			
Module 4			10 Hours
Daemon Processes, syslogd, daemonizing functions and the inetd super server, Advanced I/O functions- readv, writev, sendmsg and recvmsg, Ancillary data, Advanced polling, Unix domain protocols- socket address structure, functions and communication scenarios, Nonblocking I/O – connect and accept examples.			10 Hours
RBT: L1, L2, L3			
Module 5			10 Hours
ioctl operations- socket, file, interface configuration information, ARP cache and routing table operations, Routing sockets- data link socket address structure, reading and writing, sysctl operations, interface name and index functions, Key Management functions – reading, writing, SADB, SA, Dynamically Maintaining SA's, Out-of-Band data, Threads-basic thread functions, TCP echo server using threads, Mutexes and Conditional variables.			10 Hours
RBT: L1, L2, L3			
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Develop applications that communicate with each other using TCP and SCTP. 			

- Identify the IPv4 and IPv6 compatibility.
- Evaluate socket programming APIs.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. W. Richard Stevens, Bill Fenner, Andrew M. Rudoff: "UNIX Network Programming". Volume 1, Third Edition, Pearson 2004.

Reference Books:

1. Barry Nance: "Network Programming in C", PHI 2002 3. Bob Quinn, Dave Shute: "Windows Socket Network Programming", Pearson 2003.
2. Richard Stevens: "UNIX Network Programming". Volume 2, Second Edition.

WIRELESS AD-HOC NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - II			
Subject Code	18LNI241 / 18SCN23	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain fundamental principles of Ad-hoc Networks • Discuss a comprehensive understanding of Ad-hoc network protocols • Outline current and emerging trends in Ad-hoc Wireless Networks. • Analyze energy management in ad-hoc wireless networks. 			
Module -1			Contact Hours
Ad-hoc Wireless Networks Introduction, Issues in Ad-hoc Wireless Networks, Ad-hoc Wireless Internet; MAC Protocols for Ad-hoc Wireless Networks: Introduction, Issues in Designing a MAC Protocol, Design Goals of MAC Protocols, Classification of MAC protocols, Contention-Based Protocols, Contention-Based Protocols with Reservation Mechanisms, Contention-Based Protocols with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas. RBT: L1, L2, L3			10 Hours
Module -2			
Routing Protocols for Ad-hoc Wireless Networks Introduction, Issues in Designing a Routing Protocol for Ad-hoc Wireless Networks; Classification of Routing Protocols; Table Driven Routing Protocols; On-Demand Routing Protocols, Hybrid Routing Protocols, Hierarchical Routing Protocols and Power-Aware Routing Protocols. RBT: L1, L2, L3			10 Hours
Module – 3			
Multicast Routing in Ad-hoc Wireless Networks Introduction, Issues in Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, An Architecture Reference Model for Multicast Routing Protocols, Classifications of Multicast Routing Protocols, Tree-Based Multicast Routing Protocols and Mesh-Based Multicast Routing Protocols. RBT: L1, L2, L3			10 Hours
Module-4			
Transport Layer and Security Protocols for Ad-hoc Networks: Introduction, Issues in Designing a Transport Layer Protocol; Design Goals of a Transport Layer Protocol; Classification of Transport Layer Solutions; TCP over Transport Layer Solutions; Other Transport Layer Protocols for Ad-hoc Networks; Security in Ad-hoc Wireless Networks, Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management and Secure Routing Ad-hoc Wireless Networks. RBT: L1, L2, L3			10 Hours
Module-5			
Quality of Service and Energy Management in Ad-hoc Wireless Networks: Introduction, Issues and Challenges in Providing QoS in Ad-hoc Wireless Networks, Classification of QoS Solutions, MAC Layer Solutions, Network Layer Solutions; Energy Management in Ad-hoc Wireless Networks: Introduction, Need for Energy Management in Ad-hoc Wireless Networks, Classification of Energy Management Schemes, Battery Management Schemes,			10 Hours

Transmission Management Schemes, System Power Management Schemes.	RBT: L1, L2, L3
Course outcomes:	
The students shall able to: <ul style="list-style-type: none"> • Design their own wireless network • Evaluate the existing network and improve its quality of service • Choose appropriate protocol for various applications • Examine security measures present at different level • Analyze energy consumption and management 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. C. Siva Ram Murthy & B. S. Manoj: Ad-hoc Wireless Networks, 2 nd Edition, Pearson Education, 2011	
Reference Books:	
1. Ozan K. Tonguz and Gianguigi Ferrari: Ad-hoc Wireless Networks, John Wiley, 2007. 2. Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du: Ad-hoc Wireless Networking, Kluwer Academic Publishers, 2004. 3. C.K. Toh: Ad-hoc Mobile Wireless Networks- Protocols and Systems, Pearson Education, 2002	

ADVANCES IN STORAGE AREA NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI243 / 18SCE323 / 18SCN241 / 18SCS241 / 18SIT253 / 18SSE153	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define and contrast storage centric and server centric systems • Define metrics used for Designing storage area networks • Illustrate RAID concepts • Demonstrate, how data centers maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems. 			
Module 1			Contact Hours
Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. Intelligent Disk Subsystems: Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems. RBT: L1, L2, L3			10 Hours
Module 2			
I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. Network Attached Storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. File System and NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS. RBT: L1, L2, L3			10 Hours
Module 3			
Storage Virtualization: Definition of Storage virtualization; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network. RBT: L1, L2, L3			10 Hours
Module 4			
SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. Software Components of SAN: The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs. RBT: L1, L2, L3			10 Hours
Module 5			
Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized			10 Hours

<p>Mechanisms, Property Mechanisms, In-band Management, Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	
<p>Course Outcomes</p>	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Identify the need for performance evaluation and the metrics used for it • Apply the techniques used for data maintenance. • Realize strong virtualization concepts • Develop techniques for evaluating policies for LUN masking, file systems 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2013.

SWITCHING & STATISTICAL MULTIPLEXING IN TELECOMMUNICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18SCN242	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain switching and multiplexing. • Analyze the transmission technology. And transmission control. • Demonstrate basic knowledge on telecommunication 			
Module -1			Contact Hours
Introduction: Evolution of Telecommunication, Simple Telephone Communication, Basics of a Switching System, Manual Switching System, Major Telecommunication Networks. Why Digital: Advantages of Digital Voice Networks, Digital Signal Processing, Disadvantages of Digital Voice Networks			10 Hours
RBT: L1, L2, L3			
Module -2			10 Hours
Switching: Crossbar Switching, Principles of Common Control, Touch Tone Dial Telephone, Principles of Crossbar Switching, Crossbar Switch Configurations, Crosspoint Technology, Crossbar Exchange Organization			10 Hours
RBT: L1, L2, L3			
Module – 3			10 Hours
Electronic Space Division Switching: Stored Program Control, Centralized SPC, Distributed SPC, Software Architecture, Application Software, Enhanced Services, Two-stage, Three-stage and n-stage Networks. Digital Transmission and Multiplexing: Sampling, Quantization and Binary Coding, Quantization Noise, Companding, Differential Coding, Vocoders, Pulse Transmission, Line Coding, Time Division Multiplexing			10 Hours
RBT: L1, L2, L3			
Module-4			10 Hours
Time Division Switching: Basic Division Space and Time Switching, Time Multiplexed Space and Time Switching, Combination Switching, Three-stage and n-stage Combination Switching			10 Hours
RBT: L1, L2, L3			
Module-5			10 Hours
Traffic Engineering: Network Traffic Load and Parameters, Grade of Service and Blocking Probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay Systems			10 Hours
RBT: L1, L2, L3			
Course outcomes:			
The student will be able to:			
<ul style="list-style-type: none"> • Explain basics of telecommunications and digital form • Elaborate switching and multiplexing, telecommunication. • Illustrate transmission control in telecommunication • Design and develop switching, multiplexing and traffic control. 			
Question paper pattern:			

- The question paper will have ten questions.
- There will be 2 questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Thiagarajan Viswanathan: Telecommunication Switching Systems and Networks, PHI, 1992.
2. John.C.Bellamy: Digital Telephony, 3rd Edition, John Wiley and Sons Inc., 2002.

MOBILE APPLICATION DEVELOPMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI323/ 18SCN244 18SFC332 / 18SIT241	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Analyze system requirements for mobile applications. • Apply of mobile development frameworks. • Demonstrate mobile application design. • Demonstrate and implement mobile application. 			
Module -1			Contact Hours
Introduction to mobile communication and computing: Introduction to mobile computing, Novel applications, limitations and GSM architecture, Mobile services, System architecture, Radio interface, protocols, Handover and security. Smart phone operating systems and smart phones applications. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module -2			
Fundamentals of Android Development: Introduction to Android., The Android 4.1 Jelly Bean SDK, Understanding the Android Software Stack, Installing the Android SDK, Creating Android Virtual Devices, Creating the First Android Project, Using the Text View Control, Using the Android Emulator. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module – 3			
The Intent of Android Development, Four kinds of Android Components: Activity, Service, Broadcast Receiver and Content Provider. Building Blocks for Android Application Design, Laying Out Controls in Containers. Graphics and Animation: Drawing graphics in Android, Creating Animation with Android’s Graphics API. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module-4			
Creating the Activity, Working with views: Exploring common views, using a list view, creating custom views, understanding layout. Using Selection Widgets and Debugging Displaying and Fetching Information Using Dialogs and Fragments. Multimedia: Playing Audio, Playing Video and Capturing Media. Advanced Android Programming: Internet, Entertainment, and Services. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module-5			
Displaying web pages and maps, communicating with SMS and emails. Creating and using content providers: Creating and consuming services, publishing android applications <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Course outcomes:			
The students should be able to: <ul style="list-style-type: none"> • Describe the requirements for mobile applications • Explain the challenges in mobile application design and development • Develop design for mobile applications for specific requirements 			

- Implement the design using Android SDK
- Implement the design using Objective C and iOS
- Deploy mobile applications in Android and iPone marketplace for distribution

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Mobile Computing: (technologies and Applications-N. N. Jani S chand
2. B.M.Hirwani- Android programming Pearson publications-2013
3. W. Frank Ableson, Robi Sen and C. E. Ortiz - **Android in Action**, Third Edition-2012 DreamTech Publisher

WIRELESS SENSOR NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI324 /18SCE251 / 18SCN251	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain sensor networks for various application setups. • Demonstrate the design space and conduct trade-off analysis between performance and resources. • Assess coverage and conduct node deployment planning. • Devise appropriate data dissemination protocols and model links cost. • Determine suitable medium access protocols and radio hardware. • Illustrate sensor networks using commercial components. • Discuss quality of service, fault-tolerance, security and other dependability requirements while coping with resource constraints. 			
Module -1			Contact Hours
Introduction, Overview and Applications of Wireless Sensor Networks Introduction, Basic overview of the Technology, Applications of Wireless Sensor Networks: Introduction, Background, Range of Applications, Examples of Category 2 WSN Applications, Examples of Category 1 WSN Applications, Another Taxonomy of WSN Technology. (Chapter 1: 1.1, 1.2, Chapter2: 2.1-2.6)			10 Hours
RBT: L1, L2, L3			
Module -2			
Basic Wireless Sensor Technology and Systems: Introduction, Sensor Node Technology, Sensor Taxonomy, WN Operating Environment, WN Trends, Wireless Transmission Technology and Systems: Introduction, Radio Technology Primer, Available Wireless Technologies (Chapter3: 3.1-3.5, Chapter 4: 4.1-4.3)			10 Hours
RBT: L1, L2, L3			
Module – 3			
MAC and Routing Protocols for Wireless Sensor Networks: Introduction, Background, Fundamentals of MAC Protocols, MAC Protocols for WSNs, Sensor-MAC case Study, IEEE 802.15.4 LR-WPANs Standard Case Study. Routing Protocols for Wireless Sensor Networks: Introduction, Background, Data Dissemination and Gathering, Routing Challenges and Design Issues in WSNs, Routing Strategies in WSNs. (Chapter 5: 5.1-5.6, Chapter 6: 6.1-6.5)			10 Hours
RBT: L1, L2, L3			
Module-4			
Transport Control and Middleware for Wireless Sensor Networks: Traditional Transport Control Protocols, Transport Protocol Design Issues, Examples of Existing Transport Control Protocols, Performance of Transport Control Protocols. Middleware for Wireless Sensor Networks: Introduction, WSN Middleware Principles, Middleware Architecture, Existing Middleware. (Chapter 7: 7.1-7.4, Chap. 8: 8.1-8.4)			10 Hours
RBT: L1, L2, L3			
Module-5			

<p>Network Management and Operating System for Wireless Sensor Networks: Introduction, Network Management Requirements, Traditional Network Management Models, Network Management Design Issues. Operating Systems for Wireless Sensor Networks: Introduction, Operating System Design Issues, Examples of Operating Systems. (Chapter 9: 9.1-9.5, Chapter 10: 10.1-10.3)</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
<p>Course outcomes:</p>	
<p>The students shall able to:</p> <ul style="list-style-type: none"> • Explain existing applications of wireless sensor actuator networks • Apply in the context of wireless sensor networks and explain elements of distributed computing and network protocol design • Contrast Various hardware, software platforms that exist for sensor networks • Summarize various network level protocols for MAC, routing, time synchronization, aggregation, consensus and distributed tracking 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. KAZEM SOHRABY, DANIEL MINOLI, TAIEB ZNATI, “Wireless Sensor Networks: Technology, Protocols and Applications:, WILEY , Second Edition (Indian) , 2014 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Ian F. Akyildiz, Mehmet Can Vuran "Wireless Sensor Networks", Wiley 2010 2. Feng Zhao & Leonidas J. Guibas, “Wireless Sensor Networks- An Information Processing Approach", Elsevier, 2007. 	

MANAGING BIG DATA [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI251 / 18SCE21 / 18SCN252 / 18SCS21 / 18SFC331 / 18SIT31 / 18SSE322	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define big data for business intelligence • Analyze business case studies for big data analytics • Explain managing of Big data Without SQL • Develop map-reduce analytics using Hadoop and related tools 			
Module -1			Contact Hours
UNDERSTANDING BIG DATA: What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics. RBT: L1, L2, L3			10 Hours
Module -2			
NOSQL DATA MANAGEMENT: Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schema less databases – materialized views – distribution models – shading — version – map reduce – partitioning and combining – composing map-reduce calculations. RBT: L1, L2, L3			10 Hours
Module – 3			
BASICS OF HADOOP: Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures. RBT: L1, L2, L3			10 Hours
Module-4			
MAPREDUCE APPLICATIONS: MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats RBT: L1, L2, L3			10 Hours
Module-5			
HADOOP RELATED TOOLS: Hbase – data model and implementations – Hbase clients – Hbase examples –praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data			10 Hours

definition – HiveQL data manipulation – HiveQL queries.	RBT: L1, L2, L3
Course outcomes:	
The students shall able to: <ul style="list-style-type: none"> • Describe big data and use cases from selected business domains • Explain NoSQL big data management • Install, configure, and run Hadoop and HDFS • Perform map-reduce analytics using Hadoop • Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
<ol style="list-style-type: none"> 1. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilly, 2012. 2. Eric Sammer, "Hadoop Operations", O'Reilly, 2012. 	
Reference Books:	
<ol style="list-style-type: none"> 1. VigneshPrajapati, Big data analytics with R and Hadoop, SPD 2013. 2. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilly, 2012. 3. Lars George, "HBase: The Definitive Guide", O'Reilly, 2011. 4. Alan Gates, "Programming Pig", O'Reilly, 2011 	

NETWORK MANAGEMENT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18LNI154 / 18SCN253	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Evaluate need for interoperable network management. • Explain the concepts and architecture behind standards based network management. • Illustrate the concepts and terminology associated with SNMP and TMN • Demonstrate network management as a typical distributed application 			
Module 1			Contact Hours
Introduction: Analogy of Telephone Network Management, Data and Telecommunication Network Distributed computing Environments, TCP/IP-Based Networks: The Internet and Intranets, Communications Protocols and Standards- Communication Architectures, Protocol Layers and Services; Case Histories of Networking and Management – The Importance of topology , Filtering Does Not Reduce Load on Node, Some Common Network Problems; Challenges of Information Technology Managers, Network Management: Goals, Organization, and Functions- Goal of Network Management, Network Provisioning, Network Operations and the NOC, Network Installation and Maintenance; Network and System Management, Network Management System platform, Current Status and Future of Network Management. RBT: L1, L2, L3			10 Hours
Module 2			Contact Hours
Basic Foundations: Standards, Models, and Language: Network Management Standards, Network Management Model, Organization Model, Information Model – Management Information Trees, Managed Object Perspectives, Communication Model; ASN.1-Terminology, Symbols, and Conventions, Objects and Data Types, Object Names, An Example of ASN.1 from ISO 8824; Encoding Structure; Macros, Functional Model. RBT: L1, L2, L3			10 Hours
Module 3			Contact Hours
SNMPv1 Network Management: Managed Network: The History of SNMP Management, Internet Organizations and standards, Internet Documents, The SNMP Model, The Organization Model, System Overview. The Information Model – Introduction, The Structure of Management Information, Managed Objects, Management Information Base. The SNMP Communication Model – The SNMP Architecture, Administrative Model, SNMP Specifications, SNMP Operations, SNMP MIB Group, Functional Model SNMP Management – RMON: Remote Monitoring, RMON SMI and MIB, RMON1- RMON1 Textual Conventions, RMON1 Groups and Functions, Relationship Between Control and Data Tables, RMON1 Common and Ethernet Groups, RMON Token Ring Extension Groups, RMON2 – The RMON2 Management Information Base, RMON2 Conformance Specifications. RBT: L1, L2, L3			10 Hours
Module 4			Contact Hours
Broadband Network Management: Broadband Access Networks and Technologies: Broadband Access Networks, Broadband Access Technology; HFCT Technology: The Broadband LAN, The Cable Modem, The Cable Modem Termination System, The HFC			10 Hours

Plant, The RF Spectrum for Cable Modem; Data Over Cable, Reference Architecture; HFC Management – Cable Modem and CMTS Management, HFC Link Management, RF Spectrum Management, DSL Technology; Asymmetric Digital Subscriber Line Technology – Role of the ADSL Access Network in an Overall Network, ADSL Architecture, ADSL Channeling Schemes, ADSL Encoding Schemes; ADSL Management – ADSL Network Management Elements, ADSL Configuration Management, ADSL Fault Management, ADSL Performance Management, SNMP-Based ADSL Line MIB, MIB Integration with Interfaces Groups in MIB-2, ADSL Configuration Profiles	
RBT: L1, L2, L3	
Module 5	
Network Management Applications: Configuration Management- Network Provisioning, Inventory Management, Network Topology, Fault Management- Fault Detection, Fault Location and Isolation 24 Techniques, Performance Management – Performance Metrics, Data Monitoring, Problem Isolation, Performance Statistics; Event Correlation Techniques – Rule-Based Reasoning, Model-Based Reasoning, Case Based Reasoning, Codebook correlation Model, State Transition Graph Model, Finite State Machine Model, Security Management – Policies and Procedures, Security Breaches and the Resources Needed to Prevent Them, Firewalls, Cryptography, Authentication and Authorization, Client/Server Authentication Systems, Messages Transfer Security, Protection of Networks from Virus Attacks, Accounting Management, Report Management, Policy- Based Management, Service Level Management.	10 Hours
RBT: L1, L2, L3	
Course Outcomes	
The students should be able to:	
<ul style="list-style-type: none"> • Analyze the issues and challenges pertaining to management of emerging network technologies such as wired/wireless networks and high-speed internets. • Apply network management standards to manage practical networks • Formulate possible approaches for managing OSI network model. • Use on SNMP for managing the network • Use RMON for monitoring the behavior of the network • Identify the various components of network and formulate the scheme for the managing them 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. Mani Subramanian: Network Management- Principles and Practice, 2nd Pearson Education, 2010.	
Reference Books:	
1. J. Richard Burke: Network management Concepts and Practices: a Hands-On Approach, PHI, 2008.	

ADVANCES IN OPERATING SYSTEMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – II			
Subject Code	18SCS12 / 18SCN254	IA Marks	40

Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define the fundamentals of Operating Systems. • Explain distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols • Illustrate distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols • Identify the components and management aspects of Real time, Mobile operating Systems 			
Module 1			Teaching Hours
Operating System Overview, Process description & Control: Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Microsoft Windows Overview, Traditional UNIX Systems, Modern UNIX Systems, What is a Process?, Process States, Process Description, Process Control, Execution of the Operating System, Security Issues. RBT: L1, L2, L3			10 Hours
Module 2			
Threads, SMP, and Microkernel, Virtual Memory: Processes and Threads, Symmetric Multiprocessing (SMP), Micro Kernels, Windows Vista Thread and SMP Hours Management, Linux Process and Thread Management. Hardware and Control Structures, Operating System Software, UNIX Memory Management, Windows Vista Memory Management, Summary RBT: L1, L2, L3			10 Hours
Module 3			
Multiprocessor and Real-Time Scheduling: Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, UNIX PreclsSI) Scheduling, Windows Vista Hours Scheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock RBT: L1, L2, L3			10 Hours
Module 4			
Embedded Operating Systems: Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits. RBT: L1, L2, L3			10 Hours
Module 5			
Kernel Organization: Using Kernel Services, Daemons, Starting the Kernel, Control in the Machine , Modules and Device Management, MODULE Organization, MODULE Installation and Removal, Process and Resource Management,Running Process Manager, Creating a new Task , IPC and Synchronization, The Scheduler , Memory Manager , The Virtual Address Space, The Page Fault Handler , File Management. The windows NT/2000/XP kernel: Introduction, The NT kernel, Objects , Threads, Multiplication Synchronization,Traps,Interrupts and Exceptions, The NT executive , Object Manager, Process and Thread Manager , Virtual Memory Manager, I/o Manager, The cache Manager Kernel local procedure calls and IPC, The native API, subsystems. RBT: L1, L2, L3			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of 			

<ul style="list-style-type: none"> • Distributed operating system • Learn the various resource management techniques for distributed systems • Identify the different features of real time and mobile operating system • Modify existing open source kernels in terms of functionality or features used
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>
<p>Text Books:</p> <ol style="list-style-type: none"> 1. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013. 2. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Silberschatz, Galvin, Gagne: Operating System Concepts, 8th Edition, Wiley, 2008 2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006. 3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007

<p>CLOUD COMPUTING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – III</p>			
Subject Code	18LNI151 / 18SCE14 / 18SCN31 / 18SCS23 / 18SIT22 / 18SSE251	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define and Cloud, models and Services. • Compare and contrast programming for cloud and their applications • Explain virtuaization, Task Scheduling algorithms. • Apply ZooKeeper, Map-Reduce concept to applications. 			
Module 1			Contact Hours
<p>Introduction, Cloud Infrastructure: Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in,</p>			10 Hours

Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems. RBT: L1, L2, L3	
Module 2	
Cloud Computing: Application Paradigms.: Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The Gre The Web application, Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing. RBT: L1, L2, L3	10 Hours
Module 3	
Cloud Resource Virtualization: Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems RBT: L1, L2, L3	10 Hours
Module 4	
Cloud Resource Management and Scheduling: Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling MapReduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems. RBT: L1, L2, L3	10 Hours
Module 5	
Cloud Security, Cloud Application Development: Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems. RBT: L1, L2, L3	10 Hours
Course Outcomes	
The students should be able to: <ul style="list-style-type: none"> • Compare the strengths and limitations of cloud computing • Identify the architecture, infrastructure and delivery models of cloud computing • Apply suitable virtualization concept. • Choose the appropriate cloud player • Address the core issues of cloud computing such as security, privacy and interoperability • Design Cloud Services • Set a private cloud 	
Question paper pattern:	

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

<p align="center">COMPUTER SYSTEMS PERFORMANCE ANALYSIS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER – III</p>			
Subject Code	18SCE151 / 18SCN321 / 18SCS154	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Discuss mathematical foundations needed for performance evaluation of computer systems • Illustrate metrics used for performance evaluation • Develop the analytical modeling of computer systems • Develop new queuing analysis for both simple and complex systems • Analyze techniques for evaluating scheduling policies 			
Module 1			Contact Hours
<p>Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.</p> <p align="right">RBT: L1, L2, L3</p>			10 Hours
Module 2			
<p>Workloads, Workload Selection and Characterization: Types of Workloads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.</p> <p align="right">RBT: L1, L2, L3</p>			10 Hours
Module 3			
<p>Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.</p> <p align="right">RBT: L1, L2, L3</p>			10 Hours
Module 4			
<p>Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote- Terminal Emulation; Components of an RTE; Limitations of RTEs. Experimental Design and Analysis: Introduction: Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.</p>			10 Hours

RBT: L1, L2, L3	
Module 5	
<p>Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Course Outcomes	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Identify the need for performance evaluation and the metrics used for it • Implement Little's law and other operational laws • Apply the operational laws to open and closed systems • Use discrete-time and continuous-time Markov chains to model real world systems • Develop analytical techniques for evaluating scheduling policies 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

<p style="text-align: center;">NETWORK ROUTING ALGORITHMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - III</p>			
Subject Code	18LNI334 / 18SCN322	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS - 04			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Discuss layered architecture for communication networks and the specific functionality of the network layer. • Explain the basic principles of routing and the manner, this is implemented in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network. • Compare and contrast different routing algorithms existing and their performance characteristics. 			
Module -1			Contact Hours
<p>NETWORK ROUTING: BASICS AND FOUNDATIONS: Networking and Network Routing: An Introduction: Addressing and Internet Service: An Overview, Network Routing: An Overview, IP Addressing, On Architectures, Service Architecture, Protocol Stack Architecture, Router Architecture, Network Topology Architecture, Network Management Architecture, Public Switched Telephone Network, Communication Technologies, Standards Committees, Last Two Bits.</p> <p>Routing Algorithms: Shortest Path and Widest Path: Bellman–Ford Algorithm and the Distance Vector Approach, Dijkstra’s Algorithm, Comparison of the Bellman–Ford Algorithm and Dijkstra’s Algorithm, Shortest Path Computation with Candidate Path Caching, Widest Path Computation with Candidate Path Caching, Widest Path Algorithm, k-Shortest Paths Algorithm</p> <p>Routing Protocols: Framework and Principles: Routing Protocol, Routing Algorithm, and Routing Table, Routing Information Representation and Protocol Messages, Distance Vector Routing Protocol, Link State Routing Protocol, Path Vector Routing Protocol, Link Cost</p> <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module -2			
<p>ROUTING IN IP NETWORKS: IP Routing and Distance Vector Protocol Family : Routers, Networks, and Routing Information: Some Basics, Static Routes, Routing Information Protocol, Version 1 (RIPv1), Routing Information Protocol, Version 2 (RIPv2), Interior Gateway Routing Protocol (IGRP), Enhanced Interior Gateway Routing Protocol (EIGRP), Route Redistribution</p> <p>OSPF and Integrated IS-IS :From a Protocol Family to an Instance of a Protocol, OSPF: Protocol Features, OSPF Packet Format, Examples of Router LSAs and Network LSAs, Integrated IS-IS, Similarities and Differences Between IS-IS and OSPF</p> <p>Internet Routing Architectures: Internet Routing Evolution, Addressing and Routing: Illustrations, Current Architectural View of the Internet, Allocation of IP Prefixes and AS Number, Policy-Based Routing, Point of Presence, Traffic Engineering Implications, Internet Routing Instability</p>			10 Hours

RBT: L1, L2, L3	
Module – 3	
<p>Router Architectures: Functions of a Router, Types of Routers, Elements of a Router, Packet Flow, Packet Processing: Fast Path versus Slow Path, Router Architectures. IP Address Lookup Algorithms: Impact of Addressing on Lookup, Longest Prefix Matching, Naïve Algorithms, Binary Tries, Multibit Tries, Compressing Multibit Tries, Search by Length Algorithms, Search by Value Approaches, Hardware Algorithms, Comparing Different Approaches. IP Packet Filtering and Classification: Importance of Packet Classification, Packet Classification Problem, Packet Classification Algorithms, Naïve Solutions, Two-Dimensional Solutions, Approaches for Dimensions, Extending Two-Dimensional Solutions, Divide and Conquer Approaches, Tuple Space Approaches, Decision Tree Approaches, Hardware-Based Solutions.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Module-4	
<p>ADVANCED ROUTING PROTOCOLS FOR WIRELESS NETWORKS: Wireless networking basic aspects, Basic routing concepts, Ad hoc routing, Mesh routing, Vehicular routing, Sensor routing</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Module-5	
<p>TOWARD NEXT GENERATION ROUTING: Quality of Service Routing: QoS Attributes, Adapting Shortest Path and Widest Path Routing: A Basic Framework, Update Frequency, Information Inaccuracy, and Impact on Routing, Lessons from Dynamic Call Routing in the Telephone Network, Heterogeneous Service, Single-Link Case, A General Framework for Source-Based QoS Routing with Path Caching, Routing Protocols for QoS Routing</p> <p>MPLS and GMPLS: Traffic Engineering Extension to Routing Protocols, Multiprotocol Label Switching, Generalized MPLS, MPLS Virtual Private Networks. Routing and Traffic Engineering with MPLS: Traffic Engineering of IP/MPLS Networks, VPN Traffic Engineering, Routing/Traffic Engineering for Voice Over MPLS. VoIP Routing: Interoperability through IP and PSTN : PSTN Call Routing Using the Internet, PSTN Call Routing: Managed IP Approach, IP-PSTN Interworking for VoIP, IP Multimedia Subsystem, Multiple Heterogeneous Providers Environment and All-IP Environment of VoIP Services.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Course outcomes:	
<ul style="list-style-type: none"> • Given the network and user requirements and the type of channel over which the network has to operate, the student would be in a position to apply his knowledge for identifying a suitable routing algorithm, implementing it and analyzing its performance. • The student would also be able to design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications. 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

INFORMATION SECURITY POLICIES IN INDUSTRY
[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2018 -2019)
SEMESTER – III

Subject Code	18SCN323 / 18SFC243	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
The objectives of this course is to make students to learn <ul style="list-style-type: none"> • Explain management’s responsibilities and role in the development, maintenance, and enforcement of information security policy, standards, practices, procedures, and guidelines. • Illustrate the differences between the organization’s general information security policy and the needs and objectives of the various issue-specific and system-specific policies the organization will create. • Know what an information security blueprint is and what its major components are. • How an organization institutionalizes its policies, standards, and practices using education, training and awareness programs. • Become familiar with what viable information security architecture is, what it includes, and how it is used. 			
Module 1			Contact Hours
Introduction to Information Security Policies: About Policies, why Policies are Important, When policies should be developed, How Policy should be developed, Policy needs, Identify what and from whom it is being protected, Data security consideration, Backups, Archival storage and disposal of data, Intellectual Property rights and Policies, Incident Response and Forensics, Management Responsibilities, Role of Information Security Department, Security Management and Law Enforcement, Security awareness training and support. RBT: L1, L2, L3			10 Hours
Module 2			Contact Hours
Policy Definitions, Standards, Guidelines, Procedures with examples, Policy Key elements, Policy format and Basic Policy Components, Policy content considerations, Program Policy Examples, Business Goal Vs Security Goals, Computer Security Objectives, Mission statement Format, Examples, Key roles in Organization, Business Objectives, Standards: International Standards. RBT: L1, L2, L3			10 Hours
Module 3			Contact Hours
Writing The Security Policies: Computer location and Facility construction, Contingency Planning, Periodic System and Network Configuration Audits, Authentication and Network Security, Addressing and Architecture, Access Control, Login Security, Passwords, User Interface, Telecommuting and Remote Access, Internet Security Policies, Administrative and User Responsibilities, WWW Policies, Application Responsibilities, E-mail Security Policies. RBT: L1, L2, L3			10 Hours
Module 4			Contact Hours
Establishing Type of Viruses Protection: Rules for handling Third Party Software, User Involvement with Viruses, Legal Issues, Managing Encryption and Encrypted data, Key			10 Hours

<p>Generation considerations and Management, Software Development policies, Processes Testing and Documentation, Revision control and Configuration management, Third Party Development, Intellectual Property Issues.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	
Module 5	
<p>Maintaining the Policies: Writing the AUP, User Login Responsibilities, Organization's responsibilities and Disclosures, Compliance and Enforcement, Testing and Effectiveness of Policies, Publishing and Notification Requirements of the Policies, Monitoring, Controls and Remedies, Administrator Responsibility, Login Considerations, Reporting of security Problems, Policy Review Process, The Review Committee, Sample Corporate Policies, Sample Security Policies.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Course Outcomes	
<p>The students should be able to:</p> <ul style="list-style-type: none"> • Explain the content, need, and responsibilities of information security policies. • Explain the standards, guidelines, Procedures, and key roles of the organization. • Able to write policy document for securing network connection and interfaces. • Explain the threats to the stored data or data in transit and able to write policy document. • Able to write, monitor, and review policy document. 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>	
<p>Text Books</p> <ol style="list-style-type: none"> 1. Scott Barman, Writing Information Security Policies, Sams Publishing, 2002. 2. Thomas.R.Peltier, Information Policies, Procedures and Standards, CRC Press, 2004. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Thomas R Peltier, Justin Peltier, John Backley, " Information Security Fundamentals", Auerbach publications, CRC Press, 2005. 2. Harold F. Tipton and Micki Krause "Information Security Management Handbook", Auerbach publications, 5th Edition, 2005. 	

MACHINE LEARNING TECHNIQUES [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - III			
Subject Code	18LNI322 / 18SCE321 / 18SCN324 / 18SCS31 / 18SFC254 / 18SIT322 / 18SSE334	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain basic concepts of learning and decision trees. • Compare and contrast neural networks and genetic algorithms • Apply the Bayesian techniques and instant based learning • Examine analytical learning and reinforced learning 			
Module -1			Contact Hours
INTRODUCTION, CONCEPT LEARNING AND DECISION TREES Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search RBT: L1, L2, L3			10Hours
Module -2			
NEURAL NETWORKS AND GENETIC ALGORITHMS: Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning. RBT: L1, L2, L3			10 Hours
Module – 3			
BAYESIAN AND COMPUTATIONAL LEARNING Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier– Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model. RBT: L1, L2, L3			10 Hours
Module-4			
INSTANT BASED LEARNING AND LEARNING SET OF RULES: K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions –Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution RBT: L1, L2, L3			10 Hours
Module-5			
ANALYTICAL LEARNING AND REINFORCED LEARNING: Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning RBT: L1, L2, L3			10 Hours
Course outcomes:			
On Completion of the course, the students will be able to			

- Choose the learning techniques with this basic knowledge.
- Apply effectively neural networks and genetic algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.
- Choose and differentiate reinforcement and analytical learning techniques

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Tom M. Mitchell, "Machine Learning", McGraw-Hill Education (INDIAN EDITION), 2013.

Reference Books:

1. EthemAlpaydin, "Introduction to Machine Learning", 2nd Ed., PHI Learning Pvt. Ltd., 2013.
2. T. Hastie, R. Tibshirani, J. H. Friedman, "The Elements of Statistical Learning", Springer; 1st edition, 2001.

ANALYSIS OF COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - III			
Subject Code	18SCN331	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain with the concepts of computer networks • What is a computer network and what are the fundamental protocols. • Analyze network architectures in stochastic and deterministic way. • Illustrate RSVP, Principles of TCP • Discover more on different network protocols. • Explain multiplexing, streaming sessions in computer network. 			
Module -1			Contact Hours
Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; the importance of quantitative modeling in the Engineering of Telecommunication Networks. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module -2			Contact Hours
Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module – 3			Contact Hours
Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued). <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module-4			Contact Hours
Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little’s theorem, Brumelle’s theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module-5			Contact Hours
Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet’s Adaptive Window Protocol; Bandwidth sharing in a Network. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours

RBT: L1, L2, L3

Course outcomes:

On completion, student will be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Implement key Internet applications and their protocols, and will apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

2. J. Walrand, P. Varaiya: High Performance Communication Networks, 2nd Edition, Morgan Kaufmann, 1999

<p style="text-align: center;">PROTOCOL ENGINEERING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - III</p>			
Subject Code	18LNI23 / 18SCN332	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS - 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain Protocol Engineering fundamentals • Define SDL notations • Demonstrate various protocol conformance testing schemes • Explain Protocol Synthesis and Protocol Re-synthesis 			
Module -1			Contact Hours
Introduction: Communication Model, Communication Software, Communication Subsystems, Communication Protocol, Communication Protocol Development Methods, Protocol Engineering Process. Layered Architecture, Network Services and Interfaces, Protocol Function, OSI Model, TCP/IP Protocol Suite, Application Protocols, Protocol Specification: Components of Protocol to be Specified, Communication Service Specification, Protocol Entity Specification, Interface Specifications, Multimedia Protocol Specifications, Internet Protocol Specifications: Examples <p style="text-align: right;">RBT: L1, L2, L3</p>			10Hours
Module -2			
SDL: Examples of SDL Based Protocol Specifications Introduction to Other Protocol Specification Languages. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module - 3			
Protocol Verification/Validation: Protocol Verification, Verification of a Protocol Using Finite State Machines, Protocol Validation, Protocol Design Errors, Protocol Validation Approaches, and SDL based Protocol Verification, SDL based Protocol Validation <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module-4			
Protocol Conformance Testing: Conformance Testing, Conformance Testing Methodology and Framework, Conformance Test Architectures, Test Sequence Generation Methods, Distributed Architecture by Local Methods, Conformance Testing with TTCN, Conformance Testing in Systems with Semi-controllable Interfaces, Conformance Testing of RIP, Multimedia Applications Testing, SDL Based Tools for Conformance Testing, SDL Based Conformance Testing of MPLS. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Module-5			
Protocol Synthesis: Protocol Synthesis, Interactive Synthesis Algorithm, Automatic Synthesis Algorithm, Automatic Synthesis of SDL from MSC, Protocol Re-synthesis. Protocol Implementation: Requirements of Protocol Implementation, Object based approach to Protocol Implementation, Protocol Compilers, and Tools for Protocol Engineering. <p style="text-align: right;">RBT: L1, L2, L3</p>			10 Hours
Course outcomes:			
The students should be able to:			

- Describe the requirements for protocol engineering systems
- Explain the challenges in designing protocol engineering systems
- Implement the design using SDL

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

WEB ENGINEERING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - III			
Subject Code	18SCN333 / 18SIT324	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS - 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Demonstrate modeling and requirements of a web application. • Develop technology-Aware Web Application. • Illustrate the web application development Process. • Analyze the performances of web applications 			
Module -1			Contact Hours
Introduction: Motivation, Categories of web applications, Characteristics of web applications. Requirements Engineering: Introduction, Fundamentals, RE specifics in web engineering, Principles of RE for web applications, Adapting RE methods to web application development, Outlook. Modeling Web Application: Introduction, Fundamentals, Modeling specifics in web engineering, Modeling requirements, Content modeling, Hypertext modeling, Presentation modeling, Customization modeling, Methods and tools, Outlook. RBT: L1, L2, L3			10 Hours
Module -2			Contact Hours
Web Application Architectures: Introduction, Fundamentals, Specifics of web application architectures, Components of a generic web application architecture, Layered architectures, Data-aspect architectures. Technology-Aware Web Application Design: Introduction, Web design from an evolutionary perspective, Presentation design, Interaction design, Functional design, Outlook. Technologies for Web Applications: Introduction, Fundamentals, Client/Server communication on the web, Client side technologies, Document-specific technologies, Server-side technologies, Outlook. RBT: L1, L2, L3			10 Hours
Module – 3			Contact Hours
Testing Web Applications: Introduction, Fundamentals, Testing specifics in web engineering, Test approaches, Test scheme, Test methods and techniques, Test automation, Outlook. Operation and Maintenance of Web Applications: Introduction, Challenges following the launch of a web application, Content management, Usage analysis, Outlook. Web Project Management: From software project management to web project management, Challenges in web project management, Managing web teams, Managing the development process of a web application, Outlook. RBT: L1, L2, L3			10 Hours
Module-4			Contact Hours
The Web Application Development Process: Motivation, Fundamentals, Requirements for a web application development process, Analysis of the rational unified process, Analysis of extreme programming, Outlook. Usability of Web Applications: Motivation, What is usability? What characterizes the usability of web applications? Design guidelines, Web usability engineering methods, Web usability engineering trends, Outlook. RBT: L1, L2, L3			10 Hours
Module-5			

<p>Performance of Web Applications: Introduction, What is performance? What characterizes performance of web applications, System definition and indicators, Characterizing the work load, Analytical techniques, Representing and interpreting results, Performance optimization methods, Outlook. Security for web Applications: Introduction, Aspects of security, Encryption, digital signatures, and certificates, Secure Client/Server interaction, Client security issues, Service provider security issues, Outlook. The Semantic Web: Fundamentals of the semantic web, Technological concepts, Specifics of semantic web applications, Tools, Outlook.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Course outcomes:	
<p>Students will be able to</p> <ul style="list-style-type: none"> • Ability to Model the requirements of a web application. • Contrast technology-aware Web Application. • Ability to analyze the performances of web applications 	
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

WEB MINING [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2018 -2019) SEMESTER - III			
Subject Code	18SCN334 / 18SSC331	IA Marks	40
Number of Contact Hours/Week	04	Exam Marks	60
Total Number of Contact Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Compare and contrast different knowledge discovery issues in Web mining. • Analyze the different algorithms commonly used by Web application. • Apply the role played by Web mining in Information retrieval and extraction • Demonstrate the documents structures and grouping, • Use the probabilistic model for web mining • Illustrate applications using Web mining 			
Module -1			Contact Hours
INTRODUCTION: Crawling and Indexing, Topic Directories, Clustering and Classification, Hyperlink Analysis, Resource Discovery and VerticalPortals, Structured vs. Unstructured DataMining . INFRASTRUCTURE and WEB SEARCH -- Crawling the web – HTML and HTTP Basics – Crawling Basics – Engineering Large ScaleCrawlers- Putting together a Crawler- Boolean Queries and the Inverted Index – RelevanceRanking – Similarity Search. <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module -2			
INFORMATION RETRIEVAL: Information Retrieval and Text Mining - Keyword Search - Nearest-Neighbor Methods -Measuring Similarity - Web-Based Document Search - Document–Matching - Inverted Lists -Evaluation of Performance - Structure in a Document Collection - Clustering Documents by Similarity- Evaluation of Performance - Information Extraction - Patterns and Entities from Text- Co reference and Relationship Extraction - Template Filling and Database Construction <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module – 3			
LEARNING I: Similarity and Clustering – Formulations and approaches- Bottom up and Top down Partitioning Paradigms – Clustering and Visualization via Embedding’s – Probabilistic Approaches to clustering – Collaborative Filtering, SUPERVISED LEARNING: The Supervised Learning Scenario, Overview of Classification Strategies, Evaluating Text Classifiers, Nearest Neighbor Learners, Feature Selection. <div style="text-align: right;">RBT: L1, L2, L3</div>			10 Hours
Module-4			
LEARNING II : SUPERVISED LEARNING – Bayesian Learners, Exploiting Hierarchy among Topics, Maximum Entropy Learners, Discriminative Classification, Hypertext Classification, SEMI SUPERVISEDLEARNING -- Expectation Maximization, Labeling Hypertext Graphs and Co- training.			10 Hours

RBT: L1, L2, L3	
Module-5	
<p>APPLICATIONS: Social Network Analysis- Social Sciences and Bibliometry – Page Rank and HITS – Shortcomings of coarse Grained Graph model- Enhanced Models and Techniques- Evaluation of Topic Distillation- Measuring and Modeling the Web – Resource Discovery – Collecting Important Pages Preferentially – Similarity Search Using Link Topology – Topical Locality and Focused Crawling – Discovering Communities- The Future of Web Mining.</p> <p style="text-align: right;">RBT: L1, L2, L3</p>	10 Hours
Course outcomes:	
<p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> • Identify the application areas for web content mining, web structure mining and webusage mining. • Design to retrieval the web data • Develop schemes to crawl the web data, organize and index • Cluster the documents for fast access • Develop algorithms used by web mining applications. • Select between different approaches and techniques of web mining 	
Question paper pattern:	
<p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

IV Semester

Course Code	Name of the Subject	No. of Hrs./Week		Duration of the Exam in Hours	Marks for		Total Marks
		Lecture	Practical / Field Work		I.A.	Exam	
12SCS41	Evaluation of Project Phase – II	-	-	-	50	-	50
12SCS42	Evaluation of Project work – III	-	-	-	50	-	50
12SCS43	Project work evaluation and Viva-voce	-	-	3	-	100+100	200
	Total	-	-	03	100	200	300
Grand Total (I to IV Sem.) : 2400							

Note: Project work shall be continuously evaluated for phase I, phase II and after completion of the project.

Note:

- * Lab Classes for any two core subjects are compulsory (practical will be evaluated for 20 marks and internal assessment for 30 marks. Lab journals should be maintained).
 - # For the remaining two core subjects, it can be field work, assignment, tutorials.
- 1) Project Phase – I : 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalise the topic of dissertation. Evaluation of the same shall be taken up during beginning of III Semester. Total Marks shall be 50. Colleges have to send the synopsis after Phase – I.
 - 2) Project Phase – II : 16 weeks duration. 3 days for project work in a week during III Semester. Evaluation shall be taken during the first two weeks of the IV Semester. Total Marks shall be 50.
 - 3) Project Phase – III : 24 weeks duration in IV Semester. Evaluation shall be taken up during the middle of IV Semester. Total Marks shall be 50. At the end of the Semester Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be $50 + 50 + 100 = 200$ (50 marks for guide, 50 marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

- The Marks of Project Phase – I shall be sent to the University along with III Semester I.A. Marks of other subjects.
 - The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (out of two external examiners at least one should be present).

M. Tech in Computer Science and Engineering

I SEMESTER

COMPUTER NETWORKS

Subject Code: 12SCS11

Hours/Week : 04

Total Hours : 52

I.A. Marks : 50

Exam Hours: 03

Exam Marks: 100

1. Review of Basic Concepts: Building a Network; Requirements- Connectivity, Cost-Effective Resource Sharing, Support for Common Services; Network Architecture- Layering and Protocols, OSI Architecture, Internet Architecture; Performance- Bandwidth and Latency, Delay \times Bandwidth Product, High-Speed Networks.

2. Direct link networks: Hardware Building Blocks-nodes, links; error Detection- Two-Dimensional Parity, Internet checksum Algorithm, cyclic Redundancy Check; reliable Transmission- Stop-and-Wait, Sliding Window, Concurrent Logical Channels; Rings (802.5, FDDI) –Token Ring Media Access Control, Token Ring Maintenance, FDDI.

3. Packet Switching: Switching and forwarding – Datagrams, Virtual Circuit Switching, Source Routing; Bridges and LAN Switches – Learning Bridges, Spanning Tree Algorithm, Broadcast and Multicast, Limitations of Bridges; cell switching (ATM) – Cells, Segmentation and Reassembly, Virtual Paths, Physical Layers for ATM.

4. Internetworking: Simple internetworking (IP) – What Is an Internetwork?, Service Model, Global Address, Datagram Forwarding in IP, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels; Routing – Network as a Graph, distance Vector(RIP), Link State(OSPF), Metrics, Routing for Mobile Hosts, Global Internet – Subnetting, Classless Routing(CIDR), Interdomain Routing(BGP), Routing Areas, IP Version 6(IPv6).

5. End –to-End Protocols: Simple demultiplexer (UDP); Reliable byte stream (TCP) – End-to-End Issues, Segment Format, Connection Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Alternative Design Choices.

6. Congestion Control and Resource Allocation: Issues in resource allocation – Network Model, Taxonomy, Evaluation Criteria; Queuing discipline – FIFO, Fair Queuing; TCP Congestion Control – Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery; Congestion-Avoidance mechanisms – DECBIT, Random Early Detection (RED), Source-Based Congestion Control.

7. Applications: Traditional applications – Electronic Mail (SMTP, MIME, IMAP), World Wide Web (HTTP), Name Service (DNS), Network management (SNMP); Web services – Custom APPLICATION Protocols (WSDL, SOAP), A Generic application Protocol (REST).

Laboratory Work:

Using any Protocol Analyzer like Ethereal, perform the following experiments:

1. Capture the packets that are transmitted after clicking on the URL of the web site of your college. Analyze the packets at the highest level and prepare a brief report of your analysis.
2. Analyze the data captured above at lower levels and demonstrate the layering of the protocols.
3. Capture the packets in the LAN, & filter for a unique subscriber
4. Capture the ARP packets and find the MAC addresses in the LAN in your laboratory.

Using either NS228/OPNET or any other suitable simulator, perform the following experiments:

1. Simulate an Ethernet LAN using 10 node , change error rate and data rate , and compare throughput
2. Simulate a three nodes point – to – point network with duplex links between them. Set the queue size and vary the bandwidth and find the number of packets dropped.
3. Simulate the transmission of ping messages over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion.
4. Simulate an Ethernet LAN using n nodes and set multiple traffic nodes and plot congestion window for different source / destination.

Implement the following in C/C++:

1. Write a program for distance vector algorithm to find suitable path for transmission.
2. Write a program for error detecting code using CRC-CCITT (16-bit)
3. Write a program for congestion control using leaky bucket algorithm.

TEXT BOOKS:

Advances in Operating Systems

Subject Code : 12SCS12

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction, Review Operating Systems Strategies: User' perspectives, technologies and examples of Batch Systems, Timesharing Systems, Personal computer systems, Embedded systems, and small communicating computers; The genesis of modern operating systems.

2. Using the Operating Systems The programmer's abstract machine; Resources; Processes and threads; Writing concurrent programs.

3. Operating Systems Organization Basic functions; General implementation considerations; Contemporary OS kernels.

4. Design Strategies Design considerations; Monolithic kernels; Modular organization; Microkernel; Layered organizations; Operating Systems for distributed system.

5. Real World Examples Linux, Windows NT/2000/XP: Process descriptors, Thread descriptors, Thread scheduling. Linux, Windows NT/2000/XP: Kernel

6. Distributed Systems: Networking; The Need for a Protocol Architecture; The TCP/IP Sockets; Linux Networking; Client/Server Computing; Distributed Message Passing; Remote Procedure Calls; Clusters; Windows Vista Cluster Server; Linux Clusters; Distributed Process Management; Process Migration; Distributed Global States; Distributed Mutual Exclusion; Distributed Deadlock.

Laboratory Work: (The following programs can be executed on any available and suitable platform)

1. Design, develop and execute a program using any thread library to create the number of threads specified by the user; each thread independently generates a random integer as an upper limit, and then computes and prints the number of primes less than or equal to that upper limit along with that upper limit.

2. Rewrite above program such that the processes instead of threads are created and the number of child processes created is fixed as two. The program should make use of kernel timer to measure and print the real time, processor time, user space time and kernel space time for each process.

3. Design, develop and implement a process with a producer thread and a consumer thread which make use of a bounded buffer (size can be prefixed at a suitable value) for communication. Use any suitable synchronization construct.

4. Design, develop, and execute a program to solve a system of n linear equations using Successive Over-relaxation method and n processes which use Shared Memory API. 5. Design, develop, and execute a program to demonstrate the use of RPC.

3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007.

Advances in Database Management Systems

Subject Code : 12SCS13
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations.
2. Object and Object-Relational Databases: Overview of Object-Oriented Concepts – Objects, Encapsulation, Type and class hierarchies, complex objects; Object model of ODMG, Object definition Language ODL; Object Query Language OQL; Overview of C++ language binding; Conceptual design of Object database. Overview of object relational features of SQL; Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model.
3. Enhanced Data Models for Some Advanced Applications: Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts.
4. Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.
5. Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Window queries in SQL; Finding answers quickly; Implementation techniques for OLAP; Data Warehousing; Views and Decision support; View materialization; Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks.
6. More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.

Laboratory Work:

(The following tasks can be implemented on Oracle or any other suitable RDBMS with support for Object features)

1. Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.
2. Develop a database application to demonstrate the representation of multivalued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.

3. Design and develop a suitable Student Database application. One of the attributes to be maintained is the attendance of a student in each subject for which he/she has enrolled. Using TRIGGERS, write active rules to do the following:

a. Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.

b. Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.

4. Design, develop, and execute a program in a language of your choice to implement any one algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

TEXT BOOKS:

1. Elmasri and Navathe: Fundamentals of Database Systems, Pearson Education, 2007.

2. Raghuram Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2003.

REFERENCE BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan: Database System Concepts, 6th Edition, McGraw Hill, 2010.

2. Connolly and Begg: Database Systems, 4th Edition, Pearson Publications, 2005.

Computer Systems Performance Analysis

Subject Code : 12SCS14

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.

2. Workloads, Workload Selection and Characterization: Types of Work loads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, Popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.

3. Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid

monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.

4. Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote-Terminal Emulation; Components of an RTE; Limitations of RTEs.

5. Experimental Design and Analysis: Introduction: Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.

6. Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.

Text Book:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2007.

Reference Books:

1. Paul J Fortier, Howard E Michel: computer Systems Performance Evaluation and prediction, Elsevier, 2003.

2. Trivedi K S: Probability and Statistics with Reliability, Queuing and Computer Science Applications, 2nd Edition, Wiley India, 2001.

Advances in Digital Image Processing

Subject Code : 12SCS151

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: Origins of Digital Image Processing, examples, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image analysis and computer vision, spatial feature extraction, transform features, Edge detection, gradient operators, compass operators, stochastic gradients, line and spot detection.

2. Digital Image Fundamentals: Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.
3. Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods.
4. Image Enhancement in the Frequency Domain: Background, Image Enhancement in the Frequency Domain, Introduction to the Fourier Transform and the Frequency, Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering.
5. Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering.
6. Color Fundamentals: Color Models, Pseudo color Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression.
7. Image Transformation: Discrete Cosine Transforms, Walsh Hadamard Transforms, Wavelet Transforms and Multiprocessing, Background, Multiresolution Expansions, Wavelet Transforms in one Dimension, Wavelet Transforms in Two Dimensions, Wavelet Packets, an overview of Second Generation Wavelet Transforms.
8. Image and Video Compression: Fundamentals, Image Compression Models, Lossless compression Methods: Huffman coding, run length coding, LZ coding, Arithmetic coding, Lossy Compression: Gray level Run length coding, Block truncation coding, vector quantization, Differential predictive coding, Transform coding , Hybrid coding, Video Compression Techniques – Motion compensation, Search for motion vectors, H.261, H.263, MPEG I, MPEG 2, MPEG 4, MPEG 7 .
9. Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms.
10. Image Segmentation and Object Recognition: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation, Patterns and Pattern Classes, Recognition Based on Decision-Theoretic Methods, Structural Methods.

TEXT BOOKS

1. Rafael C Gonzalez and Richard E. Woods: Digital Image Processing, PHI 2nd Edition 2005
2. Scott.E.Umbaugh: Computer Vision and Image Processing, Prentice Hall, 1997

Computer Graphics and Visualization

Subject Code : 12SCS152
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction: Applications of computer graphics; A graphics system; Images: Physical and synthetic; Imaging systems; The synthetic camera model; The programmer's interface; Graphics architectures; Programmable pipelines; Performance characteristics. Graphics Programming: The Sierpinski gasket; Programming two-dimensional applications.

2. The OpenGL: The OpenGL API; Primitives and attributes; Color; Viewing; Control functions; The Gasket program; Polygons and recursion; The three-dimensional gasket; Plotting implicit functions.

3. Input and Interaction: Interaction; Input devices; Clients and servers; Display lists; Display lists and modeling; Programming event-driven input; Menus; Picking; A simple CAD program; Building interactive models; Animating interactive programs; Design of interactive programs; Logic operations.

4. Geometric Objects and Transformations: Scalars, points, and vectors; Three-dimensional primitives; Coordinate systems and frames; Modeling a colored cube; Affine transformations; Rotation, translation and scaling. Transformations in homogeneous coordinates; Concatenation of transformations; OpenGL transformation matrices; Interfaces to three-dimensional applications; Quaternions.

5. Viewing: Classical and computer viewing; Viewing with a computer; Positioning of the camera; Simple projections; Projections in OpenGL; Hidden-surface removal; Interactive mesh displays; Parallel-projection matrices; Perspective-projection matrices; Projections and shadows.

6. Lighting and Shading: Light and matter; Light sources; The Phong lighting model; Computation of vectors; Polygonal shading; Approximation of a sphere by recursive subdivisions; Light sources in OpenGL; Specification of materials in OpenGL; Shading of the sphere model; Global illumination.

7. Curves and surfaces: Representation of curves and surfaces; Design criteria; Parametric cubic polynomial curves; Interpolation; Hermite curves and surfaces; Bezier curves and surfaces; Cubic B-Splines; General B-Splines; Rendering curves and surfaces; Curves and surfaces in OpenGL.

Text Book:

1. Edward Angel: Interactive Computer Graphics A Top-Down Approach with OpenGL, 5th Edition, Pearson, 2009.

Reference Books:

1. Donald Hearn and Pauline Baker: Computer Graphics- OpenGL Version, 2nd Edition, Pearson, 2004.

2. F.S. Hill,Jr.: "Computer Graphics Using OpenGL", 2nd Edition, Pearson, 2001.

OPTICAL NETWORKS

Subject Code : 12SCS153
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Client Layers of the Optical Layer

SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, Optical Transport Network: Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service Multiprotocol Label Switching: Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

2. WDM Network Elements

Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, Reconfigurable OADMs Optical Cross connects: All-Optical OXC Configurations.

3. Control and Management

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability, Performance and Fault Management: The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. Configuration Management: Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

4. Basic Concepts

Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. Protection in the Client Layer: Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

5. WDM Network Design

Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength-Routing Networks, Statistical Dimensioning Models: First-Passage Model, Blocking Model, Maximum Load Dimensioning Models: Offline Light path Requests, Online RWA in Rings.

Text Book

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

Embedded Systems

Subject Code : 12SCS154
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Custom single-purpose processor design; RT level custom single-purpose processor design, optimizing custom single-purpose processors: Optimizing the original program, optimizing the FSM, Optimizing the data path, optimizing the FSM.
2. Timers, counters, and watchdog timers. State machine models: introduction; An introductory example, A basic state machine model: finite-state machines(FSM);finite-state machines with data path model (FSMD);using state machines: Describing a system as a state machine, Comparing state machine and sequential program models, Capturing a state machine model in a sequential programming language; hierarchical/concurrent state machine model (HCFM) and the state charts language; program state machine model(PSM);The role of an appropriate model and language.
3. Concurrent process models: concurrent processes: process create and terminate ,process suspend and resume, Process join; Communication among processes: shared memory, Message passing; synchronization among processes: Condition variables, monitors. Interrupts: interrupt Basics; The Shared Data Problem; interrupt latency
4. Survey of Software Architecture: Round Robin, Round Robin with interrupts, Function queue scheduling architecture, Real time operating system architecture, selecting architecture. Introduction to RTOS: Tasks and task states, tasks and Data, semaphores and shared data.
5. Operating systems services: Message queues, mailboxes, and pipes; Timer functions; Events; memory management, Interrupt routines in an RTOS environment. Basic design using an RTOS; Overview, principles, an example, encapsulating semaphores and queues, Hard Real-time scheduling considerations, saving power.
6. Embedded software development tools: Host and target machines; Linker/locator for Embedded software, getting embedded software into the target system. Debugging Techniques: Testing on host machine, instruction set simulators, macros and tools.
7. An example system: what the program does, environment in which the program operates.

Text Books :

1. **Embedded system design : A unified Hardware/software introduction** – Frank Vahid, Tony Givargis, John Wiley and Sons, Inc. 2002 (Articles : 2.4, 2.5, 2.6; 4.2, 8.3 to 8.13)
2. **An Embedded software Primer** – David E. Simon; Pearson Education, 1999. (Chapters: 4, 5, 6, 7, 8, 9, 10 and 11)

Reference books:

1. **Embedded C**: Michael J. Pont, Pearson Education (2002)
2. **Real-Time systems and programming languages** : Alan Burns and Andy Wellings, Addison Wesley-Longman (1997)

3. **Real Time programming : A guide to 32 bit embedded development**, Grehan, Moore and Cyliax, Addison-Wesley-longman.

II Semester

Formal Models in Computer Science

Subject Code : 12SCS21

IA Marks : 50

No of Lecture Hrs/Week : 4

Exam hours : 3

Total No of Lecture Hours : 52

Exam Marks : 100

1. Propositional Logic

Declarative sentences, Natural deduction, Propositional logic as a formal language, Semantics of propositional logic, Normal forms.

2. Predicate Logic

The need for a richer language, Predicate logic as a formal language, Proof theory of predicate logic, Semantics of predicate logic, Undecidability of predicate logic, Micromodels of software.

3. Verification by Model Checking

Motivation for verification, Linear-time temporal logic, Model checking, Branching-time logic, CTL* and the expressive powers of LTL and CTL.

4. Program Verification

Need for specifying and verifying code, A framework for software verification, Proof calculus for partial correctness and total correctness, Programming by contract.

5. Introduction to Z: Basic concepts; Z notation in Propositional logic and Predicate logic.

Laboratory Work:

1. Design, develop and run a program in ALLOY (or in any equivalent system) to model a Software Package Dependency System. Make suitable assumptions regarding the system. The model should allow checking to see if prerequisites in the form of libraries or other packages are present for all components in the system

2. Design, develop and run a program in NuSMV (or in any equivalent system) to model and solve the Mutual Exclusion problem.

3. Design, develop and run a program in NuSMV (or in any equivalent system) to model and simulate the Alternate Bit Protocol.

4. Design, develop and run a program in NuSMV (or in any equivalent system) to model and solve the planning problem of Ferry Man.

5. Design, develop and run a program in NuSMV (or in any equivalent system) to model and solve the Dining Philosophers Problem.

Text Books:

1. Michael Huth and Mark Ryan: Logic in Computer Science, 2nd Edition, Cambridge University Press, 2004.
2. Jim Woodcock , Jim Davies: Using Z Specification, Refinement and Proof, Prentice Hall, 1996.

(Online Edition: <http://www.usingz.com/text/online/>)

Advanced Algorithms

Subject Code : 12SCS22
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

2. Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching.

3. Polynomials and the FFT: Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

4. Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

5. String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

6. Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

Laboratory Work:

1. Design, develop, and run a program in any language to implement the Bellman-Ford algorithm and determine its performance.
2. Design, develop, and run a program in any language to implement Johnson's algorithm and determine its performance.
3. Design, develop, and run a program in any language to implement a Monte Carlo algorithm to test the primality of a given integer and determine its performance.
4. Design, develop, and run a program in any language to solve the string matching problem using naïve approach and the KMP algorithm and compare their performances.
5. Design, develop, and run a program in any language to solve modular linear equations.
6. Design, develop, and run a program in any language to implement the FFT algorithm efficiently.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007.

Advances in Computer Architecture

Subject Code : 12SCS23

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction and Review of Fundamentals of Computer Design: Introduction; Classes computers; Defining computer architecture; Trends in Technology; Trends in power in Integrated Circuits; Trends in cost; Dependability, Measuring, reporting and summarizing Performance; Quantitative Principles of computer design; Performance and Price-Performance; Fallacies and pitfalls; Case studies.

2. Some topics in Pipelining, Instruction –Level Parallelism, Its Exploitation and Limits on ILP: Introduction to pipelining, ILP; Crosscutting issues, fallacies, and pitfalls with respect to pipelining; Basic concepts and challenges of ILP; Case study of Pentium 4, Fallacies and pitfalls. Introduction to limits in ILP; Performance and efficiency in advanced multiple-issue processors.

3. Memory Hierarchy Design, Storage Systems: Review of basic concepts; Crosscutting issues in the design of memory hierarchies; Case study of AMD Opteron memory hierarchy; Fallacies and pitfalls in the design of memory hierarchies. Introduction to Storage Systems; Advanced topics in disk storage; Definition and examples of real faults and failures; I/O performance, reliability measures, and benchmarks; Queuing theory; Crosscutting issues; Designing and evaluating an I/O system – The Internet archive cluster; Case study of NetAA FAS6000 filer; Fallacies and pitfalls.

4. Hardware and Software for VLIW and EPIC

Introduction: Exploiting Instruction-Level Parallelism Statically, Detecting and Enhancing Loop-Level Parallelism, Scheduling and Structuring Code for Parallelism, Hardware Support for Exposing Parallelism: Predicated Instructions, Hardware Support for Compiler Speculation, The Intel IA-64 Architecture and Itanium Processor, Concluding Remarks.

5. Large-Scale Multiprocessors and Scientific Applications

Introduction, Interprocessor Communication: The Critical Performance Issue, Characteristics of Scientific Applications, Synchronization: Scaling Up, Performance of Scientific Applications on Shared-Memory Multiprocessors, Performance Measurement of Parallel Processors with Scientific Applications, Implementing Cache Coherence, The Custom Cluster Approach: Blue Gene/L, Concluding Remarks.

6. Computer Arithmetic

Introduction, Basic Techniques of Integer Arithmetic, Floating Point, Floating-Point Multiplication, Floating-Point Addition, Division and Remainder, More on Floating-Point Arithmetic, Speeding Up Integer Addition, Speeding Up Integer Multiplication and Division, Fallacies and Pitfalls.

Text Book:

1. Hennessey and Patterson: “Computer Architecture A Quantitative Approach”, 4th Edition, Elsevier, 2007.

Reference Books:

1. Kai Hwang: Advanced Computer Architecture - Parallelism, Scalability, Programmability, 2nd Edition, Tata McGraw Hill, 2010.

Cloud Computing

Subject Code : 12SCS24
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

- 1. Introduction :** Business and IT perspective, Cloud and virtualization, Cloud services requirements, cloud and dynamic infrastructure, cloud computing characteristics, cloud adoption.
- 2. Cloud models :** Cloud characteristics, Measured Service, Cloud models, security in a public cloud, public versus private clouds, cloud infrastructure self service.
- 3. Cloud at a service :** Gamut of cloud solutions, principal technologies, cloud strategy, cloud design and implementation using SOA, Conceptual cloud model, cloud service demand.
- 4. Cloud solutions :** Cloud ecosystem, cloud business process management, cloud service management, cloud stack, computing on demand, cloud sourcing.
- 5. Cloud offerings :** Cloud analytics, Testing under cloud, information security, virtual desktop infrastructure, Storage cloud.
- 6. Cloud management :** Resiliency, Provisioning, Asset management, cloud governance, high availability and disaster recovery, charging models, usage reporting, billing and metering.
- 7. Cloud virtualization technology :** Virtualization defined, virtualization benefits, server virtualization, virtualization for x86 architecture, Hypervisor management software, Logical partitioning, VIO server, Virtual infrastructure requirements. Storage virtualization, storage area networks, network attached storage, cloud server virtualization, virtualized data center.
- 8. Cloud and SOA :** SOA journey to infrastructure, SOA and cloud, SOA defined, SOA defined, SOA and IAAS, SOA based cloud infrastructure steps, SOA business and IT services.

TEXT BOOKS:

PROTOCOLS ENGINEERING

Subject Code: 12SCS253

Hours/Week : 04

Total Hours : 52

I.A. Marks : 50

Exam Hours: 03

Exam Marks: 100

1. Introduction: Communication model, Communication Software, Communication Subsystems, Communication Protocol Definition/Representation, Formal and Informal Protocol Development Methods, Protocol Engineering Phases
2. Error Control, Flow Control: Type of Transmission Errors, Linear Block Code, Cyclic Redundancy Checks, Introduction to Flow Control, Window Protocols, Sequence Numbers, Negative Acknowledgments, Congestion Avoidance
3. Network Reference Model: Layered Architecture, Network Services and Interfaces, Protocol Functions: Encapsulation, Segmentation, Reassembly, Multiplexing, Addressing, OSI Model Layer Functions, TCP/IP Protocol Suite, Application Protocols.
4. Protocol Specification: Components of specification, Service specification, Communication Service Specification Protocol entity specification: Sender, Receiver and Channel specification, Interface specifications, Interactions, Multimedia specifications, Alternating Bit Protocol Specification, RSVP specification.
5. Protocol Specification Language (SDL): Salient Features. Communication System Description using SDL, Structure of SDL. Data types and communication paths, Examples of SDL based Protocol Specifications: Question and answer protocol, X-on-X-off protocol, Alternating bit protocol, Sliding window protocol specification, TCP protocol specification, SDL based platform for network, OSPF, BGP Multi Protocol Label Switching SDL components.
6. Protocol Verification / Validation: Protocol Verification using FSM, ABP Verification, Protocol Design Errors, Deadlocks, Unspecified Reception, Non-executable Interactions, State Ambiguities, Protocol Validation Approaches: Perturbation Technique, Reachability Analysis, Fair Reachability Graphs, Process Algebra based Validation, SDL Based Protocol Verification: ABP Verification, Liveness Properties, SDL Based Protocol Validation: ABP Validation.
7. Protocol Conformance and Performance Testing: Conformance Testing Methodology and Framework, Local and Distributed Conformance Test Architectures, Test Sequence Generation Methods: T, U, D and W methods, Distributed Architecture by Local Methods, Synchronizable Test Sequence, Conformance testing with Tree and Tabular Combined Notation (TTCN), Conformance Testing of RIP, Testing

Multimedia Systems, quality of service test architecture(QoS), Performance Test methods, SDL Based Performance Testing of TCP, OSPF, Interoperability testing, Scalability testing protocol synthesis problem

8. Protocol Synthesis and Implementation: Synthesis methods, Interactive Synthesis Algorithm, Automatic Synthesis Algorithm, Automatic Synthesis of SDL from MSC, Protocol Re-synthesis, Requirements of Protocol Implementation, Objects Based Approach To Protocol Implementation, Protocol Compilers, Code generation from Estelle, LOTOS, SDL and CVOPS.

TEXT BOOKS:

1. Pallapa Venkataram and Sunilkumar S. Manvi: Communication Protocol Engineering, PHI, 2004.

REFERENCE BOOKS:

1. Mohammed G. Gouda: Elements of Protocol Design, Wiley Student Edition, 2004.

Semester 3

Information Security

Subject Code : 12SCS31
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Information Security: Introduction; What is security? Critical characteristics of information; NSTISSC security model; Approaches to information security implementation; The Security System Development Life Cycle; Information Security Terminology.
2. Planning for Security: Introduction; Information Security Policy, Standards, and Practices; The Information Security Blue Print.
3. Security Technology: Firewalls and VPNs: Introduction, Physical design, Firewalls, Protecting Remote Connections. Intrusion Detection, Access control and Other Security Tools: Introduction; Intrusion Detection Systems (IDS); Honey Pots, Honey Nets, and Padded cell systems; Scanning and Analysis Tools; Access Control Devices.
4. Information Security maintenance: Introduction; Security Management Models; The Maintenance Model.
5. Introduction to Network Security: Attacks, Services, and Mechanisms; Security Attacks; Security Services; A model for Internetwork Security; Internet Standards and RFCs; Wireless network security.
6. Cryptography: Conventional Encryption Principles and Algorithms; Cipher Block Modes of Operation; Location of encryption devices; Key distribution; Approaches to message authentication; Secure Hash functions and HMAC; Public Key Cryptography Principles and Algorithms; Digital Signatures; Key management.
7. Authentication Applications: Kerberos, X.509 Directory Authentication Service.
8. Electronic Mail Security: Pretty Good Privacy (PGP), S/MIME.
9. IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management.
10. Web Security: Web security requirements, Secure Socket layer (SSL) and Transport layer Security (TLS), Secure Electronic Transaction (SET).
11. Software: Introduction; Software flaws; Malware; Software-based attacks; Digital Rights Management;

TEXT BOOKS:

1. Michael E. Whitman and Herbert J. Mattord: Principles of Information Security, 2nd Edition, Cengage Learning, 2005.
2. William Stallings: Network Security Essentials Applications and Standards, Person, 2000.
3. Deven N. Shah: Information Security – Principles and Practice, Wiley India, 2009.

REFERENCE BOOKS:

1. Behrouz A. Forouzan: Cryptography and Network Security, Tata McGraw-Hill, 2007.

Wireless and Cellular Networks

Subject Code : 12SCS321
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Wireless Communication Systems: Evolution of Mobile Radio Communications Mobil Radio Systems around the world examples of Wireless Communication Systems, Paging System, Cordless Telephone System. Cellular Telephone Systems, Comparison of Common Wireless Communications Systems.
2. Modern Wireless Communications Systems: Second generation (2G), Cellular Networks, evolution of 2.5G, TDMA Standards, Third Generation (3G) Wireless Networks, Wireless Local Loop (WLL) and LMDS, Wireless Local Area Networks (WLANs), Bluetooth and Personal Area Networks (PANS)
3. The Cellular Concept: System Design Fundamentals, Introduction, Frequency reuse, channel assignment strategies, handoff strategies – prioritizing handoffs, Practical Handoff considerations. Interference and system capacity, co-channel interference and system capacity, channel planning for wireless systems, adjacent channel interference, power control for reducing interference.
4. Mobile Radio Propagation: Introduction to radio wave propagation, Free space propagation model, Relating power to electric field, Reflection, Diffraction, Scattering.
5. Modulation Techniques for Mobile Radio: Frequency modulation Vs amplitude modulation, Amplitude modulation, Angle modulation, Digital Modulation, Linear Modulation techniques – Binary phases shift keying (BPSK), Differential Phase Shift Keying (DPSK), Quadrature Phase Shift Keying (QPSK), Constant envelope modulation – Binary Frequency Shift Keying, Minimum Shift Keying (MSK), Gaussian Minimum Shift Keying (GMSK).
6. Multiple Access Techniques for Wireless Communications: Introduction to Multiple access, Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Spread Spectrum Multiple Access, Space Division Multiple Access (SDMA), Packet Radio. Protocols,

Reservation Protocols – Reservation ALOHA, Packet Reservation Multiple Access (PRMA), Capacity of cellular systems.

7. Wireless Networking: Introduction, Difference between Wireless and Fixed Telephone Networks, Development of Wireless Networks, First generation, second generation, third generation.

TEXT BOOKS:

1. Theodore S Rappaport: Wireless Communications, Principles and Practice, 2nd Edition, Pearson Education Asia, 2002.

REFERENCE BOOKS:

2. William Stallings: Wireless Communications and Networks, Pearson Education Asia, 2002.

Storage Area Networks

Subject Code : 12SCS322

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access.

2. Intelligent Disk Subsystems: Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

3. I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre

Channel Protocol Stack; Fibre Channel SAN; IP Storage.

4. Network Attached Storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system.

5. File System and NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

6. Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

7. SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective.

8. Software Components of SAN: The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

9. Management: Planning Business Continuity; Managing availability; Managing Serviceability; Capacity planning; Security considerations.

Text Book:

1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2007.

Reference Books:

1. Marc Farley: Storage Networking Fundamentals – A n Introduction to Storage Devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005.

Advances in Pattern Classification

Subject Code : 12SCS323

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: Polynomial Curve Fitting, Probability Theory, Probability Distributions, Model Selection, Decision Theory, Information Theory

2. Linear Models for Regression: Linear Basis Function Models, The Bias Variance Decomposition, Bayesian Linear Regression, Bayesian Model Comparison, The Evidence Approximation, Limitations of Fixed Basis Functions

3. Linear Models for Classification: Discriminant Functions, Probabilistic Generative Models, Probabilistic Discriminative Models, The Laplace Approximation, Bayesian Logistic Regression

4. Kernel Methods: Dual Representations, Constructing Kernels, RBF Networks, Gaussian Processes, Sparse Kernel Machines: SVMs, Multiclass SVMs, Relevance Vector Machines

5. Unsupervised Learning: Introduction, Association Rules, Cluster Analysis, Self-Organizing Maps, Principal Components, Curves and Surfaces, Non-negative Matrix Factorization, Independent Component Analysis and Exploratory Projection Pursuit, Multidimensional Scaling, Nonlinear Dimension Reduction and Local Multidimensional Scaling, The Google PageRank Algorithm

6. Mixture Models and EM: Mixtures of Gaussians, An alternative view of EM, The EM Algorithm in general.

7. High-Dimensional Problems: The Curse of Dimensionality, Diagonal Linear Discriminant Analysis and Nearest Shrunken Centroids, Linear Classifiers with Quadratic Regularization, Linear Classifiers with L1 Regularization, Classification when Features are Unavailable, High-Dimensional Regression: Supervised Principal Components, Feature Assessment and the Multiple-Testing Problem.

Text Books:

1. Christopher M Bishop: Pattern Recognition and Machine Learning, Springer, 2006.
2. Trevor Hastie, Robert Tibshirani, and Jerome Friedman: The Elements of Statistical Learning, Springer, 2008.

Reference Books:

1. R. O. Duda, P. E. Hart, and D. G. Stork: Pattern Classification by 2nd edition, Wiley –Interscience , 2001.
2. Sergios Theodoridis and Konstantinos Koutroumbas: Pattern Recognition, 2nd Edition, Elsevier, 2003.

MULTI-CORE ARCHITECTURE & PROGRAMMING

Subject Code : 12SCS324
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Multi-core Architecture

Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law.

2. System Overview of Threading

Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

3. Fundamental Concepts of Parallel Programming

Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

4. Threading and Parallel Programming Constructs

Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features.

5. Threading APIs

Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft. NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

6. OpenMP: A Portable Solution for Threading

Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

7. Solutions to Common Parallel Programming Problems

Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

Analysis of Computer Networks

Subject Code : 12SCS331
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; The importance of quantitative modeling in the Engineering of Telecommunication Networks.

2. Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

3. Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

3. Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

4. Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; Sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

TEXT BOOKS:

1. Anurag Kumar, D. Manjunath, Joy Kuri: Communication Networking An Analytical Approach, Elsevier, 2004.

REFERENCE BOOKS:

2. J. Walrand, P. Varaiya: High Performance Communication Networks, 2nd Edition, Morgan Kaufmann, 1999.

Data Mining & Warehousing

Subject Code : 12SCS332

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. INTRODUCTION:

What is a Data Warehouse?, A Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Data cube Technology, From Data warehousing to Data Mining, Data Mining Functionalities, Data cleaning, Data Integration and Transformation, Data Reduction.

12 HOURS.

2. DATA MINING PRIMITIVES, LANGUAGES AND SYSTEM ARCHITECTURES: Data Mining primitives, Presentation and Visualization of Discovered patterns, A Data Mining Query Language.

07 HOURS.

3 MINING ASSOCIATION RULES IN LARGE DATA BASES: Association Rule Mining Single – Dimensional Boolean Association Rules From Transactional Databases, Mining Multilevel Association Rules from Transactional Databases. 07 HOURS.

4 CLASSIFICATION AND PREDICTION: Issues regarding Classification and Prediction, classification by Decision tree induction, Bayesian classification, Classification by back propagation, Classification Based on the concepts from association rule mining. Other classification methods, prediction.

08 HOURS.

5 CLUSTER ANALYSIS: What is Cluster Analysis? Types of data in cluster Analysis: a Categorization of Major Clustering Methods, Partitioning Methods, Hierarchical methods, Density-Based Methods, Model-Based Clustering Methods: Statistical Approach, Neural Network Approach Outliner Analysis.

12 HOURS.

6 APPLICATIONS AND TRENDS IN DATA MINING: Data mining application, Data mining system Products research Prototypes, Additional Themes on Data Mining, Data Mining and Intelligent Query Answering, Trends in Data Mining. 06 HOURS.

Text Books:

1. Jiawei Michelin Kamber, "Data Mining Concepts and Techniques", Morgan Kauf Mann Publishers.

Advances in VLSI Design and Algorithms

Subject Code : 12SCS333
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Digital systems and VLSI: Why Design Integrated Circuits? Integrated Circuits manufacturing;

Integrated Circuit Design Techniques; IP-Based Design.

2. Fabrication and Devices: Introduction; Fabrication processes; Fabrication theory and practice; Reliability.

3. Sequential Machines: Introduction; Latches and Flip-flops; Sequential systems and clocking disciplines; Performance analysis; Clock generators; Sequential systems design, Power optimization, Design validation, Sequential testing.

4. Subsystem Design: Introduction; Combinational shifters; Adders; ALUs; Multipliers; High-density memory; Image sensors; FPGAs; PLA; Buses and networks on chips; Data paths; Subsystems as IP.

5. Architecture Design: Introduction; Hardware description languages; Register Transfer design; Pipelining; High-level synthesis; Architecture for low power; GALS systems; Architecture testing; IP components; Design methodologies; Multiprocessor system-on-Chip design.

6. Simulations: General remarks; Gate-level modeling and simulations; Switch-level modeling and simulation.

TEXT BOOKS:

1. Wayne Wolf: "Modern VLSI design", 3rd edition, Pearson Education, 2007.
2. Sabih H Gerez: "Algorithms for VLSI Design Automation", Wiley India, 2007,

Elective – III

14SCS423 Agile Technologies

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or Technical paper.

1).Project Phase – I: 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase = III: Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be 50+50+100=200 (50 Marks for Internal Guide,50 Marks for External and 100 for Viva-Voce).

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Semester: I

Year: 2014-2015

Course Title: Advances In Operating Systems	Course Code: 14SCS11
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To learn the fundamentals of Operating Systems
- To gain knowledge on Distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols
- To gain insight on to the distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols
- To know the components and management aspects of Real time, Mobile operating Systems.

TOPICS:

MODULE I

Operating System Overview, Process description & control

Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Microsoft Windows Overview, Traditional UNIX Systems, Modern UNIX Systems, Linux, What is a Process?, Process States, Process Description, Process Control, Execution of the Operating System, Security Issues, UNIX SVR4 Process Management.

10 Hours

Module II

Threads, SMP, and Microkernel, Virtual Memory.

Processes and Threads, Symmetric Multiprocessing (SMP), Microkernels, Windows Vista Thread and SMP Management, Solaris Thread and SMP Management, Linux Process and Thread Management. Hardware and Control Structures, Operating System Software, UNIX and Solaris Memory Management, Linux Memory Management, Windows Vista Memory Management, Summary.

10 Hours

Module III

Multiprocessor and Real-Time Scheduling

Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, UNIX PreclsSl) Scheduling, Windows Vista Scheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock.

10 Hours

Module IV

Embedded Operating Systems

Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits.

10 Hours

MODULEV

Kernel Organization

Using Kernel Services, Daemons, Starting the Kernel , Control in the Machine , Modules and Device Management, MODULEOrganization, MODULEInstallation and Removal, Process and Resource Management, Running Process

Manager, Creating a new Task , IPC and Synchronization, The Scheduler , Memory Manager , The Virtual Address Space, The Page Fault Handler , File Management.

The windows NT/2000/XP kernel: Introduction, The NT kernel, Objects , Threads, Multiplication Synchronization, Traps, Interrupts and Exceptions, The NT executive , Object Manager, Process and Thread Manager , Virtual Memory Manager, I/o Manager, The cache Manager , Kernel local procedure calls and IPC, The native API, subsystems.

10 Hours

Course Outcomes:

The students should be able to:

- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system
- Learn the various resource management techniques for distributed systems
- Identify the different features of real time and mobile operating systems
- Modify existing open source kernels in terms of functionality or features used.

Text Books:

1. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013.
2. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.

Reference Books:

1. Silberschatz, Galvin, Gagne: Operating System Concepts, 8th Edition, Wiley, 2008
2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006.
3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007

Semester: I

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCS12
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.

Topics:

Module I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

Module II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

Module III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

Module IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

Module V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

LAB EXPERIMENTS

NOTE: Simulate using object oriented programming, any available cloud environment (**Eg; Amazon cloud**) and **VM ware for resource virtualization.**

1. Create a Collaborative learning environment for a particular learning topic using Google Apps. Google Drive, Google Docs and Google Slides must be used for hosting e-books, important articles and presentations respectively. The instructor must use the Google Sheets to convey the timetable for different events and for analyzing the scores for individual assignment submission.

2. Modeling and simulation Cloud computing environments, including Data Centers, Hosts and Cloudlets and perform VM provisioning using CloudSim: Design a host with two CPU cores, which receives request for hosting two VMs, such that each one requires two cores and plans to host four tasks units. More specifically, tasks t1, t2, t3 and t4 to be hosted in VM1, while t5, t6, t7, and t8 to be hosted in VM2. Implement space-shared allocation policy and time-shared allocation policy. Compare the results.

3. Model a Cloud computing environment having Data center that had 100 hosts. The hosts are to be modeled to have a CPU core (1000 MIPS), 2 GB of RAM and 1 TB of storage. Consider the workload model for this evaluation included provisioning requests for 400 VMs, with each request demanding 1 CPU core (250 MIPS), 256 MB of RAM and 1 GB of storage. Each VM hosts a *web-hosting application service*, whose CPU utilization distribution was generated according to the uniform distribution. Each instance of a webhosting service required 150,000 MIPS or about 10 minutes to complete execution assuming 100% utilization. Simulate Energy-conscious model for power consumption and power management techniques such as Dynamic Voltage and Frequency Scaling (DVFS). Initially, VMs are to be allocated according to requested parameters (4 VMs on each host). The Cloud computing architecture that is to be considered for studying energy conscious resource management techniques/policies included a data center, CloudCoordinator, and Sensor component. The CloudCoordinator and Sensor perform their usual roles. Via the attached Sensors (which are connected with every host), CloudCoordinator must periodically monitor the performance status of active VMs such as load conditions, and processing share. This real time information is to be passed to VMM, which can use it for performing appropriate resizing of VMs and application of DVFS and soft scaling. CloudCoordinator continuously has to adapt allocation of VMs by issuing VM migration commands and changing power states of nodes according to its policy and current utilization of resources.

4. Model and simulate the environment consisting of a data center with 10,000 hosts where each host was modeled to have a single CPU core (1200MIPS), 4GB of RAM memory and 2TB of storage. Consider the provisioning policy for VMs as space-shared, which allows one VM to be active in a host at a given instance of time. Make a request from the end-user (through the Datacenter Broker) for creation and instantiation of 50 VMs that had following constraints: 1024MB of physical memory, 1 CPU core and 1GB of storage. The application granularity was modeled to be composed of 300 task units, with each task unit requiring 1,440,000 million instructions (20 minutes in the simulated hosts) to be executed on a host. Minimal data transfer (300 KB) overhead can be considered for the task units (to and from the data center). After the creation of VMs, task units were submitted in small groups of 50 (one for each VM) at inter-arrival delay of 10 minutes.

5. Implement Map Reduce concept for

a. Strassen's Matrix Multiplication for a huge matrix.

b. Computing the average number of citation index a researcher has according to age among some 1 billion journal articles. Consider a network of entities and relationships between them. It is required to calculate a state of each entity on

the basis of properties of the other entities in its neighborhood. This state can represent a distance to other nodes, indication that there is a neighbor

with the certain properties, characteristic of neighborhood density and so on. A network is stored as a set of nodes and each node contains a list of adjacent node IDs. Mapper emits messages for each node using ID of the adjacent node as a key. Reducer must re compute state and rewrite node with the new state. Implement this scenario.

Course Outcomes:

The students should be able to:

- Demonstrate and experiment simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.
- Familiarize with Open Stack.

Text Book:

2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Course Title: Advances in Database Management Systems	Course Code: 14SCS13
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To acquire knowledge on parallel and distributed databases and its applications.
- To study the usage and applications of Object Oriented database
- To understand the basic concepts, principles of intelligent databases.
- To understand the advanced topics of data warehousing and mining .
- To learn emerging and advanced data models
- To acquire inquisitive attitude towards research topics in databases.

Topics:**MODULE I**

Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations.

Overview of Object-Oriented Concepts – Objects, Encapsulation, Polymorphism, Type and class hierarchies etc.

10 Hours

Module II

Object and Object-Relational Databases: Object Oriented Concepts: – Objects, complex objects; Object model of ODMG, Object definition language, ODL, Object Query Language, OQL, Overview of C++ language binding; Conceptual design of Object database. Overview of object relational features of: SQL, Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model.

10 Hours

Module III

Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.

10 Hours

Module IV

Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Window queries in SQL; Finding answers quickly; Implementation techniques for OLAP; Data Warehousing; Views and Decision support, View materialization, Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks.

10 Hours

Module V

Enhanced Data Models for Some Advanced Applications: Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts. More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.

10 Hours

LABORATORY WORK:

(The following tasks can be implemented on Oracle or any other suitable RDBMS with support for Object features)

1. Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.
2. Develop a database application to demonstrate the representation of multivalued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.
3. Design and develop a suitable Student Database application. One of the attributes to be maintained is the attendance of a student in each subject for which he/she has enrolled. Using TRIGGERS, write active rules to do the following:
 - a. Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.
 - b. Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.
4. Design, develop, and execute a program in a language of your choice to implement any one algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

- Select the appropriate high performance database like parallel and distributed database
- Model and represent the real world data using object oriented database
- Embed the rule set in the database to implement data warehousing of mining
- Choose and design database for recent applications database for better interoperability

TEXT BOOKS:

2. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2013.

REFERENCE BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan: Database System Concepts, 6th Edition, McGraw Hill, 2010.

Course Title: Multi-Core Architecture and Programming	Course Code: 14SCS14
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To appreciate the need for parallel processing
- To expose the students to the problems related to multiprocessing
- To understand the different types of multicore architectures
- To understand the concepts of multi threading and OPENMP.

Topics:**MODULE I**

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization. **10 Hours**

Module II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours**MODULE III**

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours**MODULE IV**

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared

Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

Course Outcomes:

The students should be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Solve the issues related to multiprocessing and suggest solutions.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

Semester: I

Year: 2014-2015

Course Title: Advances in Digital Image Processing	Course Code: 14SCS151
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To understand the image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- To understand the image segmentation and representation techniques.
- To understand how image are analyzed to extract features of interest.
- To introduce the concepts of image registration and image fusion.
- To analyze the constraints in image processing when dealing with 3D data sets.

Topics:

MODULE I

Introduction: What is Digital Image Processing, Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System. **Digital Image Fundamentals:** Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Spatial and Gray-level Resolution, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.

10 Hours

MODULE II

Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods. **Image Enhancement in the Frequency Domain:** Introduction to the Fourier Transform and the Frequency Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency-Domain Filters, Homomorphic Filtering.

10 Hours

MODULE III

Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering, Constrained Least Square Filtering, Geometric Mean Filter.

10 Hours

MODULE IV

Color Fundamentals: Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression. **Wavelets and Multiresolution Processing:** Image Pyramids, Subband coding, The Haar Transform, Multiresolution Expansions, Wavelet Transforms in one Dimension, Fast Wavelet Transform, Wavelet Transforms in Two Dimensions, Wavelet Packets. **Image Compression:** Fundamentals, Image Compression Models, Error-free (Lossless) compression, Lossy Compression.

10 Hours

MODULE V:

Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. **Image Segmentation:** Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation.

10 Hours

Course Outcomes:

The students will be able to:

- Understand image formation and the role human visual system plays in perception of gray and color image data.
- Apply image processing techniques in both the spatial and frequency (Fourier) domains.
- Design image analysis techniques in the form of image segmentation and to evaluate the Methodologies for segmentation.
- Conduct independent study and analysis of feature extraction techniques.
- Understand the concepts of image registration and image fusion.
- Analyze the constraints in image processing when dealing with 3D data sets and to apply image
- Apply algorithms in practical applications.

Semester: I

Year: 2014-2015

Course Title: Advances in Storage Area Networks	Course Code: 14SCS152
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre's maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems

Topics:

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

10 Hours

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

10 Hours

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management,

Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

The students should be able to:

- Identify the need for performance evaluation and the metrics used for it
- Apply the techniques used for data maintenance.
- Realize storage virtualization concept,
- Develop techniques for evaluating policies for LUN masking, file systems.

Course Title: Embedded Computing Systems	Course Code: 14SCS153
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COUR
SE**OBJECTIVES**

- Provide a general overview of Embedded Systems
- Show current statistics of Embedded Systems
- Design a complete microprocessor-based hardware system
- Design, code, compile, and test real-time software
- Integrate a fully functional system including hardware and software
- Gain the ability to make intelligent choices between hardware/software tradeoffs.

Topics:**MODULE I**

Introduction to embedded systems: Embedded systems, Processor embedded into a system, Embedded hardware units and device in a system, Embedded software in a system, Examples of embedded systems, Design process in embedded system, Formalization of system design, Design process and design examples, Classification of embedded systems, skills required for an embedded system designer.

7 Hours**MODULE II**

Devices and communication buses for devices network :IO types and example, Serial communication devices, Parallel device ports, Sophisticated interfacing features in device ports, Wireless devices, Timer and counting devices, Watchdog timer, Real time clock, Networked embedded systems, Serial bus communication protocols, Parallel bus device protocols-parallel communication internet using ISA, PCI, PCI-X and advanced buses, Internet enabled systems-network protocols, Wireless and mobile system protocols.

13 Hours**MODULE III**

Device drivers and interrupts and service mechanism: Programming-I/O busy-wait approach without interrupt service mechanism, ISR concept, Interrupt sources, Interrupt servicing (Handling) Mechanism, Multiple interrupts, Context and the periods for context switching, interrupt latency and deadline, Classification of processors interrupt service mechanism from Context-saving angle, Direct memory access, Device driver programming.

10 Hours**MODULE IV**

Interprocesses communication and synchronization of processes, Threads and tasks: Multiple process in an application, Multiple threads in an application, Tasks, Task states, Task and Data, Clear-cut distinction between functions. ISRS and tasks by their characteristics, concept and semaphores, Shared data, Inter-process communication, Signal function, Semaphore functions, Message Queue functions, Mailbox functions, Pipe functions, Socket functions, RPC functions.

10 Hours**MODULE V**

Real-time operating systems: OS Services, Process management, Timer functions, Event functions, Memory management, Device, file and IO subsystems management, Interrupt routines in RTOS environment and handling of interrupt source calls, Real-time operating systems, Basic design using an RTOS, RTOS task scheduling models, interrupt latency and response of the tasks as performance metrics, OS security issues. **Introduction to embedded**

software development process and tools, Host and target machines, Linking and location software.

10 Hours

Course Outcomes:

The students should be able to:

- Knowledge to distinguish the characteristics of embedded computer systems.
- Ability examines the various vulnerabilities of embedded computer systems.
- Ability to design embedded systems.
- Awareness of the changing landscape in embedded systems

Text Books:

1. **Raj Kamal**, “Embedded Systems: Architecture, Programming, and Design” 2nd edition , Tata McGraw hill-2013

Chapters: Chapter 1.1 to 1.5, 1.8 to 1.12, Chapter 3, 4, 7, 8 and 13.1 to 13.3.

References:

2. **Marilyn Wolf** ,“Computer as Components, Principles of Embedded Computing System Design” 3rd edition , Elsevier-2014 .

Course Title: Advances in Computer Graphics	Course Code: 14SCS154
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- Learn basic and fundamental computer graphics techniques.
- Learn image synthesis techniques;
- Examine applications of modeling, design and visualization.
- Learn different color modeling and computer animation
- Learn hierarchical modeling and graphing file formats.

Topics:**MODULE I**

Three-Dimensional Object Representations: Polyhedra, OpenGL Polyhedron Functions, Curved Surfaces, Quadric Surfaces, Super quadrics, OpenGL Quadric-Surface and Cubic-Surface Functions, Blobby Objects, Spline Representations, Cubic-Spline Interpolation Methods, Bezier Spline Curves, Bazier Surfaces B-Spline Curves, B-Spline Surfaces, Beta- Splines, Retional Splines, Conversion Between Spline Representations, Displaying Spline Curves and rfaces, OpenGL Approximation-Spline Functions, Sweep Representations, Constructive Solid –Geometry Method, Octrees, BSP Trees, Fractal-Geometry Methods, Shape Grammars and Others Procedural Methods, Particle Systems, Physically Based Modeling, Visualization Of Data Sets.

10 Hours**MODULE II**

Visible-Surface Detection Methods: Classification Of Visible –Surface Detection Algorithms, Back-Face Method, Depth-Buffer Method, A-Buffer Method, Scan-Line Method, BSP-Tree Method, Area-Subdivision Method, Octree Methods, Ray-Casting Method, Comparison of Visibility –Detection Methods, Curved Surfaces, Wire-Frame Visibility –Detection Functions.

10 Hours**MODULE III**

Illumination Models and Surface- Rendering Methods: Light Sources, Surface Lighting Effects, Basic Illumination Models, Transparent Surfaces, Atmospheric Effects, Shadows, Camera parameters, Displaying light intensities, Halftone patterns and dithering techniques, polygon rendering methods, ray-tracing methods, Radiosity lighting model, Environment mapping, Photon mapping, Adding surface details, Modeling surface details with polygons, Texture mapping, Bump mapping, OpenGL Illumination and surface-rendering functions, openGL texture functions.

10 Hours**MODULE IV**

Color models, color applications and Computer animation: Properties of light, Color models, Standard primaries and the chromaticity diagram, The RGB color model, The YIQ and related color models, The CMY and CMYK color models, The HSV color model, The HLS color model, Color Selection and applications. Raster methods for computer animation, Design of animations sequences, Traditional animation techniques,

General computer-animation functions, Computer-animation languages, Key-frame systems, Motion specification, Articulated figure animation, Periodic motions, OpenGL animation procedures.

10 Hours

MODULE V

Hierarchical modeling and Graphics file formats: Basic modeling concepts, Modeling packages, General hierarchical modeling methods, Hierarchical modeling using OpenGL display list, Image-File configurations, Color-reduction methods, File-compression techniques, Composition of the major file formats.

10 Hours

COURSE OUTCOMES:

The students are able to :

- Represent and implement images and objects using 3D representation and OpenGL methodologies.
- Design develop surface detection using various detection methods
- Choose various illumination models for provides effective standards of objects.
- Design of develop effective computer animations.

Text Books:

1. Computer Graphics with OpenGL-Hearn Baker 4rd edition, Pearson publication.2010 (Chapter 8,9,10.12.13.14,15)
2. James D Foley,Andries van dam,Steven K Feiner,John F Hughes, Computer graphics, Pearson Education 3rd edition, 2013

Reference Books:

1. Edward Angel: Interactive Computer graphics a top-down approach with OpenGL, Addison Wesley, 6th edition 2012
2. Advanced graphics programming using OpenGL: TomMcReynolds-David Blythe. Elesvier.MK, 2005

Semester: I

Year: 2014-2015

Course Title: Advances in Operating Systems Laboratory	Course Code: 14SCS16
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES:

- To implement the shell of Operating System.
- To implement distributed operating system concepts.
- To implement virus detection techniques.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/ any equivalent language or tool with suitable platform.

1. Design and Develop a shell that should support at least 20 commands.
2. Design and develop a program to implement lazy buddy system algorithm.
3. Write a multi-class multithreaded program that simulates multiple sleeping barbers, all in one barbershop that has a finite number of chairs in the waiting room. Each customer is instantiated from a single customer class; each barber is instantiated from a single Barber class.
4. Use ECOS operating system to develop a program for controlling accessing to a pool of resources using mutexes and condition variables.
5. Design and develop a program to realize the virus classification, such as boot sector infector, file infector and macro virus.

Course Outcomes:

The students should be able to:

- Demonstrate the shell.
- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system.
- Understand the various virus detection techniques.

Course Title: Managing Big Data	Course Code: 14SCS21
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To Understand big data for business intelligence
- To Learn business case studies for big data analytics
- To Understand Nosql big data management
- To manage Big data without SQL
- To understanding map-reduce analytics using Hadoop and related tools

TOPICS:**MODULE I**

UNDERSTANDING BIG DATA 10 Hours What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics

MODULE II

NOSQL DATA MANAGEMENT 10 Hours Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schemaless databases – materialized views – distribution models – sharding – version – MapReduce – partitioning and combining – composing map-reduce calculations

MODULE III**BASICS OF HADOOP****10 Hours**

Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures

MODULE IV

MAPREDUCE APPLICATIONS 10 Hours MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats

MODULE V

HADOOP RELATED TOOLS 10 Hours Hbase – data model and implementations – Hbase clients – Hbase examples – praxis. Cassandra – Cassandra data model – cassandra examples – cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

LAB Experiments**Exercise 1 --- HDFS**

Start by reviewing HDFS. You will find that its composition is similar to your local Linux file system. You will use the `hadoop fs` command when interacting with HDFS.

1. Review the commands available for the Hadoop Distributed File System:
2. Copy file `foo.txt` from local disk to the user's directory in HDFS
3. Get a directory listing of the user's home directory in HDFS
4. Get a directory listing of the HDFS root directory
5. Display the contents of the HDFS file `user/fred/bar.txt`
6. Move that file to the local disk, named as `baz.txt`
7. Create a directory called `input` under the user's home directory
8. Delete the directory `input` and all its contents
9. Verify the copy by listing the directory contents in HDFS:

Exercise 2 --- MapReduce

1. Create a JOB and submit to cluster
2. Track the job information
3. Terminate the job
4. Counters in MR Jobs with example
5. Map only Jobs and generic map examples
6. Distributed cache example
7. Combiners, Secondary sorting and Job chain examples

Exercise 3 --- MapReduce (Programs)

Using movie lens data

1. List all the movies and the number of ratings
2. List all the users and the number of ratings they have done for a movie
3. List all the Movie IDs which have been rated (Movie Id with at least one user rating it)
4. List all the Users who have rated the movies (Users who have rated at least one movie)
5. List of all the User with the max, min, average ratings they have given against any movie
6. List all the Movies with the max, min, average ratings given by any user

Exercise4 – Extract facts using Hive

Hive allows for the manipulation of data in HDFS using a variant of SQL. This makes it excellent for transforming and consolidating data for load into a relational database. In this exercise you will use HiveQL to filter and aggregate click data to build facts about user's movie preferences. The query results will be saved in a staging table used to populate the Oracle Database.

The `moveapp_log_json` table contains an activity column. Activity states are as follows:

1. RATE_MOVIE
2. COMPLETED_MOVIE
3. PAUSE_MOVIE
4. START_MOVIE
5. BROWSE_MOVIE
6. LIST_MOVIE
7. SEARCH_MOVIE
8. LOGIN
9. LOGOUT
10. INCOMPLETE_MOVIE

```
hive> SELECT * FROM movieapp_log_json LIMIT 5;
hive> drop table movieapp_log_json;
hive> CREATE EXTERNAL TABLE movieapp_log_json (
custId INT,
movieId INT,
genreId INT,
time STRING,
recommended STRING,
activity INT,
rating INT,
price FLOAT
)
ROW FORMAT SERDE 'org.apache.hadoop.hive.contrib.serde2.JsonSerde'
LOCATION '/user/oracle/moviework/applog/';

hive> SELECT * FROM movieapp_log_json LIMIT 20;

hive> SELECT MIN(time), MAX(time) FROM movieapp_log_json
```

1. PURCHASE_MOVIE

Hive maps queries into Map Reduce jobs, simplifying the process of querying large datasets in HDFS. HiveQL statements can be mapped to phases of the Map Reduce framework. As illustrated in the following figure, selection and transformation operations occur in map tasks, while aggregation is handled by reducers. Join operations are flexible: they can be performed in the reducer or mappers depending on the size of the leftmost table.

1. Write a query to select only those clicks which correspond to starting, browsing, completing, or purchasing movies. Use a CASE statement to transform the RECOMMENDED column into integers where 'Y' is 1 and 'N' is 0. Also, ensure GENREID is not null. Only include the first 25 rows.
2. Write a query to select the customer ID, movie ID, recommended state and most recent rating for each movie.
3. Load the results of the previous two queries into a staging table. First, create the staging table:
4. Next, load the results of the queries into the staging table.

Exercise 5 Extract sessions using Pig

While the SQL semantics of HiveQL are useful for aggregation and projection, some analysis is better described as the flow of data through a series of sequential operations. For these situations, Pig Latin provides a convenient way of implementing data flows over data stored in HDFS. Pig Latin statements are translated into a sequence of Map Reduce jobs on the execution of any STORE or DUMP command. Job construction is optimized to exploit as much parallelism as possible, and much like Hive, temporary storage is used to hold intermediate results. As with Hive, aggregation occurs largely in the reduce

tasks. Map tasks handle Pig's FOREACH and LOAD, and GENERATE statements. The EXPLAIN command will show the execution plan for any Pig Latin script. As of Pig 0.10, the ILLUSTRATE command will provide sample results for each stage of the execution plan.

In this exercise you will learn basic Pig Latin semantics and about the fundamental types in Pig Latin, Data Bags and Tuples.

1. Start the Grunt shell and execute the following statements to set up a dataflow with the click stream data. Note: Pig Latin statements are assembled into Map Reduce jobs which are launched at execution of a DUMP or STORE statement.
2. Group the log sample by movie and dump the resulting bag.

3. Add a GROUP BY statement to the sessionize.pig script to process the click stream data into user sessions.

Course Outcomes:

The students should be able to:

- Describe big data and use cases from selected business domains
- Explain NoSQL big data management
- Install, configure, and run Hadoop and HDFS
- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

TEXT BOOKS:

1. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilley, 2012.
2. Eric Sammer, "Hadoop Operations", O'Reilley, 2012.

REFERENCES:

1. Vignesh Prajapati, Big data analytics with R and Hadoop, SPD 2013.
2. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilley, 2012.
3. Lars George, "HBase: The Definitive Guide", O'Reilley, 2011.
4. Alan Gates, "Programming Pig", O'Reilley, 2011.

Laboratory Work:

PART A: Implement the following using C/C++:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP
3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

Course Outcomes:

The students should be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Course Title: Advanced Algorithms	Course Code: 14SCS23
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To study network flow and linear programming problems.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.

Topics:**MODULE I**

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours**MODULE II**

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours**MODULE III**

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours**MODULE IV**

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours**MODULE V**

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007.

Semester: II

Year: 2014-2015

Course Title: Artificial Intelligence and Agent Technology	Course Code: 14SCS24
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Apply a given AI technique to a given concrete problem
- To Implement non-trivial AI techniques in a relatively large system
- To understand uncertainty and Problem solving techniques.
- To understand various symbolic knowledge representation to specify domains and reasoning tasks of a situated software agent.
- To understand different logical systems for inference over formal domain representations, and trace how a particular inference algorithm works on a given problem specification.
- To understand various learning techniques and agent technology.

TOPICS:

MODULE I

What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique?, The Level of the model, Criteria for success, some general references, One final word and beyond.

Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems. **Intelligent Agents:** Agents and Environments, The nature of environments, The structure of agents.

Text Book 1: Chapter 1 & 2

Text Book 2: Chapter 2

10 Hours

MODULE II

Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis.

Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem.

Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction.

Logical Agents: Knowledge –based agents, the Wumpus world, Logic-Propositional logic, Propositional theorem proving, Effective propositional model checking, Agents based on propositional logic.

Text Book 1: Chapter 3, 4 & 5 Text Book 2: Chapter 6

10 Hours

MODULE III

Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search.

Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic.

Quantifying Uncertainty: Acting under uncertainty, Basic probability notation, Inference using full joint distributions, Independence, Bayes' rule and its use, The Wumpus world revisited.

Text Book 1: Chapter 7 & 8 Text Book 2: Chapter 13

10Hours

MODULE IV

Weak Slot-and-filter structures: Semantic Nets, Frames.

Strong slot-and –filler structures: Conceptual dependency, scripts, CYC.

Adversarial Search: Games, Optimal Decision in Games, Alpha-Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-Of-The-Art Game Programs, Alternative Approaches, Summary

Text Book 1: Chapter 9 & 10 Text Book 2: Chapter 5

10 Hours

MODULE V

Learning From examples: Forms of learning, Supervised learning, Learning decision trees, Evaluating and choosing the best hypothesis, The theory of learning ,PAC, Regression and Classification with linear models, Nonparametric models, Support vector machines, Ensemble learning.

Learning Probabilistic Models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm.

Text Book 2: Chapter 18 & 20

10 Hours

COURSE OUTCOMES:

The students are able to:

- Design intelligent agents for problem solving, reasoning, planning, decision making, and learning. specific design and performance constraints, and when needed, design variants of existing algorithms.
- Apply AI technique on current applications.
- Problem solving, knowledge representation, reasoning, and learning.

Text Books.

1. Elaine Rich, Kevin Knight, Shivashanka B Nair: Artificial Intelligence, Tata McGraw Hill 3rd edition. 2013
2. Stuart Russel, Peter Norvig: Artificial Intelligence A Modern Approach, Pearson 3rd edition 2013.

Reference Books:

3. Nils J. Nilsson: "Principles of Artificial Intelligence", Elsevier, ISBN-13: 9780934613101

Semester: II

Year: 2014-2015

Course Title: Web Services	Course Code: 14SCS251
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To provide an in-depth knowledge of Web Services.
- To understand the fundamental concepts of Web services.
- To understand the fundamental concepts of WSDL Web Services.
- To design Web service Architecture.
- To Study Building Blocks of Web services.

TOPICS:

MODULE I

Middleware: Understanding the middle ware, RPC and Related Middle ware, TP Monitors, Object Brokers, Message-Oriented Middleware. **10 Hours**

MODULE II

Web Services: Web Services Technologies, Web Services Architecture. **10 Hours**

MODULE III

Basic Web Services Technology: WSDL Web Services Description Language, UDDI Universal Description Discovery and Integration, Web Services at work interactions between the Specifications, Related Standards. **10 Hours**

MODULE IV

Service Coordination Protocols: Infrastructure for Coordination Protocols, WS-Coordination, WS-Transaction, Rosetta Net and Other Standards Related to Coordination Protocols. **10 Hours**

MODULE V

Service Composition: Basic of Service Composition, A New Chance of Success for Composition, Services Composition Models, Dependencies between Coordination and Composition, BPEL: Business Process Execution Language for Web Services, Outlook, Applicability of the Web Services, Web services as a Problem and a Solution : AN Example. **10 Hours**

Course Outcomes:

The students should be able to:

- Bind and unbind services in UDDI.
- Develop WSDL document
- Implement web service client to call public service.
- Implement a service and exposing it as public service.

Text Books:

1. Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju: Web Services(Concepts ,Architectures and Applications), Springer International Edition 2009.

Course Title: Information And Network Security	Course Code: 14SCS252
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology

TOPICS:**MODULE I****Classical Encryption Techniques**

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad. **Block Ciphers and the data encryption standard:** Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours**MODULE II**

Public-Key Cryptography and RSA: Principles of public-key cryptosystems, Public-key cryptosystems. Applications for public-key cryptosystems, Requirements for public-key cryptosystems, public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours**MODULE III**

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours**MODULE IV**

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, . **Web Security Considerations:** Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer:** SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic

Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify And Finished Messages, Cryptographic Computations, Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.

10 Hours

Course Outcomes:

The students be able to

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition. 2013

References

1. V k Pachghare: Cryptography and Information Security, PHE ,2013.

Semester: II

Year: 2014-2015

Course Title : Pattern Recognition	Course Code: 14SCS253
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To study the mathematical morphology necessary for Pattern recognition.
- To introduce the student to various Pattern recognition techniques.
- To study the Representation and description and feature extraction.
- To study the principles of decision trees and clustering in pattern recognition.

TOPICS:

MODULE I

Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems.

10 Hours

MODULE II

Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation.

10 Hours

MODULE III

Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, comparison with NNC, Naive Bayes classifier, Bayesian belief network.

10 Hours

MODULE IV

Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over-fitting & Pruning, Examples.

10 Hours

MODULE V

Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards, Partitional (Forgy's, k-means, Iso-data), clustering large data sets, examples.

10 Hours

COURSE OUTCOMES:

Upon Completion of the course, the students will be able to

- Develop and analyze decision trees.
- Design the nearest neighbor classifier.
- Develop algorithms for Pattern Recognition.

Text Books:

1. Pattern Recognition (An Introduction) , V Susheela Devi, M Narsimha Murthy, Universities Press, ISBN 978-81-7371-725-3,2011.
2. Pattern Recognition & Image Analysis, Earl Gose, Richard Johnsonbaugh, Steve Jost. PHI ISBN-81-203-1484-0, 1996.

Course Title: Optical Networks	Course Code: 14SCS254
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors -
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM

Topics:**MODULE I**

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer, Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

10 Hours**MODULE II****WDM Network Elements**

Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations.

10 Hours**MODULE III****Control and Management**

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours**MODULE IV****Basic Concepts, Protection in SONET/SDH:**

Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1: N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design:

Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum **Load Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES:

The students will be able to:

- Gain Knowledge on fundamentals of optical network.
- Explore optical network architectures ranging from optical access networks to backbone optical transport networks.
- Choose approaches and methodologies of optical network for design effective optimization;
- Apply Techniques of optical network survivability.
- Gain knowledge on Problem solving skills and critical thinking in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Semester: II

Year: 2014-2015

Course Title: Advanced Algorithms Laboratory	Course Code: 14SCS26
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES

- To implement the graph search algorithms.
- To implement the string matching algorithms.
- To implement the modular linear equation algorithms.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/any equivalent tool/language by adapting exception handling technique wherever it is suitable.

1. Design, develop, and write a program to implement the Bellman-Ford algorithm and determine its performance. Give its applications.
2. Design, develop, and write a program to implement a Monte Carlo algorithm to test the **primality** of a given integer and determine its performance.
3. Design, develop, and write a program to solve string matching problem using naïve approach and the KMP algorithm. Compare their performances.
4. Design, develop, and write a program to solve String matching problem using Finite Automata and determine its performance.
5. Design, develop, and write a program to solve String matching problem using Robin Karp algorithm and determine its performance.

Course Outcomes:

Upon completion of the course, the students will be able to

- Design and apply graph search algorithms.
- Design and implement string matching algorithms.
- Design modular linear equation algorithms.

Course Title: Machine Learning Techniques	Course Code: 14SCS41
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To understand the basic concepts of learning and decision trees.
- To understand the neural networks and genetic algorithms
- To understand the Bayesian techniques
- To understand the instant based learning
- To understand the analytical learning and reinforced learning

TOPICS:**MODULE I****INTRODUCTION, CONCEPT LEARNING AND DECISION TREES**

Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search. **10 Hrs**

MODULE II**NEURAL NETWORKS AND GENETIC ALGORITHMS**

Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning. **10 Hrs**

MODULE III**BAYESIAN AND COMPUTATIONAL LEARNING**

Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model. **10 Hrs**

MODULE IV**INSTANT BASED LEARNING AND LEARNING SET OF RULES**

K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions – Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution **10 Hrs**

MODULE V**ANALYTICAL LEARNING AND REINFORCED LEARNING**

Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning **10 Hrs**

LABORATORY WORK

(The following tasks can be implemented in a language of your choice or any tools available)

- 1) Implement the CANDIDATE – ELIMINATION algorithm. Show how it is used to learn from training examples and hypothesize new instances in Version Space.
- 2) Implement the FIND–S algorithm. Show how it can be used to classify new instances of target concepts. Run the experiments to deduce instances and hypothesis consistently.

- 3) Implement the ID3 algorithm for learning Boolean-valued functions for classifying the training examples by searching through the space of a Decision Tree.
- 4) Design and implement the Back-propagation algorithm by applying it to a learning task involving an application like FACE RECOGNITION.
- 5) Design and implement Naïve Bayes Algorithm for learning and classifying TEXT DOCUMENTS.

COURSE OUTCOMES:

On Completion of the course, the students will be able to

- Choose the learning techniques with this basic knowledge.
- Apply effectively neural networks and genetic algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.
- Choose and differentiate reinforcement and analytical learning techniques

TEXT BOOK:

1. Tom M. Mitchell, “Machine Learning”, McGraw-Hill Education (INDIAN EDITION), 2013.

REFERENCES:

Course Title: Computer Vision	Course Code: 14SCS421
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To review image processing techniques for computer vision
- To understand shape and region analysis
- To understand Hough Transform and its applications to detect lines, circles, ellipses
- To understand three-dimensional image analysis techniques
- To understand motion analysis
- To study some applications of computer vision algorithms

TOPICS:**MODULE I**

CAMERAS: Pinhole Cameras, **Radiometry – Measuring Light:** Light in Space, Light Surfaces, Important Special Cases, **Sources, Shadows, And Shading:** Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, **Color:** The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.

10 Hours**MODULE II**

Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, **Edge Detection:** Noise, Estimating Derivatives, Detecting Edges, **Texture:** Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.

10 Hours**MODULE III**

The Geometry of Multiple Views: Two Views, **Stereopsis:** Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, **Segmentation by Clustering:** What Is Segmentation?, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,

10 Hours**MODULE IV**

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, **Segmentation and Fitting Using Probabilistic Methods:** Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, **Tracking With Linear Dynamic Models:** Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.

10 Hours**MODULE V**

Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, **Geometric Camera Calibration:** Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into

Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, **Model- Based Vision:** Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment. **10 Hours**

Course Outcomes:

Upon completion of the course, the students will be able to

- Implement fundamental image processing techniques required for computer vision
- Perform shape analysis
- Implement boundary tracking techniques
- Apply chain codes and other region descriptors
- Apply Hough Transform for line, circle, and ellipse detections.
- Apply 3D vision techniques.
- Implement motion related techniques.
- Develop applications using computer vision techniques.

TEXT BOOKS

1. David A. Forsyth and Jean Ponce: Computer Vision – A Modern Approach, PHI Learning (Indian Edition), 2009.

REFERENCES:

4. E. R. Davies: Computer and Machine Vision – Theory, Algorithms and Practicalities, Elsevier (Academic Press), 4th edition, 2013.

Course Title: Business Intelligence And Its Applications	Course Code: 14SCS422
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Implement the key elements of a successful business intelligence (BI) program
- To Apply a BI meta model that turns outcomes into actions
- To Extract and transform data from an operational data to a data business data
- To Exploit business analytics and performance measurement tools

TOPICS:**MODULE I**

Development Steps, BI Definitions, BI Decision Support Initiatives, Development Approaches, Parallel Development Tracks, BI Project Team Structure, Business Justification, Business Divers, Business Analysis Issues, Cost – Benefit Analysis, Risk Assessment, Business Case Assessment Activities, Roles Involved In These Activities, Risks Of Not Performing Step, Hardware, Middleware, DBMS Platform, Non Technical Infrastructure Evaluation

10 Hours**MODULE II**

Managing The BI Project, Defining And Planning The BI Project, Project Planning Activities, Roles And Risks Involved In These Activities, General Business Requirement, Project Specific Requirements, Interviewing Process

10 Hours**MODULE III**

Differences in Database Design Philosophies, Logical Database Design, Physical Database Design, Activities, Roles And Risks Involved In These Activities, Incremental Rollout, Security Management, Database Backup And Recovery

10 Hours**MODULE IV**

Growth Management, Application Release Concept, Post Implementation Reviews, Release Evaluation Activities, The Information Asset and Data Valuation, Actionable Knowledge – ROI, BI Applications, The Intelligence Dashboard

10 Hours**MODULE V**

Business View of Information technology Applications: Business Enterprise excellence, Key purpose of using IT, Type of digital data, basics of enterprise reporting, BI road ahead.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- know the complete life cycle of BI/Analytical development
- Understand the technology and processes associated with Business Intelligence framework

- Given a business scenario, identify the metrics, indicators and make recommendations to achieve the business goal.

Text Books:

1. Larissa T Moss and ShakuAtre – Business Intelligence Roadmap : The Complete Project Lifecycle for Decision Support Applications, Addison Wesley Information Technology Series, 2003.
2. R N Prasad, SeemaAcharya – Fundamentals of Business Analytics , Wiley India, 2011.

Reference Books:

3. David Loshin - Business Intelligence: The Savvy Manager's Guide, Publisher: Morgan Kaufmann, ISBN 1-55860-196-4.
4. Brian Larson - Delivering Business Intelligence with Microsoft SQL Server 2005, McGraw Hill, 2006.
5. Lynn Langit - Foundations of SQL Server 2008 Business Intelligence –Apress, ISBN13: 978-1-4302-3324-4, 2011

Course Title: Agile Technologies	Course Code: 14SCS423
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To understand how an iterative, incremental development process leads to faster delivery of more useful software
- To understand the essence of agile development methods
- To understand the principles and practices of extreme programming
- To understand the roles of prototyping in the software process
- To understand the concept of Mastering Agility

TOPICS:

MODULE I

Why Agile?: Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility, **How to Be Agile?:** Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor **10 Hours**

MODULE II

Understanding XP: The XP Lifecycle, The XP Team, XP Concepts, **Adopting XP:** Is XP Right for Us?, Go!, Assess Your Agility **10 Hours**

MODULE III

Practicing XP:

Thinking: Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, **Collaborating:** Trust, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting, **Releasing:** "Done Done", No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. **Planning:** Vision, Release Planning, The Planning Game, Risk Management, Iteration Planning, Slack, Stories, Estimating. **Developing:** Incremental requirements, Customer Tests, Test-Driven Development, Refactoring, Simple Design, Incremental Design and Architecture, Spike Solutions, Performance Optimization, Exploratory Testing

10 Hours

MODULE IV

Mastering Agility

Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading, **Improve the Process:** Understand Your Project, Tune and Adapt, Break the Rules, **Rely on People :** Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People, **Eliminate Waste :** Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput

10 Hours

MODULE V

Deliver Value: Exploit Your Agility, Only Releasable Code Has Value, Deliver Business Results, Deliver Frequently, **Seek Technical Excellence** :Software Doesn't Exist, Design Is for Understanding, Design Trade-offs, Quality with a Name, Great Design, Universal Design Principles, Principles in Practice, Pursue Mastery

10 Hours

COURSE OUTCOMES

Students should be able to

- Understand The XP Lifecycle, XP Concepts, Adopting XP
- Work on Pair Programming, Root-Cause Analysis, Retrospectives, Planning, Incremental Requirements, Customer Tests
- Implement Concepts to Eliminate Waste

Text Books:

1. **The Art of Agile Development** (Pragmatic guide to agile software development), James shore, Chromatic, O'Reilly Media, Shroff Publishers & Distributors, 2007

Reference Books:

1. Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Prentice Hall; 1st edition, 2002
- 2., "Agile and Iterative Development A Manger's Guide", Craig Larman Pearson Education, First Edition, India, 2004.

Course Title: Wireless Networks And Mobile Computing	Course Code: 14SCS424
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To introduce the concepts of wireless communication.
- To understand various propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication.
- To understand CDMA, GSM, Mobile IP, Wimax
- To understand Different Mobile OS
- To learn various Markup Languages
- CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns

TOPICS:

MODULE I

Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. **Wireless Networks :** Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.

10 Hours

MODULE II

Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6.

10 Hours

MODULE III

Mobile OS and Computing Environment: Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux and Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators.

10 Hours

MODULE IV

Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.

10 Hours

MODULE V

J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.

10 Hours

COURSE OUTCOMES:

The student should be able to:

- Work on state of art techniques in wireless communication.
- Explore CDMA, GSM, Mobile IP, WiMax
- Work on Different Mobile OS
- Develop program for CLDC, MIDP let model and security concerns

TEXT BOOKS:

1. Ashok Talukder, Roopa Yavagal, Hasan Ahmed: Mobile Computing, Technology, Applications and Service Creation, 2nd Edition, Tata McGraw Hill, 2010.
2. Martyn Mallik: Mobile and Wireless Design Essentials, Wiley India, 2003

REFERENCE BOOKS:

1. Raj kamal: Mobile Computing, Oxford University Press, 2007.
2. Iti Saha Misra: Wireless Communications and Networks, 3G and Beyond, Tata McGraw Hill, 2009.

IV Semester

Course Code	Name of the Subject	No. of Hrs./Week		Duration of the Exam in Hours	Marks for		Total Marks
		Lecture	Practical / Field Work		I.A.	Exam	
12SCS41	Evaluation of Project Phase – II	-	-	-	50	-	50
12SCS42	Evaluation of Project work – III	-	-	-	50	-	50
12SCS43	Project work evaluation and Viva-voce	-	-	3	-	100+100	200
	Total	-	-	03	100	200	300
Grand Total (I to IV Sem.) : 2400							

Note: Project work shall be continuously evaluated for phase I, phase II and after completion of the project.

Note:

- * Lab Classes for any two core subjects are compulsory (practical will be evaluated for 20 marks and internal assessment for 30 marks. Lab journals should be maintained).
 - # For the remaining two core subjects, it can be field work, assignment, tutorials.
- 1) Project Phase – I : 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalise the topic of dissertation. Evaluation of the same shall be taken up during beginning of III Semester. Total Marks shall be 50. Colleges have to send the synopsis after Phase – I.
 - 2) Project Phase – II : 16 weeks duration. 3 days for project work in a week during III Semester. Evaluation shall be taken during the first two weeks of the IV Semester. Total Marks shall be 50.
 - 3) Project Phase – III : 24 weeks duration in IV Semester. Evaluation shall be taken up during the middle of IV Semester. Total Marks shall be 50. At the end of the Semester Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be $50 + 50 + 100 = 200$ (50 marks for guide, 50 marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

- The Marks of Project Phase – I shall be sent to the University along with III Semester I.A. Marks of other subjects.
 - The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (out of two external examiners at least one should be present).

M. Tech in Computer Science and Engineering

I SEMESTER

COMPUTER NETWORKS

Subject Code: 12SCS11

Hours/Week : 04

Total Hours : 52

I.A. Marks : 50

Exam Hours: 03

Exam Marks: 100

1. Review of Basic Concepts: Building a Network; Requirements- Connectivity, Cost-Effective Resource Sharing, Support for Common Services; Network Architecture- Layering and Protocols, OSI Architecture, Internet Architecture; Performance- Bandwidth and Latency, Delay \times Bandwidth Product, High-Speed Networks.

2. Direct link networks: Hardware Building Blocks-nodes, links; error Detection- Two-Dimensional Parity, Internet checksum Algorithm, cyclic Redundancy Check; reliable Transmission- Stop-and-Wait, Sliding Window, Concurrent Logical Channels; Rings (802.5, FDDI) –Token Ring Media Access Control, Token Ring Maintenance, FDDI.

3. Packet Switching: Switching and forwarding – Datagrams, Virtual Circuit Switching, Source Routing; Bridges and LAN Switches – Learning Bridges, Spanning Tree Algorithm, Broadcast and Multicast, Limitations of Bridges; cell switching (ATM) – Cells, Segmentation and Reassembly, Virtual Paths, Physical Layers for ATM.

4. Internetworking: Simple internetworking (IP) – What Is an Internetwork?, Service Model, Global Address, Datagram Forwarding in IP, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels; Routing – Network as a Graph, distance Vector(RIP), Link State(OSPF), Metrics, Routing for Mobile Hosts, Global Internet – Subnetting, Classless Routing(CIDR), Interdomain Routing(BGP), Routing Areas, IP Version 6(IPv6).

5. End –to-End Protocols: Simple demultiplexer (UDP); Reliable byte stream (TCP) – End-to-End Issues, Segment Format, Connection Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Alternative Design Choices.

6. Congestion Control and Resource Allocation: Issues in resource allocation – Network Model, Taxonomy, Evaluation Criteria; Queuing discipline – FIFO, Fair Queuing; TCP Congestion Control – Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery; Congestion-Avoidance mechanisms – DECBIT, Random Early Detection (RED), Source-Based Congestion Control.

7. Applications: Traditional applications – Electronic Mail (SMTP, MIME, IMAP), World Wide Web (HTTP), Name Service (DNS), Network management (SNMP); Web services – Custom APPLICATION Protocols (WSDL, SOAP), A Generic application Protocol (REST).

Laboratory Work:

Using any Protocol Analyzer like Ethereal, perform the following experiments:

1. Capture the packets that are transmitted after clicking on the URL of the web site of your college. Analyze the packets at the highest level and prepare a brief report of your analysis.
2. Analyze the data captured above at lower levels and demonstrate the layering of the protocols.
3. Capture the packets in the LAN, & filter for a unique subscriber
4. Capture the ARP packets and find the MAC addresses in the LAN in your laboratory.

Using either NS228/OPNET or any other suitable simulator, perform the following experiments:

1. Simulate an Ethernet LAN using 10 node , change error rate and data rate , and compare throughput
2. Simulate a three nodes point – to – point network with duplex links between them. Set the queue size and vary the bandwidth and find the number of packets dropped.
3. Simulate the transmission of ping messages over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion.
4. Simulate an Ethernet LAN using n nodes and set multiple traffic nodes and plot congestion window for different source / destination.

Implement the following in C/C++:

1. Write a program for distance vector algorithm to find suitable path for transmission.
2. Write a program for error detecting code using CRC-CCITT (16-bit)
3. Write a program for congestion control using leaky bucket algorithm.

TEXT BOOKS:

1. Larry L. Peterson and Bruce S. David: Computer Networks – A Systems Approach, 4th Edition, Elsevier, 2007.

REFERENCE BOOKS:

1. Behrouz A. Forouzan: Data Communications and Networking, 4th Edition, Tata McGraw Hill, 2006.
2. William Stallings: Data and Computer Communication, 8th Edition, Pearson Education, 2007.
3. Alberto Leon-Garcia and Indra Widjaja: Communication Networks -Fundamental Concepts and Key Architectures, 2nd Edition Tata McGraw-Hill, 2004.

Advances in Operating Systems

Subject Code : 12SCS12

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction, Review Operating Systems Strategies: User' perspectives, technologies and examples of Batch Systems, Timesharing Systems, Personal computer systems, Embedded systems, and small communicating computers; The genesis of modern operating systems.

2. Using the Operating Systems The programmer's abstract machine; Resources; Processes and threads; Writing concurrent programs.

3. Operating Systems Organization Basic functions; General implementation considerations; Contemporary OS kernels.

4. Design Strategies Design considerations; Monolithic kernels; Modular organization; Microkernel; Layered organizations; Operating Systems for distributed system.

5. Real World Examples Linux, Windows NT/2000/XP: Process descriptors, Thread descriptors, Thread scheduling. Linux, Windows NT/2000/XP: Kernel

6. Distributed Systems: Networking; The Need for a Protocol Architecture; The TCP/IP Sockets; Linux Networking; Client/Server Computing; Distributed Message Passing; Remote Procedure Calls; Clusters; Windows Vista Cluster Server; Linux Clusters; Distributed Process Management; Process Migration; Distributed Global States; Distributed Mutual Exclusion; Distributed Deadlock.

Laboratory Work: (The following programs can be executed on any available and suitable platform)

1. Design, develop and execute a program using any thread library to create the number of threads specified by the user; each thread independently generates a random integer as an upper limit, and then computes and prints the number of primes less than or equal to that upper limit along with that upper limit.

2. Rewrite above program such that the processes instead of threads are created and the number of child processes created is fixed as two. The program should make use of kernel timer to measure and print the real time, processor time, user space time and kernel space time for each process.

3. Design, develop and implement a process with a producer thread and a consumer thread which make use of a bounded buffer (size can be prefixed at a suitable value) for communication. Use any suitable synchronization construct.

4. Design, develop, and execute a program to solve a system of n linear equations using Successive Over-relaxation method and n processes which use Shared Memory API. 5. Design, develop, and execute a program to demonstrate the use of RPC.

Text Books:

1. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2004.

2. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2008.

Reference Books:

1. Silberschatz, Galvin, Gagne: Operating System Concepts, 8th Edition, Wiley, 2008

2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006.

3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007.

Advances in Database Management Systems

Subject Code : 12SCS13
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations.

2. Object and Object-Relational Databases: Overview of Object-Oriented Concepts – Objects, Encapsulation, Type and class hierarchies, complex objects; Object model of ODMG, Object definition Language ODL; Object Query Language OQL; Overview of C++ language binding; Conceptual design of Object database. Overview of object relational features of SQL; Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model.

3. Enhanced Data Models for Some Advanced Applications: Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts.

4. Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.

5. Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Window queries in SQL; Finding answers quickly; Implementation techniques for OLAP; Data Warehousing; Views and Decision support; View materialization; Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks.

6. More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.

Laboratory Work:

(The following tasks can be implemented on Oracle or any other suitable RDBMS with support for Object features)

1. Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.

2. Develop a database application to demonstrate the representation of multivalued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.

3. Design and develop a suitable Student Database application. One of the attributes to be maintained is the attendance of a student in each subject for which he/she has enrolled. Using TRIGGERS, write active rules to do the following:

a. Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.

b. Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.

4. Design, develop, and execute a program in a language of your choice to implement any one algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

TEXT BOOKS:

1. Elmasri and Navathe: Fundamentals of Database Systems, Pearson Education, 2007.

2. Raghuram Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2003.

REFERENCE BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan: Database System Concepts, 6th Edition, McGraw Hill, 2010.

2. Connolly and Begg: Database Systems, 4th Edition, Pearson Publications, 2005.

Computer Systems Performance Analysis

Subject Code : 12SCS14

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: The art of Performance Evaluation; Common Mistakes in Performance Evaluation, A Systematic Approach to Performance Evaluation, Selecting an Evaluation Technique, Selecting Performance Metrics, Commonly used Performance Metrics, Utility Classification of Performance Metrics, Setting Performance Requirements.

2. Workloads, Workload Selection and Characterization: Types of Work loads, addition instructions, Instruction mixes, Kernels; Synthetic programs, Application benchmarks, Popular benchmarks. Work load Selection: Services exercised, level of detail; Representativeness; Timeliness, Other considerations in workload selection. Work load characterization Techniques: Terminology; Averaging, Specifying dispersion, Single Parameter Histograms, Multi Parameter Histograms, Principle Component Analysis, Markov Models, Clustering.

3. Monitors, Program Execution Monitors and Accounting Logs: Monitors: Terminology and classification; Software and hardware monitors, Software versus hardware monitors, Firmware and hybrid

monitors, Distributed System Monitors, Program Execution Monitors and Accounting Logs, Program Execution Monitors, Techniques for Improving Program Performance, Accounting Logs, Analysis and Interpretation of Accounting log data, Using accounting logs to answer commonly asked questions.

4. Capacity Planning and Benchmarking: Steps in capacity planning and management; Problems in Capacity Planning; Common Mistakes in Benchmarking; Benchmarking Games; Load Drivers; Remote-Terminal Emulation; Components of an RTE; Limitations of RTEs.

5. Experimental Design and Analysis: Introduction: Terminology, Common mistakes in experiments, Types of experimental designs, 2k Factorial Designs, Concepts, Computation of effects, Sign table method for computing effects; Allocation of variance; General 2k Factorial Designs, General full factorial designs with k factors: Model, Analysis of a General Design, Informal Methods.

6. Queuing Models: Introduction: Queuing Notation; Rules for all Queues; Little's Law, Types of Stochastic Process. Analysis of Single Queue: Birth-Death Processes; M/M/1 Queue; M/M/m Queue; M/M/m/B Queue with finite buffers; Results for other M/M/1 Queuing Systems. Queuing Networks: Open and Closed Queuing Networks; Product form networks, queuing Network models of Computer Systems. Operational Laws: Utilization Law; Forced Flow Law; Little's Law; General Response Time Law; Interactive Response Time Law; Bottleneck Analysis; Mean Value Analysis and Related Techniques; Analysis of Open Queuing Networks; Mean Value Analysis; Approximate MVA; Balanced Job Bounds; Convolution Algorithm, Distribution of Jobs in a System, Convolution Algorithm for Computing G(N), Computing Performance using G(N), Timesharing Systems, Hierarchical Decomposition of Large Queuing Networks: Load Dependent Service Centers, Hierarchical Decomposition, Limitations of Queuing Theory.

Text Book:

1. Raj Jain: The Art of Computer Systems Performance Analysis, John Wiley and Sons, 2007.

Reference Books:

1. Paul J Fortier, Howard E Michel: computer Systems Performance Evaluation and prediction, Elsevier, 2003.

2. Trivedi K S: Probability and Statistics with Reliability, Queuing and Computer Science Applications, 2nd Edition, Wiley India, 2001.

Advances in Digital Image Processing

Subject Code : 12SCS151

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: Origins of Digital Image Processing, examples, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image analysis and computer vision, spatial feature extraction, transform features, Edge detection, gradient operators, compass operators, stochastic gradients, line and spot detection.

2. Digital Image Fundamentals: Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.
3. Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods.
4. Image Enhancement in the Frequency Domain: Background, Image Enhancement in the Frequency Domain, Introduction to the Fourier Transform and the Frequency, Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency Domain Filters, Homomorphic Filtering.
5. Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering.
6. Color Fundamentals: Color Models, Pseudo color Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression.
7. Image Transformation: Discrete Cosine Transforms, Walsh Hadamard Transforms, Wavelet Transforms and Multiprocessing, Background, Multiresolution Expansions, Wavelet Transforms in one Dimension, Wavelet Transforms in Two Dimensions, Wavelet Packets, an overview of Second Generation Wavelet Transforms.
8. Image and Video Compression: Fundamentals, Image Compression Models, Lossless compression Methods: Huffman coding, run length coding, LZ coding, Arithmetic coding, Lossy Compression: Gray level Run length coding, Block truncation coding, vector quantization, Differential predictive coding, Transform coding , Hybrid coding, Video Compression Techniques – Motion compensation, Search for motion vectors, H.261, H.263, MPEG I, MPEG 2, MPEG 4, MPEG 7 .
9. Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms.
10. Image Segmentation and Object Recognition: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation, Patterns and Pattern Classes, Recognition Based on Decision-Theoretic Methods, Structural Methods.

Computer Graphics and Visualization

Subject Code : 12SCS152
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction: Applications of computer graphics; A graphics system; Images: Physical and synthetic; Imaging systems; The synthetic camera model; The programmer's interface; Graphics architectures; Programmable pipelines; Performance characteristics. Graphics Programming: The Sierpinski gasket; Programming two-dimensional applications.

2. The OpenGL: The OpenGL API; Primitives and attributes; Color; Viewing; Control functions; The Gasket program; Polygons and recursion; The three-dimensional gasket; Plotting implicit functions.

3. Input and Interaction: Interaction; Input devices; Clients and servers; Display lists; Display lists and modeling; Programming event-driven input; Menus; Picking; A simple CAD program; Building interactive models; Animating interactive programs; Design of interactive programs; Logic operations.

4. Geometric Objects and Transformations: Scalars, points, and vectors; Three-dimensional primitives; Coordinate systems and frames; Modeling a colored cube; Affine transformations; Rotation, translation and scaling. Transformations in homogeneous coordinates; Concatenation of transformations; OpenGL transformation matrices; Interfaces to three-dimensional applications; Quaternions.

5. Viewing: Classical and computer viewing; Viewing with a computer; Positioning of the camera; Simple projections; Projections in OpenGL; Hidden-surface removal; Interactive mesh displays; Parallel-projection matrices; Perspective-projection matrices; Projections and shadows.

6. Lighting and Shading: Light and matter; Light sources; The Phong lighting model; Computation of vectors; Polygonal shading; Approximation of a sphere by recursive subdivisions; Light sources in OpenGL; Specification of materials in OpenGL; Shading of the sphere model; Global illumination.

7. Curves and surfaces: Representation of curves and surfaces; Design criteria; Parametric cubic polynomial curves; Interpolation; Hermite curves and surfaces; Bezier curves and surfaces; Cubic B-Splines; General B-Splines; Rendering curves and surfaces; Curves and surfaces in OpenGL.

Text Book:

1. Edward Angel: Interactive Computer Graphics A Top-Down Approach with OpenGL, 5th Edition, Pearson, 2009.

Reference Books:

1. Donald Hearn and Pauline Baker: Computer Graphics- OpenGL Version, 2nd Edition, Pearson, 2004.

2. F.S. Hill,Jr.: "Computer Graphics Using OpenGL", 2nd Edition, Pearson, 2001.

3. James D Foley, Andries Van Dam, Steven K Feiner, John F Hughes, Computer Graphics, Addison-Wesley 1997.

OPTICAL NETWORKS

Subject Code : 12SCS153
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Client Layers of the Optical Layer

SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer , Elements of a SONET/SDH Infrastructure, Optical Transport Network: Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service Multiprotocol Label Switching: Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

2. WDM Network Elements

Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, Reconfigurable OADMs Optical Cross connects: All-Optical OXC Configurations.

3. Control and Management

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability, Performance and Fault Management: The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. Configuration Management: Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

4. Basic Concepts

Protection in SONET/SDH: Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. Protection in the Client Layer: Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1:N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

5. WDM Network Design

Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength-Routing Networks, Statistical Dimensioning Models: First-Passage Model, Blocking Model, Maximum Load Dimensioning Models: Offline Light path Requests, Online RWA in Rings.

Text Book

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

Embedded Systems

Subject Code : 12SCS154
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Custom single-purpose processor design; RT level custom single-purpose processor design, optimizing custom single-purpose processors: Optimizing the original program, optimizing the FSM, Optimizing the data path, optimizing the FSM.
2. Timers, counters, and watchdog timers. State machine models: introduction; An introductory example, A basic state machine model: finite-state machines(FSM);finite-state machines with data path model (FSMD);using state machines: Describing a system as a state machine, Comparing state machine and sequential program models, Capturing a state machine model in a sequential programming language; hierarchical/concurrent state machine model (HCFM) and the state charts language; program state machine model(PSM);The role of an appropriate model and language.
3. Concurrent process models: concurrent processes: process create and terminate ,process suspend and resume, Process join; Communication among processes: shared memory, Message passing; synchronization among processes: Condition variables, monitors. Interrupts: interrupt Basics; The Shared Data Problem; interrupt latency
4. Survey of Software Architecture: Round Robin, Round Robin with interrupts, Function queue scheduling architecture, Real time operating system architecture, selecting architecture. Introduction to RTOS: Tasks and task states, tasks and Data, semaphores and shared data.
5. Operating systems services: Message queues, mailboxes, and pipes; Timer functions; Events; memory management, Interrupt routines in an RTOS environment. Basic design using an RTOS; Overview, principles, an example, encapsulating semaphores and queues, Hard Real-time scheduling considerations, saving power.
6. Embedded software development tools: Host and target machines; Linker/locator for Embedded software, getting embedded software into the target system. Debugging Techniques: Testing on host machine, instruction set simulators, macros and tools.
7. An example system: what the program does, environment in which the program operates.

Text Books :

1. **Embedded system design : A unified Hardware/software introduction** – Frank Vahid, Tony Givargis, John Wiley and Sons, Inc. 2002 (Articles : 2.4, 2.5, 2.6; 4.2, 8.3 to 8.13)
2. **An Embedded software Primer** – David E. Simon; Pearson Education, 1999. (Chapters: 4, 5, 6, 7, 8, 9, 10 and 11)

Reference books:

1. **Embedded C**: Michael J. Pont, Pearson Education (2002)
2. **Real-Time systems and programming languages** : Alan Burns and Andy Wellings, Addison Wesley-Longman (1997)

3. **Real Time programming : A guide to 32 bit embedded development**, Grehan, Moore and Cyliax, Addison-Wesley-longman.

II Semester

Formal Models in Computer Science

Subject Code : 12SCS21

IA Marks : 50

No of Lecture Hrs/Week : 4

Exam hours : 3

Total No of Lecture Hours : 52

Exam Marks : 100

1. Propositional Logic

Declarative sentences, Natural deduction, Propositional logic as a formal language, Semantics of propositional logic, Normal forms.

2. Predicate Logic

The need for a richer language, Predicate logic as a formal language, Proof theory of predicate logic, Semantics of predicate logic, Undecidability of predicate logic, Micromodels of software.

3. Verification by Model Checking

Motivation for verification, Linear-time temporal logic, Model checking, Branching-time logic, CTL* and the expressive powers of LTL and CTL.

4. Program Verification

Need for specifying and verifying code, A framework for software verification, Proof calculus for partial correctness and total correctness, Programming by contract.

5. Introduction to Z: Basic concepts; Z notation in Propositional logic and Predicate logic.

Laboratory Work:

1. Design, develop and run a program in ALLOY (or in any equivalent system) to model a Software Package Dependency System. Make suitable assumptions regarding the system. The model should allow checking to see if prerequisites in the form of libraries or other packages are present for all components in the system

2. Design, develop and run a program in NuSMV (or in any equivalent system) to model and solve the Mutual Exclusion problem.

3. Design, develop and run a program in NuSMV (or in any equivalent system) to model and simulate the Alternate Bit Protocol.

4. Design, develop and run a program in NuSMV (or in any equivalent system) to model and solve the planning problem of Ferry Man.

5. Design, develop and run a program in NuSMV (or in any equivalent system) to model and solve the Dining Philosophers Problem.

Text Books:

1. Michael Huth and Mark Ryan: Logic in Computer Science, 2nd Edition, Cambridge University Press, 2004.
2. Jim Woodcock , Jim Davies: Using Z Specification, Refinement and Proof, Prentice Hall, 1996.

(Online Edition: <http://www.usingz.com/text/online/>)

Advanced Algorithms

Subject Code : 12SCS22
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

2. Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching.

3. Polynomials and the FFT: Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

4. Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

5. String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

6. Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

Laboratory Work:

1. Design, develop, and run a program in any language to implement the Bellman-Ford algorithm and determine its performance.
2. Design, develop, and run a program in any language to implement Johnson's algorithm and determine its performance.
3. Design, develop, and run a program in any language to implement a Monte Carlo algorithm to test the primality of a given integer and determine its performance.
4. Design, develop, and run a program in any language to solve the string matching problem using naïve approach and the KMP algorithm and compare their performances.
5. Design, develop, and run a program in any language to solve modular linear equations.
6. Design, develop, and run a program in any language to implement the FFT algorithm efficiently.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007.

Advances in Computer Architecture

Subject Code : 12SCS23

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction and Review of Fundamentals of Computer Design: Introduction; Classes computers; Defining computer architecture; Trends in Technology; Trends in power in Integrated Circuits; Trends in cost; Dependability, Measuring, reporting and summarizing Performance; Quantitative Principles of computer design; Performance and Price-Performance; Fallacies and pitfalls; Case studies.

2. Some topics in Pipelining, Instruction –Level Parallelism, Its Exploitation and Limits on ILP: Introduction to pipelining, ILP; Crosscutting issues, fallacies, and pitfalls with respect to pipelining; Basic concepts and challenges of ILP; Case study of Pentium 4, Fallacies and pitfalls. Introduction to limits in ILP; Performance and efficiency in advanced multiple-issue processors.

3. Memory Hierarchy Design, Storage Systems: Review of basic concepts; Crosscutting issues in the design of memory hierarchies; Case study of AMD Opteron memory hierarchy; Fallacies and pitfalls in the design of memory hierarchies. Introduction to Storage Systems; Advanced topics in disk storage; Definition and examples of real faults and failures; I/O performance, reliability measures, and benchmarks; Queuing theory; Crosscutting issues; Designing and evaluating an I/O system – The Internet archive cluster; Case study of NetAA FAS6000 filer; Fallacies and pitfalls.

4. Hardware and Software for VLIW and EPIC

Introduction: Exploiting Instruction-Level Parallelism Statically, Detecting and Enhancing Loop-Level Parallelism, Scheduling and Structuring Code for Parallelism, Hardware Support for Exposing Parallelism: Predicated Instructions, Hardware Support for Compiler Speculation, The Intel IA-64 Architecture and Itanium Processor, Concluding Remarks.

5. Large-Scale Multiprocessors and Scientific Applications

Introduction, Interprocessor Communication: The Critical Performance Issue, Characteristics of Scientific Applications, Synchronization: Scaling Up, Performance of Scientific Applications on Shared-Memory Multiprocessors, Performance Measurement of Parallel Processors with Scientific Applications, Implementing Cache Coherence, The Custom Cluster Approach: Blue Gene/L, Concluding Remarks.

6. Computer Arithmetic

Introduction, Basic Techniques of Integer Arithmetic, Floating Point, Floating-Point Multiplication, Floating-Point Addition, Division and Remainder, More on Floating-Point Arithmetic, Speeding Up Integer Addition, Speeding Up Integer Multiplication and Division, Fallacies and Pitfalls.

Text Book:

1. Hennessey and Patterson: “Computer Architecture A Quantitative Approach”, 4th Edition, Elsevier, 2007.

Reference Books:

1. Kai Hwang: Advanced Computer Architecture - Parallelism, Scalability, Programmability, 2nd Edition, Tata McGraw Hill, 2010.

Cloud Computing

Subject Code : 12SCS24
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. **Introduction** : Business and IT perspective, Cloud and virtualization, Cloud services requirements, cloud and dynamic infrastructure, cloud computing characteristics, cloud adoption.
2. **Cloud models** : Cloud characteristics, Measured Service, Cloud models, security in a public cloud, public versus private clouds, cloud infrastructure self service.
3. **Cloud at a service** : Gamut of cloud solutions, principal technologies, cloud strategy, cloud design and implementation using SOA, Conceptual cloud model, cloud service demand.
4. **Cloud solutions** : Cloud ecosystem, cloud business process management, cloud service management, cloud stack, computing on demand, cloud sourcing.
5. **Cloud offerings** : Cloud analytics, Testing under cloud, information security, virtual desktop infrastructure, Storage cloud.
6. **Cloud management** : Resiliency, Provisioning, Asset management, cloud governance, high availability and disaster recovery, charging models, usage reporting, billing and metering.
7. **Cloud virtualization technology** : Virtualization defined, virtualization benefits, server virtualization, virtualization for x86 architecture, Hypervisor management software, Logical partitioning, VIO server, Virtual infrastructure requirements. Storage virtualization, storage area networks, network attached storage, cloud server virtualization, virtualized data center.
8. **Cloud and SOA** : SOA journey to infrastructure, SOA and cloud, SOA defined, SOA defined, SOA and IAAS, SOA based cloud infrastructure steps, SOA business and IT services.

TEXT BOOKS:

1. Cloud Computing by Dr. Kumar Saurabh, Wiley India, 2011.

Reference Books

1. Michael Miller, Cloud Computing: Web based applications that change the way you work and collaborate online, Que publishing , August 2009
2. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On Demand computing applications and data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

Subject Code : 12SCS251
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Multimedia Communications: Introduction, Human communication model, Evolution and convergence, Technology framework, Standardization framework.
2. Framework for Multimedia Standardization: Introduction, Standardization activities, Standards to build a new global information infrastructure, Standardization processes on multimedia communications, ITU-

T mediacom2004 framework for multimedia, ISO/IEC MPEG-21 multimedia framework, IETF multimedia Internet standards.

3. Application Layer: Introduction, ITU applications, MPEG applications, Mobile servers and applications, Universal multimedia access.

4. Middleware Layer: Introduction to middleware for multimedia, Media coding, Media Streaming, Infrastructure for multimedia content distribution.

5. Network Layer: Introduction, QoS in Network Multimedia Systems.

TEXT BOOKS:

1. K.R. Rao, Zoran S. Bojkovic, Dragorad A. Milovanovic: Introduction to Multimedia Communications – Applications, Middleware, Networking, Wiley India , 2006.

REFERENCE BOOKS:

1. Fred Halsall: Multimedia Communications – Applications, Networks, Protocols, and Standards, Pearson, 2001.

2. Nalin K Sharad: Multimedia information Networking, PHI, 2002.

3. Ralf Steinmetz, Klara Narstedt: Multimedia Fundamentals: Volume 1-Media Coding and Content Processing, 2nd Edition, Pearson, 2003.

4. Prabhat K. Andleigh, Kiran Thakrar: Multimedia Systems Design, PHI, 2003.

Artificial Intelligence and Agent Technology

Subject Code: 12SCS252

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. **Artificial Intelligence:** What is AI., The Foundations of Artificial Intelligence, The History of Artificial Intelligence, The State of the Art, **Intelligent Agents**, Agents and Environments, Good Behaviour: The Concept of Rationality, The Nature of Environments, The structure of Agents.
2. **Solving problems by searching:** Problem-solving Agents, Example problems, Searching for solutions, Uninformed Search Strategies, Avoiding Repeated States, Searching with Partial Information, **Constraint Satisfaction Problems:** Constraint Satisfaction Problems, Backtracking Search for CSPs, Local Search for Constraint Satisfaction Problems, The Structure of Problems.
3. **Logical Agents:** Knowledge-Based Agents, The Wumpus World, Logic, Propositional Logic, Reasoning Patterns in Propositional Logic , Reasoning Patterns in Propositional Logic Resolution, Effective propositional inference, Agents Based on Propositional Logic, First-Order Logic, Representative Revisited, Syntax and semantics of First-Order Logic, Using First-order Logic, Knowledge Engineering in First-Order Logic.
4. **Uncertainty:** Acting under Uncertainty, Basic Probability Notation, The Axioms of Probability, Interface using full joint distributions, Independence, Bayes Rule and its use, The Wumpus World Revisited, **Probabilistic Reasoning**, Representing Knowledge in an Uncertain Domain, The semantics of Bayesian Networks, Efficient Representation of conditional distributions, Exact inference in Bayesian networks, Approximate inference in Bayesian Networks, Extending Probability to First-Order representations, Other Approaches to uncertain reasoning.
5. **Learning from Observations:** Forms of Learning, Inductive Learning, Learning Decision Trees, Ensemble Learning, Why Learning Works: computational Learning Theory, Statistical Learning Methods, **Statistical Learning:** Learning with complete data, Learning with Hidden Variables, Instance based Learning, Neural Networks, Kernel Machines, Case Study: Handwritten Digit Recognition, **Philosophical Foundations:** Weak AI, Strong AI, The Ethics and Risks of Developing Artificial Intelligence.

Text Book:

1. Stuart Russel, Peter Norvig: “Artificial Intelligence A Modern Approach”, 2nd Edition, Pearson Education, 2003.

Reference Books:

2. Nils J. Nilsson: “Principles of Artificial Intelligence”, Elsevier, 1980

PROTOCOLS ENGINEERING

Subject Code: 12SCS253

Hours/Week : 04

Total Hours : 52

I.A. Marks : 50

Exam Hours: 03

Exam Marks: 100

1. Introduction: Communication model, Communication Software, Communication Subsystems, Communication Protocol Definition/Representation, Formal and Informal Protocol Development Methods, Protocol Engineering Phases
2. Error Control, Flow Control: Type of Transmission Errors, Linear Block Code, Cyclic Redundancy Checks, Introduction to Flow Control, Window Protocols, Sequence Numbers, Negative Acknowledgments, Congestion Avoidance
3. Network Reference Model: Layered Architecture, Network Services and Interfaces, Protocol Functions: Encapsulation, Segmentation, Reassembly, Multiplexing, Addressing, OSI Model Layer Functions, TCP/IP Protocol Suite, Application Protocols.
4. Protocol Specification: Components of specification, Service specification, Communication Service Specification Protocol entity specification: Sender, Receiver and Channel specification, Interface specifications, Interactions, Multimedia specifications, Alternating Bit Protocol Specification, RSVP specification.
5. Protocol Specification Language (SDL): Salient Features. Communication System Description using SDL, Structure of SDL. Data types and communication paths, Examples of SDL based Protocol Specifications: Question and answer protocol, X-on-X-off protocol, Alternating bit protocol, Sliding window protocol specification, TCP protocol specification, SDL based platform for network, OSPF, BGP Multi Protocol Label Switching SDL components.
6. Protocol Verification / Validation: Protocol Verification using FSM, ABP Verification, Protocol Design Errors, Deadlocks, Unspecified Reception, Non-executable Interactions, State Ambiguities, Protocol Validation Approaches: Perturbation Technique, Reachability Analysis, Fair Reachability Graphs, Process Algebra based Validation, SDL Based Protocol Verification: ABP Verification, Liveness Properties, SDL Based Protocol Validation: ABP Validation.
7. Protocol Conformance and Performance Testing: Conformance Testing Methodology and Framework, Local and Distributed Conformance Test Architectures, Test Sequence Generation Methods: T, U, D and W methods, Distributed Architecture by Local Methods, Synchronizable Test Sequence, Conformance testing with Tree and Tabular Combined Notation (TTCN), Conformance Testing of RIP, Testing

Multimedia Systems, quality of service test architecture(QOS), Performance Test methods, SDL Based Performance Testing of TCP, OSPF, Interoperability testing, Scalability testing protocol synthesis problem

8. Protocol Synthesis and Implementation: Synthesis methods, Interactive Synthesis Algorithm, Automatic Synthesis Algorithm, Automatic Synthesis of SDL from MSC, Protocol Re-synthesis, Requirements of Protocol Implementation, Objects Based Approach To Protocol Implementation, Protocol Compilers, Code generation from Estelle, LOTOS, SDL and CVOPS.

TEXT BOOKS:

1. Pallapa Venkataram and Sunilkumar S. Manvi: Communication Protocol Engineering, PHI, 2004.

REFERENCE BOOKS:

1. Mohammed G. Gouda: Elements of Protocol Design, Wiley Student Edition, 2004.

Semester 3

Information Security

Subject Code : 12SCS31
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Information Security: Introduction; What is security? Critical characteristics of information; NSTISSC security model; Approaches to information security implementation; The Security System Development Life Cycle; Information Security Terminology.
2. Planning for Security: Introduction; Information Security Policy, Standards, and Practices; The Information Security Blue Print.
3. Security Technology: Firewalls and VPNs: Introduction, Physical design, Firewalls, Protecting Remote Connections. Intrusion Detection, Access control and Other Security Tools: Introduction; Intrusion Detection Systems (IDS); Honey Pots, Honey Nets, and Padded cell systems; Scanning and Analysis Tools; Access Control Devices.
4. Information Security maintenance: Introduction; Security Management Models; The Maintenance Model.
5. Introduction to Network Security: Attacks, Services, and Mechanisms; Security Attacks; Security Services; A model for Internetwork Security; Internet Standards and RFCs; Wireless network security.
6. Cryptography: Conventional Encryption Principles and Algorithms; Cipher Block Modes of Operation; Location of encryption devices; Key distribution; Approaches to message authentication; Secure Hash functions and HMAC; Public Key Cryptography Principles and Algorithms; Digital Signatures; Key management.
7. Authentication Applications: Kerberos, X.509 Directory Authentication Service.
8. Electronic Mail Security: Pretty Good Privacy (PGP), S/MIME.
9. IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management.
10. Web Security: Web security requirements, Secure Socket layer (SSL) and Transport layer Security (TLS), Secure Electronic Transaction (SET).
11. Software: Introduction; Software flaws; Malware; Software-based attacks; Digital Rights Management;

TEXT BOOKS:

1. Michael E. Whitman and Herbert J. Mattord: Principles of Information Security, 2nd Edition, Cengage Learning, 2005.
2. William Stallings: Network Security Essentials Applications and Standards, Person, 2000.
3. Deven N. Shah: Information Security – Principles and Practice, Wiley India, 2009.

REFERENCE BOOKS:

1. Behrouz A. Forouzan: Cryptography and Network Security, Tata McGraw-Hill, 2007.

Wireless and Cellular Networks

Subject Code : 12SCS321
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Wireless Communication Systems: Evolution of Mobile Radio Communications Mobil Radio Systems around the world examples of Wireless Communication Systems, Paging System, Cordless Telephone System. Cellular Telephone Systems, Comparison of Common Wireless Communications Systems.
2. Modern Wireless Communications Systems: Second generation (2G), Cellular Networks, evolution of 2.5G, TDMA Standards, Third Generation (3G) Wireless Networks, Wireless Local Loop (WLL) and LMDS, Wireless Local Area Networks (WLANs), Bluetooth and Personal Area Networks (PANS)
3. The Cellular Concept: System Design Fundamentals, Introduction, Frequency reuse, channel assignment strategies, handoff strategies – prioritizing handoffs, Practical Handoff considerations. Interference and system capacity, co-channel interference and system capacity, channel planning for wireless systems, adjacent channel interference, power control for reducing interference.
4. Mobile Radio Propagation: Introduction to radio wave propagation, Free space propagation model, Relating power to electric field, Reflection, Diffraction, Scattering.
5. Modulation Techniques for Mobile Radio: Frequency modulation Vs amplitude modulation, Amplitude modulation, Angle modulation, Digital Modulation, Linear Modulation techniques – Binary phases shift keying (BPSK), Differential Phase Shift Keying (DPSK), Quadrature Phase Shift Keying (QPSK), Constant envelope modulation – Binary Frequency Shift Keying, Minimum Shift Keying (MSK), Gaussian Minimum Shift Keying (GMSK).
6. Multiple Access Techniques for Wireless Communications: Introduction to Multiple access, Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Spread Spectrum Multiple Access, Space Division Multiple Access (SDMA), Packet Radio. Protocols,

Reservation Protocols – Reservation ALOHA, Packet Reservation Multiple Access (PRMA), Capacity of cellular systems.

7. Wireless Networking: Introduction, Difference between Wireless and Fixed Telephone Networks, Development of Wireless Networks, First generation, second generation, third generation.

TEXT BOOKS:

1. Theodore S Rappaport: Wireless Communications, Principles and Practice, 2nd Edition, Pearson Education Asia, 2002.

REFERENCE BOOKS:

1. William C Y Lee: Mobile Communications Engineering Theory and Applications, 2nd Edition, McGraw Hill, 1998.

2. William Stallings: Wireless Communications and Networks, Pearson Education Asia, 2002.

Storage Area Networks

Subject Code : 12SCS322

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access.

2. Intelligent Disk Subsystems: Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

3. I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage.

4. Network Attached Storage: The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system.

5. File System and NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

6. Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

7. SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective.

8. Software Components of SAN: The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

9. Management: Planning Business Continuity; Managing availability; Managing Serviceability; Capacity planning; Security considerations.

Text Book:

1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2007.

Reference Books:

1. Marc Farley: Storage Networking Fundamentals – A n Introduction to Storage Devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005.

2. Robert Spalding: “Storage Networks The Complete Reference”, Tata McGraw-Hill, 2003.

3. Richard Barker and Paul Massiglia: “Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs”, Wiley India, 2006.

Advances in Pattern Classification

Subject Code : 12SCS323

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. Introduction: Polynomial Curve Fitting, Probability Theory, Probability Distributions, Model Selection, Decision Theory, Information Theory

2. Linear Models for Regression: Linear Basis Function Models, The Bias Variance Decomposition, Bayesian Linear Regression, Bayesian Model Comparison, The Evidence Approximation, Limitations of Fixed Basis Functions

3. Linear Models for Classification: Discriminant Functions, Probabilistic Generative Models, Probabilistic Discriminative Models, The Laplace Approximation, Bayesian Logistic Regression

4. Kernel Methods: Dual Representations, Constructing Kernels, RBF Networks, Gaussian Processes, Sparse Kernel Machines: SVMs, Multiclass SVMs, Relevance Vector Machines

5. Unsupervised Learning: Introduction, Association Rules, Cluster Analysis, Self-Organizing Maps, Principal Components, Curves and Surfaces, Non-negative Matrix Factorization, Independent Component Analysis and Exploratory Projection Pursuit, Multidimensional Scaling, Nonlinear Dimension Reduction and Local Multidimensional Scaling, The Google PageRank Algorithm

6. Mixture Models and EM: Mixtures of Gaussians, An alternative view of EM, The EM Algorithm in general.

7. High-Dimensional Problems: The Curse of Dimensionality, Diagonal Linear Discriminant Analysis and Nearest Shrunken Centroids, Linear Classifiers with Quadratic Regularization, Linear Classifiers with L1 Regularization, Classification when Features are Unavailable, High-Dimensional Regression: Supervised Principal Components, Feature Assessment and the Multiple-Testing Problem.

Text Books:

1. Christopher M Bishop: Pattern Recognition and Machine Learning, Springer, 2006.
2. Trevor Hastie, Robert Tibshirani, and Jerome Friedman: The Elements of Statistical Learning, Springer, 2008.

Reference Books:

1. R. O. Duda, P. E. Hart, and D. G. Stork: Pattern Classification by 2nd edition, Wiley –Interscience , 2001.
2. Sergios Theodoridis and Konstantinos Koutroumbas: Pattern Recognition, 2nd Edition, Elsevier, 2003.

MULTI-CORE ARCHITECTURE & PROGRAMMING

Subject Code : 12SCS324
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Multi-core Architecture

Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law.

2. System Overview of Threading

Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization.

3. Fundamental Concepts of Parallel Programming

Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

4. Threading and Parallel Programming Constructs

Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features.

5. Threading APIs

Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

6. OpenMP: A Portable Solution for Threading

Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

7. Solutions to Common Parallel Programming Problems

Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

Analysis of Computer Networks

Subject Code : 12SCS331
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction: Two examples of analysis: Efficient transport of packet voice calls, Achievable throughput in an input-queuing packet switch; The importance of quantitative modeling in the Engineering of Telecommunication Networks.

2. Multiplexing: Network performance and source characterization; Stream sessions in a packet network: Delay guarantees; Elastic transfers in a packet network; Packet multiplexing over Wireless networks.

3. Stream Sessions: Deterministic Network Analysis: Events and processes in packet multiplexer models: Universal concepts; Deterministic traffic models and Network Calculus; Scheduling; Application to a packet voice example; Connection setup: The RSVP approach; Scheduling (continued).

3. Stream Sessions: Stochastic Analysis: Deterministic analysis can yield loose bounds; Stochastic traffic models; Additional notation; Performance measures; Little's theorem, Brumelle's theorem, and applications; Multiplexer analysis with stationary and ergodic traffic; The effective bandwidth approach for admission control; Application to the packet voice example; Stochastic analysis with shaped traffic; Multihop networks; Long-Range-Dependent traffic.

4. Adaptive Bandwidth Sharing for Elastic Traffic: Elastic transfers in a Network; Network parameters and performance objectives; Sharing a single link; Rate-Based Control; Window-Based Control: General Principles; TCP: The Internet's Adaptive Window Protocol; Bandwidth sharing in a Network.

TEXT BOOKS:

Data Mining & Warehousing

Subject Code : 12SCS332

No of Lecture Hrs/Week : 4

Total No of Lecture Hours : 52

IA Marks : 50

Exam hours : 3

Exam Marks : 100

1. INTRODUCTION:

What is a Data Warehouse?, A Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Data cube Technology, From Data warehousing to Data Mining, Data Mining Functionalities, Data cleaning, Data Integration and Transformation, Data Reduction.

12 HOURS.

2. DATA MINING PRIMITIVES, LANGUAGES AND SYSTEM ARCHITECTURES: Data Mining primitives, Presentation and Visualization of Discovered patterns, A Data Mining Query Language.

07 HOURS.

3 MINING ASSOCIATION RULES IN LARGE DATA BASES: Association Rule Mining Single – Dimensional Boolean Association Rules From Transactional Databases, Mining Multilevel Association Rules from Transactional Databases. 07 HOURS.

4 CLASSIFICATION AND PREDICTION: Issues regarding Classification and Prediction, classification by Decision tree induction, Bayesian classification, Classification by back propagation, Classification Based on the concepts from association rule mining. Other classification methods, prediction.

08 HOURS.

5 CLUSTER ANALYSIS: What is Cluster Analysis? Types of data in cluster Analysis: a Categorization of Major Clustering Methods, Partitioning Methods, Hierarchical methods, Density-Based Methods, Model-Based Clustering Methods: Statistical Approach, Neural Network Approach Outliner Analysis.

12 HOURS.

6 APPLICATIONS AND TRENDS IN DATA MINING: Data mining application, Data mining system Products research Prototypes, Additional Themes on Data Mining, Data Mining and Intelligent Query Answering, Trends in Data Mining. 06 HOURS.

Text Books:

1. Jiawei Michelin Kamber, "Data Mining Concepts and Techniques", Morgan Kauf Mann Publishers.

Advances in VLSI Design and Algorithms

Subject Code : 12SCS333
No of Lecture Hrs/Week : 4
Total No of Lecture Hours : 52

IA Marks : 50
Exam hours : 3
Exam Marks : 100

1. Introduction to Digital systems and VLSI: Why Design Integrated Circuits? Integrated Circuits manufacturing;

Integrated Circuit Design Techniques; IP-Based Design.

2. Fabrication and Devices: Introduction; Fabrication processes; Fabrication theory and practice; Reliability.

3. Sequential Machines: Introduction; Latches and Flip-flops; Sequential systems and clocking disciplines; Performance analysis; Clock generators; Sequential systems design, Power optimization, Design validation, Sequential testing.

4. Subsystem Design: Introduction; Combinational shifters; Adders; ALUs; Multipliers; High-density memory; Image sensors; FPGAs; PLA; Buses and networks on chips; Data paths; Subsystems as IP.

5. Architecture Design: Introduction; Hardware description languages; Register Transfer design; Pipelining; High-level synthesis; Architecture for low power; GALS systems; Architecture testing; IP components; Design methodologies; Multiprocessor system-on-Chip design.

6. Simulations: General remarks; Gate-level modeling and simulations; Switch-level modeling and simulation.

Elective – III

14SCS423 Agile Technologies

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or Technical paper.

1).Project Phase – I: 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase = III: Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be 50+50+100=200 (50 Marks for Internal Guide,50 Marks for External and 100 for Viva-Voce).

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Semester: I

Year: 2014-2015

Course Title: Advances In Operating Systems	Course Code: 14SCS11
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To learn the fundamentals of Operating Systems
- To gain knowledge on Distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols
- To gain insight on to the distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols
- To know the components and management aspects of Real time, Mobile operating Systems.

TOPICS:

MODULE I

Operating System Overview, Process description & control

Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Microsoft Windows Overview, Traditional UNIX Systems, Modern UNIX Systems, Linux, What is a Process?, Process States, Process Description, Process Control, Execution of the Operating System, Security Issues, UNIX SVR4 Process Management.

10 Hours

Module II

Threads, SMP, and Microkernel, Virtual Memory.

Processes and Threads, Symmetric Multiprocessing (SMP), Microkernels, Windows Vista Thread and SMP Management, Solaris Thread and SMP Management, Linux Process and Thread Management. Hardware and Control Structures, Operating System Software, UNIX and Solaris Memory Management, Linux Memory Management, Windows Vista Memory Management, Summary.

10 Hours

Module III

Multiprocessor and Real-Time Scheduling

Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, UNIX PreclsSl) Scheduling, Windows Vista Scheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock.

10 Hours

Module IV

Embedded Operating Systems

Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits.

10 Hours

MODULEV

Kernel Organization

Using Kernel Services, Daemons, Starting the Kernel , Control in the Machine , Modules and Device Management, MODULEOrganization, MODULEInstallation and Removal, Process and Resource Management, Running Process

Manager, Creating a new Task , IPC and Synchronization, The Scheduler , Memory Manager , The Virtual Address Space, The Page Fault Handler , File Management.

The windows NT/2000/XP kernel: Introduction, The NT kernel, Objects , Threads, Multiplication Synchronization, Traps, Interrupts and Exceptions, The NT executive , Object Manager, Process and Thread Manager , Virtual Memory Manager, I/o Manager, The cache Manager , Kernel local procedure calls and IPC, The native API, subsystems.

10 Hours

Course Outcomes:

The students should be able to:

- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system
- Learn the various resource management techniques for distributed systems
- Identify the different features of real time and mobile operating systems
- Modify existing open source kernels in terms of functionality or features used.

Text Books:

1. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013.
2. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.

Reference Books:

2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006.
3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007

Semester: I

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCS12
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.

Topics:

Module I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

Module II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

Module III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

Module IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

Module V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

LAB EXPERIMENTS

NOTE: Simulate using object oriented programming, any available cloud environment (**Eg; Amazon cloud**) and **VM ware for resource virtualization.**

1. Create a Collaborative learning environment for a particular learning topic using Google Apps. Google Drive, Google Docs and Google Slides must be used for hosting e-books, important articles and presentations respectively. The instructor must use the Google Sheets to convey the timetable for different events and for analyzing the scores for individual assignment submission.

2. Modeling and simulation Cloud computing environments, including Data Centers, Hosts and Cloudlets and perform VM provisioning using CloudSim: Design a host with two CPU cores, which receives request for hosting two VMs, such that each one requires two cores and plans to host four tasks units. More specifically, tasks t1, t2, t3 and t4 to be hosted in VM1, while t5, t6, t7, and t8 to be hosted in VM2. Implement space-shared allocation policy and time-shared allocation policy. Compare the results.

3. Model a Cloud computing environment having Data center that had 100 hosts. The hosts are to be modeled to have a CPU core (1000 MIPS), 2 GB of RAM and 1 TB of storage. Consider the workload model for this evaluation included provisioning requests for 400 VMs, with each request demanding 1 CPU core (250 MIPS), 256 MB of RAM and 1 GB of storage. Each VM hosts a *web-hosting application service*, whose CPU utilization distribution was generated according to the uniform distribution. Each instance of a webhosting service required 150,000 MIPS or about 10 minutes to complete execution assuming 100% utilization. Simulate Energy-conscious model for power consumption and power management techniques such as Dynamic Voltage and Frequency Scaling (DVFS). Initially, VMs are to be allocated according to requested parameters (4 VMs on each host). The Cloud computing architecture that is to be considered for studying energy conscious resource management techniques/policies included a data center, CloudCoordinator, and Sensor component. The CloudCoordinator and Sensor perform their usual roles. Via the attached Sensors (which are connected with every host), CloudCoordinator must periodically monitor the performance status of active VMs such as load conditions, and processing share. This real time information is to be passed to VMM, which can use it for performing appropriate resizing of VMs and application of DVFS and soft scaling. CloudCoordinator continuously has to adapt allocation of VMs by issuing VM migration commands and changing power states of nodes according to its policy and current utilization of resources.

4. Model and simulate the environment consisting of a data center with 10,000 hosts where each host was modeled to have a single CPU core (1200MIPS), 4GB of RAM memory and 2TB of storage. Consider the provisioning policy for VMs as space-shared, which allows one VM to be active in a host at a given instance of time. Make a request from the end-user (through the Datacenter Broker) for creation and instantiation of 50 VMs that had following constraints: 1024MB of physical memory, 1 CPU core and 1GB of storage. The application granularity was modeled to be composed of 300 task units, with each task unit requiring 1,440,000 million instructions (20 minutes in the simulated hosts) to be executed on a host. Minimal data transfer (300 KB) overhead can be considered for the task units (to and from the data center). After the creation of VMs, task units were submitted in small groups of 50 (one for each VM) at inter-arrival delay of 10 minutes.

5. Implement Map Reduce concept for

a. Strassen's Matrix Multiplication for a huge matrix.

b. Computing the average number of citation index a researcher has according to age among some 1 billion journal articles. Consider a network of entities and relationships between them. It is required to calculate a state of each entity on

the basis of properties of the other entities in its neighborhood. This state can represent a distance to other nodes, indication that there is a neighbor

with the certain properties, characteristic of neighborhood density and so on. A network is stored as a set of nodes and each node contains a list of adjacent node IDs. Mapper emits messages for each node using ID of the adjacent node as a key. Reducer must re compute state and rewrite node with the new state. Implement this scenario.

Course Outcomes:

The students should be able to:

- Demonstrate and experiment simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.
- Familiarize with Open Stack.

Text Book:

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.
2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Course Title: Advances in Database Management Systems	Course Code: 14SCS13
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To acquire knowledge on parallel and distributed databases and its applications.
- To study the usage and applications of Object Oriented database
- To understand the basic concepts, principles of intelligent databases.
- To understand the advanced topics of data warehousing and mining .
- To learn emerging and advanced data models
- To acquire inquisitive attitude towards research topics in databases.

Topics:**MODULE I**

Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations.

Overview of Object-Oriented Concepts – Objects, Encapsulation, Polymorphism, Type and class hierarchies etc.

10 Hours

Module II

Object and Object-Relational Databases: Object Oriented Concepts: – Objects, complex objects; Object model of ODMG, Object definition language, ODL, Object Query Language, OQL, Overview of C++ language binding; Conceptual design of Object database. Overview of object relational features of: SQL, Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model.

10 Hours

Module III

Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.

10 Hours

Module IV

Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Window queries in SQL; Finding answers quickly; Implementation techniques for OLAP; Data Warehousing; Views and Decision support, View materialization, Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks.

10 Hours

Module V

Enhanced Data Models for Some Advanced Applications: Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts. More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.

10 Hours

LABORATORY WORK:

(The following tasks can be implemented on Oracle or any other suitable RDBMS with support for Object features)

1. Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.
2. Develop a database application to demonstrate the representation of multivalued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.
3. Design and develop a suitable Student Database application. One of the attributes to be maintained is the attendance of a student in each subject for which he/she has enrolled. Using TRIGGERS, write active rules to do the following:
 - a. Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.
 - b. Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.
4. Design, develop, and execute a program in a language of your choice to implement any one algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

- Select the appropriate high performance database like parallel and distributed database
- Model and represent the real world data using object oriented database
- Embed the rule set in the database to implement data warehousing of mining
- Choose and design database for recent applications database for better interoperability

TEXT BOOKS:

2. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2013.

REFERENCE BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan: Database System Concepts, 6th Edition, McGraw Hill, 2010.

Course Title: Multi-Core Architecture and Programming	Course Code: 14SCS14
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To appreciate the need for parallel processing
- To expose the students to the problems related to multiprocessing
- To understand the different types of multicore architectures
- To understand the concepts of multi threading and OPENMP.

Topics:**MODULE I**

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization. **10 Hours**

Module II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours**MODULE III**

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours**MODULE IV**

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared

Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

Course Outcomes:

The students should be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Solve the issues related to multiprocessing and suggest solutions.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

Course Title: Advances in Digital Image Processing	Course Code: 14SCS151
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To understand the image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- To understand the image segmentation and representation techniques.
- To understand how image are analyzed to extract features of interest.
- To introduce the concepts of image registration and image fusion.
- To analyze the constraints in image processing when dealing with 3D data sets.

Topics:**MODULE I**

Introduction: What is Digital Image Processing, Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System. **Digital Image Fundamentals:** Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Spatial and Gray-level Resolution, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.

10 Hours**MODULE II**

Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods. **Image Enhancement in the Frequency Domain:** Introduction to the Fourier Transform and the Frequency Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency-Domain Filters, Homomorphic Filtering.

10 Hours**MODULE III**

Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering, Constrained Least Square Filtering, Geometric Mean Filter.

10 Hours**MODULE IV**

Color Fundamentals: Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression. **Wavelets and Multiresolution Processing:** Image Pyramids, Subband coding, The Haar Transform, Multiresolution Expansions, Wavelet Transforms in one Dimension, Fast Wavelet Transform, Wavelet Transforms in Two Dimensions, Wavelet Packets. **Image Compression:** Fundamentals, Image Compression Models, Error-free (Lossless) compression, Lossy Compression.

10 Hours**MODULE V:**

Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. **Image Segmentation:** Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation.

10 Hours

Course Outcomes:

The students will be able to:

- Understand image formation and the role human visual system plays in perception of gray and color image data.
- Apply image processing techniques in both the spatial and frequency (Fourier) domains.
- Design image analysis techniques in the form of image segmentation and to evaluate the Methodologies for segmentation.
- Conduct independent study and analysis of feature extraction techniques.
- Understand the concepts of image registration and image fusion.
- Analyze the constraints in image processing when dealing with 3D data sets and to apply image
- Apply algorithms in practical applications.

TEXT BOOKS

1. Rafael C Gonzalez and Richard E. Woods: Digital Image Processing, PHI 2nd Edition 2005

REFERENCES:

Semester: I

Year: 2014-2015

Course Title: Advances in Storage Area Networks	Course Code: 14SCS152
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre's maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems

Topics:

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

10 Hours

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

10 Hours

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management,

Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

The students should be able to:

- Identify the need for performance evaluation and the metrics used for it
- Apply the techniques used for data maintenance.
- Realize storage virtualization concept,
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

1. Ulf Troppens, Rainer Erkens and Wolfgang Muller: Storage Networks Explained, Wiley India, 2013.

Reference Books:

Course Title: Embedded Computing Systems	Course Code: 14SCS153
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COUR
SE**OBJECTIVES**

- Provide a general overview of Embedded Systems
- Show current statistics of Embedded Systems
- Design a complete microprocessor-based hardware system
- Design, code, compile, and test real-time software
- Integrate a fully functional system including hardware and software
- Gain the ability to make intelligent choices between hardware/software tradeoffs.

Topics:**MODULE I**

Introduction to embedded systems: Embedded systems, Processor embedded into a system, Embedded hardware units and device in a system, Embedded software in a system, Examples of embedded systems, Design process in embedded system, Formalization of system design, Design process and design examples, Classification of embedded systems, skills required for an embedded system designer.

7 Hours**MODULE II**

Devices and communication buses for devices network :IO types and example, Serial communication devices, Parallel device ports, Sophisticated interfacing features in device ports, Wireless devices, Timer and counting devices, Watchdog timer, Real time clock, Networked embedded systems, Serial bus communication protocols, Parallel bus device protocols-parallel communication internet using ISA, PCI, PCI-X and advanced buses, Internet enabled systems-network protocols, Wireless and mobile system protocols.

13 Hours**MODULE III**

Device drivers and interrupts and service mechanism: Programming-I/O busy-wait approach without interrupt service mechanism, ISR concept, Interrupt sources, Interrupt servicing (Handling) Mechanism, Multiple interrupts, Context and the periods for context switching, interrupt latency and deadline, Classification of processors interrupt service mechanism from Context-saving angle, Direct memory access, Device driver programming.

10 Hours**MODULE IV**

Interprocesses communication and synchronization of processes, Threads and tasks: Multiple process in an application, Multiple threads in an application, Tasks, Task states, Task and Data, Clear-cut distinction between functions. ISRS and tasks by their characteristics, concept and semaphores, Shared data, Inter-process communication, Signal function, Semaphore functions, Message Queue functions, Mailbox functions, Pipe functions, Socket functions, RPC functions.

10 Hours**MODULE V**

Real-time operating systems: OS Services, Process management, Timer functions, Event functions, Memory management, Device, file and IO subsystems management, Interrupt routines in RTOS environment and handling of interrupt source calls, Real-time operating systems, Basic design using an RTOS, RTOS task scheduling models, interrupt latency and response of the tasks as performance metrics, OS security issues. **Introduction to embedded**

software development process and tools, Host and target machines, Linking and location software.

10 Hours

Course Outcomes:

The students should be able to:

- Knowledge to distinguish the characteristics of embedded computer systems.
- Ability examines the various vulnerabilities of embedded computer systems.
- Ability to design embedded systems.
- Awareness of the changing landscape in embedded systems

Text Books:

1. **Raj Kamal**, “Embedded Systems: Architecture, Programming, and Design” 2nd edition , Tata McGraw hill-2013

Chapters: Chapter 1.1 to 1.5, 1.8 to 1.12, Chapter 3, 4, 7, 8 and 13.1 to 13.3.

References:

2. **Marilyn Wolf** ,“Computer as Components, Principles of Embedded Computing System Design” 3rd edition , Elsevier-2014 .

Course Title: Advances in Computer Graphics	Course Code: 14SCS154
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- Learn basic and fundamental computer graphics techniques.
- Learn image synthesis techniques;
- Examine applications of modeling, design and visualization.
- Learn different color modeling and computer animation
- Learn hierarchical modeling and graphing file formats.

Topics:**MODULE I**

Three-Dimensional Object Representations: Polyhedra, OpenGL Polyhedron Functions, Curved Surfaces, Quadric Surfaces, Super quadrics, OpenGL Quadric-Surface and Cubic-Surface Functions, Blobby Objects, Spline Representations, Cubic-Spline Interpolation Methods, Bezier Spline Curves, Bzier Surfaces B-Spline Curves, B-Spline Surfaces, Beta- Splines, Retional Splines, Conversion Between Spline Representations, Displaying Spline Curves and rfaces, OpenGL Approximation-Spline Functions, Sweep Representations, Constructive Solid –Geometry Method, Octrees, BSP Trees, Fractal-Geometry Methods, Shape Grammars and Others Procedural Methods, Particle Systems, Physically Based Modeling, Visualization Of Data Sets.

10 Hours**MODULE II**

Visible-Surface Detection Methods: Classification Of Visible –Surface Detection Algorithms, Back-Face Method, Depth-Buffer Method, A-Buffer Method, Scan-Line Method, BSP-Tree Method, Area-Subdivision Method, Octree Methods, Ray-Casting Method, Comparison of Visibility –Detection Methods, Curved Surfaces, Wire-Frame Visibility –Detection Functions.

10 Hours**MODULE III**

Illumination Models and Surface- Rendering Methods: Light Sources, Surface Lighting Effects, Basic Illumination Models, Transparent Surfaces, Atmospheric Effects, Shadows, Camera parameters, Displaying light intensities, Halftone patterns and dithering techniques, polygon rendering methods, ray-tracing methods, Radiosity lighting model, Environment mapping, Photon mapping, Adding surface details, Modeling surface details with polygons, Texture mapping, Bump mapping, OpenGL Illumination and surface-rendering functions, openGL texture functions.

10 Hours**MODULE IV**

Color models, color applications and Computer animation: Properties of light, Color models, Standard primaries and the chromaticity diagram, The RGB color model, The YIQ and related color models, The CMY and CMYK color models, The HSV color model, The HLS color model, Color Selection and applications. Raster methods for computer animation, Design of animations sequences, Traditional animation techniques,

General computer-animation functions, Computer-animation languages, Key-frame systems, Motion specification, Articulated figure animation, Periodic motions, OpenGL animation procedures.

10 Hours

MODULE V

Hierarchical modeling and Graphics file formats: Basic modeling concepts, Modeling packages, General hierarchical modeling methods, Hierarchical modeling using OpenGL display list, Image-File configurations, Color-reduction methods, File-compression techniques, Composition of the major file formats.

10 Hours

COURSE OUTCOMES:

The students are able to :

- Represent and implement images and objects using 3D representation and OpenGL methodologies.
- Design develop surface detection using various detection methods
- Choose various illumination models for provides effective standards of objects.
- Design of develop effective computer animations.

Text Books:

1. Computer Graphics with OpenGL-Hearn Baker 4rd edition, Pearson publication.2010 (Chapter 8,9,10.12.13.14,15)
2. James D Foley,Andries van dam,Steven K Feiner,John F Hughes, Computer graphics, Pearson Education 3rd edition, 2013

Reference Books:

1. Edward Angel: Interactive Computer graphics a top-down approach with OpenGL, Addison Wesley, 6th edition 2012
2. Advanced graphics programming using OpenGL: TomMcReynolds-David Blythe. Elesvier.MK, 2005

Semester: I

Year: 2014-2015

Course Title: Advances in Operating Systems Laboratory	Course Code: 14SCS16
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES:

- To implement the shell of Operating System.
- To implement distributed operating system concepts.
- To implement virus detection techniques.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/ any equivalent language or tool with suitable platform.

1. Design and Develop a shell that should support at least 20 commands.
2. Design and develop a program to implement lazy buddy system algorithm.
3. Write a multi-class multithreaded program that simulates multiple sleeping barbers, all in one barbershop that has a finite number of chairs in the waiting room. Each customer is instantiated from a single customer class; each barber is instantiated from a single Barber class.
4. Use ECOS operating system to develop a program for controlling accessing to a pool of resources using mutexes and condition variables.
5. Design and develop a program to realize the virus classification, such as boot sector infector, file infector and macro virus.

Course Outcomes:

The students should be able to:

- Demonstrate the shell.
- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system.
- Understand the various virus detection techniques.

Course Title: Managing Big Data	Course Code: 14SCS21
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To Understand big data for business intelligence
- To Learn business case studies for big data analytics
- To Understand Nosql big data management
- To manage Big data without SQL
- To understanding map-reduce analytics using Hadoop and related tools

TOPICS:**MODULE I**

UNDERSTANDING BIG DATA 10 Hours What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics

MODULE II

NOSQL DATA MANAGEMENT 10 Hours Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schemaless databases – materialized views – distribution models – sharding – version – Mapreduce – partitioning and combining – composing map-reduce calculations

MODULE III**BASICS OF HADOOP****10 Hours**

Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures

MODULE IV

MAPREDUCE APPLICATIONS 10 Hours MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats

MODULE V

HADOOP RELATED TOOLS 10 Hours Hbase – data model and implementations – Hbase clients – Hbase examples – praxis. Cassandra – Cassandra data model – cassandra examples – cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

LAB Experiments**Exercise 1 --- HDFS**

Start by reviewing HDFS. You will find that its composition is similar to your local Linux file system. You will use the `hadoop fs` command when interacting with HDFS.

1. Review the commands available for the Hadoop Distributed File System:
2. Copy file `foo.txt` from local disk to the user's directory in HDFS
3. Get a directory listing of the user's home directory in HDFS
4. Get a directory listing of the HDFS root directory
5. Display the contents of the HDFS file `user/fred/bar.txt`
6. Move that file to the local disk, named as `baz.txt`
7. Create a directory called `input` under the user's home directory
8. Delete the directory `input` and all its contents
9. Verify the copy by listing the directory contents in HDFS:

Exercise 2 --- MapReduce

1. Create a JOB and submit to cluster
2. Track the job information
3. Terminate the job
4. Counters in MR Jobs with example
5. Map only Jobs and generic map examples
6. Distributed cache example
7. Combiners, Secondary sorting and Job chain examples

Exercise 3 --- MapReduce (Programs)

Using movie lens data

1. List all the movies and the number of ratings
2. List all the users and the number of ratings they have done for a movie
3. List all the Movie IDs which have been rated (Movie Id with at least one user rating it)
4. List all the Users who have rated the movies (Users who have rated at least one movie)
5. List of all the User with the max, min, average ratings they have given against any movie
6. List all the Movies with the max, min, average ratings given by any user

Exercise4 – Extract facts using Hive

Hive allows for the manipulation of data in HDFS using a variant of SQL. This makes it excellent for transforming and consolidating data for load into a relational database. In this exercise you will use HiveQL to filter and aggregate click data to build facts about user's movie preferences. The query results will be saved in a staging table used to populate the Oracle Database.

The `moveapp_log_json` table contains an activity column. Activity states are as follows:

1. RATE_MOVIE
2. COMPLETED_MOVIE
3. PAUSE_MOVIE
4. START_MOVIE
5. BROWSE_MOVIE
6. LIST_MOVIE
7. SEARCH_MOVIE
8. LOGIN
9. LOGOUT
10. INCOMPLETE_MOVIE

```

hive> SELECT * FROM movieapp_log_json LIMIT 5;
hive> drop table movieapp_log_json;
hive> CREATE EXTERNAL TABLE movieapp_log_json (
custId INT,
movieId INT,
genreId INT,
time STRING,
recommended STRING,
activity INT,
rating INT,
price FLOAT
)
ROW FORMAT SERDE 'org.apache.hadoop.hive.contrib.serde2.JsonSerde'
LOCATION '/user/oracle/moviework/applog/';

hive> SELECT * FROM movieapp_log_json LIMIT 20;

hive> SELECT MIN(time), MAX(time) FROM movieapp_log_json

```

1. PURCHASE_MOVIE

Hive maps queries into Map Reduce jobs, simplifying the process of querying large datasets in HDFS. HiveQL statements can be mapped to phases of the Map Reduce framework. As illustrated in the following figure, selection and transformation operations occur in map tasks, while aggregation is handled by reducers. Join operations are flexible: they can be performed in the reducer or mappers depending on the size of the leftmost table.

1. Write a query to select only those clicks which correspond to starting, browsing, completing, or purchasing movies. Use a CASE statement to transform the RECOMMENDED column into integers where 'Y' is 1 and 'N' is 0. Also, ensure GENREID is not null. Only include the first 25 rows.
2. Write a query to select the customer ID, movie ID, recommended state and most recent rating for each movie.
3. Load the results of the previous two queries into a staging table. First, create the staging table:
4. Next, load the results of the queries into the staging table.

Exercise 5 Extract sessions using Pig

While the SQL semantics of HiveQL are useful for aggregation and projection, some analysis is better described as the flow of data through a series of sequential operations. For these situations, Pig Latin provides a convenient way of implementing data flows over data stored in HDFS. Pig Latin statements are translated into a sequence of Map Reduce jobs on the execution of any STORE or DUMP command. Job construction is optimized to exploit as much parallelism as possible, and much like Hive, temporary storage is used to hold intermediate results. As with Hive, aggregation occurs largely in the reduce

tasks. Map tasks handle Pig's FOREACH and LOAD, and GENERATE statements. The EXPLAIN command will show the execution plan for any Pig Latin script. As of Pig 0.10, the ILLUSTRATE command will provide sample results for each stage of the execution plan.

In this exercise you will learn basic Pig Latin semantics and about the fundamental types in Pig Latin, Data Bags and Tuples.

1. Start the Grunt shell and execute the following statements to set up a dataflow with the click stream data. Note: Pig Latin statements are assembled into Map Reduce jobs which are launched at execution of a DUMP or STORE statement.
2. Group the log sample by movie and dump the resulting bag.

3. Add a GROUP BY statement to the sessionize.pig script to process the click stream data into user sessions.

Course Outcomes:

The students should be able to:

- Describe big data and use cases from selected business domains
- Explain NoSQL big data management
- Install, configure, and run Hadoop and HDFS
- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Course Title: Advances in Computer Networks	Course Code: 14SCS22
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To become familiar with the basics of Computer Networks
- To understand various Network architectures
- Concepts of fundamental protocols
- To understand the network traffic, congestion, controlling and resource allocation.

Topics:**MODULE I****Foundation**

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4 10 Hours

MODULE II**Internetworking- I**

Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2, 10 Hours

MODULE III**Internetworking- II**

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP

Chapter 3.3, 4.1.1,4.1.3 **T2:Chapter 13.1 to 13.18 , Ch 18. T1: 10 Hours**

MODULE IV**End-to-End Protocols**

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3 10 Hours

MODULE V**Congestion Control and Resource Allocation**

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System(DNS),Electronic Mail(SMTP,POP,IMAP,MIME),World Wide Web(HTTP),Network Management(SNMP) .

T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8 10 Hours

Laboratory Work:

PART A: Implement the following using C/C++:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP
3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

Course Outcomes:

The students should be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Text books:

Course Title: Advanced Algorithms	Course Code: 14SCS23
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To study network flow and linear programming problems.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.

Topics:**MODULE I**

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours**MODULE II**

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours**MODULE III**

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours**MODULE IV**

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours**MODULE V**

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007.

Semester: II

Year: 2014-2015

Course Title: Artificial Intelligence and Agent Technology	Course Code: 14SCS24
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Apply a given AI technique to a given concrete problem
- To Implement non-trivial AI techniques in a relatively large system
- To understand uncertainty and Problem solving techniques.
- To understand various symbolic knowledge representation to specify domains and reasoning tasks of a situated software agent.
- To understand different logical systems for inference over formal domain representations, and trace how a particular inference algorithm works on a given problem specification.
- To understand various learning techniques and agent technology.

TOPICS:

MODULE I

What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique?, The Level of the model, Criteria for success, some general references, One final word and beyond.

Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems. **Intelligent Agents:** Agents and Environments, The nature of environments, The structure of agents.

Text Book 1: Chapter 1 & 2

Text Book 2: Chapter 2

10 Hours

MODULE II

Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis.

Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem.

Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction.

Logical Agents: Knowledge –based agents, the Wumpus world, Logic-Propositional logic, Propositional theorem proving, Effective propositional model checking, Agents based on propositional logic.

Text Book 1: Chapter 3, 4 & 5 Text Book 2: Chapter 6

10 Hours

MODULE III

Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search.

Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic.

Quantifying Uncertainty: Acting under uncertainty, Basic probability notation, Inference using full joint distributions, Independence, Bayes' rule and its use, The Wumpus world revisited.

Text Book 1: Chapter 7 & 8 Text Book 2: Chapter 13

10Hours

MODULE IV

Weak Slot-and-filter structures: Semantic Nets, Frames.

Strong slot-and –filler structures: Conceptual dependency, scripts, CYC.

Adversarial Search: Games, Optimal Decision in Games, Alpha-Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-Of-The-Art Game Programs, Alternative Approaches, Summary

Text Book 1: Chapter 9 & 10 Text Book 2: Chapter 5

10 Hours

MODULE V

Learning From examples: Forms of learning, Supervised learning, Learning decision trees, Evaluating and choosing the best hypothesis, The theory of learning ,PAC, Regression and Classification with linear models, Nonparametric models, Support vector machines, Ensemble learning.

Learning Probabilistic Models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm.

Text Book 2: Chapter 18 & 20

10 Hours

COURSE OUTCOMES:

The students are able to:

- Design intelligent agents for problem solving, reasoning, planning, decision making, and learning. specific design and performance constraints, and when needed, design variants of existing algorithms.
- Apply AI technique on current applications.
- Problem solving, knowledge representation, reasoning, and learning.

Text Books.

1. Elaine Rich, Kevin Knight, Shivashanka B Nair: Artificial Intelligence, Tata McGraw Hill 3rd edition. 2013
2. Stuart Russel, Peter Norvig: Artificial Intelligence A Modern Approach, Pearson 3rd edition 2013.

Reference Books:

3. Nils J. Nilsson: "Principles of Artificial Intelligence", Elsevier, ISBN-13: 9780934613101

Semester: II

Year: 2014-2015

Course Title: Web Services	Course Code: 14SCS251
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To provide an in-depth knowledge of Web Services.
- To understand the fundamental concepts of Web services.
- To understand the fundamental concepts of WSDL Web Services.
- To design Web service Architecture.
- To Study Building Blocks of Web services.

TOPICS:

MODULE I

Middleware: Understanding the middle ware, RPC and Related Middle ware, TP Monitors, Object Brokers, Message-Oriented Middleware. **10 Hours**

MODULE II

Web Services: Web Services Technologies, Web Services Architecture. **10 Hours**

MODULE III

Basic Web Services Technology: WSDL Web Services Description Language, UDDI Universal Description Discovery and Integration, Web Services at work interactions between the Specifications, Related Standards. **10 Hours**

MODULE IV

Service Coordination Protocols: Infrastructure for Coordination Protocols, WS-Coordination, WS-Transaction, Rosetta Net and Other Standards Related to Coordination Protocols. **10 Hours**

MODULE V

Service Composition: Basic of Service Composition, A New Chance of Success for Composition, Services Composition Models, Dependencies between Coordination and Composition, BPEL: Business Process Execution Language for Web Services, Outlook, Applicability of the Web Services, Web services as a Problem and a Solution : AN Example. **10 Hours**

Course Outcomes:

The students should be able to:

- Bind and unbind services in UDDI.
- Develop WSDL document
- Implement web service client to call public service.
- Implement a service and exposing it as public service.

Text Books:

1. Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju: Web Services(Concepts ,Architectures and Applications), Springer International Edition 2009.

Course Title: Information And Network Security	Course Code: 14SCS252
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology

TOPICS:**MODULE I****Classical Encryption Techniques**

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad. **Block Ciphers and the data encryption standard:** Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours**MODULE II**

Public-Key Cryptography and RSA: Principles of public-key cryptosystems, Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems, public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours**MODULE III**

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure .**User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours**MODULE IV**

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, . **Web Security Considerations:** Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer:** SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic

Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify And Finished Messages, Cryptographic Computations, Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.

10 Hours

Course Outcomes:

The students be able to

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition. 2013

References

1. V k Pachghare: Cryptography and Information Security, PHE ,2013.

Semester: II

Year: 2014-2015

Course Title : Pattern Recognition	Course Code: 14SCS253
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To study the mathematical morphology necessary for Pattern recognition.
- To introduce the student to various Pattern recognition techniques.
- To study the Representation and description and feature extraction.
- To study the principles of decision trees and clustering in pattern recognition.

TOPICS:

MODULE I

Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems.

10 Hours

MODULE II

Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation.

10 Hours

MODULE III

Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, comparison with NNC, Naive Bayes classifier, Bayesian belief network.

10 Hours

MODULE IV

Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over-fitting & Pruning, Examples.

10 Hours

MODULE V

Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards, Partitional (Forgy's, k-means, Iso-data), clustering large data sets, examples.

10 Hours

COURSE OUTCOMES:

Upon Completion of the course, the students will be able to

- Develop and analyze decision trees.
- Design the nearest neighbor classifier.
- Develop algorithms for Pattern Recognition.

Text Books:

1. Pattern Recognition (An Introduction) , V Susheela Devi, M Narsimha Murthy, Universities Press, ISBN 978-81-7371-725-3,2011.
2. Pattern Recognition & Image Analysis, Earl Gose, Richard Johnsonbaugh, Steve Jost. PHI ISBN-81-203-1484-0, 1996.

Course Title: Optical Networks	Course Code: 14SCS254
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors -
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM

Topics:**MODULE I**

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer, Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

10 Hours**MODULE II****WDM Network Elements**

Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations.

10 Hours**MODULE III****Control and Management**

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours**MODULE IV****Basic Concepts, Protection in SONET/SDH:**

Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1: N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design:

Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum **Load Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES:

The students will be able to:

- Gain Knowledge on fundamentals of optical network.
- Explore optical network architectures ranging from optical access networks to backbone optical transport networks.
- Choose approaches and methodologies of optical network for design effective optimization;
- Apply Techniques of optical network survivability.
- Gain knowledge on Problem solving skills and critical thinking in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Semester: II

Year: 2014-2015

Course Title: Advanced Algorithms Laboratory	Course Code: 14SCS26
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES

- To implement the graph search algorithms.
- To implement the string matching algorithms.
- To implement the modular linear equation algorithms.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/any equivalent tool/language by adapting exception handling technique wherever it is suitable.

1. Design, develop, and write a program to implement the Bellman-Ford algorithm and determine its performance. Give its applications.
2. Design, develop, and write a program to implement a Monte Carlo algorithm to test the **primality** of a given integer and determine its performance.
3. Design, develop, and write a program to solve string matching problem using naïve approach and the KMP algorithm. Compare their performances.
4. Design, develop, and write a program to solve String matching problem using Finite Automata and determine its performance.
5. Design, develop, and write a program to solve String matching problem using Robin Karp algorithm and determine its performance.

Course Outcomes:

Upon completion of the course, the students will be able to

- Design and apply graph search algorithms.
- Design and implement string matching algorithms.
- Design modular linear equation algorithms.

Course Title: Machine Learning Techniques	Course Code: 14SCS41
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To understand the basic concepts of learning and decision trees.
- To understand the neural networks and genetic algorithms
- To understand the Bayesian techniques
- To understand the instant based learning
- To understand the analytical learning and reinforced learning

TOPICS:**MODULE I****INTRODUCTION, CONCEPT LEARNING AND DECISION TREES**

Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search. **10 Hrs**

MODULE II**NEURAL NETWORKS AND GENETIC ALGORITHMS**

Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning. **10 Hrs**

MODULE III**BAYESIAN AND COMPUTATIONAL LEARNING**

Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model. **10 Hrs**

MODULE IV**INSTANT BASED LEARNING AND LEARNING SET OF RULES**

K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions – Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution **10 Hrs**

MODULE V**ANALYTICAL LEARNING AND REINFORCED LEARNING**

Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning **10 Hrs**

LABORATORY WORK

(The following tasks can be implemented in a language of your choice or any tools available)

- 1) Implement the CANDIDATE – ELIMINATION algorithm. Show how it is used to learn from training examples and hypothesize new instances in Version Space.
- 2) Implement the FIND–S algorithm. Show how it can be used to classify new instances of target concepts. Run the experiments to deduce instances and hypothesis consistently.

- 3) Implement the ID3 algorithm for learning Boolean-valued functions for classifying the training examples by searching through the space of a Decision Tree.
- 4) Design and implement the Back-propagation algorithm by applying it to a learning task involving an application like FACE RECOGNITION.
- 5) Design and implement Naïve Bayes Algorithm for learning and classifying TEXT DOCUMENTS.

COURSE OUTCOMES:

On Completion of the course, the students will be able to

- Choose the learning techniques with this basic knowledge.
- Apply effectively neural networks and genetic algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.
- Choose and differentiate reinforcement and analytical learning techniques

TEXT BOOK:

1. Tom M. Mitchell, “Machine Learning”, McGraw-Hill Education (INDIAN EDITION), 2013.

REFERENCES:

2. Ethem Alpaydin, “Introduction to Machine Learning”, 2nd Ed., PHI Learning Pvt. Ltd., 2013.

Course Title: Computer Vision	Course Code: 14SCS421
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To review image processing techniques for computer vision
- To understand shape and region analysis
- To understand Hough Transform and its applications to detect lines, circles, ellipses
- To understand three-dimensional image analysis techniques
- To understand motion analysis
- To study some applications of computer vision algorithms

TOPICS:**MODULE I**

CAMERAS: Pinhole Cameras, **Radiometry – Measuring Light:** Light in Space, Light Surfaces, Important Special Cases, **Sources, Shadows, And Shading:** Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, **Color:** The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.

10 Hours**MODULE II**

Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, **Edge Detection:** Noise, Estimating Derivatives, Detecting Edges, **Texture:** Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.

10 Hours**MODULE III**

The Geometry of Multiple Views: Two Views, **Stereopsis:** Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, **Segmentation by Clustering:** What Is Segmentation?, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,

10 Hours**MODULE IV**

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, **Segmentation and Fitting Using Probabilistic Methods:** Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, **Tracking With Linear Dynamic Models:** Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.

10 Hours**MODULE V**

Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, **Geometric Camera Calibration:** Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into

Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, **Model- Based Vision:** Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment. **10 Hours**

Course Outcomes:

Upon completion of the course, the students will be able to

- Implement fundamental image processing techniques required for computer vision
- Perform shape analysis
- Implement boundary tracking techniques
- Apply chain codes and other region descriptors
- Apply Hough Transform for line, circle, and ellipse detections.
- Apply 3D vision techniques.
- Implement motion related techniques.
- Develop applications using computer vision techniques.

4. E. R. Davies: Computer and Machine Vision – Theory, Algorithms and Practicalities, Elsevier (Academic Press), 4th edition, 2013.

Course Title: Business Intelligence And Its Applications	Course Code: 14SCS422
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Implement the key elements of a successful business intelligence (BI) program
- To Apply a BI meta model that turns outcomes into actions
- To Extract and transform data from an operational data to a data business data
- To Exploit business analytics and performance measurement tools

TOPICS:**MODULE I**

Development Steps, BI Definitions, BI Decision Support Initiatives, Development Approaches, Parallel Development Tracks, BI Project Team Structure, Business Justification, Business Divers, Business Analysis Issues, Cost – Benefit Analysis, Risk Assessment, Business Case Assessment Activities, Roles Involved In These Activities, Risks Of Not Performing Step, Hardware, Middleware, DBMS Platform, Non Technical Infrastructure Evaluation

10 Hours**MODULE II**

Managing The BI Project, Defining And Planning The BI Project, Project Planning Activities, Roles And Risks Involved In These Activities, General Business Requirement, Project Specific Requirements, Interviewing Process

10 Hours**MODULE III**

Differences in Database Design Philosophies, Logical Database Design, Physical Database Design, Activities, Roles And Risks Involved In These Activities, Incremental Rollout, Security Management, Database Backup And Recovery

10 Hours**MODULE IV**

Growth Management, Application Release Concept, Post Implementation Reviews, Release Evaluation Activities, The Information Asset and Data Valuation, Actionable Knowledge – ROI, BI Applications, The Intelligence Dashboard

10 Hours**MODULE V**

Business View of Information technology Applications: Business Enterprise excellence, Key purpose of using IT, Type of digital data, basics of enterprise reporting, BI road ahead.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- know the complete life cycle of BI/Analytical development
- Understand the technology and processes associated with Business Intelligence framework

- Given a business scenario, identify the metrics, indicators and make recommendations to achieve the business goal.

Text Books:

1. Larissa T Moss and ShakuAtre – Business Intelligence Roadmap : The Complete Project Lifecycle for Decision Support Applications, Addison Wesley Information Technology Series, 2003.
2. R N Prasad, SeemaAcharya – Fundamentals of Business Analytics , Wiley India, 2011.

Reference Books:

3. David Loshin - Business Intelligence: The Savvy Manager's Guide, Publisher: Morgan Kaufmann, ISBN 1-55860-196-4.
4. Brian Larson - Delivering Business Intelligence with Microsoft SQL Server 2005, McGraw Hill, 2006.
5. Lynn Langit - Foundations of SQL Server 2008 Business Intelligence –Apress, ISBN13: 978-1-4302-3324-4, 2011

Course Title: Agile Technologies	Course Code: 14SCS423
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To understand how an iterative, incremental development process leads to faster delivery of more useful software
- To understand the essence of agile development methods
- To understand the principles and practices of extreme programming
- To understand the roles of prototyping in the software process
- To understand the concept of Mastering Agility

TOPICS:

MODULE I

Why Agile?: Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility, **How to Be Agile?:** Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor **10 Hours**

MODULE II

Understanding XP: The XP Lifecycle, The XP Team, XP Concepts, **Adopting XP:** Is XP Right for Us?, Go!, Assess Your Agility **10 Hours**

MODULE III

Practicing XP:

Thinking: Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, **Collaborating:** Trust, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting, **Releasing:** "Done Done", No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. **Planning:** Vision, Release Planning, The Planning Game, Risk Management, Iteration Planning, Slack, Stories, Estimating. **Developing:** Incremental requirements, Customer Tests, Test-Driven Development, Refactoring, Simple Design, Incremental Design and Architecture, Spike Solutions, Performance Optimization, Exploratory Testing

10 Hours

MODULE IV

Mastering Agility

Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading, **Improve the Process:** Understand Your Project, Tune and Adapt, Break the Rules, **Rely on People :** Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People, **Eliminate Waste :** Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput

10 Hours

MODULE V

Deliver Value: Exploit Your Agility, Only Releasable Code Has Value, Deliver Business Results, Deliver Frequently, **Seek Technical Excellence** :Software Doesn't Exist, Design Is for Understanding, Design Trade-offs, Quality with a Name, Great Design, Universal Design Principles, Principles in Practice, Pursue Mastery

10 Hours

COURSE OUTCOMES

Students should be able to

- Understand The XP Lifecycle, XP Concepts, Adopting XP
- Work on Pair Programming, Root-Cause Analysis, Retrospectives, Planning, Incremental Requirements, Customer Tests
- Implement Concepts to Eliminate Waste

Text Books:

1. **The Art of Agile Development** (Pragmatic guide to agile software development), James shore, Chromatic, O'Reilly Media, Shroff Publishers & Distributors, 2007

Reference Books:

1. Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Prentice Hall; 1st edition, 2002
- 2., "Agile and Iterative Development A Manger's Guide", Craig Larman Pearson Education, First Edition, India, 2004.

Course Title: Wireless Networks And Mobile Computing	Course Code: 14SCS424
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To introduce the concepts of wireless communication.
- To understand various propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication.
- To understand CDMA, GSM, Mobile IP, Wimax
- To understand Different Mobile OS
- To learn various Markup Languages
- CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns

TOPICS:

MODULE I

Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. **Wireless Networks :** Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.

10 Hours

MODULE II

Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6.

10 Hours

MODULE III

Mobile OS and Computing Environment: Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux and Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators.

10 Hours

MODULE IV

Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.

10 Hours

MODULE V

J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.

10 Hours

COURSE OUTCOMES:

The student should be able to:

- Work on state of art techniques in wireless communication.
- Explore CDMA, GSM, Mobile IP, WiMax
- Work on Different Mobile OS
- Develop program for CLDC, MIDP let model and security concerns

TEXT BOOKS:

MANAGING BIG DATA [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - II			
Subject Code	16LNI422 / 16SCE21 / 16SCN24 / 16SCS21 / 16SIT41 / 16SSE422	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define big data for business intelligence • Analyze business case studies for big data analytics • Explain managing of Big data Without SQL • Develop map-reduce analytics using Hadoop and related tools 			
Module -1			Teaching Hours
UNDERSTANDING BIG DATA: What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics.			10Hours
Module -2			
NOSQL DATA MANAGEMENT: Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schema less databases – materialized views – distribution models – shading — version – map reduce – partitioning and combining – composing map-reduce calculations.			10 Hours
Module – 3			
BASICS OF HADOOP: Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures.			10 Hours
Module-4			
MAPREDUCE APPLICATIONS: MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats			10 Hours
Module-5			
HADOOP RELATED TOOLS: Hbase – data model and implementations – Hbase clients – Hbase examples –praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.			10 Hours
Course outcomes:			
The students shall able to: <ul style="list-style-type: none"> • Describe big data and use cases from selected business domains • Explain NoSQL big data management • Install, configure, and run Hadoop and HDFS • Perform map-reduce analytics using Hadoop 			

- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilly, 2012.
2. Eric Sammer, "Hadoop Operations", O'Reilly, 2012.

Reference Books:

1. Vignesh Prajapati, Big data analytics with R and Hadoop, SPD 2013.
2. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilly, 2012.
3. Lars George, "HBase: The Definitive Guide", O'Reilly, 2011.
4. Alan Gates, "Programming Pig", O'Reilly, 2011

ADVANCES IN COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN12/16SCS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Discuss with the basics of Computer Networks. • Compare various Network architectures. • Discuss fundamental protocols. • Define and analyze network traffic, congestion, controlling and resource allocation. 			
Module 1			Teaching Hours
Foundation: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels. T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4			10 Hours
Module 2			
Internetworking I: Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. T1: Chapter 3.1, 3.2,			10 Hours
Module 3			
Internetworking- II: Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP T1: Chapter 3.3, 4.1.1,4.1.3 T2:Chapter 13.1 to 13.18 , Ch 18.			10 Hours
Module 4			
End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3			10 Hours
Module 5			
Congestion Control and Resource Allocation Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System (DNS), Electronic Mail (SMTP,POP,IMAP,MIME), World Wide Web (HTTP), Network Management (SNMP) T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • List and classify network services, protocols and architectures, explain why they are layered. 			

- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Larry Peterson and Bruce S Davis “Computer Networks :A System Approach” 5th Edition , Elsevier -2014.
2. Douglas E Comer, “Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI – 2014.

Reference Books:

1. Uyles Black, “Computer Networks, Protocols , Standards and Inte rfaces” 2 nd Edition - PHI.
2. Behrouz A Forouzan, “TCP /IP Protocol Suite” 4 th Edition – Tata McGraw-Hill.

ADVANCED ALGORITHMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCS23/ 16SSE253	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define the graph search algorithms. • Explain network flow and linear programming problems. • Interpret hill climbing and dynamic programming design techniques. • Develop recursive backtracking algorithms. • Define NP completeness and randomized algorithms 			
Module -1			Teaching Hours
Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.			10Hours
Module -2			
Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson’s Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. Polynomials and the FFT: Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.			10 Hours
Module – 3			
Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization			10 Hours
Module-4			
String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.			10 Hours
Module-5			
Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.			10 Hours
Course outcomes:			

<p>Upon completion of the course, the students will be able to</p> <ul style="list-style-type: none"> • Design and apply iterative and recursive algorithms. • Design and implement optimization algorithms in specific applications. • Design appropriate shared objects and concurrent objects for applications.
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>
<p>Text Books:</p> <ol style="list-style-type: none"> 1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010. 2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

<p align="center">INTERNET OF THINGS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II</p>			
Subject Code	16LNI253 /16SCE253 /16SCN151 /16SCS24 /16SIT251 /16SSE421	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
<p align="center">CREDITS – 04</p>			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Define and explain basic issues, policy and challenges in the IoT • Illustrate Mechanism and Key Technologies in IoT • Explain the Standard of the IoT • Explain resources in the IoT and deploy of resources into business • Demonstrate data analytics for IoT 			
Module -1			Teaching Hours
<p>What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples- Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications.</p>			10Hours
Module -2			

Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards-Overview and Approaches,IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol,Representational State Transfer, ETSI M2M,Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPV6 Over Lowpower WPAN, Zigbee IP(ZIP),IPSO	10 Hours
Module – 3	
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M,Layer 3 Connectivity :IPv6 Technologies for the IoT:Overview and Motivations.Address Capabilities,IPv6 Protocol Overview, IPv6 Tunneling, IPsec in IPv6,Header Compression Schemes,Quality of Service in IPv6, Migration Strategies to IPv6.	10 Hours
Module-4	
Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications.	10 Hours
Module-5	
Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis, Structural Health Monitoring Case Study.	10 Hours
Course outcomes:	
At the end of this course the students will be able to: <ul style="list-style-type: none"> • Develop schemes for the applications of IOT in real time scenarios • Manage the Internet resources • Model the Internet of things to business • Understand the practical knowledge through different case studies • Understand data sets received through IoT devices and tools used for analysis 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. Daniel Minoli, "Building the Internet of Things with IPv6 and MIPv6:The Evolving World of M2M Communications", Wiley, 2013. 2. Arshdeep Bahga, Vijay Madiseti, "Internet of Things: A Hands on Approach" Universities Press., 2015

ARTIFICIAL INTELLIGENCE AND AGENT TECHNOLOGY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - II			
Subject Code	16SCS251	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to			

<ul style="list-style-type: none"> • Apply a given AI technique to a given concrete problem • Implement non-trivial AI techniques in a relatively large system • Explain uncertainty and Problem solving techniques. • Illustrate various symbolic knowledge representation to specify domains and reasoning tasks of a situated software agent. • Contrast different logical systems for inference over formal domain representations, and trace how a particular inference algorithm works on a given problem specification. • Compare various learning techniques and agent technology. 	
Module -1	Teaching Hours
<p>What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique?, The Level of the model, Criteria for success, some general references, One final word and beyond. Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems. Intelligent Agents: Agents and Environments, The nature of environments, The structure of agents. Text Book 1: Chapter 1 & 2 Text Book 2: Chapter 2</p>	8 Hours
Module -2	
<p>Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis. Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem. Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction. Logical Agents: Knowledge –based agents, the Wumpus world, Logic-Propositional logic, Propositional theorem proving, Effective propositional model checking, Agents based on propositional logic. Text Book 1: Chapter 3, 4 & 5 Text Book 2: Chapter 6</p>	8 Hours
Module – 3	
<p>Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search. Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic. Quantifying Uncertainty: Acting under uncertainty, Basic probability notation, Inference using full joint distributions, Independence, Bayes’ rule and its use, The Wumpus world revisited. Text Book 1: Chapter 7 & 8 Text Book 2: Chapter 13</p>	8 Hours
Module-4	
<p>Weak Slot-and-filter structures: Semantic Nets, Frames. Strong slot-and –filler structures: Conceptual dependency, scripts, CYC. Adversarial Search: Games, Optimal Decision in Games, Alpha-Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-Of-The-Art Game Programs, Alternative Approaches, Summary. Text Book 1: Chapter 9 & 10Text Book 2: Chapter 5</p>	8 Hours
Module-5	
<p>Learning From examples: Forms of learning, Supervised learning, Learning decision trees, Evaluating and choosing the best hypothesis, The theory of learning ,PAC, Regression and Classification with linear models, Nonparametric models, Support vector machines, Ensemble learning. Learning Probabilistic Models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm. Text Book 2: Chapter 18 & 20</p>	8 Hours
Course outcomes:	
<p>The students are able to:</p> <ul style="list-style-type: none"> • Design intelligent agents for problem solving, reasoning, planning, decision making, and learning. specific design and performance constraints, and when needed, design variants of 	

<p>existing algorithms.</p> <ul style="list-style-type: none"> • Apply AI technique on current applications. • Problem solving, knowledge representation, reasoning, and learning.
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Elaine Rich, Kevin Knight, Shivashanka B Nair: Artificial Intelligence, Tata McGraw Hill 3rd edition. 2013 2. Stuart Russel, Peter Norvig: Artificial Intelligence A Modern Approach, Pearson 3rd edition 2013.

PATTERN RECOGNITION [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - II			
Subject Code	16SCE252/ 16SCS252	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain various Image processing and Pattern recognition techniques. • Illustrate mathematical morphology necessary for Pattern recognition. • Demonstrate Image Representation and description and feature extraction. • Explain principles of decision trees and clustering in pattern recognition. 			
Module -1			Teaching Hours
Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems			8 Hours
Module -2			
Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation			8 Hours
Module – 3			
Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, estimation of probabilities, comparison with NNC, Naive bayes classifier, Bayesian belief network			8 Hours
Module-4			
Naive bayes classifier, Bayesian belief network, Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over fitting & Pruning, Examples, Hidden Markov models: Markov models for classification, Hidden Markov models and classification using HMM			8 Hours
Module-5			
Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards,			8 Hours

Partitional (Forgy's, k-means, Isodata), clustering large data sets, examples, An application: Handwritten Digit recognition	
Course outcomes:	
The students shall able to: <ul style="list-style-type: none"> • Explain pattern recognition principals • Develop algorithms for Pattern Recognition. • Develop and analyze decision tress. • Design the nearest neighbor classifier. • Apply Decision tree and clustering techniques to various applications 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
<ol style="list-style-type: none"> 1. Pattern Recognition (An Introduction) , V Susheela Devi, M Narsimha Murthy, 2011 Universities Press, ISBN 978-81-7371-725-3 2. Pattern Recognition & Image Analysis, Earl Gose, Richard Johnsonbaugh, Steve Jost. PH ISBN-81-203-1484-0, 1996.

INFORMATION AND NETWORK SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI12/16SCN13/16SCS253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain standard algorithms used to provide confidentiality, integrity and authenticity. • Distinguish key distribution and management schemes. • Deploy encryption techniques to secure data in transit across data networks • Implement security applications in the field of Information technology 			
Module 1			Teaching Hours
Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm			8 Hours
Module 2			
Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.			8 Hours
Module 3			
Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. User Authentication: Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.			8 Hours
Module 4			
Wireless network security: Wireless security, Wireless network threats, Wireless			8 Hours

network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function. Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. Secure Sockets Layer: SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. Transport Layer Security: Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. HTTPS Connection Initiation, Connection Closure. Secure Shell(SSH) Transport Layer Protocol, User Authentication Protocol, Connection Protocol	
Module 5	
Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.	8 Hours
Course Outcomes	
The students should be able to:	
<ul style="list-style-type: none"> Analyze the vulnerabilities in any computing system and hence be able to design a security solution. Identify the security issues in the network and resolve it. Evaluate security mechanisms using rigorous approaches, including theoretical. 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. William Stallings, Cryptography and Network Security, Pearson 6 th edition.	
Reference Books:	
1. V K Pachghare: Cryptography and Information Security.	

WEB SERVICES			
[As per Choice Based Credit System (CBCS) scheme]			
(Effective from the academic year 2016 -2017)			
SEMESTER – II			
Subject Code	16SCS254 / 16SSE154 / 16LNI252 / 16SIT21	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			

<ul style="list-style-type: none"> • Define and explain Web Services. • Summarize WSDL Web Services. • Analyze Web service Architecture. • Explain Building Blocks of Web services. 	
Module 1	Teaching Hours
Middleware: Understanding the middle ware, RPC and Related Middle ware, TP Monitors, Object Brokers, Message-Oriented Middleware.	8 Hours
Module 2	
Web Services: Web Services Technologies, Web Services Architecture.	8 Hours
Module 3	
Basic Web Services Technology: WSDL Web Services Description Language, UDDI Universal Description Discovery and Integration, Web Services at work interactions between the Specifications, Related Standards.	8 Hours
Module 4	
Service Coordination Protocols: Infrastructure for Coordination Protocols, WS-Coordination, WS-Transaction, Rosetta Net and Other Standards Related to Coordination Protocols.	8 Hours
Module 5	
Service Composition: Basic of Service Composition, A New Chance of Success for Composition, Services Composition Models, Dependencies between Coordination and Composition, BPEL: Business Process Execution Language for Web Services, Outlook, Applicability of the Web Services, Web services as a Problem and a Solution : AN Example.	8 Hours
Course Outcomes	
The students should be able to: <ul style="list-style-type: none"> • Bind and unbind services in UDDI. • Develop WSDL document • Implement web service client to call public service. • Implement a service and exposing it as public service. 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

MINIPROJECT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Laboratory Code	16LNI26/ 16SCE26 / 16SCN26 /16SCS26 /16SFC26/ 16SIT26 / 16SSE26	IA Marks	20

Number of Lecture Hours/Week	03 hours of lab	Exam Marks	80
Total Number of Lecture Hours	-----	Exam Hours	03
CREDITS – 02			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Enable the student to design, develop and analyze an application development 			
The student will carry out a mini project relevant to the course. The project must be development of an application (Hardware/Software). It is preferable if the project is based on mobile application development.			
Course outcomes:			
<ul style="list-style-type: none"> • Design, develop and to analyze an application development. • Prepare report of the project. 			
Conduction of Practical Examination:			
The student shall prepare the report by including:			
<ol style="list-style-type: none"> 1. Define project (Problem Definition) 2. Prepare requirements document <ol style="list-style-type: none"> a. Statement of work b. Functional requirements c. Software / Hardware requirements 3. Develop use cases 4. Research, analyze and evaluate existing learning materials on the application 5. Develop user interface and implement code 6. Prepare for final demo 			
Evaluation:			
Evaluation shall be taken up at the end of the semester. Project work evaluation and viva-voce examination shall be conducted. Internal evaluation shall be carried by the Guide and Head of the department for 20 marks. Final examination which includes demonstration of the project and viva-voce shall be conducted for 80 Marks viz report + Outputs of the project + presentation = 30+30+20 = 80 marks.			

SEMINAR			
[As per Choice Based Credit System (CBCS) scheme]			
(Effective from the academic year 2016 -2017)			
SEMESTER – II			
Subject Code	16SCE27 / 16SCN27 / 16LNI27 / 16SIT27 / 16SSE27 / 16SCS27 / 16SFC27	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-
CREDITS – 01			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Motivate the students to read technical article • Discover recent technology developments 			
Descriptions			
The students should read a recent technical article (try to narrow down the topic as much as possible)			

from any of the leading reputed and refereed journals like:

1. IEEE Transactions, journals, magazines, etc.
2. ACM Transactions, journals, magazines, SIG series, etc.
3. Springer
4. Elsevier publications etc

In the area of (to name few and not limited to)

- Web Technology
- Cloud Computing
- Artificial Intelligent
- Networking
- Security
- Data mining

Course Outcomes

The students should be able to:

- Conduct survey on recent technologies
- Infer and interpret the information from the survey conducted
- Motivated towards research

Conduction:

The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.

Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).

MACHINE LEARNING TECHNIQUES [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCS41/16SIT424	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain basic concepts of learning and decision trees. • Compare and contrast neural networks and genetic algorithms • Apply the Bayesian techniques and instant based learning • Examine analytical learning and reinforced learning 			
Module -1			Teaching Hours
INTRODUCTION, CONCEPT LEARNING AND DECISION TREES Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search			10Hours
Module -2			
NEURAL NETWORKS AND GENETIC ALGORITHMS: Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning.			10 Hours
Module – 3			
BAYESIAN AND COMPUTATIONAL LEARNINGGL Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes			10 Hours

Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier– Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model.	
Module-4	
INSTANT BASED LEARNING AND LEARNING SET OF RULES: K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions –Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution	10 Hours
Module-5	
ANALYTICAL LEARNING AND REINFORCED LEARNING: Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning	10 Hours
Course outcomes:	
On Completion of the course, the students will be able to <ul style="list-style-type: none"> • Choose the learning techniques with this basic knowledge. • Apply effectively neural networks and genetic algorithms for appropriate applications. • Apply bayesian techniques and derive effectively learning rules. • Choose and differentiate reinforcement and analytical learning techniques 	
Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books: 1. Tom M. Mitchell, “Machine Learning”, McGraw-Hill Education (INDIAN EDITION), 2013.	
Reference Books: 1. Ethem Alpaydin, “Introduction to Machine Learning”, 2 nd Ed., PHI Learning Pvt. Ltd., 2013. 2. T. Hastie, R. Tibshirani, J. H. Friedman, “The Elements of Statistical Learning”, Springer; 1st edition, 2001.	

Computer Vision [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCS421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Review image processing techniques for computer vision • Discuss shape and region analysis • Analyze Hough Transform and its applications to detect lines, circles, ellipses • Analyze three-dimensional image analysis techniques • Illustrate motion analysis • Discuss some applications of computer vision algorithms 			

Module -1	Teaching Hours
CAMERAS: Pinhole Cameras, Radiometry – Measuring Light: Light in Space, Light Surfaces, Important Special Cases, Sources, Shadows, And Shading: Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, Color: The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.	8 Hours
Module -2	
Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, Edge Detection: Noise, Estimating Derivatives, Detecting Edges, Texture: Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.	8 Hours
Module – 3	
The Geometry of Multiple Views: Two Views, Stereopsis: Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, Segmentation by Clustering: What Is Segmentation?, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,	8 Hours
Module-4	
Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, Segmentation and Fitting Using Probabilistic Methods: Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, Tracking With Linear Dynamic Models: Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.	8 Hours
Module-5	
Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, Geometric Camera Calibration: Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, Model- Based Vision: Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment.	8 Hours
Course outcomes:	
Upon completion of the course, the students will be able to	
<ul style="list-style-type: none"> • Implement fundamental image processing techniques required for computer vision • Perform shape analysis • Implement boundary tracking techniques • Apply chain codes and other region descriptors • Apply Hough Transform for line, circle, and ellipse detections. • Apply 3D vision techniques. • Implement motion related techniques. • Develop applications using computer vision techniques. 	
Question paper pattern:	
The question paper will have ten questions.	
There will be 2 questions from each module.	
Each question will have questions covering all the topics under a module.	
The students will have to answer 5 full questions, selecting one full question from each module.

BUSINESS INTELLIGENCE AND ITS APPLICATIONS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SIT421 / 16SCS422	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Evaluate the key elements of a successful business intelligence (BI) program • Apply a BI meta model that turns outcomes into actions • Extract and transform data from an operational data to a data business data • Evaluate business analytics and performance measurement tools 			
Module -1			Teaching Hours
Development Steps, BI Definitions, BI Decision Support Initiatives, Development Approaches, Parallel Development Tracks, BI Project Team Structure, Business Justification, Business Divers, Business Analysis Issues, Cost – Benefit Analysis, Risk Assessment, Business Case Assessment Activities, Roles Involved In These Activities, Risks Of Not Performing Step, Hardware, Middleware, DBMS Platform, Non Technical Infrastructure Evaluation			8 Hours
Module -2			
Managing The BI Project, Defining And Planning The BI Project, Project Planning Activities, Roles And Risks Involved In These Activities, General Business Requirement, Project Specific Requirements, Interviewing Process			8 Hours
Module – 3			
Differences in Database Design Philosophies, Logical Database Design, Physical Database Design, Activities, Roles And Risks Involved In These Activities, Incremental Rollout, Security Management, Database Backup And Recovery			8 Hours
Module-4			
Growth Management, Application Release Concept, Post Implementation Reviews, Release Evaluation Activities, The Information Asset and Data Valuation, Actionable Knowledge – ROI, BI Applications, The Intelligence Dashboard			8 Hours
Module-5			
Business View of Information technology Applications: Business Enterprise excellence, Key purpose of using IT, Type of digital data, basics f enterprise reporting, BI road ahead.			8 Hours
Course outcomes:			
<p>Upon completion of the course, the students will be able to</p> <ul style="list-style-type: none"> • Explain the complete life cycle of BI/Analytical development • Illustrate technology and processes associated with Business Intelligence framework • Demonstrate a business scenario, identify the metrics, indicators and make recommendations to achieve the business goal. 			

<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>
<p>Text Books:</p> <ol style="list-style-type: none"> 1. <p>AGILE TECHNOLOGIES [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – IV</p>			
Subject Code	16SCS423 /16SSE423	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain iterative, incremental development process leads to faster delivery of more useful software • Evaluate essence of agile development methods • Illustrate the principles and practices of extreme programming • Show the roles of prototyping in the software process • Explain the Mastering Agility 			
Module -1			Teaching Hours
<p>Why Agile?: Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility, How to Be Agile?: Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor</p>			8 Hours
Module -2			
<p>Understanding XP: The XP Lifecycle, The XP Team, XP Concepts, Adopting XP: Is XP Right for Us?, Go!, Assess Your Agility</p>			8 Hours
Module – 3			

Practicing XP: Thinking: Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, Collaborating: Trust, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting, Releasing: “Done Done”, No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. Planning: Vision, Release Planning, The Planning Game, Risk Management, Iteration Planning, Slack, Stories, Estimating. Developing: Incremental requirements, Customer Tests, Test-Driven Development, Refactoring, Simple Design ,Incremental Design and Architecture, Spike Solutions, Performance Optimization, Exploratory Testing	8 Hours
Module-4	
Mastering Agility: Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading, Improve the Process: Understand Your Project, Tune and Adapt, Break the Rules, Rely on People : Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People, Eliminate Waste : Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput	8 Hours
Module-5	
Deliver Value: Exploit Your Agility, Only Releasable Code Has Value, Deliver Business Results, Deliver Frequently, Seek Technical Excellence : Software Doesn't Exist, Design Is for Understanding, Design Trade-offs, Quality with a Name, Great Design, Universal Design Principles, Principles in Practice, Pursue Mastery	8 Hours
Course outcomes:	
Students should be able to <ul style="list-style-type: none"> • Define XP Lifecycle, XP Concepts, Adopting XP • Evaluate on Pair Programming, Root-Cause Analysis, Retrospectives, Planning, Incremental Requirements, Customer Tests • Demonstrate concepts to Eliminate Waste 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:

WIRELESS NETWORKS AND MOBILE COMPUTING

[As per Choice Based Credit System (CBCS) scheme]
(Effective from the academic year 2016 -2017)

SEMESTER – IV

Subject Code	16SCE22 / 16SCS424	IA Marks	20
--------------	--------------------	----------	----

Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define concepts of wireless communication. • Compare and contrast propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication. • Explain CDMA, GSM. Mobile IP, Wimax and Different Mobile OS • Illustrate various Markup Languages CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns 			
Module -1			Teaching Hours
Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. Wireless Networks : Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.			8 Hours
Module -2			
Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6			8 Hours
Module – 3			
Mobile OS and Computing Environment : Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux, Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators			8 Hours
Module-4			
Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.			8 Hours
Module-5			
J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.			8 Hours
Course outcomes:			
The students shall able to:			
<ul style="list-style-type: none"> • Explain state of art techniques in wireless communication. • Discover CDMA, GSM. Mobile IP, Wimax • Demonstrate program for CLDC, MIDP let model and security concerns 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module.			
The students will have to answer 5 full questions, selecting one full question from each module.			

Text Books:

1. Ashok Talukder, Roopa Yavagal, Hasan Ahmed: Mobile Computing, Technology, Applications and Service Creation, 2nd Edition, Tata McGraw Hill, 2010.

Note:

1. **Project Phase-1:** 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.
2. **Project Phase-2:** 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
3. **Project Evaluation:** Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
4. **Project evaluation:**
 - a. Internal Examiner shall carry out the evaluation for 100 marks.
 - b. External Examiner shall carry out the evaluation for 100 marks.
 - c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
 - d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Elective – III

14SCS423 Agile Technologies

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or Technical paper.

1).Project Phase – I: 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase = III: Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be 50+50+100=200 (50 Marks for Internal Guide,50 Marks for External and 100 for Viva-Voce).

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Semester: I

Year: 2014-2015

Course Title: Advances In Operating Systems	Course Code: 14SCS11
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To learn the fundamentals of Operating Systems
- To gain knowledge on Distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols
- To gain insight on to the distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols
- To know the components and management aspects of Real time, Mobile operating Systems.

TOPICS:

MODULE I

Operating System Overview, Process description & control

Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Microsoft Windows Overview, Traditional UNIX Systems, Modern UNIX Systems, Linux, What is a Process?, Process States, Process Description, Process Control, Execution of the Operating System, Security Issues, UNIX SVR4 Process Management.

10 Hours

Module II

Threads, SMP, and Microkernel, Virtual Memory.

Processes and Threads, Symmetric Multiprocessing (SMP), Microkernels, Windows Vista Thread and SMP Management, Solaris Thread and SMP Management, Linux Process and Thread Management. Hardware and Control Structures, Operating System Software, UNIX and Solaris Memory Management, Linux Memory Management, Windows Vista Memory Management, Summary.

10 Hours

Module III

Multiprocessor and Real-Time Scheduling

Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, UNIX PreclsSl) Scheduling, Windows Vista Scheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock.

10 Hours

Module IV

Embedded Operating Systems

Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits.

10 Hours

MODULEV

Kernel Organization

Using Kernel Services, Daemons, Starting the Kernel , Control in the Machine , Modules and Device Management, MODULEOrganization, MODULEInstallation and Removal, Process and Resource Management, Running Process

Manager, Creating a new Task , IPC and Synchronization, The Scheduler , Memory Manager , The Virtual Address Space, The Page Fault Handler , File Management.

The windows NT/2000/XP kernel: Introduction, The NT kernel, Objects , Threads, Multiplication Synchronization, Traps, Interrupts and Exceptions, The NT executive , Object Manager, Process and Thread Manager , Virtual Memory Manager, I/o Manager, The cache Manager , Kernel local procedure calls and IPC, The native API, subsystems.

10 Hours

Course Outcomes:

The students should be able to:

- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system
- Learn the various resource management techniques for distributed systems
- Identify the different features of real time and mobile operating systems
- Modify existing open source kernels in terms of functionality or features used.

Text Books:

1. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013.
2. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.

1. Silberschatz, Galvin, Gagne: Operating System Concepts, 8th Edition, Wiley, 2008
2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006.
3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007

Semester: I

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCS12
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.

Topics:

Module I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

Module II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

Module III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

Module IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

Module V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

LAB EXPERIMENTS

NOTE: Simulate using object oriented programming, any available cloud environment (**Eg; Amazon cloud**) and **VM ware for resource virtualization.**

1. Create a Collaborative learning environment for a particular learning topic using Google Apps. Google Drive, Google Docs and Google Slides must be used for hosting e-books, important articles and presentations respectively. The instructor must use the Google Sheets to convey the timetable for different events and for analyzing the scores for individual assignment submission.

2. Modeling and simulation Cloud computing environments, including Data Centers, Hosts and Cloudlets and perform VM provisioning using CloudSim: Design a host with two CPU cores, which receives request for hosting two VMs, such that each one requires two cores and plans to host four tasks units. More specifically, tasks t1, t2, t3 and t4 to be hosted in VM1, while t5, t6, t7, and t8 to be hosted in VM2. Implement space-shared allocation policy and time-shared allocation policy. Compare the results.

3. Model a Cloud computing environment having Data center that had 100 hosts. The hosts are to be modeled to have a CPU core (1000 MIPS), 2 GB of RAM and 1 TB of storage. Consider the workload model for this evaluation included provisioning requests for 400 VMs, with each request demanding 1 CPU core (250 MIPS), 256 MB of RAM and 1 GB of storage. Each VM hosts a *web-hosting application service*, whose CPU utilization distribution was generated according to the uniform distribution. Each instance of a webhosting service required 150,000 MIPS or about 10 minutes to complete execution assuming 100% utilization. Simulate Energy-conscious model for power consumption and power management techniques such as Dynamic Voltage and Frequency Scaling (DVFS). Initially, VMs are to be allocated according to requested parameters (4 VMs on each host). The Cloud computing architecture that is to be considered for studying energy conscious resource management techniques/policies included a data center, CloudCoordinator, and Sensor component. The CloudCoordinator and Sensor perform their usual roles. Via the attached Sensors (which are connected with every host), CloudCoordinator must periodically monitor the performance status of active VMs such as load conditions, and processing share. This real time information is to be passed to VMM, which can use it for performing appropriate resizing of VMs and application of DVFS and soft scaling. CloudCoordinator continuously has to adapt allocation of VMs by issuing VM migration commands and changing power states of nodes according to its policy and current utilization of resources.

4. Model and simulate the environment consisting of a data center with 10,000 hosts where each host was modeled to have a single CPU core (1200MIPS), 4GB of RAM memory and 2TB of storage. Consider the provisioning policy for VMs as space-shared, which allows one VM to be active in a host at a given instance of time. Make a request from the end-user (through the Datacenter Broker) for creation and instantiation of 50 VMs that had following constraints: 1024MB of physical memory, 1 CPU core and 1GB of storage. The application granularity was modeled to be composed of 300 task units, with each task unit requiring 1,440,000 million instructions (20 minutes in the simulated hosts) to be executed on a host. Minimal data transfer (300 KB) overhead can be considered for the task units (to and from the data center). After the creation of VMs, task units were submitted in small groups of 50 (one for each VM) at inter-arrival delay of 10 minutes.

5. Implement Map Reduce concept for

a. Strassen's Matrix Multiplication for a huge matrix.

b. Computing the average number of citation index a researcher has according to age among some 1 billion journal articles. Consider a network of entities and relationships between them. It is required to calculate a state of each entity on

the basis of properties of the other entities in its neighborhood. This state can represent a distance to other nodes, indication that there is a neighbor

with the certain properties, characteristic of neighborhood density and so on. A network is stored as a set of nodes and each node contains a list of adjacent node IDs. Mapper emits messages for each node using ID of the adjacent node as a key. Reducer must re compute state and rewrite node with the new state. Implement this scenario.

Course Outcomes:

The students should be able to:

- Demonstrate and experiment simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.
- Familiarize with Open Stack.

Text Book:

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.
2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Course Title: Advances in Database Management Systems	Course Code: 14SCS13
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To acquire knowledge on parallel and distributed databases and its applications.
- To study the usage and applications of Object Oriented database
- To understand the basic concepts, principles of intelligent databases.
- To understand the advanced topics of data warehousing and mining .
- To learn emerging and advanced data models
- To acquire inquisitive attitude towards research topics in databases.

Topics:**MODULE I**

Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations.

Overview of Object-Oriented Concepts – Objects, Encapsulation, Polymorphism, Type and class hierarchies etc.

10 Hours

Module II

Object and Object-Relational Databases: Object Oriented Concepts: – Objects, complex objects; Object model of ODMG, Object definition language, ODL, Object Query Language, OQL, Overview of C++ language binding; Conceptual design of Object database. Overview of object relational features of: SQL, Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model.

10 Hours

Module III

Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.

10 Hours

Module IV

Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Window queries in SQL; Finding answers quickly; Implementation techniques for OLAP; Data Warehousing; Views and Decision support, View materialization, Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks.

10 Hours

Module V

Enhanced Data Models for Some Advanced Applications: Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts. More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.

10 Hours

LABORATORY WORK:

(The following tasks can be implemented on Oracle or any other suitable RDBMS with support for Object features)

1. Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.
2. Develop a database application to demonstrate the representation of multivalued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.
3. Design and develop a suitable Student Database application. One of the attributes to be maintained is the attendance of a student in each subject for which he/she has enrolled. Using TRIGGERS, write active rules to do the following:
 - a. Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.
 - b. Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.
4. Design, develop, and execute a program in a language of your choice to implement any one algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

- Select the appropriate high performance database like parallel and distributed database
- Model and represent the real world data using object oriented database
- Embed the rule set in the database to implement data warehousing of mining
- Choose and design database for recent applications database for better interoperability

TEXT BOOKS:

1. Elmasri and Navathe: Fundamentals of Database Systems, Pearson Education, 2013.
2. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2013.

REFERENCE BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan: Database System Concepts, 6th Edition, McGraw Hill, 2010.

Course Title: Multi-Core Architecture and Programming	Course Code: 14SCS14
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To appreciate the need for parallel processing
- To expose the students to the problems related to multiprocessing
- To understand the different types of multicore architectures
- To understand the concepts of multi threading and OPENMP.

Topics:**MODULE I**

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization. **10 Hours**

Module II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours**MODULE III**

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours**MODULE IV**

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared

Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

Course Outcomes:

The students should be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Solve the issues related to multiprocessing and suggest solutions.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

Course Title: Advances in Digital Image Processing	Course Code: 14SCS151
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To understand the image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- To understand the image segmentation and representation techniques.
- To understand how image are analyzed to extract features of interest.
- To introduce the concepts of image registration and image fusion.
- To analyze the constraints in image processing when dealing with 3D data sets.

Topics:**MODULE I**

Introduction: What is Digital Image Processing, Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System. **Digital Image Fundamentals:** Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Spatial and Gray-level Resolution, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.

10 Hours**MODULE II**

Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods. **Image Enhancement in the Frequency Domain:** Introduction to the Fourier Transform and the Frequency Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency-Domain Filters, Homomorphic Filtering.

10 Hours**MODULE III**

Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering, Constrained Least Square Filtering, Geometric Mean Filter.

10 Hours**MODULE IV**

Color Fundamentals: Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression. **Wavelets and Multiresolution Processing:** Image Pyramids, Subband coding, The Haar Transform, Multiresolution Expansions, Wavelet Transforms in one Dimension, Fast Wavelet Transform, Wavelet Transforms in Two Dimensions, Wavelet Packets. **Image Compression:** Fundamentals, Image Compression Models, Error-free (Lossless) compression, Lossy Compression.

10 Hours**MODULE V:**

Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. **Image Segmentation:** Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation.

10 Hours

Course Outcomes:

The students will be able to:

- Understand image formation and the role human visual system plays in perception of gray and color image data.
- Apply image processing techniques in both the spatial and frequency (Fourier) domains.
- Design image analysis techniques in the form of image segmentation and to evaluate the Methodologies for segmentation.
- Conduct independent study and analysis of feature extraction techniques.
- Understand the concepts of image registration and image fusion.
- Analyze the constraints in image processing when dealing with 3D data sets and to apply image
- Apply algorithms in practical applications.

Semester: I

Year: 2014-2015

Course Title: Advances in Storage Area Networks	Course Code: 14SCS152
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre's maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems

Topics:

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

10 Hours

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

10 Hours

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management,

Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

The students should be able to:

- Identify the need for performance evaluation and the metrics used for it
- Apply the techniques used for data maintenance.
- Realize storage virtualization concept,
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

3. Richard Barker and Paul Massiglia: “Storage Area Network Essentials A Complete Guide to understanding and Implementing SANs”, Wiley India, 2006.

Downloaded from A-ZShiksha.com

Course Title: Embedded Computing Systems	Course Code: 14SCS153
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COUR
SE**OBJECTIVES**

- Provide a general overview of Embedded Systems
- Show current statistics of Embedded Systems
- Design a complete microprocessor-based hardware system
- Design, code, compile, and test real-time software
- Integrate a fully functional system including hardware and software
- Gain the ability to make intelligent choices between hardware/software tradeoffs.

Topics:**MODULE I**

Introduction to embedded systems: Embedded systems, Processor embedded into a system, Embedded hardware units and device in a system, Embedded software in a system, Examples of embedded systems, Design process in embedded system, Formalization of system design, Design process and design examples, Classification of embedded systems, skills required for an embedded system designer.

7 Hours**MODULE II**

Devices and communication buses for devices network :IO types and example, Serial communication devices, Parallel device ports, Sophisticated interfacing features in device ports, Wireless devices, Timer and counting devices, Watchdog timer, Real time clock, Networked embedded systems, Serial bus communication protocols, Parallel bus device protocols-parallel communication internet using ISA, PCI, PCI-X and advanced buses, Internet enabled systems-network protocols, Wireless and mobile system protocols.

13 Hours**MODULE III**

Device drivers and interrupts and service mechanism: Programming-I/O busy-wait approach without interrupt service mechanism, ISR concept, Interrupt sources, Interrupt servicing (Handling) Mechanism, Multiple interrupts, Context and the periods for context switching, interrupt latency and deadline, Classification of processors interrupt service mechanism from Context-saving angle, Direct memory access, Device driver programming.

10 Hours**MODULE IV**

Interprocesses communication and synchronization of processes, Threads and tasks: Multiple process in an application, Multiple threads in an application, Tasks, Task states, Task and Data, Clear-cut distinction between functions. ISRS and tasks by their characteristics, concept and semaphores, Shared data, Inter-process communication, Signal function, Semaphore functions, Message Queue functions, Mailbox functions, Pipe functions, Socket functions, RPC functions.

10 Hours**MODULE V**

Real-time operating systems: OS Services, Process management, Timer functions, Event functions, Memory management, Device, file and IO subsystems management, Interrupt routines in RTOS environment and handling of interrupt source calls, Real-time operating systems, Basic design using an RTOS, RTOS task scheduling models, interrupt latency and response of the tasks as performance metrics, OS security issues. **Introduction to embedded**

software development process and tools, Host and target machines, Linking and location software.

10 Hours

Course Outcomes:

The students should be able to:

- Knowledge to distinguish the characteristics of embedded computer systems.
- Ability examines the various vulnerabilities of embedded computer systems.
- Ability to design embedded systems.
- Awareness of the changing landscape in embedded systems

Text Books:

1. **Raj Kamal**, “Embedded Systems: Architecture, Programming, and Design” 2nd edition , Tata McGraw hill-2013

Chapters: Chapter 1.1 to 1.5, 1.8 to 1.12, Chapter 3, 4, 7, 8 and 13.1 to 13.3.

References:

2. **Marilyn Wolf** ,“Computer as Components, Principles of Embedded Computing System Design” 3rd edition , Elsevier-2014 .

Course Title: Advances in Computer Graphics	Course Code: 14SCS154
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- Learn basic and fundamental computer graphics techniques.
- Learn image synthesis techniques;
- Examine applications of modeling, design and visualization.
- Learn different color modeling and computer animation
- Learn hierarchical modeling and graphing file formats.

Topics:**MODULE I**

Three-Dimensional Object Representations: Polyhedra, OpenGL Polyhedron Functions, Curved Surfaces, Quadric Surfaces, Super quadrics, OpenGL Quadric-Surface and Cubic-Surface Functions, Blobby Objects, Spline Representations, Cubic-Spline Interpolation Methods, Bezier Spline Curves, Bzier Surfaces B-Spline Curves, B-Spline Surfaces, Beta- Splines, Retional Splines, Conversion Between Spline Representations, Displaying Spline Curves and rfaces, OpenGL Approximation-Spline Functions, Sweep Representations, Constructive Solid –Geometry Method, Octrees, BSP Trees, Fractal-Geometry Methods, Shape Grammars and Others Procedural Methods, Particle Systems, Physically Based Modeling, Visualization Of Data Sets.

10 Hours**MODULE II**

Visible-Surface Detection Methods: Classification Of Visible –Surface Detection Algorithms, Back-Face Method, Depth-Buffer Method, A-Buffer Method, Scan-Line Method, BSP-Tree Method, Area-Subdivision Method, Octree Methods, Ray-Casting Method, Comparison of Visibility –Detection Methods, Curved Surfaces, Wire-Frame Visibility –Detection Functions.

10 Hours**MODULE III**

Illumination Models and Surface- Rendering Methods: Light Sources, Surface Lighting Effects, Basic Illumination Models, Transparent Surfaces, Atmospheric Effects, Shadows, Camera parameters, Displaying light intensities, Halftone patterns and dithering techniques, polygon rendering methods, ray-tracing methods, Radiosity lighting model, Environment mapping, Photon mapping, Adding surface details, Modeling surface details with polygons, Texture mapping, Bump mapping, OpenGL Illumination and surface-rendering functions, openGL texture functions.

10 Hours**MODULE IV**

Color models, color applications and Computer animation: Properties of light, Color models, Standard primaries and the chromaticity diagram, The RGB color model, The YIQ and related color models, The CMY and CMYK color models, The HSV color model, The HLS color model, Color Selection and applications. Raster methods for computer animation, Design of animations sequences, Traditional animation techniques,

General computer-animation functions, Computer-animation languages, Key-frame systems, Motion specification, Articulated figure animation, Periodic motions, OpenGL animation procedures.

10 Hours

MODULE V

Hierarchical modeling and Graphics file formats: Basic modeling concepts, Modeling packages, General hierarchical modeling methods, Hierarchical modeling using OpenGL display list, Image-File configurations, Color-reduction methods, File-compression techniques, Composition of the major file formats.

10 Hours

COURSE OUTCOMES:

The students are able to :

- Represent and implement images and objects using 3D representation and OpenGL methodologies.
- Design develop surface detection using various detection methods
- Choose various illumination models for provides effective standards of objects.
- Design of develop effective computer animations.

Text Books:

1. Computer Graphics with OpenGL-Hearn Baker 4rd edition, Pearson publication.2010 (Chapter 8,9,10.12.13.14,15)
2. James D Foley,Andries van dam,Steven K Feiner,John F Hughes, Computer graphics, Pearson Education 3rd edition, 2013

Reference Books:

1. Edward Angel: Interactive Computer graphics a top-down approach with OpenGL, Addison Wesley, 6th edition 2012
2. Advanced graphics programming using OpenGL: TomMcReynolds-David Blythe. Elesvier.MK, 2005

Semester: I

Year: 2014-2015

Course Title: Advances in Operating Systems Laboratory	Course Code: 14SCS16
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES:

- To implement the shell of Operating System.
- To implement distributed operating system concepts.
- To implement virus detection techniques.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/ any equivalent language or tool with suitable platform.

1. Design and Develop a shell that should support at least 20 commands.
2. Design and develop a program to implement lazy buddy system algorithm.
3. Write a multi-class multithreaded program that simulates multiple sleeping barbers, all in one barbershop that has a finite number of chairs in the waiting room. Each customer is instantiated from a single customer class; each barber is instantiated from a single Barber class.
4. Use ECOS operating system to develop a program for controlling accessing to a pool of resources using mutexes and condition variables.
5. Design and develop a program to realize the virus classification, such as boot sector infector, file infector and macro virus.

Course Outcomes:

The students should be able to:

- Demonstrate the shell.
- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system.
- Understand the various virus detection techniques.

Course Title: Managing Big Data	Course Code: 14SCS21
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To Understand big data for business intelligence
- To Learn business case studies for big data analytics
- To Understand Nosql big data management
- To manage Big data without SQL
- To understanding map-reduce analytics using Hadoop and related tools

TOPICS:**MODULE I**

UNDERSTANDING BIG DATA 10 Hours What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics

MODULE II

NOSQL DATA MANAGEMENT 10 Hours Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schemaless databases – materialized views – distribution models – sharding – version – Mapreduce – partitioning and combining – composing map-reduce calculations

MODULE III**BASICS OF HADOOP****10 Hours**

Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures

MODULE IV

MAPREDUCE APPLICATIONS 10 Hours MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats

MODULE V

HADOOP RELATED TOOLS 10 Hours Hbase – data model and implementations – Hbase clients – Hbase examples – praxis. Cassandra – Cassandra data model – cassandra examples – cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

LAB Experiments**Exercise 1 --- HDFS**

Start by reviewing HDFS. You will find that its composition is similar to your local Linux file system. You will use the `hadoop fs` command when interacting with HDFS.

1. Review the commands available for the Hadoop Distributed File System:
2. Copy file `foo.txt` from local disk to the user's directory in HDFS
3. Get a directory listing of the user's home directory in HDFS
4. Get a directory listing of the HDFS root directory
5. Display the contents of the HDFS file `user/fred/bar.txt`
6. Move that file to the local disk, named as `baz.txt`
7. Create a directory called `input` under the user's home directory
8. Delete the directory `input` and all its contents
9. Verify the copy by listing the directory contents in HDFS:

Exercise 2 --- MapReduce

1. Create a JOB and submit to cluster
2. Track the job information
3. Terminate the job
4. Counters in MR Jobs with example
5. Map only Jobs and generic map examples
6. Distributed cache example
7. Combiners, Secondary sorting and Job chain examples

Exercise 3 --- MapReduce (Programs)

Using movie lens data

1. List all the movies and the number of ratings
2. List all the users and the number of ratings they have done for a movie
3. List all the Movie IDs which have been rated (Movie Id with at least one user rating it)
4. List all the Users who have rated the movies (Users who have rated at least one movie)
5. List of all the User with the max, min, average ratings they have given against any movie
6. List all the Movies with the max, min, average ratings given by any user

Exercise4 – Extract facts using Hive

Hive allows for the manipulation of data in HDFS using a variant of SQL. This makes it excellent for transforming and consolidating data for load into a relational database. In this exercise you will use HiveQL to filter and aggregate click data to build facts about user's movie preferences. The query results will be saved in a staging table used to populate the Oracle Database.

The `moveapp_log_json` table contains an activity column. Activity states are as follows:

1. RATE_MOVIE
2. COMPLETED_MOVIE
3. PAUSE_MOVIE
4. START_MOVIE
5. BROWSE_MOVIE
6. LIST_MOVIE
7. SEARCH_MOVIE
8. LOGIN
9. LOGOUT
10. INCOMPLETE_MOVIE

```

hive> SELECT * FROM movieapp_log_json LIMIT 5;
hive> drop table movieapp_log_json;
hive> CREATE EXTERNAL TABLE movieapp_log_json (
custId INT,
movieId INT,
genreId INT,
time STRING,
recommended STRING,
activity INT,
rating INT,
price FLOAT
)
ROW FORMAT SERDE 'org.apache.hadoop.hive.contrib.serde2.JsonSerde'
LOCATION '/user/oracle/moviework/applog/';

hive> SELECT * FROM movieapp_log_json LIMIT 20;

hive> SELECT MIN(time), MAX(time) FROM movieapp_log_json

```

1. PURCHASE_MOVIE

Hive maps queries into Map Reduce jobs, simplifying the process of querying large datasets in HDFS. HiveQL statements can be mapped to phases of the Map Reduce framework. As illustrated in the following figure, selection and transformation operations occur in map tasks, while aggregation is handled by reducers. Join operations are flexible: they can be performed in the reducer or mappers depending on the size of the leftmost table.

1. Write a query to select only those clicks which correspond to starting, browsing, completing, or purchasing movies. Use a CASE statement to transform the RECOMMENDED column into integers where 'Y' is 1 and 'N' is 0. Also, ensure GENREID is not null. Only include the first 25 rows.
2. Write a query to select the customer ID, movie ID, recommended state and most recent rating for each movie.
3. Load the results of the previous two queries into a staging table. First, create the staging table:
4. Next, load the results of the queries into the staging table.

Exercise 5 Extract sessions using Pig

While the SQL semantics of HiveQL are useful for aggregation and projection, some analysis is better described as the flow of data through a series of sequential operations. For these situations, Pig Latin provides a convenient way of implementing data flows over data stored in HDFS. Pig Latin statements are translated into a sequence of Map Reduce jobs on the execution of any STORE or DUMP command. Job construction is optimized to exploit as much parallelism as possible, and much like Hive, temporary storage is used to hold intermediate results. As with Hive, aggregation occurs largely in the reduce

tasks. Map tasks handle Pig's FOREACH and LOAD, and GENERATE statements. The EXPLAIN command will show the execution plan for any Pig Latin script. As of Pig 0.10, the ILLUSTRATE command will provide sample results for each stage of the execution plan.

In this exercise you will learn basic Pig Latin semantics and about the fundamental types in Pig Latin, Data Bags and Tuples.

1. Start the Grunt shell and execute the following statements to set up a dataflow with the click stream data. Note: Pig Latin statements are assembled into Map Reduce jobs which are launched at execution of a DUMP or STORE statement.
2. Group the log sample by movie and dump the resulting bag.

3. Add a GROUP BY statement to the sessionize.pig script to process the click stream data into user sessions.

Course Outcomes:

The students should be able to:

- Describe big data and use cases from selected business domains
- Explain NoSQL big data management
- Install, configure, and run Hadoop and HDFS
- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Course Title: Advances in Computer Networks	Course Code: 14SCS22
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To become familiar with the basics of Computer Networks
- To understand various Network architectures
- Concepts of fundamental protocols
- To understand the network traffic, congestion, controlling and resource allocation.

Topics:**MODULE I****Foundation**

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4 10 Hours

MODULE II**Internetworking- I**

Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2, 10 Hours

MODULE III**Internetworking- II**

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP

Chapter 3.3, 4.1.1,4.1.3 **T2:Chapter 13.1 to 13.18 , Ch 18. T1: 10 Hours**

MODULE IV**End-to-End Protocols**

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3 10 Hours

MODULE V**Congestion Control and Resource Allocation**

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System(DNS),Electronic Mail(SMTP,POP,IMAP,MIME),World Wide Web(HTTP),Network Management(SNMP) .

T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8 10 Hours

Laboratory Work:

PART A: Implement the following using C/C++:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP
3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

Course Outcomes:

The students should be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Course Title: Advanced Algorithms	Course Code: 14SCS23
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To study network flow and linear programming problems.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.

Topics:**MODULE I**

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours**MODULE II**

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours**MODULE III**

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours**MODULE IV**

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours**MODULE V**

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

Semester: II

Year: 2014-2015

Course Title: Artificial Intelligence and Agent Technology	Course Code: 14SCS24
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Apply a given AI technique to a given concrete problem
- To Implement non-trivial AI techniques in a relatively large system
- To understand uncertainty and Problem solving techniques.
- To understand various symbolic knowledge representation to specify domains and reasoning tasks of a situated software agent.
- To understand different logical systems for inference over formal domain representations, and trace how a particular inference algorithm works on a given problem specification.
- To understand various learning techniques and agent technology.

TOPICS:

MODULE I

What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique?, The Level of the model, Criteria for success, some general references, One final word and beyond.

Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems. **Intelligent Agents:** Agents and Environments, The nature of environments, The structure of agents.

Text Book 1: Chapter 1 & 2

Text Book 2: Chapter 2

10 Hours

MODULE II

Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis.

Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem.

Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction.

Logical Agents: Knowledge –based agents, the Wumpus world, Logic-Propositional logic, Propositional theorem proving, Effective propositional model checking, Agents based on propositional logic.

Text Book 1: Chapter 3, 4 & 5 Text Book 2: Chapter 6

10 Hours

MODULE III

Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search.

Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic.

Quantifying Uncertainty: Acting under uncertainty, Basic probability notation, Inference using full joint distributions, Independence, Bayes' rule and its use, The Wumpus world revisited.

Text Book 1: Chapter 7 & 8 Text Book 2: Chapter 13

10Hours

MODULE IV

Weak Slot-and-filter structures: Semantic Nets, Frames.

Strong slot-and –filler structures: Conceptual dependency, scripts, CYC.

Adversarial Search: Games, Optimal Decision in Games, Alpha-Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-Of-The-Art Game Programs, Alternative Approaches, Summary

Text Book 1: Chapter 9 & 10 Text Book 2: Chapter 5

10 Hours

MODULE V

Learning From examples: Forms of learning, Supervised learning, Learning decision trees, Evaluating and choosing the best hypothesis, The theory of learning ,PAC, Regression and Classification with linear models, Nonparametric models, Support vector machines, Ensemble learning.

Learning Probabilistic Models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm.

Text Book 2: Chapter 18 & 20

10 Hours

COURSE OUTCOMES:

The students are able to:

- Design intelligent agents for problem solving, reasoning, planning, decision making, and learning. specific design and performance constraints, and when needed, design variants of existing algorithms.
- Apply AI technique on current applications.
- Problem solving, knowledge representation, reasoning, and learning.

Text Books.

Semester: II

Year: 2014-2015

Course Title: Web Services	Course Code: 14SCS251
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To provide an in-depth knowledge of Web Services.
- To understand the fundamental concepts of Web services.
- To understand the fundamental concepts of WSDL Web Services.
- To design Web service Architecture.
- To Study Building Blocks of Web services.

TOPICS:

MODULE I

Middleware: Understanding the middle ware, RPC and Related Middle ware, TP Monitors, Object Brokers, Message-Oriented Middleware. **10 Hours**

MODULE II

Web Services: Web Services Technologies, Web Services Architecture. **10 Hours**

MODULE III

Basic Web Services Technology: WSDL Web Services Description Language, UDDI Universal Description Discovery and Integration, Web Services at work interactions between the Specifications, Related Standards. **10 Hours**

MODULE IV

Service Coordination Protocols: Infrastructure for Coordination Protocols, WS-Coordination, WS-Transaction, Rosetta Net and Other Standards Related to Coordination Protocols. **10 Hours**

MODULE V

Service Composition: Basic of Service Composition, A New Chance of Success for Composition, Services Composition Models, Dependencies between Coordination and Composition, BPEL: Business Process Execution Language for Web Services, Outlook, Applicability of the Web Services, Web services as a Problem and a Solution : AN Example. **10 Hours**

Course Outcomes:

The students should be able to:

- Bind and unbind services in UDDI.
- Develop WSDL document
- Implement web service client to call public service.
- Implement a service and exposing it as public service.

Text Books:

1. Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju: Web Services(Concepts ,Architectures and Applications), Springer International Edition 2009.

Course Title: Information And Network Security	Course Code: 14SCS252
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology

TOPICS:**MODULE I****Classical Encryption Techniques**

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad. **Block Ciphers and the data encryption standard:** Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours**MODULE II**

Public-Key Cryptography and RSA: Principles of public-key cryptosystems, Public-key cryptosystems. Applications for public-key cryptosystems, Requirements for public-key cryptosystems, public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours**MODULE III**

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours**MODULE IV**

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, . **Web Security Considerations:** Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer:** SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic

Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify And Finished Messages, Cryptographic Computations, Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.

10 Hours

Course Outcomes:

The students be able to

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition. 2013

References

Semester: II

Year: 2014-2015

Course Title : Pattern Recognition	Course Code: 14SCS253
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To study the mathematical morphology necessary for Pattern recognition.
- To introduce the student to various Pattern recognition techniques.
- To study the Representation and description and feature extraction.
- To study the principles of decision trees and clustering in pattern recognition.

TOPICS:

MODULE I

Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems.

10 Hours

MODULE II

Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation.

10 Hours

MODULE III

Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, comparison with NNC, Naive Bayes classifier, Bayesian belief network.

10 Hours

MODULE IV

Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over-fitting & Pruning, Examples.

10 Hours

MODULE V

Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards, Partitional (Forgy's, k-means, Iso-data), clustering large data sets, examples.

10 Hours

COURSE OUTCOMES:

Upon Completion of the course, the students will be able to

- Develop and analyze decision trees.
- Design the nearest neighbor classifier.
- Develop algorithms for Pattern Recognition.

Text Books:

1. Pattern Recognition (An Introduction) , V Susheela Devi, M Narsimha Murthy, Universities Press, ISBN 978-81-7371-725-3,2011.
2. Pattern Recognition & Image Analysis, Earl Gose, Richard Johnsonbaugh, Steve Jost. PHI ISBN-81-203-1484-0, 1996.

Course Title: Optical Networks	Course Code: 14SCS254
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors -
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM

Topics:**MODULE I**

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer, Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

10 Hours**MODULE II****WDM Network Elements**

Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations.

10 Hours**MODULE III****Control and Management**

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours**MODULE IV****Basic Concepts, Protection in SONET/SDH:**

Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1: N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design:

Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum **Load Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES:

The students will be able to:

- Gain Knowledge on fundamentals of optical network.
- Explore optical network architectures ranging from optical access networks to backbone optical transport networks.
- Choose approaches and methodologies of optical network for design effective optimization;
- Apply Techniques of optical network survivability.
- Gain knowledge on Problem solving skills and critical thinking in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Semester: II

Year: 2014-2015

Course Title: Advanced Algorithms Laboratory	Course Code: 14SCS26
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES

- To implement the graph search algorithms.
- To implement the string matching algorithms.
- To implement the modular linear equation algorithms.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/any equivalent tool/language by adapting exception handling technique wherever it is suitable.

1. Design, develop, and write a program to implement the Bellman-Ford algorithm and determine its performance. Give its applications.
2. Design, develop, and write a program to implement a Monte Carlo algorithm to test the **primality** of a given integer and determine its performance.
3. Design, develop, and write a program to solve string matching problem using naïve approach and the KMP algorithm. Compare their performances.
4. Design, develop, and write a program to solve String matching problem using Finite Automata and determine its performance.
5. Design, develop, and write a program to solve String matching problem using Robin Karp algorithm and determine its performance.

Course Outcomes:

Upon completion of the course, the students will be able to

- Design and apply graph search algorithms.
- Design and implement string matching algorithms.
- Design modular linear equation algorithms.

Course Title: Machine Learning Techniques	Course Code: 14SCS41
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To understand the basic concepts of learning and decision trees.
- To understand the neural networks and genetic algorithms
- To understand the Bayesian techniques
- To understand the instant based learning
- To understand the analytical learning and reinforced learning

TOPICS:**MODULE I****INTRODUCTION, CONCEPT LEARNING AND DECISION TREES**

Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search. **10 Hrs**

MODULE II**NEURAL NETWORKS AND GENETIC ALGORITHMS**

Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning. **10 Hrs**

MODULE III**BAYESIAN AND COMPUTATIONAL LEARNING**

Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model. **10 Hrs**

MODULE IV**INSTANT BASED LEARNING AND LEARNING SET OF RULES**

K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions – Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution **10 Hrs**

MODULE V**ANALYTICAL LEARNING AND REINFORCED LEARNING**

Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning **10 Hrs**

LABORATORY WORK

(The following tasks can be implemented in a language of your choice or any tools available)

- 1) Implement the CANDIDATE – ELIMINATION algorithm. Show how it is used to learn from training examples and hypothesize new instances in Version Space.
- 2) Implement the FIND–S algorithm. Show how it can be used to classify new instances of target concepts. Run the experiments to deduce instances and hypothesis consistently.

- 3) Implement the ID3 algorithm for learning Boolean-valued functions for classifying the training examples by searching through the space of a Decision Tree.
- 4) Design and implement the Back-propagation algorithm by applying it to a learning task involving an application like FACE RECOGNITION.
- 5) Design and implement Naïve Bayes Algorithm for learning and classifying TEXT DOCUMENTS.

COURSE OUTCOMES:

On Completion of the course, the students will be able to

- Choose the learning techniques with this basic knowledge.
- Apply effectively neural networks and genetic algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.
- Choose and differentiate reinforcement and analytical learning techniques

TEXT BOOK:

1. Tom M. Mitchell, “Machine Learning”, McGraw-Hill Education (INDIAN EDITION), 2013.

REFERENCES:

2. Ethem Alpaydin, “Introduction to Machine Learning”, 2nd Ed., PHI Learning Pvt. Ltd., 2013.
3. T. Hastie, R. Tibshirani, J. H. Friedman, “The Elements of Statistical Learning”, Springer; 1st edition, 2001.

Course Title: Computer Vision	Course Code: 14SCS421
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To review image processing techniques for computer vision
- To understand shape and region analysis
- To understand Hough Transform and its applications to detect lines, circles, ellipses
- To understand three-dimensional image analysis techniques
- To understand motion analysis
- To study some applications of computer vision algorithms

TOPICS:**MODULE I**

CAMERAS: Pinhole Cameras, **Radiometry – Measuring Light:** Light in Space, Light Surfaces, Important Special Cases, **Sources, Shadows, And Shading:** Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, **Color:** The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.

10 Hours**MODULE II**

Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, **Edge Detection:** Noise, Estimating Derivatives, Detecting Edges, **Texture:** Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.

10 Hours**MODULE III**

The Geometry of Multiple Views: Two Views, **Stereopsis:** Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, **Segmentation by Clustering:** What Is Segmentation?, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,

10 Hours**MODULE IV**

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, **Segmentation and Fitting Using Probabilistic Methods:** Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, **Tracking With Linear Dynamic Models:** Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.

10 Hours**MODULE V**

Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, **Geometric Camera Calibration:** Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into

Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, **Model- Based Vision:** Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment. **10 Hours**

Course Outcomes:

Upon completion of the course, the students will be able to

- Implement fundamental image processing techniques required for computer vision
- Perform shape analysis
- Implement boundary tracking techniques
- Apply chain codes and other region descriptors
- Apply Hough Transform for line, circle, and ellipse detections.
- Apply 3D vision techniques.
- Implement motion related techniques.
- Develop applications using computer vision techniques.

Course Title: Business Intelligence And Its Applications	Course Code: 14SCS422
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Implement the key elements of a successful business intelligence (BI) program
- To Apply a BI meta model that turns outcomes into actions
- To Extract and transform data from an operational data to a data business data
- To Exploit business analytics and performance measurement tools

TOPICS:**MODULE I**

Development Steps, BI Definitions, BI Decision Support Initiatives, Development Approaches, Parallel Development Tracks, BI Project Team Structure, Business Justification, Business Divers, Business Analysis Issues, Cost – Benefit Analysis, Risk Assessment, Business Case Assessment Activities, Roles Involved In These Activities, Risks Of Not Performing Step, Hardware, Middleware, DBMS Platform, Non Technical Infrastructure Evaluation

10 Hours**MODULE II**

Managing The BI Project, Defining And Planning The BI Project, Project Planning Activities, Roles And Risks Involved In These Activities, General Business Requirement, Project Specific Requirements, Interviewing Process

10 Hours**MODULE III**

Differences in Database Design Philosophies, Logical Database Design, Physical Database Design, Activities, Roles And Risks Involved In These Activities, Incremental Rollout, Security Management, Database Backup And Recovery

10 Hours**MODULE IV**

Growth Management, Application Release Concept, Post Implementation Reviews, Release Evaluation Activities, The Information Asset and Data Valuation, Actionable Knowledge – ROI, BI Applications, The Intelligence Dashboard

10 Hours**MODULE V**

Business View of Information technology Applications: Business Enterprise excellence, Key purpose of using IT, Type of digital data, basics of enterprise reporting, BI road ahead.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- know the complete life cycle of BI/Analytical development
- Understand the technology and processes associated with Business Intelligence framework

- Given a business scenario, identify the metrics, indicators and make recommendations to achieve the business goal.

Text Books:

1. Larissa T Moss and ShakuAtre – Business Intelligence Roadmap : The Complete Project Lifecycle for Decision Support Applications, Addison Wesley Information Technology Series, 2003.
2. R N Prasad, SeemaAcharya – Fundamentals of Business Analytics , Wiley India, 2011.

Reference Books:

4. Brian Larson - Delivering Business Intelligence with Microsoft SQL Server 2005, McGraw Hill, 2006.
5. Lynn Langit - Foundations of SQL Server 2008 Business Intelligence –Apress, ISBN13: 978-1-4302-3324-4, 2011

Semester: IV

Year: 2014-2015

Course Title: Agile Technologies	Course Code: 14SCS423
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To understand how an iterative, incremental development process leads to faster delivery of more useful software
- To understand the essence of agile development methods
- To understand the principles and practices of extreme programming
- To understand the roles of prototyping in the software process
- To understand the concept of Mastering Agility

TOPICS:

MODULE I

Why Agile?: Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility, **How to Be Agile?:** Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor **10 Hours**

MODULE II

Understanding XP: The XP Lifecycle, The XP Team, XP Concepts, **Adopting XP:** Is XP Right for Us?, Go!, Assess Your Agility **10 Hours**

MODULE III

Practicing XP:

Thinking: Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, **Collaborating:** Trust, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting, **Releasing:** "Done Done", No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. **Planning:** Vision, Release Planning, The Planning Game, Risk Management, Iteration Planning, Slack, Stories, Estimating. **Developing:** Incremental requirements, Customer Tests, Test-Driven Development, Refactoring, Simple Design, Incremental Design and Architecture, Spike Solutions, Performance Optimization, Exploratory Testing

10 Hours

MODULE IV

Mastering Agility

Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading, **Improve the Process:** Understand Your Project, Tune and Adapt, Break the Rules, **Rely on People :** Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People, **Eliminate Waste :** Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput

10 Hours

MODULE V

Deliver Value: Exploit Your Agility, Only Releasable Code Has Value, Deliver Business Results, Deliver Frequently, **Seek Technical Excellence** :Software Doesn't Exist, Design Is for Understanding, Design Trade-offs, Quality with a Name, Great Design, Universal Design Principles, Principles in Practice, Pursue Mastery

10 Hours

COURSE OUTCOMES

Students should be able to

- Understand The XP Lifecycle, XP Concepts, Adopting XP
- Work on Pair Programming, Root-Cause Analysis, Retrospectives, Planning, Incremental Requirements, Customer Tests
- Implement Concepts to Eliminate Waste

Text Books:

1. **The Art of Agile Development** (Pragmatic guide to agile software development), James shore, Chromatic, O'Reilly Media, Shroff Publishers & Distributors, 2007

Reference Books:

1. Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Prentice Hall; 1st edition, 2002
- 2., "Agile and Iterative Development A Manger's Guide", Craig Larman Pearson Education, First Edition, India, 2004.

Course Title: Wireless Networks And Mobile Computing	Course Code: 14SCS424
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To introduce the concepts of wireless communication.
- To understand various propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication.
- To understand CDMA, GSM, Mobile IP, Wimax
- To understand Different Mobile OS
- To learn various Markup Languages
- CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns

TOPICS:

MODULE I

Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. **Wireless Networks :** Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.

10 Hours

MODULE II

Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6.

10 Hours

MODULE III

Mobile OS and Computing Environment: Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux and Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators.

10 Hours

MODULE IV

Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.

10 Hours

MODULE V

J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.

10 Hours

COURSE OUTCOMES:

The student should be able to:

- Work on state of art techniques in wireless communication.
- Explore CDMA, GSM, Mobile IP, WiMax
- Work on Different Mobile OS
- Develop program for CLDC, MIDP let model and security concerns

TEXT BOOKS:

1. Ashok Talukder, Roopa Yavagal, Hasan Ahmed: Mobile Computing, Technology, Applications and Service Creation, 2nd Edition, Tata McGraw Hill, 2010.
2. Martyn Mallik: Mobile and Wireless Design Essentials, Wiley India, 2003

REFERENCE BOOKS:

1. Raj kamal: Mobile Computing, Oxford University Press, 2007.
2. Iti Saha Misra: Wireless Communications and Networks, 3G and Beyond, Tata McGraw Hill, 2009.

MANAGING BIG DATA [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - II			
Subject Code	16LNI422 / 16SCE21 / 16SCN24 / 16SCS21 / 16SIT41 / 16SSE422	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define big data for business intelligence • Analyze business case studies for big data analytics • Explain managing of Big data Without SQL • Develop map-reduce analytics using Hadoop and related tools 			
Module -1			Teaching Hours
UNDERSTANDING BIG DATA: What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics.			10Hours
Module -2			
NOSQL DATA MANAGEMENT: Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schema less databases – materialized views – distribution models – shading — version – map reduce – partitioning and combining – composing map-reduce calculations.			10 Hours
Module – 3			
BASICS OF HADOOP: Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures.			10 Hours
Module-4			
MAPREDUCE APPLICATIONS: MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats			10 Hours
Module-5			
HADOOP RELATED TOOLS: Hbase – data model and implementations – Hbase clients – Hbase examples –praxis. Cassandra – Cassandra data model – Cassandra examples – Cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.			10 Hours
Course outcomes:			
The students shall able to: <ul style="list-style-type: none"> • Describe big data and use cases from selected business domains • Explain NoSQL big data management • Install, configure, and run Hadoop and HDFS • Perform map-reduce analytics using Hadoop 			

- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Tom White, "Hadoop: The Definitive Guide", Third Edition, O'Reilley, 2012.
2. Eric Sammer, "Hadoop Operations", O'Reilley, 2012.

Reference Books:

1. Vignesh Prajapati, Big data analytics with R and Hadoop, SPD 2013.
2. E. Capriolo, D. Wampler, and J. Rutherglen, "Programming Hive", O'Reilley, 2012.
3. Lars George, "HBase: The Definitive Guide", O'Reilley, 2011.
4. Alan Gates, "Programming Pig", O'Reilley, 2011

ADVANCES IN COMPUTER NETWORKS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCN12/16SCS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Discuss with the basics of Computer Networks. • Compare various Network architectures. • Discuss fundamental protocols. • Define and analyze network traffic, congestion, controlling and resource allocation. 			
Module 1			Teaching Hours
Foundation: Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels. T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4			10 Hours
Module 2			
Internetworking I: Switching and Bridging, Datagram's, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation (ARP), Host Configuration (DHCP), Error Reporting (ICMP), Virtual Networks and Tunnels. T1: Chapter 3.1, 3.2,			10 Hours
Module 3			
Internetworking- II: Network as a Graph, Distance Vector (RIP), Link State (OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems (BGP), IP Version 6 (IPv6), Mobility and Mobile IP T1: Chapter 3.3, 4.1.1,4.1.3 T2:Chapter 13.1 to 13.18 , Ch 18.			10 Hours
Module 4			
End-to-End Protocols: Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3			10 Hours
Module 5			
Congestion Control and Resource Allocation Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System (DNS), Electronic Mail (SMTP,POP,IMAP,MIME), World Wide Web (HTTP), Network Management (SNMP) T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8			10 Hours
Course Outcomes			
The students should be able to:			
<ul style="list-style-type: none"> • List and classify network services, protocols and architectures, explain why they are layered. 			

- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module.

Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Larry Peterson and Bruce S Davis “Computer Networks :A System Approach” 5th Edition , Elsevier -2014.
2. Douglas E Comer, “Internetworking with TCP/IP, Principles, Protocols and Architecture” 6th Edition, PHI – 2014.

Reference Books:

1. Uyles Black, “Computer Networks, Protocols , Standards and Inte rfaces” 2 nd Edition - PHI.
2. Behrouz A Forouzan, “TCP /IP Protocol Suite” 4 th Edition – Tata McGraw-Hill.

ADVANCED ALGORITHMS [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16SCS23/ 16SSE253	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Define the graph search algorithms. • Explain network flow and linear programming problems. • Interpret hill climbing and dynamic programming design techniques. • Develop recursive backtracking algorithms. • Define NP completeness and randomized algorithms 			
Module -1			Teaching Hours
Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.			10Hours
Module -2			
Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson’s Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. Polynomials and the FFT: Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.			10 Hours
Module – 3			
Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization			10 Hours
Module-4			
String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.			10 Hours
Module-5			
Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.			10 Hours
Course outcomes:			

<p>Upon completion of the course, the students will be able to</p> <ul style="list-style-type: none"> • Design and apply iterative and recursive algorithms. • Design and implement optimization algorithms in specific applications. • Design appropriate shared objects and concurrent objects for applications.
<p>Question paper pattern:</p> <p>The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Define and explain basic issues, policy and challenges in the IoT • Illustrate Mechanism and Key Technologies in IoT • Explain the Standard of the IoT • Explain resources in the IoT and deploy of resources into business • Demonstrate data analytics for IoT 			
Module -1			Teaching Hours
What is The Internet of Things? Overview and Motivations, Examples of Applications, IPV6 Role, Areas of Development and Standardization, Scope of the Present Investigation. Internet of Things Definitions and frameworks-IoT Definitions, IoT Frameworks, Basic Nodal Capabilities. Internet of Things Application Examples- Overview, Smart Metering/Advanced Metering Infrastructure-Health/Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards, Tracking, Over-The-Air-Passive Surveillance/Ring of Steel, Control Application Examples, Myriad Other Applications.			10Hours
Module -2			

Fundamental IoT Mechanism and Key Technologies-Identification of IoT Object and Services, Structural Aspects of the IoT, Key IoT Technologies. Evolving IoT Standards-Overview and Approaches,IETF IPV6 Routing Protocol for RPL Roll, Constrained Application Protocol,Representational State Transfer, ETSI M2M,Third Generation Partnership Project Service Requirements for Machine-Type Communications, CENELEC, IETF IPV6 Over Lowpower WPAN, Zigbee IP(ZIP),IPSO	10 Hours
Module – 3	
Layer ½ Connectivity: Wireless Technologies for the IoT-WPAN Technologies for IoT/M2M, Cellular and Mobile Network Technologies for IoT/M2M,Layer 3 Connectivity :IPv6 Technologies for the IoT:Overview and Motivations.Address Capabilities,IPv6 Protocol Overview, IPv6 Tunneling, IPsec in IPv6,Header Compression Schemes,Quality of Service in IPv6, Migration Strategies to IPv6.	10 Hours
Module-4	
Case Studies illustrating IoT Design-Introduction, Home Automation, Cities, Environment, Agriculture, Productivity Applications.	10 Hours
Module-5	
Data Analytics for IoT – Introduction, Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis, Structural Health Monitoring Case Study.	10 Hours
Course outcomes:	
At the end of this course the students will be able to: <ul style="list-style-type: none"> • Develop schemes for the applications of IOT in real time scenarios • Manage the Internet resources • Model the Internet of things to business • Understand the practical knowledge through different case studies • Understand data sets received through IoT devices and tools used for analysis 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:

ARTIFICIAL INTELLIGENCE AND AGENT TECHNOLOGY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - II			
Subject Code	16SCS251	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS - 03			
Course objectives: This course will enable students to			

<ul style="list-style-type: none"> • Apply a given AI technique to a given concrete problem • Implement non-trivial AI techniques in a relatively large system • Explain uncertainty and Problem solving techniques. • Illustrate various symbolic knowledge representation to specify domains and reasoning tasks of a situated software agent. • Contrast different logical systems for inference over formal domain representations, and trace how a particular inference algorithm works on a given problem specification. • Compare various learning techniques and agent technology. 	
Module -1	Teaching Hours
<p>What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique?, The Level of the model, Criteria for success, some general references, One final word and beyond. Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems. Intelligent Agents: Agents and Environments, The nature of environments, The structure of agents. Text Book 1: Chapter 1 & 2 Text Book 2: Chapter 2</p>	8 Hours
Module -2	
<p>Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis. Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem. Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction. Logical Agents: Knowledge –based agents, the Wumpus world, Logic-Propositional logic, Propositional theorem proving, Effective propositional model checking, Agents based on propositional logic. Text Book 1: Chapter 3, 4 & 5 Text Book 2: Chapter 6</p>	8 Hours
Module – 3	
<p>Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search. Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic. Quantifying Uncertainty: Acting under uncertainty, Basic probability notation, Inference using full joint distributions, Independence, Bayes’ rule and its use, The Wumpus world revisited. Text Book 1: Chapter 7 & 8 Text Book 2: Chapter 13</p>	8 Hours
Module-4	
<p>Weak Slot-and-filter structures: Semantic Nets, Frames. Strong slot-and –filler structures: Conceptual dependency, scripts, CYC. Adversarial Search: Games, Optimal Decision in Games, Alpha-Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-Of-The-Art Game Programs, Alternative Approaches, Summary. Text Book 1: Chapter 9 & 10Text Book 2: Chapter 5</p>	8 Hours
Module-5	
<p>Learning From examples: Forms of learning, Supervised learning, Learning decision trees, Evaluating and choosing the best hypothesis, The theory of learning ,PAC, Regression and Classification with linear models, Nonparametric models, Support vector machines, Ensemble learning. Learning Probabilistic Models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm. Text Book 2: Chapter 18 & 20</p>	8 Hours
Course outcomes:	
<p>The students are able to:</p> <ul style="list-style-type: none"> • Design intelligent agents for problem solving, reasoning, planning, decision making, and learning. specific design and performance constraints, and when needed, design variants of 	

<p>existing algorithms.</p> <ul style="list-style-type: none"> • Apply AI technique on current applications. • Problem solving, knowledge representation, reasoning, and learning.
<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Elaine Rich, Kevin Knight, Shivashanka B Nair: Artificial Intelligence, Tata McGraw Hill 3rd edition. 2013 2. Stuart Russel, Peter Norvig: Artificial Intelligence A Modern Approach, Pearson 3rd edition 2013.

PATTERN RECOGNITION [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - II			
Subject Code	16SCE252/ 16SCS252	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain various Image processing and Pattern recognition techniques. • Illustrate mathematical morphology necessary for Pattern recognition. • Demonstrate Image Representation and description and feature extraction. • Explain principles of decision trees and clustering in pattern recognition. 			
Module -1			Teaching Hours
Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems			8 Hours
Module -2			
Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation			8 Hours
Module – 3			
Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, estimation of probabilities, comparison with NNC, Naive bayes classifier, Bayesian belief network			8 Hours
Module-4			
Naive bayes classifier, Bayesian belief network, Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over fitting & Pruning, Examples, Hidden Markov models: Markov models for classification, Hidden Markov models and classification using HMM			8 Hours
Module-5			
Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards,			8 Hours

Partitional (Forgy's, k-means, Isodata), clustering large data sets, examples, An application: Handwritten Digit recognition	
Course outcomes:	
The students shall able to: <ul style="list-style-type: none"> • Explain pattern recognition principals • Develop algorithms for Pattern Recognition. • Develop and analyze decision tress. • Design the nearest neighbor classifier. • Apply Decision tree and clustering techniques to various applications 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
<ol style="list-style-type: none"> 1. Pattern Recognition (An Introduction) , V Susheela Devi, M Narsimha Murthy, 2011 Universities Press, ISBN 978-81-7371-725-3 2. Pattern Recognition & Image Analysis, Earl Gose, Richard Johnsonbaugh, Steve Jost. PH ISBN-81-203-1484-0, 1996. 	
Reference Books:

INFORMATION AND NETWORK SECURITY [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Subject Code	16LNI12/16SCN13/16SCS253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Explain standard algorithms used to provide confidentiality, integrity and authenticity. • Distinguish key distribution and management schemes. • Deploy encryption techniques to secure data in transit across data networks • Implement security applications in the field of Information technology 			
Module 1			Teaching Hours
Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Mono-alphabetic Cipher, Playfair Cipher, Hill Cipher, Poly alphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm			8 Hours
Module 2			
Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. Public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.			8 Hours
Module 3			
Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. User Authentication: Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.			8 Hours
Module 4			
Wireless network security: Wireless security, Wireless network threats, Wireless			8 Hours

network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function. Web Security Considerations: Web Security Threats, Web Traffic Security Approaches. Secure Sockets Layer: SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic Computations. Transport Layer Security: Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, and Padding. HTTPS Connection Initiation, Connection Closure. Secure Shell(SSH) Transport Layer Protocol, User Authentication Protocol, Connection Protocol	
Module 5	
Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.	8 Hours
Course Outcomes	
The students should be able to:	
<ul style="list-style-type: none"> Analyze the vulnerabilities in any computing system and hence be able to design a security solution. Identify the security issues in the network and resolve it. Evaluate security mechanisms using rigorous approaches, including theoretical. 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. William Stallings, Cryptography and Network Security, Pearson 6 th edition.	
Reference Books:	
1. V K Pachghare: Cryptography and Information Security.	

WEB SERVICES			
[As per Choice Based Credit System (CBCS) scheme]			
(Effective from the academic year 2016 -2017)			
SEMESTER – II			
Subject Code	16SCS254 / 16SSE154 / 16LNI252 / 16SIT21	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			

<ul style="list-style-type: none"> • Define and explain Web Services. • Summarize WSDL Web Services. • Analyze Web service Architecture. • Explain Building Blocks of Web services. 	
Module 1	Teaching Hours
Middleware: Understanding the middle ware, RPC and Related Middle ware, TP Monitors, Object Brokers, Message-Oriented Middleware.	8 Hours
Module 2	
Web Services: Web Services Technologies, Web Services Architecture.	8 Hours
Module 3	
Basic Web Services Technology: WSDL Web Services Description Language, UDDI Universal Description Discovery and Integration, Web Services at work interactions between the Specifications, Related Standards.	8 Hours
Module 4	
Service Coordination Protocols: Infrastructure for Coordination Protocols, WS-Coordination, WS-Transaction, Rosetta Net and Other Standards Related to Coordination Protocols.	8 Hours
Module 5	
Service Composition: Basic of Service Composition, A New Chance of Success for Composition, Services Composition Models, Dependencies between Coordination and Composition, BPEL: Business Process Execution Language for Web Services, Outlook, Applicability of the Web Services, Web services as a Problem and a Solution : AN Example.	8 Hours
Course Outcomes	
The students should be able to: <ul style="list-style-type: none"> • Bind and unbind services in UDDI. • Develop WSDL document • Implement web service client to call public service. • Implement a service and exposing it as public service. 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju: Web Services(Concepts ,Architectures and Applications), Springer International Edition 2009.

MINIPROJECT [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER – II			
Laboratory Code	16LNI26/ 16SCE26 / 16SCN26 /16SCS26 /16SFC26/ 16SIT26 / 16SSE26	IA Marks	20

Number of Lecture Hours/Week	03 hours of lab	Exam Marks	80
Total Number of Lecture Hours	-----	Exam Hours	03
CREDITS – 02			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Enable the student to design, develop and analyze an application development 			
The student will carry out a mini project relevant to the course. The project must be development of an application (Hardware/Software). It is preferable if the project is based on mobile application development.			
Course outcomes:			
<ul style="list-style-type: none"> • Design, develop and to analyze an application development. • Prepare report of the project. 			
Conduction of Practical Examination:			
The student shall prepare the report by including:			
<ol style="list-style-type: none"> 1. Define project (Problem Definition) 2. Prepare requirements document <ol style="list-style-type: none"> a. Statement of work b. Functional requirements c. Software / Hardware requirements 3. Develop use cases 4. Research, analyze and evaluate existing learning materials on the application 5. Develop user interface and implement code 6. Prepare for final demo 			
Evaluation:			
Evaluation shall be taken up at the end of the semester. Project work evaluation and viva-voce examination shall be conducted. Internal evaluation shall be carried by the Guide and Head of the department for 20 marks. Final examination which includes demonstration of the project and viva-voce shall be conducted for 80 Marks viz report + Outputs of the project + presentation = 30+30+20 = 80 marks.			

SEMINAR			
[As per Choice Based Credit System (CBCS) scheme]			
(Effective from the academic year 2016 -2017)			
SEMESTER – II			
Subject Code	16SCE27 / 16SCN27 / 16LNI27 / 16SIT27 / 16SSE27 / 16SCS27 / 16SFC27	IA Marks	100
Number of Lecture Hours/Week	----	Exam Marks	-
Total Number of Lecture Hours	----	Exam Hours	-
CREDITS – 01			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Motivate the students to read technical article • Discover recent technology developments 			
Descriptions			
The students should read a recent technical article (try to narrow down the topic as much as possible)			

from any of the leading reputed and refereed journals like:

1. IEEE Transactions, journals, magazines, etc.
2. ACM Transactions, journals, magazines, SIG series, etc.
3. Springer
4. Elsevier publications etc

In the area of (to name few and not limited to)

- Web Technology
- Cloud Computing
- Artificial Intelligent
- Networking
- Security
- Data mining

Course Outcomes

The students should be able to:

- Conduct survey on recent technologies
- Infer and interpret the information from the survey conducted
- Motivated towards research

Conduction:

The students have to present at least ONE technical seminar on the selected topic and submit a report for internal evaluation.

Marks Distribution: Literature Survey + Presentation (PPT) + Report + Question & Answer + Paper: 20 + 30 + 30 + 20 (100).

MACHINE LEARNING TECHNIQUES [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCS41/16SIT424	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Explain basic concepts of learning and decision trees. • Compare and contrast neural networks and genetic algorithms • Apply the Bayesian techniques and instant based learning • Examine analytical learning and reinforced learning 			
Module -1			Teaching Hours
INTRODUCTION, CONCEPT LEARNING AND DECISION TREES Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search			10Hours
Module -2			
NEURAL NETWORKS AND GENETIC ALGORITHMS: Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning.			10 Hours
Module – 3			
BAYESIAN AND COMPUTATIONAL LEARNINGGL Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes			10 Hours

Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier– Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model.	
Module-4	
INSTANT BASED LEARNING AND LEARNING SET OF RULES: K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions –Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution	10 Hours
Module-5	
ANALYTICAL LEARNING AND REINFORCED LEARNING: Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning	10 Hours
Course outcomes:	
On Completion of the course, the students will be able to <ul style="list-style-type: none"> • Choose the learning techniques with this basic knowledge. • Apply effectively neural networks and genetic algorithms for appropriate applications. • Apply bayesian techniques and derive effectively learning rules. • Choose and differentiate reinforcement and analytical learning techniques 	
Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books: 1. Tom M. Mitchell, “Machine Learning”, McGraw-Hill Education (INDIAN EDITION), 2013.	
Reference Books: 1. Ethem Alpaydin, “Introduction to Machine Learning”, 2 nd Ed., PHI Learning Pvt. Ltd., 2013. 2. T. Hastie, R. Tibshirani, J. H. Friedman, “The Elements of Statistical Learning”, Springer; 1st edition, 2001.	

Computer Vision [As per Choice Based Credit System (CBCS) scheme] (Effective from the academic year 2016 -2017) SEMESTER - IV			
Subject Code	16SCS421	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to <ul style="list-style-type: none"> • Review image processing techniques for computer vision • Discuss shape and region analysis • Analyze Hough Transform and its applications to detect lines, circles, ellipses • Analyze three-dimensional image analysis techniques • Illustrate motion analysis • Discuss some applications of computer vision algorithms 			

Module -1	Teaching Hours
CAMERAS: Pinhole Cameras, Radiometry – Measuring Light: Light in Space, Light Surfaces, Important Special Cases, Sources, Shadows, And Shading: Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, Color: The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.	8 Hours
Module -2	
Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, Edge Detection: Noise, Estimating Derivatives, Detecting Edges, Texture: Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.	8 Hours
Module – 3	
The Geometry of Multiple Views: Two Views, Stereopsis: Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, Segmentation by Clustering: What Is Segmentation?, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,	8 Hours
Module-4	
Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, Segmentation and Fitting Using Probabilistic Methods: Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, Tracking With Linear Dynamic Models: Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.	8 Hours
Module-5	
Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, Geometric Camera Calibration: Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, Model- Based Vision: Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment.	8 Hours
Course outcomes:	
Upon completion of the course, the students will be able to	
<ul style="list-style-type: none"> • Implement fundamental image processing techniques required for computer vision • Perform shape analysis • Implement boundary tracking techniques • Apply chain codes and other region descriptors • Apply Hough Transform for line, circle, and ellipse detections. • Apply 3D vision techniques. • Implement motion related techniques. • Develop applications using computer vision techniques. 	
Question paper pattern:	
The question paper will have ten questions.	
There will be 2 questions from each module.	
Each question will have questions covering all the topics under a module.	
The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:

BUSINESS INTELLIGENCE AND ITS APPLICATIONS

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2016 -2017)

SEMESTER - IV

Subject Code	16SIT421 / 16SCS422	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS - 03

Course objectives: This course will enable students to

- Evaluate the key elements of a successful business intelligence (BI) program
- Apply a BI meta model that turns outcomes into actions
- Extract and transform data from an operational data to a data business data
- Evaluate business analytics and performance measurement tools

Module -1

Teaching Hours

Development Steps, BI Definitions, BI Decision Support Initiatives, Development Approaches, Parallel Development Tracks, BI Project Team Structure, Business Justification, Business Divers, Business Analysis Issues, Cost – Benefit Analysis, Risk Assessment, Business Case Assessment Activities, Roles Involved In These Activities, Risks Of Not Performing Step, Hardware, Middleware, DBMS Platform, Non Technical Infrastructure Evaluation

8 Hours

Module -2

Managing The BI Project, Defining And Planning The BI Project, Project Planning Activities, Roles And Risks Involved In These Activities, General Business Requirement, Project Specific Requirements, Interviewing Process

8 Hours

Module – 3

Differences in Database Design Philosophies, Logical Database Design, Physical Database Design, Activities, Roles And Risks Involved In These Activities, Incremental Rollout, Security Management, Database Backup And Recovery

8 Hours

Module-4

Growth Management, Application Release Concept, Post Implementation Reviews, Release Evaluation Activities, The Information Asset and Data Valuation, Actionable Knowledge – ROI, BI Applications, The Intelligence Dashboard

8 Hours

Module-5

Business View of Information technology Applications: Business Enterprise excellence, Key purpose of using IT, Type of digital data, basics f enterprise reporting, BI road ahead.

8 Hours

Course outcomes:

Upon completion of the course, the students will be able to

- Explain the complete life cycle of BI/Analytical development
- Illustrate technology and processes associated with Business Intelligence framework
- Demonstrate a business scenario, identify the metrics, indicators and make recommendations to achieve the business goal.

<p>Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.</p>

Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Explain iterative, incremental development process leads to faster delivery of more useful software • Evaluate essence of agile development methods • Illustrate the principles and practices of extreme programming • Show the roles of prototyping in the software process • Explain the Mastering Agility 			
Module -1			Teaching Hours
<p>Why Agile?: Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility, How to Be Agile?: Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor</p>			8 Hours
Module -2			
<p>Understanding XP: The XP Lifecycle, The XP Team, XP Concepts, Adopting XP: Is XP Right for Us?, Go!, Assess Your Agility</p>			8 Hours
Module – 3			

Practicing XP: Thinking: Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, Collaborating: Trust, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting, Releasing: “Done Done”, No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. Planning: Vision, Release Planning, The Planning Game, Risk Management, Iteration Planning, Slack, Stories, Estimating. Developing: Incremental requirements, Customer Tests, Test-Driven Development, Refactoring, Simple Design ,Incremental Design and Architecture, Spike Solutions, Performance Optimization, Exploratory Testing	8 Hours
Module-4	
Mastering Agility: Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading, Improve the Process: Understand Your Project, Tune and Adapt, Break the Rules, Rely on People : Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People, Eliminate Waste : Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput	8 Hours
Module-5	
Deliver Value: Exploit Your Agility, Only Releasable Code Has Value, Deliver Business Results, Deliver Frequently, Seek Technical Excellence : Software Doesn't Exist, Design Is for Understanding, Design Trade-offs, Quality with a Name, Great Design, Universal Design Principles, Principles in Practice, Pursue Mastery	8 Hours
Course outcomes:	
Students should be able to <ul style="list-style-type: none"> • Define XP Lifecycle, XP Concepts, Adopting XP • Evaluate on Pair Programming, Root-Cause Analysis, Retrospectives, Planning, Incremental Requirements, Customer Tests • Demonstrate concepts to Eliminate Waste 	
Question paper pattern:	
The question paper will have ten questions. There will be 2 questions from each module. Each question will have questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.	
Text Books:	
1. The Art of Agile Development (Pragmatic guide to agile software development), James shore, Chromatic, O'Reilly Media, Shroff Publishers & Distributors, 2007	
Reference Books:	
1. Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Prentice Hall; 1st edition, 2002 2. Agile and Iterative Development A Manger's Guide”, Craig Larman Pearson Education, First Edition, India, 2004	

WIRELESS NETWORKS AND MOBILE COMPUTING

[As per Choice Based Credit System (CBCS) scheme]

(Effective from the academic year 2016 -2017)

SEMESTER – IV

Subject Code	16SCE22 / 16SCS424	IA Marks	20
--------------	--------------------	----------	----

Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Define concepts of wireless communication. • Compare and contrast propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication. • Explain CDMA, GSM. Mobile IP, Wimax and Different Mobile OS • Illustrate various Markup Languages CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns 			
Module -1			Teaching Hours
Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. Wireless Networks : Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.			8 Hours
Module -2			
Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6			8 Hours
Module – 3			
Mobile OS and Computing Environment : Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux, Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators			8 Hours
Module-4			
Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.			8 Hours
Module-5			
J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.			8 Hours
Course outcomes:			
The students shall able to:			
<ul style="list-style-type: none"> • Explain state of art techniques in wireless communication. • Discover CDMA, GSM. Mobile IP, Wimax • Demonstrate program for CLDC, MIDP let model and security concerns 			
Question paper pattern:			
The question paper will have ten questions.			
There will be 2 questions from each module.			
Each question will have questions covering all the topics under a module.			
The students will have to answer 5 full questions, selecting one full question from each module.

Note:

1. **Project Phase-1:** 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.
2. **Project Phase-2:** 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
3. **Project Evaluation:** Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
4. **Project evaluation:**
 - a. Internal Examiner shall carry out the evaluation for 100 marks.
 - b. External Examiner shall carry out the evaluation for 100 marks.
 - c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
 - d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Elective – III

14SCS423 Agile Technologies

L- Lecture , T- Tutorial, P- Practical

Note:

***Lab Classes for these Core Subjects are Compulsory (Practical will be Evaluated for 20 marks and Internal assessment for 30 marks). Lab journals Should be Maintained.**

Seminar: Topics should be chosen from IEEE/ACM/Elsevier/Springer/any Refereed - Journals /Transactions. Encourage students to convert these seminar topics into a good survey paper or Technical paper.

1).Project Phase – I: 6 weeks duration shall be carried out between II and III Semester. Candidates in consultation with guide shall carryout literature survey / visit to Industries to finalize the topic of dissertation.

2) Internship:- 24 weeks Duration in 3rd Semester, Evaluation of Marks - Presentation : 25 marks, Report writing and Submission :75 marks and At the end of Internship Viva-Voce Exams shall be conducted for 50 marks.

3).Project Work : 20 weeks duration in IV Semester carries total marks of 250.

4)Project Phase II: 4 days for project work in a week during IV Semester. Evaluation shall be taken during the 8th week of the IV Semester. Total Marks shall be 25.

5).Project Phase = III: Evaluation shall be taken up at the end of the IV Semester for 25 marks. After the Project report is submitted, Project Work Evaluation and Viva-Voce Examination shall be conducted. Total Marks Shall be 50+50+100=200 (50 Marks for Internal Guide,50 Marks for External and 100 for Viva-Voce).

Marks of Evaluation of Project:

- I) The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- II) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university.(out of two external examiners at least one should be present).

Semester: I

Year: 2014-2015

Course Title: Advances In Operating Systems	Course Code: 14SCS11
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To learn the fundamentals of Operating Systems
- To gain knowledge on Distributed operating system concepts that includes architecture, Mutual exclusion algorithms, Deadlock detection algorithms and agreement protocols
- To gain insight on to the distributed resource management components viz. the algorithms for implementation of distributed shared memory, recovery and commit protocols
- To know the components and management aspects of Real time, Mobile operating Systems.

TOPICS:

MODULE I

Operating System Overview, Process description & control

Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Microsoft Windows Overview, Traditional UNIX Systems, Modern UNIX Systems, Linux, What is a Process?, Process States, Process Description, Process Control, Execution of the Operating System, Security Issues, UNIX SVR4 Process Management.

10 Hours

Module II

Threads, SMP, and Microkernel, Virtual Memory.

Processes and Threads, Symmetric Multiprocessing (SMP), Microkernels, Windows Vista Thread and SMP Management, Solaris Thread and SMP Management, Linux Process and Thread Management. Hardware and Control Structures, Operating System Software, UNIX and Solaris Memory Management, Linux Memory Management, Windows Vista Memory Management, Summary.

10 Hours

Module III

Multiprocessor and Real-Time Scheduling

Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, UNIX PreclsSl) Scheduling, Windows Vista Scheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock.

10 Hours

Module IV

Embedded Operating Systems

Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits.

10 Hours

MODULEV

Kernel Organization

Using Kernel Services, Daemons, Starting the Kernel , Control in the Machine , Modules and Device Management, MODULEOrganization, MODULEInstallation and Removal, Process and Resource Management, Running Process

Manager, Creating a new Task , IPC and Synchronization, The Scheduler , Memory Manager , The Virtual Address Space, The Page Fault Handler , File Management.

The windows NT/2000/XP kernel: Introduction, The NT kernel, Objects , Threads, Multiplication Synchronization, Traps, Interrupts and Exceptions, The NT executive , Object Manager, Process and Thread Manager , Virtual Memory Manager, I/o Manager, The cache Manager , Kernel local procedure calls and IPC, The native API, subsystems.

10 Hours

Course Outcomes:

The students should be able to:

- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system
- Learn the various resource management techniques for distributed systems
- Identify the different features of real time and mobile operating systems
- Modify existing open source kernels in terms of functionality or features used.

Text Books:

1. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013.
2. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.

Reference Books:

1. Silberschatz, Galvin, Gagne: Operating System Concepts, 8th Edition, Wiley, 2008
2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006.
3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007

Semester: I

Year: 2014-2015

Course Title: Cloud Computing	Course Code: 14SCS12
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn how to use Cloud Services.
- To implement Virtualization
- To implement Task Scheduling algorithms.
- Apply Map-Reduce concept to applications.
- To build Private Cloud.

Topics:

Module I

Introduction, Cloud Infrastructure

Cloud computing, Cloud computing delivery models and services, Ethical issues, Cloud vulnerabilities, Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Cloud storage diversity and vendor lock-in, Energy use and ecological impact, Service level agreements, User experience and software licensing. Exercises and problems.

10 Hours

Module II

Cloud Computing: Application Paradigms.

Challenges of cloud computing, Architectural styles of cloud computing, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper, The Map Reduce programming model, A case study: The GrepTheWeb application , Cloud for science and engineering, High-performance computing on a cloud, Cloud computing for Biology research, Social computing, digital content and cloud computing.

10 Hours

Module III

Cloud Resource Virtualization.

Virtualization, Layering and virtualization, Virtual machine monitors, Virtual Machines, Performance and Security Isolation, Full virtualization and paravirtualization, Hardware support for virtualization, Case Study: Xen a VMM based paravirtualization, Optimization of network virtualization, vBlades, Performance comparison of virtual machines, The dark side of virtualization, Exercises and problems.

10 Hours

Module IV

Cloud Resource Management and Scheduling.

Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling Map Reduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

10 Hours

Module V

Cloud Security, Cloud Application Development.

Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to use S3 in java, Cloud-based simulation of a distributed trust algorithm, A trust management service, A cloud service for adaptive data streaming, Cloud based optimal FPGA synthesis .Exercises and problems.

10 Hours

LAB EXPERIMENTS

NOTE: Simulate using object oriented programming, any available cloud environment (**Eg; Amazon cloud**) and **VM ware for resource virtualization.**

1. Create a Collaborative learning environment for a particular learning topic using Google Apps. Google Drive, Google Docs and Google Slides must be used for hosting e-books, important articles and presentations respectively. The instructor must use the Google Sheets to convey the timetable for different events and for analyzing the scores for individual assignment submission.

2. Modeling and simulation Cloud computing environments, including Data Centers, Hosts and Cloudlets and perform VM provisioning using CloudSim: Design a host with two CPU cores, which receives request for hosting two VMs, such that each one requires two cores and plans to host four tasks units. More specifically, tasks t1, t2, t3 and t4 to be hosted in VM1, while t5, t6, t7, and t8 to be hosted in VM2. Implement space-shared allocation policy and time-shared allocation policy. Compare the results.

3. Model a Cloud computing environment having Data center that had 100 hosts. The hosts are to be modeled to have a CPU core (1000 MIPS), 2 GB of RAM and 1 TB of storage. Consider the workload model for this evaluation included provisioning requests for 400 VMs, with each request demanding 1 CPU core (250 MIPS), 256 MB of RAM and 1 GB of storage. Each VM hosts a *web-hosting application service*, whose CPU utilization distribution was generated according to the uniform distribution. Each instance of a webhosting service required 150,000 MIPS or about 10 minutes to complete execution assuming 100% utilization. Simulate Energy-conscious model for power consumption and power management techniques such as Dynamic Voltage and Frequency Scaling (DVFS). Initially, VMs are to be allocated according to requested parameters (4 VMs on each host). The Cloud computing architecture that is to be considered for studying energy conscious resource management techniques/policies included a data center, CloudCoordinator, and Sensor component. The CloudCoordinator and Sensor perform their usual roles. Via the attached Sensors (which are connected with every host), CloudCoordinator must periodically monitor the performance status of active VMs such as load conditions, and processing share. This real time information is to be passed to VMM, which can use it for performing appropriate resizing of VMs and application of DVFS and soft scaling. CloudCoordinator continuously has to adapt allocation of VMs by issuing VM migration commands and changing power states of nodes according to its policy and current utilization of resources.

4. Model and simulate the environment consisting of a data center with 10,000 hosts where each host was modeled to have a single CPU core (1200MIPS), 4GB of RAM memory and 2TB of storage. Consider the provisioning policy for VMs as space-shared, which allows one VM to be active in a host at a given instance of time. Make a request from the end-user (through the Datacenter Broker) for creation and instantiation of 50 VMs that had following constraints: 1024MB of physical memory, 1 CPU core and 1GB of storage. The application granularity was modeled to be composed of 300 task units, with each task unit requiring 1,440,000 million instructions (20 minutes in the simulated hosts) to be executed on a host. Minimal data transfer (300 KB) overhead can be considered for the task units (to and from the data center). After the creation of VMs, task units were submitted in small groups of 50 (one for each VM) at inter-arrival delay of 10 minutes.

5. Implement Map Reduce concept for

a. Strassen's Matrix Multiplication for a huge matrix.

b. Computing the average number of citation index a researcher has according to age among some 1 billion journal articles. Consider a network of entities and relationships between them. It is required to calculate a state of each entity on

the basis of properties of the other entities in its neighborhood. This state can represent a distance to other nodes, indication that there is a neighbor

with the certain properties, characteristic of neighborhood density and so on. A network is stored as a set of nodes and each node contains a list of adjacent node IDs. Mapper emits messages for each node using ID of the adjacent node as a key. Reducer must re compute state and rewrite node with the new state. Implement this scenario.

Course Outcomes:

The students should be able to:

- Demonstrate and experiment simple Cloud Applications
- Apply resource allocation, scheduling algorithms.
- Implement Map-Reduce concept.
- Create virtual machines from available physical resources.
- Setup a private cloud.
- Familiarize with Open Stack.

Text Book:

REFERENCES:

1. Rajkumar Buyya , James Broberg, Andrzej Goscinski: Cloud Computing Principles and Paradigms, Willey 2014.
2. John W Rittinghouse, James F Ransome:Cloud Computing Implementation, Management and Security, CRC Press 2013.

Course Title: Advances in Database Management Systems	Course Code: 14SCS13
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To acquire knowledge on parallel and distributed databases and its applications.
- To study the usage and applications of Object Oriented database
- To understand the basic concepts, principles of intelligent databases.
- To understand the advanced topics of data warehousing and mining .
- To learn emerging and advanced data models
- To acquire inquisitive attitude towards research topics in databases.

Topics:**MODULE I**

Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, transactions and dealing with constraint violations.

Overview of Object-Oriented Concepts – Objects, Encapsulation, Polymorphism, Type and class hierarchies etc.

10 Hours

Module II

Object and Object-Relational Databases: Object Oriented Concepts: – Objects, complex objects; Object model of ODMG, Object definition language, ODL, Object Query Language, OQL, Overview of C++ language binding; Conceptual design of Object database. Overview of object relational features of: SQL, Object-relational features of Oracle; Implementation and related issues for extended type systems; The nested relational model.

10 Hours

Module III

Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.

10 Hours

Module IV

Data Warehousing, Decision Support and Data Mining: Introduction to decision support; OLAP, multidimensional model; Window queries in SQL; Finding answers quickly; Implementation techniques for OLAP; Data Warehousing; Views and Decision support, View materialization, Maintaining materialized views. Introduction to Data Mining; Counting co-occurrences; Mining for rules; Tree-structured rules; Clustering; Similarity search over sequences; Incremental mining and data streams; Additional data mining tasks.

10 Hours

Module V

Enhanced Data Models for Some Advanced Applications: Active database concepts and triggers; Temporal, Spatial, and Deductive Databases – Basic concepts. More Recent Applications: Mobile databases; Multimedia databases; Geographical Information Systems; Genome data management.

10 Hours

LABORATORY WORK:

(The following tasks can be implemented on Oracle or any other suitable RDBMS with support for Object features)

1. Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.
2. Develop a database application to demonstrate the representation of multivalued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.
3. Design and develop a suitable Student Database application. One of the attributes to be maintained is the attendance of a student in each subject for which he/she has enrolled. Using TRIGGERS, write active rules to do the following:
 - a. Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.
 - b. Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.
4. Design, develop, and execute a program in a language of your choice to implement any one algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

- Select the appropriate high performance database like parallel and distributed database
- Model and represent the real world data using object oriented database
- Embed the rule set in the database to implement data warehousing of mining
- Choose and design database for recent applications database for better interoperability

Course Title: Multi-Core Architecture and Programming	Course Code: 14SCS14
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the recent trends in the field of Computer Architecture and identify performance related parameters
- To appreciate the need for parallel processing
- To expose the students to the problems related to multiprocessing
- To understand the different types of multicore architectures
- To understand the concepts of multi threading and OPENMP.

Topics:**MODULE I**

Introduction to Multi-core Architecture: Motivation for Concurrency in software, Parallel Computing Platforms, Parallel Computing in Microprocessors, Differentiating Multi-core Architectures from Hyper- Threading Technology, Multi-threading on Single-Core versus Multi-Core Platforms Understanding Performance, Amdahl's Law, Growing Returns: Gustafson's Law. **System Overview of Threading:** Defining Threads, System View of Threads, Threading above the Operating System, Threads inside the OS, Threads inside the Hardware, What Happens When a Thread Is Created, Application Programming Models and Threading, Virtual Environment: VMs and Platforms, Runtime Virtualization, System Virtualization. **10 Hours**

Module II

Fundamental Concepts of Parallel Programming: Designing for Threads, Task Decomposition, Data Decomposition, Data Flow Decomposition, Implications of Different Decompositions, Challenges You'll Face, Parallel Programming Patterns, A Motivating Problem: Error Diffusion, Analysis of the Error Diffusion Algorithm, An Alternate Approach: Parallel Error Diffusion, Other Alternatives.

10 Hours**MODULE III**

Threading and Parallel Programming Constructs: Synchronization, Critical Sections, Deadlock, Synchronization Primitives, Semaphores, Locks, Condition Variables, Messages, Flow Control- based Concepts, Fence, Barrier, Implementation-dependent Threading Features. **Threading APIs :** Threading APIs for Microsoft Windows, Win32/MFC Thread APIs, Threading APIs for Microsoft .NET Framework, Creating Threads, Managing Threads, Thread Pools, Thread Synchronization, POSIX Threads, Creating Threads, Managing Threads, Thread Synchronization, Signaling, Compilation and Linking.

10 Hours**MODULE IV**

OpenMP: A Portable Solution for Threading: Challenges in Threading a Loop, Loop-carried Dependence, Data-race Conditions, Managing Shared and Private Data, Loop Scheduling and Portioning, Effective Use of Reductions, Minimizing Threading Overhead, Work-sharing Sections, Performance-oriented Programming, Using Barrier and No wait, Interleaving Single-thread and Multi-thread Execution, Data Copy-in and Copy-out, Protecting Updates of Shared

Variables, Intel Task queuing Extension to OpenMP, OpenMP Library Functions, OpenMP Environment Variables, Compilation, Debugging, performance.

10 Hours

MODULE V

Solutions to Common Parallel Programming Problems: Too Many Threads, Data Races, Deadlocks, and Live Locks, Deadlock, Heavily Contended Locks, Priority Inversion, Solutions for Heavily Contended Locks, Non-blocking Algorithms, ABA Problem, Cache Line Ping-ponging, Memory Reclamation Problem, Recommendations, Thread-safe Functions and Libraries, Memory Issues, Bandwidth, Working in the Cache, Memory Contention, Cache-related Issues, False Sharing, Memory Consistency, Current IA-32 Architecture, Itanium Architecture, High-level Languages, Avoiding Pipeline Stalls on IA-32, Data Organization for High Performance.

10 Hours

Course Outcomes:

The students should be able to:

- Identify the limitations of ILP and the need for multi-core architectures.
- Solve the issues related to multiprocessing and suggest solutions.
- Point out the salient features of different multi-core architectures and how they exploit parallelism.

Text Book

1. Multicore Programming , Increased Performance through Software Multi-threading by Shameem Akhter and Jason Roberts , Intel Press , 2006

Semester: I

Year: 2014-2015

Course Title: Advances in Digital Image Processing	Course Code: 14SCS151
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To understand the image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- To understand the image segmentation and representation techniques.
- To understand how image are analyzed to extract features of interest.
- To introduce the concepts of image registration and image fusion.
- To analyze the constraints in image processing when dealing with 3D data sets.

Topics:

MODULE I

Introduction: What is Digital Image Processing, Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System. **Digital Image Fundamentals:** Elements of Visual Perception, A Simple Image Formation Model, Basic Concepts in Sampling and Quantization, Representing Digital Images, Spatial and Gray-level Resolution, Zooming and Shrinking Digital Images, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations.

10 Hours

MODULE II

Image Enhancement in the Spatial Domain: Some Basic Gray Level Transformations, Histogram Processing, Enhancement Using Arithmetic/Logic Operations, Basics of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods. **Image Enhancement in the Frequency Domain:** Introduction to the Fourier Transform and the Frequency Domain, Smoothing Frequency-Domain Filters, Sharpening Frequency-Domain Filters, Homomorphic Filtering.

10 Hours

MODULE III

Image Restoration: A Model of the Image degradation/Restoration process, Noise Models, Restoration in the Presence of Noise Only–Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear, Position-Invariant Degradations , Estimating the Degradation Function, Inverse Filtering ,Minimum Mean Square Error (Wiener) Filtering, Constrained Least Square Filtering, Geometric Mean Filter.

10 Hours

MODULE IV

Color Fundamentals: Color Models, Pseudocolor Image Processing, Basics of Full-Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression. **Wavelets and Multiresolution Processing:** Image Pyramids, Subband coding, The Haar Transform, Multiresolution Expansions, Wavelet Transforms in one Dimension, Fast Wavelet Transform, Wavelet Transforms in Two Dimensions, Wavelet Packets. **Image Compression:** Fundamentals, Image Compression Models, Error-free (Lossless) compression, Lossy Compression.

10 Hours

MODULE V:

Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. **Image Segmentation:** Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Based Segmentation.

10 Hours

Course Outcomes:

The students will be able to:

- Understand image formation and the role human visual system plays in perception of gray and color image data.
- Apply image processing techniques in both the spatial and frequency (Fourier) domains.
- Design image analysis techniques in the form of image segmentation and to evaluate the Methodologies for segmentation.
- Conduct independent study and analysis of feature extraction techniques.
- Understand the concepts of image registration and image fusion.
- Analyze the constraints in image processing when dealing with 3D data sets and to apply image
- Apply algorithms in practical applications.

Semester: I

Year: 2014-2015

Course Title: Advances in Storage Area Networks	Course Code: 14SCS152
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of storage centric and server centric systems
- To understand the metrics used for Designing storage area networks
- To understand the RAID concepts
- To enable the students to understand how data centre's maintain the data with the concepts of backup mainly remote mirroring concepts for both simple and complex systems

Topics:

MODULE I

Introduction: Server Centric IT Architecture and its Limitations; Storage – Centric IT Architecture and its advantages. Case study: Replacing a server with Storage Networks The Data Storage and Data Access problem; The Battle for size and access. **Intelligent Disk Subsystems:** Architecture of Intelligent Disk Subsystems; Hard disks and Internal I/O Channels; JBOD, Storage virtualization using RAID and different RAID levels; Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems, Availability of disk subsystems.

10 Hours

MODULE II

I/O Techniques: The Physical I/O path from the CPU to the Storage System; SCSI; Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. **Network Attached Storage:** The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system. **File System and NAS:** Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

10 Hours

MODULE III

Storage Virtualization: Definition of Storage virtualization ; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

10 Hours

MODULE IV

SAN Architecture and Hardware devices: Overview, Creating a Network for storage; SAN Hardware devices; The fibre channel switch; Host Bus Adaptors; Putting the storage in SAN; Fabric operation from a Hardware perspective. **Software Components of SAN:** The switch's Operating system; Device Drivers; Supporting the switch's components; Configuration options for SANs.

10 Hours

MODULE V

Management of Storage Network: System Management, Requirement of management System, Support by Management System, Management Interface, Standardized Mechanisms, Property Mechanisms, In-band Management,

Use of SNMP, CIM and WBEM, Storage Management Initiative Specification (SMI-S), CMIP and DMI, Optional Aspects of the Management of Storage Networks, Summary

10 Hours

Course Outcomes:

The students should be able to:

- Identify the need for performance evaluation and the metrics used for it
- Apply the techniques used for data maintenance.
- Realize storage virtualization concept,
- Develop techniques for evaluating policies for LUN masking, file systems.

Text Book:

Course Title: Embedded Computing Systems	Course Code: 14SCS153
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COUR
SE**OBJECTIVES**

- Provide a general overview of Embedded Systems
- Show current statistics of Embedded Systems
- Design a complete microprocessor-based hardware system
- Design, code, compile, and test real-time software
- Integrate a fully functional system including hardware and software
- Gain the ability to make intelligent choices between hardware/software tradeoffs.

Topics:**MODULE I**

Introduction to embedded systems: Embedded systems, Processor embedded into a system, Embedded hardware units and device in a system, Embedded software in a system, Examples of embedded systems, Design process in embedded system, Formalization of system design, Design process and design examples, Classification of embedded systems, skills required for an embedded system designer.

7 Hours**MODULE II**

Devices and communication buses for devices network :IO types and example, Serial communication devices, Parallel device ports, Sophisticated interfacing features in device ports, Wireless devices, Timer and counting devices, Watchdog timer, Real time clock, Networked embedded systems, Serial bus communication protocols, Parallel bus device protocols-parallel communication internet using ISA, PCI, PCI-X and advanced buses, Internet enabled systems-network protocols, Wireless and mobile system protocols.

13 Hours**MODULE III**

Device drivers and interrupts and service mechanism: Programming-I/O busy-wait approach without interrupt service mechanism, ISR concept, Interrupt sources, Interrupt servicing (Handling) Mechanism, Multiple interrupts, Context and the periods for context switching, interrupt latency and deadline, Classification of processors interrupt service mechanism from Context-saving angle, Direct memory access, Device driver programming.

10 Hours**MODULE IV**

Interprocesses communication and synchronization of processes, Threads and tasks: Multiple process in an application, Multiple threads in an application, Tasks, Task states, Task and Data, Clear-cut distinction between functions. ISRS and tasks by their characteristics, concept and semaphores, Shared data, Inter-process communication, Signal function, Semaphore functions, Message Queue functions, Mailbox functions, Pipe functions, Socket functions, RPC functions.

10 Hours**MODULE V**

Real-time operating systems: OS Services, Process management, Timer functions, Event functions, Memory management, Device, file and IO subsystems management, Interrupt routines in RTOS environment and handling of interrupt source calls, Real-time operating systems, Basic design using an RTOS, RTOS task scheduling models, interrupt latency and response of the tasks as performance metrics, OS security issues. **Introduction to embedded**

software development process and tools, Host and target machines, Linking and location software.

10 Hours

Course Outcomes:

The students should be able to:

- Knowledge to distinguish the characteristics of embedded computer systems.
- Ability examines the various vulnerabilities of embedded computer systems.
- Ability to design embedded systems.
- Awareness of the changing landscape in embedded systems

Text Books:

1. **Raj Kamal**, “Embedded Systems: Architecture, Programming, and Design” 2nd edition , Tata McGraw hill-2013

Chapters: Chapter 1.1 to 1.5, 1.8 to 1.12, Chapter 3, 4, 7, 8 and 13.1 to 13.3.

References:

2. **Marilyn Wolf** ,“Computer as Components, Principles of Embedded Computing System Design” 3rd edition , Elsevier-2014 .

Course Title: Advances in Computer Graphics	Course Code: 14SCS154
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- Learn basic and fundamental computer graphics techniques.
- Learn image synthesis techniques;
- Examine applications of modeling, design and visualization.
- Learn different color modeling and computer animation
- Learn hierarchical modeling and graphing file formats.

Topics:**MODULE I**

Three-Dimensional Object Representations: Polyhedra, OpenGL Polyhedron Functions, Curved Surfaces, Quadric Surfaces, Super quadrics, OpenGL Quadric-Surface and Cubic-Surface Functions, Blobby Objects, Spline Representations, Cubic-Spline Interpolation Methods, Bezier Spline Curves, Bazier Surfaces B-Spline Curves, B-Spline Surfaces, Beta- Splines, Retional Splines, Conversion Between Spline Representations, Displaying Spline Curves and rfaces, OpenGL Approximation-Spline Functions, Sweep Representations, Constructive Solid –Geometry Method, Octrees, BSP Trees, Fractal-Geometry Methods, Shape Grammars and Others Procedural Methods, Particle Systems, Physically Based Modeling, Visualization Of Data Sets.

10 Hours**MODULE II**

Visible-Surface Detection Methods: Classification Of Visible –Surface Detection Algorithms, Back-Face Method, Depth-Buffer Method, A-Buffer Method, Scan-Line Method, BSP-Tree Method, Area-Subdivision Method, Octree Methods, Ray-Casting Method, Comparison of Visibility –Detection Methods, Curved Surfaces, Wire-Frame Visibility –Detection Functions.

10 Hours**MODULE III**

Illumination Models and Surface- Rendering Methods: Light Sources, Surface Lighting Effects, Basic Illumination Models, Transparent Surfaces, Atmospheric Effects, Shadows, Camera parameters, Displaying light intensities, Halftone patterns and dithering techniques, polygon rendering methods, ray-tracing methods, Radiosity lighting model, Environment mapping, Photon mapping, Adding surface details, Modeling surface details with polygons, Texture mapping, Bump mapping, OpenGL Illumination and surface-rendering functions, openGL texture functions.

10 Hours**MODULE IV**

Color models, color applications and Computer animation: Properties of light, Color models, Standard primaries and the chromaticity diagram, The RGB color model, The YIQ and related color models, The CMY and CMYK color models, The HSV color model, The HLS color model, Color Selection and applications. Raster methods for computer animation, Design of animations sequences, Traditional animation techniques,

General computer-animation functions, Computer-animation languages, Key-frame systems, Motion specification, Articulated figure animation, Periodic motions, OpenGL animation procedures.

10 Hours

MODULE V

Hierarchical modeling and Graphics file formats: Basic modeling concepts, Modeling packages, General hierarchical modeling methods, Hierarchical modeling using OpenGL display list, Image-File configurations, Color-reduction methods, File-compression techniques, Composition of the major file formats.

10 Hours

COURSE OUTCOMES:

The students are able to :

- Represent and implement images and objects using 3D representation and OpenGL methodologies.
- Design develop surface detection using various detection methods
- Choose various illumination models for provides effective standards of objects.
- Design of develop effective computer animations.

Text Books:

1. Computer Graphics with OpenGL-Hearn Baker 4rd edition, Pearson publication.2010 (Chapter 8,9,10.12.13.14,15)
2. James D Foley,Andries van dam,Steven K Feiner,John F Hughes, Computer graphics, Pearson Education 3rd edition, 2013

Reference Books:

1. Edward Angel: Interactive Computer graphics a top-down approach with OpenGL, Addison Wesley, 6th edition 2012
2. Advanced graphics programming using OpenGL: TomMcReynolds-David Blythe. Elesvier.MK, 2005

Semester: I

Year: 2014-2015

Course Title: Advances in Operating Systems Laboratory	Course Code: 14SCS16
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES:

- To implement the shell of Operating System.
- To implement distributed operating system concepts.
- To implement virus detection techniques.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/ any equivalent language or tool with suitable platform.

1. Design and Develop a shell that should support at least 20 commands.
2. Design and develop a program to implement lazy buddy system algorithm.
3. Write a multi-class multithreaded program that simulates multiple sleeping barbers, all in one barbershop that has a finite number of chairs in the waiting room. Each customer is instantiated from a single customer class; each barber is instantiated from a single Barber class.
4. Use ECOS operating system to develop a program for controlling accessing to a pool of resources using mutexes and condition variables.
5. Design and develop a program to realize the virus classification, such as boot sector infector, file infector and macro virus.

Course Outcomes:

The students should be able to:

- Demonstrate the shell.
- Demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system.
- Understand the various virus detection techniques.

Course Title: Managing Big Data	Course Code: 14SCS21
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To Understand big data for business intelligence
- To Learn business case studies for big data analytics
- To Understand Nosql big data management
- To manage Big data without SQL
- To understanding map-reduce analytics using Hadoop and related tools

TOPICS:**MODULE I**

UNDERSTANDING BIG DATA 10 Hours What is big data – why big data –.Data!, Data Storage and Analysis, Comparison with Other Systems, Rational Database Management System , Grid Computing, Volunteer Computing, convergence of key trends – unstructured data – industry examples of big data – web analytics – big data and marketing – fraud and big data – risk and big data – credit risk management – big data and algorithmic trading – big data and healthcare – big data in medicine – advertising and big data – big data technologies – introduction to Hadoop – open source technologies – cloud and big data – mobile business intelligence – Crowd sourcing analytics – inter and trans firewall analytics

MODULE II

NOSQL DATA MANAGEMENT 10 Hours Introduction to NoSQL – aggregate data models – aggregates – key-value and document data models – relationships – graph databases – schemaless databases – materialized views – distribution models – sharding – version – MapReduce – partitioning and combining – composing map-reduce calculations

MODULE III**BASICS OF HADOOP****10 Hours**

Data format – analyzing data with Hadoop – scaling out – Hadoop streaming – Hadoop pipes – design of Hadoop distributed file system (HDFS) – HDFS concepts – Java interface – data flow – Hadoop I/O – data integrity – compression – serialization – Avro – file-based data structures

MODULE IV

MAPREDUCE APPLICATIONS 10 Hours MapReduce workflows – unit tests with MRUnit – test data and local tests – anatomy of MapReduce job run – classic Map-reduce – YARN – failures in classic Map-reduce and YARN – job scheduling – shuffle and sort – task execution – MapReduce types – input formats – output formats

MODULE V

HADOOP RELATED TOOLS 10 Hours Hbase – data model and implementations – Hbase clients – Hbase examples – praxis. Cassandra – Cassandra data model – cassandra examples – cassandra clients –Hadoop integration. Pig – Grunt – pig data model – Pig Latin – developing and testing Pig Latin scripts. Hive – data types and file formats – HiveQL data definition – HiveQL data manipulation – HiveQL queries.

LAB Experiments**Exercise 1 --- HDFS**

Start by reviewing HDFS. You will find that its composition is similar to your local Linux file system. You will use the `hadoop fs` command when interacting with HDFS.

1. Review the commands available for the Hadoop Distributed File System:
2. Copy file `foo.txt` from local disk to the user's directory in HDFS
3. Get a directory listing of the user's home directory in HDFS
4. Get a directory listing of the HDFS root directory
5. Display the contents of the HDFS file `user/fred/bar.txt`
6. Move that file to the local disk, named as `baz.txt`
7. Create a directory called `input` under the user's home directory
8. Delete the directory `input` and all its contents
9. Verify the copy by listing the directory contents in HDFS:

Exercise 2 --- MapReduce

1. Create a JOB and submit to cluster
2. Track the job information
3. Terminate the job
4. Counters in MR Jobs with example
5. Map only Jobs and generic map examples
6. Distributed cache example
7. Combiners, Secondary sorting and Job chain examples

Exercise 3 --- MapReduce (Programs)

Using movie lens data

1. List all the movies and the number of ratings
2. List all the users and the number of ratings they have done for a movie
3. List all the Movie IDs which have been rated (Movie Id with at least one user rating it)
4. List all the Users who have rated the movies (Users who have rated at least one movie)
5. List of all the User with the max, min, average ratings they have given against any movie
6. List all the Movies with the max, min, average ratings given by any user

Exercise4 – Extract facts using Hive

Hive allows for the manipulation of data in HDFS using a variant of SQL. This makes it excellent for transforming and consolidating data for load into a relational database. In this exercise you will use HiveQL to filter and aggregate click data to build facts about user's movie preferences. The query results will be saved in a staging table used to populate the Oracle Database.

The `moveapp_log_json` table contains an activity column. Activity states are as follows:

1. RATE_MOVIE
2. COMPLETED_MOVIE
3. PAUSE_MOVIE
4. START_MOVIE
5. BROWSE_MOVIE
6. LIST_MOVIE
7. SEARCH_MOVIE
8. LOGIN
9. LOGOUT
10. INCOMPLETE_MOVIE

```

hive> SELECT * FROM movieapp_log_json LIMIT 5;
hive> drop table movieapp_log_json;
hive> CREATE EXTERNAL TABLE movieapp_log_json (
custId INT,
movieId INT,
genreId INT,
time STRING,
recommended STRING,
activity INT,
rating INT,
price FLOAT
)
ROW FORMAT SERDE 'org.apache.hadoop.hive.contrib.serde2.JsonSerde'
LOCATION '/user/oracle/moviework/applog/';

hive> SELECT * FROM movieapp_log_json LIMIT 20;

hive> SELECT MIN(time), MAX(time) FROM movieapp_log_json

```

1. PURCHASE_MOVIE

Hive maps queries into Map Reduce jobs, simplifying the process of querying large datasets in HDFS. HiveQL statements can be mapped to phases of the Map Reduce framework. As illustrated in the following figure, selection and transformation operations occur in map tasks, while aggregation is handled by reducers. Join operations are flexible: they can be performed in the reducer or mappers depending on the size of the leftmost table.

1. Write a query to select only those clicks which correspond to starting, browsing, completing, or purchasing movies. Use a CASE statement to transform the RECOMMENDED column into integers where 'Y' is 1 and 'N' is 0. Also, ensure GENREID is not null. Only include the first 25 rows.

2. Write a query to select the customer ID, movie ID, recommended state and most recent rating for each movie.

3. Load the results of the previous two queries into a staging table. First, create the staging table:

4. Next, load the results of the queries into the staging table.

Exercise 5 Extract sessions using Pig

While the SQL semantics of HiveQL are useful for aggregation and projection, some analysis is better described as the flow of data through a series of sequential operations. For these situations, Pig Latin provides a convenient way of implementing data flows over data stored in HDFS. Pig Latin statements are translated into a sequence of Map Reduce jobs on the execution of any STORE or DUMP command. Job construction is optimized to exploit as much parallelism as possible, and much like Hive, temporary storage is used to hold intermediate results. As with Hive, aggregation occurs largely in the reduce

tasks. Map tasks handle Pig's FOREACH and LOAD, and GENERATE statements. The EXPLAIN command will show the execution plan for any Pig Latin script. As of Pig 0.10, the ILLUSTRATE command will provide sample results for each stage of the execution plan.

In this exercise you will learn basic Pig Latin semantics and about the fundamental types in Pig Latin, Data Bags and Tuples.

1. Start the Grunt shell and execute the following statements to set up a dataflow with the click stream data. Note: Pig Latin statements are assembled into Map Reduce jobs which are launched at execution of a DUMP or STORE statement.
2. Group the log sample by movie and dump the resulting bag.

3. Add a GROUP BY statement to the sessionize.pig script to process the click stream data into user sessions.

Course Outcomes:

The students should be able to:

- Describe big data and use cases from selected business domains
- Explain NoSQL big data management
- Install, configure, and run Hadoop and HDFS
- Perform map-reduce analytics using Hadoop
- Use Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data Analytics

Course Title: Advances in Computer Networks	Course Code: 14SCS22
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

Course Objectives:

- To become familiar with the basics of Computer Networks
- To understand various Network architectures
- Concepts of fundamental protocols
- To understand the network traffic, congestion, controlling and resource allocation.

Topics:

MODULE I

Foundation

Building a Network, Requirements, Perspectives, Scalable Connectivity, Cost-Effective Resource sharing, Support for Common Services, Manageability, Protocol layering, Performance, Bandwidth and Latency, Delay X Bandwidth Product, Perspectives on Connecting, Classes of Links, Reliable Transmission, Stop-and-Wait , Sliding Window, Concurrent Logical Channels.

T1: Chapter 1.1, 1.2, 1.5.1, 1.5.2., 2.1, 2.5 T2: Chapter 4 10 Hours

MODULE II

Internetworking- I

Switching and Bridging, Datagram’s, Virtual Circuit Switching, Source Routing, Bridges and LAN Switches, Basic Internetworking (IP), What is an Internetwork ?, Service Model, Global Addresses, Datagram Forwarding in IP, sub netting and classless addressing, Address Translation(ARP), Host Configuration(DHCP), Error Reporting(ICMP), Virtual Networks and Tunnels.

T1: Chapter 3.1, 3.2, 10 Hours

MODULE III

Internetworking- II

Network as a Graph, Distance Vector(RIP), Link State(OSPF), Metrics, The Global Internet, Routing Areas, Routing among Autonomous systems(BGP), IP Version 6(IPv6), Mobility and Mobile IP
Chapter 3.3, 4.1.1,4.1.3 **T2:**Chapter 13.1 to 13.18 , Ch 18. **T1:**

10 Hours

MODULE IV

End-to-End Protocols

Simple Demultiplexer (UDP), Reliable Byte Stream(TCP), End-to-End Issues, Segment Format, Connecting Establishment and Termination, Sliding Window Revisited, Triggering Transmission, Adaptive Retransmission, Record Boundaries, TCP Extensions, Queuing Disciplines, FIFO, Fair Queuing, TCP Congestion Control, Additive Increase/ Multiplicative Decrease, Slow Start, Fast Retransmit and Fast Recovery.

T1: Chapter 5.1, 5.2.1 to 5.2.8, 6.2, 6.3 10 Hours

MODULE V

Congestion Control and Resource Allocation

Congestion-Avoidance Mechanisms, DEC bit, Random Early Detection (RED), Source-Based Congestion Avoidance. The Domain Name System(DNS),Electronic Mail(SMTP,POP,IMAP,MIME),World Wide Web(HTTP),Network Management(SNMP) .

T1: Chapter 6.4 T2: Chapter 23.1 to 23.16, Chapter 24, Chapter 25, Chapter 27.1 to 27.8 10 Hours

Laboratory Work:

PART A: Implement the following using C/C++:

1. Write a program to transfer the contents of a requested file from server to the client using TCP/IP Sockets (using TCP/IP Socket programming).
2. Write a program to archive Traffic management at Flow level by implementing Closed Loop Control technique. (Leaky Bucket Algorithm)
3. Write a program to implement dynamic routing strategy in finding optimal path for data transmission. (Bellman ford algorithm).
4. Write a program to implement Link State Routing (Dijkstra Algorithm).
5. Write a program for implementing the error detection technique while data transfer in unreliable network code using CRC (16-bits) Technique.
6. Write a program for providing security for transfer of data in the network. (RSA Algorithm)
7. Write a program for encrypting 64 bit playing text using DES algorithm.

PART B: Simulation Programs using OPNET /NS2 or any other equivalent software

1. Simulate a 3 node point to point network with duplex links between them. Set the Queue size and vary the bandwidth and find the number of packets dropped.
2. Simulate a four-node point-to-point network, and connect the links as follows: n0->n2, n1->n2 and n2->n3. Apply TCP agent changing the parameters and determine the number of packets sent/received by TCP/UDP
3. Simulate the different types of internet traffic such as FTP and TELNET over network and analyze the throughput.

Course Outcomes:

The students should be able to:

- List and classify network services, protocols and architectures, explain why they are layered.
- Choose key Internet applications and their protocols, and apply to develop their own applications (e.g. Client Server applications, Web Services) using the sockets API.
- Explain develop effective communication mechanisms using techniques like connection establishment, queuing theory, recovery Etc.
- Explain various congestion control techniques.

Course Title: Advanced Algorithms	Course Code: 14SCS23
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To learn the graph search algorithms.
- To study network flow and linear programming problems.
- To learn the hill climbing and dynamic programming design techniques.
- To develop recursive backtracking algorithms.
- To get an awareness of NP completeness and randomized algorithms.

Topics:**MODULE I**

Review of Analysis Techniques: Growth of Functions: Asymptotic notations; Standard notations and common functions; Recurrences and Solution of Recurrence equations- The substitution method, The recurrence – tree method, The master method; Amortized Analysis: Aggregate, Accounting and Potential Methods.

10 Hours**MODULE II**

Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. **Polynomials and the FFT:** Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.

10 Hours**MODULE III**

Number -Theoretic Algorithms: Elementary notions; GCD; Modular Arithmetic; Solving modular linear equations; The Chinese remainder theorem; Powers of an element; RSA cryptosystem; Primality testing; Integer factorization.

10 Hours**MODULE IV**

String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.

10 Hours**MODULE V**

Probabilistic and Randomized Algorithms: Probabilistic algorithms; Randomizing deterministic algorithms, Monte Carlo and Las Vegas algorithms; Probabilistic numeric algorithms.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- Design and apply iterative and recursive algorithms.
- Design and implement optimization algorithms in specific applications.
- Design appropriate shared objects and concurrent objects for applications.

TEXT BOOKS:

1. T. H Cormen, C E Leiserson, R L Rivest and C Stein: Introduction to Algorithms, 3rd Edition, Prentice-Hall of India, 2010.
2. Kenneth A. Berman, Jerome L. Paul: Algorithms, Cengage Learning, 2002.

REFERENCE BOOKS:

1. Ellis Horowitz, Sartaj Sahni, S.Rajasekharan: Fundamentals of Computer Algorithms, 2nd Edition, Universities press, 2007.

Semester: II

Year: 2014-2015

Course Title: Artificial Intelligence and Agent Technology	Course Code: 14SCS24
Credits(L:T:P):4:0:0	Core/Elective: Core
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Apply a given AI technique to a given concrete problem
- To Implement non-trivial AI techniques in a relatively large system
- To understand uncertainty and Problem solving techniques.
- To understand various symbolic knowledge representation to specify domains and reasoning tasks of a situated software agent.
- To understand different logical systems for inference over formal domain representations, and trace how a particular inference algorithm works on a given problem specification.
- To understand various learning techniques and agent technology.

TOPICS:

MODULE I

What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique?, The Level of the model, Criteria for success, some general references, One final word and beyond.

Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems. **Intelligent Agents:** Agents and Environments, The nature of environments, The structure of agents.

Text Book 1: Chapter 1 & 2

Text Book 2: Chapter 2

10 Hours

MODULE II

Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis.

Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem.

Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction.

Logical Agents: Knowledge –based agents, the Wumpus world, Logic-Propositional logic, Propositional theorem proving, Effective propositional model checking, Agents based on propositional logic.

Text Book 1: Chapter 3, 4 & 5 Text Book 2: Chapter 6

10 Hours

MODULE III

Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search.

Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic.

Quantifying Uncertainty: Acting under uncertainty, Basic probability notation, Inference using full joint distributions, Independence, Bayes' rule and its use, The Wumpus world revisited.

Text Book 1: Chapter 7 & 8 Text Book 2: Chapter 13

10Hours

MODULE IV

Weak Slot-and-filter structures: Semantic Nets, Frames.

Strong slot-and –filler structures: Conceptual dependency, scripts, CYC.

Adversarial Search: Games, Optimal Decision in Games, Alpha-Beta Pruning, Imperfect Real-Time Decisions, Stochastic Games, Partially Observable Games, State-Of-The-Art Game Programs, Alternative Approaches, Summary

Text Book 1: Chapter 9 & 10 Text Book 2: Chapter 5

10 Hours

MODULE V

Learning From examples: Forms of learning, Supervised learning, Learning decision trees, Evaluating and choosing the best hypothesis, The theory of learning ,PAC, Regression and Classification with linear models, Nonparametric models, Support vector machines, Ensemble learning.

Learning Probabilistic Models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm.

Text Book 2: Chapter 18 & 20

10 Hours

COURSE OUTCOMES:

The students are able to:

- Design intelligent agents for problem solving, reasoning, planning, decision making, and learning. specific design and performance constraints, and when needed, design variants of existing algorithms.
- Apply AI technique on current applications.
- Problem solving, knowledge representation, reasoning, and learning.

Text Books.

1. Elaine Rich, Kevin Knight, Shivashanka B Nair: Artificial Intelligence, Tata McGraw Hill 3rd edition. 2013
2. Stuart Russel, Peter Norvig: Artificial Intelligence A Modern Approach, Pearson 3rd edition 2013.

Reference Books:

3. Nils J. Nilsson: "Principles of Artificial Intelligence", Elsevier, ISBN-13: 9780934613101

Semester: II

Year: 2014-2015

Course Title: Web Services	Course Code: 14SCS251
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course objectives:

- To provide an in-depth knowledge of Web Services.
- To understand the fundamental concepts of Web services.
- To understand the fundamental concepts of WSDL Web Services.
- To design Web service Architecture.
- To Study Building Blocks of Web services.

TOPICS:

MODULE I

Middleware: Understanding the middle ware, RPC and Related Middle ware, TP Monitors, Object Brokers, Message-Oriented Middleware. **10 Hours**

MODULE II

Web Services: Web Services Technologies, Web Services Architecture. **10 Hours**

MODULE III

Basic Web Services Technology: WSDL Web Services Description Language, UDDI Universal Description Discovery and Integration, Web Services at work interactions between the Specifications, Related Standards. **10 Hours**

MODULE IV

Service Coordination Protocols: Infrastructure for Coordination Protocols, WS-Coordination, WS-Transaction, Rosetta Net and Other Standards Related to Coordination Protocols. **10 Hours**

MODULE V

Service Composition: Basic of Service Composition, A New Chance of Success for Composition, Services Composition Models, Dependencies between Coordination and Composition, BPEL: Business Process Execution Language for Web Services, Outlook, Applicability of the Web Services, Web services as a Problem and a Solution : AN Example. **10 Hours**

Course Outcomes:

The students should be able to:

- Bind and unbind services in UDDI.
- Develop WSDL document
- Implement web service client to call public service.
- Implement a service and exposing it as public service.

Text Books:

1. Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju: Web Services(Concepts ,Architectures and Applications), Springer International Edition 2009.

Course Title: Information And Network Security	Course Code: 14SCS252
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To understand the fundamentals of Cryptography
- To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.
- To understand the various key distribution and management schemes.
- To understand how to deploy encryption techniques to secure data in transit across data networks
- To design security applications in the field of Information technology

TOPICS:**MODULE I****Classical Encryption Techniques**

Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad. **Block Ciphers and the data encryption standard:** Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm.

10 Hours**MODULE II**

Public-Key Cryptography and RSA: Principles of public-key cryptosystems, Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems, public-key cryptanalysis. The RSA algorithm, description of the algorithm, computational aspects, the security of RSA. **Other Public-Key Cryptosystems:** Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack, Elgamal Cryptographic systems, Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Z_p , elliptic curves over $GF(2^m)$, Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA.

10 Hours**MODULE III**

Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure. **User Authentication:** Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, federated identity management, identity management, identity federation, personal identity verification.

10 Hours**MODULE IV**

Wireless network security: Wireless security, Wireless network threats, Wireless network measures, mobile device security, security threats, mobile device security strategy, IEEE 802.11 Wireless LAN overview, the Wi-Fi alliance, IEEE 802 protocol architecture. Security, IEEE 802.11i services, IEEE 802.11i phases of operation, discovery phase, Authentication phase, key management phase, protected data transfer phase, the IEEE 802.11i pseudorandom function, . **Web Security Considerations:** Web Security Threats, Web Traffic Security Approaches. **Secure Sockets Layer:** SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Alert Protocol, and shake Protocol, Cryptographic

Computations. **Transport Layer Security:** Version Number, Message Authentication Code, Pseudorandom Functions, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify And Finished Messages, Cryptographic Computations, Padding. **HTTPS** Connection Initiation, Connection Closure. **Secure Shell (SSH)** Transport Layer Protocol, User Authentication Protocol, Connection Protocol.

10 Hours

MODULE V

Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. **IP Security:** IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service, transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.

10 Hours

Course Outcomes:

The students be able to

- Analyze the vulnerabilities in any computing system and hence be able to design a security solution.
- Identify the security issues in the network and resolve it.
- Evaluate security mechanisms using rigorous approaches, including theoretical.

Text Books:

1. William Stallings: Cryptography and Network Security, Pearson 6th edition. 2013

References

1. V k Pachghare: Cryptography and Information Security, PHE ,2013.

Semester: II

Year: 2014-2015

Course Title : Pattern Recognition	Course Code: 14SCS253
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To study the mathematical morphology necessary for Pattern recognition.
- To introduce the student to various Pattern recognition techniques.
- To study the Representation and description and feature extraction.
- To study the principles of decision trees and clustering in pattern recognition.

TOPICS:

MODULE I

Introduction: Definition of PR, Applications, Datasets for PR, Different paradigms for PR, Introduction to probability, events, random variables, Joint distributions and densities, moments. Estimation minimum risk estimators, problems.

10 Hours

MODULE II

Representation: Data structures for PR, Representation of clusters, proximity measures, size of patterns, Abstraction of Data set, Feature extraction, Feature selection, Evaluation.

10 Hours

MODULE III

Nearest Neighbor based classifiers & Bayes classifier: Nearest neighbor algorithm, variants of NN algorithms, use of NN for transaction databases, efficient algorithms, Data reduction, prototype selection, Bayes theorem, minimum error rate classifier, estimation of probabilities, comparison with NNC, Naive Bayes classifier, Bayesian belief network.

10 Hours

MODULE IV

Decision Trees: Introduction, DT for PR, Construction of DT, Splitting at the nodes, Over-fitting & Pruning, Examples.

10 Hours

MODULE V

Clustering: Hierarchical (Agglomerative, single/complete/average linkage, wards, Partitional (Forgy's, k-means, Iso-data), clustering large data sets, examples.

10 Hours

COURSE OUTCOMES:

Upon Completion of the course, the students will be able to

- Develop and analyze decision trees.
- Design the nearest neighbor classifier.
- Develop algorithms for Pattern Recognition.

Text Books:

1. Pattern Recognition (An Introduction) , V Susheela Devi, M Narsimha Murthy, Universities Press, ISBN 978-81-7371-725-3,2011.
2. Pattern Recognition & Image Analysis, Earl Gose, Richard Johnsonbaugh, Steve Jost. PHI ISBN-81-203-1484-0, 1996.

Course Title: Optical Networks	Course Code: 14SCS254
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To understand the different kind of losses, signal distortion in optical wave guides and other signal degradation factors -
- To learn the various optical source materials, LED structures, quantum efficiency, Laser diodes
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM

Topics:**MODULE I**

Client Layers of the Optical Layer: SONET/SDH: Multiplexing, CAT and LCAS, Sonnet/SDH Layers, SONET Frame Structure, SONET/SDH Physical Layer, Elements of a SONET/SDH Infrastructure, **Optical Transport Network:** Hierarchy, Frame Structure, Multiplexing, Generic Framing Procedure Ethernet: Frame Structure, Switches, Ethernet Physical Layer, Carrier Transport IP: Routing and Forwarding, Quality of Service. **Multiprotocol Label Switching:** Labels and Forwarding, Quality of Service, Signaling and Routing, Carrier Transport, Resilient Packet Ring: Quality of Service, Node Structure, Fairness Storage-Area Networks: Fiber Channel.

10 Hours**MODULE II****WDM Network Elements**

Optical Line Terminals, Optical Line Amplifiers, Optical Add/Drop Multiplexers: OADM Architectures, **Reconfigurable OADMs Optical Cross connects:** All-Optical OXC Configurations.

10 Hours**MODULE III****Control and Management**

Network Management Functions: Management Framework, Information Model, Management Protocols. Optical Layer Services and Interfacing, Layers within the Optical Layer, Multivendor Interoperability. **Performance and Fault Management:** The Impact of Transparency, BER Measurement, Optical Trace, Alarm Management, Data Communication Network (DCN) and Signaling, Policing, Optical Layer Overhead, Client Layers. **Configuration Management:** Equipment Management, Connection Management, Adaptation Management. Optical Safety: Open Fiber Control Protocol

10 Hours**MODULE IV****Basic Concepts, Protection in SONET/SDH:**

Point-to-Point Links, Self-Healing Rings, Unidirectional Line-Switched Rings, Bidirectional Line-Switched Rings, Ring Interconnection and Dual Homing. **Protection in the Client Layer:** Protection in Resilient Packet Rings, Protection in Ethernet, Protection in IP, Protection in MPLS, Why Optical Layer Protection: Service Classes Based on Protection. Optical Layer Protection Schemes: 1+1 OMS Protection, 1:1 OMS Protection, OMS-DPRing, OMS-SPRing, 1: N Transponder Protection, 1+1 OCh Dedicated Protection, OCh-SPRing, OCH-Mesh Protection, GMPLS Protection, Interworking between Layers.

10 Hours

MODULE V

WDM Network Design:

Cost Trade-OFFS: A Detailed Ring Network Example LTD and RWA Problems, Light path Topology Design, Routing and Wavelength Assignment, Wavelength Conversion. Dimensioning Wavelength- Routing Networks, **Statistical Dimensioning Models:** First-Passage Model, Blocking Model, Maximum **Load Dimensioning Models:** Offline Light path Requests, Online RWA in Rings.

10 Hours

COURSE OUTCOMES:

The students will be able to:

- Gain Knowledge on fundamentals of optical network.
- Explore optical network architectures ranging from optical access networks to backbone optical transport networks.
- Choose approaches and methodologies of optical network for design effective optimization;
- Apply Techniques of optical network survivability.
- Gain knowledge on Problem solving skills and critical thinking in the discipline of optical networks.

Text Books:

1. Optical Networks by Rajeev Ramaswamy, Kumar N Sivarajan, Galen H Sasaki, Elsevier Publication 3rd Edition, 2009.

References:

1. Uyles Black, Optical Networks-Third generation transport system: Pearson 2013.

Course Title: Advanced Algorithms Laboratory	Course Code: 14SCS26
Credits(2) (L:T:P):0:0:3	Core/Elective: Core
Type of Course: Practical	Total Contact Hours: 42 Hrs

COURSE OBJECTIVES

- To implement the graph search algorithms.
- To implement the string matching algorithms.
- To implement the modular linear equation algorithms.

LABORATORY WORK:

Note: The following programs can be executed on Java/C#/any equivalent tool/language by adapting exception handling technique wherever it is suitable.

1. Design, develop, and write a program to implement the Bellman-Ford algorithm and determine its performance. Give its applications.
2. Design, develop, and write a program to implement a Monte Carlo algorithm to test the **primality** of a given integer and determine its performance.
3. Design, develop, and write a program to solve string matching problem using naïve approach and the KMP algorithm. Compare their performances.
4. Design, develop, and write a program to solve String matching problem using Finite Automata and determine its performance.
5. Design, develop, and write a program to solve String matching problem using Robin Karp algorithm and determine its performance.

Course Outcomes:

Upon completion of the course, the students will be able to

- Design and apply graph search algorithms.
- Design and implement string matching algorithms.
- Design modular linear equation algorithms.

Course Title: Machine Learning Techniques	Course Code: 14SCS41
Credits(L:T:P):3:0:1	Core/Elective: Core
Type of Course: Lecture & Practical	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES:

- To understand the basic concepts of learning and decision trees.
- To understand the neural networks and genetic algorithms
- To understand the Bayesian techniques
- To understand the instant based learning
- To understand the analytical learning and reinforced learning

TOPICS:**MODULE I****INTRODUCTION, CONCEPT LEARNING AND DECISION TREES**

Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search. **10 Hrs**

MODULE II**NEURAL NETWORKS AND GENETIC ALGORITHMS**

Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning. **10 Hrs**

MODULE III**BAYESIAN AND COMPUTATIONAL LEARNING**

Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier – Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model. **10 Hrs**

MODULE IV**INSTANT BASED LEARNING AND LEARNING SET OF RULES**

K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions – Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution **10 Hrs**

MODULE V**ANALYTICAL LEARNING AND REINFORCED LEARNING**

Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning **10 Hrs**

LABORATORY WORK

(The following tasks can be implemented in a language of your choice or any tools available)

- 1) Implement the CANDIDATE – ELIMINATION algorithm. Show how it is used to learn from training examples and hypothesize new instances in Version Space.
- 2) Implement the FIND–S algorithm. Show how it can be used to classify new instances of target concepts. Run the experiments to deduce instances and hypothesis consistently.

- 3) Implement the ID3 algorithm for learning Boolean-valued functions for classifying the training examples by searching through the space of a Decision Tree.
- 4) Design and implement the Back-propagation algorithm by applying it to a learning task involving an application like FACE RECOGNITION.
- 5) Design and implement Naïve Bayes Algorithm for learning and classifying TEXT DOCUMENTS.

COURSE OUTCOMES:

On Completion of the course, the students will be able to

- Choose the learning techniques with this basic knowledge.
- Apply effectively neural networks and genetic algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.
- Choose and differentiate reinforcement and analytical learning techniques

TEXT BOOK:

1. Tom M. Mitchell, “Machine Learning”, McGraw-Hill Education (INDIAN EDITION), 2013.

REFERENCES:

2. Ethem Alpaydin, “Introduction to Machine Learning”, 2nd Ed., PHI Learning Pvt. Ltd., 2013.
3. T. Hastie, R. Tibshirani, J. H. Friedman, “The Elements of Statistical Learning”, Springer; 1st edition, 2001.

Course Title: Computer Vision	Course Code: 14SCS421
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To review image processing techniques for computer vision
- To understand shape and region analysis
- To understand Hough Transform and its applications to detect lines, circles, ellipses
- To understand three-dimensional image analysis techniques
- To understand motion analysis
- To study some applications of computer vision algorithms

TOPICS:**MODULE I**

CAMERAS: Pinhole Cameras, **Radiometry – Measuring Light:** Light in Space, Light Surfaces, Important Special Cases, **Sources, Shadows, And Shading:** Qualitative Radiometry, Sources and Their Effects, Local Shading Models, Application: Photometric Stereo, Interreflections: Global Shading Models, **Color:** The Physics of Color, Human Color Perception, Representing Color, A Model for Image Color, Surface Color from Image Color.

10 Hours**MODULE II**

Linear Filters: Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing, Filters as Templates, **Edge Detection:** Noise, Estimating Derivatives, Detecting Edges, **Texture:** Representing Texture, Analysis (and Synthesis) Using Oriented Pyramids, Application: Synthesis by Sampling Local Models, Shape from Texture.

10 Hours**MODULE III**

The Geometry of Multiple Views: Two Views, **Stereopsis:** Reconstruction, Human Stereopsis, Binocular Fusion, Using More Cameras, **Segmentation by Clustering:** What Is Segmentation?, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction, Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering,

10 Hours**MODULE IV**

Segmentation by Fitting a Model: The Hough Transform, Fitting Lines, Fitting Curves, Fitting as a Probabilistic Inference Problem, Robustness, **Segmentation and Fitting Using Probabilistic Methods:** Missing Data Problems, Fitting, and Segmentation, The EM Algorithm in Practice, **Tracking With Linear Dynamic Models:** Tracking as an Abstract Inference Problem, Linear Dynamic Models, Kalman Filtering, Data Association, Applications and Examples.

10 Hours**MODULE V**

Geometric Camera Models: Elements of Analytical Euclidean Geometry, Camera Parameters and the Perspective Projection, Affine Cameras and Affine Projection Equations, **Geometric Camera Calibration:** Least-Squares Parameter Estimation, A Linear Approach to Camera Calibration, Taking Radial Distortion into

Account, Analytical Photogrammetry, An Application: Mobile Robot Localization, **Model- Based Vision:** Initial Assumptions, Obtaining Hypotheses by Pose Consistency, Obtaining Hypotheses by pose Clustering, Obtaining Hypotheses Using Invariants, Verification, Application: Registration In Medical Imaging Systems, Curved Surfaces and Alignment. **10 Hours**

Course Outcomes:

Upon completion of the course, the students will be able to

- Implement fundamental image processing techniques required for computer vision
- Perform shape analysis
- Implement boundary tracking techniques
- Apply chain codes and other region descriptors
- Apply Hough Transform for line, circle, and ellipse detections.
- Apply 3D vision techniques.
- Implement motion related techniques.
- Develop applications using computer vision techniques.

Course Title: Business Intelligence And Its Applications	Course Code: 14SCS422
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

Course Objectives:

- To Implement the key elements of a successful business intelligence (BI) program
- To Apply a BI meta model that turns outcomes into actions
- To Extract and transform data from an operational data to a data business data
- To Exploit business analytics and performance measurement tools

TOPICS:**MODULE I**

Development Steps, BI Definitions, BI Decision Support Initiatives, Development Approaches, Parallel Development Tracks, BI Project Team Structure, Business Justification, Business Divers, Business Analysis Issues, Cost – Benefit Analysis, Risk Assessment, Business Case Assessment Activities, Roles Involved In These Activities, Risks Of Not Performing Step, Hardware, Middleware, DBMS Platform, Non Technical Infrastructure Evaluation

10 Hours**MODULE II**

Managing The BI Project, Defining And Planning The BI Project, Project Planning Activities, Roles And Risks Involved In These Activities, General Business Requirement, Project Specific Requirements, Interviewing Process

10 Hours**MODULE III**

Differences in Database Design Philosophies, Logical Database Design, Physical Database Design, Activities, Roles And Risks Involved In These Activities, Incremental Rollout, Security Management, Database Backup And Recovery

10 Hours**MODULE IV**

Growth Management, Application Release Concept, Post Implementation Reviews, Release Evaluation Activities, The Information Asset and Data Valuation, Actionable Knowledge – ROI, BI Applications, The Intelligence Dashboard

10 Hours**MODULE V**

Business View of Information technology Applications: Business Enterprise excellence, Key purpose of using IT, Type of digital data, basics of enterprise reporting, BI road ahead.

10 Hours**Course Outcomes:**

Upon completion of the course, the students will be able to

- know the complete life cycle of BI/Analytical development
- Understand the technology and processes associated with Business Intelligence framework

- Given a business scenario, identify the metrics, indicators and make recommendations to achieve the business goal.

Text Books:

1. Larissa T Moss and ShakuAtre – Business Intelligence Roadmap : The Complete Project Lifecycle for Decision Support Applications, Addison Wesley Information Technology Series, 2003.
2. R N Prasad, SeemaAcharya – Fundamentals of Business Analytics , Wiley India, 2011.

Reference Books:

3. David Loshin - Business Intelligence: The Savvy Manager's Guide, Publisher: Morgan Kaufmann, ISBN 1-55860-196-4.
4. Brian Larson - Delivering Business Intelligence with Microsoft SQL Server 2005, McGraw Hill, 2006.
5. Lynn Langit - Foundations of SQL Server 2008 Business Intelligence –Apress, ISBN13: 978-1-4302-3324-4, 2011

Semester: IV

Year: 2014-2015

Course Title: Agile Technologies	Course Code: 14SCS423
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To understand how an iterative, incremental development process leads to faster delivery of more useful software
- To understand the essence of agile development methods
- To understand the principles and practices of extreme programming
- To understand the roles of prototyping in the software process
- To understand the concept of Mastering Agility

TOPICS:

MODULE I

Why Agile?: Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility, **How to Be Agile?:** Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor **10 Hours**

MODULE II

Understanding XP: The XP Lifecycle, The XP Team, XP Concepts, **Adopting XP:** Is XP Right for Us?, Go!, Assess Your Agility **10 Hours**

MODULE III

Practicing XP:

Thinking: Pair Programming, Energized Work, Informative Workspace, Root-Cause Analysis, Retrospectives, **Collaborating:** Trust, Sit Together, Real Customer Involvement, Ubiquitous Language, Stand-Up Meetings, Coding Standards, Iteration Demo, Reporting, **Releasing:** "Done Done", No Bugs, Version Control, Ten-Minute Build, Continuous Integration, Collective Code Ownership, Documentation. **Planning:** Vision, Release Planning, The Planning Game, Risk Management, Iteration Planning, Slack, Stories, Estimating. **Developing:** Incremental requirements, Customer Tests, Test-Driven Development, Refactoring, Simple Design, Incremental Design and Architecture, Spike Solutions, Performance Optimization, Exploratory Testing

10 Hours

MODULE IV

Mastering Agility

Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading, **Improve the Process:** Understand Your Project, Tune and Adapt, Break the Rules, **Rely on People :** Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People, **Eliminate Waste :** Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput

10 Hours

MODULE V

Deliver Value: Exploit Your Agility, Only Releasable Code Has Value, Deliver Business Results, Deliver Frequently, **Seek Technical Excellence** :Software Doesn't Exist, Design Is for Understanding, Design Trade-offs, Quality with a Name, Great Design, Universal Design Principles, Principles in Practice, Pursue Mastery

10 Hours

COURSE OUTCOMES

Students should be able to

- Understand The XP Lifecycle, XP Concepts, Adopting XP
- Work on Pair Programming, Root-Cause Analysis, Retrospectives, Planning, Incremental Requirements, Customer Tests
- Implement Concepts to Eliminate Waste

Text Books:

1. **The Art of Agile Development** (Pragmatic guide to agile software development), James shore, Chromatic, O'Reilly Media, Shroff Publishers & Distributors, 2007

Reference Books:

1. Agile Software Development, Principles, Patterns, and Practices, Robert C. Martin, Prentice Hall; 1st edition, 2002
- 2., "Agile and Iterative Development A Manger's Guide", Craig Larman Pearson Education, First Edition, India, 2004.

Course Title: Wireless Networks And Mobile Computing	Course Code: 14SCS424
Credits(L:T:P):4:0:0	Core/Elective: Elective
Type of Course: Lecture	Total Contact Hours: 50 Hrs

COURSE OBJECTIVES

- To introduce the concepts of wireless communication.
- To understand various propagation methods, Channel models, capacity calculations multiple antennas and multiple user techniques used in the mobile communication.
- To understand CDMA, GSM, Mobile IP, Wimax
- To understand Different Mobile OS
- To learn various Markup Languages
- CDC, CLDC, MIDP; Programming for CLDC, MIDlet model and security concerns

TOPICS:

MODULE I

Mobile Computing Architecture: Architecture for Mobile Computing, 3-tier Architecture, Design Considerations for Mobile Computing. **Wireless Networks :** Global Systems for Mobile Communication (GSM and Short Service Messages (SMS): GSM Architecture, Entities, Call routing in GSM, PLMN Interface, GSM Addresses and Identities, Network Aspects in GSM, Mobility Management, GSM Frequency allocation. Introduction to SMS, SMS Architecture, SM MT, SM MO, SMS as Information bearer, applications, GPRS and Packet Data Network, GPRS Network Architecture, GPRS Network Operations, Data Services in GPRS, Applications for GPRS, Billing and Charging in GPRS, Spread Spectrum technology, IS-95, CDMA versus GSM, Wireless Data, Third Generation Networks, Applications on 3G, Introduction to WiMAX.

10 Hours

MODULE II

Mobile Client: Moving beyond desktop, Mobile handset overview, Mobile phones and their features, PDA, Design Constraints in applications for handheld devices. Mobile IP: Introduction, discovery, Registration, Tunneling, Cellular IP, Mobile IP with IPv6.

10 Hours

MODULE III

Mobile OS and Computing Environment: Smart Client Architecture, The Client: User Interface, Data Storage, Performance, Data Synchronization, Messaging. The Server: Data Synchronization, Enterprise Data Source, Messaging. Mobile Operating Systems: WinCE, Palm OS, Symbian OS, Linux and Proprietary OS Client Development: The development process, Need analysis phase, Design phase, Implementation and Testing phase, Deployment phase, Development Tools, Device Emulators.

10 Hours

MODULE IV

Building, Mobile Internet Applications: Thin client: Architecture, the client, Middleware, messaging Servers, Processing a Wireless request, Wireless Applications Protocol (WAP) Overview, Wireless Languages: Markup Languages, HDML, WML, HTML, cHTML, XHTML, VoiceXML.

10 Hours

MODULE V

J2ME: Introduction, CDC, CLDC, MIDP; Programming for CLDC, MIDlet model, Provisioning, MIDlet life-cycle, Creating new application, MIDlet event handling, GUI in MIDP, Low level GUI Components, Multimedia APIs; Communication in MIDP, Security Considerations in MIDP.

10 Hours

COURSE OUTCOMES:

The student should be able to:

- Work on state of art techniques in wireless communication.
- Explore CDMA, GSM, Mobile IP, WiMax
- Work on Different Mobile OS
- Develop program for CLDC, MIDP let model and security concerns

TEXT BOOKS:

1. Ashok Talukder, Roopa Yavagal, Hasan Ahmed: Mobile Computing, Technology, Applications and Service Creation, 2nd Edition, Tata McGraw Hill, 2010.
2. Martyn Mallik: Mobile and Wireless Design Essentials, Wiley India, 2003

REFERENCE BOOKS:

APPLIED MATHEMATICS

(Common to MDE,MMD,MEA,CAE,MCM,MAR,IAE,MTP,MTH,MTE,MST,MTR)

Sub Code : 16MDE11 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objectives:

The main objectives of the course are to enhance the knowledge of various methods in finding the roots of an algebraic, transcendental or simultaneous system of equations and also to evaluate integrals numerically and differentiation of complex functions with a greater accuracy. These concepts occur frequently in their subjects like finite element method and other design application oriented subjects.

Course Content:

1. Approximations and round off errors: Significant figures, accuracy and precision, error definitions, round off errors and truncation errors. Mathematical modeling and Engineering problem solving: Simple mathematical model, Conservation Laws of Engineering.**06 Hours**
2. Roots of Equations: Bracketing methods-Graphical method, Bisection method, False position method, Newton- Raphson method, Secant Method. Multiple roots, Simple fixed point iteration. Roots of polynomial-Polynomials in Engineering and Science, Muller's method, Bairstow's Method Graeffe's Roots Squaring Method.**12 Hours**
3. Numerical Differentiation and Numerical Integration: Newton –Cotes and Gauss Quadrature Integration formulae, Integration of Equations, Romberg integration, Numerical Differentiation Applied to Engineering problems, High Accuracy differentiation formulae**06 Hours**
4. System of Linear Algebraic Equations And Eigen Value Problems: Introduction, Direct methods, Cramer's Rule, Gauss Elimination Method, Gauss-Jordan Elimination Method, Triangularization method, Cholesky Method, Partition method, error Analysis for direct methods, Iteration Methods.

Eigen values and Eigen Vectors: Bounds on Eigen Values, Jacobi method for symmetric matrices, Givens method for symmetric matrices, Householder's method for symmetric matrices, Rutishauser method for arbitrary matrices, Power method, Inverse power method .**16 Hours**

5. Linear Transformation: Introduction to Linear Transformation, The matrix of Linear Transformation, Linear Models in Science and Engineering
Orthogonality and Least Squares: Inner product, length and orthogonality, orthogonal sets, Orthogonal projections, The Gram-schmidt process, Least Square problems, Inner product spaces. **12 Hours**

Text Books:

1. S.S.Sastry, Introductory Methods of Numerical Analysis, PHI, 2005.
2. Steven C. Chapra, Raymond P.Canale, Numerical Methods for Engineers, Tata Mcgraw Hill, 4th Ed, 2002.
3. M K Jain, S.R.K Iyengar, R K. Jain, Numerical methods for Scientific and engg computation, New Age International, 2003.

Reference Books:

1. Pervez Moin, Fundamentals of Engineering Numerical Analysis, Cambridge, 2010.
2. David. C. Lay, Linear Algebra and its applications, 3rd edition, Pearson Education, 2002.

Course Outcomes:

The Student will be able to

1. Model some simple mathematical models of physical Applications.
2. Find the roots of polynomials in Science and Engineering problems.
3. Differentiate and integrate a function for a given set of tabulated data, for Engineering Applications

FINITE ELEMENT METHOD
(Common to MDE,MEA,MMD,CAE,MTR)

Sub Code : 16MDE12 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objectives

1. To present the Finite element method (FEM) as a numerical method for engineering analysis of continua and structures
2. To present Finite element formulation using variational and weighted residual approaches
3. To present Finite elements for the analysis of bars & trusses, beams & frames, plane stress & plane strain problems and 3-D solids, for thermal and dynamics problems.

Course Content:

1. **Introduction to Finite Element Method:** Basic Steps in Finite Element Method to solve mechanical engineering (Solid, Fluid and Heat Transfer) problems: Functional approach and Galerkin approach, Displacement Approach: Admissible Functions, Convergence Criteria: Conforming and Non Conforming elements, C_0 , C_1 and C_n Continuity Elements. Basic Equations, Element Characteristic Equations, Assembly Procedure, Boundary and Constraint Conditions.

10 Hours.
2. **Solid Mechanics : One-Dimensional Finite Element Formulations and Analysis** – Bars- uniform, varying and stepped cross section- Basic(Linear) and Higher Order Elements Formulations for Axial, Torsional and Temperature Loads with problems. Beams- Basic (Linear) Element Formulation-for uniform, varying and stepped cross section- for different loading and boundary conditions with problems. Trusses, Plane Frames and Space Frame Basic(Linear) Elements Formulations for different boundary condition -Axial, Bending, Torsional, and Temperature Loads with problems.

10 Hours.

3. **Two Dimensional Finite Element Formulations for Solid Mechanics Problems:** Triangular Membrane (TRIA 3, TRIA 6, TRIA 10) Element, Four-Noded Quadrilateral Membrane (QUAD 4, QUAD 8) Element Formulations for in-plane loading with sample problems. Triangular and Quadrilateral Axi-symmetric basic and higher order Elements formulation for axi-symmetric loading only with sample problems
Three Dimensional Finite Element Formulations for Solid Mechanics Problems: Finite Element Formulation of Tetrahedral Element (TET 4, TET 10), Hexahedral Element (HEXA 8, HEXA 20), for different loading conditions. Serendipity and Lagrange family Elements

10 Hours.

4. **Finite Element Formulations for Structural Mechanics Problems:** Basics of plates and shell theories: Classical thin plate Theory, Shear deformation Theory and Thick Plate theory. Finite Element Formulations for triangular and quadrilateral Plate elements. Finite element formulation of flat, curved, cylindrical and conical Shell elements
5. **Dynamic Analysis:** Finite Element Formulation for point/lumped mass and distributed masses system, Finite Element Formulation of one dimensional dynamic analysis: bar, truss, frame and beam element. Finite Element Formulation of Two dimensional dynamic analysis: triangular membrane and axisymmetric element, quadrilateral membrane and axisymmetric element. Evaluation of eigen values and eigen vectors applicable to bars, shaft, beams, plane and space frame.

10 Hours.

Text Books:

1. T. R. Chandrupatla and A. D. Belegundu, Introduction to Finite Elements in Engineering, Prentice Hall, 3rd Ed, 2002.
2. Lakshminarayana H. V., Finite Elements Analysis– Procedures in Engineering, Universities Press, 2004.

Reference Books:

1. Rao S. S. , Finite Elements Method in Engineering- 4th Edition, Elsevier, 2006
2. P.Seshu, Textbook of Finite Element Analysis, PHI, 2004.
3. J.N.Reddy, Introduction to Finite Element Method, McGraw -Hill, 2006.
4. Bathe K. J., Finite Element Procedures, Prentice-Hall, 2006..
5. Cook R. D., Finite Element Modeling for Stress Analysis, Wiley,1995.

Course Outcome:

On completion of the course the student will be

1. Knowledgeable about the FEM as a numerical method for the solution of solid mechanics, structural mechanics and thermal problems
2. Developing skills required to use a commercial FEA software

CONTINUUM MECHANICS
(Common to MDE, MEA, MMD, CAE)

Sub Code: 14CAE13
Hrs/ Week: 04
Total Hrs: 50

IA Marks: 20
Exam Hours: 03
Exam Marks: 80

Course Objective:

The course Continuum Mechanics aims at a comprehensive study of Mechanics of Solids and Mechanics of Fluids. The topics covered are: Analysis of Stress, Deformation and Strain, Generalized Hooke's law, Formulation of Two Dimensional Electrostatic problems, Basic equations of Viscoelasticity.

Course Content:

1. Analysis of Stress: Definition and Notation for forces and stresses. body force, surface force Components of stresses, equations of Equilibrium, Specification of stress at a point. Principal stresses, maximum and minimum shear stress, Mohr's diagram in three dimensions. Boundary conditions .Stress components on an arbitrary plane, Stress invariants, Octahedral stresses, Decomposition of state of stress, deviator and spherical stress tensors, Stress transformation. 10 Hours

2. Deformation and Strain: Deformation, Strain Displacement relations, Strain components, The state of strain at a point, , Principal strain, strain invariants, Strain transformation, Compatibility equations, Cubical dilatation, spherical and deviator strains, plane strain, Mohr's circle, and compatibility equation

Relations and the General Equations of Elasticity: Generalized Hooke's; law in terms of engineering constants. Formulation of elasticity Problems. 12 Hours

3. Two Dimensional Problems in Cartesian Co-Ordinates: Airy's stress function, investigation of simple beam problems. Bending of a narrow cantilever beam under end load, simply supported beam with uniform load, Use of Fourier series to solve two dimensional problems. Existence and uniqueness of solution, Saint -Venant's principle, Principle of super position and reciprocal theorem. 9 Hours.

4. Two Dimensional Problems in Polar Co-Ordinates: General equations, stress distribution symmetrical about an axis, Strain components in polar co-ordinates, Rotating disk and cylinder, Concentrated force on semi-infinite plane, Stress concentration around a circular hole in an infinite plate.

Thermal Stresses: Introduction, Thermo-elastic stress -strain relations, thin circular disc, long circular cylinder. 9 Hours

5 Torsion of Prismatic Bars: Introduction, Torsion of Circular cross section bars, Torsion of elliptical cross section bars, Soap film analogy, Membrane analogy, Torsion of thin walled open tubes.

Elastic Stability: Axial compression of prismatic bars, Elastic stability, buckling load for column with constant cross section. **Viscoelasticity:** Linear viscoelastic behavior. Simple viscoelastic models-generalized models, linear differential operator equation. Creep and Relaxation- creep function, relaxation function, hereditary integrals. Complex moduli and compliances. (Note: No numerical) 10 Hours

Text Books:

1. Timoshenko and Goodier, "**Theory of Elasticity**"-'Tata McGraw Hill, New Delhi,3rd edition , 1970
2. L S Srinath "Advanced Mechanics of Solids"- Tata McGraw Hill, New Delhi, 3rd edition, 2010
3. G. Thomas Mase, Ronald E. Smelser, George. E. Mase, Continuum Mechanics for Engineers, 3rd Edition, CRC Press,Boca Raton, 2010

References:

1. Batra, R. C., Elements of Continuum Mechanics, Reston, 2006.
2. George E. Mase, Schaum's Outline of Continuum Mechanics, McGraw-Hill, 1970
3. Dill, Ellis Harold, Continuum Mechanics: Elasticity, Plasticity, Viscoelasticity, CRC Press , 2006.
4. Sadhu Singh, " Theory of Elasticity"- Khanna publisher, 4th edition, 2013

Course Outcome:

Continuum Mechanics background essential to mathematically model physical problems in Solid Mechanics

EXPERIMENTAL MECHANICS

(Common to MDE,MEA,MMD,CAE)

Sub Code : 16CAE16 IA Marks :20

Hrs/ Week : 04 Exam Hours : 03

Total Hrs: 50 Exam Marks :80

Course Objective:

This course aims at a comprehensive study of mechanics of solids. The topics covered are

The objective of this course is to familiarize the student with state of the art experimental techniques namely strain gauges, photo elasticity, moiré interferometry, brittle coating, moiré fringes and holography.

Course Content:

1. **Introduction:** Definition of terms, calibration, standards, dimension and units, generalized measurement system, Basic concepts in dynamic measurements, system response, distortion, impedance matching, experiment planning.

Analysis of Experimental Data: Cause and types of experimental errors, error analysis. Statistical analysis of experimental data- Probability distribution, gaussian, normal distribution. Chi-square test, Method of least square, correlation coefficient, multivariable regression, standard deviation of mean, graphical analysis and curve fitting, general consideration in data analysis.

10 Hours

2. **Data Acquisition and Processing:** General data acquisition system, signal conditioning revisited, data transmission, Analog-to-Digital and Digital-to- Analog conversion, Basic components (storage and display) of data acquisition system. Computer program as a substitute for wired logic.

Force, Torque and Strain Measurement: Mass balance measurement, Elastic Element for force measurement, torque measurement. Strain Gages -Strain sensitivity of gage metals, Gage construction, Gage sensitivity and gage factor, Performance characteristics, Environmental effects Strain, gage circuits, Potentiometer, Wheat Stone's bridges, Constant current circuits. Strain Analysis Methods-Two element and three element, rectangular and delta rosettes, Correction for transverse strains effects, stress gage - plane shear gage, Stress intensity factor gage.

10 Hours

3. **Stress Analysis:** Two Dimensional Photo elasticity - Nature of light, - wave theory of light,- optical interference - Polariscope stress optic law - effect of stressed model in plane and circular Polariscope, Isoclinics Iso chromatics fringe order determination - Fringe multiplication

techniques - Calibration Photoelastic model materials. Separation methods shear difference method, Analytical separation methods, Model to prototype scaling.

10 Hours

4. **Three Dimensional Photo elasticity:** Stress freezing method, General slice, Effective stresses, Stresses separation, Shear difference method, Oblique incidence method Secondary principals stresses, Scattered light photo elasticity, Principals, Polari scope and stress data analyses.

10 Hours

5. **Coating Methods:** a) Photoelastic Coating Method-Birefringence coating techniques Sensitivity Reinforcing and thickness effects - data reduction - Stress separation techniques Photoelastic strain gauges. b) Brittle Coatings Method:Brittle coating technique Principles data analysis - coating materials, Coating techniques. c) Moire Technique - Geometrical approach, Displacement approach- sensitivity of Moire data data reduction, In plane and out plane Moire methods, Moire photography, Moire grid production.

Holography: Introduction, Equation for plane waves and spherical waves, Intensity, Coherence, Spherical radiator as an object (record process), Hurter, Driffeld curves, Reconstruction process, Holographicinterferomerty, Realtime. and double exposure methods, Displacement measurement, Isopachics.

10 Hours

Text Books:

1. **Holman**, "Experimental Methods for Engineers" 7th Edition, Tata McGraw-Hill Companies, Inc, New York, 2007.
2. **R. S. Sirohi, H. C. Radha Krishna**, "Mechanical measurements" New Age International Pvt. Ltd., New Delhi, 2004
3. **Experimental Stress Analysis** - Srinath, Lingaiah, Raghavan, Gargesa, Ramachandra and Pant, Tata McGraw Hill, 1984.
4. **Instrumentation, Measurement And Analysis** -Nakra&Chaudhry, B C Nakra K KChaudhry, Tata McGraw-Hill Companies, Inc, New York, Seventh Edition, 2006.

Reference Books:

1. **Measurement Systems Application and Design** - Doebelin E. A., 4th (S.I.) Edition, McGraw Hill, New York. 1989
2. **Design and Analysis of Experiments** - Montgomery D.C., John Wiley & Sons, 1997.
3. **Experimental Stress Analysis** - Dally and Riley, McGraw Hill, 1991.
4. **Experimental Stress Analysis** - Sadhu Singh, Khanna publisher, 1990.
5. **PhotoelasticityVol I and Vol II** - M.M.Frocht,. John Wiley and sons, 1969.
6. **Strain Gauge Primer** - Perry and Lissner, McGraw Hill, 1962.

Course Outcome:It helps the students to

1. Undertake experimental investigations to verify predictions by other methods.
2. To acquire skills for experimental investigations an accompanying laboratory course is desirable.

Elective-I

COMPUTER GRAPHICS

(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE151 IA Marks :20

Hrs/ Week : 04 Exam Hours : 03

Total Hrs: 50 Exam Marks :80

Course Objective:

This course will help the student to be knowledgeable of concepts, principles, processes and techniques essential to all areas of computer graphics

Course Content:

1. Transformations : Representation of points, Transformations: Rotation, Reflection, Scaling, Shearing, Combined Transformations, Translations and Homogeneous Coordinates, A geometric interpretation of homogeneous coordinates, Over all scaling, Points at infinity, Rotation about an arbitrary point, Reflection through an arbitrary line, Rotation about an axis parallel to coordinate axis, Rotation about an arbitrary axis in space, Reflection through an arbitrary plane.

10 Hours

2. Types and Mathematical Representation of Curves: Curve representation, Explicit, Implicit and parametric representation. Nonparametric and parametric representation of Lines, Circles, Ellipse, Parabola, Hyperbola, Conics. Parametric representation of synthetic curve, Hermite cubic splines, , Bezier curves: Blending function, Properties, generation, B-spline curves- Cox-deBoor recursive formula, Properties, Open uniform basis functions, Non-uniform basis functions, Periodic B-spline curve.

Types and Mathematical Representation of Surfaces Surface entities and parametric representation- Plane, Ruled, surface of revolution, Offset surface, Coons patch, Bezier surface, B-spline surface

10Hours

3. Types and Mathematical Representation of Solids

Solid entities: Block, Cylinder, Cone, Sphere, Wedge, Torus, Solid representation, Fundamentals of solid modeling, Set theory, Regularized set operations, Set membership classification, Half spaces, Basic elements, Building operations, Boundary representation and Constructive solid geometry, Basic elements, Building operations.

Scan Conversion and Clipping: Representation of points, lines, Drawing Algorithms: DDA algorithm, Bresenham's integer line algorithm, Bresenham's circle algorithm, Polygon filling algorithms: Scan conversion, Seed filling, Scan line algorithm. Viewing transformation, Clipping - Points, lines, Text, Polygon, Cohen-Sutherland line clipping, Sutherland-Hodgmen algorithm.

10Hours

4. Visual Realism: Introduction, Hidden line removal, Visibility of object views, Visibility techniques: Minimax test, Containment test, Surface test, Silhouettes, Homogeneity test, Sorting, Coherence, Hidden surface removal- Z-buffer algorithm, Warnock's algorithm, Hidden solid removal - ray tracing algorithm, Shading, Shading models, Diffuse reflection, Specular reflection, Ambient light, Shading of surfaces: Constant shading, Gourand shading, Phong shading, Shading enhancements, Shading Solids, Ray tracing for CSG, Z-buffer algorithm for B-rep and CSG

10 Hours

5.Applications: Colouring- RGB, CMY, HSV, HSL colour models, Data Exchange: Evolution of Data exchange, IGES, PDES, Animation: Conventional animation-key frame, Inbetweening, Line testing, Painting, Filming, Computer animation, Entertainment and Engineering Animation, Animation system hardware, Software architecture, Animation types, Frame buffer, Colour table, Zoom-pan-scroll, Cross bar, Real time play back, Animation techniques- key frame, Skelton. Path of motion and p-curves.

10 Hours

TextBooks:

1. IbrahimZeid, CAD/CAM-Theory and Practice-McGraw Hill, 2006.
2. David Rogers & Alan Adams, Mathematical Elements for Computer Graphics-Tata McGraw Hill, 2002.

ReferenceBooks:

1. Xiang Z, Plastock, R. A, Computer Graphics- Schaum's Outline, McGraw Hill, 2007.
2. Foley, van Dam, Feiner and Hughes, Computer Graphics- Principles and Practice-Addison Wesley, 1996.
3. Sinha A N., Udai A D., Computer Graphics- Tata McGraw Hill, 2008.

Course Outcome:

This course will enable students to:

1. Recognize how a visual image can be an effective means of communication
2. Acquire and develop the skills needed to creatively solve visual communication problems.
3. Understand, develop and employ visual hierarchy using images and text

COMPUTER APPLICATIONS IN DESIGN
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE152 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objective

It helps the students to learn the principles of CAD/CAM/CAE Systems, Graphics Programming, Geometric Modeling Systems, CAD, CAM and CAE Integration, Standards for Communicating between Systems

Course Content:

1. Introduction To CAD/CAM/CAE Systems

Overview, Definitions of CAD. CAM and CAE, Integrating the Design and Manufacturing Processes through a Common Database-A Scenario, Using CAD/CAM/CAE Systems for Product Development-A Practical Example.

Components of CAD/CAM/CAE Systems: Hardware Components ,Vector-Refresh(Stroke-Refresh) Graphics Devices, Raster Graphics Devices, Hardware Configuration, Software Components, Windows-Based CAD Systems.**10 Hours**

2. Basic Concepts of Graphics Programming:

Graphics Libraries, Coordinate Systems, Window and Viewport, Output Primitives - Line, Polygon, Marker Text, Graphics Input, Display List, Transformation Matrix, Translation, Rotation, Mapping, Other Transformation Matrices, Hidden-Line and Hidden-Surface Removal, Back-Face Removal Algorithm, Depth-Sorting, or Painters, Algorithm, Hidden-Line Removal Algorithm, z-Buffer Method, Rendering, Shading, Ray Tracing, Graphical User Interface, X Window System.

Standards

Standards for Communicating Between Systems: Exchange Methods of Product Definition Data, Initial Graphics Exchange Specification, Drawing Interchange Format, Standard for the Exchange of Product Data. Tutorials, Computational exercises involving Geometric Modeling of components and their assemblies

10 Hours

3. Geometric Modeling Systems

: Wireframe Modeling Systems, Surface Modeling Systems, Solid Modeling Systems, Modeling Functions, Data Structure, Euler Operators, Boolean Operations, Calculation of Volumetric Properties, Non manifold Modeling Systems, Assembly Modeling Capabilities, Basic Functions of Assembly Modeling, Browsing an Assembly, Features of Concurrent Design, Use of Assembly models, Simplification of Assemblies, Web-Based Modeling.

Representation and Manipulation of Curves: Types of Curve Equations, Conic Sections, Circle or Circular Arc, Ellipse or Elliptic Arc, Hyperbola, Parabola, Hermite Curves, Bezier Curve, Differentiation of a Bezier Curve Equation, Evaluation of a Bezier Curve

10 Hours

4. B-Spline Curve, Evaluation of a B-Spline Curve, Composition of B-Spline Curves, Differentiation of a B-Spline Curve, Non uniform Rational B-Spline (NURBS) Curve, Evaluation of a NURBS Curve, Differentiation of a NURBS Curve, Interpolation Curves, Interpolation Using a Hermite Curve, Interpolation Using a B-Spline Curve, Intersection of Curves.

Representation and Manipulation of Surfaces: Types of Surface Equations, Bilinear Surface, Coon's Patch, Bicubic Patch, Bezier Surface, Evaluation of a Bezier Surface, Differentiation of a Bezier Surface, B-Spline Surface, Evaluation of a B-Spline Surface, Differentiation of a B-Spline Surface, NURBS Surface, Interpolation Surface, Intersection of Surfaces.

10 Hours

5. **CAD and CAM Integration**

Overview of the Discrete Part Production Cycle, Process Planning, Manual Approach, Variant Approach, Generative Approach, Computer-Aided Process Planning Systems, CAM-I CAPP, MIPLAN and Multi CAPP, Met CAPP, ICEM-PART, Group Technology, Classification and Coding, Existing Coding Systems, Product Data Management (PDM) Systems.

10 Hours

Text Books:

1. Kunwoo Lee, "Principles of CAD/CAM/CAE systems"-Addison Wesley, 1999
2. Radhakrishnan P., et al., "CAD/CAM/CIM"-New Age International, 2008

Reference Books:

1. Ibrahim Zeid, "CAD/CAM – Theory & Practice", McGraw Hill, 1998
2. Bedworth, Mark Henderson & Philip Wolfe, "Computer Integrated Design and Manufacturing" -McGraw hill inc., 1991.
3. Pro-Engineer, Part modeling Users Guide, 1998

Course Outcome:

Students develop expertise in generation of various curves, surfaces and volumes used in geometric modeling systems.

MECHATRONICS SYSTEM DESIGN
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE153 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objective

1. To educate the student regarding integration of mechanical, electronics, electrical and computer systems in the design of CNC machine tools, Robots etc.
2. To provide students with an understanding of the Mechatronic Design Process, actuators, Sensors, transducers, Signal Conditioning, MEMS and Microsystems and also the Advanced Applications in Mechatronics.

Course Content:

1. Introduction: Definition and Introduction to Mechatronic Systems. Modeling & Simulation of Physical systems Overview of Mechatronic Products and their functioning, measurement systems. Control Systems, simple Controllers. Study of Sensors and Transducers: Pneumatic and Hydraulic Systems, Mechanical Actuation System, Electrical Actual Systems, Real time interfacing and Hardware components for Mechatronics. **10 Hours**
2. Electrical Actuation Systems: Electrical systems, Mechanical switches, Solid state switches, solenoids, DC & AC motors, Stepper motors. System Models: Mathematical models:- mechanical system building blocks, electrical system building blocks, thermal system building blocks, electromechanical systems, hydro-mechanical systems, pneumatic systems. **11 Hours**
3. Signal Conditioning: Signal conditioning, the operational amplifier, Protection, Filtering, Wheatstone Bridge, Digital signals , Multiplexers, Data Acquisition, Introduction to digital system processing, pulse-modulation. MEMS and Microsystems: Introduction, Working Principle, Materials for MEMS and Microsystems, Micro System fabrication process, Overview of Micro Manufacturing, Micro system Design, and Micro system Packaging. **13 Hours**
4. Data Presentation Systems: Basic System Models, System Models, Dynamic Responses of System. **8 Hours**
5. Advanced Applications in Mechatronics: Fault Finding, Design, Arrangements and Practical Case Studies, Design for manufacturing, User-friendly design. **8 Hours**

Text Books:

1. W. Bolton, "Mechatronics" - Addison Wesley Longman Publication, 1999
2. HSU "MEMS and Microsystems design and manufacture"- Tata McGraw-Hill Education, 2002

Reference Books:

1. Kamm, "Understanding Electro-Mechanical Engineering an Introduction to Mechatronics"- IEEE Press, 1 edition ,1996
2. Shetty and Kolk "Mechatronics System Design"- Cengage Learning, 2010
3. Mahalik "Mechatronics"- Tata McGraw-Hill Education, 2003
4. HMT "Mechatronics"- Tata McGraw-Hill Education, 1998
5. Michel .B. Histan& David. Alciatore, "Introduction to Mechatronics & Measurement Systems"- Mc Grew Hill, 2002
6. "Fine Mechanics and Precision Instruments"- Pergamon Press, 1971.

Course Outcome:

This course makes the student to appreciate multi disciplinary nature of modern engineering systems. Specifically mechanical engineering students to collaborate with Electrical, Electronics, Instrumentation and Computer Engineering disciplines.

DESIGN FOR MANUFACTURE
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE154 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objective:

To educate students a clear understanding of factors to be considered in designing parts and components with focus on manufacturability

Course Content:

1. Effect of Materials And Manufacturing Process On Design: Major phases of design. Effect of material properties on design Effect of manufacturing processes on design. Material selection process- cost per unit property, Weighted properties and limits on properties methods.

Tolerance Analysis: Process capability, mean, variance, skewness, kurtosis, Process capability metrics, Cp, Cpk, Cost aspects, Feature tolerances, Geometries tolerances, Geometric tolerances, Surface finish, Review of relationship between attainable tolerance grades and different machining process. Cumulative effect of tolerance- Sure fit law and truncated normal law. **12**

Hours

2. Selective Assembly: Interchangeable part manufacture and selective assembly, Deciding the number of groups -Model-1 : Group tolerance of mating parts equal, Model total and group tolerances of shaft equal. Control of axial play-Introducing secondary machining operations, Laminated shims, examples.

Datum Features : Functional datum, Datum for manufacturing, Changing the datum. Examples.**12 Hours**

3. Design Considerations: Design of components with casting consideration. Pattern,Mould, and Parting line. Cored holes and Machined holes. Identifying the possible and probable parting line. Casting requiring special sand cores. Designing to obviate sand cores.

Component Design: Component design with machining considerations link design for turning components-milling, Drilling and other related processes including finish- machining operations. **13 Hours**

4. True positional theory : Comparison between co-ordinate and convention method of feature location. Tolerance and true position tolerancing virtual size concept, Floating and fixed fasteners. Projected tolerance zone. Assembly with gasket, zero position tolerance. Functional gauges, Paper layout gauging. **7 Hours**
5. Design of Gauges: Design of gauges for checking components in assemble with emphasis on various types of limit gauges for both hole and shaft. **6 Hours**

Text Books:

1. Harry Peck , “Designing for Manufacturing”, Pitman Publications, 1983.
2. Dieter , “Machine Design” - McGraw-Hill Higher Education, -2008
3. R.K. Jain, "Engineering Metrology", Khanna Publishers, 1986
4. Product design for manufacture and assembly - Geoffrey Boothroyd, Peter dewhurst, Winston Knight, Marceldekker. Inc. CRC Press, Third Edition
5. Material selection and Design, Vol. 20 - ASM Hand book.

Course Outcome:

Students will have added capability to include manufacturability in mechanical engineering design of parts and their assemblies.

ADVANCED FLUID DYNAMICS
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MEA155 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objective:

The student will gain knowledge of dynamics of fluid flow under different conditions.

1. **Review of undergraduate Fluid Mechanics** : Differential Flow analysis- Continuity equation (3D Cartesian, Cylindrical and spherical coordinates) Navier Stokes equations (3D- Cartesian, coordinates) Elementary inviscid flows; superposition (2D). **8 Hours**
2. **Integral Flow Analysis:** Reynolds transport theorem, Continuity, momentum, moment of momentum, energy equations with applications such as turbo machines, jet propulsion &propellers;
Exact solution of viscous flow equations: Steady flow: Hagen Poiseuille problem, plane Poiseuille problem, Unsteady flow: Impulsively started plate
12 Hours
3. **Low Reynolds number flows:**Lubrication theory (Reynolds equation), flow past rigid sphere, flow past cylinder
Boundary Layer Theory:Definitions, Blasius solution, Von-Karman integral, Separation, **10 Hours**
4. Thermal Boundary layer and heat transfer, (Laminar & turbulent flows);
Experiments in fluids: Wind tunnel, Pressure Probes, Anemometers and flow meters
10 Hours
5. **Special Topics:**Stability theory; Natural and forced convection; Rayleigh Benardproblem;Transition to turbulence; Introduction to turbulent flows
10 Hours

Text Books:

1. "Foundations of fluid mechanics" - S. W. Yuan,SI Unit edition, 1988.
2. "Advanced Engineering Fluid Mechanics"- K. Muralidhar& G. Biswas, Narosa Publishers, 1999.

Reference Books:

1. "Physical Fluid Dynamics" 2nd edition – D.J. Tritton, Oxford Science Publications, 1988.
2. "Boundary Layer Theory"8th edition, H. Schlichting, McGraw Hill, New York., 1999.

Course Outcome:

The student will be able to apply concepts of fluid dynamics in solving real time problems.

Design Engineering Laboratory – Lab 1
(Common to MDE,MEA,MMD,CAE,MCS)

Sub Code : 16MDE16 IA Marks :20
Hrs/ Week : 3 Exam Hours : 03
Total Hrs:42 Exam Marks : 80

Note:

- 1) These are independent laboratory exercises
- 2) A student may be given one or two problems stated herein
- 3) Student must submit a comprehensive report on the problem solved and give a Presentation on the same for Internal Evaluation
- 4) Any one of the exercises done from the following list has to be asked in the Examination for evaluation.

Course Content:

Experiment #1

Numerically Calculation and MATLAB Simulation

Part A: Invariants, Principal stresses and strains with directions

Part A: Maximum shear stresses and strains and planes, Von-Mises stress

Part C: Calculate and Plot Stresses in Thick-Walled Cylinder

Experiment #2

Stress analysis in Curved beam in 2D

Part A : Experimental studies using Strain Gauge Instrumentation.

Part B : 2D Photo elastic Investigation.

Part C :Modelling and Numerical Analysis using FEM.

Experiment #3

Stress analysis of rectangular plate with circular hole under i. Uniform Tension and ii. shear

Part A: Matlab simulation for Calculation and Plot of normalized hoop Stress at hole boundary in Infinite Plate

Part B: Modelling of plate geometry under chosen load conditions and study the effect of plate geometry.

Part C: Numerical Analysis using FEA package.

Experiment #4

Single edge notched beam in four point bending.

Part A: Modeling of single edge notched beam in four point bending. Part B:

Numerical Studies using FEA.

Part C: Correlation Studies.

Experimental #5

Torsion of Prismatic bar with Rectangular cross-section. Part A: Elastic

solutions, MATLAB Simulation

Part B: Finite Element Analysis of any chosen geometry. Part C:

Correlation studies.

Experiment #6

Contact Stress Analysis of Circular Disc under diametrical compression

Part A: 3-D Modeling of Circular Discs with valid literature background, supported with experimental results on contact stress. Part B:

Numerical Analysis using any FEA package.

Part C: 2D Photo Elastic Investigation.

Experiment #7

Vibration Characteristics of a Spring Mass Damper System. Part A:

Analytical Solutions.

Part B: MATLAB Simulation. Part C:

Correlation Studies.

Experiment #8

Modelling and Simulation of Control Systems using MATLAB.

Common to Design Engineering (MDE), Engineering Analysis & Design (MEA),
Machine Design (MMD), Computer Aided Engineering (CAE)

COMPOSITE MATERIALS TECHNOLOGY

(Common to MDE, MEA, MMD, CAE)

Sub Code: 16MST21 IA Marks: 20

Hrs/ Week: 04 Exam Hours: 03

Total Hrs: 50 Exam Marks: 80

Course Objective:

Mechanics of composite materials provides a methodology for stress analysis and progressive failure analysis of laminated composite structures for aerospace, automobile, marine and other engineering applications.

Course Content:

Module 1: Introduction to Composite Materials: Definition, Classification, Types of matrices material and reinforcements, Characteristics & selection, Fiber composites, laminated composites, Particulate composites, Prepegs, and sandwich construction.

Metal Matrix Composites: Reinforcement materials, Types, Characteristics and selection, Base metals, Selection, Applications

Macro Mechanics of a Lamina: Hooke's law for different types of materials, Number of elastic constants, Derivation of nine independent constants for orthotropic material, Two - dimensional relationship of compliance and stiffness matrix. Hooke's law for two-dimensional angle lamina, engineering constants - Numerical problems. Invariant properties. Stress-Strain relations for lamina of arbitrary orientation, Numerical problems.

10 Hours

Module 2: Micro Mechanical Analysis of a Lamina: Introduction, Evaluation of the four elastic moduli, Rule of mixture, Numerical problems. Experimental Characterization of Lamina- Elastic Moduli and Strengths

Failure Criteria: Failure criteria for an elementary composite layer or Ply, Maximum Stress and Strain Criteria, Approximate strength criteria, Inter-laminar Strength, Tsai-Hill theory, Tsai, Wu tensor theory, Numerical problem, practical recommendations.

10 Hours

Module 3: Macro Mechanical Analysis of Laminate: Introduction, code, Kirchhoff hypothesis, Classical Lamination Theory, A, B, and D matrices (Detailed derivation), Special cases of laminates, Numerical problems. Shear Deformation Theory, A, B, D and E matrices (Detailed derivation)

10 Hours

Module 4: Analysis of Composite Structures: Optimization of Laminates, composite laminates of uniform strength, application of optimal composite structures, composite pressure vessels, spinning composite disks, composite lattice structures.

Applications: Aircrafts, missiles, Space hardware, automobile, Electrical and Electronics, Marine, Recreational and sports equipment-future potential of composites. **10 Hours**

Module 5: Manufacturing and Testing: Layup and curing - open and closed mould processing, Hand lay-up techniques, Bag moulding and filamentwinding. Pultrusion, Pulforming, Thermoforming, Injection moulding, Cutting, Machining, joining and repair.

NDT tests – Purpose, Types of defects, NDT method - Ultrasonic inspection, Radiography, Acoustic emission and Acoustic ultrasonic method. **10 Hours**

Text Books:

1. Autar K. Kaw, Mechanics of Composite materials, CRC Press, 2nd Ed, 2005.
2. Madhijit Mukhopadhyay, Mechanics of Composite Materials & Structures, Universities Press, 2004.

Reference Books:

1. J. N. Reddy, Mechanics of Laminated Composite Plates & Shells, CRD Press, 2nd Ed, 2004.
2. Mein Schwartz, Composite Materials handbook, McGraw Hill, 1984.
3. Rober M. Jones, Mechanics of Composite Materials, Taylor & Francis, 1998.
4. Michael W, Hyer, Stress analysis of fiber Reinforced Composite Materials, Mc-Graw Hill International, 2009.
5. Composite Material Science and Engineering, Krishan K. Chawla, Springer, 3e, 2012.
6. Fibre Reinforced Composites, P.C. Mallik, Marcel Decker, 1993.
7. Hand Book of Composites, P.C. Mallik, Marcel Decker, 1993

Course Outcome:

This course provides the background for the analysis, design, optimization and test simulation of advanced composite structures and Components.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

ADVANCED MACHINE DESIGN
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE22 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objective:

This course enables the student to identify failure modes and evolve design by analysis methodology. Design against fatigue failure is given explicit attention.

Course Content:

Module 1: Introduction: Role of failure prevention analysis in mechanical design, Modes of mechanical failure, Review of failure theories for ductile and brittle materials including Mohr's theory and modified Mohr's theory. Numerical examples.

Fatigue of Materials: Introductory concepts, High cycle and low cycle fatigue, Fatigue design models, Fatigue design methods ,Fatigue design criteria, Fatigue testing, Test methods and standard test specimens, Fatigue fracture surfaces and macroscopic features, Fatigue mechanisms and microscopic features. **10 Hours**

Module 2: Stress-Life (S-N) Approach: S-N curves, Statistical nature of fatigue test data, General S-N behavior, Mean stress effects, Different factors influencing S-N behaviour, S-N curve representation and approximations, Constant life diagrams, Fatigue life estimation using S- N approach.

Strain-Life(ϵ -N)approach: Monotonic stress-strain behavior ,Strain controlled test methods ,Cyclic stress-strain behavior ,Strain based approach to life estimation, Determination of strain life fatigue properties, Mean stress effects, Effect of surface finish, Life estimation by ϵ -N approach. **10 Hours**

Module 3: LEFM Approach: LEFM concepts, Crack tip plastic zone, Fracture toughness, Fatigue crack growth, Mean stress effects, Crack growth life estimation.

Notches and their effects: Concentrations and gradients in stress and strain, S-N approach for notched membranes, mean Stress effects and Haigh diagrams, Numerical examples. **10 Hours**

Module 4: Fatigue from Variable Amplitude Loading: Spectrum loads and cumulative damage, Damage quantification and the concepts of damage fraction and accumulation, Cumulative damage theories, Load interaction and sequence effects, Cycle counting methods, Life estimation using stress life approach. Numerical examples.

Notch strain analysis: Strain – life approach, Neuber’s rule, Glinka’s rule, applications of fracture mechanics to crack growth at notches. Numerical examples. **10 Hours**

Module 5: Surface Failure: Introduction, Surface geometry, Mating surface, Friction, Adhesive wear, Abrasive wear, Corrosion wear.

Surface fatigue: spherical contact, Cylindrical contact, General contact, Dynamic contact stresses, Surface fatigue strength, Surface fatigue failure modes, Design to avoid Surface failures. **10 Hours**

Text Books:

1. Ralph I. Stephens, Ali Fatemi, Robert, Henry o. Fuchs, “Metal Fatigue in engineering”, John wileyNewyork, Second edition. 2001.
2. Failure of Materials in Mechanical Design, Jack. A. Collins, John Wiley, Newyork 1992.
3. Robert L. Norton , “Machine Design”, Pearson Education India, 2000

Reference Books:

1. S.Suresh , “Fatigue of Materials”, Cambridge University Press, -1998
2. Julie.A.Benantine , “Fundamentals of Metal Fatigue Analysis”, Prentice Hall,1990
3. Fatigue and Fracture, ASM Hand Book, Vol 19,2002.

Course Outcome:

This course enriches the student with state of the art design methodology namely design by analysis and damage tolerant design.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

DYNAMICS AND MECHANISM DESIGN
(Common to MDE,MEA,MMD)

Sub Code : 16MDE 23 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks :80

Course Objective:

To include dynamics considerations in the design of mechanisms for engineering applications is the objective of this course.

Course Content:

Module 1: Geometry of Motion: Introduction, analysis and synthesis, Mechanism terminology, planar, Spherical and spatial mechanisms, mobility, Grashoffs law, Equivalent mechanisms, unique mechanisms.

Kinematic analysis of plane mechanisms: Auxiliary point method using rotated velocity vector, Hall - Ault auxiliary point method, Goodman's indirect method. Numerical examples. **08 Hours**

Module 2: Generalized Principles of Dynamics: Fundamental laws of motion, Generalized coordinates, Configuration space, Constraints, Virtual work, principle of virtual work, Energy and momentum, Work and kinetic energy, Equilibrium and stability, Kinetic energy of a system, Angular momentum, Generalized momentum.

Lagrange's Equation: Lagrange's equation from D'Alembert's principles, Examples, Hamiltons equations, Hamiltons principle, Lagrange's, equation from Hamiltons principle, Derivation of Hamiltons equations, Numerical examples. **12 Hours**

Module 3: Synthesis of Linkages: Type, number, and dimensional synthesis, Function generation, Path generation and Body guidance, Precision positions, Structural error, Chebychev spacing, Two position synthesis of slider crank mechanisms, Crank-rocker mechanisms with optimum transmission angle

Motion Generation: Poles and relative poles, Location of poles and relative poles, polode, Curvature, Inflection circle. Numerical examples. **10 Hours**

Module 4: Graphical Methods of Dimensional Synthesis: Two position synthesis of crank and rocker mechanisms, Three position synthesis, Four position synthesis (point precision reduction) Overlay method, Coupler curve synthesis, Cognate linkages.

Analytical Methods of Dimensional Synthesis: Freudenstein's equation for four bar mechanism and slider crank mechanism, Examples, Bloch's method of synthesis, Analytical synthesis using complex algebra. **12 Hours**

Module 5: System Dynamics: Gyroscopic action in machines, Euler's equation of motion, Phase Plane representation, Phase plane Analysis, Response of Linear Systems to transient disturbances.

Spatial Mechanisms: Introduction, Position analysis problem, Velocity and acceleration analysis, Eulerian angles. Numerical examples. **08 Hours**

Text Books:

1. K.J.Waldron&G.L.Kinzel , “Kinematics, Dynamics and Design of Machinery”, Wiley India, 2007.
2. Greenwood , “Classical Dynamics”, Prentice Hall of India, 1988.

References Books:

1. J E Shigley, “Theory of Machines and Mechanism” -McGraw-Hill, 1995
2. A.G.Ambekar , “Mechanism and Machine Theory”, PHI, 2007.
3. Ghosh and Mallick , “Theory of Mechanism and Mechanism”, East West press 2007.
4. David H. Myszka , “Machines and Mechanisms”, Pearson Education, 2005.

Course Outcome:

The knowledge of dynamics considerations in mechanism design is essential to use commercial multi body dynamics software in mechanical engineering design

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

ADVANCED THEORY OF VIBRATIONS
(Common to MDE, MEA, MMD, CAE)

Sub Code: 16MDE24 IA Marks: 20
Hrs/ Week: 04 Exam Hours: 03
Total Hrs: 50 Exam Marks: 80

Course Objective:

To teach students how to use the theoretical principles of vibration, and vibration analysis techniques, for the practical solution of vibration problems. The course builds on student's prior knowledge of vibration theory, and concentrates on the applications. The student will understand the importance of vibrations in mechanical design of machine parts subject to vibrations.

Course Content:

Module 1: Review of Mechanical Vibrations: Basic concepts; free vibration of single degree of freedom systems with and without damping, forced vibration of single DOF-systems, Natural frequency.

Vibration Control: Introduction, Vibration isolation theory, Vibration isolation and motion isolation for harmonic excitation, practical aspects of vibration analysis, vibration isolation, Dynamic vibration absorbers, and Vibration dampers. **12 hours**

Module 2: Vibration Measurement and applications: Introduction, Transducers, Vibration pickups, Frequency measuring instruments, Vibration exciters, Signal analysis.

Modal analysis & Condition Monitoring: Dynamic Testing of machines and Structures, Experimental Modal analysis, Machine Condition monitoring and diagnosis. **10 hours**

Module 3: Transient Vibration of single Degree-of freedom systems: Impulse excitation, arbitrary excitation, Laplace transform formulation, Pulse excitation and rise time, Shock response spectrum, Shock isolation.

Random Vibrations : Random phenomena, Time averaging and expected value, Frequency response function, Probability distribution, Correlation, Power spectrum and power spectral density, Fourier transforms and response. **10 hours**

Module 4: Non Linear Vibrations: Introduction, Sources of nonlinearity, Qualitative analysis of nonlinear systems. Phase plane, Conservative systems, Stability of equilibrium, Method of isoclines, Perturbation method, Method of iteration, Self-excited oscillations. **10 hours**

Module 5: Continuous Systems: Vibration of string, longitudinal vibration of rods, Torsional vibration of rods, Euler equation for beams. **08 hours**

Text Books

1. S. S. Rao, "Mechanical Vibrations", Pearson Education, 4th edition.
2. S. Graham Kelly, "Fundamentals of Mechanical Vibration" - McGraw-Hill, 2000
3. Theory of Vibration with Application, - William T. Thomson, Marie Dillon Dahleh, Chandramouli Padmanabhan, 5th edition Pearson Education.

Reference Books

1. S. Graham Kelly, "Mechanical Vibrations", Schaum's Outlines, Tata McGraw Hill, 2007.
2. C Sujatha, "Vibrations and Acoustics – Measurements and signal analysis", Tata McGraw Hill, 2010.

Course Outcome:

At the end of the course the student will be able to solve major and realistic vibration problems in mechanical engineering design that involves application of most of the course syllabus.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

Elective-II

DESIGN OPTIMIZATION

(Common to MDE,MEA, MMD,CAE)

Sub Code : 16CAE251 IA Marks : 20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks : 80

Course Objective:

It aids the students to acquire the basics of optimum design, Classical Optimization Techniques, Non - linear Programming, Unconstrained Optimization Techniques, Integer Programming and Dynamic Programming.

Course Content:

Module 1: Engineering Design Practice: Evolution of Design Technology, Introduction to Design and the Design Process, Design versus Analysis, Role of Computers in Design Cycle, Impact of CAE on Design, Numerical Modeling with FEA and Correlation with Physical Tests.

Applications of Optimization in Engineering Design: Automotive, Aerospace and General Industry Applications, Optimization of Metallic and Composite Structures, Minimization and Maximization Problems, MDO and MOO. **10 Hours**

Module 2: Optimum Design Problem Formulation: Types of Optimization Problems, The Mathematics of Optimization, Design Variables and Design Constraints, Feasible and Infeasible Designs, Equality and Inequality Constraints, Discrete and Continuous Optimization, Linear and Non Linear Optimization.

Optimization Theory – Fundamental Concepts, Global and Local Minimum, Gradient Vector and Hessian Matrix, Concept of Necessary and Sufficient Conditions, Constrained and Unconstrained Problems, Lagrange Multipliers and Kuhn Tucker Conditions. **10 Hours**

Module 3: Sensitivity Analysis: Linear and Non Linear Approximations. Gradient Based Optimization Methods – Dual and Direct.

Optimization Disciplines: Conceptual Design Optimization and Design Fine Tuning, Combined Optimization, Optimization of Multiple Static and Dynamic Loads, Transient Simulations, Equivalent Static Load Methods. Internal and External Responses, Design Variables in Each Discipline. **10 Hours**

Module 4: Manufacturability in Optimization Problems: Design For Manufacturing, Manufacturing Methods and Rules, Applying Manufacturing Constraints to Optimization Problems.

Design Interpretation: Unbound Problems, Over Constrained Problems, Problems with No of Multiple Solutions, Active and Inactive Constraints, Constraint Violations and Constraint Screening, Design Move Limits, Local and Global Optimum .

10 Hours

Module 5: Dynamic Programming: Introduction, Multistage decision processes, Principle of optimality, Computational Procedure in dynamic programming, Initial value problem, Examples.

10 Hours

Text Books:

1. S.S.Rao, Engineering Optimization: Theory and Practice, John Wiley, 2009
2. JasbirArora, Introduction to Optimum Design, McGraw Hill, 2011.

Reference Books:

1. Optimisation and Probability in System Engg - Ram, Van Nostrand.
2. Optimization methods - K. V. Mital and C. Mohan, New age International Publishers, 1999.
3. Optimization methods for Engg. Design - R.L Fox, Addison – Wesley, 1971.

Course Outcome:

It provides the student with knowledge required to optimize an existing design with single or multiple objective functions. However the skills have to be acquired through commercial optimization programs

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

THEORY OF PLASTICITY

(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE252 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks : 80

Course Objective:

This course focuses on stress-strain relations, yield criteria and associated flow rules for elastic-plastic analysis of components and structures

Course Content:

Module 1: Definition and scope of the subject, Brief review of elasticity, Octahedral normal and shear stresses, Spherical and deviatoric stress, Invariance in terms of the deviatoric stresses, Idealised stress-strain diagrams for different material models, Engineering and natural strains, Mathematical relationships between true stress and true strains, Cubical dilation, finite strains co-efficient Octahedral strain, Strain rate and the strain rate tensor. **10hours**

Module 2: Material Models, Stress-strain relations, Yield criteria for ductile metal, Von Mises, Tresca, Yield surface for an Isotropic Plastic materials, Stress space, Experimental verification of Yield criteria, Yield criteria for an anisotropic material, flow rule normality, Yield locus, Symmetry convexity, Deformation of isotropic and kinematic hardening, bilinear stress-strain relationship, power law hardening, deformation theory of plasticity, J_2 flow theory, J_2 incremental theory,. **10hours**

Module 3: Plastic stress-strain relations, Prandtl- Rouss Saint Venant, Levy-Von Mises, Experimental verification of the Prandtl- Rouss equation Upper and lower bound theorems and corollaries, Application to problems: Uniaxial tension and compression, Stages of plastic yielding,. **10 Hours**

Module 4: Bending of beams, Torsion of rods and tubes, nonlinear bending and torsion equations. Application of metal forming: Drawing and Extrusion process, stresses in drawing and extruding with and without friction. **10 hours**

Module 5: Sliplinetheory,Introduction, Basic equations for incompressible two dimensional flow, continuity equations, Stresses in conditions of plain strain conventionforslip-lines,Geometryofsliplines,Propertiesofsliplines, Computational Plasticity- Finite element method, Formulations, Plasticity models **10hours**

Text Books

1. Engineering Plasticity - Theory and Application to Metal Forming Process -R.A.C..Slater, McMillan Press Ltd., 1977
2. Theory of Plasticity and Metal forming Process - Sadhu Singh, Khanna Publishers, Delhi, 1999.

Reference Books

1. Introduction to the Theory of Plasticity for Engineers- Haffman and Sachs, LLC, 2012.
2. Theory of plasticity - J Chakrabarty, Butterworth, 2006.
3. Plasticity for Mechanical Engineers - Johnson and Mellor, Van Nostrand, 1966.

Course Outcome:

The students learn the theory of plasticity as a background for nonlinear analysis (Material nonlinearity) by the Finite element method.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

ADVANCED MANUFACTURING PROCESSES SIMULATION

(Common to MDE,MEA,MMD,CAE)

Sub Code : 16CAE253

IA Marks :20

Hrs/ Week : 04

Exam Hours : 03

Total Hrs: 50

Exam Marks : 80

Course Objective:

The course aims at bringing in clear understanding of finite element modeling for simulation of various manufacturing processes.

Course Content:

Module 1: Finite Element Models of Sheet Metal Forming Processes: Introduction, fundamentals of continuum mechanics- strain and stress measurement, Material Models , FE-Equations for Small Deformations, FE-Equations for Finite Deformations, Flow Approach- Eulerian FE-Formulations for Rigid-Plastic Sheet Metal Analysis, The Dynamic, Explicit Method, Historical Review of Sheet Forming Simulation

Plastic Behaviour of Sheet Metal: Anisotropy of Sheet Metals- Uniaxial and biaxial Anisotropy Coefficients, Yield Criteria for Isotropic Materials, Classical Yield Criteria for Anisotropic Materials.

10 Hours

Module 2: Advanced Anisotropic Yield Criteria:Banabic-Balan-Comsa (BBC) 2005 Yield Criterion, Banabic-Balan-Comsa (BBC) 2008 Yield Criterion, Recommendations on the Choice of the Yield Criterion, Modeling of the Bauschinger Effect.

Formability of Sheet Metals: Evaluation of the Sheet Metal Formability-method based on simulation test and limit dome height diagram, Forming Limit Diagram- definition, experimental determination, methods of determining the limit strain, factors influencing the forming limit, Theoretical Predictions of the Forming Limit Curves, Semi-empirical Model.

10 Hours

Module 3:Numerical Simulation of the Sheet Metal Forming Processes: Simulation of the Elementary Forming Processes. Simulation of the Industrial Parts Forming Processes, Robust Design of Sheet Metal Forming Processes, The Spring-back Analysis, Computer Aided Spring- back Compensation.

Forging: Classification, various stages during forging, Forging equipment, brief description, deformation in compression, forging defects. Residual stresses in forging.

10 Hours

Module 4: Rolling :Classification, forces and geometrical relationships in rolling., Deformation in rolling, Defects in rolled products, Residual stresses in rolled products. Torque and Horsepower.

Drawing and Extrusion:Principles of Rod and wire drawing, variables in wire drawing, Residual stresses in rod, wire and tube drawing, Defects in Rod and

wire drawing. Extrusion equipment, Classification, variables in extrusion, Deformation in extrusion, Extrusion defects, Work done in extrusion. **10 Hours**

Module 5: Composite Materials and Honeycomb Structures: Manufacturing processes and environmental requirements for manufacturing of composite components, NDT methods and quality control, sandwich structures and adhesive bonding. Heat Treatment Processes: Purpose of heat treatment and theory of heat treatment processes, heat treatment of alloys of aluminum, magnesium, titanium, steel and case hardening. **10 Hours**

Text Books

1. **Dorel Banabic**, Sheet Metal Forming Processes: Constitutive Modeling and Numerical Simulation, Springer, 2010.
2. **Dieter G.E.** Mechanical Metallurgy, McGraw Hill, 1986.
3. **ASM** Metals Handbook –Volume II.

Reference Books:

1. **Aircraft Materials and Manufacturing Process** - George F.Titterton, published by Himalayan books, New Delhi, 1968.
2. **Aircraft Production Technology and Management** - ChennaKeshu S and Ganapathy K K, Interline Publishing, Bangalore, 1993.
3. **SachG** "Fundamentals of working of metals" Pergamon Press.
4. **N Bhatnagar, T S Srivatsan**, "Processing and Fabrication of Advanced Materials", IK International
5. **Phillip F. Ostwald, Jairo Muñoz**, "Manufacturing processes and systems", John Wiley, 1997.
6. **Stephen F. Krar, Arthur Gill**, "Exploring advanced manufacturing technologies", Industrial Press, 2003.
7. **Kobayashi** "Metal forming and finite element methods", Oxford, 1989.
8. **PrakashMahadeo Dixit, Uday S. Dixit**, "Modeling of metal forming and machining processes", Springer, 2008.
9. **Dorel Banabic**, "Advanced Methods in Material Forming", Springer, 2007.
10. **Schuler GmbH**, "Metal forming handbook", Springer, 1998.

Course Outcome:

Students will be able to analyse the behaviour of materials during forming.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

ROTOR DYNAMICS
(Common to MDE,MEA,MMD)

Sub Code : 16MDE254 IA Marks :20
Hrs/ Week : 04 Exam Hours : 03
Total Hrs: 50 Exam Marks : 80

Course Objective:

This course is of interest to turbo machinery designers. Specifically modeling of bearings, shafts and rotor stages (compressors, turbines including blades) to predict instability like whirling including gyroscopic and Coriolis effect.

Course Content:

Module 1: Fluid Film Lubrication: Basic theory of fluid film lubrication, Derivation of generalized Reynolds equations, Boundary conditions, Fluid film stiffness and Damping coefficients, Stability and dynamic response for hydrodynamic journal bearing, Two lobe journal bearings.

Stability of Flexible Shafts: Introduction, equation of motion of a flexible shaft with rigid support, Radial elastic friction forces, Rotary friction, friction Independent of velocity, friction dependent on frequency, Different shaft stiffness Constant, gyroscopic effects, Nonlinear problems of large deformation applied forces, instability of rotors in magnetic field. **12 Hours**

Module 2: Critical Speed: Dunkerley's method, Rayleigh's method, Stodola's method. Rotor Bearing System: Instability of rotors due to the effect of hydrodynamic oil layer in the bearings, support flexibility, Simple model with one concentrated mass at the center **08 Hours**

Module 3: Turborotor System Stability by Transfer Matrix Formulation: General turborotor system, development of element transfer matrices, the matrix differential equation, effect of shear and rotary inertia, the elastic rotors supported in bearings, numerical solutions. **10 Hours**

Module 4: Turborotor System Stability by Finite Element Formulation: General turborotor system, generalized forces and co-ordinates system assembly element matrices, Consistent mass matrix formulation, Lumped mass model, linearised model for journal bearings, System dynamic equations Fix stability analysis non dimensional stability analysis, unbalance response and Transient analysis. **12 Hours**

Module 5: Blade Vibration: Centrifugal effect, Transfer matrix and Finite element, approaches. **08 Hours**

Reference Books:

1. Cameron, "Principles of Lubrication", Longman Publishing Group, 1986
2. Bolotin , "Nonconservative problems of the Theory of elastic stability", Macmillan, 1963
3. Pezdel, Lockie , "Matrix Methods in Elasto Mechanics", McGraw-Hill, 1963.
4. Timosenko , "Vibration Problems in Engineering", Oxford City Press, 2011
5. Zienkiewicz, "The finite element method in engineering science", McGraw-Hill, 1971

Course Outcome:

Provides the student understanding of modeling a rotating machine elements theoretically. However rotor dynamic analysis demands FE Modeling using a commercial FEA software

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

AUTOMOBILE SYSTEM DESIGN
(Common to MDE, MMD, MEA and CAE)

Sub Code	:	16 MEA255	IA Marks	:	20
Hrs/ Week	:	04	Exam Hours	:	03
Total Hrs.	:	52	Exam Marks	:	80

Course Objective:

This course would facilitate understanding of the stages involved in automobile system design. The student will be exposed to industrial practices in design of various systems of an automobile.

Module 1: Body Shapes: Aerodynamic Shapes, drag forces for small family cars.

Fuel Injection: Spray formation, direct injection for single cylinder engines (both SI & CI), energy audit. **12 Hours**

Module 2: Design of I.C. Engine I: Combustion fundamentals, combustion chamber design, cylinder head design for both SI & C. I. Engines. **08 Hours**

Module 3: Design of I.C. Engine II: Design of crankshaft, camshaft, connecting rod, piston & piston rings for small family cars (max up to 3 cylinders). **10 Hours**

Module 4: Transmission System: Design of transmission systems – gearbox (max of 4-speeds), differential.

Suspension System: Vibration fundamentals, vibration analysis (single & two degree of freedom, vibration due to engine unbalance, application to vehicle suspension). **10 Hours**

Module 5: Cooling System: Heat exchangers, application to design of cooling system (water cooled).
Emission Control: Common emission control systems, measurement of emissions, exhaust gas emission testing.

10 Hours

Text Books:

1. **Design of Automotive Engines**, - A .Kolchin& V. Demidov, MIR Publishers, Moscow
2. **The motor vehicle, Newton steeds &Garratte** - Iliff& sons Ltd., London
3. **I.C. Engines** - Edward F Obert, International text book company.

Reference Books:

1. **Introduction to combustion** - Turns
2. **Automobile Mechanic** -, N.K.Giri, Khanna Publications, 1994
3. **I.C. Engines** - Maleev, McGraw Hill book company, 1976
4. **Diesel engine design** - HeldtP.M.,Chilton company New York.
5. **Problems on design of machine elements** - V.M. Faires&Wingreen, McMillan Company., 1965
6. **Design of I.C.Engines** - John Heywood, TMH

Course Outcome:

The student will be able to apply the knowledge in creating a preliminary design of automobile sub systems.

Scheme of Examination:

Two questions to be set from each module. Students have to answer five full questions, choosing one full question from each module.

Design Engineering Laboratory - Lab 2
(Common to MDE,MEA,MMD,CAE,MCS)

Sub Code : 16MDE26	IA Marks : 20
Hrs/ Week : 6	Exam Hours : 03
Total Hrs: 42	Exam Marks : 80

Note:

- 1) These are independent laboratory exercises
- 2) A student may be given one or two problems stated herein
- 3) Student must submit a comprehensive report on the problem solved and give a Presentation on the same for Internal Evaluation
- 4) Any one of the exercises done from the following list has to be asked in the Examination for evaluation.

Course Content:

Experiment #1 Structural Analysis

Part A: FE Modeling of a stiffened Panel using a commercial preprocessor.

Part B: Buckling, Bending and Modal analysis of stiffened Panels.

Part C: Parametric Studies.

Experiment #2

Design Optimization

Part A: Shape Optimization of a rotating annular disk.

Part B: Weight Minimization of a Rail Car Suspension Spring.

Part C: Topology Optimization of a Bracket.

Experiment #3

Thermal analysis

Part A: Square Plate with Temperature Prescribed on one edge and Opposite edge insulated.

Part B: A Thick Square Plate with the Top Surface exposed to a Fluid at high temperature, Bottom Surface at room temperature, Lateral Surfaces Insulated.

Experiment #4

Thermal Stress Analysis

Part A: A Thick Walled Cylinder with specified Temperature at inner and outer Surfaces.

Part B: A Thick Walled Cylinder filled with a Fluid at high temperature and Outer Surface exposed to atmosphere.

Experiment#5

CFD Analysis

Part A: CFD Analysis of a Hydro Dynamic Bearing using commercial code.

Part B: Comparison of predicted Pressure and Velocity distributions with Target solutions.

Part C: Experimental Investigations using a Journal Bearing Test Rig.

Part D: Correlation Studies.

Experiment #6

Welded Joints.

Part A : Fabrication and Testing.

Part B : FE Modeling and Failure Analysis .

Part C : Correlation Studies.

Experiment #7

Bolted Joints.

Part A : Fabrication and Testing.

Part B : FE Modeling and Failure Analysis .

Part C : Correlation Studies.

Experiment #8

Adhesive Bonded Joints.

Part A : Fabrication and Testing.

Part B : FE Modeling and Failure Analysis .

Part C : Correlation Studies.

16CAE421	Fracture Mechanics
16MST422	Smart Materials & Structures
16MDE423	Robust Design
16MEA424	Computational Fluid Dynamics

- Note:** 1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.
2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee comprising of HoD as Chairman, Guide and Senior faculty of the department.
3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted.
4. Project evaluation: a. Internal Examiner shall carry out the evaluation for 100 marks. b. External Examiner shall carry out the evaluation for 100 marks. c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation. d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

IV Semester
TRIBOLOGY AND BEARING DESIGN
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE41
Hrs/ Week : 04
Total Hrs: 50

IA Marks :20
E x a m H o u r s : 0 3
Exam Marks :80

Course Objective:

Gives in-depth knowledge regarding hydrodynamic, hydrostatic lubrication and various bearings, with their design and applications

Course Content:

Module 1. Introduction to Tribology: Introduction, Friction, Wear, Wear Characterization, Regimes of lubrication, Classification of contacts, lubrication theories, Effect of pressure and temperature on viscosity. Newton's Law of viscous forces, Flow through stationary parallel plates. Hagen's poiseuille's theory, viscometers. Numerical problems, Concept of lightly loaded bearings, Petroff's equation, Numerical problems.

9Hrs

Module 2. Hydrodynamic Lubrications: Pressure development mechanism. Converging and diverging films and pressure induced flow. Reynolds's 2D equation with assumptions. Introduction to idealized slide bearing with fixed shoe and Pivoted shoes. Expression for load carrying capacity. Location of center of pressure, effect of end leakage on performance, Numerical problems Journal Bearings: Introduction to idealized full journal bearings. Load carrying capacity of idealized full journal bearings, Sommerfeld number and its significance, short and partial bearings, Comparison between lightly loaded and heavily loaded bearings, effects of end leakage on performance, Numerical problems.

10 Hrs

Module 3. Hydrostatic Bearings: Hydrostatic thrust bearings, hydrostatic circular pad, annular pad, rectangular pad bearings, types of flow restricters, expression for discharge, load carrying capacity and condition for minimum power loss, numerical problems, and hydrostatic journal bearings. EHL Contacts: Introduction to Elasto - hydrodynamic lubricated bearings. Introduction to 'EHL' constant. Grubin type solution.

11Hrs

Module 4. Antifriction bearings: Advantages, selection, nominal life, static and dynamic load bearing capacity, probability of survival, equivalent load, cubic mean load, bearing mountings. Porous Bearings: Introduction to porous and gas lubricated bearings. Governing differential equation for gas lubricated bearings, Equations for porous bearings and working principal, Fretting phenomenon and its stages.

11 Hrs

Module 5. Magnetic Bearings: Introduction to magnetic bearings, Active magnetic bearings. Different equations used in magnetic bearings and working principal. Advantages and disadvantages of magnetic bearings, Electrical analogy, Magneto-hydrodynamic bearings.

9 Hrs

Text Books

1. Mujamdar.B.C "Introduction to Tribology of Bearing", Wheeler Publishing, New Delhi 2001
2. Radzimovsky, "Lubrication of Bearings - Theoretical principles and design" Oxford press Company, 2000.

Reference Books

1. Dudley D.Fulier " Theory and practice of Lubrication for Engineers", New YorkCompany.1998
2. Moore "Principles and applications of Tribology" Pergamon press, 1975
3. Oscar Pinkus, BenoSternlicht, "Theory of hydrodynamic lubrication", McGraw-Hill, 1961
4. G W Stachowiak, A W Batchelor , "Engineering Tribology", Elsevier publication 1993.
5. Hydrostatic and hybrid bearings, Butterworth 1983.
6. F. M. Stansfield, Hydrostatic bearings for machine tools and similar applications, Machinery Publishing, 1970

Course Outcome:

Students develop skills to design and selection of bearings on Varioustribological factors to be considered in moving and rotating parts.

IV Semester Elective -3
FRACTURE MECHANICS
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16CAE421
Hrs/ Week : 04
Total Hrs: 50

IA Marks :20
E x a m H o u r s : 0 3
Exam Marks :80

Course Objective:

Fracture mechanics provides a methodology for prediction, prevention and control of fracture in materials, components and structures. It provides a background for damage tolerant design. It quantifies toughness as materials resistance to crack propagation.

Course Content:

Module 1. Fracture mechanics principles: Introduction and historical review, Sources of micro and macro cracks. Stress concentration due to elliptical hole, Strength ideal materials, Griffith's energy balance approach. Fracture mechanics approach to design. NDT and Various NDT methods used in fracture mechanics, Numerical problems. The Airy stress function. Complex stress function. Solution to crack problems. Effect of finite size. Special cases, Elliptical cracks, Numerical problems.

12Hrs

Module 2. . Plasticity effects, Irwin plastic zone correction. Dugdale approach. The shape of the plastic zone for plane stress and plane strain cases, Plastic constraint factor. The Thickness effect, numerical problems. Determination of Stress intensity factors and plane strain fracture toughness: Introduction, analysis and numerical methods, experimental methods, estimation of stress intensity factors. Plane strain fracture toughness test, The Standard test. Size requirements. Non-linearity. Applicability.

12 Hrs

Module 3. . The energy release rate, Criteria for crack growth. The crack resistance (R curve). Compliance, J integral. Tearing modulus. Stability. Elastic plastic fracture mechanics : Fracture beyond general yield. The Crack-tip opening displacement. The Use of CTOD criteria. Experimental determination of CTOD. Parameters affecting the critical CTOD. Use of J integral. Limitation of J integral.

12Hrs

Module 4. Dynamics and crack arrest: Crack speed and kinetic energy. Dynamic stress intensity and elastic energy release rate. Crack branching. Principles of crack arrest. Crack arrest in practice. Dynamic fracture toughness.

06 Hrs

Module 5. Fatigue crack propagation and applications of fracture mechanics: Crack growth and the stress intensity factor. Factors affecting crack propagation. variable amplitude service loading, Means to provide fail-safety, Required information for fracture mechanics approach, Mixed mode (combined) loading and design criteria.

08 Hrs

Text Books

1. David Broek, "Elementary Engineering Fracture Mechanics", Springer Netherlands, 2011
2. Anderson, "Fracture Mechanics-Fundamental and Application", T.L CRC press 1998.

Reference Books

1. Karen Hellan, "Introduction to fracture mechanics", McGraw Hill, 2nd Edition
2. S.A. Meguid, "Engineering fracture mechanics" Elsevier Applied Science, 1989
3. Jayatilaka, "Fracture of Engineering Brittle Materials", Applied Science Publishers, 1979
4. Rolfe and Barsom, "Fracture and Fatigue Control in Structures", Prentice Hall, 1977
5. Knott, "Fundamentals of fracture mechanisms", Butterworths, 1973

Course Outcome:

At the end of the course students will:

1. Develop basic fundamental understanding of the effects of cracklike defects on the performance of aerospace, civil, and mechanical Engineering structures.
2. Learn to select appropriate materials for engineering structures to insure damage tolerance.
3. Learn to employ modern numerical methods to determine critical crack sizes and fatigue crack propagation rates in engineering structures.
4. Gain an appreciation of the status of academic research in field of fracture mechanics.

IV Semester Elective -3
SMART MATERIALS AND STRUCTURES
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MST422
Hrs/ Week : 04
Total Hrs: 50

IA Marks :20
E x a m H o u r s : 0 3
Exam Marks :80

Course Objective:

Knowledge of smart materials and structures is essential designing mechanical systems for advanced engineering applications ,the course aims at training students in smart materials and structures application and analysis

Course Content:

Module 1. Smart Structures: Types of Smart Structures, Potential Feasibility of Smart Structures, Key Elements Of Smart Structures, Applications of Smart Structures. Piezoelectric materials, Properties, piezoelectric Constitutive Relations, Depoling and Coersive Field, field strain relation. Hysteresis, Creep and Strain Rate effects, Inchworm Linear Motor.**Beam Modeling:** Beam Modeling with induced strain Rate effects, Inchworm Linear Motor Beam Modeling with induced strain Actuation-single Actuators, dual Actuators, Pure Extension, Pure Bending harmonic excitation, Bernoulli-Euler beam Model, problems, Piezoelectrical Applications.

12Hrs

Module 2. Shape memory Alloy: Experimental Phenomenology, Shape Memory Effect, Phase Transformation, Tanaka's Constitutive Model, testing of SMA Wires, Vibration Control through SMA, Multiplexing. Applications Of SMA and Problems. **ER and MR Fluids:** Mechanisms and properties, Fluid Composition and behavior, The Bingham Plastic and Related Models, Pre-Yield Response.Post-Yield flow applications in Clatches, Dampers and Others.

13 Hrs

Module 3 Vibration Absorbers: series and Parallel Damped Vibrations (OverView), Active Vibration Absorbers, Fiber Optics, Physical Phenomena,Characteristics, Sensors, Fiber Optics in Crack Detection, applications.**Control of Structures:** Modeling, Control Strategies and Limitations, Active Structures in Practice.

13Hrs

Module 4. MEMS – Mechanical Properties of MEMS Materials, Scaling of Mechanical Systems, Fundamentals of Theory, The Intrinsic Characteristics of MEMS, Miniaturization, Microelectronics Integration.

06 Hrs

Module 5. Devices: Sensors and Actuators, Conductivity of Semiconductors, Crystal Planes and Orientation, (Stress and Strain Relations, Flexural Beam Bending Analysis Under Simple Loading Conditions), Polymers in MEMS, Optical MEMS Applications.

06 Hrs

Text Books

1. Smart Materials and Structures - M. V. Gandhi and B. So Thompson, Chapman and Hall, London; New York, 1992 (ISBN: 0412370107).
2. Smart Structures and Materials - B. Culshaw, Artech House, Boston, 1996 (ISBN :0890066817).
3. Smart Structures: Analysis and Design - A. V. Srinivasan, Cambridge University Press, Cambridge; New York, 2001 (ISBN: 0521650267).

Reference Books

- Electroceramics: Materials, Properties and Applications - A. J. Moulson and J. M. Herbert. John Wiley & Sons, ISBN: 0471497429
2. Piezoelectric Sensories: Force, Strain, Pressure, Acceleration and Acoustic Emission Sensors. Materials and Amplifiers, Springer, Berlin; New York, 2002 (ISBN: 3540422595).
 3. Piezoelectric Actuators and Wtrasonic Motors - K. Uchino, Kluwer Academic Publishers, Boston, 1997 (ISBN: 0792398114).
 4. Handbook of Giant Magnetostrictive Materials - G. Engdahl, Academic Press, San Diego, Calif.; London, 2000 (ISBN: 012238640X).
 5. Shape Memory Materials - K. Otsuka and C. M. Wayman, Cambridge University Press, Cambridge; New York, 199~ (ISBN: 052144487X).

Course Outcome:

At the completion of this course, students will be able to:

1. Understand the behavior and applicability of various smart materials
2. Design simple models for smart structures & materials
3. Perform simulations of smart structures & materials application
4. Conduct experiments to verify the predictions

IV Semester Elective -3
ROBUST DESIGN
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MDE423

Hrs/ Week : 04

Total Hrs: 50

IA Marks :20

E x a m H o u r s : 0 3

Exam Marks :80

Course Objective:

Course aims at giving orientation to design of experiments and taguchi's orthogonal array techniques which are predominantly used in optimization of parameters.

Course Content:

Module 1. Quality by Experimental Design : Quality, western and Taguchi quality philosophy, Elements of cost, Noise factors causes of variation, Quadratic loss function and variation of quadratic loss functions. Robust Design : Steps in robust design : parameter design and tolerance design, reliability improvement through experiments, illustration through numerical examples.

Experimental Design: Classical experiments: factorial experiments, terminology, factors. Levels, Interactions, Treatment combination, randomization, 2-level experimental design for two factors and three factors. 3-level experiment designs for two factors and three factors, factor effects, factor interactions, Fractional factorial design, Saturated design, Central composite designs, Illustration through numerical examples.

12Hrs

Module 2. Measures of Variability : Measures of variability, Concept of confidence level, Statistical distributions : normal, log normal and Weibull distributions. Hypothesis testing, Probability plots, choice of sample size illustration through numerical examples. Analysis and interpretation of experimental data: Measures of variability, Ranking method, column effect method and plotting method, Analysis of variance (ANOVA), in factorial experiments: YATE's algorithm for ANOVA, Regression analysis, Mathematical models from experimental data, illustration through numerical examples.

14 Hrs

Module 3. Taguchi's Orthogonal Arrays : Types orthogonal arrays, Selection of standard orthogonal arrays, Linear graphs and interaction assignment, dummy level technique, Compound factor method, modification of linear graphs, Column merging method, Branching design, Strategies for constructing orthogonal arrays. Signal to Noise ratio (S-N Ratios) : Evaluation of sensitivity to noise, Signal to noise ratios for static problems, Smaller – the – better types, Nominal – the –better – type, larger – the- better – type. Signal to noise ratios for dynamic problems, Illustrations through numerical examples.

14Hrs

Module 4. Parameter Design and Tolerance Design : Parameter and tolerance design concepts, Taguchi's inner and outer arrays, Parameter design strategy, Tolerance design strategy, Illustrations through numerical examples.

06 Hrs

Module 5. . Reliability Improvement Through Robust Design : Role of S-N ratios in reliability improvement ; Case study; Illustrating the reliability improvement of routing process of a printed wiring boards using robust design concepts.

04 Hrs

Text Books

1. Madhav S. Phadake , "Quality Engineering using Robust Design", Prentice Hall, 1989.
2. Douglas Montgomery, "Design and analysis of experiments", Wiley India Pvt.Ltd., 2007.
3. Phillip J. Ross, Taguchi , "Techniques for Quality Engineering", McGraw Hill Int. Ed., 1996

Reference Books

- Thomas B. Barker , "Quality by Experimental Design", Marcel Dekker Inc ASQC Quality Press, 1985
2. C.F. Jeff Wu, Michael Hamada , "Experiments planning, analysis and parameter design optimization", John Willey Ed., 2002
 3. W.L. Condra, Marcel Dekker , "Reliability improvement by Experiments", Marcel Dekker Inc ASQC Quality Press, 1985

Course Outcome:

After taking this course, a student will:

1. Have knowledge, understanding and the ability to apply methods to analyze and identify opportunities to improve design processes for robustness
2. Be able to lead product development activities that include robust design techniques.

IV Semester Elective -3
COMPUTATIONAL FLUID DYNAMICS
(Common to MDE,MEA,MMD,CAE)

Sub Code : 16MEA424

Hrs/ Week : 04

Total Hrs: 50

IA Marks :20

E x a m H o u r s : 0 3

Exam Marks :80

Course Objective:

This course would create awareness about the theory behind fluid dynamics computations as applied in analysis tools.

Course Content:

Module 1. . Basic Concepts - Dimensionless form of equations; Simplified mathematical models; Hyperbolic, Parabolic & Elliptic systems; Properties of numerical solutions (Consistency, Stability, Conservation, Convergence and Accuracy).

08Hrs

Module 2. . Finite Difference Methods - Discretisation; Boundary conditions; error propagation; Introduction to spectral methods; examples.

10 Hrs

Module 3 Finite volume method - Surface & volume integrals; Interpolation & differentiation; Boundary conditions; Examples.

10Hrs

Module 4. . Gaussian Elimination; LU decomposition; Tridiagonal Systems; Iterative methods; convergence; ADI & other splitting methods.

Multi-grid method - Coupled equations; Simultaneous solutions, sequential solutions & under relaxation. Non linear systems

10 Hrs

Module 5. Initial value problem & Boundary value problems; Implicit & Explicit Schemes; 2D and 3D examples. Heat and Mass transfer Problems; Multi Phase Flows.

12 Hrs

Text Books

1. **Computational Methods for Fluid Dynamics**, 3rd edition - J.H. Ferziger & M. Peric, Springer, 2002.
2. **Numerical Solutions of Partial Differential Equations, Finite Difference methods**, 3rd ed., - G.D. Smith, Oxford University Press. 1986.

Reference Books

1. **Computational Fluid Dynamics** - T. J. Chung, Cambridge Univ. Press, 2002.
2. **Partial Differential Equations for Scientists and Engineers** - Farlow, John Wiley, 1982.

Course Outcome:

The student will be able to analyse and obtain numerical solutions to fluid dynamics problems.

------------	-------------------------

Note:

- 1) Project Phase - I: 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carry out literature survey & visit to Industries to finalize the topic of dissertation.
- 2) Project Phase - II: 16 weeks duration during III Semester. Evaluation shall be taken during the Second week of the IV Semester. Total Marks shall be 25.
- 3) Project Evaluation: 24 weeks duration in IV Semester. Project Work Evaluation shall be taken up at the end of the IV Semester. Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be 250 (Phase I Evaluation: 25 Marks, Phase -II Evaluation: 25 Marks, Project Evaluation marks by Internal Examiner (guide): 50, Project Evaluation marks by External Examiner: 50, marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

- The I.A. Marks of Project Phase - I & II shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (Out of two external examiners at least one should be present).

Advanced Mathematics

Subject Code	: 14ELD11	IA Marks	: 50
No. of Lecture Hours / Week	: 04	Exam. Hours	: 03
Total No. of Lecture Hours	: 50	Exam. Marks	: 100

Matrix Theory

QR-EL Decomposition – Eigen values using shifted QR algorithm- Singular Value EL Decomposition - Pseudo inverse- Least square approximations

Calculus of Variations

Concept of Functionals- Euler's equation – functional dependent on first and higher order derivatives – Functionals on several dependent variables – Iso perimetric problems- Variational problems with moving boundaries

Transform Methods

Laplace transform methods for one dimensional wave equation – Displacements in a string – Longitudinal vibration of a elastic bar – Fourier transform methods for one dimensional heat conduction problems in infinite and semi infinite rod.

Elliptic Equation

Laplace equation – Properties of harmonic functions – Fourier transform methods for laplace equations. Solution for Poisson equation by Fourier transforms method

Linear and Non Linear Programming

Simplex Algorithm- Two Phase and Big M techniques – Duality theory- Dual Simplex method. Non Linear Programming –Constrained extremal problems- Lagranges multiplier method- Kuhn- Tucker conditions and solutions

Digital VLSI Design

Subject Code : 14EVE12
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure. The MOS System under External Bias. Structure and Operation of MOS Transistor. MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.

MOS Inverters: Static Characteristics: Introduction, Resistive-Load Inverter. Inverters with n_Type MOSFET Load. CMOS Inverter.

MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition. Calculation of Delay Times. Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics. Calculation of Interconnect Delay. Switching Power Dissipation of CMOS Inverters.

Dynamic Logic Circuits : Introduction, Basic Principles of Pass Transistor Circuits. Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.

Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).

Low-Power CMOS Logic Circuits: Introduction, Overview of Power Consumption, Low-Power Design Through Voltage Scaling. Estimation and Optimization of Switching Activity, Reduction of Switched Capacitance, Adiabatic Logic Circuits.

BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation. Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.

Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits. Output Circuits and L(di/dt) Noise. On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.

Design for Manufacturability : Introduction, Process Variations, Basic Concepts and Definitions. Design of Experiments and Performance Modelling, Parametric Yield Estimation, Parametric Yield Maximization, Worst-Case Analysis, Performance Variability Minimization.

Advanced Embedded Systems

Subject Code : 14EVE13
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Typical Embedded System: Core of the Embedded System, Memory, Sensors and Actuators, Communication Interface, Embedded Firmware, Other System Components.

Characteristics and Quality Attributes of Embedded Systems: Hardware Software Co-Design and Program Modeling; Fundamental Issues in Hardware Software Co-Design, Computational Models in Embedded Design, Introduction to Unified Modeling Language, Hardware Software Trade-offs.

Embedded Hardware Design and Development :EDA Tools, How to Use EDA Tool, Schematic Design – Place wire, Bus , port, junction, creating part numbers, Design Rules check, Bill of materials, Netlist creation , PCB Layout Design – Building blocks, Component placement, PCB track routing.

ARM -32 bit Microcontroller family. Architecture of ARM Cortex M3 –General Purpose Registers, Stack Pointer, Link Register, Program Counter, Special Register,. Nested Vector Interrupt Controller. Interrupt behavior of ARM Cortex M3. Exceptions Programming. Advanced Programming Features. Memory Protection. Debug Architecture.

Embedded Firmware Design and Development: Embedded Firmware Design Approaches. Embedded Firmware Development Languages

Real-Time Operating System (RTOS) based Embedded System Design: Operating System Basics, Types of OS, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling, Threads, Processes and Scheduling: Putting them altogether, Task Communication, Task Synchronization, Device Drivers, How to Choose an RTOS

The Embedded System Development Environment: The Integrated Development Environment (IDE), Types of Files Generated on Cross compilation, Disassembler/ELDompiler, Simulators, Emulators and Debugging, Target Hardware Debugging, Boundary Scan.

Digital Circuits and Logic Design

Subject Code : 14ELLD14
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Threshold Logic: Introductory Concepts, Synthesis of Threshold Networks

Reliable Design and Fault Diagnosis Hazards: Fault Detection in Combinational Circuits, Fault-Location Experiments, Boolean Differences, Fault Detection by Path Sensitizing, Detection of Multiple Faults, Failure-Tolerant Design, Quadded Logic

Capabilities, Minimization, and Transformation of Sequential Machines: The Finite- State Model, Further Definitions, Capabilities and Limitations of Finite – State Machines, State Equivalence and Machine Minimization, Simplification of Incompletely Specified Machines.

Structure of Sequential Machines: Introductory Example, State Assignments Using Partitions, The Lattice of closed Partitions, Reductions of the Output Dependency, Input Independence and Autonomous Clocks, Covers and Generation of closed Partitions by state splitting, Information Flow in Sequential Machines, ELDompositions, Synthesis of Multiple Machines.

State—Identifications and Fault-Detection Experiments: Homing Experiments, Distinguishing Experiments, Machine Identification, Fault-Detection Experiments, Design of Diagnosable Machines, Second Algorithm for the Design of Fault Detection Experiments, Fault-Detection Experiments for Machines which have no Distinguishing Sequences.

Digital System Design Using Verilog

Subject Code : EE11D151
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

Ex. Marks : 50
Exam Hours : 05
Exam Marks : 100

Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.

Combinational Basics: Boolean Functions and Boolean Algebra, Binary Coding, Combinational Components and Circuits, Verification of Combinational Circuits.

Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers.

Sequential Basics: Storage elements, Counters, Sequential Datapaths and Control, Clocked Synchronous Timing Methodology.

Memories: Concepts, Memory Types, Error Detection and Correction.

Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.

Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory.

I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.

Accelerators: Concepts, case study, Verification of accelerators.

Design Methodology: Design flow, Design optimization, Design for test.

Digital Electronics Lab -1

Subject Code : 14ELD16
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 25
Exam Hours : 03
Exam Marks : 50

Design Using Cadence ORCAD

1. Design of 3½ Digit Digital Voltmeter
2. Design of Monolithic function Generator.
3. Design of Regulator Power supplies.
4. Design of Batch counter using TTL ICs.
5. Design of DAC and ADC.
6. Design of Electronic P, PI, PID and ON/OFF controllers.
7. Design of Programmable Timers.
8. Design of filters and resonance circuits.

VLSI DIGITAL DESIGN

FPGA DIGITAL DESIGN

VLSI Front End Design programs:

Programming can be done using any compiler. Down load the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro apart from verification by simulation with any of the front end tools

1. Write Verilog code for the design of 8-bit
 - i. Carry Ripple Adder
 - ii. Carry LookAhead adder
 - iii. Carry Skip Adder

- iv. BCD Adder & Subtractor
 - 2. Write Verilog Code for 8-bit
 - i. Array Multiplication (Signed and Unsigned)
 - ii. Booth Multiplication (Radix-4)
 - 3. Write Verilog code for 4/8-bit
 - i. Magnitude Comparator
 - ii. LFSR
 - iii. Parity Generator
 - iv. Universal Shift Register
 - 4. Write Verilog Code for 3-bit Arbitrary Counter to generate 0,1,2,3,6,5,7 and repeats.
 - 5. Design a Mealy and Moore Sequence Detector using Verilog to detect Sequence.
Eg 11101 (with and without overlap) any sequence can be specified
 - 6. Design a FIFO and LIFO buffers in Verilog and Verify its Operation.
 - 7. Design a coin operated public Telephone unit using Mealy FSM model with following operations
 - i. The calling process is initiated by lifting the receiver.
 - ii. Insert 1 Rupee Coin to make a call.
 - iii. If line is busy, placing the receiver on hook should return a coin
 - iv. If line is through, the call is allowed for 60 seconds at the 45th second prompt another 1 Rupee coin to be inserted, to continue the call.
 - v. If user doesn't insert the coin within 60 seconds the call should be terminated.
 - vi. The system is ready to accept new call request when the receiver is placed on the hook.
 - vii. The FSM goes 'out of order' state when there is a Line Fault.
- Note: Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits

Modern DSP

Subject Code : 14EEED21
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 20
Exam Hours : 03
Exam Marks : 100

Goal of the course – Advances in Digital Signal Processing involve variable sampling rates and thus the multirate signal processing and hence their applications in communication systems and signal processing. It is intended to introduce a basic course in multirate signal processing especially meant for students of branches eligible for M Tech courses in EC related disciplines.

Introduction and Discrete Fourier Transforms: Signals, Systems and Processing. Classification of Signals, The Concept of Frequency in Continuous-Time and Discrete-Time Signals, Analog-to-Digital and Digital-to-Analog Conversion, Frequency-Domain Sampling: The Discrete Fourier Transform, Properties of the DFT, Linear Filtering Methods Based on the DFT (Ref.1 Chap. 1 & 7)

Design of Digital Filters: General Considerations, Design of FIR Filters, Design of IIR Filters from Analog Filters. Frequency Transformations. (Ref.1 Chap.10)

Multirate Digital Signal Processing: Introduction, EL Dimation by a factor 'D', Interpolation by a factor 'I', Sampling rate Conversion by a factor 'I/D', implementation of Sampling rate conversion, Multistage implementation of Sampling rate conversion. Sampling rate conversion of Band Pass Signals, Sampling rate conversion by an arbitrary factor, Applications of Multirate Signal Processing, Digital Filter banks. Two Channel Quadrature Mirror Filter banks, M-Channel QMF bank. (Ref.1 Chap.11)

Adaptive Filters: Applications of Adaptive Filters, Adaptive Direct Form FIR Filters- The LMS Algorithm. Adaptive Direct Form Filters-RLS Algorithm. (Ref.1 Chap.13)

Reference Books:

1. Proakis and Manolakis, “**Digital Signal Processing**”, Prentice Hall 1996. (Fourth Edition).
2. Roberto Cristi, “**Modern Digital Signal Processing**”, Cengage Publishers, India, (Erstwhile Thompson Publications). 2003.

Coding Theory

Subject Code : 14E1D22
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Information and Entropy: Sources of information, DMS and Markov. Properties of Entropy. Entropy of information sources. Extension of a DMS. Information channels. probability relations in a channel, A Priori, A Posteriori Entropies. Equivocation. Mutual information. Capacity of BSC, BEC, Noiseless and deterministic channels.

Source coding: Uniquely Decodable codes, Instantaneous codes and its construction, Average length of a code. Bounds for Average Length, Kraft's Inequality. R-ary compact codes. Code efficiency, Redundancy. Shannon-Fano and Huffman code.

Algebra: Groups, rings and fields, properties of finite fields, Galois field arithmetic and its realization, Vector spaces. Matrices.

Channel Coding: Block codes, Minimum distance of a block code, Singleton bound. Performance of Codes. Hamming codes. Cyclic codes. Golay Codes BCH codes, R-S codes. Convolutional codes. Viterbi Algorithm. LDPC Codes.

Reference Books:

1. S. Lin and D. J. Costello Jr, "Error Control Coding", Pearson Prentice Hall, 2004

Digital Signal Compression

Subject Code : 14EED23
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction: Compression techniques, Modeling & coding, Distortion criteria, Differential Entropy, Rate Distortion Theory, Vector Spaces, Information theory, Models for sources, Coding – uniquely ELDecodable codes, Prefix codes, Kraft McMillan Inequality

Quantization: Quantization problem, Uniform Quantizer, Adaptive Quantization, Non-uniform Quantization, Entropy coded Quantization, Vector Quantization, LBG algorithm, Tree-structured VQ, Structured VQ, Variations of VQ – Gain shape VQ, Mean removed VQ, Classified VQ, Multistage VQ, Adaptive VQ, Trellis coded quantization

Differential Encoding: Basic algorithm, Prediction in DPCM, Adaptive DPCM, Delta Modulation, Speech coding – G.726, Image coding.

Transform Coding: Transforms – KLT, DCT, DST, DWHT; Quantization and coding of transform coefficients, Application to Image compression – JPEG, Application to audio compression.

Sub-band Coding: Filters, Sub-band coding algorithm, Design of filter banks, Perfect reconstruction using two channel filter banks, M-band QMF filter banks, Poly-phase ELDecomposition, Bit allocation, Speech coding – G.722, Audio coding – MPEG audio, Image compression

Wavelet Based Compression: Wavelets, Multiresolution analysis & scaling function, Implementation using filters, Image compression – EZW, SPIHT, JPEG 2000

Analysis/Synthesis Schemes: Speech compression – LPC-10, CELP, MELP, Image Compression – Fractal compression

Video Compression: Motion compensation, Video signal representation, Algorithms for video conferencing & videophones – H.261, H. 263, Asymmetric applications – MPEG 1, MPEG 2, MPEG 4, MPEG 7, Packet video

Lossless Coding: Huffman coding, Adaptive Huffman coding, Golomb codes, Rice codes, Tunstall codes, Applications of Huffman coding, Arithmetic coding, Algorithm implementation, Applications of Arithmetic coding, Dictionary techniques – LZ77, LZ78, Applications of LZ78 – JBIG, JBIG2, Predictive coding – Prediction with partial match, Burrows Wheeler Transform, Applications – CALIC, JPEG-LS, Facsimile coding – T.4, T.6.

Real Time Operating Systems

Subject Code : 14111D24
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

- Introduction to Real-Time Embedded Systems:** Brief history of Real Time Systems. A brief history of Embedded Systems.
- System Resources:** Resource Analysis. Real-Time Service Utility. Scheduling Classes. The Cyclic Executive. Scheduler Concepts. Preemptive Fixed Priority Scheduling Policies, Real-Time OS. Thread Safe Reentrant Functions.
- Processing:** Preemptive Fixed-Priority Policy. Feasibility. Rate Monotonic least upper bound. Necessary and Sufficient feasibility. Deadline – Monotonic Policy, Dynamic priority policies.
- I/O Resources:** Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.
- Memory:** Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems.
- Multi-resource Services:** Blocking, Deadlock and livelock, Critical sections to protect shared resources, priority inversion.
- Soft Real-Time Services:** Missed Deadlines, QoS, Alternatives to rate monotonic policy. Mixed hard and soft real-time services.
- Embedded System Components:** Firmware components, RTOS system software mechanisms. Software application components.
- Debugging Components:** Exceptions assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports. Trace ports. Power-On self test and diagnostics, External test equipment, Application-level debugging.
- Performance Tuning:** Basic concepts of drill-down tuning, hardware – supported profiling and tracing, Building performance monitoring into software. Path length, Efficiency, and Call frequency, Fundamental optimizations.
- High availability and Reliability Design:** Reliability and Availability, Similarities and differences. Reliability. Reliable software. Available software. Design tradeoffs, Hierarchical applications for Fail-safe design.
- Design of RTOS – PIC microcontroller.** (Chap 13 of book MykePredko)

Reference Books:

Synthesis and Optimization of Digital Circuits

Subject Code : 14LE0252
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

- Introduction:** Microelectronics, semiconductor technologies and circuit taxonomy. Microelectronic design styles, computer aided synthesis and optimization.
- Graphs:** Notation, undirected graphs, directed graphs, combinatorial optimization. Algorithms, tractable and intractable problems, algorithms for linear and integer programs, graph optimization problems and algorithms. *Boolean algebra and Applications.*
- Hardware Modeling:** Hardware Modeling Languages, distinctive features, structural hardware language, Behavioural hardware language, HDLs used in synthesis, abstract models, structures logic networks, state diagrams, dataflow and sequencing graphs, compilation and optimization techniques.
- Two Level Combinational Logic Optimization:** Logic optimization, principles, operation on two level logic covers, algorithms for logic minimization, symbolic minimization and encoding property, minimization of Boolean relations.
- Multiple Level Combinational Optimizations:** Models and transformations for combinational networks, algebraic model, Synthesis of testable network, algorithm for delay evaluation and optimization, rule based system for logic optimization.
- Sequential Circuit Optimization:** Sequential circuit optimization using state based models, sequential circuit optimization using network models.
- Schedule Algorithms:** A model for scheduling problems, Scheduling wither source and without resource constraints, Scheduling algorithms for extended sequencing models, Scheduling Pipe lined circuits.
- Cell Library Binding:** Problem formulation and analysis, algorithms for library binding, specific problems and algorithms for library binding (lookup table F.P.G.As and Anti fuse based F.P.G.As), rule based library binding.
- Testing:** Simulation, Types of simulators, basic components of a simulator, fault simulation Techniques, Automatic test pattern generation methods (ATPG), design for Testability (DFT) Techniques.

Digital Electronics Lab -2

Subject Code : 1411D26
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Graphical Programming using LabVIEW

Design of 4 bit Adders (CLA, CSA, CMA, Parallel adders)

Design of Binary Subtractors

Design of Encoder (8X3), ELDecoder(3X8)

Design of Multiplexer (8X1), and Demultiplexer (1X8)

Design of code converters & Comparator

Design of FF (SR, D, T, JK, and Master Slave with delays)

Design of registers using latches and flip-flops

Design of 8 bit Shift registers

Design of Asynchronous & Synchronous Counters

ARM-CORTEX M3

[Programming to be done using Keiluvision 4 and download the program on to a M3 evaluation board such as NXP LPC1114 or ATMEL ATSAM3U].

Write an Assembly language program to calculate $10+9+8+\dots+1$

Write a Assembly language program to link Multiple object files and link them together.

Write a Assembly language program to store data in RAM.

Write a C program to Output the "Hello World" message using UART.

Write a C program to Design a Stopwatch using interrupts.

Write an Exception vector table in C

Write an Assembly Language Program for locking a Mutex.

Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values.

Advanced Computer Architecture

Subject Code : 14ELD41
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction and Review of Fundamentals of Computer Design: Introduction: Classes computers: Defining computer architecture: Trends in Technology: Trends in power in Integrated Circuits; Trends in cost: Dependability. Measuring, reporting and summarizing Performance: Quantitative Principles of computer design; Performance and Price-Performance; Fallacies and pitfalls: Case studies.

Some topics in Pipelining. Instruction –Level Parallelism, Its Exploitation and Limits on ILP: Introduction to pipelining. ILP: Crosscutting issues, fallacies, and pitfalls with respect to pipelining; Basic concepts and challenges of ILP: Case study of Pentium 4, Fallacies and pitfalls. Introduction to limits in ILP; Performance and efficiency in advanced multiple-issue processors.

Memory Hierarchy Design, Storage Systems: Review of basic concepts; Crosscutting issues in the design of memory hierarchies: Case study of AMD Opteron memory hierarchy; Fallacies and pitfalls in the design of memory hierarchies. Introduction to Storage Systems: Advanced topics in disk storage.

Definition and examples of real faults and failures ; I/O performance, reliability measures, and benchmarks: Queuing theory: Crosscutting issues; Designing and evaluating an I/O system – The Internet archive cluster; Case study of NetAA FAS6000 filer: Fallacies and pitfalls.

Hardware and Software for VLIW and EPIC Introduction: Exploiting Instruction-Level Parallelism Statically, Detecting and Enhancing Loop-Level Parallelism, Scheduling and Structuring Code for Parallelism, Hardware Support for Exposing Parallelism: Predicated Instructions, Hardware Support for Compiler Speculation, The Intel IA-64 Architecture and Itanium Processor.

Concluding Remarks.

Large-Scale Multiprocessors and Scientific Applications Introduction, Interprocessor Communication: The Critical Performance Issue, Characteristics of Scientific Applications, Synchronization: Scaling Up, Performance of Scientific Applications on Shared-Memory Multiprocessors, Performance Measurement of Parallel Processors with Scientific Applications, Implementing Cache Coherence. The Custom Cluster Approach: Blue Gene/L, Concluding Remarks.

Computer Arithmetic: Introduction, Basic Techniques of Integer Arithmetic, Floating Point, Floating-Point Multiplication, Floating-Point Addition, Division and Remainder, More on Floating-Point Arithmetic, Speeding Up Integer Addition, Speeding Up Integer Multiplication and Division, Fallacies and Pitfalls.

Reference Books:

1. Hennessey and Patterson. "**Computer Architecture A Quantitative Approach**". 4th Edition. Elsevier. 2007.

Advances in VLSI Design

Subject Code : 14EVE421
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Review of MOS Circuits: MOS and CMOS static plots, switches, comparison between CMOS and BI - CMOS.

MESFETS: MESFET and MODFET operations, quantitative description of MESFETS.

MIS Structures and MOSFETS: MIS systems in equilibrium, under bias, small signal operation of MESFETS and MOSFETS.

Short Channel Effects and Challenges to CMOS: Short channel effects, scaling theory, processing challenges to further CMOS miniaturization

Beyond CMOS: Evolutionary advances beyond CMOS, carbon Nanotubes, conventional vs. tactile computing, computing, molecular and biological computing Mole electronics-molecular Diode and diode- diode logic. Defect tolerant computing,

Super Buffers, Bi-CMOS and Steering Logic: Introduction, RC delay lines, super buffers- An NMOS super buffer, tri state super buffer and pad drivers, CMOS super buffers, Dynamic ratio less inverters, large capacitive loads, pass logic, designing of transistor logic, General functional blocks -NMOS and CMOS functional blocks.

Special Circuit Layouts and Technology Mapping: Introduction, Talley circuits, NAND-NAND, NOR- NOR, and AOI Logic, NMOS, CMOS Multiplexers, Barrel shifter, Wire routing and module layout.

System Design: CMOS design methods, structured design methods, Strategies encompassing hierarchy, regularity, modularity & locality, CMOS Chip design Options, programmable logic, Programmable inter connect, programmable structure, Gate arrays standard cell approach, Full custom design.

Total		8	04	09	150	400	550	28
Grand Total (I to IV Sem.) : 2400 Marks; 94 Credits								

Elective -3:

14 EVE 421	Advances in VLSI Design
------------	-------------------------

Note:

- 1) Project Phase - I: 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carry out literature survey & visit to Industries to finalize the topic of dissertation.
- 2) Project Phase - II: 16 weeks duration during III Semester. Evaluation shall be taken during the Second week of the IV Semester. Total Marks shall be 25.
- 3) Project Evaluation: 24 weeks duration in IV Semester. Project Work Evaluation shall be taken up at the end of the IV Semester. Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be 250 (Phase I Evaluation: 25 Marks, Phase -II Evaluation: 25 Marks, Project Evaluation marks by Internal Examiner (guide): 50, Project Evaluation marks by External Examiner: 50, marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

- The I.A. Marks of Project Phase - I & II shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (Out of two external examiners at least one should be present).

Advanced Mathematics

Subject Code	: 14ELD11	IA Marks	: 50
No. of Lecture Hours / Week	: 04	Exam. Hours	: 03
Total No. of Lecture Hours	: 50	Exam. Marks	: 100

Matrix Theory

QR-EL Decomposition – Eigen values using shifted QR algorithm- Singular Value EL Decomposition - Pseudo inverse- Least square approximations

Calculus of Variations

Concept of Functionals- Euler's equation – functional dependent on first and higher order derivatives – Functionals on several dependent variables – Iso perimetric problems- Variational problems with moving boundaries

Transform Methods

Laplace transform methods for one dimensional wave equation – Displacements in a string – Longitudinal vibration of a elastic bar – Fourier transform methods for one dimensional heat conduction problems in infinite and semi infinite rod.

Elliptic Equation

Laplace equation – Properties of harmonic functions – Fourier transform methods for laplace equations. Solution for Poisson equation by Fourier transforms method

Linear and Non Linear Programming

Simplex Algorithm- Two Phase and Big M techniques – Duality theory- Dual Simplex method. Non Linear Programming –Constrained extremal problems- Lagranges multiplier method- Kuhn- Tucker conditions and solutions

Digital VLSI Design

Subject Code : 14EVE12
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure. The MOS System under External Bias. Structure and Operation of MOS Transistor. MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.

MOS Inverters: Static Characteristics: Introduction, Resistive-Load Inverter. Inverters with n_Type MOSFET Load. CMOS Inverter.

MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition. Calculation of Delay Times. Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics. Calculation of Interconnect Delay. Switching Power Dissipation of CMOS Inverters.

Dynamic Logic Circuits : Introduction, Basic Principles of Pass Transistor Circuits. Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.

Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).

Low-Power CMOS Logic Circuits: Introduction, Overview of Power Consumption, Low-Power Design Through Voltage Scaling. Estimation and Optimization of Switching Activity, Reduction of Switched Capacitance, Adiabatic Logic Circuits.

BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation. Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.

Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits. Output Circuits and L(di/dt) Noise. On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.

Design for Manufacturability : Introduction, Process Variations, Basic Concepts and Definitions. Design of Experiments and Performance Modelling, Parametric Yield Estimation, Parametric Yield Maximization, Worst-Case Analysis, Performance Variability Minimization.

Advanced Embedded Systems

Subject Code : 14EVE13
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Typical Embedded System: Core of the Embedded System, Memory, Sensors and Actuators, Communication Interface, Embedded Firmware, Other System Components.

Characteristics and Quality Attributes of Embedded Systems: Hardware Software Co-Design and Program Modeling; Fundamental Issues in Hardware Software Co-Design, Computational Models in Embedded Design, Introduction to Unified Modeling Language, Hardware Software Trade-offs.

Embedded Hardware Design and Development :EDA Tools, How to Use EDA Tool, Schematic Design – Place wire, Bus , port, junction, creating part numbers, Design Rules check, Bill of materials, Netlist creation , PCB Layout Design – Building blocks, Component placement, PCB track routing.

ARM -32 bit Microcontroller family. Architecture of ARM Cortex M3 –General Purpose Registers, Stack Pointer, Link Register, Program Counter, Special Register,. Nested Vector Interrupt Controller. Interrupt behavior of ARM Cortex M3. Exceptions Programming. Advanced Programming Features. Memory Protection. Debug Architecture.

Embedded Firmware Design and Development: Embedded Firmware Design Approaches. Embedded Firmware Development Languages

Real-Time Operating System (RTOS) based Embedded System Design: Operating System Basics, Types of OS, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling, Threads, Processes and Scheduling: Putting them altogether, Task Communication, Task Synchronization, Device Drivers, How to Choose an RTOS

The Embedded System Development Environment: The Integrated Development Environment (IDE), Types of Files Generated on Cross compilation, Disassembler/ELDompiler, Simulators, Emulators and Debugging, Target Hardware Debugging, Boundary Scan.

Digital Circuits and Logic Design

Subject Code : 14ELLD14
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Threshold Logic: Introductory Concepts, Synthesis of Threshold Networks

Reliable Design and Fault Diagnosis Hazards: Fault Detection in Combinational Circuits, Fault-Location Experiments, Boolean Differences, Fault Detection by Path Sensitizing, Detection of Multiple Faults, Failure-Tolerant Design, Quadded Logic

Capabilities, Minimization, and Transformation of Sequential Machines: The Finite- State Model, Further Definitions, Capabilities and Limitations of Finite – State Machines, State Equivalence and Machine Minimization, Simplification of Incompletely Specified Machines.

Structure of Sequential Machines: Introductory Example, State Assignments Using Partitions, The Lattice of closed Partitions, Reductions of the Output Dependency, Input Independence and Autonomous Clocks, Covers and Generation of closed Partitions by state splitting, Information Flow in Sequential Machines, ELDompositions, Synthesis of Multiple Machines.

State—Identifications and Fault-Detection Experiments: Homing Experiments, Distinguishing Experiments, Machine Identification, Fault-Detection Experiments, Design of Diagnosable Machines, Second Algorithm for the Design of Fault Detection Experiments, Fault-Detection Experiments for Machines which have no Distinguishing Sequences.

Digital System Design Using Verilog

Subject Code : EE11D151
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

Ex. Marks : 50
Exam Hours : 05
Exam Marks : 100

Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.

Combinational Basics: Boolean Functions and Boolean Algebra, Binary Coding, Combinational Components and Circuits, Verification of Combinational Circuits.

Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers.

Sequential Basics: Storage elements, Counters, Sequential Datapaths and Control, Clocked Synchronous Timing Methodology.

Memories: Concepts, Memory Types, Error Detection and Correction.

Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.

Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory.

I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.

Accelerators: Concepts, case study, Verification of accelerators.

Design Methodology: Design flow, Design optimization, Design for test.

REFERENCE BOOKS:

1. Peter J. Ashenden, "Digital Design: An Embedded Ssystems Approach Using VERILOG". Elsevier, 2010.

Digital Electronics Lab -1

Subject Code : 14ELD16
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 25
Exam Hours : 03
Exam Marks : 50

Design Using Cadence ORCAD

1. Design of 3½ Digit Digital Voltmeter
2. Design of Monolithic function Generator.
3. Design of Regulator Power supplies.
4. Design of Batch counter using TTL ICs.
5. Design of DAC and ADC.
6. Design of Electronic P, PI, PID and ON/OFF controllers.
7. Design of Programmable Timers.
8. Design of filters and resonance circuits.

VLSI DIGITAL DESIGN

FPGA DIGITAL DESIGN

VLSI Front End Design programs:

Programming can be done using any compiler. Down load the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro apart from verification by simulation with any of the front end tools

1. Write Verilog code for the design of 8-bit
 - i. Carry Ripple Adder
 - ii. Carry LookAhead adder
 - iii. Carry Skip Adder

- iv. BCD Adder & Subtractor
 - 2. Write Verilog Code for 8-bit
 - i. Array Multiplication (Signed and Unsigned)
 - ii. Booth Multiplication (Radix-4)
 - 3. Write Verilog code for 4/8-bit
 - i. Magnitude Comparator
 - ii. LFSR
 - iii. Parity Generator
 - iv. Universal Shift Register
 - 4. Write Verilog Code for 3-bit Arbitrary Counter to generate 0,1,2,3,6,5,7 and repeats.
 - 5. Design a Mealy and Moore Sequence Detector using Verilog to detect Sequence.
Eg 11101 (with and without overlap) any sequence can be specified
 - 6. Design a FIFO and LIFO buffers in Verilog and Verify its Operation.
 - 7. Design a coin operated public Telephone unit using Mealy FSM model with following operations
 - i. The calling process is initiated by lifting the receiver.
 - ii. Insert 1 Rupee Coin to make a call.
 - iii. If line is busy, placing the receiver on hook should return a coin
 - iv. If line is through, the call is allowed for 60 seconds at the 45th second prompt another 1 Rupee coin to be inserted, to continue the call.
 - v. If user doesn't insert the coin within 60 seconds the call should be terminated.
 - vi. The system is ready to accept new call request when the receiver is placed on the hook.
 - vii. The FSM goes 'out of order' state when there is a Line Fault.
- Note: Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits

Modern DSP

Subject Code : 14EEED21
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 20
Exam Hours : 03
Exam Marks : 100

Goal of the course – Advances in Digital Signal Processing involve variable sampling rates and thus the multirate signal processing and hence their applications in communication systems and signal processing. It is intended to introduce a basic course in multirate signal processing especially meant for students of branches eligible for M Tech courses in EC related disciplines.

Introduction and Discrete Fourier Transforms: Signals, Systems and Processing. Classification of Signals, The Concept of Frequency in Continuous-Time and Discrete-Time Signals, Analog-to-Digital and Digital-to-Analog Conversion, Frequency-Domain Sampling: The Discrete Fourier Transform, Properties of the DFT, Linear Filtering Methods Based on the DFT (Ref.1 Chap. 1 & 7)

Design of Digital Filters: General Considerations, Design of FIR Filters, Design of IIR Filters from Analog Filters. Frequency Transformations. (Ref.1 Chap.10)

Multirate Digital Signal Processing: Introduction, EL Dimation by a factor 'D', Interpolation by a factor 'I', Sampling rate Conversion by a factor 'I/D', implementation of Sampling rate conversion, Multistage implementation of Sampling rate conversion. Sampling rate conversion of Band Pass Signals, Sampling rate conversion by an arbitrary factor, Applications of Multirate Signal Processing, Digital Filter banks. Two Channel Quadrature Mirror Filter banks, M-Channel QMF bank. (Ref.1 Chap.11)

Adaptive Filters: Applications of Adaptive Filters, Adaptive Direct Form FIR Filters- The LMS Algorithm. Adaptive Direct Form Filters-RLS Algorithm. (Ref.1 Chap.13)

Reference Books:

1. Proakis and Manolakis, "Digital Signal Processing", Prentice Hall 1996. (Fourth Edition).
2. Roberto Cristi, "Modern Digital Signal Processing", Cengage Publishers, India, (Erstwhile Thompson Publications). 2003.
3. S.K. Mitra, "Digital Signal Processing: A Computer Based Approach", III Ed, Tata McGraw Hill, India, 2007.

Coding Theory

Subject Code : 14E1D22
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Information and Entropy: Sources of information, DMS and Markov. Properties of Entropy. Entropy of information sources. Extension of a DMS. Information channels. probability relations in a channel, A Priori, A Posteriori Entropies. Equivocation. Mutual information. Capacity of BSC, BEC, Noiseless and deterministic channels.

Source coding: Uniquely Decodable codes, Instantaneous codes and its construction, Average length of a code. Bounds for Average Length, Kraft's Inequality. R-ary compact codes. Code efficiency, Redundancy. Shannon-Fano and Huffman code.

Algebra: Groups, rings and fields, properties of finite fields, Galois field arithmetic and its realization, Vector spaces. Matrices.

Channel Coding: Block codes, Minimum distance of a block code, Singleton bound. Performance of Codes. Hamming codes. Cyclic codes. Golay Codes BCH codes, R-S codes. Convolutional codes. Viterbi Algorithm. LDPC Codes.

Reference Books:

1. S. Lin and D. J. Costello Jr, "Error Control Coding", Pearson Prentice Hall, 2004
2. T. K. Moon, "Error Correction Coding: Mathematical Methods And Algorithms". Student Edition. John Wiley & Sons, 2005

Digital Signal Compression

Subject Code : 14EED23
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction: Compression techniques, Modeling & coding, Distortion criteria, Differential Entropy, Rate Distortion Theory, Vector Spaces, Information theory, Models for sources, Coding – uniquely ELDecodable codes, Prefix codes, Kraft McMillan Inequality

Quantization: Quantization problem, Uniform Quantizer, Adaptive Quantization, Non-uniform Quantization, Entropy coded Quantization, Vector Quantization, LBG algorithm, Tree-structured VQ, Structured VQ, Variations of VQ – Gain shape VQ, Mean removed VQ, Classified VQ, Multistage VQ, Adaptive VQ, Trellis coded quantization

Differential Encoding: Basic algorithm, Prediction in DPCM, Adaptive DPCM, Delta Modulation, Speech coding – G.726, Image coding.

Transform Coding: Transforms – KLT, DCT, DST, DWHT; Quantization and coding of transform coefficients, Application to Image compression – JPEG, Application to audio compression.

Sub-band Coding: Filters, Sub-band coding algorithm, Design of filter banks, Perfect reconstruction using two channel filter banks, M-band QMF filter banks, Poly-phase ELDecomposition, Bit allocation, Speech coding – G.722, Audio coding – MPEG audio, Image compression

Wavelet Based Compression: Wavelets, Multiresolution analysis & scaling function, Implementation using filters, Image compression – EZW, SPIHT, JPEG 2000

Analysis/Synthesis Schemes: Speech compression – LPC-10, CELP, MELP, Image Compression – Fractal compression

Video Compression: Motion compensation, Video signal representation, Algorithms for video conferencing & videophones – H.261, H. 263, Asymmetric applications – MPEG 1, MPEG 2, MPEG 4, MPEG 7, Packet video

Lossless Coding: Huffman coding, Adaptive Huffman coding, Golomb codes, Rice codes, Tunstall codes, Applications of Huffman coding, Arithmetic coding, Algorithm implementation, Applications of Arithmetic coding, Dictionary techniques – LZ77, LZ78, Applications of LZ78 – JBIG, JBIG2, Predictive coding – Prediction with partial match, Burrows Wheeler Transform, Applications – CALIC, JPEG-LS, Facsimile coding – T.4, T.6.

Real Time Operating Systems

Subject Code : 1411D24
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

- Introduction to Real-Time Embedded Systems:** Brief history of Real Time Systems. A brief history of Embedded Systems.
- System Resources:** Resource Analysis. Real-Time Service Utility. Scheduling Classes. The Cyclic Executive. Scheduler Concepts. Preemptive Fixed Priority Scheduling Policies, Real-Time OS. Thread Safe Reentrant Functions.
- Processing:** Preemptive Fixed-Priority Policy. Feasibility. Rate Monotonic least upper bound. Necessary and Sufficient feasibility. Deadline – Monotonic Policy, Dynamic priority policies.
- I/O Resources:** Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.
- Memory:** Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems.
- Multi-resource Services:** Blocking, Deadlock and livelock, Critical sections to protect shared resources, priority inversion.
- Soft Real-Time Services:** Missed Deadlines, QoS, Alternatives to rate monotonic policy. Mixed hard and soft real-time services.
- Embedded System Components:** Firmware components, RTOS system software mechanisms. Software application components.
- Debugging Components:** Exceptions assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace ports. Power-On self test and diagnostics, External test equipment, Application-level debugging.
- Performance Tuning:** Basic concepts of drill-down tuning, hardware – supported profiling and tracing, Building performance monitoring into software. Path length, Efficiency, and Call frequency, Fundamental optimizations.
- High availability and Reliability Design:** Reliability and Availability, Similarities and differences. Reliability. Reliable software, Available software. Design tradeoffs, Hierarchical applications for Fail-safe design.
- Design of RTOS – PIC microcontroller.** (Chap 13 of book MykePredko)

Reference Books:

Synthesis and Optimization of Digital Circuits

Subject Code : 14LE0252
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

- Introduction:** Microelectronics, semiconductor technologies and circuit taxonomy. Microelectronic design styles, computer aided synthesis and optimization.
- Graphs:** Notation, undirected graphs, directed graphs, combinatorial optimization. Algorithms, tractable and intractable problems, algorithms for linear and integer programs, graph optimization problems and algorithms. *Boolean algebra and Applications.*
- Hardware Modeling:** Hardware Modeling Languages, distinctive features, structural hardware language, Behavioural hardware language, HDLs used in synthesis, abstract models, structures logic networks, state diagrams, dataflow and sequencing graphs, compilation and optimization techniques.
- Two Level Combinational Logic Optimization:** Logic optimization, principles, operation on two level logic covers, algorithms for logic minimization, symbolic minimization and encoding property, minimization of Boolean relations.
- Multiple Level Combinational Optimizations:** Models and transformations for combinational networks, algebraic model, Synthesis of testable network, algorithm for delay evaluation and optimization, rule based system for logic optimization.
- Sequential Circuit Optimization:** Sequential circuit optimization using state based models, sequential circuit optimization using network models.
- Schedule Algorithms:** A model for scheduling problems, Scheduling wither source and without resource constraints, Scheduling algorithms for extended sequencing models, Scheduling Pipe lined circuits.
- Cell Library Binding:** Problem formulation and analysis, algorithms for library binding, specific problems and algorithms for library binding (lookup table F.P.G.As and Anti fuse based F.P.G.As), rule based library binding.
- Testing:** Simulation, Types of simulators, basic components of a simulator, fault simulation Techniques, Automatic test pattern generation methods (ATPG), design for Testability (DFT) Techniques.

Digital Electronics Lab -2

Subject Code : 1411D26
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Graphical Programming using LabVIEW

Design of 4 bit Adders (CLA, CSA, CMA, Parallel adders)

Design of Binary Subtractors

Design of Encoder (8X3), ELDecoder(3X8)

Design of Multiplexer (8X1), and Demultiplexer (1X8)

Design of code converters & Comparator

Design of FF (SR, D, T, JK, and Master Slave with delays)

Design of registers using latches and flip-flops

Design of 8 bit Shift registers

Design of Asynchronous & Synchronous Counters

ARM-CORTEX M3

[Programming to be done using Keiluvision 4 and download the program on to a M3 evaluation board such as NXP LPC1114 or ATMEL ATSAM3U].

Write an Assembly language program to calculate $10+9+8+\dots+1$

Write a Assembly language program to link Multiple object files and link them together.

Write a Assembly language program to store data in RAM.

Write a C program to Output the "Hello World" message using UART.

Write a C program to Design a Stopwatch using interrupts.

Write an Exception vector table in C

Write an Assembly Language Program for locking a Mutex.

Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values.

Advanced Computer Architecture

Subject Code : 14ELD41
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction and Review of Fundamentals of Computer Design: Introduction: Classes computers: Defining computer architecture: Trends in Technology: Trends in power in Integrated Circuits; Trends in cost: Dependability. Measuring, reporting and summarizing Performance: Quantitative Principles of computer design; Performance and Price-Performance; Fallacies and pitfalls: Case studies.

Some topics in Pipelining. Instruction –Level Parallelism, Its Exploitation and Limits on ILP: Introduction to pipelining. ILP: Crosscutting issues, fallacies, and pitfalls with respect to pipelining; Basic concepts and challenges of ILP: Case study of Pentium 4, Fallacies and pitfalls. Introduction to limits in ILP; Performance and efficiency in advanced multiple-issue processors.

Memory Hierarchy Design, Storage Systems: Review of basic concepts; Crosscutting issues in the design of memory hierarchies: Case study of AMD Opteron memory hierarchy; Fallacies and pitfalls in the design of memory hierarchies. Introduction to Storage Systems: Advanced topics in disk storage.

Definition and examples of real faults and failures ; I/O performance, reliability measures, and benchmarks: Queuing theory: Crosscutting issues; Designing and evaluating an I/O system – The Internet archive cluster; Case study of NetAA FAS6000 filer: Fallacies and pitfalls.

Hardware and Software for VLIW and EPIC Introduction: Exploiting Instruction-Level Parallelism Statically, Detecting and Enhancing Loop-Level Parallelism, Scheduling and Structuring Code for Parallelism, Hardware Support for Exposing Parallelism: Predicated Instructions, Hardware Support for Compiler Speculation, The Intel IA-64 Architecture and Itanium Processor.

Concluding Remarks.

Large-Scale Multiprocessors and Scientific Applications Introduction, Interprocessor Communication: The Critical Performance Issue, Characteristics of Scientific Applications, Synchronization: Scaling Up, Performance of Scientific Applications on Shared-Memory Multiprocessors, Performance Measurement of Parallel Processors with Scientific Applications, Implementing Cache Coherence. The Custom Cluster Approach: Blue Gene/L, Concluding Remarks.

Computer Arithmetic: Introduction, Basic Techniques of Integer Arithmetic, Floating Point, Floating-Point Multiplication, Floating-Point Addition, Division and Remainder, More on Floating-Point Arithmetic, Speeding Up Integer Addition, Speeding Up Integer Multiplication and Division, Fallacies and Pitfalls.

Reference Books:

1. Hennessey and Patterson. "**Computer Architecture A Quantitative Approach**". 4th Edition. Elsevier. 2007.
2. Kai Hwang. "**Advanced Computer Architecture - Parallelism, Scalability, Programmability**". 2nd Edition

Advances in VLSI Design

Subject Code : 14EVE421
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Review of MOS Circuits: MOS and CMOS static plots, switches, comparison between CMOS and BI - CMOS.

MESFETS: MESFET and MODFET operations, quantitative description of MESFETS.

MIS Structures and MOSFETS: MIS systems in equilibrium, under bias, small signal operation of MESFETS and MOSFETS.

Short Channel Effects and Challenges to CMOS: Short channel effects, scaling theory, processing challenges to further CMOS miniaturization

Beyond CMOS: Evolutionary advances beyond CMOS, carbon Nanotubes, conventional vs. tactile computing, computing, molecular and biological computing Mole electronics-molecular Diode and diode- diode logic. Defect tolerant computing,

Super Buffers, Bi-CMOS and Steering Logic: Introduction, RC delay lines, super buffers- An NMOS super buffer, tri state super buffer and pad drivers, CMOS super buffers, Dynamic ratio less inverters, large capacitive loads, pass logic, designing of transistor logic, General functional blocks -NMOS and CMOS functional blocks.

Special Circuit Layouts and Technology Mapping: Introduction, Talley circuits, NAND-NAND, NOR- NOR, and AOI Logic, NMOS, CMOS Multiplexers, Barrel shifter, Wire routing and module layout.

System Design: CMOS design methods, structured design methods, Strategies encompassing hierarchy, regularity, modularity & locality, CMOS Chip design Options, programmable logic, Programmable inter connect, programmable structure, Gate arrays standard cell approach, Full custom design.

16ECS252	Multimedia Over Communication Links

M.Tech in DIGITAL ELECTRONICS / ELECTRONICS

(Common to M.Tech in Digital Electronics and M.Tech in Electronics)

III SEMESTER: Internship

Sl. No	Subject Code	Title	Teaching Hours /Week		Examination			Credit	
			Theory	Practical/Field Work/Assignment	Duration	I.A. Marks	Theory/Practical Marks		Total Marks
1	16ELD31	Seminar / Presentation on Internship (After 8 weeks from the date of commencement)	-	-	-	25	-	25	20
2	16ELD32	Report on Internship	-	-	-	25	-	50	
3	16ELD33	Evaluation and Viva-Voce of Internship	-	-	-	-	50	50	
4	16ELD34	Evaluation of Project phase -1	-	-	-	50	-	25	1
TOTAL			-	-	-	100	50	150	21

M.Tech in DIGITAL ELECTRONICS / ELECTRONICS

(Common to M.Tech in Digital Electronics and M.Tech in Electronics)

IV SEMESTER

Sl. No	Subject Code	Title	Teaching Hours /Week		Examination				Credit
			Theory	Practical/Field Work/ Assignment	Duration	I.A. Marks	Theory/ Practical Marks	Total Marks	
1	16ELD41	Synthesis and optimization of Digital Circuits	4	-	3	20	80	100	4
2	16EXX42X	Elective-3	3	-	3	20	80	100	3
3	16ELD43	Evaluation of Project phase -2	-	-	-	50	-	50	3
4	16ELD44	Evaluation of Project and Viva-Voce	-	-	-	-	100+100	200	10
TOTAL			-	-	6	90	360	450	20

Elective-3	
16ECS422	Advances in Image Processing

Note:

1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted .

- a. Internal Examiner shall carry out the evaluation for 100 marks.
- b. External Examiner shall carry out the evaluation for 100 marks.
- c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
- d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.Tech – DE & E - FIRST SEMESTER SYLLABUS

ADVANCED ENGINEERING MATHEMATICS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – I			
Subject Code	16ELD11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Acquaint with principles of linear algebra, calculus of variations, probability theory and random process. • Apply the knowledge of linear algebra, calculus of variations, probability theory and random process in the applications of electronics and communication engineering sciences. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>Linear Algebra-I Introduction to vector spaces and sub-spaces, definitions, illustrative examples and simple problems. Linearly independent and dependent vectors-definition and problems. Basis vectors, dimension of a vector space. Linear transformations- definition, properties and problems. Rank-Nullity theorem(without proof). Matrix form of linear transformations- Illustrative examples.(Text 1 & Ref. 1)</p>			L1,L2
Module -2			
<p>Linear Algebra-II Computation of Eigen values and Eigen vectors of real symmetric matrices-Given's method. Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process. QR decomposition, singular value decomposition, least square approximations.(Text 1 & Ref. 1)</p>			L1,L2
Module -3			
<p>Calculus of Variations Concept of functional-Eulers equation. functional dependent on first and higher order derivatives, functional on several dependent variables. Isoperimetric problems-variation problems with moving boundaries.(Text 2 & Ref. 2)</p>			L1,L2
Module -4			

<p>Probability Theory Review of basic probability theory. Definitions of random variables and probability distributions, probability mass and density functions, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Binomial, Poisson, Exponential, Gaussian and Rayleigh distributions-examples.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Module -5</p>	
<p>Joint probability distributions Definition and properties of CDF, PDF, PMF, conditional distributions. Expectation, covariance and correlation. Independent random variables. Statement of central limit theorem-Illustrative examples. Random process- Classification, stationary and ergodic random process. Auto correlation function-properties, Gaussian random process.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images. • Apply the techniques of QR and singular value decomposition for data compression, least square approximation in solving inconsistent linear systems. • Utilize the concepts of functionals and their variations in the applications of communication systems, decision theory, synthesis and optimization of digital circuits. • Learn the idea of random variables (discrete/continuous) and probability distributions in analyzing the probability models arising in control systems and system communications. • Apply the idea of joint probability distributions and the role of parameter-dependent random variables in random process. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

DIGITAL VLSI DESIGN [As per Choice Based Credit System (CBCS) scheme]			
Subject Code	16EVE12	IA Marks	20
Number	04	Exam Marks	80
Total Number of	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Explain VLSI Design Methodologies • Learn Static and Dynamic operation principles, analysis and design of inverter circuit. • Infer state of the art Semiconductors Memory circuits. • Outline the comprehensive coverage of Methodologies and Design practice that are used to reduce the Power Dissipation of large scale digital circuits. • Illustrate VLSI and ASIC design. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects. MOS Inverters-Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load.			L1, L2
Module -2			
MOS Inverters-Static Characteristics: CMOS Inverter. MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.			L2, L3
Module -3			

<p>Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).</p>	<p>L1, L2, L3</p>
<p>Module -4</p>	
<p>Dynamic Logic Circuits: Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.</p> <p>BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.</p>	<p>L1,L2, L3</p>
<p>Module -5</p>	
<p>Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.</p> <p>Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modeling.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyse issues of On-chip interconnect Modelling and Interconnect delay calculation. 2. Analyse the Switching Characteristics in Digital Integrated Circuits. 3. Use the Dynamic Logic circuits in state-of-the-art VLSI chips. 4. Study critical issues such as ESD protection, Clock distribution, Clock buffering, and Latch phenomenon 5. Use Bipolar and Bi-CMOS circuits in very high speed design. 	
<p>Question Paper Pattern</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCED EMBEDDED SYSTEM

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	16EVE13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.

Describe the hardware software co-design and firmware design approaches

Explain the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions.

Program ARM CORTEX M3 using the various instructions, for different applications.

Modules	Revised Bloom's Taxonomy (RBT) Level
Module -1	
Embedded System: Embedded vs General computing system, classification, application and purpose of ES. Core of an Embedded System, Memory, Sensors, Actuators, LED, Opto coupler, Communication Interface, Reset circuits, RTC, WDT, Characteristics and Quality Attributes of Embedded Systems (Text 1: Selected Topics from Ch -1, 2, 3).	L1, L2, L3
Module -2	
Hardware Software Co-Design, embedded firmware design approaches, computational models, embedded firmware development languages, Integration and testing of Embedded Hardware and firmware, Components in embedded system development environment (IDE), Files generated during compilation, simulators, emulators and debugging (Text 1: Selected Topics From Ch-7, 9, 12, 13).	L1, L2, L3
Module -3	
ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)	L1, L2, L3

Module -4	
Instruction Sets: Assembly basics, Instruction list and description, useful instructions, Memory Systems, Memory maps, Cortex M3 implementation overview, pipeline and bus interface (Text 2: Ch-4, 5, 6)	L1, L2, L3
Module -5	
Exceptions, Nested Vector interrupt controller design, SysTick Timer, Cortex-M3 Programming using assembly and C language, CMSIS (Text 2: Ch-7, 8, 10)	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. Explain the hardware software co-design and firmware design approaches. Acquire the knowledge of the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. ● Apply the knowledge gained for Programming ARM CORTEX M3 for different applications. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. K. V. Shibu, "Introduction to embedded systems", TMH education Pvt. Ltd. 2009. 2. Joseph Yiu, –The Definitive Guide to the ARM Cortex-M3, 2ndedn, Newnes, (Elsevier), 2010.

DIGITAL CIRCUITS AND LOGIC DESIGN			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – I			
Subject Code	16ELD14	IA Marks	20
Number of Lecture	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand the concepts of sequential machines ● Design Sequential Machines/Circuits ● Analyze the faults in the design of circuits ● Apply fault detection experiments to sequential circuits 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
Threshold Logic: Introductory Concepts, Synthesis of Threshold Networks, Capabilities, Minimization, and Transformation of Sequential Machines: The Finite- State Model, Further Definitions, Capabilities.			L1, L2,L3
Module -2			
Fault Detection by Path Sensitizing, Detection of Multiple Faults, Failure-Tolerant Design, Quadded Logic, Reliable Design and Fault Diagnosis Hazards: Fault Detection in Combinational Circuits.			L1, L2, L3,L4
Module -3			
Fault-Location Experiments, Boolean Differences, Limitations of Finite – State Machines, State Equivalence and Machine Minimization, Simplification of Incompletely Specified Machines.			L1, L2, L3,L4
Module -4			
Structure of Sequential Machines: Introductory Example, State Assignments Using Partitions, The Lattice of closed Partitions, Reductions of the Output Dependency, Input Independence and Autonomous Clocks, Covers and Generation of closed Partitions by state splitting, Information Flow in Sequential Machines, ELD ecompositions, Synthesis of Multiple Machines.			L1, L2, L3,L4
Module -5			

<p>State Identifications and Fault-Detection Experiments: Homing Experiments, Distinguishing Experiments, Machine Identification, Fault Detection Experiments, Design of Diagnosable Machines, Second Algorithm for the Design of Fault Detection Experiments, Fault-Detection.</p>	<p>L1, L2, L3,L4</p>
<p>Course outcomes: At the end of the course, the students will be able to:</p> <ul style="list-style-type: none"> ● Understand the concepts of sequential machines ● Design Sequential Machines/Circuits ● Analyze the faults in the design of circuits ● Apply fault detection experiments to sequential circuits 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Zvi Kohavi, –Switching and Finite Automata Theoryll , 2nd Edition, TMH.</p>

DIGITAL SYSTEM DESIGN USING VERILOG [As per Choice Based Credit System (CBCS) scheme]			
Subject Code	16EVE151	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40 (08 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand the concepts of Verilog Language ● Design the digital systems as an activity in a larger systems design context. ● Study the design and operation of semiconductor memories frequently used in application specific digital system. ● Inspect how effectively IC's are embedded in package and assembled in PCB's for different application ● Design and diagnosis of processors and I/O controllers they can be used in embedded systems 			
Modules			Revised Bloom's Taxonomy (RBT)
Module -1			
Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.			L1, L2
Module -2			
Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers. Sequential Basics: Storage elements, Counters, Sequential Data paths and Control, Clocked Synchronous Timing Methodology.			L1, L2
Module -3			
Memories: Concepts, Memory Types, Error Detection and Correction. Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.			L1, L2
Module -4			
Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory. I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.			L2, L3
Module -5			

<p>Accelerators: Concepts, case study, Verification of accelerators. Design Methodology: Design flow, Design optimization, Design for test.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Design embedded systems, using small microcontrollers, larger CPUs/DSPs, or hard or soft processor cores. • Design construct the combinational circuits using discrete gates and programmable logic devices. • Describe Verilog model for sequential circuits and test pattern generation • Explore the different types of semiconductor memories and their usage for specific chip design • Synthesis different types of processor and I/O controllers that are used in embedded system design 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

DIGITAL ELECTRONICS LAB -1

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Laboratory Code	16ELDL16	IA Marks	20
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Marks	80
		Exam Hours	03

CREDITS – 02

Course objectives: This laboratory course enables students to get practical experience on the

- Design tool such as Cadence OrCAD/ OrCAD Lite /EDA tool
- Design of analog and digital circuits using the simulation tool
- FPGA Design and testing for digital circuits
- Verilog programming and design of digital circuits
- Design, verification and performance testing

Laboratory Experiments**Revised Bloom's Taxonomy (RBT) Level****1. Using Cadence OrCAD or OrCAD Lite or any EDA Tool, design and verify the following:****L2,L3,L4**

- a) 3½ Digit Digital Voltmeter
- b) Monolithic function Generator
- c) Regulated Power supplies
- d) Batch counter using TTL ICs.
- e) DAC and ADC
- f) P, PI, PID and ON/OFF Controllers
- g) Programmable Timers
- h) Filters and Resonance Circuits

<p>2. Develop Verilog Program for design and testing the following digital circuits (for 4/8 bits) using FPGA/CPLD. Use logic analyzer/Chipscope for the verification of results.</p> <p>(Note: Programming can be done using any compiler. Down load the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro. Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits.)</p> <ol style="list-style-type: none"> Carry skip and carry look ahead adder BCD adder and subtractor Array Multiplication (signed and unsigned) Booth multiplication (radix-4) Magnitude comparator LFSR Parity generator Universal Shift Register Sequence generation (11101 say) using Mealy/Moore FSM 	<p>L2, L3, L4</p>
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> Design an analog and digital systems using Cadence OrCAD, OrCAD Lite or any EDA tool. Develop Verilog Programs for Digital Circuit design simulation. Design and implement digital systems on FPGA/CPLD Testing and validation of digital systems using Logic analyzer/Chipscope 	
<p>Conduct of Practical Examination:</p> <ol style="list-style-type: none"> All laboratory experiments are to be included for practical examination. For examination, two questions using different tool to be set. Students are allowed to pick one experiment from the lot. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero. 	

M.Tech – DE & E - SECOND SEMESTER SYLLABUS

Advanced DSP			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16ECS21	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand Multirate digital signal processing principles and its applications. ● Estimate the various spectral components present in the received signal using different spectral estimation methods such as Parametric and Nonparametric. ● Design and implement an optimum adaptive filter using LMS and RLS algorithms. ● Understand the concepts and mathematical representations of Wavelet transforms. 			
Modules			RBT Level
Module 1			
<p>Multirate Digital Signal Processing: Introduction, decimation by a factor 'D', Interpolation by a factor 'I', sampling rate conversion by a factor 'I/D', Implementation of sampling rate conversion, Multistage implementation of sampling rate conversion, Applications of multirate signal processing, Digital filter banks, two channel quadrature mirror filter banks, M-channel QMF bank. (Text 1)</p>			L1,L2,L3
Module 2			
<p>Linear prediction and Optimum Linear Filters: Random signals, Correlation Functions and Power Spectra, Innovations Representation of a Stationary Random Process. Forward and Backward Linear Prediction. Solution of the Normal Equations The Levinson-Durbin Algorithm. Properties of the Linear Prediction-Error Filters. (Text 1)</p>			L1,L2,L3
Module 3			
<p>Adaptive filters: Applications of adaptive filters- Adaptive channel equalization,, Adaptive noise cancellation, Linear Predictive coding of Speech Signals, Adaptive direct form FIR filters-The LMS algorithm, Properties of LMS algorithm. Adaptive direct form filters- RLS algorithm. (Text 1)</p>			L1,L2,L3
Module 4			
<p>Power Spectrum Estimation: Non parametric Methods for Power Spectrum Estimation - Bartlett Method, Welch Method, Blackman and Tukey Methods. Parametric Methods for Power Spectrum Estimation: Relationship between the auto correlation and the model</p>			

parameters, Yule and Walker methods for the AR Model Parameters, Burg Method for the AR Model parameters, Unconstrained least-squares method for the AR Model parameters, Sequential estimation methods for the AR Model parameters, ARMA Model for Power Spectrum Estimation. (Text 1)	L1,L2,L3
Module 5	
<p>WAVELET TRANSFORMS: The Age of Wavelets, The origin of Wavelets, Wavelets and other reality transforms, History of wavelets, Wavelets of the future.</p> <p>Continuous Wavelet and Short Time Fourier Transform: Wavelet Transform, Mathematical preliminaries, Properties of wavelets.</p> <p>Discrete Wavelet Transform: Haar scaling functions, Haar wavelet function, Daubechies Wavelets. (Chapters 1, 3 & 4 of Text 2)</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Design adaptive filters for a given application ● Design multirate DSP Systems ● Implement adaptive signal processing algorithm ● Design active networks ● Understand important advanced signal processing techniques, including multi-rate processing and time-frequency analysis techniques 	
<p>Question paper pattern: The question paper will have ten questions.</p> <ul style="list-style-type: none"> ● Each full question consists of 16marks. ● There will be 2 full questions (with a maximum of four sub questions) from each module. ● Each full question will have sub questions covering all the topics under a module. ● The Students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. –Digital Signal Processing, Principles, Algorithms and Applications , John G.Proakis, Dimitris G.Manolakis, Fourth edition, Pearson-2007. 2. Insight into Wavelets- from Theory to Practicell , K.P Soman, Ramachandran, Resmi- PHI Third Edition-2010. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. "Modern Digital signal processing", Robert. O. Cristi, Cengage Publishers, India, 2003. 2. "Digital signal processing: A Practitioner's approach", E.C. Ifeachor, and B. W. Jarvis, , Second Edition, Pearson Education, India, 2002, Reprint. 3. –Wavelet Transforms, Introduction to Theory and applications , Raghuveer. M. Rao, Ajit S.Bopardikar, Pearson Education, Asia, 2000. 	

Error Control Coding			
[As per Choice Based Credit System (CBCS) Scheme]			
SEMESTER – II			
Subject Code	16ECS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> Explain the Entropy, information rate and capacity for the Discrete memoryless channel. Apply modern algebra and probability theory for the coding. Compare Block codes such as Linear Block Codes, Cyclic codes etc and Convolutional codes. Detect and correct errors for different data communication and storage systems. Implement different Block code encoders and decoders. Analyse and implement convolutional encoders and decoders. Analyse and apply soft and hard Viterbi algorithm for decoding of convolutional codes. 			
Modules			RBT Level
Module 1			
<p>Information theory: Introduction, Entropy, Source coding theorem, discrete memoryless channel, Mutual Information, Channel Capacity Channel coding theorem.(Chap. 5 of Text 1)</p> <p>Introduction to algebra: Groups, Fields, binary field arithmetic, Construction of Galois Fields $GF(2^m)$ and its properties, (Only statements of theorems without proof) Computation using Galois field $GF(2^m)$ arithmetic, Vector spaces and Matrices. (Chap. 2 of Text 2)</p>			L1,L2,L3
Module 2			
<p>Linear block codes: Generator and parity check matrices, Encoding circuits, Syndrome and error detection, Minimum distance considerations, Error detecting and error correcting capabilities, Standard array and syndrome decoding, Single Parity Check Codes(SPC),Repetition codes, Self dual codes, Hamming codes, Reed-Muller codes. Product codes and Interleaved codes. (Chap. 3 of Text 2)</p>			L1,L2,L3
Module 3			
<p>Cyclic codes: Introduction, Generator and parity check polynomials, Encoding of cyclic codes, Syndrome computing and error detection, Decoding of cyclic codes, Error trapping Decoding, Cyclic hamming codes, Shortened cyclic codes.(Chap. 4 of Text2)</p>			L1,L2,L3
Module 4			
<p>BCH codes: Binary primitive BCH codes, Decoding procedures, Implementation of Galois field arithmetic, Implementation of error correction. (Chap. 6 of Text 2)</p> <p>Reed -Solomon codes. (Chap. 7 of Text 2)</p>			

<p>Majority Logic decodable codes: One -step majority logic decoding, One-step majority logic decodable codes, Two-step majority logic, decoding, Multiple-step majority logic. (Chap. 8 of Text 2)</p>	L1,L2,L3
<p>Module 5</p>	
<p>Convolution codes: Convolutional Encoding, Convolutional Encoder Representation, Formulation of the Convolutional Decoding Problem, Properties of Convolutional Codes: Distance property of convolutional codes, Systematic and Nonsystematic Convolutional Codes, Performance Bounds for Convolutional Codes, Coding Gain. Other Convolutional Decoding Algorithms: Sequential Decoding, Feedback Decoding.(Chap. 7 of Text 3)</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Analyse a discrete memoryless channel, given the source and transition probabilities. ● Apply the concept of modern linear algebra for the error control coding technique. ● Implement efficient LBC, Cyclic codes etc encoder and decoders. ● Apply decoding algorithms for efficient decoding of Block codes and Convolutional codes. 	
<p>Question paper pattern: The question paper will have 10 full questions carrying equal marks. Each full question consists of 16 marks with a maximum of four sub questions.</p> <ul style="list-style-type: none"> ● There will be 2 full questions from each module covering all the topics of the module ● The students will have to answer 5 full questions, selecting one full question from each module.

Advances in VLSI Design			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE23	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable the students to:</p> <ul style="list-style-type: none"> • Learn circuit-oriented approach towards digital design • Illustrate the impact of interconnect wiring on the functionality and performance of a digital gate. Infer different approaches to digital timing and clocking circuits Understand the impact of clock skew on the behaviour of digital synchronous circuits • Explain the role of peripheral circuitry such as the decoders, sense amplifiers, drivers and control circuitry in the design of reliable and fast memories 			
Modules			RBT Level
Module 1			
<p>Implementation Strategies For Digital ICS: Introduction, From Custom to Semicustom and Structured Array Design Approaches, Custom Circuit Design, Cell-Based Design Methodology, Standard Cell, Compiled Cells, Macrocells, Megacells and Intellectual Property, Semi-Custom Design Flow, Array-Based Implementation Approaches, Pre-diffused (or Mask-Programmable) Arrays, Pre-wired Arrays, Perspective-The Implementation Platform of the Future.</p>			L1,L2,L3
Module 2			
<p>Coping With Interconnect: Introduction, Capacitive Parasitics, Capacitance and Reliability-Cross Talk, Capacitance and Performance in CMOS, Resistive Parasitics, Resistance and Reliability-Ohmic Voltage Drop, Electromigration, Resistance and Performance-RC Delay, Inductive Parasitics, Inductance and Reliability-Voltage Drop, Inductance and Performance-Transmission Line Effects, Advanced Interconnect Techniques, Reduced-Swing Circuits, Current-Mode Transmission Techniques, Perspective: Networks-on-a-Chip.</p>			L1,L2,L3
Module 3			
<p>Timing Issues In Digital Circuits: Introduction, Timing Classification of Digital Systems, Synchronous Interconnect, Mesochronous interconnect, Plesiochronous Interconnect, Asynchronous Interconnect, Synchronous Design — An In-depth Perspective, Synchronous Timing Basics, Sources of Skew and Jitter, Clock-Distribution Techniques, Latch-Based Clocking, Self-Timed Circuit Design, Self-Timed Logic - An Asynchronous Technique, Completion-Signal Generation, Self-Timed Signaling, Practical Examples of Self-Timed Logic, Synchronizers and Arbiters,</p>			L1,L2,L3

Synchronizers-Concept and Implementation, Arbiters, Clock Synthesis and Synchronization Using a Phase-Locked Loop, Basic Concept, Building Blocks of a PLL.	
Module 4	
Designing Memory and Array Structures: Introduction, Memory Classification, Memory Architectures and Building Blocks, The Memory Core, Read-Only Memories, Nonvolatile Read-Write Memories, Read-Write Memories (RAM), Contents-Addressable or Associative Memory (CAM), Memory Peripheral Circuitry, The Address Decoders, Sense Amplifiers, Voltage References, Drivers/Buffers, Timing and Control.	L1,L2,L3
Module 5	
Designing Memory and Array Structures: Memory Reliability and Yield, Signal-to-Noise Ratio, Memory yield, Power Dissipation in Memories, Sources of Power Dissipation in Memories, Partitioning of the memory, Addressing the Active Power Dissipation, Data-retention dissipation, Case Studies in Memory Design: The Programmable Logic Array (PLA), A 4 Mbit SRAM, A 1 Gbit NAND Flash Memory, Perspective: Semiconductor Memory Trends and Evolutions.	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Apply design automation for complex circuits using the different implementation methodology like custom versus semi-custom, hardwired versus fixed, regular array versus ad-hoc. • Use the approaches to minimize the impact of interconnect parasitics on performance, power dissipation and circuit reliability • Impose the ordering of the switching events to meet the desired timing constraints using synchronous, clocked approach. • Infer the reliability of the memory. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book:</p> <p>Jan M Rabey, Anantha Chandrakasan, Borivoje Nikolic, –Digital Integrated Circuits-A Design Perspectivell , PHI, 2nd Edition.</p>

Veendrick, – MOS IC’s: From Basics to ASICs, Wiley-VCH, 1992. 3. Anantha P. Chandrakasan , Robert W. Brodersen, –Low Power Digital CMOS Designll , Kluwer Academic Publisher, 1995. 	

Real Time Operating System			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE24	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Introduce the fundamental concepts of Real Time Operating Systems and the real time embedded system • Apply concepts relating to operating systems such as Scheduling techniques, Thread Safe Reentrant Functions, Dynamic priority policies. • Describe concepts related to Multi resource services like blocking, Deadlock, live lock & soft real-time services. • Discuss Memory management concepts, Embedded system components, Debugging components and file system components. • Study programs for multithreaded applications using suitable data structures. 			
Modules			RBT Level
Module 1			
Real-Time Systems and Resources: Brief history of Real Time Systems, A brief history of Embedded Systems. System Resources, Resource Analysis, Real-Time Service Utility, Scheduler concepts, Real-Time OS, State transition diagram and tables, Thread Safe Reentrant Functions. (Text 1: Selected sections from Chap. 1, 2)			L1,L2,L3
Module 2			
Processing with Real Time Scheduling: Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies with timing diagrams and problems and issues, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline –Monotonic Policy, Dynamic priority policies, Alternative to RM policy. (Text 1: Chap. 2,3,7)			L1,L2,L3
Module 3			
Memory and I/O: Worst case execution time, Intermediate I/O, Shared Memory, ECC Memory, Flash file systems. Multi-resource Services, Blocking, Deadlock and live lock, Critical sections to protect shared resources, Missed deadline, QoS, Reliability and Availability, Similarities and differences, Reliable software, Available software. (Text 1: Selected topics from Chap. 4,5,6,7,11)			L1,L2,L3
Module 4			
Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components. Debugging Components, Exceptions, assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace			L1,L2,L3

Ports, External test equipment. (Text 1: Selected topics from Chap. 8,9)	
Module 5	
Process and Threads: Process and thread creations, Simple Programs, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication using multiple threads. (Text 2: Chap. 11)	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Develop programs for real time services, firmware and RTOS, using the fundamentals of Real Time Embedded System, real time service utilities, debugging methodologies and optimization techniques. • Select the appropriate system resources (CPU, I/O, Memory, Cache, ECC Memory, Microcontroller/FPGA/ASIC to improve the system performance. • Apply priority based static and dynamic real time scheduling techniques for the given specifications. • Analyse deadlock conditions, shared memory problem, critical section problem, missed deadlines, availability, reliability and QoS. • Develop programs for multithreaded applications using suitable techniques and data structure 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sam Siewert, –Real-Time Embedded Systems and Componentsll , Cengage Learning India Edition, 2007. 2. Dr. K.V.K.K Prasad, Embedded/Real Time Systems, Concepts, Design and Programming, Black Book, DreamTech Press, New edition, 2010.

Multimedia over Communication Links			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16ECS252	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
Course Objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Gain fundamental knowledge in understanding the basics of different multimedia networks, applications, media types like text and image. • Analyse media types like audio and video and gain knowledge on multimedia systems. • Analyse Audio compression techniques required to compress Audio. • Analyse compression techniques required to compress video. • Gain fundamental knowledge about the Multimedia Communications in different Networks. 			
Modules			RBT Level
Module 1			
Multimedia Communications: Introduction, Multimedia information representation, multimedia networks, multimedia applications, Application and networking terminology. (Chap. 1 of Text1)			L1, L2, L3
Information Representation: Introduction, Text, Images. (Chap. 2- Sections 2.2 and 2.3 of Text 1)			
Module 2			
Information Representation: Audio and Video. (Chap. 2 - Sections 2.4 and 2.5 of Text 1)			L1, L2, L3
Distributed multimedia systems: Introduction, main Features of a DMS, Resource management of DMS, Networking, Multimedia operating systems. (Chap. 4 - Sections 4.1 to 4.5 of Text 2)			
Module 3			
Multimedia Processing in Communication: Introduction, Perceptual coding of digital Audio signals, Transform Audio Coders, Audio Sub band Coders. (Chap. 3 - Sections 3.1, 3.2, 3.6, 3.7 of Text 2)			L1, L2, L3
Module 4			
Multimedia Communication Standards: Introduction, MPEG approach to multimedia standardization, MPEG-1, MPEG-2, Overview of MPEG-4. (Chap. 5 - Sections 5.1 to 5.4 and 5.5.1 of Text 2)			L1, L2, L3
Module 5			
Multimedia Communication Across Networks: Packet audio/video in the network environment, Video transport across generic networks, Multimedia Transport across ATM Networks. (Chap. 6 - Sections 6.1, 6.2, 6.3 of Text 2)			L1, L2, L3

Course Outcomes: After studying this course, students will be able to:

- Understand basics of different multimedia networks, applications.
- Analyse media types like audio and video to represent in digital form.
- Understand different compression techniques to compress audio.
- Understand different compression techniques to compress audio video.
- Describe the basics of Multimedia Communication Across Networks

Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of four sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

Digital Electronics Lab -2

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

Laboratory Code	16ELDL26	IA Marks	20
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Marks	80
		Exam Hours	03

CREDITS – 02

Course objectives: This laboratory course enables students to

1. Design and simulate digital electronic circuits using graphical programming tool LabVIEW.
2. Create user friendly interfaces using LabVIEW and analyze the input and output data for various digital circuits.
3. Use of assembly level programming for different applications using ARM-CORTEX M3 Kit and Keil uVision-4 tool.
4. Practice the different concepts and applications of C programming environment with ARM CORTEX M3.

Laboratory Experiments**Revised
Bloom's
Taxonomy
(RBT) Level****PART-A: Graphical Programming using LabVIEW**

- a) Design of 4 bit Adders (CLA, CSA, CMA, Parallel adders)
- b) Design of Binary Subtractors
- c) Design of Encoder (8X3), Decoder(3X8)
- d) Design of Multiplexer (8X1), and Demultiplexer (1X8)
- e) Design of code converters & Comparator
- f) Design of FF (SR, D, T, JK, and Master Slave with delays)
- g) Design of registers using latches and flip-flops
- h) Design of 8 bit Shift registers
- i) Design of Asynchronous & Synchronous Counters

L3

<p>PART-B: ARM-CORTEX M3 [Programming to be done using Keil uVision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U]</p> <ol style="list-style-type: none"> Write an Assembly language program to calculate 10+9+8+..... +1 Write a Assembly language program to link Multiple object files and link them together. Write a Assembly language program to store data in RAM. Write a C program to Output the "Hello World" message using UART. Write a C program to Design a Stopwatch using interrupts. Write an Exception vector table in C Write an Assembly Language Program for locking a Mutex. Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values. 	<p>L3</p>
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> Design and simulate the digital circuits using graphical programming tool LabVIEW. Build user friendly interfaces to interact with the digital circuits and to observe the outputs. Develop assembly programs for different applications using ARM Cortex M3 and Keil uVision-4 tool. Develop C Programs for different applications using ARM-Cortex M3 and Keil uVision-4 tool. 	
<p>Conduct of Practical Examination:</p> <ol style="list-style-type: none"> All laboratory experiments are to be included for practical examination. For examination, one question each to be set from PART-A and PART-B. Students are allowed to pick one experiment from the lot. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. Change of experiment is allowed only once and Marks allotted to the procedure part will be made zero. 	

M.Tech – DE & E - FOURTH SEMESTER SYLLABUS

Synthesis and Optimization of Digital Circuits [As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ELD41	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Understand the need for optimization and dimensions of optimization for digital circuits. • Understand basic optimization techniques used in circuits design • Understand advanced tools and techniques in digital systems design including Hardware Modeling and Compilation Techniques. • Explain details of Logic-Level synthesis and optimization techniques for combinational and sequential circuits. • Explain the concept of scheduling and resource binding for optimization. 			
Modules			RBT Level
Module 1			
<p>Introduction to Synthesis and optimization: Design of Microelectronics circuits, Computer aided Synthesis and Optimization.</p> <p>Hardware Modeling: HDLs for Synthesis, Abstract models, Compilation and Behavioral Optimization. (Text1: Topics from Chap. 1,3)</p>			L1, L2, L3
Module 2			
<p>Graph theory for CAD for VLSI: Graphs, Combinatorial Optimization, Graph Optimization problems and Algorithms, Boolean Algebra and Applications.</p> <p>Architectural Synthesis and Optimization: Fundamental Architectural Synthesis problems, Area and Performance Estimation, Strategies for Architectural Optimization, Datapath Synthesis, Control Path Synthesis.(Text1: Topics From Chap. 2,4)</p>			L1, L2, L3
Module 3			
<p>Two level Combinational Logic Optimization: Introduction, Logic Optimizations, Operations on Two level Logic Covers, Algorithms for Logic Minimization, Symbolic Minimization and Encoding Problems.</p> <p>Multiple Level Combinational Logic Optimization: Introduction, Models and Transformations for Combinational Networks, The Algebraic Model, The Boolean Model. (Text1: Chap. 7, 8)</p>			L1, L2, L3
Module 4			
<p>Sequential Logic Optimization: Introduction, Sequential Logic Optimization using State based Models, Sequential Logic Optimization using Network Models,</p>			L1, L2, L3

Implicit FSM Traversal Methods, Testability concerns for Synchronous Circuits. (Text 1: Chap. 9)	
Module 5	
<p>Scheduling Algorithms: Introduction, A Model for Scheduling problems, Scheduling with Resource Constraints, Scheduling without Resource Constraints, Scheduling Algorithms for Extended Sequencing Models, Scheduling Pipelined Circuits.</p> <p>Resource Sharing and Binding: Sharing and Binding for Resource dominated circuits, Sharing and Binding for General Circuits, Concurrent Binding and Scheduling, Resource sharing and Binding for Non – Scheduled Sequencing Graphs. (Text1: Chap. 5,6)</p>	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the process of synthesis and optimization in a top down approach for digital circuits models using HDLs. • Understand the terminologies of graph theory and its algorithms to optimize a Boolean equation. • Apply different two level and multilevel optimization algorithms for combinational circuits • Apply the different sequential circuit optimization methods using state models and network models. • Apply different scheduling algorithms with resource binding and without resource binding for pipelined sequential circuits and extended sequencing models. 	
<p>Question paper pattern:</p> <p>The question paper will have 10 full questions carrying equal marks. Each full question consists of 16 marks with a maximum of four sub questions.</p> <ul style="list-style-type: none"> • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Giovanni De Micheli, –Synthesis and Optimization of Digital Circuits , Tata McGraw-Hill, 2003.</p>	
<p>Reference Book: Edwards M.D., Automatic Logic synthesis Techniques for Digital Systems, Macmillan New Electronic Series, 1992.</p>	

Advances in Image Processing			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ECS422	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> Acquire fundamental knowledge in understanding the representation of the digital image and its properties Equip with some pre-processing techniques required to enhance the image for further analysis purpose. Select the region of interest in the image using segmentation techniques. Represent the image based on its shape and edge information. Describe the objects present in the image based on its properties and structure. 			
Modules			RBT Level
Module 1			
The image, its representations and properties: Image representations a few concepts, Image digitization, Digital image properties, Color images.			L1
Module 2			
Image Pre-processing: Pixel brightness transformations, geometric transformations, local pre-processing.			L1, L2
Module 3			
Segmentation: Thresholding; Edge-based segmentation – Edge image thresholding, Edge relaxation, Border tracing, Hough transforms; Region – based segmentation – Region merging, Region splitting, Splitting and merging, Watershed segmentation, Region growing post-processing.			L1, L2, L3
Module 4			
Shape representation and description: Region identification; Contour-based shape representation and description – Chain codes, Simple geometric border representation, Fourier transforms of boundaries, Boundary description using segment sequences, B-spline representation; Region-based shape representation and description – Simple scalar region descriptors, Moments, Convex hull.			L1, L2, L3
Module 5			
Mathematical Morphology: Basic morphological concepts, Four morphological principles, Binary dilation and erosion, Skeletons and object marking, Morphological segmentations and watersheds.			L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> Understand the representation of the digital image and its properties 			

Apply pre-processing techniques required to enhance the image for its further analysis.

- Use segmentation techniques to select the region of interest in the image for analysis
Represent the image based on its shape and edge information.
Describe the objects present in the image based on its properties and structure.
- Use morphological operations to simplify images, and quantify and preserve the main shape characteristics of the objects.

Question paper pattern:

The question paper will have 10 full questions carrying equal marks. Each full question consists of 16 marks with a maximum of four sub questions.

- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

Elective-3	
16ECS422	Advances in Image Processing

Note:

- 1. Project Phase-1:** 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.
- 2. Project Phase-2:** 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
- 3. Project Evaluation:** Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted .
 - a. Internal Examiner shall carry out the evaluation for 100 marks.
 - b. External Examiner shall carry out the evaluation for 100 marks.
 - c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
 - d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.Tech – DE & E - FIRST SEMESTER SYLLABUS

ADVANCED ENGINEERING MATHEMATICS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – I			
Subject Code	16ELD11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Acquaint with principles of linear algebra, calculus of variations, probability theory and random process. • Apply the knowledge of linear algebra, calculus of variations, probability theory and random process in the applications of electronics and communication engineering sciences. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>Linear Algebra-I Introduction to vector spaces and sub-spaces, definitions, illustrative examples and simple problems. Linearly independent and dependent vectors-definition and problems. Basis vectors, dimension of a vector space. Linear transformations- definition, properties and problems. Rank-Nullity theorem(without proof). Matrix form of linear transformations-Illustrative examples.(Text 1 & Ref. 1)</p>			L1,L2
Module -2			
<p>Linear Algebra-II Computation of Eigen values and Eigen vectors of real symmetric matrices-Given's method. Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process. QR decomposition, singular value decomposition, least square approximations.(Text 1 & Ref. 1)</p>			L1,L2
Module -3			
<p>Calculus of Variations Concept of functional-Eulers equation. functional dependent on first and higher order derivatives, functional on several dependent variables. Isoperimetric problems-variation problems with moving boundaries.(Text 2 & Ref. 2)</p>			L1,L2
Module -4			

<p>Probability Theory Review of basic probability theory. Definitions of random variables and probability distributions, probability mass and density functions, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Binomial, Poisson, Exponential, Gaussian and Rayleigh distributions-examples.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Module -5</p>	
<p>Joint probability distributions Definition and properties of CDF, PDF, PMF, conditional distributions. Expectation, covariance and correlation. Independent random variables. Statement of central limit theorem-Illustrative examples. Random process- Classification, stationary and ergodic random process. Auto correlation function-properties, Gaussian random process.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images. • Apply the techniques of QR and singular value decomposition for data compression, least square approximation in solving inconsistent linear systems. • Utilize the concepts of functionals and their variations in the applications of communication systems, decision theory, synthesis and optimization of digital circuits. • Learn the idea of random variables (discrete/continuous) and probability distributions in analyzing the probability models arising in control systems and system communications. • Apply the idea of joint probability distributions and the role of parameter-dependent random variables in random process. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

DIGITAL VLSI DESIGN [As per Choice Based Credit System (CBCS) scheme]			
Subject Code	16EVE12	IA Marks	20
Number	04	Exam Marks	80
Total Number of	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Explain VLSI Design Methodologies • Learn Static and Dynamic operation principles, analysis and design of inverter circuit. • Infer state of the art Semiconductors Memory circuits. • Outline the comprehensive coverage of Methodologies and Design practice that are used to reduce the Power Dissipation of large scale digital circuits. • Illustrate VLSI and ASIC design. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.</p> <p>MOS Inverters-Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load.</p>			L1, L2
Module -2			
<p>MOS Inverters-Static Characteristics: CMOS Inverter.</p> <p>MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.</p>			L2, L3
Module -3			

<p>Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).</p>	<p>L1, L2, L3</p>
<p>Module -4</p>	
<p>Dynamic Logic Circuits: Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.</p> <p>BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.</p>	<p>L1,L2, L3</p>
<p>Module -5</p>	
<p>Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.</p> <p>Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modeling.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyse issues of On-chip interconnect Modelling and Interconnect delay calculation. 2. Analyse the Switching Characteristics in Digital Integrated Circuits. 3. Use the Dynamic Logic circuits in state-of-the-art VLSI chips. 4. Study critical issues such as ESD protection, Clock distribution, Clock buffering, and Latch phenomenon 5. Use Bipolar and Bi-CMOS circuits in very high speed design. 	
<p>Question Paper Pattern</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCED EMBEDDED SYSTEM

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	16EVE13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.

Describe the hardware software co-design and firmware design approaches

Explain the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions.

Program ARM CORTEX M3 using the various instructions, for different applications.

Modules	Revised Bloom's Taxonomy (RBT) Level
Module -1	
Embedded System: Embedded vs General computing system, classification, application and purpose of ES. Core of an Embedded System, Memory, Sensors, Actuators, LED, Opto coupler, Communication Interface, Reset circuits, RTC, WDT, Characteristics and Quality Attributes of Embedded Systems (Text 1: Selected Topics from Ch -1, 2, 3).	L1, L2, L3
Module -2	
Hardware Software Co-Design, embedded firmware design approaches, computational models, embedded firmware development languages, Integration and testing of Embedded Hardware and firmware, Components in embedded system development environment (IDE), Files generated during compilation, simulators, emulators and debugging (Text 1: Selected Topics From Ch-7, 9, 12, 13).	L1, L2, L3
Module -3	
ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)	L1, L2, L3

Module -4	
Instruction Sets: Assembly basics, Instruction list and description, useful instructions, Memory Systems, Memory maps, Cortex M3 implementation overview, pipeline and bus interface (Text 2: Ch-4, 5, 6)	L1, L2, L3
Module -5	
Exceptions, Nested Vector interrupt controller design, SysTick Timer, Cortex-M3 Programming using assembly and C language, CMSIS (Text 2: Ch-7, 8, 10)	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. Explain the hardware software co-design and firmware design approaches. Acquire the knowledge of the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. • Apply the knowledge gained for Programming ARM CORTEX M3 for different applications. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. K. V. Shibu, "Introduction to embedded systems", TMH education Pvt. Ltd. 2009. 2. Joseph Yiu, –The Definitive Guide to the ARM Cortex-M3, 2ndedn, Newnes, (Elsevier), 2010.

DIGITAL CIRCUITS AND LOGIC DESIGN			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – I			
Subject Code	16ELD14	IA Marks	20
Number of Lecture	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand the concepts of sequential machines ● Design Sequential Machines/Circuits ● Analyze the faults in the design of circuits ● Apply fault detection experiments to sequential circuits 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
Threshold Logic: Introductory Concepts, Synthesis of Threshold Networks, Capabilities, Minimization, and Transformation of Sequential Machines: The Finite- State Model, Further Definitions, Capabilities.			L1, L2,L3
Module -2			
Fault Detection by Path Sensitizing, Detection of Multiple Faults, Failure-Tolerant Design, Quadded Logic, Reliable Design and Fault Diagnosis Hazards: Fault Detection in Combinational Circuits.			L1, L2, L3,L4
Module -3			
Fault-Location Experiments, Boolean Differences, Limitations of Finite – State Machines, State Equivalence and Machine Minimization, Simplification of Incompletely Specified Machines.			L1, L2, L3,L4
Module -4			
Structure of Sequential Machines: Introductory Example, State Assignments Using Partitions, The Lattice of closed Partitions, Reductions of the Output Dependency, Input Independence and Autonomous Clocks, Covers and Generation of closed Partitions by state splitting, Information Flow in Sequential Machines, ELD ecompositions, Synthesis of Multiple Machines.			L1, L2, L3,L4
Module -5			

<p>State Identifications and Fault-Detection Experiments: Homing Experiments, Distinguishing Experiments, Machine Identification, Fault Detection Experiments, Design of Diagnosable Machines, Second Algorithm for the Design of Fault Detection Experiments, Fault-Detection.</p>	<p>L1, L2, L3,L4</p>
<p>Course outcomes: At the end of the course, the students will be able to:</p> <ul style="list-style-type: none"> ● Understand the concepts of sequential machines ● Design Sequential Machines/Circuits ● Analyze the faults in the design of circuits ● Apply fault detection experiments to sequential circuits 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Zvi Kohavi, –Switching and Finite Automata Theoryll , 2nd Edition, TMH.</p>

DIGITAL SYSTEM DESIGN USING VERILOG [As per Choice Based Credit System (CBCS) scheme]			
Subject Code	16EVE151	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40 (08 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand the concepts of Verilog Language ● Design the digital systems as an activity in a larger systems design context. ● Study the design and operation of semiconductor memories frequently used in application specific digital system. ● Inspect how effectively IC's are embedded in package and assembled in PCB's for different application ● Design and diagnosis of processors and I/O controllers they can be used in embedded systems 			
Modules			Revised Bloom's Taxonomy (RBT)
Module -1			
Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.			L1, L2
Module -2			
Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers. Sequential Basics: Storage elements, Counters, Sequential Data paths and Control, Clocked Synchronous Timing Methodology.			L1, L2
Module -3			
Memories: Concepts, Memory Types, Error Detection and Correction. Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.			L1, L2
Module -4			
Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory. I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.			L2, L3
Module -5			

<p>Accelerators: Concepts, case study, Verification of accelerators. Design Methodology: Design flow, Design optimization, Design for test.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Design embedded systems, using small microcontrollers, larger CPUs/DSPs, or hard or soft processor cores. • Design construct the combinational circuits using discrete gates and programmable logic devices. • Describe Verilog model for sequential circuits and test pattern generation • Explore the different types of semiconductor memories and their usage for specific chip design • Synthesis different types of processor and I/O controllers that are used in embedded system design 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

<p>Reference Book: Verilog HDL: A Guide to Digital Design and Synthesis, Second Edition by Samir Palnitkar.</p>	

DIGITAL ELECTRONICS LAB -1

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Laboratory Code	16ELDL16	IA Marks	20
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Marks	80
		Exam Hours	03

CREDITS – 02

Course objectives: This laboratory course enables students to get practical experience on the

- Design tool such as Cadence OrCAD/ OrCAD Lite /EDA tool
- Design of analog and digital circuits using the simulation tool
- FPGA Design and testing for digital circuits
- Verilog programming and design of digital circuits
- Design, verification and performance testing

Laboratory Experiments**Revised Bloom's Taxonomy (RBT) Level****1. Using Cadence OrCAD or OrCAD Lite or any EDA Tool, design and verify the following:****L2,L3,L4**

- a) 3½ Digit Digital Voltmeter
- b) Monolithic function Generator
- c) Regulated Power supplies
- d) Batch counter using TTL ICs.
- e) DAC and ADC
- f) P, PI, PID and ON/OFF Controllers
- g) Programmable Timers
- h) Filters and Resonance Circuits

<p>2. Develop Verilog Program for design and testing the following digital circuits (for 4/8 bits) using FPGA/CPLD. Use logic analyzer/Chipscope for the verification of results.</p> <p>(Note: Programming can be done using any compiler. Down load the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro. Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits.)</p> <ol style="list-style-type: none"> Carry skip and carry look ahead adder BCD adder and subtractor Array Multiplication (signed and unsigned) Booth multiplication (radix-4) Magnitude comparator LFSR Parity generator Universal Shift Register Sequence generation (11101 say) using Mealy/Moore FSM 	<p>L2, L3, L4</p>
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> Design an analog and digital systems using Cadence OrCAD, OrCAD Lite or any EDA tool. Develop Verilog Programs for Digital Circuit design simulation. Design and implement digital systems on FPGA/CPLD Testing and validation of digital systems using Logic analyzer/Chipscope 	
<p>Conduct of Practical Examination:</p> <ol style="list-style-type: none"> All laboratory experiments are to be included for practical examination. For examination, two questions using different tool to be set. Students are allowed to pick one experiment from the lot. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero. 	

M.Tech – DE & E - SECOND SEMESTER SYLLABUS

Advanced DSP			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16ECS21	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand Multirate digital signal processing principles and its applications. ● Estimate the various spectral components present in the received signal using different spectral estimation methods such as Parametric and Nonparametric. ● Design and implement an optimum adaptive filter using LMS and RLS algorithms. ● Understand the concepts and mathematical representations of Wavelet transforms. 			
Modules			RBT Level
Module 1			
<p>Multirate Digital Signal Processing: Introduction, decimation by a factor 'D', Interpolation by a factor 'I', sampling rate conversion by a factor 'I/D', Implementation of sampling rate conversion, Multistage implementation of sampling rate conversion, Applications of multirate signal processing, Digital filter banks, two channel quadrature mirror filter banks, M-channel QMF bank. (Text 1)</p>			L1,L2,L3
Module 2			
<p>Linear prediction and Optimum Linear Filters: Random signals, Correlation Functions and Power Spectra, Innovations Representation of a Stationary Random Process. Forward and Backward Linear Prediction. Solution of the Normal Equations The Levinson-Durbin Algorithm. Properties of the Linear Prediction-Error Filters. (Text 1)</p>			L1,L2,L3
Module 3			
<p>Adaptive filters: Applications of adaptive filters- Adaptive channel equalization,, Adaptive noise cancellation, Linear Predictive coding of Speech Signals, Adaptive direct form FIR filters-The LMS algorithm, Properties of LMS algorithm. Adaptive direct form filters- RLS algorithm. (Text 1)</p>			L1,L2,L3
Module 4			
<p>Power Spectrum Estimation: Non parametric Methods for Power Spectrum Estimation - Bartlett Method, Welch Method, Blackman and Tukey Methods. Parametric Methods for Power Spectrum Estimation: Relationship between the auto correlation and the model</p>			

parameters, Yule and Walker methods for the AR Model Parameters, Burg Method for the AR Model parameters, Unconstrained least-squares method for the AR Model parameters, Sequential estimation methods for the AR Model parameters, ARMA Model for Power Spectrum Estimation. (Text 1)	L1,L2,L3
Module 5	
<p>WAVELET TRANSFORMS: The Age of Wavelets, The origin of Wavelets, Wavelets and other reality transforms, History of wavelets, Wavelets of the future.</p> <p>Continuous Wavelet and Short Time Fourier Transform: Wavelet Transform, Mathematical preliminaries, Properties of wavelets.</p> <p>Discrete Wavelet Transform: Haar scaling functions, Haar wavelet function, Daubechies Wavelets. (Chapters 1, 3 & 4 of Text 2)</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Design adaptive filters for a given application ● Design multirate DSP Systems ● Implement adaptive signal processing algorithm ● Design active networks ● Understand important advanced signal processing techniques, including multi-rate processing and time-frequency analysis techniques 	
<p>Question paper pattern: The question paper will have ten questions.</p> <ul style="list-style-type: none"> ● Each full question consists of 16marks. ● There will be 2 full questions (with a maximum of four sub questions) from each module. ● Each full question will have sub questions covering all the topics under a module. ● The Students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. –Digital Signal Processing, Principles, Algorithms and Applications , John G.Proakis, Dimitris G.Manolakis, Fourth edition, Pearson-2007. 2. Insight into Wavelets- from Theory to Practicell , K.P Soman, Ramachandran, Resmi- PHI Third Edition-2010. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. "Modern Digital signal processing", Robert. O. Cristi, Cengage Publishers, India, 2003. 2. "Digital signal processing: A Practitioner's approach", E.C. Ifeachor, and B. W. Jarvis, , Second Edition, Pearson Education, India, 2002, Reprint. 3. –Wavelet Transforms, Introduction to Theory and applications , Raghuveer. M. Rao, Ajit S.Bopardikar, Pearson Education, Asia, 2000. 	

Error Control Coding			
[As per Choice Based Credit System (CBCS) Scheme]			
SEMESTER – II			
Subject Code	16ECS22	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Explain the Entropy, information rate and capacity for the Discrete memoryless channel. Apply modern algebra and probability theory for the coding. Compare Block codes such as Linear Block Codes, Cyclic codes etc and Convolutional codes. • Detect and correct errors for different data communication and storage systems. Implement different Block code encoders and decoders. Analyse and implement convolutional encoders and decoders. Analyse and apply soft and hard Viterbi algorithm for decoding of convolutional codes. 			
Modules			RBT Level
Module 1			
<p>Information theory: Introduction, Entropy, Source coding theorem, discrete memoryless channel, Mutual Information, Channel Capacity Channel coding theorem.(Chap. 5 of Text 1)</p> <p>Introduction to algebra: Groups, Fields, binary field arithmetic, Construction of Galois Fields $GF(2^m)$ and its properties, (Only statements of theorems without proof) Computation using Galois field $GF(2^m)$ arithmetic, Vector spaces and Matrices. (Chap. 2 of Text 2)</p>			L1,L2,L3
Module 2			
<p>Linear block codes: Generator and parity check matrices, Encoding circuits, Syndrome and error detection, Minimum distance considerations, Error detecting and error correcting capabilities, Standard array and syndrome decoding, Single Parity Check Codes(SPC),Repetition codes, Self dual codes, Hamming codes, Reed-Muller codes. Product codes and Interleaved codes. (Chap. 3 of Text 2)</p>			L1,L2,L3
Module 3			
<p>Cyclic codes: Introduction, Generator and parity check polynomials, Encoding of cyclic codes, Syndrome computing and error detection, Decoding of cyclic codes, Error trapping Decoding, Cyclic hamming codes, Shortened cyclic codes.(Chap. 4 of Text2)</p>			L1,L2,L3
Module 4			
<p>BCH codes: Binary primitive BCH codes, Decoding procedures, Implementation of Galois field arithmetic, Implementation of error correction. (Chap. 6 of Text 2)</p> <p>Reed -Solomon codes. (Chap. 7 of Text 2)</p>			

<p>Majority Logic decodable codes: One -step majority logic decoding, One-step majority logic decodable codes, Two-step majority logic, decoding, Multiple-step majority logic. (Chap. 8 of Text 2)</p>	L1,L2,L3
<p>Module 5</p>	
<p>Convolution codes: Convolutional Encoding, Convolutional Encoder Representation, Formulation of the Convolutional Decoding Problem, Properties of Convolutional Codes: Distance property of convolutional codes, Systematic and Nonsystematic Convolutional Codes, Performance Bounds for Convolutional Codes, Coding Gain. Other Convolutional Decoding Algorithms: Sequential Decoding, Feedback Decoding.(Chap. 7 of Text 3)</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Analyse a discrete memoryless channel, given the source and transition probabilities. ● Apply the concept of modern linear algebra for the error control coding technique. ● Implement efficient LBC, Cyclic codes etc encoder and decoders. ● Apply decoding algorithms for efficient decoding of Block codes and Convolutional codes. 	
<p>Question paper pattern: The question paper will have 10 full questions carrying equal marks. Each full question consists of 16 marks with a maximum of four sub questions.</p> <ul style="list-style-type: none"> ● There will be 2 full questions from each module covering all the topics of the module ● The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Simon Haykin, Digital Communication systems , First edition, Wiley India Private. Ltd, 2014. ISBN 978-81-265-4231-4 2. Shu Lin and Daniel J. Costello. Jr, "Error control coding", Pearson, Prentice Hall, 2nd edition, 2004. 3. Bernard Sklar, Digital Communications - Fundamentals and Applications , 2nd Edition Pearson Education (Asia) Ptv. Ltd, 2001. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Blahut. R. E, "Theory and practice of error control codes", Addison Wesley, 1984. 2. Salvatore Gravano, –Introduction to Error control coding , Oxford university press, 2007. 	

Advances in VLSI Design			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE23	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Learn circuit-oriented approach towards digital design • Illustrate the impact of interconnect wiring on the functionality and performance of a digital gate. Infer different approaches to digital timing and clocking circuits Understand the impact of clock skew on the behaviour of digital synchronous circuits • Explain the role of peripheral circuitry such as the decoders, sense amplifiers, drivers and control circuitry in the design of reliable and fast memories 			
Modules			RBT Level
Module 1			
Implementation Strategies For Digital ICS: Introduction, From Custom to Semicustom and Structured Array Design Approaches, Custom Circuit Design, Cell-Based Design Methodology, Standard Cell, Compiled Cells, Macrocells, Megacells and Intellectual Property, Semi-Custom Design Flow, Array-Based Implementation Approaches, Pre-diffused (or Mask-Programmable) Arrays, Pre-wired Arrays, Perspective-The Implementation Platform of the Future.			L1,L2,L3
Module 2			
Coping With Interconnect: Introduction, Capacitive Parasitics, Capacitance and Reliability-Cross Talk, Capacitance and Performance in CMOS, Resistive Parasitics, Resistance and Reliability-Ohmic Voltage Drop, Electromigration, Resistance and Performance-RC Delay, Inductive Parasitics, Inductance and Reliability-Voltage Drop, Inductance and Performance-Transmission Line Effects, Advanced Interconnect Techniques, Reduced-Swing Circuits, Current-Mode Transmission Techniques, Perspective: Networks-on-a-Chip.			L1,L2,L3
Module 3			
Timing Issues In Digital Circuits: Introduction, Timing Classification of Digital Systems, Synchronous Interconnect, Mesochronous interconnect, Plesiochronous Interconnect, Asynchronous Interconnect, Synchronous Design — An In-depth Perspective, Synchronous Timing Basics, Sources of Skew and Jitter, Clock-Distribution Techniques, Latch-Based Clocking, Self-Timed Circuit Design, Self-Timed Logic - An Asynchronous Technique, Completion-Signal Generation, Self-Timed Signaling, Practical Examples of Self-Timed Logic, Synchronizers and Arbiters,			L1,L2,L3

Synchronizers-Concept and Implementation, Arbiters, Clock Synthesis and Synchronization Using a Phase-Locked Loop, Basic Concept, Building Blocks of a PLL.	
Module 4	
Designing Memory and Array Structures: Introduction, Memory Classification, Memory Architectures and Building Blocks, The Memory Core, Read-Only Memories, Nonvolatile Read-Write Memories, Read-Write Memories (RAM), Contents-Addressable or Associative Memory (CAM), Memory Peripheral Circuitry, The Address Decoders, Sense Amplifiers, Voltage References, Drivers/Buffers, Timing and Control.	L1,L2,L3
Module 5	
Designing Memory and Array Structures: Memory Reliability and Yield, Signal-to-Noise Ratio, Memory yield, Power Dissipation in Memories, Sources of Power Dissipation in Memories, Partitioning of the memory, Addressing the Active Power Dissipation, Data-retention dissipation, Case Studies in Memory Design: The Programmable Logic Array (PLA), A 4 Mbit SRAM, A 1 Gbit NAND Flash Memory, Perspective: Semiconductor Memory Trends and Evolutions.	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Apply design automation for complex circuits using the different implementation methodology like custom versus semi-custom, hardwired versus fixed, regular array versus ad-hoc. • Use the approaches to minimize the impact of interconnect parasitics on performance, power dissipation and circuit reliability • Impose the ordering of the switching events to meet the desired timing constraints using synchronous, clocked approach. • Infer the reliability of the memory. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

Real Time Operating System [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE24	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Introduce the fundamental concepts of Real Time Operating Systems and the real time embedded system • Apply concepts relating to operating systems such as Scheduling techniques, Thread Safe Reentrant Functions, Dynamic priority policies. • Describe concepts related to Multi resource services like blocking, Deadlock, live lock & soft real-time services. • Discuss Memory management concepts, Embedded system components, Debugging components and file system components. • Study programs for multithreaded applications using suitable data structures. 			
Modules			RBT Level
Module 1			
Real-Time Systems and Resources: Brief history of Real Time Systems, A brief history of Embedded Systems. System Resources, Resource Analysis, Real-Time Service Utility, Scheduler concepts, Real-Time OS, State transition diagram and tables, Thread Safe Reentrant Functions. (Text 1: Selected sections from Chap. 1, 2)			L1,L2,L3
Module 2			
Processing with Real Time Scheduling: Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies with timing diagrams and problems and issues, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline –Monotonic Policy, Dynamic priority policies, Alternative to RM policy. (Text 1: Chap. 2,3,7)			L1,L2,L3
Module 3			
Memory and I/O: Worst case execution time, Intermediate I/O, Shared Memory, ECC Memory, Flash file systems. Multi-resource Services, Blocking, Deadlock and live lock, Critical sections to protect shared resources, Missed deadline, QoS, Reliability and Availability, Similarities and differences, Reliable software, Available software. (Text 1: Selected topics from Chap. 4,5,6,7,11)			L1,L2,L3
Module 4			
Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components. Debugging Components, Exceptions, assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace			L1,L2,L3

Ports, External test equipment. (Text 1: Selected topics from Chap. 8,9)	
Module 5	
Process and Threads: Process and thread creations, Simple Programs, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication using multiple threads. (Text 2: Chap. 11)	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Develop programs for real time services, firmware and RTOS, using the fundamentals of Real Time Embedded System, real time service utilities, debugging methodologies and optimization techniques. • Select the appropriate system resources (CPU, I/O, Memory, Cache, ECC Memory, Microcontroller/FPGA/ASIC to improve the system performance. • Apply priority based static and dynamic real time scheduling techniques for the given specifications. • Analyse deadlock conditions, shared memory problem, critical section problem, missed deadlines, availability, reliability and QoS. • Develop programs for multithreaded applications using suitable techniques and data structure 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

Multimedia over Communication Links

[As per Choice Based credit System (CBCS) Scheme
SEMESTER – II

Subject Code	16ECS252	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03

CREDITS – 03

Course Objectives: This course will enable students to:

- Gain fundamental knowledge in understanding the basics of different multimedia networks, applications, media types like text and image.
- Analyse media types like audio and video and gain knowledge on multimedia systems.
- Analyse Audio compression techniques required to compress Audio.
- Analyse compression techniques required to compress video.
- Gain fundamental knowledge about the Multimedia Communications in different Networks.

Modules	RBT Level
Module 1	
Multimedia Communications: Introduction, Multimedia information representation, multimedia networks, multimedia applications, Application and networking terminology. (Chap. 1 of Text1) Information Representation: Introduction, Text, Images. (Chap. 2- Sections 2.2 and 2.3 of Text 1)	L1, L2, L3
Module 2	
Information Representation: Audio and Video. (Chap. 2 - Sections 2.4 and 2.5 of Text 1) Distributed multimedia systems: Introduction, main Features of a DMS, Resource management of DMS, Networking, Multimedia operating systems. (Chap. 4 - Sections 4.1 to 4.5 of Text 2)	L1, L2, L3
Module 3	
Multimedia Processing in Communication: Introduction, Perceptual coding of digital Audio signals, Transform Audio Coders, Audio Sub band Coders. (Chap. 3 - Sections 3.1, 3.2, 3.6, 3.7 of Text 2)	L1, L2, L3
Module 4	
Multimedia Communication Standards: Introduction, MPEG approach to multimedia standardization, MPEG-1, MPEG-2, Overview of MPEG-4. (Chap. 5 - Sections 5.1 to 5.4 and 5.5.1 of Text 2)	L1, L2, L3
Module 5	
Multimedia Communication Across Networks: Packet audio/video in the network environment, Video transport across generic networks, Multimedia Transport across ATM Networks. (Chap. 6 - Sections 6.1, 6.2, 6.3 of Text 2)	L1, L2, L3

Course Outcomes: After studying this course, students will be able to:

- Understand basics of different multimedia networks, applications.
- Analyse media types like audio and video to represent in digital form.
- Understand different compression techniques to compress audio.
- Understand different compression techniques to compress audio video.
- Describe the basics of Multimedia Communication Across Networks

Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of four sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

Digital Electronics Lab -2

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

Laboratory Code	16ELDL26	IA Marks	20
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Marks	80
		Exam Hours	03

CREDITS – 02

Course objectives: This laboratory course enables students to

1. Design and simulate digital electronic circuits using graphical programming tool LabVIEW.
2. Create user friendly interfaces using LabVIEW and analyze the input and output data for various digital circuits.
3. Use of assembly level programming for different applications using ARM-CORTEX M3 Kit and Keil uVision-4 tool.
4. Practice the different concepts and applications of C programming environment with ARM CORTEX M3.

Laboratory Experiments

**Revised
Bloom's
Taxonomy
(RBT) Level**

PART-A: Graphical Programming using LabVIEW

- a) Design of 4 bit Adders (CLA, CSA, CMA, Parallel adders)
- b) Design of Binary Subtractors
- c) Design of Encoder (8X3), Decoder(3X8)
- d) Design of Multiplexer (8X1), and Demultiplexer (1X8)
- e) Design of code converters & Comparator
- f) Design of FF (SR, D, T, JK, and Master Slave with delays)
- g) Design of registers using latches and flip-flops
- h) Design of 8 bit Shift registers
- i) Design of Asynchronous & Synchronous Counters

L3

<p>PART-B: ARM-CORTEX M3 [Programming to be done using Keil uVision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U]</p> <ol style="list-style-type: none"> a) Write an Assembly language program to calculate 10+9+8+..... +1 b) Write a Assembly language program to link Multiple object files and link them together. c) Write a Assembly language program to store data in RAM. d) Write a C program to Output the "Hello World" message using UART. e) Write a C program to Design a Stopwatch using interrupts. f) Write an Exception vector table in C g) Write an Assembly Language Program for locking a Mutex. h) Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values. 	<p>L3</p>
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> • Design and simulate the digital circuits using graphical programming tool LabVIEW. • Build user friendly interfaces to interact with the digital circuits and to observe the outputs. • Develop assembly programs for different applications using ARM Cortex M3 and Keil uVision-4 tool. • Develop C Programs for different applications using ARM-Cortex M3 and Keil uVision-4 tool. 	
<p>Conduct of Practical Examination:</p> <ol style="list-style-type: none"> 1. All laboratory experiments are to be included for practical examination. 2. For examination, one question each to be set from PART-A and PART-B. 3. Students are allowed to pick one experiment from the lot. 4. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. 5. Change of experiment is allowed only once and Marks allotted to the procedure part will be made zero. 	

M.Tech – DE & E - FOURTH SEMESTER SYLLABUS

Synthesis and Optimization of Digital Circuits [As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ELD41	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Understand the need for optimization and dimensions of optimization for digital circuits. • Understand basic optimization techniques used in circuits design • Understand advanced tools and techniques in digital systems design including Hardware Modeling and Compilation Techniques. • Explain details of Logic-Level synthesis and optimization techniques for combinational and sequential circuits. • Explain the concept of scheduling and resource binding for optimization. 			
Modules			RBT Level
Module 1			
<p>Introduction to Synthesis and optimization: Design of Microelectronics circuits, Computer aided Synthesis and Optimization.</p> <p>Hardware Modeling: HDLs for Synthesis, Abstract models, Compilation and Behavioral Optimization. (Text1: Topics from Chap. 1,3)</p>			L1, L2, L3
Module 2			
<p>Graph theory for CAD for VLSI: Graphs, Combinatorial Optimization, Graph Optimization problems and Algorithms, Boolean Algebra and Applications.</p> <p>Architectural Synthesis and Optimization: Fundamental Architectural Synthesis problems, Area and Performance Estimation, Strategies for Architectural Optimization, Datapath Synthesis, Control Path Synthesis.(Text1: Topics From Chap. 2,4)</p>			L1, L2, L3
Module 3			
<p>Two level Combinational Logic Optimization: Introduction, Logic Optimizations, Operations on Two level Logic Covers, Algorithms for Logic Minimization, Symbolic Minimization and Encoding Problems.</p> <p>Multiple Level Combinational Logic Optimization: Introduction, Models and Transformations for Combinational Networks, The Algebraic Model, The Boolean Model. (Text1: Chap. 7, 8)</p>			L1, L2, L3
Module 4			
<p>Sequential Logic Optimization: Introduction, Sequential Logic Optimization using State based Models, Sequential Logic Optimization using Network Models,</p>			L1, L2, L3

Implicit FSM Traversal Methods, Testability concerns for Synchronous Circuits. (Text 1: Chap. 9)	
Module 5	
<p>Scheduling Algorithms: Introduction, A Model for Scheduling problems, Scheduling with Resource Constraints, Scheduling without Resource Constraints, Scheduling Algorithms for Extended Sequencing Models, Scheduling Pipelined Circuits.</p> <p>Resource Sharing and Binding: Sharing and Binding for Resource dominated circuits, Sharing and Binding for General Circuits, Concurrent Binding and Scheduling, Resource sharing and Binding for Non – Scheduled Sequencing Graphs. (Text1: Chap. 5,6)</p>	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the process of synthesis and optimization in a top down approach for digital circuits models using HDLs. • Understand the terminologies of graph theory and its algorithms to optimize a Boolean equation. • Apply different two level and multilevel optimization algorithms for combinational circuits • Apply the different sequential circuit optimization methods using state models and network models. • Apply different scheduling algorithms with resource binding and without resource binding for pipelined sequential circuits and extended sequencing models. 	
<p>Question paper pattern:</p> <p>The question paper will have 10 full questions carrying equal marks. Each full question consists of 16 marks with a maximum of four sub questions.</p> <ul style="list-style-type: none"> • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Giovanni De Micheli, –Synthesis and Optimization of Digital Circuits , Tata McGraw-Hill, 2003.</p>	
<p>Reference Book: Edwards M.D., Automatic Logic synthesis Techniques for Digital Systems, Macmillan New Electronic Series, 1992.</p>	

Advances in Image Processing			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ECS422	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> Acquire fundamental knowledge in understanding the representation of the digital image and its properties Equip with some pre-processing techniques required to enhance the image for further analysis purpose. Select the region of interest in the image using segmentation techniques. Represent the image based on its shape and edge information. Describe the objects present in the image based on its properties and structure. 			
Modules			RBT Level
Module 1			
The image, its representations and properties: Image representations a few concepts, Image digitization, Digital image properties, Color images.			L1
Module 2			
Image Pre-processing: Pixel brightness transformations, geometric transformations, local pre-processing.			L1, L2
Module 3			
Segmentation: Thresholding; Edge-based segmentation – Edge image thresholding, Edge relaxation, Border tracing, Hough transforms; Region – based segmentation – Region merging, Region splitting, Splitting and merging, Watershed segmentation, Region growing post-processing.			L1, L2, L3
Module 4			
Shape representation and description: Region identification; Contour-based shape representation and description – Chain codes, Simple geometric border representation, Fourier transforms of boundaries, Boundary description using segment sequences, B-spline representation; Region-based shape representation and description – Simple scalar region descriptors, Moments, Convex hull.			L1, L2, L3
Module 5			
Mathematical Morphology: Basic morphological concepts, Four morphological principles, Binary dilation and erosion, Skeletons and object marking, Morphological segmentations and watersheds.			L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> Understand the representation of the digital image and its properties 			

Apply pre-processing techniques required to enhance the image for its further analysis.

- Use segmentation techniques to select the region of interest in the image for analysis
Represent the image based on its shape and edge information.
Describe the objects present in the image based on its properties and structure.
- Use morphological operations to simplify images, and quantify and preserve the main shape characteristics of the objects.

Question paper pattern:

The question paper will have 10 full questions carrying equal marks. Each full question consists of 16 marks with a maximum of four sub questions.

- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

M.Tech 2018-Digital Electronics/ Electronics –
FIRST SEMESTER SYLLABUS

ADVANCED ENGINEERING MATHEMATICS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – I			
Subject	18ELD11	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> To learn principles of advanced engineering mathematics through linear algebra and calculus of variations. To understand probability theory and random process that serve as an essential tool for applications of electronics and communication engineering sciences. 			
Modules			RBT Level
Module -1			
<p><u>Linear Algebra-I</u> Introduction to vector spaces and sub-spaces, definitions, illustrative example. Linearly independent and dependent vectors- Basis-definition and problems. Linear transformations-definitions. Matrix form of linear transformations-Illustrative examples (Text Book:1).</p>			L1, L2
Module -2			
<p><u>Linear Algebra-II</u> Computation of eigen values and eigen vectors of real symmetric matrices-Given's method. Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process (Text. Book:1).</p>			L1, L2
Module -3			
<p>Calculus of Variations : - Concept of functional-Eulers equation. Functional dependent on first and higher order derivatives, Functional on several dependent variables. Isoperimetric problems-variation problems with moving boundaries.</p>			L1, L2
Module -4			

<p>Probability Theory:-Review of basic probability theory. Definitions of random variables and probability distributions, probability mass and density functions, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Poisson, Gaussian and Erlang distributions-examples. (Text Book: 3)</p>	<p>L1, L2</p>
<p>Module -5</p>	
<p>Engineering Applications on Random processes:- Classification. Stationary, WSS and ergodic random process. Auto-correlation function-properties, Gaussian random process. (Text Book: 3)</p>	<p>L2, L3, L4</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <p>CO-1: Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images.</p> <p>CO-2: Apply the technique of singular value decomposition for data compression, least square approximation in solving inconsistent linear systems.</p> <p>CO-3: Utilize the concepts of functional and their variations in the applications of communication systems, decision theory, synthesis and optimization of digital circuits.</p> <p>CO-4: Learn the idea of random variables (discrete/continuous) and probability distributions in analyzing the probability models arising in control systems and system communications.</p> <p>CO-5: Analyze random process through parameter-dependent variables in various random processes.</p>	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. David C.Lay, Steven R.Lay and J.J.McDonald: “LinearAlgebra and its Applications”, 5thEdition, Pearson Education Ltd., 2015 2. ADVANCED DIGITAL SIGNAL PROCESSING [As per Choice Based Credit System (CBCS) Scheme] SEMESTER – I			
Course Code	18ECS12	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Understand Multirate digital signal processing principles and its applications. • Estimate the various spectral components present in the received signal using different spectral estimation methods such as Parametric and Nonparametric. • Design and implement an optimum adaptive filter using LMS and RLS algorithms. • Understand the concepts and mathematical representations of Wavelet transforms. 			
Modules			RBT Levels
Module-1			
Multirate Digital Signal Processing: Introduction, decimation by a factor 'D', Interpolation by a factor 'I', sampling rate conversion by a factor 'I/D', Implementation of sampling rate conversion, Multistage implementation of sampling rate conversion, Applications of multirate signal processing, Digital filter banks, two channel quadrature mirror filter banks, M-channel QMF bank. (Text 1)			L1, L2, L3
Module-2			
Linear prediction and Optimum Linear Filters: Random signals, Correlation Functions and Power Spectra, Innovations Representation of a Stationary Random Process. Forward and Backward Linear Prediction. Solution of the Normal Equations. The Levinson-Durbin Algorithm. Properties of the Linear Prediction-Error Filters. (Text 1)			L1, L2, L3
Module-3			
Adaptive filters: Applications of Adaptive Filters-Adaptive Channel Equalization, Adaptive noise cancellation, Linear Predictive coding of Speech Signals, Adaptive direct form FIR filters-The LMS algorithm, Properties of LMS algorithm. Adaptive direct form filters- RLS algorithm. (Text 1)			L1, L2, L3
Module-4			
Power Spectrum Estimation: Non parametric Methods for Power Spectrum Estimation - Bartlett Method, Welch Method, Blackman and Tukey Methods. Parametric Methods for Power Spectrum Estimation:			L1, L2, L3

Relationship between the auto correlation and the model parameters, Yule and Walker methods for the AR Model Parameters, Burg Method for the AR Model parameters, Unconstrained least-squares method for the AR Model parameters, Sequential estimation methods for the AR Model parameters, ARMA Model for Power Spectrum Estimation. (Text 1)	
Module-5	
<p>WAVELET TRANSFORMS: The Age of Wavelets, The origin of Wavelets, Wavelets and other reality transforms, History of wavelets, Wavelets of the future.</p> <p>Continuous Wavelet and Short Time Fourier Transform: Wavelet Transform, Mathematical preliminaries, Properties of wavelets. Discrete Wavelet Transform: Haar scaling functions, Haar wavelet function, Daubechies Wavelets. (Chapters 1, 3 & 4 of Text 2)</p>	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Design adaptive filters for a given application • Design multirate DSP Systems • Implement adaptive signal processing algorithm • Design active networks • Understand advanced signal processing techniques, including multi-rate processing and time-frequency analysis techniques 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. “Digital Signal Processing, Principles, Algorithms and Applications”, JohnG. Proakis, Dimitris G.Manolakis, Fourth edition, Pearson-2007. 2. Insight into Wavelets- from Theory to Practice”, K.P Soman, Ramachandran, Resmi- PHI Third Edition-2010. 	

ADVANCED EMBEDDED SYSTEM [As per Choice Based Credit System (CBCS) scheme] SEMESTER - I			
Subject	18EVE13	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS - 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. • Describe the hardware software co-design and firmware design approaches • Explain the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. • Program ARM CORTEX M3 using the various instructions, for different applications. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>Embedded System: Embedded vs General computing system, classification, application and purpose of ES. Core of an Embedded System, Memory, Sensors, Actuators, LED, Opto coupler, Communication Interface, Reset circuits, RTC, WDT, Characteristics and Quality Attributes of Embedded Systems (Text 1: Selected Topics from Ch -1, 2, 3).</p>			L1, L2, L3
Module -2			
<p>Hardware Software Co-Design, embedded firmware design approaches, computational models, embedded firmware development languages, Integration and testing of Embedded Hardware and firmware, Components in embedded system development environment (IDE), Files generated during compilation, simulators, emulators and debugging (Text 1: Selected Topics From Ch-7, 9, 12, 13).</p>			L1, L2, L3
Module -3			
<p>ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)</p>			L1, L2, L3
Module -4			

Instruction Sets: Assembly basics, Instruction list and description, useful instructions, Memory Systems, Memory maps, Cortex M3 implementation overview, pipeline and bus interface (Text 2: Ch-4, 5, 6).	L1, L2, L3
Module -5	
Exceptions, Nested Vector interrupt controller design, SysTick Timer, Cortex-M3 Programming using assembly and C language, CMSIS (Text 2: Ch-7, 8, 10).	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. • Explain the hardware software co-design and firmware design approaches. • Acquire the knowledge of the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. • Apply the knowledge gained for Programming ARM CORTEX M3 for different applications. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. K. V. Shibu, "Introduction to embedded systems", TMH education Pvt. Ltd. 2009. 2. Joseph Yiu, "The Definitive Guide to the ARM Cortex-M3", 2nd edn, Newnes, (Elsevier), 2010. 	
<p>Reference Book:</p> <p>James K. Peckol, "Embedded systems- A contemporary design tool", John Wiley, 2008.</p>	

DIGITAL CIRCUITS AND LOGIC DESIGN [As per Choice Based Credit System (CBCS) scheme] SEMESTER - I			
Course Code	18ELD14	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits - 04			
Course objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Understand the concepts of sequential machines • Design Sequential Machines/Circuits • Analyze the faults in the design of circuits • Apply fault detection experiments to sequential circuits 			
Modules			RBT Levels
Module-1			
Threshold Logic: Introductory Concepts, Synthesis of Threshold Networks, Capabilities, Minimization, and Transformation of Sequential Machines: The Finite- State Model, Further Definitions, Capabilities.			L1, L2, L3
Module-2			
Fault Detection by Path Sensitizing, Detection of Multiple Faults, Failure-Tolerant Design, Quadded Logic, Reliable Design and Fault Diagnosis Hazards: Fault Detection in Combinational Circuits.			L1, L2, L3
Module-3			
Fault-Location Experiments, Boolean Differences, Limitations of Finite - State Machines, State Equivalence and Machine Minimization, Simplification of Incompletely Specified Machines.			L1, L2, L3
Module-4			
Structure of Sequential Machines: Introductory Example, State Assignments Using Partitions, The Lattice of closed Partitions, Reductions of the Output Dependency, Input Independence and Autonomous Clocks, Covers and Generation of closed Partitions by state splitting, Information Flow in Sequential Machines, ELD ecompositions, Synthesis of Multiple Machines.			L1, L2, L3
Module-5			

<p>State Identifications and Fault-Detection Experiments: Homing Experiments, Distinguishing Experiments, Machine Identification, Fault Detection Experiments, Design of Diagnosable Machines, Second Algorithm for the Design of Fault Detection Experiments, Fault-Detection.</p>	<p>L1, L2, L3</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the concepts of sequential machines • Design Sequential Machines/Circuits • Analyze the faults in the design of circuits • Apply fault detection experiments to sequential circuits 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Book: Zvi Kohavi, “Switching and Finite Automata Theory”, 2nd Edition, TMH, 2008, ISBN: 978_0_07_099387_7</p>

DIGITAL VLSI DESIGN [As per Choice Based Credit System (CBCS) scheme] SEMESTER -I			
Subject	18EVE15	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of	50 (10 Hours per Module)	Exam Hours	03
CREDITS - 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Explain VLSI Design Methodologies • Learn Static and Dynamic operation principles, analysis and design of inverter circuit. • Infer state of the art Semiconductors Memory circuits. • Outline the comprehensive coverage of Methodologies and Design practice that are used to reduce the Power Dissipation of large scale digital circuits. • Illustrate VLSI and ASIC design • Illustrate VLSI and ASIC design. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.</p> <p>MOS Inverters-Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load.</p>			L1, L2
Module -2			
<p>MOS Inverters-Static Characteristics: CMOS Inverter.</p> <p>MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.</p>			L2, L3
Module -3			
<p>Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).</p>			L1, L2, L3

Module -4	
<p>Dynamic Logic Circuits: Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS circuits.</p> <p>BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.</p>	L1,L2, L3
Module -5	
<p>Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.</p> <p>Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modeling.</p>	L2, L3
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyse issues of On-chip interconnect Modelling and Interconnect delay calculation. 2. Analyse the Switching Characteristics in Digital Integrated Circuits. 3. Use the Dynamic Logic circuits in state-of-the-art VLSI chips. 4. Study critical issues such as ESD protection, Clock distribution, Clock buffering, and Latch phenomenon 5. Use Bipolar and Bi-CMOS circuits in very high speed design. 	
<p>Question Paper Pattern</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

EMBEDDED SYSTEMS LAB [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Laboratory Code	18ELDL16	CIE Marks	40
Number of Lecture Hours/Week	01Hr Tutorial (Instructions)+ 03 Hours Laboratory	Exam Marks	60
		Exam Hours	03
CREDITS – 02			
<p>Course objectives: This laboratory course enables students to get practical experience on the</p> <ul style="list-style-type: none"> • Understand the design tool such as Cadence OrCAD/ OrCAD Lite /EDA tool • Design of analog and digital circuits using the simulation tool • Use of assembly level programming for different applications using ARM-CORTEX M3 Kit and Keil uVision-4 tool. • Practice the different concepts and applications of C programming environment with ARM CORTEX M3. 			
Laboratory Experiments			Revised Bloom's Taxonomy (RBT) Level
<p>Part A: EDA Using Cadence OrCAD or OrCAD Lite or any EDA Tool, design and verify the following:</p> <ol style="list-style-type: none"> a) 3½ Digit Digital Voltmeter b) Monolithic function Generator c) Regulated Power supplies d) Batch counter using TTL ICs. e) DAC and ADC f) P, PI, PID and ON/OFF Controllers g) Programmable Timers h) Filters and Resonance Circuits 			L2,L3,L4

<p>PART-B: ARM-CORTEX M3 [Programming to be done using Keil uVision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U]</p> <ol style="list-style-type: none"> a) Write an Assembly language program to calculate 10+9+8+ +1 b) Write a Assembly language program to link Multiple object files and link them together. c) Write a Assembly language program to store data in RAM. d) Write a C program to Output the "Hello World" message using UART. e) Write a C program to Design a Stopwatch using interrupts. f) Write an Exception vector table in C g) Write an Assembly Language Program for locking a Mutex. h) Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values. 	L3
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> • Understand the computer aided design tools for the electronic circuit designs. • Design an analog and digital systems using Cadence OrCAD, OrCAD Lite or any EDA tool. • Develop assembly programs for different applications using ARM Cortex M3 and Keil uVision-4 tool. • Develop C Programs for different applications using ARM-Cortex M3 and Keil uVision-4 tool. 	
<p>Conduct of Practical Examination:</p> <ol style="list-style-type: none"> 1. All laboratory experiments are to be included for practical examination. 2. For examination, two questions using different tool to be set. 3. Students are allowed to pick one experiment from the lot. 4. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. 5. Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero. 	

RESEARCH METHODOLOGY AND IPR [As per Choice Based Credit System (CBCS) scheme] SEMESTER –I			
Course Code	18RMI17	CIE Marks	40
Number of Lecture Hours/Week	02	Exam Hours	03
Total Number of Lecture Hours	25	SEE Marks	60
Credits - 02			
<p>Course objectives:</p> <ul style="list-style-type: none"> • To give an overview of the research methodology and explain the technique of defining a research problem • To explain the functions of the literature review in research. • To explain carrying out a literature search, its review, developing theoretical and conceptual frameworks and writing a review. • To explain various research designs and their characteristics. • To explain the details of sampling designs, and also different methods of data collections. • To explain the art of interpretation and the art of writing research reports. • To explain various forms of the intellectual property, its relevance and business impact in the changing global business environment. • To discuss leading International Instruments concerning Intellectual Property Rights. ■ 			
Module-1			Teaching Hours/ RBT Level
<p>Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. ■</p>			05 L1, L2
Module-2			
<p>Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.</p> <p>Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed. ■</p>			05 L1, L2
Module-3			

<p>Research Design: Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs.</p> <p>Design of Sample Surveys: Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs. ■</p>	<p>05</p> <p>L1, L2</p>
<p>Module-4</p>	
<p>Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method.</p> <p>Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout.</p> <p>Interpretation and Report Writing (continued): of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports. ■</p>	<p>05</p> <p>L1, L2,</p> <p>L3, L4</p>
<p>Module-5</p>	
<p>Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout-Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property Rights, UNSECO. ■</p>	<p>05</p> <p>L1, L2,</p> <p>L3, L4</p>

Course outcomes:

At the end of the course the student will be able to:

- Discuss research methodology and the technique of defining a research problem
- Explain the functions of the literature review in research, carrying out a literature search, developing theoretical and conceptual frameworks and writing a review.
- Explain various research designs and their characteristics.
- Explain the art of interpretation and the art of writing research reports
- Discuss various forms of the intellectual property, its relevance and business impact in the changing global business environment and leading International Instruments concerning IPR. ■

Question paper pattern:

- Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks.
- Each full question can have a maximum of 4 sub questions.
- There will be 2 full questions from each module covering all the topics of the module.
- Students will have to answer 5 full questions, selecting one full question from each module.
- The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

M.Tech 2018-Digital Electronics/ Electronics –
SECOND SEMESTER SYLLABUS

ADVANCED COMPUTER ARCHITECTURE [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	18ELD21	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to: <ul style="list-style-type: none"> • Understand the basic concepts for parallel processing • Analyze program partitioning and flow mechanisms • Apply pipelining concept for the performance evaluation • Learn the advanced processor architectures for suitable applications • Know concepts of Parallel Programming 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
Parallel Computer Models: The State of Computing, Multiprocessors and multicomputers, Multivector and SIMD computers. Program and Network Properties: Conditions of parallelism, Program Partitioning & Scheduling, Program Flow Mechanisms.			L1,L2, L3
Module -2			
Principles of Scalable Performance: Performance Metrics and Measures, Parallel Processing Applications, Speedup Performance Laws, Scalability Analysis and Approaches. Processors & Memory Hierarchy: Advanced processor technology, Super Scalars & Vector Processors, Memory Hierarchy Technology, Virtual Memory Technology.			L1,L2, L3,
Module -3			
Bus, Cache and Shared Memory: Bus Systems, Cache Memory Organizations, Shared Memory Organizations, Sequential & Weak Consistency Model. Pipelining & Superscalar Technologies: Linear Pipeline Processors, Nonlinear Pipeline Processors, Instruction Pipeline Design, Arithmetic Pipeline Design, Superscalar Pipeline Design.			L1, L2, L3
Module -4			

<p>Multivector & SIMD Computers: Vector Processing principles, Multivector Multiprocessors, Compound Vector Processing, SIMD Computer Organization.</p> <p>Scalable, Multithreaded and Data Flow Computers: Latency Hiding Techniques, Principles of Multithreading, Fine Grain Multi Computers, Scalable and Multithreaded Architectures, Data Flow and Hybrid Architectures.</p>	L1, L2, L3
Module -5	
<p>Parallel Models, Languages and Compilers: Parallel Programming Models, Parallel Languages & Compilers, Dependence Analysis and Data Arrays, Code Optimization and Scheduling, Loop Parallelization and Pipelining.</p> <p>Parallel Program Development and Environments: Parallel Programming Environments, Synchronization and Multi Processor Modes, Shared Variable Program Structures.</p>	L1, L2, L3
<p>Course outcomes: At the end of this course, the students will be able to:</p> <ul style="list-style-type: none"> • Understand the basic concepts for parallel processing • Analyze program partitioning and flow mechanisms • Apply pipelining concept for the performance evaluation • Learn the advanced processor architectures for suitable applications • Understand parallel Programming 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Book:</p> <p style="padding-left: 40px;">Kai Hwang & Narendra Jotwani, “Advanced Computer Architecture: Parallelism, Scalability, Programmability”, McGraw Hill Education, 3rd Edition, 2016, ISBN: 978-93-392-2092-1.</p>

Real Time Operating System [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	18EVE22	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50(10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Introduce the fundamental concepts of Real Time Operating Systems and the real time embedded system • Apply concepts relating to operating systems such as Scheduling techniques, Thread Safe Reentrant Functions, Dynamic priority policies. • Describe concepts related to Multi resource services like blocking, Deadlock, live lock & soft real-time services. • Discuss Memory management concepts, Embedded system components, Debugging components and file system components. • Study programs for multithreaded applications using suitable data structures. 			
Modules			RBT Level
Module 1			
Real-Time Systems and Resources: Brief history of Real Time Systems, A brief history of Embedded Systems. System Resources, Resource Analysis, Real-Time Service Utility, Scheduler concepts, Real-Time OS, State transition diagram and tables, Thread Safe Reentrant Functions. (Text 1: Selected sections from Chap. 1, 2)			L1,L2,L3
Module 2			
Processing with Real Time Scheduling: Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies with timing diagrams and problems and issues, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline –Monotonic Policy, Dynamic priority policies, Alternative to RM policy. (Text 1: Chap. 2,3,7)			L1,L2,L3
Module 3			
Memory and I/O: Worst case execution time, Intermediate I/O, Shared Memory, ECC Memory, Flash file systems. Multi-resource Services, Blocking, Deadlock and live lock, Critical sections to protect shared resources, Missed deadline, QoS, Reliability and Availability, Similarities and differences, Reliable software, Available software. (Text 1: Selected topics from Chap. 4,5,6,7,11)			L1,L2,L3
Module 4			
Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components. Debugging			L1,L2,L3

Components, Exceptions, assert, Checking return codes, Single-step debugging, Test access ports, Trace Ports. (Text 1: Selected topics from Chap. 8,9)	
Module 5	
Process and Threads: Process and thread creations, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication (Text 2: Chap. 11)	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Develop programs for real time services, firmware and RTOS, using the fundamentals of Real Time Embedded System, real time service utilities, debugging methodologies and optimization techniques. • Select the appropriate system resources (CPU, I/O, Memory, Cache, ECC Memory, Microcontroller/FPGA/ASIC to improve the system performance. • Apply priority based static and dynamic real time scheduling techniques for the given specifications. • Analyze deadlock conditions, shared memory problem, critical section problem, missed deadlines, availability, reliability and QoS. • Develop programs for multithreaded applications using suitable techniques and data structure 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sam Siewert, “Real-Time Embedded Systems and Components”, Cengage Learning India Edition, 2007. 2. Dr. K.V.K.K Prasad, Embedded/Real Time Systems, Concepts, Design and Programming, Black Book, Dream Tech Press, New edition, 2010. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. James W S Liu, “Real Time System”, Pearson education, 2008. 2. Dream Tech Software Team, “Programming for Embedded Systems”, John Wiley, India Pvt. Ltd., 2008. 	

ERROR CONTROL CODING [As per Choice Based Credit System (CBCS) Scheme] SEMESTER – 2			
Subject Code	18ECS23	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Understand the concept of the Entropy, information rate and capacity for the Discrete memoryless channel. • Apply modern algebra and probability theory for the coding. • Compare Block codes such as Linear Block Codes, Cyclic codes etc and Convolutional codes. • Detect and correct errors for different data communication and storage systems. • Implement different Block code encoders and decoders. • Analyze and implement convolutional encoders and decoders. • Analyze and apply soft and hard Viterbi algorithm for decoding of convolutional codes. 			
Modules			RBT Level
Module 1			
<p>Information theory: Introduction, Entropy, Source coding theorem, discrete memoryless channel, Mutual Information, Channel Capacity Channel coding theorem.(Chap. 5 of Text 1)</p> <p>Introduction to algebra: Groups, Fields, binary field arithmetic, Construction of Galois Fields $GF(2^m)$ and its properties, (Only statements of theorems without proof) Computation using Galois field $GF(2^m)$ arithmetic, Vector spaces and Matrices. (Chap. 2 of Text 2)</p>			L1,L2,L3
Module 2			
<p>Linear block codes: Generator and parity check matrices, Encoding circuits, Syndrome and error detection, Minimum distance considerations, Error detecting and error correcting capabilities, Standard array and syndrome decoding, Single Parity Check Codes (SPC), Repetition codes, Self dual codes, Hamming codes, Reed-Muller codes. Product codes and Interleaved codes. (Chap. 3 of Text 2)</p>			L1,L2,L3
Module 3			
<p>Cyclic codes: Introduction, Generator and parity check polynomials, Encoding of cyclic codes, Syndrome computing and error detection, Decoding of cyclic codes, Error trapping Decoding, Cyclic hamming codes, Shortened cyclic codes.(Chap. 4 of Text2)</p>			L1,L2,L3
Module 4			
<p>BCH codes: Binary primitive BCH codes, Decoding procedures,</p>			

<p>Implementation of Galois field arithmetic. (Chap. 6 (6.1,6.2,6.7) of Text 2)</p> <p>Primitive BCH codes over GF (q), Reed -Solomon codes. (Chap. 7 (7.2,7.3) of Text 2)</p> <p>Majority Logic decodable codes: One -step majority logic decoding, Multiple-step majority logic. (Chap. 8 (8.1,8.4) of Text 2)</p>	L1,L2,L3
Module 5	
<p>Convolution codes: Encoding of convolutional codes: Systematic and Nonsystematic Convolutional Codes, Feedforward encoder inverse, A catastrophic encoder, Structural properties of convolutional codes: state diagram, state table, state transition table, tree diagram, trellis diagram.</p> <p>Viterbi algorithm, Sequential decoding: Log Likelihood Metric for Sequential Decoding. (11.1,11.2, 12.1,13.1 of Text 2)</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Analyse a discrete memoryless channel, given the source and transition probabilities. • Apply the concept of modern linear algebra for the error control coding technique. • Construct and Implement efficient LBC, Cyclic codes etc encoder and decoders. • Apply decoding algorithms for efficient decoding of Block codes and Convolutional codes. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Simon Haykin, "Digital Communication systems", First edition, Wiley India Private. Ltd, 2014. ISBN 978-81-265-4231-4 2. Shu Lin and Daniel J. Costello. Jr, "Error control coding", Pearson, Prentice Hall, 2nd edition, 2004. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Blahut. R. E, "Theory and practice of error control codes", Addison Wesley, 1984. 2. Salvatore Gravano, "Introduction to Error control coding", Oxford university press, 2007. 3. Bernard Sklar, "Digital Communications - Fundamentals and Applications", 2nd Edition Pearson Education (Asia) Pvt. Ltd, 2001. 	

DIGITAL CIRCUITS SIMULATION LAB [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Laboratory Code	18ELDL26	CIE Marks	40
Number of Lecture Hours/Week	01Hr Tutorial (Instructions)+ 03 Hours Laboratory	SEE Marks	60
		Exam Hours	03
CREDITS – 02			
<p>Course objectives: This laboratory course enables students to</p> <ul style="list-style-type: none"> • Design and simulate digital electronic circuits using graphical programming tool LabVIEW. • Create user friendly interfaces using LabVIEW and analyze the input and output data for various digital circuits. • Understand the FPGA Design and testing for digital circuits • Design of digital circuits using Verilog programming • Verification and performance testing of digital circuits 			
Laboratory Experiments			Revised Bloom's Taxonomy (RBT) Level
<p>PART-A: Graphical Programming using LabVIEW</p> <ol style="list-style-type: none"> a) Design of 4 bit Adders (CLA, CSA, CMA, Parallel adders) b) Design of Binary Subtractors c) Design of Encoder (8X3), Decoder(3X8) d) Design of Multiplexer (8X1), and Demultiplexer (1X8) e) Design of code converters & Comparator f) Design of FF (SR, D, T, JK, and Master Slave with delays) g) Design of registers using latches and flip-flops h) Design of 8 bit Shift registers i) Design of Asynchronous & Synchronous Counters 			L3

<p>2. Develop Verilog Program for design and testing the following digital circuits (for 4/8 bits) using FPGA/CPLD. Use logic analyzer/Chipscope for the verification of results.</p> <p>(Note: Programming can be done using any compiler. Down load the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro. Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits.)</p> <ol style="list-style-type: none"> Carry skip and carry look ahead adder BCD adder and subtractor Array Multiplication (signed and unsigned) Booth multiplication (radix-4) Magnitude comparator LFSR Parity generator Universal Shift Register Sequence generation (11101 say) using Mealy/Moore FSM 	<p>L2, L3, L4</p>
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> Simulate the digital circuits using graphical programming tool LabVIEW. Build user friendly interfaces to interact with the digital circuits and to observe the outputs. Develop Verilog Programs for Digital Circuit design simulation and implement digital systems on FPGA/CPLD Testing and validation of digital systems using Logic analyzer/Chipscope 	
<p>Conduct of Practical Examination:</p> <ol style="list-style-type: none"> All laboratory experiments are to be included for practical examination. For examination, one question each to be set from PART-A and PART-B. Students are allowed to pick one experiment from the lot. Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. Change of experiment is allowed only once and Marks allotted to the procedure part will be made zero. 	

Professional Elective 1

Wireless Sensor Networks [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Course Code	18ECS241	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits – 04			
Course Outcomes:			
At the end of this course, students will be able to			
<ul style="list-style-type: none"> • Understand the hardware details of different types of sensors and select right type of sensor for various applications. • Understand conversion of sensor information into digital data and packetize to a specific protocol for Transmission • Understand radio standards and communication protocols to be used for wireless sensor. • Understand the issues involved in synchronization and security. 			
Modules			RBT Levels
Module-1			
Motivation for a Network of Wireless Sensor Nodes Sensing and Sensors, Wireless Sensor Networks, Challenges and Constraints (Chapt 1 till 1.2.7) Applications: Structural Health Monitoring (till 2.1.4), Traffic Control (2.2), Health Care (2.3), Pipeline Monitoring (2.4), Precision Agriculture (2.5)			L1, L2, L3
Module-2			
Sensing Node Architecture: The Sensing Subsystem (3.1), The Processor (3.2) Subsystem (3.2) (in brief only), Communication Interfaces (3.3), Prototypes (3.4) Medium Access Control : Overview - Contention-Free Medium Access, Contention-Based Medium Access (6.1), Wireless MAC Protocols – CSMA, MACA and MACAW, MACA By Invitation, IEEE 802.11, IEEE 802.15.4 and ZigBee (6.2), Characteristics of MAC Protocols in Sensor Networks (6.3), Contention-Free MAC Protocols (6.4), Contention-Based MAC Protocols (6.5), Hybrid MAC Protocols (6.6)			L1, L2, L3
Module-3			
Network Layer: 7.1 Overview , 7.2 Routing Metrics, 7.3 Flooding and Gossiping, 7.4 Data-Centric Routing, 7.5 Proactive Routing, 7.6 On-Demand Routing, 7.8 Location-Based Routing , 7.9 QoS-Based Routing Protocols			L1, L2, L3
Module-4			

<p>Power management: 8.1 Local Power Management Aspects, 8.2 Dynamic Power Management, 8.3 Conceptual Architecture.</p> <p>Time Synchronization: 9.1 Clocks and the Synchronization Problem, 9.2 Time Synchronization in Wireless Sensor Networks, 9.3 Basics of Time Synchronization, 9.4 Time Synchronization Protocols till (9.4.5)</p>	L1, L2, L3
Module-5	
<p>Localization: 10.1 Overview, 10.2 Ranging Techniques, 10.3 Range-Based Localization, 10.4 Range-Free Localization, 10.5 Event-Driven Localization.</p> <p>Network Security: 11.1 Fundamentals of Network Security, 11.2 Challenges of Security in Wireless Sensor Networks, 11.3 Security Attacks in Sensor</p>	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <p>CO1: Explain the concepts of sensors and conversion to digitally formatted signal for transmission.</p> <p>CO2: Evaluate the capacity and degradation in performance of various wireless MAC protocols in a transmission environment.</p> <p>CO3: Analyze schemes to transport sensor data to a server in a power efficient and time efficient manner.</p> <p>CO4: Develop and evaluate the performance of a sensor network including localization of sensor faults.</p>	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as see marks is 60. 	
<p>Text Book:</p> <p>1. Waltenegus Dargie and Christian Poellabauer, “Fundamentals of Wireless Sensor Networks Theory and Practice”, John Wiley & Sons Ltd. ISBN 978-0-470-99765-9, 2010.</p> <p>Reference Book:</p> <p>1. Ian F. Akyildiz and Mehmet Can Vuran “Wireless Sensor Networks”, John Wiley & Sons Ltd. ISBN 978-0-470-03601-3 (H/B), 2010.</p>	

Professional Elective 2

SoC DESIGN			
[As per Choice Based credit System (CBCS) Scheme			
SEMESTER – II			
Subject Code	18EVE252	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Describe the ARM processor architecture and user-level assembly language programming • Appreciate what a high-level language (in this case, C) really needs and how those needs are met by the ARM instruction set. • raises the issues involved in debugging systems which use embedded processor cores and in the production testing of board-level systems. • Learn the concept of memory hierarchy, discussing the principles of memory management and caches. 			
Modules			RBT Level
Module 1			
<p>ARM Organization and Implementation: 3-stage pipeline ARM organization, 5-stage pipeline ARM organization, ARM instruction execution, ARM implementation, The ARM coprocessor interface. The ARM Instruction Set : Introduction, Exceptions, Conditional execution, Branch and Branch with Link (B, BL), Branch, Branch with Link and eXchange (BX, BLX), Software Interrupt (SWI), Data processing instructions, Multiply instructions, Count leading zeros (CLZ - architecture v5T only), Single word and unsigned byte data transfer instruction, Half-word and signed byte data transfer instructions, Multiple register transfer instructions, Swap memory and register instructions (SWP), Status register to general register transfer instructions, General register to status register transfer instructions, Coprocessor instructions, Coprocessor data operations, Coprocessor data transfers, Coprocessor register transfers, Breakpoint instruction (BRK - architecture v5T only), Unused instruction space, Memory faults, ARM architecture variants.</p>			L1,L2
Module 2			
<p>Architectural Support for High-Level Languages: Abstraction in software design, Data types, Floating-point data types, The ARM floating-point architecture, Expressions, Conditional statements, Loops, Functions and procedures, Use of memory, Run-time environment. Architectural Support for System Development: The ARM</p>			L1,L2

memory interface, The Advanced Microcontroller Bus Architecture (AMBA), The ARM reference peripheral specification, Hardware system prototyping tools, The ARMulator, The JTAG boundary scan test architecture, The ARM debug architecture, Embedded Trace, Signal processing support.	
Module 3	
ARM Processor Cores: ARM7TDMI, ARM8,ARM9TDMI, ARM10TDMI ,Discussion ,Example and exercises. Memory Hierarchy: Memory size and speed, On-chip memory, Caches, Cache design - an example, Memory management, Examples and exercises.	L1,L2
Module 4	
Architectural Support for Operating Systems: An introduction to operating systems, The ARM system control coprocessor, CP15 protection unit registers, ARM protection unit,CP15 MMU registers, ARM MMU architecture, Synchronization, Context switching, Input/ Output, Example and exercises. ARM CPU Cores: The ARM710T, ARM720T and ARM740T, The ARM810,The Strong ARM SA-110,The ARM920T and ARM940T,The ARM946E-S and ARM966E-S,The ARM1020E,Discussion,Example and exercises.	L1,L2
Module 5	
Embedded ARM Applications: The VLSI Ruby II Advanced Communication Processor, The VLSI ISDN Subscriber Processor, The One C TM VWS22100 GSM chip, The Ericsson-VLSI Bluetooth Baseband Controller, The ARM7500 and ARM7500FE, The ARM7100 364,The SA-1100 368,Examples and exercises. The AMULET Asynchronous ARM Processors: Self-timed design 375,AMULET1 377,AMULET2 381,AMULET2e 384,AMULET3 387,The DRACO telecommunications controller 390, A self-timed future? 396, Example and exercises.	L1,L2,L3
Course Outcomes: After studying this course, students will be able to: 1. Apply the 3- and 5-stage pipeline ARM processor cores and analyse the implementation issues. 2. Use the concepts and methodologies employed in designing a System- on-chip (SoC) based around a microprocessor core and in designing the microprocessor core itself. 3. Understand how SoCs and microprocessors are designed and used, and why a modern processor is designed the way that it is. 4. Use integrated ARM CPU cores (including StrongARM) that incorporate full support for memory management. 5. Analyze the requirements of a modern operating system and use the ARM architecture to address the same.	
Question paper pattern: <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. 	

- Students will have to answer 5 full questions, selecting one full question from each module.
- The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

M.Tech 2018-Digital Electronics/ Electronics -
THIRD SEMESTER SYLLABUS

<u>SYNTHESIS AND OPTIMIZATION OF DIGITAL CIRCUITS</u> [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Course Code	18ELD31	CIA Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits – 04			
<p>Course objectives: This course will enable students to</p> <ul style="list-style-type: none"> • Understand the need for optimization and dimensions of optimization for digital circuits. • Understand basic optimization techniques used in circuits design • Understand advanced tools and techniques in digital systems design including Hardware Modeling and Compilation Techniques. • Explain details of Logic-Level synthesis and optimization techniques for combinational and sequential circuits. • Explain the concept of scheduling and resource binding for optimization. 			
Modules			RBT Levels
Module-1			
<p>Introduction to Synthesis and optimization: Design of Microelectronics circuits, Computer aided Synthesis and Optimization.</p> <p>Hardware Modeling: HDLs for Synthesis, Abstract models, Compilation and Behavioral Optimization. (Text1: Topics from Chap.1,3)</p>			L1, L2, L3
Module-2			
<p>Graph theory for CAD for VLSI: Graphs, Combinatorial Optimization, Graph Optimization problems and Algorithms, Boolean Algebra and Applications.</p> <p>Architectural Synthesis and Optimization: Fundamental Architectural Synthesis problems, Area and Performance Estimation, Strategies for Architectural Optimization, Datapath Synthesis, Control Path Synthesis.(Text1: Topics From Chap. 2,4)</p>			L1, L2, L3
Module-3			
<p>Two level Combinational Logic Optimization: Introduction, Logic Optimizations, Operations on Two level Logic Covers, Algorithms for Logic Minimization, Symbolic Minimization and Encoding Problems.</p> <p>Multiple Level Combinational Logic Optimization:</p>			L1, L2, L3

Introduction, Models and Transformations for Combinational Networks, The Algebraic Model, The Boolean Model. (Text1: Chap. 7, 8)	
Module-4	
Sequential Logic Optimization: Introduction, Sequential Logic Optimization using State based Models, Sequential Logic Optimization using Network Models, Implicit FSM Traversal Methods, Testability concerns for Synchronous Circuits. (Text 1: Chap. 9)	L1, L2, L3
Module-5	
Scheduling Algorithms: Introduction, A Model for Scheduling problems, Scheduling with Resource Constraints, Scheduling without Resource Constraints, Scheduling Algorithms for Extended Sequencing Models, Scheduling Pipelined Circuits. Resource Sharing and Binding: Sharing and Binding for Resource dominated circuits, Sharing and Binding for General Circuits, Concurrent Binding and Scheduling. (Text1: Chap. 5,6)	L1, L2, L3
Course Outcomes: After studying this course, students will be able to:	
<ul style="list-style-type: none"> • Understand the process of synthesis and optimization in a top down approach for digital circuits models using HDLs. • Understand the terminologies of graph theory and its algorithms to optimize a Boolean equation. • Apply different two level and multilevel optimization algorithms for combinational circuits • Apply the different sequential circuit optimization methods using state models and network models. • Apply different scheduling algorithms with resource binding and without resource binding for pipelined sequential circuits and extended sequencing models. 	
Question paper pattern:	
<ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

Professional Elective 3

Advances in Image Processing [As per Choice Based credit System (CBCS) Scheme SEMESTER – III			
Subject Code	18ECS321	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours Per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable students to:			
1. Acquire fundamental knowledge in understanding the representation of the digital image and its properties			
2. Equip with some pre-processing techniques required to enhance the image for further analysis purpose.			
3. Select the region of interest in the image using segmentation techniques.			
4. Represent the image based on its shape and edge information.			
5. Describe the objects present in the image based on its properties and structure.			
Modules			RBT Level
Module 1			
The image, its representations and properties: Image representations a few concepts, Image digitization, Digital image properties, Color images.			L1
Module 2			
Image Pre-processing: Pixel brightness transformations, geometric transformations, local pre-processing.			L1, L2
Module 3			
Segmentation: Thresholding; Edge-based segmentation – Edge image thresholding, Edge relaxation, Border tracing, Hough transforms; Region – based segmentation – Region merging, Region splitting, Splitting and merging, Watershed segmentation, Region growing post-processing.			L1, L2, L3
Module 4			
Shape representation and description: Region identification; Contour-based shape representation and description – Chain codes, Simple geometric border representation, Fourier transforms of boundaries, Boundary description using segment sequences, B-spline representation; Region-based shape representation and description – Simple scalar region descriptors, Moments, Convex hull.			L1, L2, L3
Module 5			
Mathematical Morphology: Basic morphological concepts, Four morphological principles, Binary dilation and erosion, Skeletons			L1, L2, L3

and object marking, Morphological segmentations and watersheds.	
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand the representation of the digital image and its properties 2. Apply pre-processing techniques required to enhance the image for its further analysis. 3. Use segmentation techniques to select the region of interest in the image for analysis 4. Represent the image based on its shape and edge information. 5. Describe the objects present in the image based on its properties and structure. 6. Use morphological operations to simplify images, and quantify and preserve the main shape characteristics of the objects. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Milan Sonka, Vaclav Hlavac, Roger Boyle, “Image Processing, Analysis, and Machine Vision”, Cengage Learning, 2013, ISBN: 978-81-315-1883-0 <p>Reference Books:</p> <ol style="list-style-type: none"> 1. Geoff Dougherty, Digital Image Processing for Medical Applications, Cambridge university Press, 2010 2. S.Jayaraman, S Esakkirajan, T.Veerakumar, Digital Image Processing, Tata McGraw Hill, 2011. 	

Professional Elective 4

Internet of Things [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Course Code	18ECS333	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Introduce concept of IOT and its applications in today’s scenario. • Understand IOT content generation and transport through networks • Understand the devices employed for IOT data acquisition and communication access technologies • Introduce some use cases of IOT 			
Module-1			RBT
<p>What is IOT Genesis, Digitization, Impact, Connected Roadways, Buildings, Challenges</p> <p>IOT Network Architecture and Design Drivers behind new network Architectures, Comparing IOT Architectures, M2M architecture, IOT world forum standard, IOT Reference Model, Simplified IOT Architecture.</p>			L1, L2
Module-2			
<p>IOT Network Architecture and Design Core IOT Functional Stack, Layer1(Sensors and Actuators) , Layer 2(Communications Sublayer), Access network sublayer, Gateways and backhaul sublayer, Network transport sublayer, IOT Network management. Layer 3(Applications and Analytics) – Analytics vs Control, Data vs Network Analytics IOT Data Management and Compute Stack</p>			L2,L3
Module-3			
<p>Engineering IOT Networks Things in IOT – Sensors, Actuators, MEMS and smart objects. Sensor networks, WSN, Communication protocols for WSN Communications Criteria, Range Frequency bands, power consumption, Topology, Constrained Devices, Constrained Node Networks IOT Access Technologies, IEEE 802.15.4 Competitive Technologies – Overview only of IEEE 802.15.4g, 4e, IEEE 1901.2a Standard Alliances – LTE Cat0, Cat-M, NB-IOT</p>			L2,L3
Module-4			

<p>Engineering IOT Networks IP as IOT network layer, Key Advantages, Adoption, Optimization, Constrained Nodes, Constrained Networks, IP versions, Optimizing IP for IOT. Application Protocols for IOT – Transport Layer, Application Transport layer, Background only of SCADA, Generic web based protocols, IOT Application Layer Data and Analytics for IOT – Introduction, Structured and Unstructured data, IOT Data Analytics overview and Challenges.</p>	L3,L4
Module-5	
<p>IOT in Industry (Three Use cases)</p> <ul style="list-style-type: none"> • IOT Strategy for Connected manufacturing, Architecture for Connected Factory • Utilities – Power utility, IT/OT divide, Grid blocks reference model, Reference Architecture, Primary substation grid block and automation. • Smart and Connected cities –Strategy, Smart city network Architecture, Street layer, city layer, Data center layer, services layer, Smart city security architecture, Smart street lighting. 	L3,L4
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the basic concepts IOT Architecture and devices employed. • Analyze the sensor data generated and map it to IOT protocol stack for transport. • Apply communications knowledge to facilitate transport of IOT data over various available communications media. • Design a use case for a typical application in real life ranging from sensing devices to analyzing the data available on a server to perform tasks on the device. 	
<p>Text Book: Cisco, IOT Fundamentals – Networking Technologies, Protocols, Use Cases for IOT, Pearson Education; First edition (16 August 2017). ISBN-10: 9386873745, ISBN-13: 978-9386873743</p>

14EVE27	Seminar on Advanced topics from refereed journals	--	3	--	25	--	25	1
**Project Phase-I(6 week Duration)								
Total		20	16	18	300	550	850	23

Elective-2:

14 EVE 255	SOC Design
------------	------------

**** Between the II Semester and III Semester, after availing a vocation of 2 weeks.**

VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM
SCHEME OF TEACHING AND EXAMINATION FOR
M.Tech. VLSI Design and Embedded Systems

III Semester: INTERNSHIP #

CREDIT BASED

Course Code	Subject	No. of Hrs./Week		Duration of the Exam in Hours	Marks for		Total Marks	CREDITS
		Lecture	Practical / Field Work		I.A.	Exam		
14EVE31	Midterm Presentation on Internship (After 8 weeks from the date of commencement) *	-	-	-	25	-	25	4
14EVE32	Report on Internship (After 16 weeks from the date of commencement)	-	-	-	75		75	12
14EVE33	Evaluation and Viva-voce	-	-	3	-	50	50	4
	Total	-	-	-	100	50	150	20

* The student shall make a midterm presentation of the activities undertaken during the first 8 weeks of internship to a panel comprising Internship Guide, a senior faculty from the department and Head of the Department.

The College shall facilitate and monitor the student internship program.

The internship report of each student shall be submitted to the University.

VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM
SCHEME OF TEACHING AND EXAMINATION FOR
M.TECH. VLSI Design and Embedded Systems

IV Semester

CREDIT BASED

Subject Code	Subject	No. of Hrs./Week		Duration of Exam in Hours	Marks for		Total Marks	CREDITS
		Lecture	Practical / Field Work / Assignment/ Tutorials		I.A.	Exam		
14EVE41	Synthesis and Optimization of Digital Circuits	4	2					
14EVE42X	Elective-3	4	2					
14EVE43	Evaluation of Project Phase-I	-	-	-	25	-	25	1
14EVE44	Phase-II : Midterm evaluation of Project #	-	-	-	25	-	25	1
14EVE45	Evaluation of Project Work and Viva-voce	-	-	3	-	100+100	200	18
Total		8	04	09	150	400	550	28
Grand Total (I to IV Sem.) : 2400 Marks; 94 Credits								

Elective-3:

14 EVE 421	Advances in VLSI Design
------------	-------------------------

Note:

- 1) Project Phase – I: 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalize the topic of dissertation.
- 2) Project Phase – II: 16 weeks duration during III Semester. Evaluation shall be taken during the Second week of the IV Semester. Total Marks shall be 25.
- 3) Project Evaluation: 24 weeks duration in IV Semester. Project Work Evaluation shall be taken up at the end of the IV Semester. Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be 250 (Phase I Evaluation: 25 Marks, Phase –II Evaluation: 25 Marks, Project Evaluation marks by Internal Examiner (guide): 50, Project Evaluation marks by External Examiner: 50, marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

- The I.A. Marks of Project Phase – I & II shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (Out of two external examiners at least one should be present).

Advanced Mathematics

Subject Code	: 14ELD11	IA Marks	: 50
No. of Lecture Hours / Week	: 04	Exam. Hours	: 03
Total No. of Lecture Hours	: 50	Exam. Marks	: 100

Matrix Theory

QR EL Decomposition – Eigen values using shifted QR algorithm- Singular Value EL Decomposition - Pseudo inverse- Least square approximations

Calculus of Variations

Concept of Functionals- Euler's equation – functional dependent on first and higher order derivatives – Functionals on several dependent variables – Isoperimetric problems- Variational problems with moving boundaries

Transform Methods

Laplace transform methods for one dimensional wave equation – Displacements in a string – Longitudinal vibration of a elastic bar – Fourier transform methods for one dimensional heat conduction problems in infinite and semi infinite rod.

Elliptic Equation

Laplace equation – Properties of harmonic functions – Fourier transform methods for laplace equations. Solution for Poisson equation by Fourier transforms method

Linear and Non Linear Programming

Simplex Algorithm- Two Phase and Big M techniques – Duality theory- Dual Simplex method. Non Linear Programming –Constrained extremal problems- Lagranges multiplier method- Kuhn- Tucker conditions and solutions

Digital VLSI Design

Subject Code : 14EVE12
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.

MOS Inverters: Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load, CMOS Inverter.

MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.

Dynamic Logic Circuits : Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.

Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).

Low-Power CMOS Logic Circuits: Introduction, Overview of Power Consumption, Low-Power Design Through Voltage Scaling, Estimation and Optimization of Switching Activity, Reduction of Switched Capacitance, Adiabatic Logic Circuits.

BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.

Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.

Design for Manufacturability : Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modelling, Parametric Yield Estimation, Parametric Yield Maximization, Worst-Case Analysis, Performance Variability Minimization.

Advanced Embedded Systems

Subject Code : 14EVE13
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Typical Embedded System : Core of the Embedded System, Memory, Sensors and Actuators, Communication Interface, Embedded Firmware, Other System Components.

Characteristics and Quality Attributes of Embedded Systems: Hardware Software Co-Design and Program Modeling: Fundamental Issues in Hardware Software Co-Design, Computational Models in Embedded Design, Introduction to Unified Modeling Language, Hardware Software Trade-offs.

Embedded Hardware Design and Development :EDA Tools, How to Use EDA Tool, Schematic Design – Place wire, Bus , port, junction, creating part numbers, Design Rules check, Bill of materials, Netlist creation , PCB Layout Design – Building blocks, Component placement, PCB track routing.

ARM -32 bit Microcontroller family. Architecture of ARM Cortex M3 –General Purpose Registers, Stack Pointer, Link Register, Program Counter, Special Register,. Nested Vector Interrupt Controller. Interrupt behavior of ARM Cortex M3. Exceptions Programming. Advanced Programming Features. Memory Protection. Debug Architecture.

Embedded Firmware Design and Development: Embedded Firmware Design Approaches, Embedded Firmware Development Languages

Real-Time Operating System (RTOS) based Embedded System Design: Operating System Basics, Types of OS, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling, Threads, Processes and Scheduling: Putting them altogether, Task Communication, Task Synchronization, Device Drivers, How to Choose an RTOS

The Embedded System Development Environment: The Integrated Development Environment (IDE), Types of Files Generated on Cross compilation, Disassembler/ELDompiler, Simulators, Emulators and Debugging, Target Hardware Debugging, Boundary Scan.

VLSI Process Technology

Subject Code : 14EVE14
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Crystal Growth and Wafer Preparation: Introduction, Electronic-Grade Silicon, Czochralski Crystal Growing, Silicon Shaping, Process Considerations.

Epitaxy: Introduction, Vapour-Phase Epitaxy, Molecular Beam Epitaxy, Silicon on Insulators, Epitaxial Evaluation.

Lithography: Introduction, Optical Lithography, Electron Lithography, X-ray Lithography, Ion Lithography.

Reactive Plasma Etching: Introduction, Plasma Properties, Feature-Size Control and Anisotropic Etch Mechanisms, Other Properties of Etch Processes, Reactive Plasma-Etching Techniques and Equipment, Specific Etch Processes.

Dielectric and Polysilicon Film Deposition: Introduction, Deposition Processes, Polysilicon, Silicon Dioxide, Silicon Nitride, Plasma-Assisted Depositions, Other Materials.

Ion Implantation: Introduction, Range Theory, Implantation Equipment, Annealing, Shallow Junctions, High-Energy Implantation.

Metallization: Introduction, Metallization Applications, Metallization Choices, Physical Vapor Deposition, Patterning, Metallization Problems, New Role of Metallization.

VLSI Process Integration: Introduction, Fundamental Considerations for IC Processing, NMOS IC technology, CMOS IC Technology, MOS Memory IC Technology, Bipolar IC Technology, IC Fabrication.

Packaging of VLSI Devices: Introduction, Package Types, Packaging Design Considerations.

Reference Books:

1. S. M. Sze, "VLSI Technology", McGraw-Hill, Second Edition.
2. S.K. Ghandhi, "VLSI Fabrication Principles", John Wiley Inc., New York, 1994, Second Edition.

Digital System Design Using Verilog

Subject Code : 14 ELD151
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.

Combinational Basics: Boolean Functions and Boolean Algebra, Binary Coding, Combinational Components and Circuits, Verification of Combinational Circuits.

Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers.

Sequential Basics: Storage elements, Counters, Sequential Datapaths and Control, Clocked Synchronous Timing Methodology.

Memories: Concepts, Memory Types, Error Detection and Correction.

Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.

Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory.

I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.

Accelerators: Concepts, case study, Verification of accelerators.

Design Methodology: Design flow, Design optimization, Design for test.

VLSI Design and Embedded System Lab -1

Subject Code : 14EVE16
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 50
Exam Hours : 03
Exam Marks : 50

VLSI Digital Design

ASIC-Digital Design Flow

1. Write Verilog Code for the following circuits and their Test Bench for verification, observe the waveform and synthesize the code with technological library(**constraints to be given**). Do the initial timing verification with gate level simulation.

1. An inverter, Buffer and Transmission gate
2. Basic/universal gates
3. Flip flop -RS, D, JK, MS, T
4. Serial & Parallel adder
5. 4-bit counter [Synchronous & Asynchronous counter]

FPGA DIGITAL DESIGN

VLSI Front End Design programs:

Programming can be done using any compiler. Download the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro apart from verification by simulation with any of the front end tools

1. Write Verilog code for the design of 8-bit
 - i. Carry Ripple Adder
 - ii. Carry LookAhead adder
 - iii. Carry Skip Adder
 - iv. BCD Adder & Subtractor

2. Write Verilog Code for 8-bit
 - i. Array Multiplication (Signed and Unsigned)
 - ii. Booth Multiplication (Radix-4)
3. Write Verilog code for 4/8-bit
 - i. Magnitude Comparator
 - ii. LFSR
 - iii. Parity Generator
 - iv. Universal Shift Register
4. Write Verilog Code for 3-bit Arbitrary Counter to generate 0,1,2,3,6,5,7 and repeats.
5. Design a Mealy and Moore Sequence Detector using Verilog to detect Sequence.
Eg 11101 (with and without overlap) any sequence can be specified
6. Design a FIFO and LIFO buffers in Verilog and Verify its Operation.
7. Design a coin operated public Telephone unit using Mealy FSM model with following operations
 - i. The calling process is initiated by lifting the receiver.
 - ii. Insert 1 Rupee Coin to make a call.
 - iii. If line is busy, placing the receiver on hook should return a coin
 - iv. If line is through, the call is allowed for 60 seconds at the 45th second prompt another 1 Rupee coin to be inserted, to continue the call.
 - v. If user doesn't insert the coin within 60 seconds the call should be terminated.
 - vi. The system is ready to accept new call request when the receiver is placed on the hook.
 - vii. The FSM goes 'out of order' state when there is a Line Fault.

Note: Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits

Embedded Systems:

1. Use any EDA (Electronic Design Automation) tool to learn the Embedded Hardware Design and for PCB design.
2. Familiarize the different entities for the circuit diagram design.

3. Familiarize with the layout design tool, building blocks, component placement, routings, design rule checking etc.

ARM-CORTEX M3

[Programming to be done using Keiluvision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U].

1. Write an Assembly language program to calculate $10+9+8+ \dots +1$
2. Write a Assembly language program to link Multiple object files and link them together.
3. Write a Assembly language program to store data in RAM.
4. Write a C program to Output the "Hello World" message using UART.
5. Write a C program to Design a Stopwatch using interrupts.
6. Write an Exception vector table in C
7. Write an Assembly Language Program for locking a Mutex.
8. Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values.

Design of Analog and Mixed Mode VLSI Circuits

Subject Code : 14 EVE21
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Basic MOS Device Physics: General considerations, MOS I/V Characteristics, second order effects, MOS device models.

Single stage Amplifier: CS stage with resistance load, divide connected load, current source load, triode load, CS stage with source degeneration, source follower, common-gate stage, cascade stage, choice of device models.

Frequency response of CS stage: source follower, Common gate stage, Cascade stage and Difference pair. Noise in CS stage, C- G stage, source follower, cascade stage, differential pair.

Differential Amplifiers & Current Mirrors: Basic difference pair, common mode response, Differential pair with MOS loads, Gilbert cell. Basic current mirrors, Cascade mirrors, active current mirrors.

Operational Amplifiers: One Stage OP-Amp. Two Stage OP-Amp, Gain boosting, Common Mode Feedback, Slew rate, Power Supply Rejection, Noise in Op Amps.

Oscillators and Phase Locked Loops: Ring Oscillators, LC Oscillators, VCO, Mathematical Model of VCO. Simple PLL, Charge pump PLL, Non-ideal effects in PLL, Delay locked loops and applications.

Bandgap Refernces and Switched capacitor Circuits: General Considerations, Supply Independent biasing, PTAT Current Generation, Constant Gm Biasing, Sampling Switches, Switched Capacitor Amplifiers.

Data Converter Architectures: DAC & ADC Specifications, Resistor String DAC, R-2R Ladder Network, Current Steering DAC, Charge Scaling DAC, Cyclic DAC, Pipeline DAC, Flash ADC, Pipeline ADC, Integrating ADC, Successive Approximation ADC.

Reference Book:

1. “Design of Analog CMOS Integrated Circuits”, Behzad Razavi, TMH, 2007.

Low Power VLSI Design

Subject Code : 14 EVE22
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction: Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits. Emerging Low power approaches, Physics of power dissipation in CMOS devices.

Device & Technology Impact on Low Power: Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

Power estimation, Simulation Power analysis: SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation.

Probabilistic power analysis: Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

Low Power Design Circuit level: Power consumption in circuits. Flip Flops & Latches design, high capacitance nodes, low power digital cells library.

Logic level: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic.

Low power Architecture & Systems: Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components, low power memory design.

Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co design of clock network.

Algorithm & Architectural Level Methodologies: Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

VLSI Testing and Verification

Subject Code : 14 EVE23
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction to Testing: Testing Philosophy, Role of Testing, Digital and Analog VLSI Testing, VLSI Technology Trends Affecting Testing. Faults in Digital Circuits: Failures and Faults, Modeling of Faults, Temporary Faults.

Test Generation for Combinational Logic Circuits: Fault Diagnosis of Digital Circuits, Test Generation Techniques for Combinational Circuits, Detection of Multiple Faults in Combinational Logic Circuits.

Design of Testable Sequential Circuits: Controllability and Observability, Ad Hoc Design Rules for Improving Testability, Design of Diagnosable Sequential Circuits, The Scan-Path Technique for Testable Sequential Circuit Design, Level-Sensitive Scan Design, Random Access Scan Technique, Partial Scan, Testable Sequential Circuit Design Using Nonscan Techniques, CrossCheck, Boundary Scan.

Built-In Self Test: Test Pattern Generation for BIST, Output Response Analysis, Circular BIST, BIST Architectures.

Testable Memory Design: RAM Fault Models, Test Algorithms for RAMs, Detection of Pattern Sensitive Faults, BIST Techniques for Ram Chips, Test Generation and BIST for Embedded RAMs.

Importance of Design Verification: What is verification? What is attest bench? The importance of verification, Reconvergence model, Formal verification, Equivalence checking, Model checking, Functional verification.[Ref4- Chapter1]

Verification Tools: Linting tools: Limitations of linting tools, linting verilog source code, linting VHDL source code, linting OpenVera and e-source code, code reviews. Simulators: Stimulus and response, Event based simulation, cycle based simulation, Co-simulators, verification intellectual property: hardware modelers, waveform viewers.[Ref4-Chapter2]

The verification plan: The role of verification plan: specifying the verification plan, defining the first success. Levels of verification: unit level verification, reusable components verification, ASIC and FPGA verification, system level verification, board level verification, verifying strategies, verifying responses. [Ref4-Chapter3]

Static Timing Verification: Concept of static timing analysis. Cross talk and noise. Limitations of STA. slew of a wave form, Skew between the signals, Timing arcs and unateness, Min and Max timing paths, clock domains, operating conditions, critical path analysis, falsepaths, Timing models. [Ref5 Chapter 1, 2, 3, 8]

Physical Design Verification: Layout rule checks and electrical rule checks. Parasitic extraction. Antenna, Crosstalk and Noise: Cross talk glitch analysis, crosstalk delayanalysis, timing verification [Ref6 Chapter 8]

Real Time Operating Systems

Subject Code : 14 ELD24
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction to Real-Time Embedded Systems: Brief history of Real Time Systems, A brief history of Embedded Systems.

System Resources: Resource Analysis, Real-Time Service Utility, Scheduling Classes, The Cyclic Executive, Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies, Real-Time OS, Thread Safe Reentrant Functions.

Processing: Preemptive Fixed-Priority Policy, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline – Monotonic Policy, Dynamic priority policies.

I/O Resources: Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.

Memory: Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems.

Multi-resource Services: Blocking, Deadlock and livelock, Critical sections to protect shared resources, priority inversion

Soft Real-Time Services: Missed Deadlines, QoS, Alternatives to rate monotonic policy, Mixed hard and soft real-time services.

Embedded System Components: Firmware components, RTOS system software mechanisms, Software application components.

Debugging Components: Exceptions assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace ports, Power-On self test and diagnostics, External test equipment, Application-level debugging.

Performance Tuning: Basic concepts of drill-down tuning, hardware – supported profiling and tracing, Building performance monitoring into software, Path length, Efficiency, and Call frequency, Fundamental optimizations.

High availability and Reliability Design: Reliability and Availability, Similarities and differences, Reliability, Reliable software, Available software, Design tradeoffs, Hierarchical applications for Fail-safe design.

Design of RTOS – PIC microcontroller. (Chap 13 of book Myke Predko)

SoC Design

Subject Code : 14EVE255
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Goal of the course – Today, VLSI chips are entire “system-on-chip” designs, which include processors, memories, peripheral controllers, and connectivity sub-systems. The course aims to provide an appreciation for the motivation behind SoC design, the challenges of SoC design, and the overall SoC design flow.

Motivation for SoC Design - Review of Moore’s law and CMOS scaling, benefits of system-on-chip integration in terms of cost, power, and performance. Comparison on System-on-Board, System-on-Chip, and System-in-Package. Typical goals in SoC design – cost reduction, power reduction, design effort reduction, performance maximization. Productivity gap issues and the ways to improve the gap – IP based design and design reuse.

System On Chip Design Process: A canonical SoC Design, SoC Designflow, waterfall vs spiral, top down vs bottom up, Specification requirement, Types of Specification, System Design Process, System level design issues, Soft IP vs Hard IP, IP verification and Integration, Hardware-Software codesign, Design for timing closure, Logic design issues, Verification strategy, On chip buses and interfaces, Low Power, Hardware Accelerators in Soc.

Embedded Memories –cache memories, flash memories, embedded DRAM. Topics related to cache memories. Cache coherence. MESI protocol and Directory-based coherence.

Interconnect architectures for SoC. Bus architecture and its limitations. Network on Chip (NOC) topologies. Mesh-based NoC. Routing in an NoC. Packet switching and wormhole routing.

MPSoCs: What, Why, How MPSoCs, Techniques for designing MPSoCs, Performance and flexibility for MPSoCs design

Case Study: A Low Power Open Multimedia Application Platform for 3G Wireless.

VLSI Design and Embedded System Lab -2

Subject Code : 14EVE26
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 25
Exam Hours : 03
Exam Marks : 50

ANALOG DESIGN

Analog Design Flow

1. Design an **Inverter** with given specifications*, completing the design flow mentioned below:
 - a. **Draw the schematic** and verify the following
 - i) DC Analysis
 - ii) Transient Analysis
 - b. **Draw the Layout** and verify the DRC, ERC
 - c. Check for XX
 - d. Extract RC and back annotate the same and verify the Design
 - e. Verify & Optimize for Time, Power and Area to the given constraint***
2. Design the following circuits with given specifications*, completing the design flow mentioned below:
 - a. Draw the schematic and verify the following
 - i) DC Analysis
 - ii) AC Analysis
 - iii) Transient Analysis
 - b. Draw the Layout and verify the DRC, ERC
 - c. Check for XX
 - d. Extract RC and back annotate the same and verify the Design.
 - i) A Single Stage differential amplifier

ii) Common source and Common Drain amplifier.

3. Design an op-amp with given specification* using given differential amplifier Common source and Common Drain amplifier in library** and completing the design flow mentioned below:

a. Draw the schematic and verify the following

i) DC Analysis

ii). AC Analysis

iii) Transient Analysis

b. Draw the Layout and verify the DRC, ERC

c. Check for XX

d. Extract RC and back annotate the same and verify the Design.

4. Design a 4 bit R-2R based DAC for the given specification and completing the design flow mentioned using given op-amp in the library**.

a. Draw the schematic and verify the following

i) DC Analysis

ii) AC Analysis

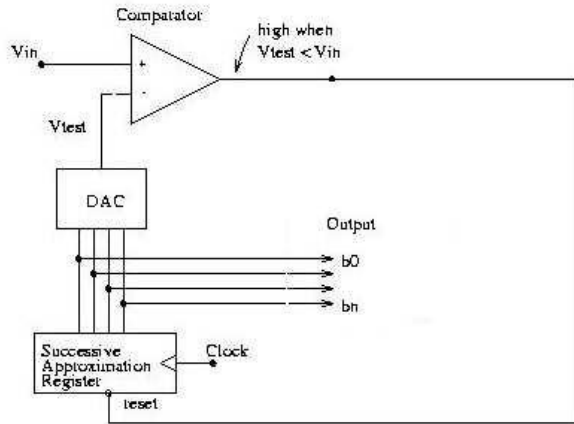

iii) Transient Analysis

b. Draw the Layout and verify the DRC, ERC

c. Check for XX

d. Extract RC and back annotate the same and verify the Design.

5. For the SAR based ADC mentioned in the figure below draw the mixed signal schematic and verify the functionality by completing ASIC Design FLOW.[Specifications to GDS-II]

* Appropriate specification should be given.

** Applicable Library should be added & information should be given to the Designer.

*** An appropriate constraint should be given

6 Design a simple 8-bit ADC converter using any one of the tools given above.

7. Design a simple NAND/NOR gate using any one of the tools given above.(Any other experiments may be added in supportive of the course)

EMBEDDED SYSTEMS

Embedded Programming Concepts (RTOS)

1. Create 'n' number of child threads. Each thread prints the message " I'm inthread number ..." and sleeps for 50 ms and then quits. The main thread waits for complete execution of all the child threads and then quits. Compile and execute in Linux.

2. Implement the multithread application satisfying the following :

i. Two child threads are created with normal priority.

ii. Thread 1 receives and prints its priority and sleeps for 50ms and then quits.

iii. Thread 2 prints the priority of the thread 1 and rises its priority to above normal and retrieves the new priority of thread 1, prints it and then quits.

iv. The main thread waits for the child thread to complete its job and quits.

3. Implement the usage of anonymous pipe with 512 bytes for data sharing between parent and child processes using handle inheritance mechanism.

4. Test the program below using multithread application

- i. The main thread creates a child thread with default stack size and name 'Child_Thread'.
- ii. The main thread sends user defined messages and the message 'WM_QUIT' randomly to the child thread.
- iii. The child thread processes the message posted by the main thread and quits when it receives the 'WM_QUIT' message.
- iv. The main thread checks the termination of the child thread and quits when the child thread completes its execution.
- v. The main thread continues sending the random messages to the child thread till the 'WM_QUIT' message is sent to child thread.
- vi. The messaging mechanism between the main thread and child thread is synchronous.

5. Test the program application for creating an anonymous pipe with 512 bytes of size and pass the 'Read Handle' of the pipe to a second process using memory mapped object. The first process writes a message 'Hi from Pipe Server'. The 2nd process reads the data written by the pipe server to the pipe and displays it on the console. Use event object for indicating the availability of data on the pipe and mutex objects for synchronizing the access in the pipe.

6. Create a POSIX based message queue for communicating between two tasks as per the requirements given below:-

- i. Use a named message queue with name 'MyQueue'.
- ii. Create two tasks (Task1 & Task2) with stack size 4000 & priorities 99 & 100 respectively.
- iii. Task 1 creates the specified message queue as Read Write and reads the message present, if any, from the message queue and prints it on the console.
- iv. Task 2 opens the message queue and posts the message 'Hi from Task2'. Handle all possible error scenarios appropriately.

Synthesis and Optimization of Digital Circuits

Subject Code : 14EVE41
No. of Lecture Hours /week: 04
Total no. of Lecture Hours : 50

IA Marks 50
Exam Hours 03
Exam Marks 100

Introduction: Microelectronics, semiconductor technologies and circuit taxonomy, Microelectronic design styles, computer aided synthesis and optimization.

Graphs: Notation, undirected graphs, directed graphs, combinatorial optimization, Algorithms, tractable and intractable problems, algorithms for linear and integer programs, graph optimization problems and algorithms, Boolean algebra and Applications.

Hardware Modeling: Hardware Modeling Languages, distinctive features, structural hardware language, Behavioural hardware language, HDLs used in synthesis, abstract models, structures logic networks, state diagrams, dataflow and sequencing graphs, compilation and optimization techniques.

Two Level Combinational Logic Optimization: Logic optimization, principles, operation on two level logic covers, algorithms for logic minimization, symbolic minimization and encoding property, minimization of Boolean relations.

Multiple Level Combinational Optimizations: Models and transformations for combinational networks, algebraic model, Synthesis of testable network, algorithm for delay evaluation and optimization, rule based system for logic optimization.

Sequential Circuit Optimization: Sequential circuit optimization using state based models, sequential circuit optimization using network models.

Schedule Algorithms: A model for scheduling problems, Scheduling wither source and without resource constraints, Scheduling algorithms for extended sequencing models, Scheduling Pipe lined circuits.

Cell Library Binding: Problem formulation and analysis, algorithms for library binding, specific problems and algorithms for library binding (lookup table F.P.G.As and Anti fuse based F.P.G.As), rule based library binding.

Testing: Simulation, Types of simulators, basic components of a simulator, fault simulation Techniques, Automatic test pattern generation methods(ATPG), design for Testability (DFT) Techniques.

Advances in VLSI Design

Subject Code : 14EVE421
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Review of MOS Circuits: MOS and CMOS static plots, switches, comparison between CMOS and BI - CMOS.

MESFETS: MESFET and MODFET operations, quantitative description of MESFETS.

MIS Structures and MOSFETS: MIS systems in equilibrium, under bias, small signal operation of MESFETS and MOSFETS.

Short Channel Effects and Challenges to CMOS: Short channel effects, scaling theory, processing challenges to further CMOS miniaturization

Beyond CMOS: Evolutionary advances beyond CMOS, carbon Nanotubes, conventional vs. tactile computing, computing, molecular and biological computing Mole electronics-molecular Diode and diode- diode logic. Defect tolerant computing,

Super Buffers, Bi-CMOS and Steering Logic: Introduction, RC delay lines, super buffers- An NMOS super buffer, tri state super buffer and pad drivers, CMOS super buffers, Dynamic ratio less inverters, large capacitive loads, pass logic, designing of transistor logic, General functional blocks -NMOS and CMOS functional blocks.

Special Circuit Layouts and Technology Mapping: Introduction, Talley circuits, NAND-NAND, NOR- NOR, and AOI Logic, NMOS, CMOS Multiplexers, Barrel shifter, Wire routing and module layout.

System Design: CMOS design methods, structured design methods, Strategies encompassing hierarchy, regularity, modularity & locality, CMOS Chip design Options, programmable logic, Programmable inter connect, programmable structure, Gate arrays standard cell approach, Full custom design.

Total		8	04	09	150	400	550	28
Grand Total (I to IV Sem.) : 2400 Marks; 94 Credits								

Elective-3:

14 EVE 421	Advances in VLSI Design
------------	-------------------------

Note:

- 1) Project Phase – I: 6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carry out literature survey / visit to Industries to finalize the topic of dissertation.
- 2) Project Phase – II: 16 weeks duration during III Semester. Evaluation shall be taken during the Second week of the IV Semester. Total Marks shall be 25.
- 3) Project Evaluation: 24 weeks duration in IV Semester. Project Work Evaluation shall be taken up at the end of the IV Semester. Project Work Evaluation and Viva-Voce Examinations shall be conducted. Total Marks shall be 250 (Phase I Evaluation: 25 Marks, Phase –II Evaluation: 25 Marks, Project Evaluation marks by Internal Examiner (guide): 50, Project Evaluation marks by External Examiner: 50, marks for external and 100 for viva-voce).

Marks of Evaluation of Project:

- The I.A. Marks of Project Phase – I & II shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university. (Out of two external examiners at least one should be present).

Advanced Mathematics

Subject Code	: 14ELD11	IA Marks	: 50
No. of Lecture Hours / Week	: 04	Exam. Hours	: 03
Total No. of Lecture Hours	: 50	Exam. Marks	: 100

Matrix Theory

QR EL Decomposition – Eigen values using shifted QR algorithm- Singular Value EL Decomposition - Pseudo inverse- Least square approximations

Calculus of Variations

Concept of Functionals- Euler's equation – functional dependent on first and higher order derivatives – Functionals on several dependent variables – Isoperimetric problems- Variational problems with moving boundaries

Transform Methods

Laplace transform methods for one dimensional wave equation – Displacements in a string – Longitudinal vibration of a elastic bar – Fourier transform methods for one dimensional heat conduction problems in infinite and semi infinite rod.

Elliptic Equation

Laplace equation – Properties of harmonic functions – Fourier transform methods for laplace equations. Solution for Poisson equation by Fourier transforms method

Linear and Non Linear Programming

Simplex Algorithm- Two Phase and Big M techniques – Duality theory- Dual Simplex method. Non Linear Programming –Constrained extremal problems- Lagranges multiplier method- Kuhn- Tucker conditions and solutions

Digital VLSI Design

Subject Code : 14EVE12
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.

MOS Inverters: Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load, CMOS Inverter.

MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.

Dynamic Logic Circuits : Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.

Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).

Low-Power CMOS Logic Circuits: Introduction, Overview of Power Consumption, Low-Power Design Through Voltage Scaling, Estimation and Optimization of Switching Activity, Reduction of Switched Capacitance, Adiabatic Logic Circuits.

BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.

Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.

Design for Manufacturability : Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modelling, Parametric Yield Estimation, Parametric Yield Maximization, Worst-Case Analysis, Performance Variability Minimization.

Advanced Embedded Systems

Subject Code : 14EVE13
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Typical Embedded System : Core of the Embedded System, Memory, Sensors and Actuators, Communication Interface, Embedded Firmware, Other System Components.

Characteristics and Quality Attributes of Embedded Systems: Hardware Software Co-Design and Program Modeling: Fundamental Issues in Hardware Software Co-Design, Computational Models in Embedded Design, Introduction to Unified Modeling Language, Hardware Software Trade-offs.

Embedded Hardware Design and Development :EDA Tools, How to Use EDA Tool, Schematic Design – Place wire, Bus , port, junction, creating part numbers, Design Rules check, Bill of materials, Netlist creation , PCB Layout Design – Building blocks, Component placement, PCB track routing.

ARM -32 bit Microcontroller family. Architecture of ARM Cortex M3 –General Purpose Registers, Stack Pointer, Link Register, Program Counter, Special Register,. Nested Vector Interrupt Controller. Interrupt behavior of ARM Cortex M3. Exceptions Programming. Advanced Programming Features. Memory Protection. Debug Architecture.

Embedded Firmware Design and Development: Embedded Firmware Design Approaches, Embedded Firmware Development Languages

Real-Time Operating System (RTOS) based Embedded System Design: Operating System Basics, Types of OS, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling, Threads, Processes and Scheduling: Putting them altogether, Task Communication, Task Synchronization, Device Drivers, How to Choose an RTOS

The Embedded System Development Environment: The Integrated Development Environment (IDE), Types of Files Generated on Cross compilation, Disassembler/ELDompiler, Simulators, Emulators and Debugging, Target Hardware Debugging, Boundary Scan.

VLSI Process Technology

Subject Code : 14EVE14
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Crystal Growth and Wafer Preparation: Introduction, Electronic-Grade Silicon, Czochralski Crystal Growing, Silicon Shaping, Process Considerations.

Epitaxy: Introduction, Vapour-Phase Epitaxy, Molecular Beam Epitaxy, Silicon on Insulators, Epitaxial Evaluation.

Lithography: Introduction, Optical Lithography, Electron Lithography, X-ray Lithography, Ion Lithography.

Reactive Plasma Etching: Introduction, Plasma Properties, Feature-Size Control and Anisotropic Etch Mechanisms, Other Properties of Etch Processes, Reactive Plasma-Etching Techniques and Equipment, Specific Etch Processes.

Dielectric and Polysilicon Film Deposition: Introduction, Deposition Processes, Polysilicon, Silicon Dioxide, Silicon Nitride, Plasma-Assisted Depositions, Other Materials.

Ion Implantation: Introduction, Range Theory, Implantation Equipment, Annealing, Shallow Junctions, High-Energy Implantation.

Metallization: Introduction, Metallization Applications, Metallization Choices, Physical Vapor Deposition, Patterning, Metallization Problems, New Role of Metallization.

VLSI Process Integration: Introduction, Fundamental Considerations for IC Processing, NMOS IC technology, CMOS IC Technology, MOS Memory IC Technology, Bipolar IC Technology, IC Fabrication.

Packaging of VLSI Devices: Introduction, Package Types, Packaging Design Considerations.

Reference Books:

1. S. M. Sze, "VLSI Technology", McGraw-Hill, Second Edition.

Digital System Design Using Verilog

Subject Code : 14 ELD151
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.

Combinational Basics: Boolean Functions and Boolean Algebra, Binary Coding, Combinational Components and Circuits, Verification of Combinational Circuits.

Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers.

Sequential Basics: Storage elements, Counters, Sequential Datapaths and Control, Clocked Synchronous Timing Methodology.

Memories: Concepts, Memory Types, Error Detection and Correction.

Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.

Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory.

I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.

Accelerators: Concepts, case study, Verification of accelerators.

Design Methodology: Design flow, Design optimization, Design for test.

REFERENCE BOOKS:

VLSI Design and Embedded System Lab -1

Subject Code : 14EVE16
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 50
Exam Hours : 03
Exam Marks : 50

VLSI Digital Design

ASIC-Digital Design Flow

1. Write Verilog Code for the following circuits and their Test Bench for verification, observe the waveform and synthesize the code with technological library(**constraints to be given**). Do the initial timing verification with gate level simulation.

1. An inverter, Buffer and Transmission gate
2. Basic/universal gates
3. Flip flop -RS, D, JK, MS, T
4. Serial & Parallel adder
5. 4-bit counter [Synchronous & Asynchronous counter]

FPGA DIGITAL DESIGN

VLSI Front End Design programs:

Programming can be done using any compiler. Download the programs on FPGA/CPLD boards and performance testing may be done using pattern generator (32 channels and logic analyzer)/Chipscope pro apart from verification by simulation with any of the front end tools

1. Write Verilog code for the design of 8-bit
 - i. Carry Ripple Adder
 - ii. Carry LookAhead adder
 - iii. Carry Skip Adder
 - iv. BCD Adder & Subtractor

2. Write Verilog Code for 8-bit
 - i. Array Multiplication (Signed and Unsigned)
 - ii. Booth Multiplication (Radix-4)
3. Write Verilog code for 4/8-bit
 - i. Magnitude Comparator
 - ii. LFSR
 - iii. Parity Generator
 - iv. Universal Shift Register
4. Write Verilog Code for 3-bit Arbitrary Counter to generate 0,1,2,3,6,5,7 and repeats.
5. Design a Mealy and Moore Sequence Detector using Verilog to detect Sequence.
Eg 11101 (with and without overlap) any sequence can be specified
6. Design a FIFO and LIFO buffers in Verilog and Verify its Operation.
7. Design a coin operated public Telephone unit using Mealy FSM model with following operations
 - i. The calling process is initiated by lifting the receiver.
 - ii. Insert 1 Rupee Coin to make a call.
 - iii. If line is busy, placing the receiver on hook should return a coin
 - iv. If line is through, the call is allowed for 60 seconds at the 45th second prompt another 1 Rupee coin to be inserted, to continue the call.
 - v. If user doesn't insert the coin within 60 seconds the call should be terminated.
 - vi. The system is ready to accept new call request when the receiver is placed on the hook.
 - vii. The FSM goes 'out of order' state when there is a Line Fault.

Note: Implementing the above designs on Xilinx/Altera/Cypress/equivalent based FPGA/CPLD kits

Embedded Systems:

1. Use any EDA (Electronic Design Automation) tool to learn the Embedded Hardware Design and for PCB design.
2. Familiarize the different entities for the circuit diagram design.

3. Familiarize with the layout design tool, building blocks, component placement, routings, design rule checking etc.

ARM-CORTEX M3

[Programming to be done using Keiluvision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U].

1. Write an Assembly language program to calculate $10+9+8+ \dots +1$
2. Write a Assembly language program to link Multiple object files and link them together.
3. Write a Assembly language program to store data in RAM.
4. Write a C program to Output the "Hello World" message using UART.
5. Write a C program to Design a Stopwatch using interrupts.
6. Write an Exception vector table in C
7. Write an Assembly Language Program for locking a Mutex.
8. Write a SVC handler in C. Use the wrapper code to extract the correct stack frame starting location. The C handler can then use this to extract the stacked PC location and the stacked register values.

Design of Analog and Mixed Mode VLSI Circuits

Subject Code : 14 EVE21
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Basic MOS Device Physics: General considerations, MOS I/V Characteristics, second order effects, MOS device models.

Single stage Amplifier: CS stage with resistance load, divide connected load, current source load, triode load, CS stage with source degeneration, source follower, common-gate stage, cascade stage, choice of device models.

Frequency response of CS stage: source follower, Common gate stage, Cascade stage and Difference pair. Noise in CS stage, C- G stage, source follower, cascade stage, differential pair.

Differential Amplifiers & Current Mirrors: Basic difference pair, common mode response, Differential pair with MOS loads, Gilbert cell. Basic current mirrors, Cascade mirrors, active current mirrors.

Operational Amplifiers: One Stage OP-Amp. Two Stage OP-Amp, Gain boosting, Common Mode Feedback, Slew rate, Power Supply Rejection, Noise in Op Amps.

Oscillators and Phase Locked Loops: Ring Oscillators, LC Oscillators, VCO, Mathematical Model of VCO. Simple PLL, Charge pump PLL, Non-ideal effects in PLL, Delay locked loops and applications.

Bandgap Refernces and Switched capacitor Circuits: General Considerations, Supply Independent biasing, PTAT Current Generation, Constant Gm Biasing, Sampling Switches, Switched Capacitor Amplifiers.

Data Converter Architectures: DAC & ADC Specifications, Resistor String DAC, R-2R Ladder Network, Current Steering DAC, Charge Scaling DAC, Cyclic DAC, Pipeline DAC, Flash ADC, Pipeline ADC, Integrating ADC, Successive Approximation ADC.

Reference Book:

1. “Design of Analog CMOS Integrated Circuits”, Behzad Razavi, TMH, 2007.

Low Power VLSI Design

Subject Code : 14 EVE22
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction: Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits. Emerging Low power approaches, Physics of power dissipation in CMOS devices.

Device & Technology Impact on Low Power: Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

Power estimation, Simulation Power analysis: SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power, gate level capacitance estimation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation.

Probabilistic power analysis: Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

Low Power Design Circuit level: Power consumption in circuits. Flip Flops & Latches design, high capacitance nodes, low power digital cells library.

Logic level: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic.

Low power Architecture & Systems: Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components, low power memory design.

Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co design of clock network.

Algorithm & Architectural Level Methodologies: Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis.

Reference Books:

VLSI Testing and Verification

Subject Code : 14 EVE23
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction to Testing: Testing Philosophy, Role of Testing, Digital and Analog VLSI Testing, VLSI Technology Trends Affecting Testing. Faults in Digital Circuits: Failures and Faults, Modeling of Faults, Temporary Faults.

Test Generation for Combinational Logic Circuits: Fault Diagnosis of Digital Circuits, Test Generation Techniques for Combinational Circuits, Detection of Multiple Faults in Combinational Logic Circuits.

Design of Testable Sequential Circuits: Controllability and Observability, Ad Hoc Design Rules for Improving Testability, Design of Diagnosable Sequential Circuits, The Scan-Path Technique for Testable Sequential Circuit Design, Level-Sensitive Scan Design, Random Access Scan Technique, Partial Scan, Testable Sequential Circuit Design Using Nonscan Techniques, CrossCheck, Boundary Scan.

Built-In Self Test: Test Pattern Generation for BIST, Output Response Analysis, Circular BIST, BIST Architectures.

Testable Memory Design: RAM Fault Models, Test Algorithms for RAMs, Detection of Pattern Sensitive Faults, BIST Techniques for Ram Chips, Test Generation and BIST for Embedded RAMs.

Importance of Design Verification: What is verification? What is attest bench? The importance of verification, Reconvergence model, Formal verification, Equivalence checking, Model checking, Functional verification.[Ref4- Chapter1]

Verification Tools: Linting tools: Limitations of linting tools, linting verilog source code, linting VHDL source code, linting OpenVera and e-source code, code reviews. Simulators: Stimulus and response, Event based simulation, cycle based simulation, Co-simulators, verification intellectual property: hardware modelers, waveform viewers.[Ref4-Chapter2]

The verification plan: The role of verification plan: specifying the verification plan, defining the first success. Levels of verification: unit level verification, reusable components verification, ASIC and FPGA verification, system level verification, board level verification, verifying strategies, verifying responses. [Ref4-Chapter3]

Static Timing Verification: Concept of static timing analysis. Cross talk and noise. Limitations of STA. slew of a wave form, Skew between the signals, Timing arcs and unateness, Min and Max timing paths, clock domains, operating conditions, critical path analysis, falsepaths, Timing models. [Ref5 Chapter 1, 2, 3, 8]

Physical Design Verification: Layout rule checks and electrical rule checks. Parasitic extraction. Antenna, Crosstalk and Noise: Cross talk glitch analysis, crosstalk delayanalysis, timing verification [Ref6 Chapter 8]

Real Time Operating Systems

Subject Code : 14 ELD24
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Introduction to Real-Time Embedded Systems: Brief history of Real Time Systems, A brief history of Embedded Systems.

System Resources: Resource Analysis, Real-Time Service Utility, Scheduling Classes, The Cyclic Executive, Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies, Real-Time OS, Thread Safe Reentrant Functions.

Processing: Preemptive Fixed-Priority Policy, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline – Monotonic Policy, Dynamic priority policies.

I/O Resources: Worst-case Execution time, Intermediate I/O, Execution efficiency, I/O Architecture.

Memory: Physical hierarchy, Capacity and allocation, Shared Memory, ECC Memory, Flash file systems.

Multi-resource Services: Blocking, Deadlock and livelock, Critical sections to protect shared resources, priority inversion

Soft Real-Time Services: Missed Deadlines, QoS, Alternatives to rate monotonic policy, Mixed hard and soft real-time services.

Embedded System Components: Firmware components, RTOS system software mechanisms, Software application components.

Debugging Components: Exceptions assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace ports, Power-On self test and diagnostics, External test equipment, Application-level debugging.

Performance Tuning: Basic concepts of drill-down tuning, hardware – supported profiling and tracing, Building performance monitoring into software, Path length, Efficiency, and Call frequency, Fundamental optimizations.

High availability and Reliability Design: Reliability and Availability, Similarities and differences, Reliability, Reliable software, Available software, Design tradeoffs, Hierarchical applications for Fail-safe design.

Design of RTOS – PIC microcontroller. (Chap 13 of book Myke Predko)

SoC Design

Subject Code : 14EVE255
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Goal of the course – Today, VLSI chips are entire “system-on-chip” designs, which include processors, memories, peripheral controllers, and connectivity sub-systems. The course aims to provide an appreciation for the motivation behind SoC design, the challenges of SoC design, and the overall SoC design flow.

Motivation for SoC Design - Review of Moore’s law and CMOS scaling, benefits of system-on-chip integration in terms of cost, power, and performance. Comparison on System-on-Board, System-on-Chip, and System-in-Package. Typical goals in SoC design – cost reduction, power reduction, design effort reduction, performance maximization. Productivity gap issues and the ways to improve the gap – IP based design and design reuse.

System On Chip Design Process: A canonical SoC Design, SoC Designflow, waterfall vs spiral, top down vs bottom up, Specification requirement, Types of Specification, System Design Process, System level design issues, Soft IP vs Hard IP, IP verification and Integration, Hardware-Software codesign, Design for timing closure, Logic design issues, Verification strategy, On chip buses and interfaces, Low Power, Hardware Accelerators in Soc.

Embedded Memories –cache memories, flash memories, embedded DRAM. Topics related to cache memories. Cache coherence. MESI protocol and Directory-based coherence.

Interconnect architectures for SoC. Bus architecture and its limitations. Network on Chip (NOC) topologies. Mesh-based NoC. Routing in an NoC. Packet switching and wormhole routing.

MPSoCs: What, Why, How MPSoCs, Techniques for designing MPSoCs, Performance and flexibility for MPSoCs design

Case Study: A Low Power Open Multimedia Application Platform for 3G Wireless.

VLSI Design and Embedded System Lab -2

Subject Code : 14EVE26
No. of Lecture Hours /week : 03
Total no. of Lecture Hours : 42

IA Marks : 25
Exam Hours : 03
Exam Marks : 50

ANALOG DESIGN

Analog Design Flow

1. Design an **Inverter** with given specifications*, completing the design flow mentioned below:
 - a. **Draw the schematic** and verify the following
 - i) DC Analysis
 - ii) Transient Analysis
 - b. **Draw the Layout** and verify the DRC, ERC
 - c. Check for XX
 - d. Extract RC and back annotate the same and verify the Design
 - e. Verify & Optimize for Time, Power and Area to the given constraint***
2. Design the following circuits with given specifications*, completing the design flow mentioned below:
 - a. Draw the schematic and verify the following
 - i) DC Analysis
 - ii) AC Analysis
 - iii) Transient Analysis
 - b. Draw the Layout and verify the DRC, ERC
 - c. Check for XX
 - d. Extract RC and back annotate the same and verify the Design.
 - i) A Single Stage differential amplifier

ii) Common source and Common Drain amplifier.

3. Design an op-amp with given specification* using given differential amplifier Common source and Common Drain amplifier in library** and completing the design flow mentioned below:

a. Draw the schematic and verify the following

i) DC Analysis

ii). AC Analysis

iii) Transient Analysis

b. Draw the Layout and verify the DRC, ERC

c. Check for XX

d. Extract RC and back annotate the same and verify the Design.

4. Design a 4 bit R-2R based DAC for the given specification and completing the design flow mentioned using given op-amp in the library**.

a. Draw the schematic and verify the following

i) DC Analysis

ii) AC Analysis

iii) Transient Analysis

b. Draw the Layout and verify the DRC, ERC

c. Check for XX

d. Extract RC and back annotate the same and verify the Design.

5. For the SAR based ADC mentioned in the figure below draw the mixed signal schematic and verify the functionality by completing ASIC Design FLOW.[Specifications to GDS-II]

* Appropriate specification should be given.

** Applicable Library should be added & information should be given to the Designer.

*** An appropriate constraint should be given

6 Design a simple 8-bit ADC converter using any one of the tools given above.

7. Design a simple NAND/NOR gate using any one of the tools given above.(Any other experiments may be added in supportive of the course)

EMBEDDED SYSTEMS

Embedded Programming Concepts (RTOS)

1. Create 'n' number of child threads. Each thread prints the message " I'm inthread number ... " and sleeps for 50 ms and then quits. The main thread waits for complete execution of all the child threads and then quits. Compile and execute in Linux.

2. Implement the multithread application satisfying the following :

i. Two child threads are created with normal priority.

ii. Thread 1 receives and prints its priority and sleeps for 50ms and then quits.

iii. Thread 2 prints the priority of the thread 1 and rises its priority to above normal and retrieves the new priority of thread 1, prints it and then quits.

iv. The main thread waits for the child thread to complete its job and quits.

3. Implement the usage of anonymous pipe with 512 bytes for data sharing between parent and child processes using handle inheritance mechanism.

4. Test the program below using multithread application

- i. The main thread creates a child thread with default stack size and name 'Child_Thread'.
- ii. The main thread sends user defined messages and the message 'WM_QUIT' randomly to the child thread.
- iii. The child thread processes the message posted by the main thread and quits when it receives the 'WM_QUIT' message.
- iv. The main thread checks the termination of the child thread and quits when the child thread completes its execution.
- v. The main thread continues sending the random messages to the child thread till the 'WM_QUIT' message is sent to child thread.
- vi. The messaging mechanism between the main thread and child thread is synchronous.

5. Test the program application for creating an anonymous pipe with 512 bytes of size and pass the 'Read Handle' of the pipe to a second process using memory mapped object. The first process writes a message 'Hi from Pipe Server'. The 2nd process reads the data written by the pipe server to the pipe and displays it on the console. Use event object for indicating the availability of data on the pipe and mutex objects for synchronizing the access in the pipe.

6. Create a POSIX based message queue for communicating between two tasks as per the requirements given below:-

- i. Use a named message queue with name 'MyQueue'.
- ii. Create two tasks (Task1 & Task2) with stack size 4000 & priorities 99 & 100 respectively.
- iii. Task 1 creates the specified message queue as Read Write and reads the message present, if any, from the message queue and prints it on the console.
- iv. Task2 opens the message queue and posts the message 'Hi from Task2'. Handle all possible error scenarios appropriately.

Synthesis and Optimization of Digital Circuits

Subject Code : 14EVE41
No. of Lecture Hours /week: 04
Total no. of Lecture Hours : 50

IA Marks 50
Exam Hours 03
Exam Marks 100

Introduction: Microelectronics, semiconductor technologies and circuit taxonomy, Microelectronic design styles, computer aided synthesis and optimization.

Graphs: Notation, undirected graphs, directed graphs, combinatorial optimization, Algorithms, tractable and intractable problems, algorithms for linear and integer programs, graph optimization problems and algorithms, Boolean algebra and Applications.

Hardware Modeling: Hardware Modeling Languages, distinctive features, structural hardware language, Behavioural hardware language, HDLs used in synthesis, abstract models, structures logic networks, state diagrams, dataflow and sequencing graphs, compilation and optimization techniques.

Two Level Combinational Logic Optimization: Logic optimization, principles, operation on two level logic covers, algorithms for logic minimization, symbolic minimization and encoding property, minimization of Boolean relations.

Multiple Level Combinational Optimizations: Models and transformations for combinational networks, algebraic model, Synthesis of testable network, algorithm for delay evaluation and optimization, rule based system for logic optimization.

Sequential Circuit Optimization: Sequential circuit optimization using state based models, sequential circuit optimization using network models.

Schedule Algorithms: A model for scheduling problems, Scheduling wither source and without resource constraints, Scheduling algorithms for extended sequencing models, Scheduling Pipe lined circuits.

Cell Library Binding: Problem formulation and analysis, algorithms for library binding, specific problems and algorithms for library binding (lookup table F.P.G.As and Anti fuse based F.P.G.As), rule based library binding.

Testing: Simulation, Types of simulators, basic components of a simulator, fault simulation Techniques, Automatic test pattern generation methods(ATPG), design for Testability (DFT) Techniques.

Advances in VLSI Design

Subject Code : 14EVE421
No. of Lecture Hours /week : 04
Total no. of Lecture Hours : 50

IA Marks : 50
Exam Hours : 03
Exam Marks : 100

Review of MOS Circuits: MOS and CMOS static plots, switches, comparison between CMOS and BI - CMOS.

MESFETS: MESFET and MODFET operations, quantitative description of MESFETS.

MIS Structures and MOSFETS: MIS systems in equilibrium, under bias, small signal operation of MESFETS and MOSFETS.

Short Channel Effects and Challenges to CMOS: Short channel effects, scaling theory, processing challenges to further CMOS miniaturization

Beyond CMOS: Evolutionary advances beyond CMOS, carbon Nanotubes, conventional vs. tactile computing, computing, molecular and biological computing Mole electronics-molecular Diode and diode- diode logic. Defect tolerant computing,

Super Buffers, Bi-CMOS and Steering Logic: Introduction, RC delay lines, super buffers- An NMOS super buffer, tri state super buffer and pad drivers, CMOS super buffers, Dynamic ratio less inverters, large capacitive loads, pass logic, designing of transistor logic, General functional blocks -NMOS and CMOS functional blocks.

Special Circuit Layouts and Technology Mapping: Introduction, Talley circuits, NAND-NAND, NOR- NOR, and AOI Logic, NMOS, CMOS Multiplexers, Barrel shifter, Wire routing and module layout.

System Design: CMOS design methods, structured design methods, Strategies encompassing hierarchy, regularity, modularity & locality, CMOS Chip design Options, programmable logic, Programmable inter connect, programmable structure, Gate arrays standard cell approach, Full custom design.

Elective -3	
16ECS422	Advances in Image Processing

Note:

1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted.

a. Internal Examiner shall carry out the evaluation for 100 marks.

b. External Examiner shall carry out the evaluation for 100 marks.

c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.

d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.Tech-VLSI & ES-2016-FIRST SEMESTER SYLLABUS

ADVANCED ENGINEERING MATHEMATICS

[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	16ELD11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Acquaint with principles of linear algebra, calculus of variations, probability theory and random process.
- Apply the knowledge of linear algebra, calculus of variations, probability theory and random process in the applications of electronics and communication engineering sciences.

Modules	Revised Bloom's Taxonomy (RBT) Level
----------------	---

Module -1

Linear Algebra-I

Introduction to vector spaces and sub-spaces, definitions, illustrative examples and simple problems. Linearly independent and dependent vectors-definition and problems. Basis vectors, dimension of a vector space. Linear transformations- definition, properties and problems. Rank-Nullity theorem(without proof). Matrix form of linear transformations-Illustrative examples.(**Text 1 & Ref. 1**)

L1,L2

Module -2

Linear Algebra-II

Computation of Eigen values and Eigen vectors of real symmetric matrices-Given's method. Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process. QR decomposition, singular value decomposition, least square approximations.(**Text 1 & Ref. 1**)

L1,L2

Module -3

Calculus of Variations

Concept of functional-Eulers equation. functional dependent on first and higher order derivatives, functional on several dependent variables. Isoperimetric problems-variation problems with moving boundaries.(**Text 2 & Ref. 2**)

L1,L2

Module -4

<p>Probability Theory Review of basic probability theory. Definitions of random variables and probability distributions, probability mass and density functions, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Binomial, Poisson, Exponential, Gaussian and Rayleigh distributions-examples.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Module -5</p>	
<p>Joint probability distributions Definition and properties of CDF, PDF, PMF, conditional distributions. Expectation, covariance and correlation. Independent random variables. Statement of central limit theorem-Illustrative examples. Random process- Classification, stationary and ergodic random process. Auto correlation function-properties, Gaussian random process.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images. • Apply the techniques of QR and singular value decomposition for data compression, least square approximation in solving inconsistent linear systems. • Utilize the concepts of functionals and their variations in the applications of communication systems, decision theory, synthesis and optimization of digital circuits. • Learn the idea of random variables (discrete/continuous) and probability distributions in analyzing the probability models arising in control systems and system communications. • Apply the idea of joint probability distributions and the role of parameter-dependent random variables in random process. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

DIGITAL VLSI DESIGN[As per Choice Based Credit System (CBCS) scheme]
SEMESTER –I

Subject Code	16EVE12	IA Marks	20
Number	04	Exam Marks	80
Total Number of	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Explain VLSI Design Methodologies
- Learn Static and Dynamic operation principles, analysis and design of inverter circuit.
- Infer state of the art Semiconductors Memory circuits.
- Outline the comprehensive coverage of Methodologies and Design practice that are used to reduce the Power Dissipation of large scale digital circuits.
- Illustrate VLSI and ASIC design.

Modules	Revised Bloom's Taxonomy (RBT) Level
----------------	---

Module -1

MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.

MOS Inverters-Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load.

L1, L2**Module -2**

MOS Inverters-Static Characteristics: CMOS Inverter.

MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.

L2, L3**Module -3**

<p>Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).</p>	<p>L1, L2, L3</p>
<p>Module -4</p>	
<p>Dynamic Logic Circuits: Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.</p> <p>BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.</p>	<p>L1,L2, L3</p>
<p>Module -5</p>	
<p>Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.</p> <p>Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modeling.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyse issues of On-chip interconnect Modelling and Interconnect delay calculation. 2. Analyse the Switching Characteristics in Digital Integrated Circuits. 3. Use the Dynamic Logic circuits in state-of-the-art VLSI chips. 4. Study critical issues such as ESD protection, Clock distribution, Clock buffering, and Latch phenomenon 5. Use Bipolar and Bi-CMOS circuits in very high speed design. 	
<p>Question Paper Pattern</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCED EMBEDDED SYSTEM

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	16EVE13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.
- Describe the hardware software co-design and firmware design approaches
- Explain the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions.
- Program ARM CORTEX M3 using the various instructions, for different applications.

Modules**Revised Bloom's Taxonomy (RBT) Level****Module -1**

Embedded System: Embedded vs General computing system, classification, application and purpose of ES. Core of an Embedded System, Memory, Sensors, Actuators, LED, Opto coupler, Communication Interface, Reset circuits, RTC, WDT, Characteristics and Quality Attributes of Embedded Systems (Text 1: Selected Topics from Ch -1, 2, 3).

L1, L2, L3**Module -2**

Hardware Software Co-Design, embedded firmware design approaches, computational models, embedded firmware development languages, Integration and testing of Embedded Hardware and firmware, Components in embedded system development environment (IDE), Files generated during compilation, simulators, emulators and debugging (Text 1: Selected Topics From Ch-7, 9, 12, 13).

L1, L2, L3

Module -3	
ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)	L1, L2, L3
Module -4	
Instruction Sets: Assembly basics, Instruction list and description, useful instructions, Memory Systems, Memory maps, Cortex M3 implementation overview, pipeline and bus interface (Text 2: Ch-4, 5, 6)	L1, L2, L3
Module -5	
Exceptions, Nested Vector interrupt controller design, SysTick Timer, Cortex-M3 Programming using assembly and C language, CMSIS (Text 2: Ch-7, 8, 10)	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. ● Explain the hardware software co-design and firmware design approaches. ● Acquire the knowledge of the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. ● Apply the knowledge gained for Programming ARM CORTEX M3 for different applications. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

LOW POWER VLSI DESIGN

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER -I

Subject Code	16EVE14	IA Marks	20
Number of Lecture	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Know the basics and advanced techniques in low power design which is a hot topic in today's market where the power plays a major role.
- Describe the various power reduction and the power estimation methods.
- Explain power dissipation at all layers of design hierarchy from technology, circuit, logic, architecture and system
- Apply State-of-the art approaches to power estimation and reduction.
- Practice the low power techniques using current generation design style and process technology

Modules

**Revised
Bloom's
Taxonom**

Module -1

Introduction: Need for low power VLSI chips, charging and discharging capacitance, short circuit current in CMOS leakage current, static current, basic principles of low power design, low power figure of merits.

Simulation power analysis: SPICE circuit simulation, discrete transistor modeling and analysis, gate level logic simulation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation. (Text 1)

L1, L2

Module -2

Probabilistic power analysis: Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

Circuit: Transistor and gate sizing, equivalent pin ordering, network restructuring and reorganization, special latches and flip flops, low power digital cell library, adjustable device threshold voltage. (Text 1)

L1, L2, L3

Module -3

Logic: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic (Text 1).

Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co design of clock network (Text 2).

L1, L2, L3

Module -4

<p>Low power Architecture & Systems: Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation (Text 1).</p> <p>Low power arithmetic components: Introduction, circuit design style, adders, multipliers, division (Text 2).</p>	L1- L4
Module -5	
<p>Low power memory design: Introduction, sources and reductions of power dissipation in memory subsystem, sources of power dissipation in DRAM and SRAM (Text 2).</p> <p>Algorithm & Architectural Level Methodologies: Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis (Text 2).</p> <p>Advanced Techniques: Adiabatic computation, pass transistor, Asynchronous circuits (Text 1).</p>	L1-L4
<p>Course outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Identify the sources of power dissipation in CMOS circuits. • Perform power analysis using simulation based approaches and probabilistic analysis. • Use optimization and trade-off techniques that involve power dissipation of digital circuits. • Make the power design a reality by making power dimension an integral part of the design process • Use practical low power design techniques and their analysis at various levels of design abstraction and analyse how these are being captured in the latest design automation environments. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Gary K. Yeap, “Practical Low Power Digital VLSI Design”, Kluwer Academic, 1998. 2. Jan M.Rabaey, Massoud Pedram, “Low Power Design Methodologies”, Kluwer Academic, 2010.

DIGITAL SYSTEM DESIGN USING VERILOG

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	16EVE151	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40 (08 Hours per Module)	Exam Hours	03

CREDITS – 03**Course objectives:** This course will enable students to:

- Understand the concepts of Verilog Language
- Design the digital systems as an activity in a larger systems design context.
- Study the design and operation of semiconductor memories frequently used in application specific digital system.
- Inspect how effectively IC's are embedded in package and assembled in PCB's for different application
- Design and diagnosis of processors and I/O controllers they can be used in embedded systems

Modules**Revised Bloom's Taxonomy (RBT)****Module -1****Introduction and Methodology:** Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.**L1, L2****Module -2****Number Basics:** Unsigned and Signed Integers, Fixed and Floating-point Numbers.**Sequential Basics:** Storage elements, Counters, Sequential Data paths and Control, Clocked Synchronous Timing Methodology.**L1, L2****Module -3****Memories:** Concepts, Memory Types, Error Detection and Correction.
Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.**L1, L2****Module -4****Processor Basics:** Embedded Computer Organization, Instruction and Data, Interfacing with memory.**I/O interfacing:** I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.**L2, L3****Module -5**

<p>Accelerators: Concepts, case study, Verification of accelerators. Design Methodology: Design flow, Design optimization, Design for test.</p>	<p>L2, L3</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Design embedded systems, using small microcontrollers, larger CPUs/DSPs, or hard or soft processor cores. • Design the combinational circuits using discrete gates and programmable logic devices. • Describe Verilog model for sequential circuits and test pattern generation • Explore the different types of semiconductor memories and their usage for specific chip design • Synthesis different types of processor and I/O controllers that are used in embedded system design 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Peter J. Ashenden, –Digital Design: An Embedded Systems Approach Using VERILOG^{II} , Elsevier, 2010.</p>	
<p>Reference Book: Verilog HDL: A Guide to Digital Design and Synthesis, Second Edition by Samir Palnitkar.</p>	

VLSI and ES LAB - 1

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Laboratory Code	16EVEL16	IA Marks	20
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Marks	80
		Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to:

- Learn Verilog Code Programming for the design of digital circuits
- Use FPGA/CPLD board and Logic Analyzer or Chipscope to verify the results
- Learn Assembly language programming for different applications using ARM-Cortex M3 Kit and Keil uVision- 4 tool.
- Learn C language programming for different applications using ARM- Cortex M3 Kit and Keil uVision-4 tool.

Laboratory Experiments:

**Revised
Bloom's
Taxonomy**

- 1) **Digital Design Experiments:** Using Verilog code and any Compiler. Download code to FPGA/CPLD board and verify the output using Logic Analyzer or Chipscope
- a) Design and verify an 8 to 3 programmable priority encoder
 - b) Design and verify 3-bit Arbitrary Counter and repeat the given sequence
 - c) Design and Verify BCD adder and subtractor
 - d) Design and verify a sequential block to generate a sequence (say 11101) using appropriate FSM.
 - e) Design and verify 8 bit Ripple carry adder and Carry skip adder.
 - f) Design and verify a Linear feedback shift register based on a given polynomial expression
 - g) Design and verify the following 8 bit multipliers. Also report on area delay trade-off
 - i) Serial Multiplier
 - ii) Parallel Multiplier
 - h) Design and verify a parameterized FIFO
 - i) Design and verify register file which has 32-entry 3-ports having explicit address decoder. The ports are dedicated for read and write and will take one clock cycle for read or write operation

L2,L3,L4

<p>2) ARM Cortex M3 Programs: (Programming to be done using Keil uVision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U)</p> <ol style="list-style-type: none"> a) Write an Assembly language program to calculate the sum and display the result for the addition of first ten numbers. SUM = 10+9+8+. +1 b) Write a Assembly language program to link multiple object files and link them together c) Write an Assembly language program to store data in RAM d) Write a C program to Output the –Hello World message using UART e) Write a C program to Design a Stopwatch using interrupts 	<p>L2,L3,L4</p>
---	------------------------

Course outcomes: On the completion of this laboratory course, the students will be able to:

- Develop Verilog Code for the design of digital circuits
- Use FPGA/CPLD board and Logic Analyzer or Chipscope to verify the results
- Develop Assembly language programs for different applications using ARM-Cortex M3 Kit and Keil uVision-4 tool.
- Develop C language programs for different applications using ARM-Cortex M3 Kit and Keil uVision-4 tool

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- For examination, two questions using different tool to be set.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

M.Tech-VLSI & ES-2016-SECOND SEMESTER SYLLABUS

Design of Analog and Mixed Mode VLSI Circuits [As per Choice Based credit System (CBCS) Scheme SEMESTER – II]			
Subject Code	16EVE21	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Describe basic physics and operation of MOS devices. ● Exemplify single-stage and differential amplifiers and current mirrors ● Describe operational amplifiers ● Learn the design of phase-locked-loops ● Know the role of Data converters in an ever-increasing digital world. 			
Modules			RBT Level
Module 1			
Basic MOS Device Physics: General considerations, MOS I/V Characteristics, second order effects, MOS device models.			L1, L2
Single stage Amplifier: Basic Concepts, Common Source stage.(Text 1)			
Module 2			
Single stage Amplifier: Source follower, common-gate stage, Cascode Stage, choice of device models.			L1,L2
Differential Amplifiers: Single ended and differential operation, Basic differential pair, Common mode response, Differential pair with MOS loads, Gilbert cell. (Text 1)			
Module 3			
Passive and Active Current Mirrors: Basic current mirrors, Cascode Current mirrors, Active Current mirrors.			L1,L2,L3
Operational Amplifiers (part-1): General Considerations, One Stage OP-Amp, Two Stage OP-Amp, Gain boosting. (Text 1)			
Module 4			
Operational Amplifiers (part-2): Common Mode Feedback, Slew rate, Power Supply Rejection.			L1,L2,L3
Phase Locked Loops: Simple PLL, Charge pump PLLs, Non-ideal effects in PLLs, Delay-Locked Loops, Applications. (Text 1)			
Module 5			
Data Converter Architectures: DAC & ADC Specifications, Current Steering DAC, Charge Scaling DAC, Cyclic DAC, Pipeline DAC, Flash ADC, Pipeline ADC, Integrating ADC, Successive Approximation ADC. (Text 2)			L1,L2,L3

Course Outcomes: After studying this course, students will be able to:

- Use efficient analytical tools for quantifying the behaviour of basic circuits by inspection.
- Design high-performance, stable operational amplifiers with the trade-offs between speed, precision and power dissipation.
- Design and study the behaviour of phase-locked-loops for the applications.
- Identify the critical parameters that affect the analog and mixed-signal VLSI circuits' performance
- Perform calculations in the digital or discrete time domain, more sophisticated data converters to translate the digital data to and from inherently analog world.

Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of four sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

VLSI Testing			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE22	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Learn various types of faults and fault modeling • Comprehend the need for testing and testable design of digital circuits • Illustrate methods and algorithms for testing digital combinatorial networks and test pattern generation • Exemplify methods for testing sequential circuits and memory testing • Inferring testing methods using Boundary scan, Built-in self test and other advanced topics in digital circuit design. 			
Modules			RBT Level
Module 1			
<p>Faults in digital circuits: Failures and Faults, Modeling of faults, Temporary Faults. (Text 1)</p> <p>Logic Simulation: Applications, Problems in simulation based design verification, types of simulation, The unknown logic values, compiled simulation, event-driven simulation, Delay models, Element evaluation, Hazard detection, Gate-level event-driven Simulation. (Text 2)</p>			L1,L2
Module 2			
<p>Test generation for Combinational Logic circuits: Fault Diagnosis of digital circuits, Test generation techniques for combinational circuits, Detection of multiple faults in Combinational logic circuits. (Text 1)</p> <p>Testable Combinational logic circuit design: The Read-Muller expansion technique, Three level OR-AND-OR design, Automatic synthesis of testable logic.(Text 1)</p>			L1,L2,L3
Module 3			
<p>Testable Combinational logic circuit design: Testable design of multilevel combinational circuits, Synthesis of random pattern testable combinational circuits, Path delay fault testable combinational logic design, Testable PLA design. (Text 1)</p> <p>Test generation for Sequential circuits: Testing of sequential circuits as Iterative combinational circuits, state table verification, Test generation based on Circuit Structure, Functional Fault models, test Generation based on Functional Fault models. (Text 1)</p>			L1,L2,L3
Module 4			
<p>Design of testable sequential circuits: Controllability and observability, Ad-Hoc design rules for improving testability, design of</p>			L1,L2,L3

<p>diagnosable sequential circuits, the scan-path technique for testable sequential circuit design, Level Sensitive Scan Design(LSSD), Random Access Scan Technique, Partial scan, testable sequential circuit design using Nonscan Techniques, Cross check, Boundary Scan. (Text 1)</p>	
<p>Module 5</p>	
<p>Built-In Self Test: Test pattern generation for BIST, Output response analysis, Circular BIST, BIST Architectures. (Text 1)</p>	<p>L1,L2,L3</p>
<p>Testable Memory Design: RAM Fault Models, Test algorithms for RAMs, Detection of pattern-sensitive faults, BIST techniques for RAM chips, Test generation and BIST for embedded RAMs. (Text1)</p>	
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Analyze the need for fault modeling and testing of digital circuits • Generate fault lists for digital circuits and compress the tests for efficiency • Create tests for digital memories and analyze failures in them • Apply boundary scan technique to validate the performance of digital circuits • Design built-in self tests for complex digital circuits 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Lala Parag K., Digital Circuit Testing and Testability, New York, Academic Press, 1997. 2. Abramovici M, Breuer M A and Friedman A D, –Digital Systems Testing and Testable Designll , Wiley, 1994.

Advances in VLSI Design [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE23	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Learn circuit-oriented approach towards digital design • Illustrate the impact of interconnect wiring on the functionality and performance of a digital gate. • Infer different approaches to digital timing and clocking circuits • Understand the impact of clock skew on the behaviour of digital synchronous circuits • Explain the role of peripheral circuitry such as the decoders, sense amplifiers, drivers and control circuitry in the design of reliable and fast memories 			
Modules			RBT Level
Module 1			
Implementation Strategies For Digital ICS: Introduction, From Custom to Semicustom and Structured Array Design Approaches, Custom Circuit Design, Cell-Based Design Methodology, Standard Cell, Compiled Cells, Macrocells, Megacells and Intellectual Property, Semi-Custom Design Flow, Array-Based Implementation Approaches, Pre-diffused (or Mask-Programmable) Arrays, Pre-wired Arrays, Perspective-The Implementation Platform of the Future.			L1,L2,L3
Module 2			
Coping With Interconnect: Introduction, Capacitive Parasitics, Capacitance and Reliability-Cross Talk, Capacitance and Performance in CMOS, Resistive Parasitics, Resistance and Reliability-Ohmic Voltage Drop, Electromigration, Resistance and Performance-RC Delay, Inductive Parasitics, Inductance and Reliability-Voltage Drop, Inductance and Performance-Transmission Line Effects, Advanced Interconnect Techniques, Reduced-Swing Circuits, Current-Mode Transmission Techniques, Perspective: Networks-on-a-Chip.			L1,L2,L3
Module 3			
Timing Issues In Digital Circuits: Introduction, Timing Classification of Digital Systems, Synchronous Interconnect, Mesochronous interconnect, Plesiochronous Interconnect, Asynchronous Interconnect, Synchronous Design — An In-depth Perspective, Synchronous Timing Basics, Sources of Skew and Jitter, Clock-Distribution Techniques, Latch-Based Clocking, Self-Timed Circuit Design, Self-Timed Logic - An Asynchronous			L1,L2,L3

Technique, Completion-Signal Generation, Self-Timed Signaling, Practical Examples of Self-Timed Logic, Synchronizers and Arbiters, Synchronizers-Concept and Implementation, Arbiters, Clock Synthesis and Synchronization Using a Phase-Locked Loop, Basic Concept, Building Blocks of a PLL.	
Module 4	
Designing Memory and Array Structures: Introduction, Memory Classification, Memory Architectures and Building Blocks, The Memory Core, Read-Only Memories, Nonvolatile Read-Write Memories, Read-Write Memories (RAM), Contents-Addressable or Associative Memory (CAM), Memory Peripheral Circuitry, The Address Decoders, Sense Amplifiers, Voltage References, Drivers/Buffers, Timing and Control.	L1,L2,L3
Module 5	
Designing Memory and Array Structures: Memory Reliability and Yield, Signal-to-Noise Ratio, Memory yield, Power Dissipation in Memories, Sources of Power Dissipation in Memories, Partitioning of the memory, Addressing the Active Power Dissipation, Data-retention dissipation, Case Studies in Memory Design: The Programmable Logic Array (PLA), A 4 Mbit SRAM, A 1 Gbit NAND Flash Memory, Perspective: Semiconductor Memory Trends and Evolutions.	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Apply design automation for complex circuits using the different implementation methodology like custom versus semi-custom, hardwired versus fixed, regular array versus ad-hoc. • Use the approaches to minimize the impact of interconnect parasitics on performance, power dissipation and circuit reliability • Impose the ordering of the switching events to meet the desired timing constraints using synchronous, clocked approach. • Infer the reliability of the memory 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book:</p> <p>Jan M Rabey, Anantha Chandrakasan, Borivoje Nikolic, –Digital Integrated Circuits-A Design Perspectivell , PHI, 2nd Edition.</p>

Veendrick, –MOS IC’s: From Basics to ASICs, Wiley-VCH, 1992. 3. Anantha P. Chandrakasan , Robert W. Brodersen, –Low Power Digital CMOS Designll , Kluwer Academic Publisher, 1995. 	

Real Time Operating System [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE24	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Introduce the fundamental concepts of Real Time Operating Systems and the real time embedded system • Apply concepts relating to operating systems such as Scheduling techniques, Thread Safe Reentrant Functions, Dynamic priority policies. • Describe concepts related to Multi resource services like blocking, Deadlock, live lock & soft real-time services. • Discuss Memory management concepts, Embedded system components, Debugging components and file system components. • Study programs for multithreaded applications using suitable data structures. 			
Modules			RBT Level
Module 1			
Real-Time Systems and Resources: Brief history of Real Time Systems, A brief history of Embedded Systems. System Resources, Resource Analysis, Real-Time Service Utility, Scheduler concepts, Real-Time OS, State transition diagram and tables, Thread Safe Reentrant Functions. (Text 1: Selected sections from Chap. 1, 2)			L1,L2,L3
Module 2			
Processing with Real Time Scheduling: Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies with timing diagrams and problems and issues, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline –Monotonic Policy, Dynamic priority policies, Alternative to RM policy. (Text 1: Chap. 2,3,7)			L1,L2,L3
Module 3			
Memory and I/O: Worst case execution time, Intermediate I/O, Shared Memory, ECC Memory, Flash file systems. Multi-resource Services, Blocking, Deadlock and live lock, Critical sections to protect shared resources, Missed deadline, QoS, Reliability and Availability, Similarities and differences, Reliable software, Available software. (Text 1: Selected topics from Chap. 4,5,6,7,11)			L1,L2,L3
Module 4			
Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components. Debugging			L1,L2,L3

<p>Components, Exceptions, assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace Ports, External test equipment. (Text 1: Selected topics from Chap. 8,9)</p>	
<p>Module 5</p>	
<p>Process and Threads: Process and thread creations, Simple Programs, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication using multiple threads. (Text 2: Chap. 11)</p>	<p>L1,L2,L3</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Develop programs for real time services, firmware and RTOS, using the fundamentals of Real Time Embedded System, real time service utilities, debugging methodologies and optimization techniques. • Select the appropriate system resources (CPU, I/O, Memory, Cache, ECC Memory, Microcontroller/FPGA/ASIC to improve the system performance. • Apply priority based static and dynamic real time scheduling techniques for the given specifications. • Analyze deadlock conditions, shared memory problem, critical section problem, missed deadlines, availability, reliability and QoS. • Develop programs for multithreaded applications using suitable techniques and data structure 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sam Siewert, –Real-Time Embedded Systems and Componentsll , Cengage Learning India Edition, 2007. 2. Dr. K.V.K.K Prasad, Embedded/Real Time Systems, Concepts, Design and Programming, Black Book, Dream Tech Press, New edition, 2010.

SoC Design			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE254	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Describe the ARM processor architecture and user-level assembly language programming • Appreciate what a high-level language (in this case, C) really needs and how those needs are met by the ARM instruction set. • raises the issues involved in debugging systems which use embedded processor cores and in the production testing of board-level systems. • Learn the concept of memory hierarchy, discussing the principles of memory management and caches. 			
Modules			RBT Level
Module 1			
<p>ARM Organization and Implementation: 3-stage pipeline ARM organization, 5-stage pipeline ARM organization, ARM instruction execution, ARM implementation, The ARM coprocessor interface.</p> <p>The ARM Instruction Set : Introduction, Exceptions, Conditional execution, Branch and Branch with Link (B, BL), Branch, Branch with Link and eXchange (BX, BLX), Software Interrupt (SWI), Data processing instructions, Multiply instructions, Count leading zeros (CLZ - architecture v5T only), Single word and unsigned byte data transfer instruction, Half-word and signed byte data transfer instructions, Multiple register transfer instructions, Swap memory and register instructions (SWP), Status register to general register transfer instructions, General register to status register transfer instructions, Coprocessor instructions, Coprocessor data operations, Coprocessor data transfers, Coprocessor register transfers, Breakpoint instruction (BRK - architecture v5T only), Unused instruction space, Memory faults, ARM architecture variants.</p>			L1,L2
Module 2			
<p>Architectural Support for High-Level Languages: Abstraction in software design, Data types, Floating-point data types, The ARM floating-point architecture, Expressions, Conditional statements, Loops, Functions and procedures, Use of memory, Run-time environment.</p> <p>Architectural Support for System Development: The ARM memory interface, The Advanced Microcontroller Bus Architecture (AMBA), The ARM reference peripheral specification, Hardware system prototyping tools, The ARMulator, The JTAG boundary scan test architecture, The ARM debug architecture, Embedded Trace,</p>			L1,L2

Signal processing support.	
Module 3	
ARM Processor Cores: ARM7TDMI, ARM8,ARM9TDMI, ARM10TDMI ,Discussion ,Example and exercises. Memory Hierarchy: Memory size and speed, On-chip memory, Caches, Cache design - an example, Memory management, Examples and exercises.	L1,L2
Module 4	
Architectural Support for Operating Systems: An introduction to operating systems, The ARM system control coprocessor, CP15 protection unit registers, ARM protection unit,CP15 MMU registers, ARM MMU architecture, Synchronization, Context switching, Input/ Output, Example and exercises. ARM CPU Cores: The ARM710T, ARM720T and ARM740T, The ARM810,The Strong ARM SA-110,The ARM920T and ARM940T,The ARM946E-S and ARM966E-S,The ARM1020E,Discussion,Example and exercises.	L1,L2
Module 5	
Embedded ARM Applications: The VLSI Ruby II Advanced Communication Processor, The VLSI ISDN Subscriber Processor, The One C™ VWS22100 GSM chip, The Ericsson-VLSI Bluetooth Baseband Controller, The ARM7500 and ARM7500FE, The ARM7100 364,The SA-1100 368,Examples and exercises. The AMULET Asynchronous ARM Processors: Self-timed design 375,AMULET1 377,AMULET2 381,AMULET2e 384,AMULET3 387,The DRACO telecommunications controller 390, A self-timed future? 396,Example and exercises.	L1,L2,L3
Course Outcomes: After studying this course, students will be able to: <ul style="list-style-type: none"> • Apply the 3- and 5-stage pipeline ARM processor cores and analyse the implementation issues. • Use the concepts and methodologies employed in designing a System-on-chip (SoC) based around a microprocessor core and in designing the microprocessor core itself. • Understand how SoCs and microprocessors are designed and used, and why a modern processor is designed the way that it is. • Use integrated ARM CPU cores (including StrongARM) that incorporate full support for memory management. • Analyze the requirements of a modern operating system and use the ARM architecture to address the same. 	
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

Total Number of Lecture Hours	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Hours	03
CREDITS – 02			
<p>Course objectives: This laboratory course enables students to:</p> <ul style="list-style-type: none"> • Learn the CAD tool and the flow of the Full Custom IC design cycle. • Learn running DRC, LVS and Parasitic Extraction of the various designs. • Create various components like inverter, differential amplifier and use the same in the design of operational amplifier, R-2R based DAC and ADC. • Understand the suitability of different techniques of IPC and task switching in a multithreaded application. • Study and implement different types of data structures required to implement inter task communication. • Implement Inter task communication using an appropriate data structure. 			
Part – A: Experiments to be done using CADENCE/SYNOPSIS/MENTOR GRAPHICS/TANNER Tool			RBT Level
<p>1. Design an Inverter with given specifications*, completing the design flow mentioned below:</p> <ol style="list-style-type: none"> a. Draw the schematic and verify the following <ol style="list-style-type: none"> i) DC Analysis ii) Transient Analysis b. Draw the Layout and verify the DRC, ERC c. Check for XX d. Extract RC and back annotate the same and verify the Design e. Verify & Optimize for Time, Power and Area to the given constraint*** <p>(Following specification may be used to design an Inverter in gpdk 180nm technology with minimum area:</p> <ol style="list-style-type: none"> i. Maximum output rise time=100ps ii. Maximum output fall time=100ps iii. $P_{avg} \leq 15\mu w$ iv. Load capacitance= 50fF v. Input rise time=200ps vi. Input fall time=200ps <p>Choose maximum frequency based on the power)</p>			L3
<p>Design the following circuits with given specifications*, completing the design flow mentioned below:</p> <ol style="list-style-type: none"> a. Draw the schematic and verify the following <ol style="list-style-type: none"> i) DC Analysis ii) AC Analysis iii) Transient Analysis 			L3

<ul style="list-style-type: none"> b. Draw the Layout and verify the DRC, ERC, LVS c. Check for XX d. Extract RC and back annotate the same and verify the Design. <ul style="list-style-type: none"> 2. i) A Single Stage differential amplifier ii) Common source amplifier <ul style="list-style-type: none"> 3. Design an op-amp with given specification* using given differential amplifier Common source amplifier in library** 4. Design a 4 bit R-2R based DAC for the given specification** 	
<ul style="list-style-type: none"> 5. Design an Integrator and Differentiator using OPAMP (First Order) 	
<ul style="list-style-type: none"> 6. Design and characterize a basic Sigma delta ADC from the available designs. 	
<ul style="list-style-type: none"> 7. Design a simple NAND/NOR gate using any one of the tools given above. <p>(Any other experiments may be added in supportive of the course)</p> <p>* Appropriate specification should be given.</p> <p>** Applicable Library should be added & information should be given to the Designer.</p> <p>*** An appropriate constraint should be given</p>	
Part – B: Experiments to be done using Linux	
<ul style="list-style-type: none"> 1. Develop and test programs to (a) create child process and display it's id and (b) Execute child process function using switch structure 	
<ul style="list-style-type: none"> 2. Develop and test program for a multithreaded application, where communication is through a buffer for the conversion of lowercase text to uppercase text, using semaphore concept. 	
<ul style="list-style-type: none"> 3. Develop and test program for a multithreaded application, where communication is through shared memory for the conversion of lowercase text to uppercase text. 	
<ul style="list-style-type: none"> 4. Develop program for inter-thread communication using message queue. Data is to be input from the keyboard for the chosen application. 	
<ul style="list-style-type: none"> 5. Create '_n' number of child threads. Each thread prints the message –I'm in thread number ... and sleeps for 50 ms and then quits. The main thread waits for complete execution of all the child threads and then quits. Compile and execute in Linux. 	
<ul style="list-style-type: none"> 6. Implement the multi-thread application satisfying the following : <ul style="list-style-type: none"> i. Two child threads are created with normal priority. ii. Thread 1 receives and prints its priority and sleeps for 50ms and then quits. iii. Thread 2 prints the priority of the thread 1 and rises its priority to above normal and retrieves the new priority of thread 1, prints it and then quits. iv. The main thread waits for the child thread to complete its job and 	L3

quits.	
7. Implement the usage of anonymous pipe with 512 bytes for data sharing between parent and child processes using handle inheritance mechanism	
<p>Course outcomes: This laboratory course enable the students to:</p> <ul style="list-style-type: none"> • Design Analog, digital and mixed mode circuits • Learn the various issues in Mixed signal designs basically data converters. • Acquire hands-on skills of using CAD tools in VLSI design. • Appreciate the design process in VLSI through a mini-project on the design of a CMOS sub-system. • Select a suitable task switching technique in a multithreaded application. • Implement different techniques of message passing and Inter task communication. • Implement different data structures such as pipes, queues and buffers in multithreaded programming. 	
<p>Conduct of Practical Examination:</p> <ul style="list-style-type: none"> • All laboratory experiments are to be included for practical examination. • For examination, one experiment from Part-A and One experiment from Part-B is to be set. • Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. • Change of experiment is allowed only once and Marks allotted to the Procedure part to be made zero. 	
<p>Reference Book: (for some of the Part-B programs) Dreamtech Software Team, –Programming for Embedded Systemsll , John Wiley, India Pvt. Ltd., 2008.</p>	

M.Tech-VLSI & ES-2016-FOURTH SEMESTER SYLLABUS

Synthesis and Optimization of Digital Circuits [As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ELD41	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students:</p> <ul style="list-style-type: none"> • Understand the need for optimization and dimensions of optimization for digital circuits. • Understand basic optimization techniques used in circuits design • Understand advanced tools and techniques in digital systems design including Hardware Modeling and Compilation Techniques. • Explain details of Logic-Level synthesis and optimization techniques for combinational and sequential circuits. • Explain the concept of scheduling and resource binding for optimization. 			
Modules			RBT Level
Module 1			
<p>Introduction to Synthesis and optimization: Design of Microelectronics circuits, Computer aided Synthesis and Optimization. Hardware Modeling: HDLs for Synthesis, Abstract models, Compilation and Behavioral Optimization. (Text1: Topics from Chap. 1,3)</p>			L1, L2, L3
Module 2			
<p>Graph theory for CAD for VLSI: Graphs, Combinatorial Optimization, Graph Optimization problems and Algorithms, Boolean Algebra and Applications. Architectural Synthesis and Optimization: Fundamental Architectural Synthesis problems, Area and Performance Estimation, Strategies for Architectural Optimization, Data path Synthesis, Control Path Synthesis.(Text1: Topics From Chap. 2,4)</p>			L1, L2, L3
Module 3			
<p>Two level Combinational Logic Optimization: Introduction, Logic Optimizations, Operations on Two level Logic Covers, Algorithms for Logic Minimization, Symbolic Minimization and Encoding Problems. Multiple Level Combinational Logic Optimization: Introduction, Models and Transformations for Combinational Networks, The Algebraic Model, The Boolean Model. (Text1: Chap. 7, 8)</p>			L1, L2, L3
Module 4			
<p>Sequential Logic Optimization: Introduction, Sequential Logic Optimization using State based Models, Sequential Logic Optimization using Network Models, Implicit FSM Traversal Methods, Testability concerns for</p>			L1, L2, L3

Synchronous Circuits. (Text 1: Chap. 9)	
Module 5	
<p>Scheduling Algorithms: Introduction, A Model for Scheduling problems, Scheduling with Resource Constraints, Scheduling without Resource Constraints, Scheduling Algorithms for Extended Sequencing Models, Scheduling Pipelined Circuits.</p> <p>Resource Sharing and Binding: Sharing and Binding for Resource dominated circuits, Sharing and Binding for General Circuits, Concurrent Binding and Scheduling, Resource sharing and Binding for Non – Scheduled Sequencing Graphs. (Text1: Chap. 5,6)</p>	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the process of synthesis and optimization in a top down approach for digital circuits models using HDLs. • Understand the terminologies of graph theory and its algorithms to optimize a Boolean equation. • Apply different two level and multilevel optimization algorithms for combinational circuits • Apply the different sequential circuit optimization methods using state models and network models. • Apply different scheduling algorithms with resource binding and without resource binding for pipelined sequential circuits and extended sequencing models. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Giovanni De Micheli, –Synthesis and Optimization of Digital Circuits , Tata McGraw-Hill, 2003.</p>	
<p>Reference Book: Edwars M.D., Automatic Logic synthesis Techniques for Digital Systems, Macmillan New Electronic Series, 1992.</p>	

Advances in Image Processing			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ECS422	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
Course Objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Acquire fundamental knowledge in understanding the representation of the digital image and its properties • Equip with some pre-processing techniques required to enhance the image for further analysis purpose. • Select the region of interest in the image using segmentation techniques. • Represent the image based on its shape and edge information. • Describe the objects present in the image based on its properties and structure. 			
Modules			RBT Level
Module 1			
The image, its representations and properties: Image representations a few concepts, Image digitization, Digital image properties, Color images.			L1
Module 2			
Image Pre-processing: Pixel brightness transformations, geometric transformations, local pre-processing.			L1, L2
Module 3			
Segmentation: Thresholding; Edge-based segmentation – Edge image thresholding, Edge relaxation, Border tracing, Hough transforms; Region – based segmentation – Region merging, Region splitting, Splitting and merging, Watershed segmentation, Region growing post-processing.			L1, L2, L3
Module 4			
Shape representation and description: Region identification; Contour-based shape representation and description – Chain codes, Simple geometric border representation, Fourier transforms of boundaries, Boundary description using segment sequences, B-spline representation; Region-based shape representation and description – Simple scalar region descriptors, Moments, Convex hull.			L1, L2, L3
Module 5			
Mathematical Morphology: Basic morphological concepts, Four morphological principles, Binary dilation and erosion, Skeletons and object marking, Morphological segmentations and watersheds.			L1, L2, L3
Course Outcomes: After studying this course, students will be able to:			
<ul style="list-style-type: none"> • Understand the representation of the digital image and its properties • Apply pre-processing techniques required to enhance the image for its further analysis. 			

Use segmentation techniques to select the region of interest in the image for analysis

- Represent the image based on its shape and edge information.
- Describe the objects present in the image based on its properties and structure.
- Use morphological operations to simplify images, and quantify and preserve the main shape characteristics of the objects.

Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of four sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

Elective -3	
16ECS422	Advances in Image Processing

Note:

1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted.

- a. Internal Examiner shall carry out the evaluation for 100 marks.
- b. External Examiner shall carry out the evaluation for 100 marks.
- c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
- d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.Tech-VLSI & ES-2016-FIRST SEMESTER SYLLABUS

ADVANCED ENGINEERING MATHEMATICS

[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	16ELD11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Acquaint with principles of linear algebra, calculus of variations, probability theory and random process.
- Apply the knowledge of linear algebra, calculus of variations, probability theory and random process in the applications of electronics and communication engineering sciences.

Modules	Revised Bloom's Taxonomy (RBT) Level
----------------	---

Module -1

Linear Algebra-I

Introduction to vector spaces and sub-spaces, definitions, illustrative examples and simple problems. Linearly independent and dependent vectors-definition and problems. Basis vectors, dimension of a vector space. Linear transformations- definition, properties and problems. Rank-Nullity theorem(without proof). Matrix form of linear transformations-Illustrative examples.(**Text 1 & Ref. 1**)

L1,L2

Module -2

Linear Algebra-II

Computation of Eigen values and Eigen vectors of real symmetric matrices-Given's method. Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process. QR decomposition, singular value decomposition, least square approximations.(**Text 1 & Ref. 1**)

L1,L2

Module -3

Calculus of Variations

Concept of functional-Eulers equation. functional dependent on first and higher order derivatives, functional on several dependent variables. Isoperimetric problems-variation problems with moving boundaries.(**Text 2 & Ref. 2**)

L1,L2

Module -4

<p>Probability Theory Review of basic probability theory. Definitions of random variables and probability distributions, probability mass and density functions, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Binomial, Poisson, Exponential, Gaussian and Rayleigh distributions-examples.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Module -5</p>	
<p>Joint probability distributions Definition and properties of CDF, PDF, PMF, conditional distributions. Expectation, covariance and correlation. Independent random variables. Statement of central limit theorem-Illustrative examples. Random process- Classification, stationary and ergodic random process. Auto correlation function-properties, Gaussian random process.(Text 3 & Ref. 3)</p>	<p>L1,L2</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images. • Apply the techniques of QR and singular value decomposition for data compression, least square approximation in solving inconsistent linear systems. • Utilize the concepts of functionals and their variations in the applications of communication systems, decision theory, synthesis and optimization of digital circuits. • Learn the idea of random variables (discrete/continuous) and probability distributions in analyzing the probability models arising in control systems and system communications. • Apply the idea of joint probability distributions and the role of parameter-dependent random variables in random process. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

DIGITAL VLSI DESIGN			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER –I			
Subject Code	16EVE12	IA Marks	20
Number	04	Exam Marks	80
Total Number of	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Explain VLSI Design Methodologies • Learn Static and Dynamic operation principles, analysis and design of inverter circuit. • Infer state of the art Semiconductors Memory circuits. • Outline the comprehensive coverage of Methodologies and Design practice that are used to reduce the Power Dissipation of large scale digital circuits. • Illustrate VLSI and ASIC design. 			
Modules			Revised Bloom's Taxonomy (RBT) Level
Module -1			
<p>MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.</p> <p>MOS Inverters-Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load.</p>			L1, L2
Module -2			
<p>MOS Inverters-Static Characteristics: CMOS Inverter.</p> <p>MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.</p>			L2, L3
Module -3			

<p>Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).</p>	<p>L1, L2, L3</p>
<p>Module -4</p>	
<p>Dynamic Logic Circuits: Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS Circuits.</p> <p>BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.</p>	<p>L1,L2, L3</p>
<p>Module -5</p>	
<p>Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.</p> <p>Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modeling.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyse issues of On-chip interconnect Modelling and Interconnect delay calculation. 2. Analyse the Switching Characteristics in Digital Integrated Circuits. 3. Use the Dynamic Logic circuits in state-of-the-art VLSI chips. 4. Study critical issues such as ESD protection, Clock distribution, Clock buffering, and Latch phenomenon 5. Use Bipolar and Bi-CMOS circuits in very high speed design. 	
<p>Question Paper Pattern</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

ADVANCED EMBEDDED SYSTEM

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	16EVE13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.
- Describe the hardware software co-design and firmware design approaches
- Explain the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions.
- Program ARM CORTEX M3 using the various instructions, for different applications.

Modules**Revised Bloom's Taxonomy (RBT) Level****Module -1**

Embedded System: Embedded vs General computing system, classification, application and purpose of ES. Core of an Embedded System, Memory, Sensors, Actuators, LED, Opto coupler, Communication Interface, Reset circuits, RTC, WDT, Characteristics and Quality Attributes of Embedded Systems (Text 1: Selected Topics from Ch -1, 2, 3).

L1, L2, L3**Module -2**

Hardware Software Co-Design, embedded firmware design approaches, computational models, embedded firmware development languages, Integration and testing of Embedded Hardware and firmware, Components in embedded system development environment (IDE), Files generated during compilation, simulators, emulators and debugging (Text 1: Selected Topics From Ch-7, 9, 12, 13).

L1, L2, L3

Module -3	
ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)	L1, L2, L3
Module -4	
Instruction Sets: Assembly basics, Instruction list and description, useful instructions, Memory Systems, Memory maps, Cortex M3 implementation overview, pipeline and bus interface (Text 2: Ch-4, 5, 6)	L1, L2, L3
Module -5	
Exceptions, Nested Vector interrupt controller design, SysTick Timer, Cortex-M3 Programming using assembly and C language, CMSIS (Text 2: Ch-7, 8, 10)	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> ● Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. ● Explain the hardware software co-design and firmware design approaches. ● Acquire the knowledge of the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. ● Apply the knowledge gained for Programming ARM CORTEX M3 for different applications. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module.

LOW POWER VLSI DESIGN

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER -I

Subject Code	16EVE14	IA Marks	20
Number of Lecture	04	Exam Marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to:

- Know the basics and advanced techniques in low power design which is a hot topic in today's market where the power plays a major role.
- Describe the various power reduction and the power estimation methods.
- Explain power dissipation at all layers of design hierarchy from technology, circuit, logic, architecture and system
- Apply State-of-the art approaches to power estimation and reduction.
- Practice the low power techniques using current generation design style and process technology

Modules

**Revised
Bloom's
Taxonom**

Module -1

Introduction: Need for low power VLSI chips, charging and discharging capacitance, short circuit current in CMOS leakage current, static current, basic principles of low power design, low power figure of merits.

Simulation power analysis: SPICE circuit simulation, discrete transistor modeling and analysis, gate level logic simulation, architecture level analysis, data correlation analysis in DSP systems, Monte Carlo simulation. (Text 1)

L1, L2

Module -2

Probabilistic power analysis: Random logic signals, probability & frequency, probabilistic power analysis techniques, signal entropy.

Circuit: Transistor and gate sizing, equivalent pin ordering, network restructuring and reorganization, special latches and flip flops, low power digital cell library, adjustable device threshold voltage. (Text 1)

L1, L2, L3

Module -3

Logic: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic (Text 1).

Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew, chip & package co design of clock network (Text 2).

L1, L2, L3

Module -4

<p>Low power Architecture & Systems: Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation (Text 1).</p> <p>Low power arithmetic components: Introduction, circuit design style, adders, multipliers, division (Text 2).</p>	L1- L4
Module -5	
<p>Low power memory design: Introduction, sources and reductions of power dissipation in memory subsystem, sources of power dissipation in DRAM and SRAM (Text 2).</p> <p>Algorithm & Architectural Level Methodologies: Introduction, design flow, Algorithmic level analysis & optimization, Architectural level estimation & synthesis (Text 2).</p> <p>Advanced Techniques: Adiabatic computation, pass transistor, Asynchronous circuits (Text 1).</p>	L1-L4
<p>Course outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Identify the sources of power dissipation in CMOS circuits. • Perform power analysis using simulation based approaches and probabilistic analysis. • Use optimization and trade-off techniques that involve power dissipation of digital circuits. • Make the power design a reality by making power dimension an integral part of the design process • Use practical low power design techniques and their analysis at various levels of design abstraction and analyse how these are being captured in the latest design automation environments. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Gary K. Yeap, “Practical Low Power Digital VLSI Design”, Kluwer Academic, 1998. 2. Jan M.Rabaey, Massoud Pedram, “Low Power Design Methodologies”, Kluwer Academic, 2010.

DIGITAL SYSTEM DESIGN USING VERILOG			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – I			
Subject Code	16EVE151	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	40 (08 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Understand the concepts of Verilog Language ● Design the digital systems as an activity in a larger systems design context. ● Study the design and operation of semiconductor memories frequently used in application specific digital system. ● Inspect how effectively IC's are embedded in package and assembled in PCB's for different application ● Design and diagnosis of processors and I/O controllers they can be used in embedded systems 			
Modules			Revised Bloom's Taxonomy (RBT)
Module -1			
Introduction and Methodology: Digital Systems and Embedded Systems, Binary representation and Circuit Elements, Real-World Circuits, Models, Design Methodology.			L1, L2
Module -2			
Number Basics: Unsigned and Signed Integers, Fixed and Floating-point Numbers. Sequential Basics: Storage elements, Counters, Sequential Data paths and Control, Clocked Synchronous Timing Methodology.			L1, L2
Module -3			
Memories: Concepts, Memory Types, Error Detection and Correction. Implementation Fabrics: ICs, PLDs, Packaging and Circuit Boards, Interconnection and Signal Integrity.			L1, L2
Module -4			
Processor Basics: Embedded Computer Organization, Instruction and Data, Interfacing with memory. I/O interfacing: I/O devices, I/O controllers, Parallel Buses, Serial Transmission, I/O software.			L2, L3
Module -5			

<p>Accelerators: Concepts, case study, Verification of accelerators. Design Methodology: Design flow, Design optimization, Design for test.</p>	<p>L2, L3</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Design embedded systems, using small microcontrollers, larger CPUs/DSPs, or hard or soft processor cores. • Design the combinational circuits using discrete gates and programmable logic devices. • Describe Verilog model for sequential circuits and test pattern generation • Explore the different types of semiconductor memories and their usage for specific chip design • Synthesis different types of processor and I/O controllers that are used in embedded system design 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> · The question paper will have 10 full questions carrying equal marks. · Each full question consists of 16 marks with a maximum of four sub questions. · There will be 2 full questions from each module covering all the topics of the module · The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Peter J. Ashenden, –Digital Design: An Embedded Systems Approach Using VERILOG^{II} , Elsevier, 2010.</p>	
<p>Reference Book: Verilog HDL: A Guide to Digital Design and Synthesis, Second Edition by Samir Palnitkar.</p>	

VLSI and ES LAB - 1

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Laboratory Code	16EVEL16	IA Marks	20
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Marks	80
		Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to:

- Learn Verilog Code Programming for the design of digital circuits
- Use FPGA/CPLD board and Logic Analyzer or Chipscope to verify the results
- Learn Assembly language programming for different applications using ARM-Cortex M3 Kit and Keil uVision- 4 tool.
- Learn C language programming for different applications using ARM- Cortex M3 Kit and Keil uVision-4 tool.

Laboratory Experiments:

**Revised
Bloom's
Taxonomy**

- 1) **Digital Design Experiments:** Using Verilog code and any Compiler. Download code to FPGA/CPLD board and verify the output using Logic Analyzer or Chipscope
- a) Design and verify an 8 to 3 programmable priority encoder
 - b) Design and verify 3-bit Arbitrary Counter and repeat the given sequence
 - c) Design and Verify BCD adder and subtractor
 - d) Design and verify a sequential block to generate a sequence (say 11101) using appropriate FSM.
 - e) Design and verify 8 bit Ripple carry adder and Carry skip adder.
 - f) Design and verify a Linear feedback shift register based on a given polynomial expression
 - g) Design and verify the following 8 bit multipliers. Also report on area delay trade-off
 - i) Serial Multiplier
 - ii) Parallel Multiplier
 - h) Design and verify a parameterized FIFO
 - i) Design and verify register file which has 32-entry 3-ports having explicit address decoder. The ports are dedicated for read and write and will take one clock cycle for read or write operation

L2,L3,L4

<p>2) ARM Cortex M3 Programs: (Programming to be done using Keil uVision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ATSAM3U)</p> <ol style="list-style-type: none"> a) Write an Assembly language program to calculate the sum and display the result for the addition of first ten numbers. SUM = 10+9+8+. +1 b) Write a Assembly language program to link multiple object files and link them together c) Write an Assembly language program to store data in RAM d) Write a C program to Output the –Hello World message using UART e) Write a C program to Design a Stopwatch using interrupts 	<p>L2,L3,L4</p>
<p>Course outcomes: On the completion of this laboratory course, the students will be able to:</p> <ul style="list-style-type: none"> • Develop Verilog Code for the design of digital circuits • Use FPGA/CPLD board and Logic Analyzer or Chipscope to verify the results • Develop Assembly language programs for different applications using ARM-Cortex M3 Kit and Keil uVision-4 tool. • Develop C language programs for different applications using ARM-Cortex M3 Kit and Keil uVision-4 tool 	
<p>Conduct of Practical Examination:</p> <ul style="list-style-type: none"> • All laboratory experiments are to be included for practical examination. • For examination, two questions using different tool to be set. • Students are allowed to pick one experiment from the lot. • Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. • Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero. 	

M.Tech-VLSI & ES-2016-SECOND SEMESTER SYLLABUS

Design of Analog and Mixed Mode VLSI Circuits [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE21	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> ● Describe basic physics and operation of MOS devices. ● Exemplify single-stage and differential amplifiers and current mirrors ● Describe operational amplifiers ● Learn the design of phase-locked-loops ● Know the role of Data converters in an ever-increasing digital world. 			
Modules			RBT Level
Module 1			
Basic MOS Device Physics: General considerations, MOS I/V Characteristics, second order effects, MOS device models.			L1, L2
Single stage Amplifier: Basic Concepts, Common Source stage.(Text 1)			
Module 2			
Single stage Amplifier: Source follower, common-gate stage, Cascode Stage, choice of device models.			L1,L2
Differential Amplifiers: Single ended and differential operation, Basic differential pair, Common mode response, Differential pair with MOS loads, Gilbert cell. (Text 1)			
Module 3			
Passive and Active Current Mirrors: Basic current mirrors, Cascode Current mirrors, Active Current mirrors.			L1,L2,L3
Operational Amplifiers (part-1): General Considerations, One Stage OP-Amp, Two Stage OP-Amp, Gain boosting. (Text 1)			
Module 4			
Operational Amplifiers (part-2): Common Mode Feedback, Slew rate, Power Supply Rejection.			L1,L2,L3
Phase Locked Loops: Simple PLL, Charge pump PLLs, Non-ideal effects in PLLs, Delay-Locked Loops, Applications. (Text 1)			
Module 5			
Data Converter Architectures: DAC & ADC Specifications, Current Steering DAC, Charge Scaling DAC, Cyclic DAC, Pipeline DAC, Flash ADC, Pipeline ADC, Integrating ADC, Successive Approximation ADC. (Text 2)			L1,L2,L3

Course Outcomes: After studying this course, students will be able to:

- Use efficient analytical tools for quantifying the behaviour of basic circuits by inspection.
- Design high-performance, stable operational amplifiers with the trade-offs between speed, precision and power dissipation.
- Design and study the behaviour of phase-locked-loops for the applications.
- Identify the critical parameters that affect the analog and mixed-signal VLSI circuits' performance
- Perform calculations in the digital or discrete time domain, more sophisticated data converters to translate the digital data to and from inherently analog world.

Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of four sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

VLSI Testing			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE22	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Learn various types of faults and fault modeling • Comprehend the need for testing and testable design of digital circuits • Illustrate methods and algorithms for testing digital combinatorial networks and test pattern generation • Exemplify methods for testing sequential circuits and memory testing • Inferring testing methods using Boundary scan, Built-in self test and other advanced topics in digital circuit design. 			
Modules			RBT Level
Module 1			
<p>Faults in digital circuits: Failures and Faults, Modeling of faults, Temporary Faults. (Text 1)</p> <p>Logic Simulation: Applications, Problems in simulation based design verification, types of simulation, The unknown logic values, compiled simulation, event-driven simulation, Delay models, Element evaluation, Hazard detection, Gate-level event-driven Simulation. (Text 2)</p>			L1,L2
Module 2			
<p>Test generation for Combinational Logic circuits: Fault Diagnosis of digital circuits, Test generation techniques for combinational circuits, Detection of multiple faults in Combinational logic circuits. (Text 1)</p> <p>Testable Combinational logic circuit design: The Read-Muller expansion technique, Three level OR-AND-OR design, Automatic synthesis of testable logic.(Text 1)</p>			L1,L2,L3
Module 3			
<p>Testable Combinational logic circuit design: Testable design of multilevel combinational circuits, Synthesis of random pattern testable combinational circuits, Path delay fault testable combinational logic design, Testable PLA design. (Text 1)</p> <p>Test generation for Sequential circuits: Testing of sequential circuits as Iterative combinational circuits, state table verification, Test generation based on Circuit Structure, Functional Fault models, test Generation based on Functional Fault models. (Text 1)</p>			L1,L2,L3
Module 4			
<p>Design of testable sequential circuits: Controllability and observability, Ad-Hoc design rules for improving testability, design of</p>			L1,L2,L3

<p>diagnosable sequential circuits, the scan-path technique for testable sequential circuit design, Level Sensitive Scan Design(LSSD), Random Access Scan Technique, Partial scan, testable sequential circuit design using Nonscan Techniques, Cross check, Boundary Scan. (Text 1)</p>	
<p>Module 5</p>	
<p>Built-In Self Test: Test pattern generation for BIST, Output response analysis, Circular BIST, BIST Architectures. (Text 1)</p>	<p>L1,L2,L3</p>
<p>Testable Memory Design: RAM Fault Models, Test algorithms for RAMs, Detection of pattern-sensitive faults, BIST techniques for RAM chips, Test generation and BIST for embedded RAMs. (Text1)</p>	
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Analyze the need for fault modeling and testing of digital circuits • Generate fault lists for digital circuits and compress the tests for efficiency • Create tests for digital memories and analyze failures in them • Apply boundary scan technique to validate the performance of digital circuits • Design built-in self tests for complex digital circuits 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Lala Parag K., Digital Circuit Testing and Testability, New York, Academic Press, 1997. 2. Abramovici M, Breuer M A and Friedman A D, –Digital Systems Testing and Testable Designll , Wiley, 1994.

Advances in VLSI Design [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE23	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Learn circuit-oriented approach towards digital design • Illustrate the impact of interconnect wiring on the functionality and performance of a digital gate. • Infer different approaches to digital timing and clocking circuits • Understand the impact of clock skew on the behaviour of digital synchronous circuits • Explain the role of peripheral circuitry such as the decoders, sense amplifiers, drivers and control circuitry in the design of reliable and fast memories 			
Modules			RBT Level
Module 1			
Implementation Strategies For Digital ICS: Introduction, From Custom to Semicustom and Structured Array Design Approaches, Custom Circuit Design, Cell-Based Design Methodology, Standard Cell, Compiled Cells, Macrocells, Megacells and Intellectual Property, Semi-Custom Design Flow, Array-Based Implementation Approaches, Pre-diffused (or Mask-Programmable) Arrays, Pre-wired Arrays, Perspective-The Implementation Platform of the Future.			L1,L2,L3
Module 2			
Coping With Interconnect: Introduction, Capacitive Parasitics, Capacitance and Reliability-Cross Talk, Capacitance and Performance in CMOS, Resistive Parasitics, Resistance and Reliability-Ohmic Voltage Drop, Electromigration, Resistance and Performance-RC Delay, Inductive Parasitics, Inductance and Reliability-Voltage Drop, Inductance and Performance-Transmission Line Effects, Advanced Interconnect Techniques, Reduced-Swing Circuits, Current-Mode Transmission Techniques, Perspective: Networks-on-a-Chip.			L1,L2,L3
Module 3			
Timing Issues In Digital Circuits: Introduction, Timing Classification of Digital Systems, Synchronous Interconnect, Mesochronous interconnect, Plesiochronous Interconnect, Asynchronous Interconnect, Synchronous Design — An In-depth Perspective, Synchronous Timing Basics, Sources of Skew and Jitter, Clock-Distribution Techniques, Latch-Based Clocking, Self-Timed Circuit Design, Self-Timed Logic - An Asynchronous			L1,L2,L3

Technique, Completion-Signal Generation, Self-Timed Signaling, Practical Examples of Self-Timed Logic, Synchronizers and Arbiters, Synchronizers-Concept and Implementation, Arbiters, Clock Synthesis and Synchronization Using a Phase-Locked Loop, Basic Concept, Building Blocks of a PLL.	
Module 4	
Designing Memory and Array Structures: Introduction, Memory Classification, Memory Architectures and Building Blocks, The Memory Core, Read-Only Memories, Nonvolatile Read-Write Memories, Read-Write Memories (RAM), Contents-Addressable or Associative Memory (CAM), Memory Peripheral Circuitry, The Address Decoders, Sense Amplifiers, Voltage References, Drivers/Buffers, Timing and Control.	L1,L2,L3
Module 5	
Designing Memory and Array Structures: Memory Reliability and Yield, Signal-to-Noise Ratio, Memory yield, Power Dissipation in Memories, Sources of Power Dissipation in Memories, Partitioning of the memory, Addressing the Active Power Dissipation, Data-retention dissipation, Case Studies in Memory Design: The Programmable Logic Array (PLA), A 4 Mbit SRAM, A 1 Gbit NAND Flash Memory, Perspective: Semiconductor Memory Trends and Evolutions.	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Apply design automation for complex circuits using the different implementation methodology like custom versus semi-custom, hardwired versus fixed, regular array versus ad-hoc. • Use the approaches to minimize the impact of interconnect parasitics on performance, power dissipation and circuit reliability • Impose the ordering of the switching events to meet the desired timing constraints using synchronous, clocked approach. • Infer the reliability of the memory 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book:</p> <p>Jan M Rabey, Anantha Chandrakasan, Borivoje Nikolic, –Digital Integrated Circuits-A Design Perspectivell , PHI, 2nd Edition.</p>	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. M. Smith, –Application Specific Integrated circuitsll , Addison Wesley, 1997 2. H. Veendrick, –MOS IC’s: From Basics to ASICs, Wiley-VCH, 1992. 3. Anantha P. Chandrakasan , Robert W. Brodersen, –Low Power Digital CMOS Designll , Kluwer Academic Publisher, 1995. 	

Real Time Operating System [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE24	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Introduce the fundamental concepts of Real Time Operating Systems and the real time embedded system • Apply concepts relating to operating systems such as Scheduling techniques, Thread Safe Reentrant Functions, Dynamic priority policies. • Describe concepts related to Multi resource services like blocking, Deadlock, live lock & soft real-time services. • Discuss Memory management concepts, Embedded system components, Debugging components and file system components. • Study programs for multithreaded applications using suitable data structures. 			
Modules			RBT Level
Module 1			
Real-Time Systems and Resources: Brief history of Real Time Systems, A brief history of Embedded Systems. System Resources, Resource Analysis, Real-Time Service Utility, Scheduler concepts, Real-Time OS, State transition diagram and tables, Thread Safe Reentrant Functions. (Text 1: Selected sections from Chap. 1, 2)			L1,L2,L3
Module 2			
Processing with Real Time Scheduling: Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies with timing diagrams and problems and issues, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline –Monotonic Policy, Dynamic priority policies, Alternative to RM policy. (Text 1: Chap. 2,3,7)			L1,L2,L3
Module 3			
Memory and I/O: Worst case execution time, Intermediate I/O, Shared Memory, ECC Memory, Flash file systems. Multi-resource Services, Blocking, Deadlock and live lock, Critical sections to protect shared resources, Missed deadline, QoS, Reliability and Availability, Similarities and differences, Reliable software, Available software. (Text 1: Selected topics from Chap. 4,5,6,7,11)			L1,L2,L3
Module 4			
Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components. Debugging			L1,L2,L3

<p>Components, Exceptions, assert, Checking return codes, Single-step debugging, kernel scheduler traces, Test access ports, Trace Ports, External test equipment. (Text 1: Selected topics from Chap. 8,9)</p>	
<p>Module 5</p>	
<p>Process and Threads: Process and thread creations, Simple Programs, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication using multiple threads. (Text 2: Chap. 11)</p>	<p>L1,L2,L3</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Develop programs for real time services, firmware and RTOS, using the fundamentals of Real Time Embedded System, real time service utilities, debugging methodologies and optimization techniques. • Select the appropriate system resources (CPU, I/O, Memory, Cache, ECC Memory, Microcontroller/FPGA/ASIC to improve the system performance. • Apply priority based static and dynamic real time scheduling techniques for the given specifications. • Analyze deadlock conditions, shared memory problem, critical section problem, missed deadlines, availability, reliability and QoS. • Develop programs for multithreaded applications using suitable techniques and data structure 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sam Siewert, –Real-Time Embedded Systems and Componentsll , Cengage Learning India Edition, 2007. 2. Dr. K.V.K.K Prasad, Embedded/Real Time Systems, Concepts, Design and Programming, Black Book, Dream Tech Press, New edition, 2010.

SoC Design			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	16EVE254	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Describe the ARM processor architecture and user-level assembly language programming • Appreciate what a high-level language (in this case, C) really needs and how those needs are met by the ARM instruction set. • raises the issues involved in debugging systems which use embedded processor cores and in the production testing of board-level systems. • Learn the concept of memory hierarchy, discussing the principles of memory management and caches. 			
Modules			RBT Level
Module 1			
<p>ARM Organization and Implementation: 3-stage pipeline ARM organization, 5-stage pipeline ARM organization, ARM instruction execution, ARM implementation, The ARM coprocessor interface.</p> <p>The ARM Instruction Set : Introduction, Exceptions, Conditional execution, Branch and Branch with Link (B, BL), Branch, Branch with Link and eXchange (BX, BLX), Software Interrupt (SWI), Data processing instructions, Multiply instructions, Count leading zeros (CLZ - architecture v5T only), Single word and unsigned byte data transfer instruction, Half-word and signed byte data transfer instructions, Multiple register transfer instructions, Swap memory and register instructions (SWP), Status register to general register transfer instructions, General register to status register transfer instructions, Coprocessor instructions, Coprocessor data operations, Coprocessor data transfers, Coprocessor register transfers, Breakpoint instruction (BRK - architecture v5T only), Unused instruction space, Memory faults, ARM architecture variants.</p>			L1,L2
Module 2			
<p>Architectural Support for High-Level Languages: Abstraction in software design, Data types, Floating-point data types, The ARM floating-point architecture, Expressions, Conditional statements, Loops, Functions and procedures, Use of memory, Run-time environment.</p> <p>Architectural Support for System Development: The ARM memory interface, The Advanced Microcontroller Bus Architecture (AMBA), The ARM reference peripheral specification, Hardware system prototyping tools, The ARMulator, The JTAG boundary scan test architecture, The ARM debug architecture, Embedded Trace,</p>			L1,L2

Signal processing support.	
Module 3	
ARM Processor Cores: ARM7TDMI, ARM8,ARM9TDMI, ARM10TDMI ,Discussion ,Example and exercises. Memory Hierarchy: Memory size and speed, On-chip memory, Caches, Cache design - an example, Memory management, Examples and exercises.	L1,L2
Module 4	
Architectural Support for Operating Systems: An introduction to operating systems, The ARM system control coprocessor, CP15 protection unit registers, ARM protection unit,CP15 MMU registers, ARM MMU architecture, Synchronization, Context switching, Input/ Output, Example and exercises. ARM CPU Cores: The ARM710T, ARM720T and ARM740T, The ARM810,The Strong ARM SA-110,The ARM920T and ARM940T,The ARM946E-S and ARM966E-S,The ARM1020E,Discussion,Example and exercises.	L1,L2
Module 5	
Embedded ARM Applications: The VLSI Ruby II Advanced Communication Processor, The VLSI ISDN Subscriber Processor, The One C™ VWS22100 GSM chip, The Ericsson-VLSI Bluetooth Baseband Controller, The ARM7500 and ARM7500FE, The ARM7100 364,The SA-1100 368,Examples and exercises. The AMULET Asynchronous ARM Processors: Self-timed design 375,AMULET1 377,AMULET2 381,AMULET2e 384,AMULET3 387,The DRACO telecommunications controller 390, A self-timed future? 396,Example and exercises.	L1,L2,L3
Course Outcomes: After studying this course, students will be able to: <ul style="list-style-type: none"> • Apply the 3- and 5-stage pipeline ARM processor cores and analyse the implementation issues. • Use the concepts and methodologies employed in designing a System-on-chip (SoC) based around a microprocessor core and in designing the microprocessor core itself. • Understand how SoCs and microprocessors are designed and used, and why a modern processor is designed the way that it is. • Use integrated ARM CPU cores (including StrongARM) that incorporate full support for memory management. • Analyze the requirements of a modern operating system and use the ARM architecture to address the same. 	
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module.

Total Number of Lecture Hours	01Hr Tutorial (Instructions) + 02 Hours Laboratory	Exam Hours	03
CREDITS – 02			
<p>Course objectives: This laboratory course enables students to:</p> <ul style="list-style-type: none"> • Learn the CAD tool and the flow of the Full Custom IC design cycle. • Learn running DRC, LVS and Parasitic Extraction of the various designs. • Create various components like inverter, differential amplifier and use the same in the design of operational amplifier, R-2R based DAC and ADC. • Understand the suitability of different techniques of IPC and task switching in a multithreaded application. • Study and implement different types of data structures required to implement inter task communication. • Implement Inter task communication using an appropriate data structure. 			
Part – A: Experiments to be done using CADENCE/SYNOPSIS/MENTOR GRAPHICS/TANNER Tool			RBT Level
<p>1. Design an Inverter with given specifications*, completing the design flow mentioned below:</p> <ol style="list-style-type: none"> a. Draw the schematic and verify the following <ol style="list-style-type: none"> i) DC Analysis ii) Transient Analysis b. Draw the Layout and verify the DRC, ERC c. Check for XX d. Extract RC and back annotate the same and verify the Design e. Verify & Optimize for Time, Power and Area to the given constraint*** <p>(Following specification may be used to design an Inverter in gpdk 180nm technology with minimum area:</p> <ol style="list-style-type: none"> i. Maximum output rise time=100ps ii. Maximum output fall time=100ps iii. $P_{avg} \leq 15\mu w$ iv. Load capacitance= 50fF v. Input rise time=200ps vi. Input fall time=200ps <p>Choose maximum frequency based on the power)</p>			L3
<p>Design the following circuits with given specifications*, completing the design flow mentioned below:</p> <ol style="list-style-type: none"> a. Draw the schematic and verify the following <ol style="list-style-type: none"> i) DC Analysis ii) AC Analysis iii) Transient Analysis 			L3

<ul style="list-style-type: none"> b. Draw the Layout and verify the DRC, ERC, LVS c. Check for XX d. Extract RC and back annotate the same and verify the Design. <ul style="list-style-type: none"> 2. i) A Single Stage differential amplifier ii) Common source amplifier 3. Design an op-amp with given specification* using given differential amplifier Common source amplifier in library** 4. Design a 4 bit R-2R based DAC for the given specification** 	
<p>5. Design an Integrator and Differentiator using OPAMP (First Order)</p>	
<p>6. Design and characterize a basic Sigma delta ADC from the available designs.</p>	
<p>7. Design a simple NAND/NOR gate using any one of the tools given above.</p> <p>(Any other experiments may be added in supportive of the course) * Appropriate specification should be given. ** Applicable Library should be added & information should be given to the Designer. *** An appropriate constraint should be given</p>	
Part – B: Experiments to be done using Linux	
<p>1. Develop and test programs to (a) create child process and display it's id and (b) Execute child process function using switch structure</p>	
<p>2. Develop and test program for a multithreaded application, where communication is through a buffer for the conversion of lowercase text to uppercase text, using semaphore concept.</p>	
<p>3. Develop and test program for a multithreaded application, where communication is through shared memory for the conversion of lowercase text to uppercase text.</p>	
<p>4. Develop program for inter-thread communication using message queue. Data is to be input from the keyboard for the chosen application.</p>	
<p>5. Create '_n' number of child threads. Each thread prints the message –I'm in thread number ... and sleeps for 50 ms and then quits. The main thread waits for complete execution of all the child threads and then quits. Compile and execute in Linux.</p>	
<p>6. Implement the multi-thread application satisfying the following :</p> <ul style="list-style-type: none"> i. Two child threads are created with normal priority. ii. Thread 1 receives and prints its priority and sleeps for 50ms and then quits. iii. Thread 2 prints the priority of the thread 1 and rises its priority to above normal and retrieves the new priority of thread 1, prints it and then quits. iv. The main thread waits for the child thread to complete its job and 	L3

quits.	
7. Implement the usage of anonymous pipe with 512 bytes for data sharing between parent and child processes using handle inheritance mechanism	
<p>Course outcomes: This laboratory course enable the students to:</p> <ul style="list-style-type: none"> • Design Analog, digital and mixed mode circuits • Learn the various issues in Mixed signal designs basically data converters. • Acquire hands-on skills of using CAD tools in VLSI design. • Appreciate the design process in VLSI through a mini-project on the design of a CMOS sub-system. • Select a suitable task switching technique in a multithreaded application. • Implement different techniques of message passing and Inter task communication. • Implement different data structures such as pipes, queues and buffers in multithreaded programming. 	
<p>Conduct of Practical Examination:</p> <ul style="list-style-type: none"> • All laboratory experiments are to be included for practical examination. • For examination, one experiment from Part-A and One experiment from Part-B is to be set. • Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. • Change of experiment is allowed only once and Marks allotted to the Procedure part to be made zero. 	
<p>Reference Book: (for some of the Part-B programs) Dreamtech Software Team, –Programming for Embedded Systemsll , John Wiley, India Pvt. Ltd., 2008.</p>	

M.Tech-VLSI & ES-2016-FOURTH SEMESTER SYLLABUS

Synthesis and Optimization of Digital Circuits [As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ELD41	IA Marks	20
Number of Lecture Hours/Week	04	Exam marks	80
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students:</p> <ul style="list-style-type: none"> • Understand the need for optimization and dimensions of optimization for digital circuits. • Understand basic optimization techniques used in circuits design • Understand advanced tools and techniques in digital systems design including Hardware Modeling and Compilation Techniques. • Explain details of Logic-Level synthesis and optimization techniques for combinational and sequential circuits. • Explain the concept of scheduling and resource binding for optimization. 			
Modules			RBT Level
Module 1			
<p>Introduction to Synthesis and optimization: Design of Microelectronics circuits, Computer aided Synthesis and Optimization. Hardware Modeling: HDLs for Synthesis, Abstract models, Compilation and Behavioral Optimization. (Text1: Topics from Chap. 1,3)</p>			L1, L2, L3
Module 2			
<p>Graph theory for CAD for VLSI: Graphs, Combinatorial Optimization, Graph Optimization problems and Algorithms, Boolean Algebra and Applications. Architectural Synthesis and Optimization: Fundamental Architectural Synthesis problems, Area and Performance Estimation, Strategies for Architectural Optimization, Data path Synthesis, Control Path Synthesis.(Text1: Topics From Chap. 2,4)</p>			L1, L2, L3
Module 3			
<p>Two level Combinational Logic Optimization: Introduction, Logic Optimizations, Operations on Two level Logic Covers, Algorithms for Logic Minimization, Symbolic Minimization and Encoding Problems. Multiple Level Combinational Logic Optimization: Introduction, Models and Transformations for Combinational Networks, The Algebraic Model, The Boolean Model. (Text1: Chap. 7, 8)</p>			L1, L2, L3
Module 4			
<p>Sequential Logic Optimization: Introduction, Sequential Logic Optimization using State based Models, Sequential Logic Optimization using Network Models, Implicit FSM Traversal Methods, Testability concerns for</p>			L1, L2, L3

Synchronous Circuits. (Text 1: Chap. 9)	
Module 5	
<p>Scheduling Algorithms: Introduction, A Model for Scheduling problems, Scheduling with Resource Constraints, Scheduling without Resource Constraints, Scheduling Algorithms for Extended Sequencing Models, Scheduling Pipelined Circuits.</p> <p>Resource Sharing and Binding: Sharing and Binding for Resource dominated circuits, Sharing and Binding for General Circuits, Concurrent Binding and Scheduling, Resource sharing and Binding for Non – Scheduled Sequencing Graphs. (Text1: Chap. 5,6)</p>	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the process of synthesis and optimization in a top down approach for digital circuits models using HDLs. • Understand the terminologies of graph theory and its algorithms to optimize a Boolean equation. • Apply different two level and multilevel optimization algorithms for combinational circuits • Apply the different sequential circuit optimization methods using state models and network models. • Apply different scheduling algorithms with resource binding and without resource binding for pipelined sequential circuits and extended sequencing models. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have 10 full questions carrying equal marks. • Each full question consists of 16 marks with a maximum of four sub questions. • There will be 2 full questions from each module covering all the topics of the module • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>Text Book: Giovanni De Micheli, –Synthesis and Optimization of Digital Circuits , Tata McGraw-Hill, 2003.</p>	
<p>Reference Book: Edwars M.D., Automatic Logic synthesis Techniques for Digital Systems, Macmillan New Electronic Series, 1992.</p>	

Advances in Image Processing			
[As per Choice Based credit System (CBCS) Scheme SEMESTER – IV			
Subject Code	16ECS422	IA Marks	20
Number of Lecture Hours/Week	03	Exam marks	80
Total Number of Lecture Hours	40 (8 Hours per Module)	Exam Hours	03
CREDITS – 03			
Course Objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Acquire fundamental knowledge in understanding the representation of the digital image and its properties • Equip with some pre-processing techniques required to enhance the image for further analysis purpose. • Select the region of interest in the image using segmentation techniques. • Represent the image based on its shape and edge information. • Describe the objects present in the image based on its properties and structure. 			
Modules			RBT Level
Module 1			
The image, its representations and properties: Image representations a few concepts, Image digitization, Digital image properties, Color images.			L1
Module 2			
Image Pre-processing: Pixel brightness transformations, geometric transformations, local pre-processing.			L1, L2
Module 3			
Segmentation: Thresholding; Edge-based segmentation – Edge image thresholding, Edge relaxation, Border tracing, Hough transforms; Region – based segmentation – Region merging, Region splitting, Splitting and merging, Watershed segmentation, Region growing post-processing.			L1, L2, L3
Module 4			
Shape representation and description: Region identification; Contour-based shape representation and description – Chain codes, Simple geometric border representation, Fourier transforms of boundaries, Boundary description using segment sequences, B-spline representation; Region-based shape representation and description – Simple scalar region descriptors, Moments, Convex hull.			L1, L2, L3
Module 5			
Mathematical Morphology: Basic morphological concepts, Four morphological principles, Binary dilation and erosion, Skeletons and object marking, Morphological segmentations and watersheds.			L1, L2, L3
Course Outcomes: After studying this course, students will be able to:			
<ul style="list-style-type: none"> • Understand the representation of the digital image and its properties • Apply pre-processing techniques required to enhance the image for its further analysis. 			

Use segmentation techniques to select the region of interest in the image for analysis

- Represent the image based on its shape and edge information.
- Describe the objects present in the image based on its properties and structure.
- Use morphological operations to simplify images, and quantify and preserve the main shape characteristics of the objects.

Question paper pattern:

- The question paper will have 10 full questions carrying equal marks.
- Each full question consists of 16 marks with a maximum of four sub questions.
- There will be 2 full questions from each module covering all the topics of the module
- The students will have to answer 5 full questions, selecting one full question from each module.

M.Tech-VLSI & ES-2018- FIRST SEMESTER SYLLABUS

ADVANCED ENGINEERING MATHEMATICS [As per Choice Based Credit System (CBCS) Scheme] SEMESTER - I			
Course Code	18ELD11	CIE	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS - 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> To learn principles of advanced engineering mathematics through linear algebra and calculus of variations. To understand probability theory and random process that serve as an essential tool for applications of electronics and communication engineering sciences 			
Modules			(RBT) Level
Module -1			
Linear Algebra-I Introduction to vector spaces and sub-spaces, definitions, illustrative example. Linearly independent and dependent vectors- Basis-definition and problems. Linear transformations-definitions. Matrix form of linear transformations-Illustrative examples (Text Book:1).			L1,L2
Module -2			
Linear Algebra-II Computation of eigen values and eigen vectors of real symmetric matrices-Given's method. Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process (Text. Book:1).			L1,L2
Module -3			
Calculus of Variations : - Concept of functional- Eulers equation. Functional dependent on first and higher order derivatives, Functional on several dependent variables. Isoperimetric problems-variation problems with moving boundaries. (Text.Book:2)			L1,L2
Module -4			
Probability Theory:- Review of basic probability theory. Definitions of random variables and probability distributions, probability mass and density functions, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Poisson, Gaussian and Erlang distributions-examples. (Text Book: 3)			L1,L2
Module -5			

<p>Engineering Applications on Random processes:- Classification. Stationary, WSS and ergodic random process. Auto-correlation function-properties, Gaussian random process. (Text Book: 3)</p>	<p>L1,L2</p>
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images. 2. Apply the technique of singular value decomposition for data compression, least square approximation in solving inconsistent linear systems. 3. Utilize the concepts of functional and their variations in the applications of communication systems, decision theory, synthesis and optimization of digital circuits. 4. Learn the idea of random variables (discrete/continuous) and probability distributions in analyzing the probability models arising in control systems and system communications. 5. Analyze random process through parameter-dependent variables in various random processes. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	

ASIC DESIGN [As per Choice Based Credit System (CBCS) scheme] SEMESTER- I			
Subject Code	18EVE12	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Explain ASIC methodologies and programmable logic cells to implement a function on IC. • Analyse back-end physical design flow, including partitioning, floor-planning, placement, and routing. • Gain sufficient theoretical knowledge for carrying out FPGA and ASIC designs. • Design CAD algorithms and explain how these concepts interact in ASIC design. 			
Modules			(RBT) Level
Module -1			
Introduction to ASICs: Full custom, Semi-custom and Programmable ASICs, ASIC Design flow, ASIC cell libraries. CMOS Logic: Data path Logic Cells: Data Path Elements, Adders: Carry skip, Carry bypass, Carry save, Carry select, Conditional sum, Multiplier (Booth encoding), Data path Operators, I/O cells, Cell Compilers.			L1,L2
Module -2			
ASIC Library Design: Logical effort: Predicting Delay, Logical area and logical efficiency, Logical paths, Multi stage cells, Optimum delay and number of stages, library cell design. Programmable ASIC Logic Cells: MUX as Boolean function generators, Acted ACT: ACT 1, ACT 2 and ACT 3 Logic Modules, Xilinx LCA: XC3000 CLB, Altera FLEX and MAX, Programmable ASIC I/O Cells: Xilinx and Altera I/O Block.			L1-L3
Module -3			
Low-level design entry: Schematic entry: Hierarchical design, The cell library, Names, Schematic Icons & Symbols, Nets, Schematic Entry for ASICs, Connections, vectored instances & buses, Edit in place, attributes, Netlist screener. ASIC Construction: Physical Design, CAD Tools System partitioning, Estimating ASIC size. Partitioning: Goals and objectives, Constructive Partitioning, Iterative Partitioning Improvement, KL, FM and Look Ahead algorithms.			L1-L4
Module -4			

<p>Floor planning and placement: Goals and objectives, Measurement of delay in Floor planning, Floor planning tools, Channel definition, I/O and Power planning and Clock planning.</p> <p>Placement: Goals and Objectives, Min-cut Placement algorithm, Iterative Placement Improvement, Time driven placement methods, Physical Design Flow.</p>	L1-L3
Module -5	
<p>Routing: Global Routing: Goals and objectives, Global Routing Methods, Global routing between blocks, Back-annotation. Detailed Routing: Goals and objectives, Measurement of Channel Density, Left-Edge Algorithm, Area-Routing Algorithms, Multilevel routing, Timing –Driven detailed routing, Final routing steps, Special Routing, Circuit extraction and DRC.</p>	L1-L3
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Describe the concepts of ASIC design methodology, data path elements, logical effort and FPGA architectures. 2. Analyze the design of FPGAs and ASICs suitable for specific tasks, perform design entry and explain the physical design flow. 3. Design data path elements for ASIC cell libraries and compute optimum path delay. 4. Create floor plan including partition and routing with the use of CAD algorithms. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Book:</p> <ul style="list-style-type: none"> • Michael John Sebastian Smith, “Application - Specific Integrated Circuits” Addison-Wesley Professional; 2005. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Neil H.E. ADVANCED EMBEDDED SYSTEM [As per Choice Based Credit System (CBCS) scheme] SEMESTER - I			
Subject	18EVE13	CIE	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS - 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. • Describe the hardware software co-design and firmware design approaches • Explain the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. • Program ARM CORTEX M3 using the various instructions, for different applications. 			
Modules			(RBT) Level
Module -1			
<p>Embedded System: Embedded vs General computing system, classification, application and purpose of ES. Core of an Embedded System, Memory, Sensors, Actuators, LED, Opto coupler, Communication Interface, Reset circuits, RTC, WDT, Characteristics and Quality Attributes of Embedded Systems (Text 1: Selected Topics from Ch -1, 2, 3).</p>			L1, L2, L3
Module -2			
<p>Hardware Software Co-Design, embedded firmware design approaches, computational models, embedded firmware development languages, Integration and testing of Embedded Hardware and firmware, Components in embedded system development environment (IDE), Files generated during compilation, simulators, emulators and debugging (Text 1: Selected Topics From Ch-7, 9, 12, 13).</p>			L1, L2, L3
Module -3			
<p>ARM-32 bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)</p>			L1, L2, L3
Module -4			
<p>Instruction Sets: Assembly basics, Instruction list and description, useful instructions, Memory Systems, Memory maps, Cortex M3 implementation overview, pipeline and bus interface (Text 2: Ch-4, 5, 6).</p>			L1, L2, L3
Module -5			

Exceptions, Nested Vector interrupt controller design, SysTick Timer, Cortex-M3 Programming using assembly and C language, CMSIS (Text 2: Ch-7, 8, 10).	L1, L2, L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system. 2. Explain the hardware software co-design and firmware design approaches. 3. Acquire the knowledge of the architectural features of ARM CORTEX M3, a 32 bit microcontroller including memory map, interrupts and exceptions. 4. Apply the knowledge gained for Programming ARM CORTEX M3 for different applications. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. K. V. Shibu, "Introduction to embedded systems", TMH education Pvt. Ltd. 2009. 2. Joseph Yiu, "The Definitive Guide to the ARM Cortex-M3", 2nd edn, Newnes, (Elsevier), 2010.

VLSI TESTING			
[As per Choice Based credit System (CBCS) Scheme			
SEMESTER – I			
Subject Code	18EVE14	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Learn various types of faults and fault modelling. • Comprehend the need for testing and testable design of digital circuits • Illustrate methods and algorithms for testing digital combinatorial networks and test pattern generation • Exemplify methods for testing sequential circuits and memory testing • Inferring testing methods using Boundary scan, Built-in self test and other advanced topics in digital circuit design. 			
Modules			RBT Level
Module 1			
<p>Faults in digital circuits: Failures and Faults, Modeling of faults, Temporary Faults. (Text 1)</p> <p>Logic Simulation: Applications, Problems in simulation based design verification, types of simulation, The unknown logic values, compiled simulation, event-driven simulation, Delay models, Element evaluation, Hazard detection, Gate-level event-driven Simulation. (Text 2)</p>			L1,L2
Module 2			
<p>Test generation for Combinational Logic circuits: Fault Diagnosis of digital circuits, Test generation techniques for combinational circuits, Detection of multiple faults in Combinational logic circuits. (Text 1)</p> <p>Testable Combinational logic circuit design: The Read-Muller expansion technique, Three level OR-AND-OR design, Automatic synthesis of testable logic.(Text 1)</p>			L1,L2,L3
Module 3			
<p>Testable Combinational logic circuit design: Testable design of multilevel combinational circuits, Synthesis of random pattern testable combinational circuits, Path delay fault testable combinational logic design, Testable PLA design. (Text 1)</p> <p>Test generation for Sequential circuits: Testing of sequential circuits as Iterative combinational circuits, state table verification, Test generation based on Circuit Structure, Functional Fault models, test Generation based on Functional Fault models. (Text 1)</p>			L1,L2,L3
Module 4			
<p>Design of testable sequential circuits: Controllability and observability, Ad-Hoc design rules for improving testability, design of diagnosable sequential circuits, the scan-path technique for testable</p>			L1,L2,L3

sequential circuit design, Level Sensitive Scan Design(LSSD), Random Access Scan Technique, Partial scan, testable sequential circuit design using Nonscan Techniques, Cross check, Boundary Scan. (Text 1)	
Module 5	
<p>Built-In Self Test: Test pattern generation for BIST, Output response analysis, Circular BIST, BIST Architectures. (Text 1)</p> <p>Testable Memory Design: RAM Fault Models, Test algorithms for RAMs, Detection of pattern-sensitive faults, BIST techniques for RAM chips, Test generation and BIST for embedded RAMs. (Text1)</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyze the need for fault modeling and testing of digital circuits 2. Generate fault lists for digital circuits and compress the tests for efficiency 3. Create tests for digital memories and analyze failures in them 4. Apply boundary scan technique to validate the performance of digital circuits 5. Design built-in self tests for complex digital circuits 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Lala Parag K., Digital Circuit Testing and Testability, New York, Academic Press, 1997. 2. Abramovici M, Breuer M A and Friedman A D, “Digital Systems Testing and Testable Design”, Wiley, 1994.

DIGITAL VLSI DESIGN			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER -I			
Subject Code	18EVE15	CIE Marks	40
Number of Lecture Hours/Week of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS - 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Explain VLSI Design Methodologies • Learn Static and Dynamic operation principles, analysis and design of inverter circuit. • Infer state of the art Semiconductors Memory circuits. • Outline the comprehensive coverage of Methodologies and Design practice that are used to reduce the Power Dissipation of large scale digital circuits. • Illustrate VLSI and ASIC design 			
Modules			(RBT) Level
Module -1			
<p>MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor, MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects.</p> <p>MOS Inverters-Static Characteristics: Introduction, Resistive-Load Inverter, Inverters with n_Type MOSFET Load.</p>			L1, L2
Module -2			
<p>MOS Inverters-Static Characteristics: CMOS Inverter.</p> <p>MOS Inverters: Switching Characteristics and Interconnect Effects: Introduction, Delay-Time Definition, Calculation of Delay Times, Inverter Design with Delay Constraints, Estimation of Interconnect Parasitics, Calculation of Interconnect Delay, Switching Power Dissipation of CMOS Inverters.</p>			L2, L3
Module -3			
<p>Semiconductor Memories: Introduction, Dynamic Random Access Memory (DRAM), Static Random Access Memory (SRAM), Nonvolatile Memory, Flash Memory, Ferroelectric Random Access Memory (FRAM).</p>			L1, L2, L3
Module -4			

<p>Dynamic Logic Circuits: Introduction, Basic Principles of Pass Transistor Circuits, Voltage Bootstrapping, Synchronous Dynamic Circuit Techniques, Dynamic CMOS Circuit Techniques, High Performance Dynamic CMOS circuits.</p> <p>BiCMOS Logic Circuits: Introduction, Bipolar Junction Transistor (BJT): Structure and Operation, Dynamic Behavior of BJTs, Basic BiCMOS Circuits: Static Behavior, Switching Delay in BiCMOS Logic Circuits, BiCMOS Applications.</p>	<p>L1,L2, L3</p>
<p>Module -5</p>	
<p>Chip Input and Output (I/O) Circuits: Introduction, ESD Protection, Input Circuits, Output Circuits and L(di/dt) Noise, On-Chip Clock Generation and Distribution, Latch-Up and Its Prevention.</p> <p>Design for Manufacturability: Introduction, Process Variations, Basic Concepts and Definitions, Design of Experiments and Performance Modeling.</p>	<p>L2, L3</p>
<p>Course outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Analyse issues of On-chip interconnect Modelling and Interconnect delay calculation. 2. Analyse the Switching Characteristics in Digital Integrated Circuits. 3. Use the Dynamic Logic circuits in state-of-the-art VLSI chips. 4. Study critical issues such as ESD protection, Clock distribution, Clock buffering, and Latch phenomenon 5. Use Bipolar and Bi-CMOS circuits in very high speed design. 	
<p>Question Paper Pattern</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

VLSI & ES Lab-1 [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Laboratory Code	18EVEL16	CIE Marks	40
Number of Lecture Hours/Week	03	SEE marks	60
Total Number of Lecture Hours	01Hr Tutorial (Instructions)+ 03 Hours Laboratory	Exam Hours	03
CREDITS – 02			
<p>Course objectives: This laboratory course enables students to:</p> <ul style="list-style-type: none"> • Learn Verilog Code Programming for the design of digital circuits • Use FPGA/CPLD board and Logic Analyzer or Chipscope to verify the results. • Learn physical design for the digital circuits • Learn Assembly language programming for different applications using ARM- Cortex M3 Kit and Keil uVision- 4 tool. • Learn C language programming for different applications using ARM- Cortex M3 Kit and Keil uVision-4 tool. 			
Experiments			RBT Level
<p>Part – A: VLSI Digital Design Experiments to be done using</p> <ol style="list-style-type: none"> 1. CADENCE/SYNOPSIS/MENTOR GRAPHICS/TANNER or any other equivalent Tool 2. FPGA/CPLD Boards with Xilinx or any other equivalent 			

ASIC-Digital Design Flow

L3

I. Write Verilog Code for the following circuits and their Test Bench for verification, observe the wave technological library (constraints to be given). Do the initial timing verification with gate level simulation.

1. An inverter, Buffer, Transmission gate and basic gates
2. Flip flop - RS, D, JK, MS, T
3. 4-bit counter [Synchronous & Asynchronous counter]

Note: For the set of experiments listed above, students can make the following flow as a study:

- Core Constrained flow
- Creation of I/O pad frame
- Use the created I/O pad frame for Pad constrained design.
- CTS flow Only for designs which have clock

FPGA DIGITAL DESIGN***VLSI Front End Design programs:***

Programming can be done using any compiler. Down load the programs on FPGA/CPLD boards and use pattern generator (32 channels and logic analyzer)/Chipscope pro apart from verification by simulation

1. Write Verilog code for the design of 8-bit
 - i. Carry Ripple Adder
 - ii. Carry Look Ahead adder
 - iii. Carry Skip Adder
2. Write Verilog Code for 8-bit
 - i. Array Multiplication (Signed and Unsigned)
 - ii. Booth Multiplication (Radix-4)
3. Write Verilog code for 4/8-bit
 - i. Magnitude Comparator
 - ii. LFSR
 - iii. Parity Generator
 - iv. Universal Shift Register
4. Design a Mealy and Moore Sequence Detector using Verilog to detect Sequence. Eg 11101 (with and without overlap) any sequence can be specified.

Part – B: Experiments to be done using ARM Cortex M3	
<p>ARM Cortex M3 Programs - Programming to be done using Keil uVision 4 and download the program on to a M3 evaluation board such as NXP LPC1768 or ATMEL ARM</p> <p>a) Write an Assembly language program to calculate the sum and display the result for the addition of first ten numbers. SUM = 10+9+8++1</p> <p>b) Write an Assembly language program to store data in RAM</p> <p>c) Write a C program to output the “Hello World” message using UART</p> <p>d) Write a C program to operate a buzzer using Cortex M3</p> <p>e) Write a C program to display the temperature sensed using Cortex M3.</p> <p>f) Write a C program to control stepper motor using Cortex M3.</p>	L1, L2, L3
<p>Course outcomes: This laboratory course enable the students to:</p> <ol style="list-style-type: none"> 1. Understand the features of CAD tool in VLSI design. 2. Design and verify the behavior of digital circuits using digital flow 3. Verify the design using a logic analyzer 4. Analyse physical design 5. Develop Assembly language programs for different applications using ARM- Cortex M3 Kit and Keil uVision-4 tool. 6. Develop C language programs for different applications using ARM- Cortex M3 Kit and Keil uVision-4 tool. 	
<p>Conduct of Practical Examination:</p> <ul style="list-style-type: none"> • All laboratory experiments are to be included for practical examination. • For examination, one experiment from Part-A and One experiment from Part-B is to be set. • Students are allowed to pick one experiment from the lot. • Strictly follow the instructions as printed on the cover page of answer script for breakup of marks. • Change of experiment is allowed only once and Marks allotted to the Procedure part to be made zero. 	

RESEARCH METHODOLOGY AND IPR [As per Choice Based Credit System (CBCS) scheme] SEMESTER -I			
Course Code	18RMI17	CIE Marks	40
Number of Lecture Hours/Week	02	Exam Hours	03
Total Number of Lecture Hours	25	SEE Marks	60
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To give an overview of the research methodology and explain the technique of defining a research problem • To explain the functions of the literature review in research. • To explain carrying out a literature search, its review, developing theoretical and conceptual frameworks and writing a review. • To explain various research designs and their characteristics. • To explain the details of sampling designs, and also different methods of data collections. • To explain the art of interpretation and the art of writing research reports. • To explain various forms of the intellectual property, its relevance and business impact in the changing global business environment. • To discuss leading International Instruments concerning Intellectual Property Rights. ■ 			
Module-1			Teaching Hours/ RBT Level
Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. ■			05 L1, L2
Module-2			
Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration. Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed. ■			05 L1, L2
Module-3			

<p>Research Design: Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs.</p> <p>Design of Sample Surveys: Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs. ■</p>	<p>05</p> <p>L1, L2</p>
<p>Module-4</p>	
<p>Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method.</p> <p>Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout.</p> <p>Interpretation and Report Writing (continued): of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports. ■</p>	<p>05</p> <p>L1, L2, L3, L4</p>
<p>Module-5</p>	
<p>Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout-Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property Rights, UNSECO. ■</p>	<p>05</p> <p>L1, L2, L3, L4</p>

Course outcomes:

At the end of the course the student will be able to:

- Discuss research methodology and the technique of defining a research problem
- Explain the functions of the literature review in research, carrying out a literature search, developing theoretical and conceptual frameworks and writing a review.
- Explain various research designs and their characteristics.
- Explain the art of interpretation and the art of writing research reports
- Discuss various forms of the intellectual property, its relevance and business impact in the changing global business environment and leading International Instruments concerning IPR. ■

Question paper pattern:

- Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks.
- Each full question can have a maximum of 4 sub questions.
- There will be 2 full questions from each module covering all the topics of the module.
- Students will have to answer 5 full questions, selecting one full question from each module.
- The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

M.Tech-VLSI & ES-2018-SECOND SEMESTER SYLLABUS

DESIGN OF ANALOG AND MIXED MODE VLSI CIRCUITS [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	18EVE21	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Describe basic physics and operation of MOS devices. • Exemplify single-stage and differential amplifiers and current mirrors • Describe operational amplifiers • Learn the design of phase-locked-loops • Know the role of Data converters in an ever-increasing digital world. 			
Modules			RBT Level
Module 1			
Basic MOS Device Physics: General considerations, MOS I/V Characteristics, second order effects, MOS device models.			L1, L2
Single stage Amplifier: Basic Concepts, Common Source stage (Text 1)			
Module 2			
Single stage Amplifier: Source follower, common-gate stage, Cascode Stage, choice of device models.			L1,L2
Differential Amplifiers: Single ended and differential operation, Basic differential pair, Common mode response, Differential pair with MOS loads, Gilbert cell (Text 1)			
Module 3			
Passive and Active Current Mirrors: Basic current mirrors, Cascode Current mirrors, Active Current mirrors.			L1,L2,L3
Operational Amplifiers (part-1): General Considerations, One Stage OP-Amp, Two Stage OP-Amp, Gain boosting (Text 1)			
Module 4			
Operational Amplifiers (part-2): Common Mode Feedback, Slew rate, Power Supply Rejection.			L1,L2,L3
Phase Locked Loops: Simple PLL, Charge pump PLLs, Non-ideal effects in PLLs, Delay-Locked Loops, Applications (Text 1)			
Module 5			
Data Converter Architectures: DAC & ADC Specifications, Current Steering DAC, Charge Scaling DAC, Cyclic DAC, Pipeline DAC, Flash ADC, Pipeline ADC, Integrating ADC, Successive Approximation ADC (Text 2)			L1,L2,L3

<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Use efficient analytical tools for quantifying the behaviour of basic circuits by inspection. 2. Design high-performance, stable operational amplifiers with the trade-offs between speed, precision and power dissipation. 3. Design and study the behaviour of phase-locked-loops for the applications. 4. Identify the critical parameters that affect the analog and mixed-signal VLSI circuits' performance 5. Perform calculations in the digital or discrete time domain, more sophisticated data converters to translate the digital data to and from inherently analog world. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Behzad Razavi, "Design of Analog CMOS Integrated Circuits", TMH, 2007. 2. R. Jacob Baker, "CMOS Circuit Design, Layout, and Simulation", Second Edition, Wiley. 	
<p>Reference Book:</p> <ul style="list-style-type: none"> • Phillip E. Allen, Douglas R. Holberg, "CMOS Analog Circuit Design", Second Edition, Oxford University Press. 	

REAL TIME OPERATING SYSTEM [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	18EVE22	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable the students to:			
<ul style="list-style-type: none"> • Introduce the fundamental concepts of Real Time Operating Systems and the real time embedded system • Apply concepts relating to operating systems such as Scheduling techniques, Thread Safe Reentrant Functions, Dynamic priority policies. • Describe concepts related to Multi resource services like blocking, Deadlock, live lock & soft real-time services. • Discuss Memory management concepts, Embedded system components, Debugging components and file system components. • Study programs for multithreaded applications using suitable data structures. 			
Modules			RBT Level
Module 1			
Real-Time Systems and Resources: Brief history of Real Time Systems, A brief history of Embedded Systems. System Resources, Resource Analysis, Real-Time Service Utility, Scheduler concepts, Real-Time OS, State transition diagram and tables, Thread Safe Reentrant Functions. (Text 1: Selected sections from Chap. 1, 2)			L1,L2,L3
Module 2			
Processing with Real Time Scheduling: Scheduler Concepts, Preemptive Fixed Priority Scheduling Policies with timing diagrams and problems and issues, Feasibility, Rate Monotonic least upper bound, Necessary and Sufficient feasibility, Deadline –Monotonic Policy, Dynamic priority policies, Alternative to RM policy. (Text 1: Chap. 2,3,7)			L1,L2,L3
Module 3			
Memory and I/O: Worst case execution time, Intermediate I/O, Shared Memory, ECC Memory, Flash file systems. Multi-resource Services, Blocking, Deadlock and live lock, Critical sections to protect shared resources, Missed deadline, QoS, Reliability and Availability, Similarities and differences, Reliable software, Available software. (Text 1: Selected topics from Chap. 4,5,6,7,11)			L1,L2,L3
Module 4			
Firmware Components: The 3 firmware components, RTOS system software mechanisms, Software application components. Debugging Components, Exceptions, assert, Checking return codes, Single-step debugging, Test access ports, Trace Ports. (Text 1: Selected topics			L1,L2,L3

from Chap. 8,9)	
Module 5	
Process and Threads: Process and thread creations, Programs related to semaphores, message queue, shared buffer applications involving inter task/thread communication (Text 2: Chap. 11)	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Develop programs for real time services, firmware and RTOS, using the fundamentals of Real Time Embedded System, real time service utilities, debugging methodologies and optimization techniques. 2. Select the appropriate system resources (CPU, I/O, Memory, Cache, ECC Memory, Microcontroller/FPGA/ASIC) to improve the system performance. 3. Apply priority based static and dynamic real time scheduling techniques for the given specifications. 4. Analyze deadlock conditions, shared memory problem, critical section problem, missed deadlines, availability, reliability and QoS. 5. Develop programs for multithreaded applications using suitable techniques and data structure 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Sam Siewert, "Real-Time Embedded Systems and Components", Cengage Learning India Edition, 2007. 2. Dr. K.V.K.K Prasad, Embedded/Real Time Systems, Concepts, Design and Programming, Black Book, Dream Tech Press, New edition, 2010. 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. James W S Liu, "Real Time System", Pearson education, 2008. 2. Dream Tech Software Team, "Programming for Embedded Systems", John Wiley, India Pvt. Ltd., 2008. 	

SYSTEM VERILOG [As per Choice Based credit System (CBCS) Scheme] SEMESTER – II			
Subject Code	18EVE23	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Understand digital system verification using object oriented methods • Learn the System Verilog language for digital system verification. • Create/build test benches for the basic design/methodology. • Use constrained random tests for verification • Understand concepts of functional coverage 			
Modules			RBT Level
Module 1			
Verification Guidelines: The verification process, basic test bench functionality, directed testing, methodology basics, constrained random stimulus, randomization, functional coverage, test bench components, layered testbench. Data Types: Built in Data types, fixed and dynamic arrays, Queues, associative arrays, linked lists, array methods, choosing a storage type, creating new types with type def, creating user defined structures, type conversion, Enumerated types, constants and strings, Expression width.			L1, L2
Module 2			
Procedural Statements and Routines: Procedural statements, Tasks, Functions and void functions, Task and function overview, Routine arguments, returning from a routine, Local data storage, time values. Converting the test bench and design: Separating the test bench and design, The interface construct, Stimulus timing, Interface driving and sampling, System Verilog assertions.			L1,L2,L3
Module 3			
Randomization: Introduction, Randomization in System Verilog, Constraint details, Solution probabilities, Valid constraints, In-line constraints, Random number functions, Common randomization problems, Iterative and array constraints, Random control, Random Number Generators.			L1,L2,L3
Module 4			
Threads and Interprocess Communication: Working with threads, Disabling threads, Interprocess communication, Events, semaphores, Mailboxes, Building a test bench with threads and Interprocess Communication.			L1,L2,L3

Module 5	
<p>Functional Coverage: Coverage types, Coverage strategies, Simple coverage example, Anatomy of Cover group and Triggering a Cover group, Data sampling, Cross coverage, Generic Cover groups, Coverage options, Analyzing coverage data, measuring coverage statistics during simulation.</p>	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Write test benches for moderately complex digital circuits 2. Use System Verilog language 3. Appreciate functional coverage 4. Apply constrained random tests benches using System Verilog 5. Analyze a verification case and apply System Verilog to verify the design 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

ADVANCES IN VLSI DESIGN			
[As per Choice Based credit System (CBCS) Scheme]			
SEMESTER – II			
Subject Code	18EVE241	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
<p>Course Objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Learn circuit-oriented approach towards digital design • Illustrate the impact of interconnect wiring on the functionality and performance of a digital gate. • Infer different approaches to digital timing and clocking circuits • Understand the impact of clock skew on the behaviour of digital synchronous circuits. • Explain the role of peripheral circuitry such as the decoders, sense amplifiers, drivers and control circuitry in the design of reliable and fast memories . 			
Modules			RBT Level
Module 1			
<p>Implementation Strategies For Digital ICS: Introduction, From Custom to Semicustom and Structured Array Design Approaches, Custom Circuit Design, Cell-Based Design Methodology, Standard Cell, Compiled Cells, Macrocells, Megacells and Intellectual Property, Semi-Custom Design Flow, Array-Based Implementation Approaches, Pre-diffused (or Mask-Programmable) Arrays, Pre-wired Arrays, Perspective-The Implementation Platform of the Future.</p>			L1,L2,L3
Module 2			
<p>Coping With Interconnect: Introduction, Capacitive Parasitics, Capacitance and Reliability-Cross Talk, Capacitance and Performance in CMOS, Resistive Parasitics, Resistance and Reliability-Ohmic Voltage Drop, Electromigration, Resistance and Performance-RC Delay, Inductive Parasitics, Inductance and Reliability-Voltage Drop, Inductance and Performance-Transmission Line Effects, Advanced Interconnect Techniques, Reduced-Swing Circuits, Current-Mode Transmission Techniques, Perspective: Networks-on-a-Chip.</p>			L1,L2,L3
Module 3			
<p>Timing Issues In Digital Circuits: Introduction, Timing Classification of Digital Systems, Synchronous Interconnect, Mesochronous interconnect, Plesiochronous Interconnect, Asynchronous Interconnect, Synchronous Design — An In-depth Perspective, Synchronous Timing Basics, Sources of Skew and Jitter, Clock-Distribution Techniques, Latch-Base Technique,</p>			L1,L2,L3

Completion-Signal Generation, Self-Timed Signaling, Practical Examples of Self-Timed Logic, Synchronizers and Arbiters, Synchronizers-Concept and Implementation, Arbiters, Clock Synthesis and Synchronization Using a Phase-Locked Loop, Basic Concept, Building Blocks of a PLL. d Clocking, Self Timed Circuit Design, Self-Timed Logic - An Asynchronous	
Module 4	
Design of testable sequential circuits: Controllability and observability, Ad-Hoc design rules for improving testability, design of diagnosable sequential circuits, the scan-path technique for testable sequential circuit design, Level Sensitive Scan Design(LSSD), Random Access Scan Technique, Partial scan, testable sequential circuit design using Nonscan Techniques, Cross check, Boundary Scan. (Text 1)	L1,L2,L3
Module 5	
Designing Memory and Array Structures: Memory Reliability and Yield, Signal-to-Noise Ratio, Memory yield, Power Dissipation in Memories, Sources of Power Dissipation in Memories, Partitioning of the memory, Addressing the Active Power Dissipation, Data retention dissipation, Case Studies in Memory Design: The Programmable Logic Array (PLA), A 4 Mbit SRAM, A 1 Gbit NAND Flash Memory, Perspective: Semiconductor Memory Trends and Evolutions.	L1,L2,L3
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Apply design automation for complex circuits using the different implementation methodology like custom versus semi-custom, hardwired versus fixed, regular array versus ad-hoc. 2. Use the approaches to minimize the impact of interconnect parasitics on performance, power dissipation and circuit reliability 3. Impose the ordering of the switching events to meet the desired timing constraints using synchronous, clocked approach. 4. Infer the reliability of the memory 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ul style="list-style-type: none"> • Jan M Rabey, Anantha Chandrakasan, Borivoje Nikolic, –Digital Integrated Circuits-A Design Perspective, PHI, 2nd Edition. 	

SoC DESIGN [As per Choice Based credit System (CBCS) Scheme SEMESTER – II			
Subject Code	18EVE252	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable students to: <ul style="list-style-type: none"> • Describe the ARM processor architecture and user-level assembly language programming • Appreciate what a high-level language (in this case, C) really needs and how those needs are met by the ARM instruction set. • raises the issues involved in debugging systems which use embedded processor cores and in the production testing of board-level systems. • Learn the concept of memory hierarchy, discussing the principles of memory management and caches. 			
Modules			RBT Level
Module 1			
ARM Organization and Implementation: 3-stage pipeline ARM organization, 5-stage pipeline ARM organization, ARM instruction execution, ARM implementation, The ARM coprocessor interface. The ARM Instruction Set : Introduction, Exceptions, Conditional execution, Branch and Branch with Link (B, BL),Branch, Branch with Link and eXchange (BX, BLX),Software Interrupt (SWI),Data processing instructions, Multiply instructions, Count leading zeros (CLZ - architecture v5T only), Single word and unsigned byte data transfer instruction, Half-word and signed byte data transfer instructions,Multiple register transfer instructions, Swap memory and register instructions (SWP), Status register to general register transfer instructions, General register to status register transfer instructions, Coprocessor instructions, Coprocessor data operations, Coprocessor data transfers, Coprocessor register transfers, Breakpoint instruction (BRK - architecture v5T only), Unused instruction space, Memory faults, ARM architecture variants.			L1,L2
Module 2			
Architectural Support for High-Level Languages: Abstraction in software design, Data types, Floating-point data types, The ARM floating-point architecture, Expressions, Conditional statements, Loops, Functions and procedures, Use of memory, Run-time environment. Architectural Support for System Development: The ARM memory interface, The Advanced Microcontroller Bus Architecture (AMBA), The ARM reference peripheral specification, Hardware			L1,L2

system prototyping tools, The ARMulator, The JTAG boundary scan test architecture, The ARM debug architecture, Embedded Trace, Signal processing support.	
Module 3	
ARM Processor Cores: ARM7TDMI, ARM8,ARM9TDMI, ARM10TDMI,Discussion,Example and exercises. Memory Hierarchy: Memory size and speed, On-chip memory, Caches, Cache design - an example, Memory management, Examples and exercises.	L1,L2
Module 4	
Architectural Support for Operating Systems: An introduction to operating systems, The ARM system control coprocessor, CP15 protection unit registers, ARM protection unit,CP15 MMU registers, ARM MMU architecture, Synchronization, Context switching, Input/ Output, Example and exercises. ARM CPU Cores: The ARM710T, ARM720T and ARM740T, The ARM810, The Strong ARM SA-110, The ARM920T and ARM940T, The ARM946E-S and ARM966E-S, The ARM1020E, Discussion, Example and exercises.	L1,L2
Module 5	
Embedded ARM Applications: The VLSI Ruby II Advanced Communication Processor, The VLSI ISDN Subscriber Processor, The One C TM VWS22100 GSM chip, The Ericsson-VLSI Bluetooth Baseband Controller, The ARM7500 and ARM7500FE, The ARM7100 364, The SA-1100 368, Examples and exercises. The AMULET Asynchronous ARM Processors: Self-timed design 375, AMULET1 377, AMULET2 381, AMULET2e 384,AMULET3 387, The DRACO telecommunications controller 390, A self-timed future? 396, Example and exercises.	L1,L2,L3
Course Outcomes: After studying this course, students will be able to: 1. Apply the 3- and 5-stage pipeline ARM processor cores and analyse the implementation issues. 2. Use the concepts and methodologies employed in designing a System- on-chip (SoC) based around a microprocessor core and in designing the microprocessor core itself. 3. Understand how SoCs and microprocessors are designed and used, and why a modern processor is designed the way that it is. 4. Use integrated ARM CPU cores (including StrongARM) that incorporate full support for memory management. 5. Analyze the requirements of a modern operating system and use the ARM architecture to address the same.	
Question paper pattern: <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

VLSI & ES Lab-2			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – II			
Laboratory Code	18EVEL26	IA Marks	40
Number of Lecture Hours/Week	01Hr Tutorial (Instructions) + 03 Hours Laboratory	Exam Mark	60
		Exam Hour	03
CREDITS – 02			
Course objectives: This course will enable students to:			
<ul style="list-style-type: none"> • Learn the CAD tool and the flow of the Full Custom IC design cycle. • Learn running DRC, LVS and Parasitic Extraction of the various designs. • Create various components like inverter, differential amplifier and use the same in the design of operational amplifier, R-2R based DAC and ADC. • Understand the suitability of different techniques of IPC and task switching in a multithreaded application. • Study and implement different types of data structures required to implement inter task communication. • Implement Inter task communication using an appropriate data structure. 			
Experiments			(RBT) Level
<p>PART A: VLSI Design. Experiments to be conducted using suitable CAD tool</p> <p>1. Design an Inverter with given specifications*, completing the design flow mentioned below:</p> <ol style="list-style-type: none"> a. Draw the schematic and verify the following <ol style="list-style-type: none"> i) DC Analysis ii) Transient Analysis b. Draw the Layout and verify the DRC, ERC c. Check for XX d. Extract RC and back annotate the same and verify the Design e. Verify & Optimize for Time, Power and Area to the given constraint*** 			L2,L3,L4

<p>2. Design the following circuits with given specifications*, completing the design flow mentioned below:</p> <ol style="list-style-type: none"> a. Draw the schematic and verify the following <ol style="list-style-type: none"> i) DC Analysis ii) AC Analysis iii) Transient Analysis b. Draw the Layout and verify the DRC, ERC, LVS c. Check for XX d. Extract RC and back annotate the same and verify the Design <ol style="list-style-type: none"> i) Single Stage differential amplifier ii) Common source amplifier iii) Design an op-amp with given specification* using differential amplifier Common source amplifier in library** iv) Design a 4 bit R-2R based DAC for the given specification** 	
<p>3. Design an Integrator using OPAMP (First Order)</p>	
<p>4. Design a Differentiator using OPAMP (First Order)</p>	
<p>5. Design and characterize a basic Sigma delta ADC from the available designs.</p>	
<p>PART B: RTOS programs using C language in LINUX OS.</p> <ol style="list-style-type: none"> 1. Develop programs to (a) create child process and display it's id and (b) Execute child process function using switch structure 2. Develop and test program for a multithreaded application, where communication is through a buffer for the conversion of lowercase text to uppercase text, using semaphore concept. 3. Develop and test program for a multithreaded application, where communication is through shared memory for the conversion of lowercase text to uppercase text. 4. Develop program for inter-thread communication using message queue. Data is to be input from the keyboard for the chosen application 5. Create 'n' number of child threads. Each thread prints the message "I'm in thread number ..." and sleeps for 50 ms and then quits. The main thread waits for complete execution of all the child threads and then quits. Compile and execute in Linux. 6. Implement the usage of anonymous pipe with 512 bytes for data sharing between parent and child processes using handle inheritance mechanism 	<p>L1, L2, L3</p>

Course outcomes: On the completion of this laboratory course, the students will be able to:

- Design, implement and analyse analog, digital and mixed mode circuits
- Learn the various issues in Mixed signal designs basically data converters.
- Acquire hands-on skills of using CAD tools in VLSI design.
- Appreciate the design process in VLSI through a mini-project on the design of a CMOS sub-system.
- Select a suitable task switching technique in a multithreaded application.
- Implement different techniques of message passing and Inter task communication.
- Implement different data structures such as pipes, queues and buffers in multithreaded programming.

Conduct of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- For examination, two questions using different tool to be set.
- Students are allowed to pick one experiment from the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks.
- Change of experiment is allowed only once and Marks allotted to the procedure part to be made zero.

M.Tech-VLSI & ES-2018- THIRD SEMESTER SYLLABUS

CAD of DIGITAL SYSTEMS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Course Code	18EVE31	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits –03			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Use graph theory in physical design • Learn various optimization methods • Understand different techniques for placement and routing 			
Modules			RBT Levels
Module-1			
<p>Introduction to Design Methodologies: The VLSI Design Problem, The Design Domains, Design Actions, Design Methods and Technologies.</p> <p>VLSI Design Automation tools: Algorithmic and System Design, Structural and Logic Design, Transistor-level Design, Layout Design, Verification Methods, Design Management Tools.</p> <p>Algorithmic graph theory and computational complexity: Terminology, Data Structures for the Representation of Graphs, Computational Complexity, Examples of Graph Algorithms.</p> <p>Tractable and intractable problems: Decision Problems, Complexity Classes, NP-completeness and NP-hardness, Consequences.</p>			L1, L2
Module-2			
<p>General purpose methods for combinational optimization: Backtracking and Branch-and-bound, Dynamic Programming, Integer Linear Programming, Local Search, Simulated Annealing, Tabu Search, Genetic Algorithms, A Few Final Remarks on General-purpose Methods.</p> <p>Layout compaction: Design Rules, Symbolic Layout, Problem Formulation, Algorithms for Constraint-graph Compaction, Other Issues.</p>			L2,L3
Module-3			
<p>Placement and partitioning: Circuit Representation, Wire-length Estimation, Types of Placement Problem, Placement Algorithm, Partitioning.</p> <p>Floor planning: Floorplanning Concepts, Shape Functions and Floorplan Sizing.</p>			L2,L3
Module-4			

<p>Routing: Types of Local Routing Problems, Area Routing, Channel Routing, Introduction to Global Routing, Algorithms for Global Routing.</p> <p>Simulation: General Remarks on VLSI Simulation, Gate-level Modeling and Simulation, Switch-level Modeling and Simulation.</p>	L2,L3
Module-5	
<p>Logic Synthesis and Verification: Introduction to Combinational Logic Synthesis, Binary-decision Diagrams, Two-level Logic Synthesis</p> <p>High level synthesis: Hardware Models for High Level Synthesis, Internal Representation of the Input Algorithm, Allocation, Assignment and Scheduling, Some Scheduling Algorithm, Some Aspects of the Assignment Problem, High-level Transformations.</p>	L3,L4
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Solve graph theoretic problems. 2. Evaluate the computational complexity of an algorithm 3. Write algorithms for VLSI Automation 4. Simulate and synthesize digital circuits using VLSI automation tools. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60.

<p>Reference Books:</p> <ul style="list-style-type: none"> • N.A. Sherwani, “Algorithms for VLSI Physical Design Automation”. Springer International edition, 3rd edition. 	

ADVANCES IN IMAGE PROCESSING [As per Choice Based credit System (CBCS) Scheme SEMESTER – III]			
Subject Code	18ECS321	CIE Marks	40
Number of Lecture Hours/Week	04	SEE marks	60
Total Number of Lecture Hours	50 (10 Hours Per Module)	Exam Hours	03
CREDITS – 04			
Course Objectives: This course will enable students to:			
<ol style="list-style-type: none"> 1. Acquire fundamental knowledge in understanding the representation of the digital image and its properties 2. Equip with some pre-processing techniques required to enhance the image for further analysis purpose. 3. Select the region of interest in the image using segmentation techniques. 4. Represent the image based on its shape and edge information. 5. Describe the objects present in the image based on its properties and structure. 			
Modules			RBT Level
Module 1			
The image, its representations and properties: Image representations a few concepts, Image digitization, Digital image properties, Color images.			L1
Module 2			
Image Pre-processing: Pixel brightness transformations, geometric transformations, local pre-processing.			L1, L2
Module 3			
Segmentation: Thresholding; Edge-based segmentation – Edge image thresholding, Edge relaxation, Border tracing, Hough transforms; Region – based segmentation – Region merging, Region splitting, Splitting and merging, Watershed segmentation, Region growing post-processing.			L1, L2, L3
Module 4			
Shape representation and description: Region identification; Contour-based shape representation and description – Chain codes, Simple geometric border representation, Fourier transforms of boundaries, Boundary description using segment sequences, B-spline representation; Region-based shape representation and description – Simple scalar region descriptors, Moments, Convex hull.			L1, L2, L3
Module 5			
Mathematical Morphology: Basic morphological concepts, Four morphological principles, Binary dilation and erosion, Skeletons and object marking, Morphological segmentations and			L1, L2, L3

watersheds.	
<p>Course Outcomes: After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Understand the representation of the digital image and its properties • Apply pre-processing techniques required to enhance the image for its further analysis. • Use segmentation techniques to select the region of interest in the image for analysis • Represent the image based on its shape and edge information. • Describe the objects present in the image based on its properties and structure. • Use morphological operations to simplify images, and quantify and preserve the main shape characteristics of the objects. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Text Books:</p> <ol style="list-style-type: none"> 1. Milan Sonka, Vaclav Hlavac, Roger Boyle, “Image Processing, Analysis, and Machine Vision”, Cengage Learning, 2013, ISBN: 978-81-315-1883-0 	
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Geoff Dougherty, Digital Image Processing for Medical Applications, Cambridge university Press, 2010 2. S.Jayaraman, S Esakkirajan, T.Veerakumar, Digital Image Processing, Tata McGraw Hill, 2011. 	

INTERNET of THINGS [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Course Code	18ECS333	CIE Marks	40
Number of Lecture Hours/Week	04	SEE Marks	60
Total Number of Lecture Hours	50 (10 Hours per Module)	Exam Hours	03
Credits – 04			
<p>Course objectives: This course will enable students to:</p> <ul style="list-style-type: none"> • Introduce concept of IOT and its applications in today’s scenario. • Understand IOT content generation and transport through networks • Understand the devices employed for IOT data acquisition and communication access technologies • Introduce some use cases of IOT 			
Module-1			RBT
<p>What is IOT Genesis, Digitization, Impact, Connected Roadways, Buildings, Challenges</p> <p>IOT Network Architecture and Design Drivers behind new network Architectures, Comparing IOT Architectures, M2M architecture, IOT world forum standard, IOT Reference Model, Simplified IOT Architecture.</p>			L1, L2
Module-2			
<p>IOT Network Architecture and Design Core IOT Functional Stack, Layer1(Sensors and Actuators), Layer 2(Communications Sublayer), Access network sublayer, Gateways and backhaul sublayer, Network transport sublayer, IOT Network management. Layer 3(Applications and Analytics) – Analytics vs Control, Data vs Network Analytics IOT Data Management and Compute Stack</p>			L2,L3
Module-3			
<p>Engineering IOT Networks Things in IOT – Sensors, Actuators, MEMS and smart objects. Sensor networks, WSN, Communication protocols for WSN Communications Criteria, Range Frequency bands, power consumption, Topology, Constrained Devices, Constrained Node Networks IOT Access Technologies, IEEE 802.15.4 Competitive Technologies – Overview only of IEEE 802.15.4g, 4e, IEEE 1901.2a Standard Alliances – LTE Cat0, Cat-M, NB-IOT</p>			L2,L3
Module-4			

<p>Engineering IOT Networks IP as IOT network layer, Key Advantages, Adoption, Optimization, Constrained Nodes, Constrained Networks, IP versions, Optimizing IP for IOT. Application Protocols for IOT – Transport Layer, Application Transport layer, Background only of SCADA, Generic web based protocols, IOT Application Layer Data and Analytics for IOT – Introduction, Structured and Unstructured data, IOT Data Analytics overview and Challenges.</p>	L3,L4
Module-5	
<p>IOT in Industry (Three Use cases) IOT Strategy for Connected manufacturing, Architecture for Connected Factory Utilities – Power utility, IT/OT divide, Grid blocks reference model, Reference Architecture, Primary substation grid block and automation. Smart and Connected cities –Strategy, Smart city network Architecture, Street layer, city layer, Data center layer, services layer, Smart city security architecture, Smart street lighting.</p>	L3,L4
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • Examination will be conducted for 100 marks with question paper containing 10 full questions, each of 20 marks. • Each full question can have a maximum of 4 sub questions. • There will be 2 full questions from each module covering all the topics of the module. • Students will have to answer 5 full questions, selecting one full question from each module. • The total marks will be proportionally reduced to 60 marks as SEE marks is 60. 	
<p>Course Outcomes: After studying this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand the basic concepts IOT Architecture and devices employed. 2. Analyze the sensor data generated and map it to IOT protocol stack for transport. 3. Apply communications knowledge to facilitate transport of IOT data over various available communications media. 4. Design a use case for a typical application in real life ranging from sensing devices to analyzing the data available on a server to perform tasks on the device.

14EPE422	PWM Converters and Applications
14EPE423	DSP Applications to Drives

Note:

- 1) Project Phase – I:6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalise the topic of dissertation.
- 2) Project Phase – II:16 weeks duration. 3 days for project work in a week during III Semester. Evaluation shall be taken during the first two weeks of the IV Semester. Total Marks shall be 25.
- 3) Project Phase – III :24 weeks duration in IV Semester. Evaluation shall be taken up during the middle of IV Semester. At the end of the semester Project Work evaluation and Viva-Voce Examinations shall be conducted.

Total Marks shall be 250 (Phase - II Evaluation: 25 Marks, Phase – III Evaluation:25 Marks, Project Evaluation marks by Internal Examiner (Guide):50, Project Evaluation marks by External Examiner :50, Viva-Voce Examination:100 Marks).

Marks of Evaluation of Project:

- The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university (Out of two external examiners at least one should be present).

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - I			
APPLIED MATHEMATICS			
Subject Code	14MAT11	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	02
Total No. of Lecture Hours	52	Exam Marks	100

Numerical Methods: Solution of algebraic and transcendental equations- iterative methods based on second degree equation – Muller method,(no derivation) Chebyshev method, general iteration method (first order),acceleration of convergence, system of non-linear equations, and complex roots – Newton-Raphson method, polynomial equations – Birge –Vieta method and Bairstow’s method.

Numerical Solution of Partial Differential Equations: Classification of second order equations, parabolic equations- solution of one dimensional heat equation, explicit method,Crank-Nicolson method and Du Fort-Frankel method, hyperbolic equations- solution of one dimensional wave equation.

System of Linear Algebraic Equations and Eigen Value Problems: Iterative methods - Gauss-Seidal method, SOR method, Eigen value problems – Gerschgorian circle, Eigen values and Eigen vectors of real symmetric matrices - Jacobi method, Givens method.

Interpolation:Hermite interpolation, spline interpolation, numerical solution of differential equations – Numerov method.

Optimization: Linear programming- formulation of the problem, graphical method, general linear programming problem, simplex method, artificial variable technique -M-method.

Graph Theory: Basic terminologies, types of graphs, sub graphs, graphs isomorphism, connected graphs-walks, paths, circuits, connected and disconnected graphs, operations on graphs, Eulerian paths and circuits, Hamiltonian paths and circuits, applications of graphs.

Linear Algebra: Vector spaces, linear dependent, independence, basis and dimension, elementary properties, examples.

Linear Transformations: Definition, properties, range and null space, rank and nullity, algebra of linear transformations- invertible, singular and non-singular transformations, representation of transformations by matrices.

SEMESTER - I			
POWER SEMICONDUCTOR DEVICES			
Subject Code	14EPE12	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Power Diodes: Basic structure and V-I characteristics, breakdown voltages and control, on-state losses, switching characteristics-turn-on transient, turn-off transient and reverse recovery transient, Schottky diodes, snubber requirements for diodes, diode snubber, modeling and simulation of power diodes.

Thyristors:- Basic structure, V-I characteristics, turn-on process, on-state operation, turn -off process, switching characteristics, turn-on transient and di/dt limitations, turn-off transient, turn-off time and reapplied dv/dt limitations, gate drive requirements, ratings of thyristors, snubber requirements and snubber design, modeling and simulation of thyristors.

Triacs: Basic structure and operation-I characteristics, ratings, snubber requirements, modeling and simulation of triacs.

Gate Turnoff Thyristor (GTO): Basic structure and operation, GTO switching characteristics, GTO turn-on transient, GTO turn -off transient, minimum on and off state times, gate drive requirements, maximum controllable anode current, overcurrent protection of GTO'S, modelling and simulation of GTO'S.

Power BJT'S: Basic structure and V-I characteristics, breakdown voltages and control, secondary breakdown and it's control- FBSOA and RBSOA curves - on state losses, switching characteristics, resistive switching specifications, clamped inductive switching specifications, turn-on transient, turn-off transient, storage time, base drive requirements, switching losses, device protection- snubber requirements for BJT'S and snubber design - switching aids, modeling and simulation of power BJT'S.

Power MOSFET'S:- Basic structure, V-I characteristics, turn-on process, on state operation, turn-off process, switching characteristics, resistive switching specifications, clamped inductive switching specifications - turn-on transient and di/dt limitations, turn-off transient, turn off time, switching losses, effect of reverse recovery transients on switching stresses and losses - dv/dt limitations, gating requirements, gate charge - ratings of MOSFET'S, FBSOA and RBSOA curves, device protection -snubber requirements, modeling and simulation of Power MOSFET'S.

Insulated Gate Bipolar Transistors (IGBT'S): Basic structure and operation, latch up IGBT, switching characteristics, resistive switching specifications, clamped inductive switching specifications - IGBT turn-on transient, IGBT turn off transient- current tailing - gating requirements -ratings of IGBT'S, FBSOA and RBSOA curves, switching losses - minimum on and off state times - switching frequency capability - overcurrent protection of IGBT'S, short circuit protection, snubber requirements and snubber design.

New Power Semiconductor Devices : MOS gated thyristors, MOS controlled thyristors or MOS GTO'S, base resistance controlled thyristors, emitter switched thyristor, thermal design of power electronic equipment, modeling and simulation, heat transfer by conduction, transient thermal impedance - heat sinks, heat transfer by radiation and convection - heat sink selection for power semiconductor devices.

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - I			
MODELING AND SIMULATION OF POWER ELECTRONIC SYSTEMS			
Subject Code	14EPE13	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Computer Simulation of Power Electronic Converters and Systems: Challenges in computer simulation, simulation process, Types of analysis, mechanics of simulation, circuit-oriented simulators, equation solvers, comparison of circuit oriented simulators and equation solvers.

Modeling of Systems: Input-Output relations, differential equations and linearization, state space representation, transfer function representation, modeling of an armature controlled DC Motor, poles and zeros circuit averaging method of modelling approach for switched power electronic circuits, space vector modeling, space vectors, representation of space vectors in orthogonal co-ordinates, space vector transformations, modeling of induction motor, state space representation of the d-q model of the induction motor.

Digital Controller Design: Controller design techniques, Bode diagram method, PID controller, design, root locus method, state space method. Tracker, controller design, controlling voltage, controlling current.

Discrete Computation Essentials: Numeric formats, fixed -point numeric format, floating -point numeric format, tracking the base point in the fixed point system, addition of numbers, subtraction of numbers, multiplication of numbers, normalization and scaling, multiplication algorithm, arithmetic algorithm reciprocal, square root, reciprocal of square root, sine and cosine exponential, logarithm, implementation examples, pi controller, sine and cosine, pulse width modulation, space vector pwm, over-modulation.

SOLID STATE POWER CONTROLLERS			
Subject Code	14EPE14	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Line Commutated Converters: Phase control, single phase semi-converter & fully controlled converter, three phase semi controlled & fully controlled converter, dual converters, power factor improvement methods, effect of source inductance, single phase series converters, twelve pulse converter and design of converter circuits.

Inverters: Principle of operation, performance parameters, single phase bridge inverters and three phase inverters.

Voltage Control of Single Phase Inverters: Single/multiple, pulse/SPWM/ modified SPWM methods, voltage control of three phase inverter, SPWM/third harmonic PWM/Space vector modulation, harmonic reduction, current source inverter, comparison between VSI & CSI.

Multilevel Inverters: Introduction, types, diode clamped multi-level inverters, features & applications.

DC-DC Converters: Principle of operation, analysis of step-down and step-up converters, classification of chopper & chopper circuit design.

SEMESTER - I			
EMBEDDED SYSTEM DESIGN(ELECTIVE-I)			
Subject Code	14EPE151	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	02
Total No. of Lecture Hours	52	Exam Marks	100

Introduction to Embedded System: An embedded system, processor, hardware unit, software embedded into a system, example of an embedded system, OS services, I/O, N/W, O/S, real time and embedded OS.

Processor and Memory Organization: Structural unit in a processor, processor selection for an embedded systems, memory devices, memory selection for an embedded system, allocation of memory to program statements and blocks and memory map of a system, direct memory accesses.

Real Time System: Types, real time computing, design issues, sample systems, hardware requirements- processor introduction, ARM various system architecture, high performance processors - strong ARM processors, addressing modes, instruction set, basic alp programs, interrupt structure.

Real Time Operating System: Fundamental requirements of RTOS, real time kernel types, schedulers, various scheduling modules with examples, latency (interrupt latency, scheduling latency and context switching latency), tasks, state transition diagram, task control block. Inter-task communication and synchronization of tasks, building real time applications.

SEMESTER - I			
POWER ELECTRONICS LABORATORY - I			
Subject Code	14EPE16	IA Marks	25
No. of Lecture Hours/Week	--	Exam Hours	03
Number of Practical Hours/week	03	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	--	Exam Marks	50

1. Analysis of static and dynamic characteristic of MOSFET and IGBT
2. Performance of single phase fully controlled and semi-controlled converter for RL load for continuous current mode
3. Performance of single phase fully controlled and semi-controlled converter for RL load for discontinuous current mode
4. Study of effect of source inductance on the performance of single phase fully controlled converter
5. Performance analysis of three phase fully controlled and semi-controlled converter for RL load for continuous current mode
6. Performance analysis of three phase fully controlled and semi-controlled converter for RL load for discontinuous current mode
7. Performance analysis of single phase bridge inverter for RL load and voltage control by single pulse width modulation
8. Performance analysis of two quadrant chopper
9. Diode clamped multilevel inverter
10. ZVS operation of a Synchronous buck converter

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - I			
SEMINAR			
Subject Code	14EPE17	IA Marks	25
No. of Lecture Hours/Week	--	Exam Hours	--
Number of contact Hours/week	03	Number of Tutorial Hours/week	--
Total No. of contactHours	--	Exam Marks	--

The aim of the seminar is to inculcate self-learning, face audience, enhance communication skill, involve in group discussion and present his ideas.

Each student, under the guidance of a Faculty, is required to

- i) Choose a topic of his/her interest relevant to the Course of Specialization
- ii) Carryout literature survey, organize the subject topics in a systematic order
- iii) Prepare the report with own sentences
- iv) Type the matter to acquaint with the use of Micro-soft equation and drawing tools or any such facilities
- v) Present the seminar topic at least for 20 minutes orally and/or through power point slides
- vi) Answer the queries and involve in debate/discussion lasting for about 10 minutes
- vii) Submit two copies of the typed report with a list of references

The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident.

The internal assessment marks shall be awarded by a committee consisting of at least two staff members based on the relevance of the topic, presentation skill, participation in the question and answer session and quality of report.

SEMESTER - II			
ACANDDC DRIVES			
Subject Code	14EPE21	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Electric Drives: Introduction – block diagram-classification of electrical drives-choice of electrical drives-fundamental torque equation- components of load torque- steady state stability.

DC Drives: Single Quadrant Drive: 1-Phase semi and half wave converter drives, Two quadrant Drive: 1-phase and 3-phase full converter drive.

Two and Four Quadrant drive: 1-phase and three- phase dual converter drive, different braking methods and closed loop control of DC drives.

AC Drives: Voltage and current source inverter - inverter control-six step and PWM operation, Control of Induction motor drive -V/f and field oriented control – direct and indirect vector control, voltage and current source inverter fed induction motor drives, stator and rotor voltage control methods, slip energy recovery drives.

Closed Loop Control of AC Drives: Stator voltage control, V/f control, slip regulation, speed control of static Kramer's drive, current control, brushless DC motor, stepper motor and variable reluctance motor drives static excitation schemes of AC generator.

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - II			
SWITCHED MODE POWER CONVERSION			
Subject Code	14EPE22	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

DC – DC Converters (Basic Converters): Linear voltage regulators (LVRs), a basic switching converter(SMPC), comparison between LVR & SMPC, principle of operation and analysis of buck converter analysis, inductor current ripple and output voltage ripple, capacitor resistance effect, synchronous rectification, design considerations, buck converter for discontinuous current operation, principle of operation and analysis of boost converter, inductor current ripple and output voltage ripple, inductor resistance effect, design considerations, boost converter for discontinuous current operation, principle of operation and analysis of buck-boost converter analysis, inductors current ripple and output voltage ripple, design considerations, buck-boost converter for discontinuous current operation, principle of operation and analysis of CUK converter , inductor current ripple and output voltage ripple, capacitor resistance effect, design considerations, single ended primary inductance converter(SEPIC).

Derived Converters: Introduction, transformer models, principle of operation and analysis of fly back converter-continuous and discontinuous current mode of operation, design considerations, principle of operation and analysis of forward converter, design considerations, double ended(Two switch) forward converter, principle of operation and analysis of push-pull converter, design considerations, principle of operation and analysis of full bridge and half-bridge DC-DC converters, design considerations, current fed converters, multiple outputs.

Control of DC-DC Converter: Modeling of DC-DC converters, power supply control, control loop stability, small signal analysis, switch transfer function, filter transfer function, PWM transfer function, Type-2 error amplifier with compensation, design, PSpice simulation of feedback control, Type-3 error amplifier with compensation, design.

Resonant Converters: Introduction, resonant switch ZCS converter, principle of operation and analysis, resonant switch ZVS converter, principle of operation and analysis, series resonant inverter, series resonant DC-DC converter, parallel resonant DC-DC converter, series- parallel resonant DC-DC converter, resonant converters comparison, resonant DC link converter.

Design of inductor and transformers for SMPC.

POWER ELECTRONICS SYSTEM DESIGN USING ICS			
Subject Code	14EPE23	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Introduction: Measurement techniques for voltages, current, power, power factor in power electronic circuits, other recording and analysis of waveforms, sensing of speed.

Switching Regulator Control Circuits : Introduction, isolation techniques of switching regulator systems, PWM systems.

Commercial PWM Control ICs and their Applications: TL 494 PWM Control IC, UC 1840 Programmable off line PWM controller, UC 1524 PWM control IC, UC 1846 current mode control IC, UC 1852 resonant mode power supply controller.

Switching Power Supply Ancillary, Supervisory & Peripheral Circuits and Components: Introduction, Opto-couplers, self-biased techniques used in primary side of reference power supplies, Soft/Start in switching power supplies, current limit circuits, over voltage protection, AC line loss detection.

Phase – Locked Loops (PLL) & Applications: PLL Design using ICs, 555 timer & its applications, analog to digital converter using IC's, digital to analog converters using ICs, implementation of different gating circuits.

Programmable Logic Controllers (PLC): Basic configuration of a PLC, Programming and PLC, program modification, power converter control using PLCs.

SEMESTER - II			
FACTS CONTROLLERS			
Subject Code	14EPE24	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Introduction: Basics of power transmission networks - control of power flow in AC - transmission line- flexible AC transmission system controllers – application of FACTS controllers in distribution systems.

AC Transmission Line and Reactive Power Compensation: Analysis of uncompensated AC Line - passive reactive power compensation - compensation by a series capacitor connected at the midpoint of the line - shunt compensation connected at the midpoint of the line - comparison between series and shunt capacitor - compensation by STATCOM and SSSC - some representative examples.

Static Var Compensator: Analysis of SVC - Configuration of SVC- SVC Controller – voltage regulator design - some issues - harmonics and filtering - protection aspects – modeling of SVC – applications of SVC.

Thyristor and GTO Controlled Series Capacitor: Introduction - basic concepts of controlled series compensation - operation of TCSC - analysis of TCSC- control of TCSC - modeling of TCSC for stability studies - GTO thyristor controlled series capacitor (GCSC) - mitigation of sub synchronous resonance with TCSC and GCSC - applications of TCSC.

Static Phase Shifting Transformer: General - basic principle of a PST - configurations of SPST improvement of transient stability using SPST - damping of low frequency power oscillations - applications of SPST.

Static Synchronous Compensator (STATCOM): Introduction - principle of operation of STATCOM - a simplified analysis of a three phase six pulse STATCOM - analysis of a six pulse VSC using switching functions - multi-pulse converters control of type 2 converters - control of type I Converters - multilevel voltage source converters - harmonic transfer and resonance in VSC, applications of STATCOM.

SSSC and UPFC:

SSSC-operation of SSSC and the control of power flow –modelling of SSSC in load flow and transient stability. Unified Power Flow Controller (UPFC) – Principle of operation – modes of operation – applications – modeling of UPFC for power flow studies.

Special Purpose FACTS Controllers: Interline Power Flow Controller - operation and control.

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - II			
MODELING AND ANALYSIS OF ELECTRICAL MACHINES(ELECTIVE-II)			
Subject Code	14EPE252	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	02
Total No. of Lecture Hours	52	Exam Marks	100

Basic Concepts of Modeling: Basic two pole machine representation of commutator machines, 3-phase synchronous machine with and without damper bar and 3-phase induction machine, Kron's primitive machine-voltage, current and torque equations.

DC Machine Modeling: Mathematical model of separately excited DC motor-steady state and transient state analysis, sudden application of inertia load, transfer function of separately excited DC motor, mathematical model of dc series motor, shunt motor, linearization techniques for small perturbations.

Reference Frame Theory: Real time model of a two phase induction machine, transformation to obtain constant matrices, three phase to two phase transformation, power equivalence.

Dynamic Modeling of Three Phase Induction Machine: Generalized model in arbitrary frame, electromagnetic torque, deviation of commonly used induction motor models-stator reference frames model, rotor reference frames model, synchronously rotating reference frames model, equations in flux linkages, per unit model, dynamic simulation.

Small Signal Equations of the Induction Machine: Derivation of small signal equations of induction machine, space phasor model, DQ flux linkages model derivation, control principle of the induction motor.

Transformer Modeling: Introduction, single phase transformer model, three phase transformer connections, per phase analysis, normal systems, per unit normalization, per unit three phase quantities, change of base, per unit analysis of normal system, regulating transformers for voltage and phase angle control, auto transformers, transmission line and transformers.

Modeling of Synchronous Machines: Introduction, voltage equations and torque equation in machine variables, stator voltage equations in arbitrary and rotor reference frame variables, Park's equations, torque equations in substitute variables, rotor angle and angle between rotors, per unit system, analysis of steady state operation.

Dynamic Analysis of Synchronous Machines: Dynamic performance during sudden change in input torque and during a 3-phase fault at the machine terminals, approximate transient torque versus rotor angle characteristics, comparison of actual and approximate transient torque-angle characteristics during a sudden change in input torque; first swing transient stability limit, comparison of actual and approximate transient torque-angle characteristics during a 3-phase fault at the machine terminals, critical clearing time, equal area criterion, computer simulation.

SEMESTER - IV			
HVDC POWER TRANSMISSION			
Subject Code	14EPE41	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

DC Power Transmission Technology: Introduction, comparison with AC transmission, application of DC transmission, description of DC transmission system, Planning of HVDC transmission, modern trends in DC transmission, operating problems.

HVDC Converters: Introduction to Line commutated converter, choice of converter configuration for any pulse number, analysis of 6 and 12 pulse Graetz bridge converter without overlap, effect of smoothing reactor. Two and Three level voltage source converters, Pulse Width Modulation. Analysis of converter in two and three, and three and four valve conduction modes, LCC bridge characteristics, Twelve pulse converter, detailed analysis of converters. Analysis of Capacitor Commutated and voltage source converters.

Control of Converters and HVDC link: DC link control principles, converter control characteristics, firing angle control, current and extinction angle control, Starting and stopping of Dc link, Power control, Frequency control, Reactive power control, Tap changer control, Emergency control and Telecommunication requirements. Control of voltage source converter.

Converter Faults and Protection: Converter faults, protection against over currents, over voltages in converter station, surge arrestor, protection against over voltages. Protection against faults in voltage source converter.

Smoothing Reactor and DC line: Smoothing reactors, Effects of corona loss, DC line insulators, Transient over voltages in DC line, Protection in dc line, Detection and protection of faults, DC breaker

Reactive Power Control: Reactive power control in steady state and transient state, sources of reactive power, SVC and STATCOM.

Harmonics and Filters: Introduction, Generation of harmonics, design of AC and DC filters.

Power Flow Analysis in AC/DC Systems: Introduction, dc system model, solution procedure, inclusion of constraints, case study, on line power flow analysis for security control, power flow analysis under dynamic conditions, power flow with VSC based HVDC system.

Stability Analysis and Power Modulation: Introduction to stability concepts, power modulation, practical considerations in the application of modulation controllers, voltage stability, analysis of voltage stability in asynchronous AC/DC system.

Multi Terminal DC Systems: Introduction, applications, types, control and protection.

SEMESTER - IV			
POWER QUALITY ENHANCEMENT USING CUSTOM POWER DEVICES MITIGATION(ELECTIVE- III)			
Subject Code	14EPE421	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Introduction and Characterization of Electric Power Quality: Electric Power Quality, Power Electronic applications in Power Transmission Systems, Power Electronic applications in Power Distribution Systems. Power Quality terms and Definitions, Power Quality Problems.

Analysis and Conventional Mitigation Methods: Analysis of Power Outages, Analysis of Unbalance , Analysis of Distortion, Analysis of Voltage Sag, Analysis of Voltage Flicker, Reduced Duration and Customer impact of Outages, Classical Load Balancing Problem, Harmonic Reduction, Voltage Sag or Dip Reduction.

Custom Power Devices: Introduction, Utility-Customer Interface, Custom Power Devices, Custom Power Park, Status of Application of CP Devices, Closed-Loop Switching Control, Second and higher order Systems.

Solid State Limiting, Breaking and Transferring Devices: Solid State Current Limiter, Solid State Breaker, Issues in Limiting and Switching operations, Solid State Transfer Switch, Sag/Swell Detection Algorithms.

Load Compensation using DSTATCOM: Compensating Single-Phase Loads, Ideal Three-Phase Shunt Compensator Structure, Generating Reference Currents Using Instantaneous PQ Theory, Generating reference currents using instantaneous Symmetrical Components, General Algorithm for generating reference currents, Generating Reference currents when the Source is Unbalanced.

Realization and Control of DSTATCOM: DSTATCOM Structure, Control of DSTATCOM Connected to a Stiff Source, DSTATCOM Connected to weak Supply Point, DSTATCOM Current Control through Phasors, DSTATCOM in Voltage Control Mode.

Series Compensation of Power Distribution System: Rectifier Supported DVR, DC Capacitor Supported DVR, DVR Structure, Voltage Restoration, Series Active Filter.

Unified Power Quality Conditioner: UPQC Configurations, Right-Shunt UPQC Characteristics, Left-Shunt UPQC Characteristics, Structure and Control of Right-Shunt UPQC, Structure and Control of Left-Shunt UPQC.

Grand Total (I to IV Sem.) : 2400 Marks; 94 Credits

Elective - III

Subject code	Name of the Subject
14EPE421	Power Quality Enhancement using Custom Power Devices
14EPE422	PWM Converters and Applications
14EPE423	DSP Applications to Drives

Note:

- 1) Project Phase – I:6 weeks duration shall be carried out between II and III Semesters. Candidates in consultation with the guides shall carryout literature survey / visit to Industries to finalise the topic of dissertation.
- 2) Project Phase – II:16 weeks duration. 3 days for project work in a week during III Semester. Evaluation shall be taken during the first two weeks of the IV Semester. Total Marks shall be 25.
- 3) Project Phase – III :24 weeks duration in IV Semester. Evaluation shall be taken up during the middle of IV Semester. At the end of the semester Project Work evaluation and Viva-Voce Examinations shall be conducted.

Total Marks shall be 250 (Phase - II Evaluation: 25 Marks, Phase – III Evaluation:25 Marks, Project Evaluation marks by Internal Examiner (Guide):50, Project Evaluation marks by External Examiner :50, Viva-Voce Examination:100 Marks).

Marks of Evaluation of Project:

- The I.A. Marks of Project Phase – II & III shall be sent to the University along with Project Work report at the end of the Semester.
- 4) During the final viva, students have to submit all the reports.
 - 5) The Project Valuation and Viva-Voce will be conducted by a committee consisting of the following:
 - a) Head of the Department (Chairman)
 - b) Guide
 - c) Two Examiners appointed by the university (Out of two external examiners at least one should be present).

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - I			
APPLIED MATHEMATICS			
Subject Code	14MAT11	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	02
Total No. of Lecture Hours	52	Exam Marks	100

Numerical Methods: Solution of algebraic and transcendental equations- iterative methods based on second degree equation – Muller method,(no derivation) Chebyshev method, general iteration method (first order),acceleration of convergence, system of non-linear equations, and complex roots – Newton-Raphson method, polynomial equations – Birge –Vieta method and Bairstow’s method.

Numerical Solution of Partial Differential Equations: Classification of second order equations, parabolic equations- solution of one dimensional heat equation, explicit method,Crank-Nicolson method and Du Fort-Frankel method, hyperbolic equations- solution of one dimensional wave equation.

System of Linear Algebraic Equations and Eigen Value Problems: Iterative methods - Gauss-Seidal method, SOR method, Eigen value problems – Gerschgorian circle, Eigen values and Eigen vectors of real symmetric matrices - Jacobi method, Givens method.

Interpolation:Hermite interpolation, spline interpolation, numerical solution of differential equations – Numerov method.

Optimization: Linear programming- formulation of the problem, graphical method, general linear programming problem, simplex method, artificial variable technique -M-method.

Graph Theory: Basic terminologies, types of graphs, sub graphs, graphs isomorphism, connected graphs-walks, paths, circuits, connected and disconnected graphs, operations on graphs, Eulerian paths and circuits, Hamiltonian paths and circuits, applications of graphs.

Linear Algebra: Vector spaces, linear dependent, independence, basis and dimension, elementary properties, examples.

Linear Transformations: Definition, properties, range and null space, rank and nullity, algebra of linear transformations- invertible, singular and non-singular transformations, representation of transformations by matrices.

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - I			
POWER SEMICONDUCTOR DEVICES			
Subject Code	14EPE12	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Power Diodes: Basic structure and V-I characteristics, breakdown voltages and control, on-state losses, switching characteristics-turn-on transient, turn-off transient and reverse recovery transient, Schottky diodes, snubber requirements for diodes, diode snubber, modeling and simulation of power diodes.

Thyristors:- Basic structure, V-I characteristics, turn-on process, on-state operation, turn -off process, switching characteristics, turn-on transient and di/dt limitations, turn-off transient, turn-off time and reapplied dv/dt limitations, gate drive requirements, ratings of thyristors, snubber requirements and snubber design, modeling and simulation of thyristors.

Triacs: Basic structure and operation-I characteristics, ratings, snubber requirements, modeling and simulation of triacs.

Gate Turnoff Thyristor (GTO): Basic structure and operation, GTO switching characteristics, GTO turn-on transient, GTO turn -off transient, minimum on and off state times, gate drive requirements, maximum controllable anode current, overcurrent protection of GTO'S, modelling and simulation of GTO'S.

Power BJT'S: Basic structure and V-I characteristics, breakdown voltages and control, secondary breakdown and it's control- FBSOA and RBSOA curves - on state losses, switching characteristics, resistive switching specifications, clamped inductive switching specifications, turn-on transient, turn-off transient, storage time, base drive requirements, switching losses, device protection- snubber requirements for BJT'S and snubber design - switching aids, modeling and simulation of power BJT'S.

Power MOSFET'S:- Basic structure, V-I characteristics, turn-on process, on state operation, turn-off process, switching characteristics, resistive switching specifications, clamped inductive switching specifications - turn-on transient and di/dt limitations, turn-off transient, turn off time, switching losses, effect of reverse recovery transients on switching stresses and losses - dv/dt limitations, gating requirements, gate charge - ratings of MOSFET'S, FBSOA and RBSOA curves, device protection -snubber requirements, modeling and simulation of Power MOSFET'S.

Insulated Gate Bipolar Transistors (IGBT'S): Basic structure and operation, latch up IGBT, switching characteristics, resistive switching specifications, clamped inductive switching specifications - IGBT turn-on transient, IGBT turn off transient- current tailing - gating requirements -ratings of IGBT'S, FBSOA and RBSOA curves, switching losses - minimum on and off state times - switching frequency capability - overcurrent protection of IGBT'S, short circuit protection, snubber requirements and snubber design.

New Power Semiconductor Devices : MOS gated thyristors, MOS controlled thyristors or MOS GTO'S, base resistance controlled thyristors, emitter switched thyristor, thermal design of power electronic equipment, modeling and simulation, heat transfer by conduction, transient thermal impedance - heat sinks, heat transfer by radiation and convection - heat sink selection for power semiconductor devices.

SOLID STATE POWER CONTROLLERS			
Subject Code	14EPE14	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Line Commutated Converters: Phase control, single phase semi-converter & fully controlled converter, three phase semi controlled & fully controlled converter, dual converters, power factor improvement methods, effect of source inductance, single phase series converters, twelve pulse converter and design of converter circuits.

Inverters: Principle of operation, performance parameters, single phase bridge inverters and three phase inverters.

Voltage Control of Single Phase Inverters: Single/multiple, pulse/SPWM/ modified SPWM methods, voltage control of three phase inverter, SPWM/third harmonic PWM/Space vector modulation, harmonic reduction, current source inverter, comparison between VSI & CSI.

Multilevel Inverters: Introduction, types, diode clamped multi-level inverters, features & applications.

DC-DC Converters: Principle of operation, analysis of step-down and step-up converters, classification of chopper & chopper circuit design.

No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	02
Total No. of Lecture Hours	52	Exam Marks	100

Introduction to Embedded System: An embedded system, processor, hardware unit, software embedded into a system, example of an embedded system, OS services, I/O, N/W, O/S, real time and embedded OS.

Processor and Memory Organization: Structural unit in a processor, processor selection for an embedded systems, memory devices, memory selection for an embedded system, allocation of memory to program statements and blocks and memory map of a system, direct memory accesses.

Real Time System: Types, real time computing, design issues, sample systems, hardware requirements- processor introduction, ARM various system architecture, high performance processors - strong ARM processors, addressing modes, instruction set, basic alp programs, interrupt structure.

Real Time Operating System: Fundamental requirements of RTOS, real time kernel types, schedulers, various scheduling modules with examples, latency (interrupt latency, scheduling latency and context switching latency), tasks, state transition diagram, task control block. Inter-task communication and synchronization of tasks, building real time applications.

SEMESTER - I			
SEMINAR			
Subject Code	14EPE17	IA Marks	25
No. of Lecture Hours/Week	--	Exam Hours	--
Number of contact Hours/week	03	Number of Tutorial Hours/week	--
Total No. of contactHours	--	Exam Marks	--

The aim of the seminar is to inculcate self-learning, face audience, enhance communication skill, involve in group discussion and present his ideas.

Each student, under the guidance of a Faculty, is required to

- i) Choose a topic of his/her interest relevant to the Course of Specialization
- ii) Carryout literature survey, organize the subject topics in a systematic order
- iii) Prepare the report with own sentences
- iv) Type the matter to acquaint with the use of Micro-soft equation and drawing tools or any such facilities
- v) Present the seminar topic at least for 20 minutes orally and/or through power point slides
- vi) Answer the queries and involve in debate/discussion lasting for about 10 minutes
- vii) Submit two copies of the typed report with a list of references

The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident.

The internal assessment marks shall be awarded by a committee consisting of at least two staff members based on the relevance of the topic, presentation skill, participation in the question and answer session and quality of report.

Total No. of Lecture Hours	52	Exam Marks	100

Electric Drives: Introduction – block diagram-classification of electrical drives-choice of electrical drives-fundamental torque equation- components of load torque- steady state stability.

DC Drives: Single Quadrant Drive: 1-Phase semi and half wave converter drives, Two quadrant Drive: 1-phase and 3-phase full converter drive.

Two and Four Quadrant drive: 1-phase and three- phase dual converter drive, different braking methods and closed loop control of DC drives.

AC Drives: Voltage and current source inverter - inverter control-six step and PWM operation, Control of Induction motor drive -V/f and field oriented control – direct and indirect vector control, voltage and current source inverter fed induction motor drives, stator and rotor voltage control methods, slip energy recovery drives.

Closed Loop Control of AC Drives: Stator voltage control, V/f control, slip regulation, speed control of static Kramer's drive, current control, brushless DC motor, stepper motor and variable reluctance motor drives static excitation schemes of AC generator.

SWITCHED MODE POWER CONVERSION			
Subject Code	14EPE22	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

DC – DC Converters (Basic Converters): Linear voltage regulators (LVRs), a basic switching converter(SMPC), comparison between LVR & SMPC, principle of operation and analysis of buck converter analysis, inductor current ripple and output voltage ripple, capacitor resistance effect, synchronous rectification, design considerations, buck converter for discontinuous current operation, principle of operation and analysis of boost converter, inductor current ripple and output voltage ripple, inductor resistance effect, design considerations, boost converter for discontinuous current operation, principle of operation and analysis of buck-boost converter analysis, inductors current ripple and output voltage ripple, design considerations, buck-boost converter for discontinuous current operation, principle of operation and analysis of CUK converter , inductor current ripple and output voltage ripple, capacitor resistance effect, design considerations, single ended primary inductance converter(SEPIC).

Derived Converters: Introduction, transformer models, principle of operation and analysis of fly back converter-continuous and discontinuous current mode of operation, design considerations, principle of operation and analysis of forward converter, design considerations, double ended(Two switch) forward converter, principle of operation and analysis of push-pull converter, design considerations, principle of operation and analysis of full bridge and half-bridge DC-DC converters, design considerations, current fed converters, multiple outputs.

Control of DC-DC Converter: Modeling of DC-DC converters, power supply control, control loop stability, small signal analysis, switch transfer function, filter transfer function, PWM transfer function, Type-2 error amplifier with compensation, design, PSpice simulation of feedback control, Type-3 error amplifier with compensation, design.

Resonant Converters: Introduction, resonant switch ZCS converter, principle of operation and analysis, resonant switch ZVS converter, principle of operation and analysis, series resonant inverter, series resonant DC-DC converter, parallel resonant DC-DC converter, series- parallel resonant DC-DC converter, resonant converters comparison, resonant DC link converter.

Design of inductor and transformers for SMPC.

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - II			
FACTS CONTROLLERS			
Subject Code	14EPE24	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	02	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Introduction: Basics of power transmission networks - control of power flow in AC - transmission line- flexible AC transmission system controllers – application of FACTS controllers in distribution systems.

AC Transmission Line and Reactive Power Compensation: Analysis of uncompensated AC Line - passive reactive power compensation - compensation by a series capacitor connected at the midpoint of the line - shunt compensation connected at the midpoint of the line - comparison between series and shunt capacitor - compensation by STATCOM and SSSC - some representative examples.

Static Var Compensator: Analysis of SVC - Configuration of SVC- SVC Controller – voltage regulator design - some issues - harmonics and filtering - protection aspects – modeling of SVC – applications of SVC.

Thyristor and GTO Controlled Series Capacitor: Introduction - basic concepts of controlled series compensation - operation of TCSC - analysis of TCSC- control of TCSC - modeling of TCSC for stability studies - GTO thyristor controlled series capacitor (GCSC) - mitigation of sub synchronous resonance with TCSC and GCSC - applications of TCSC.

Static Phase Shifting Transformer: General - basic principle of a PST - configurations of SPST improvement of transient stability using SPST - damping of low frequency power oscillations - applications of SPST.

Static Synchronous Compensator (STATCOM): Introduction - principle of operation of STATCOM - a simplified analysis of a three phase six pulse STATCOM - analysis of a six pulse VSC using switching functions - multi-pulse converters control of type 2 converters - control of type I Converters - multilevel voltage source converters - harmonic transfer and resonance in VSC, applications of STATCOM.

SSSC and UPFC:

SSSC-operation of SSSC and the control of power flow –modelling of SSSC in load flow and transient stability. Unified Power Flow Controller (UPFC) – Principle of operation – modes of operation – applications – modeling of UPFC for power flow studies.

Special Purpose FACTS Controllers: Interline Power Flow Controller - operation and control.

Number of Practical Hours/week	--	Number of Tutorial Hours/week	02
Total No. of Lecture Hours	52	Exam Marks	100

Basic Concepts of Modeling: Basic two pole machine representation of commutator machines, 3-phase synchronous machine with and without damper bar and 3-phase induction machine, Kron's primitive machine-voltage, current and torque equations.

DC Machine Modeling: Mathematical model of separately excited DC motor-steady state and transient state analysis, sudden application of inertia load, transfer function of separately excited DC motor, mathematical model of dc series motor, shunt motor, linearization techniques for small perturbations.

Reference Frame Theory: Real time model of a two phase induction machine, transformation to obtain constant matrices, three phase to two phase transformation, power equivalence.

Dynamic Modeling of Three Phase Induction Machine: Generalized model in arbitrary frame, electromagnetic torque, deviation of commonly used induction motor models-stator reference frames model, rotor reference frames model, synchronously rotating reference frames model, equations in flux linkages, per unit model, dynamic simulation.

Small Signal Equations of the Induction Machine: Derivation of small signal equations of induction machine, space phasor model, DQ flux linkages model derivation, control principle of the induction motor.

Transformer Modeling: Introduction, single phase transformer model, three phase transformer connections, per phase analysis, normal systems, per unit normalization, per unit three phase quantities, change of base, per unit analysis of normal system, regulating transformers for voltage and phase angle control, auto transformers, transmission line and transformers.

Modeling of Synchronous Machines: Introduction, voltage equations and torque equation in machine variables, stator voltage equations in arbitrary and rotor reference frame variables, Park's equations, torque equations in substitute variables, rotor angle and angle between rotors, per unit system, analysis of steady state operation.

Dynamic Analysis of Synchronous Machines: Dynamic performance during sudden change in input torque and during a 3-phase fault at the machine terminals, approximate transient torque versus rotor angle characteristics, comparison of actual and approximate transient torque-angle characteristics during a sudden change in input torque; first swing transient stability limit, comparison of actual and approximate transient torque-angle characteristics during a 3-phase fault at the machine terminals, critical clearing time, equal area criterion, computer simulation.

M.TECH. POWER ELECTRONICS (EPE)			
SEMESTER - II			
POWER ELECTRONICSLABORATORY - II			
Subject Code	14EPE26	IA Marks	25
No. of Lecture Hours/Week	--	Exam Hours	03
Number of Practical Hours/week	03	Number of Tutorial Hours/week	--
Total No. of Practical Hours	--	Exam Marks	50

1. Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for continuous current mode.
2. Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.
3. Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for continuous current mode.
4. Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.
5. Performance analysis of a practical chopper fed DC Drives system for class-A and class-C commutation and analysis of wave forms in continuous mode.
6. Simulation study of buck, boost and buck- boost converter (basic topologies) and analysis of wave forms for continuous current mode (CCM).
7. Simulation study of buck, boost and buck-boost converter (basic topologies) and analysis of wave forms for discontinuous current mode (DCM).
8. Simulation study of forward converter and fly back converter and performance analysis of various wave forms.
9. Resonant converter simulation study and analysis
10. Closed loop operation of a buck and boost converter.

SEMESTER - IV			
HVDC POWER TRANSMISSION			
Subject Code	14EPE41	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

DC Power Transmission Technology: Introduction, comparison with AC transmission, application of DC transmission, description of DC transmission system, Planning of HVDC transmission, modern trends in DC transmission, operating problems.

HVDC Converters: Introduction to Line commutated converter, choice of converter configuration for any pulse number, analysis of 6 and 12 pulse Graetz bridge converter without overlap, effect of smoothing reactor. Two and Three level voltage source converters, Pulse Width Modulation. Analysis of converter in two and three, and three and four valve conduction modes, LCC bridge characteristics, Twelve pulse converter, detailed analysis of converters. Analysis of Capacitor Commutated and voltage source converters.

Control of Converters and HVDC link: DC link control principles, converter control characteristics, firing angle control, current and extinction angle control, Starting and stopping of Dc link, Power control, Frequency control, Reactive power control, Tap changer control, Emergency control and Telecommunication requirements. Control of voltage source converter.

Converter Faults and Protection: Converter faults, protection against over currents, over voltages in converter station, surge arrestor, protection against over voltages. Protection against faults in voltage source converter.

Smoothing Reactor and DC line: Smoothing reactors, Effects of corona loss, DC line insulators, Transient over voltages in DC line, Protection in dc line, Detection and protection of faults, DC breaker

Reactive Power Control: Reactive power control in steady state and transient state, sources of reactive power, SVC and STATCOM.

Harmonics and Filters: Introduction, Generation of harmonics, design of AC and DC filters.

Power Flow Analysis in AC/DC Systems: Introduction, dc system model, solution procedure, inclusion of constraints, case study, on line power flow analysis for security control, power flow analysis under dynamic conditions, power flow with VSC based HVDC system.

Stability Analysis and Power Modulation: Introduction to stability concepts, power modulation, practical considerations in the application of modulation controllers, voltage stability, analysis of voltage stability in asynchronous AC/DC system.

Multi Terminal DC Systems: Introduction, applications, types, control and protection.

SEMESTER - IV			
POWER QUALITY ENHANCEMENT USING CUSTOM POWER DEVICES MITIGATION(ELECTIVE- III)			
Subject Code	14EPE421	IA Marks	50
No. of Lecture Hours/Week	04	Exam Hours	03
Number of Practical Hours/week	--	Number of Tutorial Hours/week	--
Total No. of Lecture Hours	52	Exam Marks	100

Introduction and Characterization of Electric Power Quality: Electric Power Quality, Power Electronic applications in Power Transmission Systems, Power Electronic applications in Power Distribution Systems. Power Quality terms and Definitions, Power Quality Problems.

Analysis and Conventional Mitigation Methods: Analysis of Power Outages, Analysis of Unbalance , Analysis of Distortion, Analysis of Voltage Sag, Analysis of Voltage Flicker, Reduced Duration and Customer impact of Outages, Classical Load Balancing Problem, Harmonic Reduction, Voltage Sag or Dip Reduction.

Custom Power Devices: Introduction, Utility-Customer Interface, Custom Power Devices, Custom Power Park, Status of Application of CP Devices, Closed-Loop Switching Control, Second and higher order Systems.

Solid State Limiting, Breaking and Transferring Devices: Solid State Current Limiter, Solid State Breaker, Issues in Limiting and Switching operations, Solid State Transfer Switch, Sag/Swell Detection Algorithms.

Load Compensation using DSTATCOM: Compensating Single-Phase Loads, Ideal Three-Phase Shunt Compensator Structure, Generating Reference Currents Using Instantaneous PQ Theory, Generating reference currents using instantaneous Symmetrical Components, General Algorithm for generating reference currents, Generating Reference currents when the Source is Unbalanced.

Realization and Control of DSTATCOM: DSTATCOM Structure, Control of DSTATCOM Connected to a Stiff Source, DSTATCOM Connected to weak Supply Point, DSTATCOM Current Control through Phasors, DSTATCOM in Voltage Control Mode.

Series Compensation of Power Distribution System: Rectifier Supported DVR, DC Capacitor Supported DVR, DVR Structure, Voltage Restoration, Series Active Filter.

Unified Power Quality Conditioner: UPQC Configurations, Right-Shunt UPQC Characteristics, Left-Shunt UPQC Characteristics, Structure and Control of Right-Shunt UPQC, Structure and Control of Left-Shunt UPQC.

Elective - 3

Course Code under 16EPE42X	Title
16EPE421	Digital Power Electronics
16EPE422	MPPT in Solar Systems
16EPE423	Multi-Terminal DC Grids
16EPE424	Multilevel Converters for Industrial Applications

Note: 1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted

4. Project evaluation:

- a. Internal Examiner shall carry out the evaluation for 100 marks.
- b. External Examiner shall carry out the evaluation for 100 marks.
- c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
- d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - I			
APPLIED MATHAMATICS (Core Course)			
Course Code	16EEE11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> The objectives of this course is to acquaint the students with principles of advanced mathematics through linear algebra, transform methods for differential equations, calculus of variations and linear and non-linear programming, that serve as an essential tool for applications of electrical engineering sciences. ■ 			
Module-1			Teaching Hours
Numerical Methods: Solution of algebraic and transcendental equations- iterative methods based on second degree equation – Muller method(no derivation), Chebyshev method. Fixed point iteration method (first order), acceleration of convergence- Δ^2 - Aitken’s method. System of non-linear equations – Newton-Raphson method. Complex roots by Bairstow’s method. ■			10
Revised Bloom’s Taxonomy Level	L ₂ – Understanding, L ₃ – Applying		
Module-2			
Numerical Solution of Partial Differential Equations: Classification of second order equations, parabolic equations-solution of one dimensional heat equation, explicit method, Crank-Nicolson method. Hyperbolic equations- solution of one dimensional wave equation and two-dimensional Laplace equation by explicit method. ■			10
Revised Bloom’s Taxonomy Level	L ₃ – Applying		
Module-3			
Linear Algebra: Vector spaces, linear dependent, independence, basis and dimension, elementary properties, examples. Linear Transformations: Definition, properties, range and null space, rank and nullity, algebra of linear transformations-invertible, singular and non-singular transformations, representation of transformations by matrices. ■			10
Revised Bloom’s Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding		
Module-4			
System of linear algebraic equations and Eigen value problems: Iterative methods - Gauss-Seidal method, SOR method, Eigen value problems – Gerschgorian circle theorem, Eigen values and Eigen vectors of real symmetric matrices -Jacobi method. Interpolation: Hermite interpolation, spline interpolation, numerical solution of differential equations – Numerov method. ■			10
Revised Bloom’s Taxonomy Level	L ₃ – Applying		
Module-5			
Optimization: Linear programming- formulation of the problem, general linear programming problem, simplex method, artificial variable technique, Big M-method. Graph Theory: Basic terminologies, types of graphs, sub graphs, graphs isomorphism, connected graphs-walks, paths, circuits, connected and disconnected graphs, operations on graphs, Eulerian paths and circuits, Hamiltonian paths and circuits, applications to electrical circuits. ■			10
Revised Bloom’s Taxonomy Level	L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE)
16EEE11 APPLIED MATHAMATICS (Core Course) (continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

1. Employ numerical techniques in order to achieve more accurate values in the computation of roots of algebraic and non-linear equations.
2. Utilize analytical and numerical schemes to solve partial differential equations applicable to engineering problems.
3. Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images.
4. Apply standard iterative methods to compute Eigen values and solve ordinary differential equations.
5. Employ linear and non-linear programming techniques in simulation of network systems and optimization of electrical circuits. ■

Graduate Attributes (As per NBA):

Critical Thinking, Problem Solving, Research Skill, Usage of Modern Tools.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question is for 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module. ■

POWER ELECTRONIC CONVERTERS (Core Course)			
Course Code	16EPE13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge of PWM techniques in controlling the converter operation. • To impart knowledge of designing and analyzing DC – DC PWM converters and control modules. • To impart knowledge of designing and analyzing DC – AC and AC – DC converters. • To impart knowledge of analyzing different types of resonant converters and their control. • To impart knowledge of AC –AC converters and multilevel controllers. ■ 			
Module-1			Teaching Hours
PWM DC/DC Converters: Forward Converters - Analysis of the Basic Circuit, Galvanically Isolated Forward Converter, Boost Converter - Analysis of the Basic Scheme, Variation of the Output Voltage, Boundary Between the Continuous and the Discontinuous Mode , Discontinuous Mode Power Losses, Indirect Converter - Boundary Between the Continuous and the Discontinuous Mode, Discontinuous Mode, Indirect Converter with Galvanic Separation, Push – Pull (Symmetric) Converters - Analysis of Idealized Circuit in Continuous Mode, Output Characteristics, Selection of Components, DC Premagnetization of the Core, Half-Bridge Converter, Bridge Converter, Hamilton Circuit, Ćuk Converters - Elimination of the Current Ripple, Ćuk Converters with Galvanic Isolation. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
Control Modules: Basic Principles and Characteristics of PWM Control Modules - Circuit Analysis, Simple PWM, Voltage-Controlled PWM, Current-Controlled PWM- Compensated PWM, IC Control Modules - Control Module TL494, Control Module SG1524/2524/3524, Control Module TDA 1060. DC/AC Converters – Inverters: Single-Phase Voltage Inverters - Pulse-Controlled Output Voltage, Pulse-Width Modulated Inverters - Unipolar PWM, Three-Phase Inverters-Overmodulation ($m_a > 1$), Asynchronous PWM, Space Vector Modulation - Space Vector Modulation: Basic Principles, Application of Space Vector Modulation Technique, Direct and Inverse Sequencing, Real Drive Influence. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
AC/DC Converters – Rectifiers: Half-Wave Single-Phase Rectifiers , Full-Wave Rectifiers - Commutation of Current, Output Filters - Capacitive Filter, L Filter, Voltage Doublers, Three-Phase Rectifiers, Phase Controlled Rectifiers - Full-Wave Thyristor Rectifiers, Three-Phase Thyristor Bridge Rectifiers, Twelve-Pulse Rectifiers, Rectifiers with Circuit for Power Factor Correction, Active Rectifier - Active Rectifier with Hysteresis Current Controller, PWM Rectifiers - Advanced Control Techniques of PWM Rectifiers , PWM Rectifier with Current Output, PWM Rectifiers in Active Filters, Some Topologies of PWM Rectifiers, Applications of PWM Rectifiers. ■			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		

M.TECH POWER ELECTRONICS (EPE) 16EPE13 POWER ELECTRONIC CONVERTERS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4				Teaching Hours
Resonant Converters: Resonant Circuits - Resonant Converters of Class D, Series Resonant Converters, Parallel Resonant Converters, Series – Parallel Resonant Converter, Series Resonant Converters Based on GTO Thyristors, Class E Resonant Converters, DC/DC Converters Based on Resonant Switches - ZCS Quasi-resonant Converters, ZVS Quasi-resonant Converters, Multiresonant Converters, ZVS Resonant DC/AC Converters, Soft Switching PWM DC/DC Converters -Phase Shift Bridge Converters, Resonant Transitions PWM Converters, Control Circuits of Resonant Converters - Integrated Circuit Family UCx861-8, Integrated Circuits for Control of Soft, Switching PWM Converters. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Module-5				
AC/AC Converters: Single-Phase AC/AC Voltage Converters - Time Proportional Control Three-Phase Converters, Frequency Converters, Direct Frequency Converters, Introduction to AC/AC Matrix Converters - Basic Characteristics, Bidirectional Switches, Realization of Input Filter, Current Commutation, Protection of Matrix Converter, Application of Matrix Converter. Introduction to Multilevel Converters: Basic Characteristics -Multilevel DC/DC Converters, Time Interval: $nT < t < nT + DT$, $n = 0, 1, 2$, Time Interval: $nT + DT < t < (n + 1)T$, Multilevel Inverters - Cascaded H-Bridge Inverters, Diode-Clamped Multilevel Inverters, Flying Capacitor Multilevel Inverter, Other Multilevel Inverter Topologies, Control of Multilevel Inverters - Multilevel SPWM, Space Vector Modulation, Space Vector Control, Selective Harmonic Elimination. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Use the knowledge of PWM techniques in controlling different power electronic converters. • Apply the knowledge of power electronics in design and analysis of DC –DC PWM converters. • Design and analyze DC –AC and AC – DC converters and control their operation using PWM techniques. • Design and analyze different resonant converters and their control circuits. • Analyze AC – AC converters and multilevel converters. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem analysis.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - I			
MODELLING AND DESIGN OF CONTROLLERS (Core Course)			
Course Code	16EPE14	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge required for modeling and computer simulation of power electronic converters and systems. • To explain control system essentials in representing system in digital domain. • To explain the designing of digital controllers by different methods. • To explain the design and analysis of optimal and robust controllers by different methods. • To impart knowledge of discrete computation essentials. ■ 			
Module-1			Teaching Hours
Computer Simulation of Power Electronic Converters and Systems: Introduction, Challenges in Computer Simulation, Simulation Process, Mechanics of Simulation, Solution Techniques for Time-Domain Analysis, Widely Used, Circuit-Oriented Simulators, Equation Solvers. Modelling of Systems: Input-Output relations, Differential Equations and Linearization, State Space Representation, Transfer Function Representation, Block Diagrams, Lagrange method, Circuit Averaging, Bond Graphs, Space Vector Modelling. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying.		
Module-2			
Control System Essentials: Representation of system in digital Domain, The Z – Transform, Digital Filter, Mapping between s – plane and z – plane, Effect of Sampling, Continuous to Discrete Domain Conversion, Control System Basics, Control Principles, State - Space Method. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
Digital Controller Design: Controller Design Techniques, Bode Diagram Method, PID Controller, Root Locus Method, State Space Method, Full State Feedback, Regulator Design by Pole Placement, Estimation Design, Tracker : Controller Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
Digital Controller Design (continued): Controlling Voltage, Controlling Current, Control of Induction motor, Output Feedback, Induction motor Control with Output Feedback. Optimal and Robust Controller Design: Least Squares Principle, Quadratic Forms, Minimum Energy Principle, Least Square Solution, Weighted Least Squares, Recursive Least Squares, Optimal Control: Linear Quadratic, Induction motor example, Robust Controller Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE) 16EPE14 MODELLING AND DESIGN OF CONTROLLERS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Discrete Computation Essentials: Numeric Formats, Tracking the Base Point in the Fixed Point System, Normalization And Scaling, Arithmetic Algorithms. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Describe the role of computer simulations in the analysis and design of power electronics systems. • Understand the functional modeling of static systems. • Use sampling technique to determine a digital equivalent to a continuous time system. • Understand the control basics of digital systems. • Design digital controllers in discrete time and frequency domain. • Design optimal and robust controllers by different methods. • Explain essentials of discrete computation. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Ethics.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

SEMESTER - I			
EMBEDDED SYSTEMS (Elective Course)			
Course Code	16EPE151	IA Marks	20
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credits - 03			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge of embedded systems with suitable examples, explanation of process, classification of embedded systems. • To explain the processor architecture, memory organization, communication with processor and interrupt services. • To explain the program modeling concepts, inter-process communication and synchronization of processes. ■ 			
Module-1			Teaching Hours
Introduction to Embedded Systems: Embedded Systems, Processor Embedded into a System, Embedded Hardware Units and Devices in a System, Embedded Software in a System, Examples of Embedded Systems, Embedded Systems – on –chip (Soc) and Use of VLSI Circuit Design Technology, Complex Systems Design and Processors, Design of Process in Embedded System, Formulation of System Design, Design Process and Design Examples, Classification of Embedded Systems, Skill required for an Embedded System Designer. ■			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Processor Architecture and Memory Organisation: 8051 Architecture, Real world Interfacing, Introduction to Advanced Architecture, Processor and Memory Organization, Instruction Level Parallelism, Performance Metrics, Memory – Types, Memory – Maps and Addresses, Processor Selection, Memory Selection. ■			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Devices and Communication Buses, Interrupt Services: IO Types and Examples, Serial Communication Devices, Parallel Device Ports, Sophisticated Interfacing Features in Device Ports, Wireless Devices, Timer and Counting Devices, Watchdog Timer, Real Time Clock, Networked Embedded Systems, Serial Bus Device Protocols – Parallel Communication Network Using ISA, PCI, PCI –X and Advanced Protocols.			08
Device Drivers and Interrupts Service Mechanisms: Programmed – I/O Busy – wait Approach without Interrupt Service Mechanism, ISR Concept, Interrupt Sources, Interrupt Servicing Mechanism, Direct Memory Access. ■			
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Program Modelling concepts: Program Models, DFG Models, State Machine Programming Models for Event – controlled Program Flow, Modelling of Multiprocessor Systems, UML Modelling.			08
Interprocess Communication and Synchronization of Processes, Threads and Tasks: Multiple Processes in an Application, Multiple Threads in an Application, Tasks, Task Status, Task and Data, Clear – cut Distention Between Functions, ISRS and Tasks by their Characteristics, Concept of Semaphores, Shared Data, Interprocess Communication, Signal Function, Semaphore Functions, Message Queue Functions, Mailbox Functions, Pipe Functions, Socket Functions, RPC Functions. ■			
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) 16EPE151 EMBEDDED SYSTEMS (Elective Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Real - Time Operating Systems: OS Services, Process Management, Timer Functions, Event Functions, Memory management, Device, File and IO Subsystems Management , Interrupt Routines in RTOS Environment and Handling of Interrupt Source Calls, Real – time Operating Systems, Basic Design Using an RTOS, Rtos Task Scheduling Models, Interrupt Latency and Response of the task as performance Metrics, OS Security Issues. ■				08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain design process in embedded system and formulation of system design. • Describe processor architecture and memory organization. • Describe the devices; serial port, parallel port devices, timing devices, devices for synchronous iso-synchronous and asynchronous communication. • Describe device drivers and interrupt mechanisms. • Explain the programming concepts and source code engineering tools for embedded programming. • Explain real time programming and program modeling concepts during single and multi-processor system software development process. • Describe real time operating systems concepts. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem analysis.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

Number of credits completed at the end of II semester: 22+ 22 = 44

Elective - 2

Course Code under 16EPE25X	Title
16EPE251	Converters for Solar and Wind Power Systems
16EPE252	Uninterruptible Power Supply
16EPE253	Power Quality Problems and Mitigation
16EPE254	Hybrid Electric Vehicles

Note: Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - II			
ELECTRIC DRIVES (Core Course)			
Course Code	16EPE21	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction to drive, their characteristics and breaking. • To explain the basic elements of drives, classification of drives, their dynamics and speed control • To explain selection of drive for a specific application. • To explain control of an electric drive using microprocessor. ■ 			
Module-1			Teaching Hours
Characteristics Electric motors: Introduction, Characteristics of DC motors, Three phase Induction Motors and Synchronous Motors, Braking of Electric Motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Dynamics of Electric Drives: Introduction, Classification of Electric Drives, Basic Elements of an Electric Drive, Dynamic Conditions of Drive System, Stability Considerations of Electric Drive. Control of Electric Motors: Induction Motor Drives. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Control of Electric Motors (continued): Synchronous Motor Drives, DC Drives. Permanent Magnet Synchronous Motor, Classification of Permanent Magnet Synchronous Motor, Cycloconverters fed Synchronous Motor. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Control of Electric Motors (continued): Permanent Magnet Synchronous Motor, Classification of Permanent Magnet Synchronous Motor, Cycloconverters fed Synchronous Motor. Applications: Drive Considerations for Textile Mills, Steel Rolling Mills, Cranes and Hoist Drives, Cement Mills, Sugar Mills, Machine Tools, Paper Mills, Coal Mines, Centrifugal Pumps, Turbo - compressors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-5			
Microprocessors and Control of Electrical Drives: Introduction, Dedicated Hardware Systems versus Microprocessor Control, Applications Area and Functions of Microprocessors in Drive Technology, Control of Electric Drives using Microprocessors, Control System Design of Microprocessors based Variable Speed Drives, Stepper motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE)
16EPE21 ELECTRIC DRIVES (Core Course) (continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

- Explain characteristics of DC motors, induction motors and synchronous motors.
- Explain braking of electric motors.
- Classify electric drives.
- Discuss dynamics conditions and stability considerations of Electric drive.
- Control the speed of electric motors.
- Suggest a drive for a specific application.
- Explain using microprocessor in the control of an electric drive. ■

Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

Text Book

---	---	--------------------	--------------	-------------------------------

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - II			
SWITCHED - MODE POWER SUPPLIES (Core Course)			
Course Code	16EPE22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an overview on SMPS, its characteristics, new technologies, basic principles and control modes. • To introduce the topology of DC/DC converter used and the method of selecting key peripheral components of SMPS. • To explain the power factor correction circuit design of SMPS, the design of high-frequency transformer, the examples of SMPS optimization design, and the key design points of SMPS. • To introduce the SMPS testing technology and the protection circuit design of SMPS. ■ 			
Module-1			Teaching Hours
<p>Switching-Mode Power Supply (SMPS): Overview, Classification of Integrated Regulated Power Supply, Characteristics of SMPS, New Development Trend of SMPS, Basic Principles of SMPS, Control Mode Type of SMPS, Working Mode of SMPS, Feedback Type of SMPS, Load Characteristics of SMPS.</p> <p>Topologies of the DC/DC Converter: Topologies of the DC/DC Converter, Basic Principle of Buck Converter, Basic Principle of - Boost Converter, Buck-Boost Converter, Charge Pump Converter, (Single-ended primary inductor converter)SEPIC, Flyback Converter, Forward Converter, Push-Pull Converter, Half/Full Bridge Converter, Soft Switching Converter, Half-Bridge LLC Resonant Converter, 2-Switch Forward Converter. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
<p>Method for Selecting Key Peripheral Components of SMPS: Selection Method for - Fixed Resistor, Capacitors, Inductor Characteristics and Selection Method for Magnetic Beads, Selection Method for EMI Filter - Input Bridge Rectifier, Output Rectifier, Transient Voltage Suppressor (TVS), Power Switching Tube, Optical Coupler, Adjustable Precision Shunt Regulator, SMPS Protection Elements. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
<p>Power Factor Correction Circuit Design of SMPS: Brief Introduction to Power Factor Correction (PFC), Basic Principle of Passive PFC Circuit, Design Examples of Passive PFC Circuit, Basic Principle of Active PFC Circuit, Design Examples of Active PFC Circuit, Principle and Application of High-Power PFC, Measures to Suppress PFC Electromagnetic Interference, PFC Configuration Scheme.</p> <p>Design of High-Frequency Transformer: Selection Method for Magnetic Cores by the Empirical Formula or Output Power Table, Waveform Parameters of the High-Frequency Transformer Circuit, Formula Derivation of Selecting High-Frequency Transformer Magnetic Core Based on AP Method, Design of Flyback High-Frequency Transformer, Design of Forward High-Frequency Transformer, Loss of High-Frequency Transformer. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ – Applying.		

M.TECH POWER ELECTRONICS (EPE) 16EPE22 SWITCHED - MODE POWER SUPPLIES (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4				Teaching Hours
<p>Key Design Points of SMPS: SMPS Design Requirements, Design of High-Efficiency SMPS, Methods of Reducing No-Load and Standby Power Consumption of SMPS, Stability Design of Optocoupler Feedback Control Loop SMPS Layout and Wiring, Design of Constant Voltage/Current SMPS, Design of Precision Constant Voltage/Current SMPS, Design of Remote Turn-Off Circuit for SMPS, Typical Application and Printed Circuit Design of New Single-Chip SMPS, Electromagnetic Interference Waveform Analysis and Safety Code Design of SMPS, Radiator Design of Single-Chip SMPS, Radiator Design of Power Switching Tube (MOSFET), Common Troubleshooting Methods of SMPS. ■</p>				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying.			
Module-5				
<p>SMPS Testing Technology: Parameter Testing of SMPS, Performance Testing of SMPS, SMPS Measurement Skills, Accurate Measurement Method of Duty Ratio, Method to Detect the Magnetic Saturation of High-Frequency Transformer with Oscilloscope, Digital Online Current/Resistance Meter, Electromagnetic Compatibility Measurement of SMPS, Waveform Test and Analysis of SMPS.</p> <p>Protection and Monitoring Circuit Design of SMPS: Design of Drain Clamp Protection Circuit, Overvoltage Protection Circuit Constituted by Discrete Components, Application of Integrated Overvoltage Protector, Design of Undervoltage Protection Circuit, Design of Overcurrent and Overpower Protection Circuit, Design of Soft-Start Circuit, Mains Voltage Monitor, Transient Interference and Audio Noise Suppression Technology of SMPS, Design of Overheating Protection Component and Cooling Control System. ■</p>				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes:				
At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain a SMPS, its characteristics, new technologies, basic principles and control modes. • Suggest a suitable DC/DC converter for an SMPS. • Explain the method of selecting key peripheral components of SMPS. • Design the power factor correction circuit of SMPS. • Explain selection of magnetic core and designing of high-frequency transformer. • Explain designing of different SMPS. • Explain testing technology of SMPS. • Design protection and monitoring circuit for SMPS. ■ 				
Graduate Attributes (As per NBA):				
Engineering Knowledge, Problem Analysis, Design / development of solutions, Ethics, Communication.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Optimal Design of Switching Power Supply	Zhanyou Sha et al	Wiley	2015

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - II			
MODELLING AND ANALYSIS OF ELECTRICAL MACHINES (Core Course)			
Subject Code	16EPE23	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To provide basic concepts of modelling of dc and ac machines. • To provide knowledge of theory of transformation of three phase variable to two phase variable. • To analyze the steady state and dynamic state operation of three-phase induction machines using transformation theory based mathematical modelling. • To provide modeling concepts of single phase and three phase transformers. • To analyze the steady state and dynamic state operation of three-phase synchronous machines using transformation theory based mathematical modelling. ■ 			
Module-1			Teaching Hours
<p>Basic Concepts of Modelling: Basic two pole machine representation of commutator machines, 3-phase synchronous machine with and without damper bar and 3-phase induction machine, Kron's primitive machine-voltage, current and torque equations.</p> <p>DC Machine Modelling: Mathematical model of separately excited DC motor-steady state and transient state analysis, sudden application of inertia load, transfer function of separately excited DC motor, mathematical model of dc series motor, shunt motor, linearization techniques for small perturbations. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
<p>Reference Frame Theory: Real time model of a two phase induction machine, transformation to obtain constant matrices, three phase to two phase transformation, power equivalence.</p> <p>Dynamic Modelling of Three Phase Induction Machine: Generalized model in arbitrary frame, electromagnetic torque, deviation of commonly used induction motor models-stator reference frames model, rotor reference frames model, synchronously rotating reference frames model, equations in flux linkages, per unit model, dynamic simulation. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
<p>Small Signal Equations of the Induction Machine: Derivation of small signal equations of induction machine, space phasor model, DQ flux linkages model derivation, control principle of the induction motor.</p> <p>Transformer Modelling: Introduction, single phase transformer model, three phase transformer connections, per phase analysis, normal systems, per unit normalization, per unit three phase quantities, change of base, per unit analysis of normal system, regulating transformers for voltage and phase angle control, auto transformers, transmission line and transformers. ■</p>			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		
Module-4			
<p>Modelling of Synchronous Machines: Introduction, voltage equations and torque equation in machine variables, stator voltage equations in arbitrary and rotor reference frame variables, Park's equations, torque equations in substitute variables, rotor angle and angle between rotors, per unit system, analysis of steady state operation. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE)				
16EPE23 MODELLING AND ANALYSIS OF ELECTRICAL MACHINES (Core Course) (continued)				
CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Dynamic Analysis of Synchronous Machines: Dynamic performance during sudden change in input torque and during a 3-phase fault at the machine terminals, approximate transient torque versus rotor angle characteristics, comparison of actual and approximate transient torque-angle characteristics during a sudden change in input torque; first swing transient stability limit, comparison of actual and approximate transient torque-angle characteristics during a 3-phase fault at the machine terminals, critical clearing time, equal area criterion, computer simulation. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain the basic concepts of modeling. • Develop mathematical models for DC motors for transient state analysis. • Use reference frame theory to transform three phase to two phase. • Develop dynamic model for three phase induction motor in stator and rotor reference frames. • Develop mathematical model of single phase transformers. • Model synchronous machine using Park's transformation for the analysis of steady state operation. • Model synchronous machine to perform dynamic analysis under different conditions. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Ethics,				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - II			
FACTS CONTROLLERS (Core Course)			
Course Code	16EPE24	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To discuss the growth of complex electrical power networks and to introduce the lack of controllability of the active- and reactive-power flows in energized networks. • To describe the conventional controlled systems and introduce the basic operating principles of new FACTS devices • To describe the various components of a general SVC, its control system, an overview of the voltage-control characteristics of SVC and the principles of design of the SVC voltage regulator. • To explain the concepts of SVC control in such applications as stability enhancement, damping subsynchronous oscillations, improvement of HVDC link performance and the basic issues relating to the design of SVC controllers in different applications. • To explain the concepts of series compensation, TCSC controller and its operation, characteristics, modeling and applications. • To introduce voltage source converter based facts devices. ■ 			
Module-1			Teaching Hours
Control Mechanism of Transmission System: Background, Electrical Transmission Networks, Conventional Control Mechanisms, Flexible ac Transmission Systems (FACTS), Emerging Transmission Networks. Reactive-Power Control in Electrical Power Transmission Systems: Reactive Power, Uncompensated Transmission Lines, Passive Compensation. Principles of Conventional Reactive-Power Compensators: Introduction, Synchronous Condensers, The Saturated Reactor (SR), The Thyristor-Controlled Reactor (TCR), The Thyristor-Controlled Transformer (TCT). ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Principles of Conventional Reactive-Power Compensators (continued): The Fixed Capacitor–Thyristor-Controlled Reactor (FC–TCR), The Mechanically Switched Capacitor–Thyristor-Controlled Reactor (MSC–TCR), The Thyristor-Switched Capacitor (TSC), The Thyristor-Switched Capacitor–Thyristor-Controlled Reactor (TSC–TCR), A Comparison of Different SVCs. SVC Voltage Control: Introduction Voltage Control. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
SVC Voltage Control (continued): Effect of Network Resonances on the Controller Response, The 2nd Harmonic Interaction between the SVC and ac Network, Application of the SVC to Series-Compensated ac Systems, 3rd Harmonic Distortion, Voltage-Controller Design Studies. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
SVC Applications: Introduction, Increase in Steady-State Power-Transfer Capacity, Enhancement of Transient Stability, Augmentation of Power-System Damping - Principle of the SVC, Auxiliary Control, Torque Contributions of SVC Controllers, Effect of the Power System, Effect of the SVC, SVC Mitigation of Subsynchronous Resonance (SSR) - Principle of SVC Control, Configuration and Design of the SVC Controller, Rating of an SVC, Prevention of Voltage Instability- Principles of SVC Control- A Case Study, Configuration and Design of the SVC Controller, Rating of an SVC.			10

M.TECH POWER ELECTRONICS (EPE) 16EPE24 FACTS CONTROLLERS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4 (continued)				Teaching Hours
The Thyristor-Controlled Series Capacitor (TCSC): Series Compensation, The TCSC Controller, Operation of the TCSC, The TSSC, Analysis of the TCSC, Capability Characteristics, Harmonic Performance, Losses, Response of the TCSC, Modelling of the TCSC. ■				
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Module-5				
TCSC Applications: Introduction, Open-Loop Control, Closed-Loop Control, Improvement of the System-Stability Limit, Enhancement of System Damping, Subsynchronous Resonance (SSR) Mitigation, Voltage-Collapse Prevention. VSC based FACTS Controllers: Introduction, The STATCOM, The SSSC, The UPFC, Comparative Evaluation of Different FACTS Controllers. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Discuss the growth of complex electrical power networks, the lack of controllability of the active- and reactive-power flows in energized networks. • Describe the conventional controlled systems and the basic operating principles of FACTS. • Describe the various components of a general SVC, its control system, control characteristics and the design of the SVC voltage regulator. • Explain the use of SVC in stability enhancement, damping subsynchronous oscillations, improvement of HVDC link performance. • Explain the concepts of series compensation, TCSC controller and its operation, characteristics, modeling and applications. • Explain the operation of voltage source converter based FACTS. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Lifelong Learning.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

POWER QUALITY PROBLEMS AND MITIGATION (Elective Course)			
Course Code	16EPE253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credits - 03			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction on power quality (PQ), causes and effects of PQ problems, requirement of PQ improvements, and mitigation aspects of PQ problems. • To give PQ definitions, terminologies, standards, benchmarks, monitoring requirements through numerical problems. • To explain passive shunt and series compensation using lossless passive LC components, active shunt compensation using DSTATCOM (distribution static compensators), active series compensation using DVR (dynamic voltage restorer), and combined compensation using UPQC (unified power quality compensator) for mitigation of current-based PQ problems. • To explain classification, modeling and analysis of various nonlinear loads which cause the power quality problems. ■ 			
Module-1			Teaching Hours
<p>Power Quality: Introduction, State of the Art on Power Quality, Classification of Power Quality Problems, Causes of Power Quality Problems, Effects of Power Quality Problems on Users, Classification of Mitigation Techniques for Power Quality Problems.</p> <p>Power Quality Standards and Monitoring: Introduction, State of the Art on Power Quality Standards and Monitoring, Power Quality Terminologies, Power Quality Definitions, Power Quality Standards, Power Quality Monitoring, Numerical Examples.</p> <p>Passive Shunt and Series Compensation: Introduction, State of the Art on Passive Shunt and Series Compensators, Classification of Passive Shunt and Series Compensators, Principle of Operation of Passive Shunt and Series Compensators, Analysis and Design of Passive Shunt Compensators, Modelling, Simulation, and Performance of Passive Shunt and Series Compensators, Numerical Examples. ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
<p>Active Shunt Compensation: Introduction, State of the Art on DSTATCOMs, Classification of DSTATCOMs, Principle of Operation and Control of DSTATCOMs, Analysis and Design of DSTATCOMs, Modelling, Simulation, and Performance of DSTATCOMs, Numerical Examples. ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
<p>Active Series Compensation: Introduction, State of the Art on Active Series Compensators, Classification of Active Series Compensators, Principle of Operation and Control of Active Series Compensators, Analysis and Design of Active Series Compensators, Modelling, Simulation, and Performance of Active Series Compensators, Numerical Examples. ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
<p>Unified Power Quality Compensators: Introduction, State of the Art on Unified Power Quality Compensators, Classification of Unified Power Quality Compensators, Principle of Operation and Control of Unified Power Quality Compensators, Analysis and Design of Unified Power Quality Compensators, Modelling, Simulation, and Performance of UPQCs, Numerical Examples (from 6.01 to 6.10). ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE)				
16EPE253 POWER QUALITY PROBLEMS AND MITIGATION (Elective Course) (continued)				
CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Unified Power Quality Compensators (continued): Numerical Examples (from 6.11 to 20). Loads That Cause Power Quality Problems: Introduction, State of the Art on Nonlinear Loads, Classification of Nonlinear Loads, Power Quality Problems Caused by Nonlinear Loads, Analysis of Nonlinear Loads, Modelling, Simulation, and Performance of Nonlinear Loads, Numerical Examples. ■				08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain causes, effects of PQ problems and classification of mitigation techniques for PQ problems. • Explain PQ standards, terminology and monitoring requirements through numerical problems. • Explain passive shunt and series compensation using lossless passive components. • Explain the design, operation and modeling of active shunt compensation equipment. • Explain the design, operation and modeling of active series compensation equipment. • Explain the design operation and modeling of unified power quality compensators. • Discuss mitigation of power quality problems due to nonlinear loads. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Modern Tool Usage, Engineers and society, Ethics, Individual and Team work, Communication, Lifelong Learning.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

1	Power Quality Problems and Mitigation Techniques	Bhim Singh, Ambrish Chandra, Kamal Al-Haddad	Wiley	2015

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - II POWER ELECTRONIS LABORATORY-2			
Course Code	16EPEL26	IA Marks	20
Number of Practical Hours/Week	03	Exam Hours	03
Total Number of Practical Hours	40	Exam Marks	80
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To conduct experiments to assess the performance of separately excited DC motor fed by single phase and three phase fully controlled converter in continuous and discontinuous current modes. • To conduct experiments to assess the performance of Chopper fed DC drives for class A and class C commutation in continuous current mode. • To simulate different converters and analyze the waveform in continuous and discontinuous current modes. • To simulate forward converter, fly back converter and resonant converter to study their performance. ■ 			
Sl. NO	Experiments		
1	Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for continuous current mode.		
2	Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.		
3	Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for continuous current mode.		
4	Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.		
5	Performance analysis of a practical chopper fed DC Drives system for class-A and class-C commutation and analysis of wave forms in continuous mode.		
6	Simulation study of buck, boost and buck- boost converter (basic topologies) and analysis of wave forms for continuous current mode (CCM).		
7	Simulation study of buck, boost and buck-boost converter (basic topologies) and analysis of wave forms for discontinuous current mode (DCM).		
8	Simulation study of forward converter and fly back converter and performance analysis of various wave forms.		
9	Resonant converter simulation study and analysis.		
10	Closed loop operation of a buck and boost converter.		
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ – Understanding L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Conduct experiments on single phase / three phase fully controlled converter fed separately excited DC motor to assess the performance in continuous and discontinuous current modes. • Conduct experiments to assess the performance of Chopper fed DC drives for class A and class C commutation in continuous current mode. • Simulate different converters for analyzing the waveform in continuous and discontinuous current modes. • Simulate forward converter, fly back converter and resonant converter to study their performance. ■ 			
Graduate Attributes (As per NBA):			
Engineering Knowledge, Problem Analysis, Conduct investigations of complex Problems, Modern Tool Usage, Individual and Team work, Communication.

Number of credits completed at the end of IV semester: 22 + 22 + 21 + 20 = 85

Elective - 3

Course Code under 16EPE42X	Title
16EPE421	Digital Power Electronics
16EPE422	MPPT in Solar Systems
16EPE423	Multi-Terminal DC Grids
16EPE424	Multilevel Converters for Industrial Applications

Note: 1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted

4. Project evaluation:

- a. Internal Examiner shall carry out the evaluation for 100 marks.
- b. External Examiner shall carry out the evaluation for 100 marks.
- c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
- d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - IV			
HVDC POWER TRANSMISSION (Core Course)			
Course Code	16EPE41	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction to DC power transmission and describe the basic components of a converter, and describe the methods for compensating the reactive power demanded by the converter and the methods for simulation of HVDC systems • To describe the types of filters for removing harmonics and the characteristics of the system impedance resulting from AC filter designs and different methods of control of HVDC converter and system. • To explain the design techniques for the main components of an HVDC system. • To explain the protection of HVDC system and other converter configurations used for the HVDC transmission and the recent trends for HVDC applications. ■ 			
Module-1			Teaching Hours
HVDC Technology: Introduction, Advantages of HVDC Systems, HVDC System Costs, Overview and Organization of HVDC Systems, Review of the HVDC System Reliability, HVDC Characteristics and Economic Aspects. Power Conversion: Thyristor, 3-Phase Converter, 3-Phase Full Bridge Converter, 12-Pulse Converter. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Harmonics of HVDC and Removal: Introduction, Determination of Resulting Harmonic Impedance, Active Power Filter. Control of HVDC Converter and System: Converter Control for an HVDC System, Commutation Failure, HVDC Control and Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Control of HVDC Converter and System (continued): HVDC Control Functions, Reactive Power and Voltage Stability. Interactions between AC and DC Systems: Definition of Short Circuit Ratio and Effective Short Circuit Ratio, Interaction between HVDC and AC Power System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Main Circuit Design: Converter Circuit and Components, Converter Transformer, Cooling System, HVDC Overhead Line, HVDC Earth Electrodes, HVDC Cable, HVDC Telecommunications Current Sensors, HVDC Noise and Vibration. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-5			
Fault Behaviour and Protection of HVDC System: Valve Protection Functions, Protective Action of an HVDC System, Protection by Control Actions, Fault Analysis. Other Converter Configurations for HVDC Transmission: Introduction, Voltage Source Converter (VSC), CCC and CSCC HVDC System, 10.4 Multi-Terminal DC Transmission. Trends for HVDC Applications: Wind Farm Technology, Modern Voltage Source Converter (VSC) HVDC Systems, 800 kV HVDC System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE)
16EPE41 HVDC POWER TRANSMISSION (Core Course) (continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

- Explain importance of DC power transmission.
- Describe the basic components of a converter, the methods for compensating the reactive power demanded by the converter
- Explain the methods for simulation of HVDC systems and its control.
- Describe filters for eliminating harmonics and the characteristics of the system impedance resulting from AC filter designs
- Explain the design techniques for the main components of an HVDC system.
- Explain the protection of HVDC system and other converter configurations used for the HVDC transmission.
- Explain the recent trends for HVDC applications. ■

Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis, Lifelong Learning.

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

MULTILEVEL CONVERTERS FOR INDUSTRIAL APPLICATIONS (Elective Course)			
Course Code	16EPE424	IA Marks	20
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credits - 03			
Course objectives:			
<ul style="list-style-type: none"> • To provide an overview of medium-voltage power converters and their applications. • To describe the generalized multilevel converter topology and to derive the classic converters with a common DC bus and to analyze the common characteristics of the symmetric topologies. • Explain the analysis of the operation of the diode-clamped multilevel converter, and a multilevel space vector modulation and to characterize the balancing boundary of the passive front-end converter • To describe the operation and analysis of the flying capacitor multilevel converter. • To explain asymmetric topology with hybrid modulation and a common DC source called a cascade asymmetric multilevel converter (CAMC) with five voltage levels and its advantages. • To analyse the behaviour of the CAMC as a distribution static compensator (DSTATCOM) and shunt active power filter in improving the power quality in medium-voltage distribution systems as custom power devices. • To analyse the behaviour of the diode-clamped topology configured as a back-to-back converter for several working conditions. ■ 			
Module-1			Teaching Hours
Converters: Introduction, Medium-Voltage Power Converters, Multilevel Converters, Applications. Multilevel Topologies: Introduction, Generalized Topology with a Common DC Bus, Converters Derived from the Generalized Topology, Symmetric Topologies without a Common DC Link, Summary of Symmetric Topologies, Asymmetric Topologies. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-2			
Diode-Clamped Multilevel Converter: Introduction, Converter Structure and Functional Description, Modulation of Multilevel Converters, Voltage Balance Control, Effectiveness Boundary of Voltage Balancing in DCMC Converters, Performance Results. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-3			
Flying Capacitor Multilevel Converter: Introduction, Flying Capacitor Topology, Modulation Scheme for the FCMC, Dynamic Voltage Balance of the FCMC. Cascade Asymmetric Multilevel Converter (CAMC): Introduction, General Characteristics of the CAMC, CAMC Three-Phase Inverter, Comparison of the Five-Level Topologies. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-4			
Case Study 1: DSTATCOM Built with a Cascade Asymmetric Multilevel Converter: Introduction, Compensation Principles, CAMC Model, Reactive Power and Harmonics Compensation. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-5			
Case Study 2: Medium-Voltage Motor Drive Built with DCMC: Introduction, Back-to-Back DCMC Converter, Unified Predictive Controller of the Back-to-Back DCMC in an IM Drive Application, Performance Evaluation. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		

M.TECH POWER ELECTRONICS (EPE)
16EPE424 MULTILEVEL CONVERTERS FOR INDUSTRIAL APPLICATIONS (Elective Course)
(continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

- Explain the working of medium-voltage power converters and their applications.
- Explain multilevel, symmetric and asymmetric topologies.
- Explain the structure and operation of the diode-clamped multilevel converter, and a multilevel space vector modulation.
- Characterize the balancing boundary of the passive front-end converter.
- Describe the operation and analysis of the flying capacitor multilevel converter.
- Discuss the characteristics topologies of the Cascade Asymmetric Multilevel Controller.
- Explain the working of a distribution static compensator (DSTATCOM) built with CAMC for reactive power and harmonic compensation.
- Evaluate the performance of back-to-back converter in an induction motor drive for several working conditions. ■

Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis.

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

TOTAL			07	--	06	90	360	450	20

Number of credits completed at the end of IV semester: 22 + 22 + 21 + 20 = 85

Elective - 3

Course Code under 16EPE42X	Title
16EPE421	Digital Power Electronics
16EPE422	MPPT in Solar Systems
16EPE423	Multi-Terminal DC Grids
16EPE424	Multilevel Converters for Industrial Applications

Note: 1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted

4. Project evaluation:

- a. Internal Examiner shall carry out the evaluation for 100 marks.
- b. External Examiner shall carry out the evaluation for 100 marks.
- c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
- d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - I			
APPLIED MATHAMATICS (Core Course)			
Course Code	16EEE11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> The objectives of this course is to acquaint the students with principles of advanced mathematics through linear algebra, transform methods for differential equations, calculus of variations and linear and non-linear programming, that serve as an essential tool for applications of electrical engineering sciences. ■ 			
Module-1			Teaching Hours
Numerical Methods: Solution of algebraic and transcendental equations- iterative methods based on second degree equation – Muller method(no derivation), Chebyshev method. Fixed point iteration method (first order), acceleration of convergence- Δ^2 - Aitken’s method. System of non-linear equations – Newton-Raphson method. Complex roots by Bairstow’s method. ■			10
Revised Bloom’s Taxonomy Level	L ₂ – Understanding, L ₃ – Applying		
Module-2			
Numerical Solution of Partial Differential Equations: Classification of second order equations, parabolic equations-solution of one dimensional heat equation, explicit method, Crank-Nicolson method. Hyperbolic equations- solution of one dimensional wave equation and two-dimensional Laplace equation by explicit method. ■			10
Revised Bloom’s Taxonomy Level	L ₃ – Applying		
Module-3			
Linear Algebra: Vector spaces, linear dependent, independence, basis and dimension, elementary properties, examples. Linear Transformations: Definition, properties, range and null space, rank and nullity, algebra of linear transformations-invertible, singular and non-singular transformations, representation of transformations by matrices. ■			10
Revised Bloom’s Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding		
Module-4			
System of linear algebraic equations and Eigen value problems: Iterative methods - Gauss-Seidal method, SOR method, Eigen value problems – Gerschgorian circle theorem, Eigen values and Eigen vectors of real symmetric matrices -Jacobi method. Interpolation: Hermite interpolation, spline interpolation, numerical solution of differential equations – Numerov method. ■			10
Revised Bloom’s Taxonomy Level	L ₃ – Applying		
Module-5			
Optimization: Linear programming- formulation of the problem, general linear programming problem, simplex method, artificial variable technique, Big M-method. Graph Theory: Basic terminologies, types of graphs, sub graphs, graphs isomorphism, connected graphs-walks, paths, circuits, connected and disconnected graphs, operations on graphs, Eulerian paths and circuits, Hamiltonian paths and circuits, applications to electrical circuits. ■			10
Revised Bloom’s Taxonomy Level	L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE)
16EEE11 APPLIED MATHAMATICS (Core Course) (continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

1. Employ numerical techniques in order to achieve more accurate values in the computation of roots of algebraic and non-linear equations.
2. Utilize analytical and numerical schemes to solve partial differential equations applicable to engineering problems.
3. Understand vector spaces, basis, linear transformations and the process of obtaining matrix of linear transformations arising in magnification and rotation of images.
4. Apply standard iterative methods to compute Eigen values and solve ordinary differential equations.
5. Employ linear and non-linear programming techniques in simulation of network systems and optimization of electrical circuits. ■

Graduate Attributes (As per NBA):

Critical Thinking, Problem Solving, Research Skill, Usage of Modern Tools.

Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question is for 16 marks.
- There will be two full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module. ■

POWER SEMICONDUCTOR DEVICES AND COMPONENTS (Core Course)			
Course Code	16EPE12	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To enhance the knowledge of fundamentals of semiconductor physics, power electronics and power computation in circuits • To enhance the knowledge of fundamentals of various semiconductor devices, their operation and characteristics. • To explain the design and operation of drive circuits and snubber circuits. • To explain the controlling of temperature rise of the semiconductor devices and designing of magnetic components used for the power electronic circuits. ■ 			
Module-1			Teaching Hours
<p>Power Electronics: Introduction, Converter Classification, Power Electronics Concepts, Electronic Switches, Switch Selection, Spice, PSpice and Capture, Representation of switches in Pspice -The Voltage-Controlled Switch, Transistors, Diodes and Thyristors (SCRs).</p> <p>Power Computations: Introduction, Power and Energy, Inductors and Capacitors, Energy Recovery, Effective Values, Apparent Power and Power Factor, Power Computations for Sinusoidal AC Circuits, Power Computations for Nonsinusoidal Periodic Waveforms, Power Computations Using Pspice.</p> <p>Basic Semiconductor Physics: Introduction, Conduction Processes in Semiconductors pn Junctions, Charge Control Description of pn-Junction Operation, Avalanche Breakdown. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
<p>Power Diodes: Introduction, Basic Structure and I – V characteristics, Breakdown Voltage Considerations, On –State Losses, Switching Characteristics, Schottky Diodes.</p> <p>Bipolar Junction Transistors: Introduction, Vertical Power Transistor Structures, Z-V Characteristics, Physics of BJT Operation, Switching Characteristics, Breakdown Voltages, Second Breakdown, On-State Losses, Safe Operating areas.</p> <p>Power MOSFETs : Introduction, Basic Structure, I-V Characteristics, Physics of Device Operation, Switching Characteristics, Operating Limitations and Safe Operating Areas. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
<p>Thyristors: Introduction, Basic Structure, I-V Characteristics, Physics of Device Operation, Switching Characteristics, Methods of Improving di/dt and dv/dt Ratings.</p> <p>Gate Turn-Off Thyristors: Introduction, Basic Structure and Z-V Characteristics, Physics of Turn-Off Operation, GTO Switching Characteristics, Overcurrent Protection of GTOs.</p> <p>Insulated Gate Bipolar Transistors: Introduction, Basic Structure, I-V Characteristics, Physics of Device Operation, Latchup in IGBTs, Switching Characteristics, Device Limits and SOAs.</p> <p>Emerging Devices and Circuits: Introduction, Power Junction Field Effect Transistors, Field-Controlled Thyristor, JFET-Based Devices versus Other Power Devices, MOS-Controlled Thyristors, Power Integrated Circuits, New Semiconductor Materials for Power Devices. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) 16EPE12 POWER SEMICONDUCTOR DEVICES AND COMPONENTS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4				Teaching Hours
<p>Snubber Circuits: Function and Types of Snubber Circuits, Diode Snubbers, Snubber Circuits for Thyristors, Need for Snubbers with Transistors, Turn-Off Snubber, Overvoltage Snubber, Turn-On Snubber, Snubbers for Bridge Circuit Configurations, GTO Snubber Considerations.</p> <p>Gate and Base Drive Circuits: Preliminary Design Considerations, dc-Coupled Drive Circuits, Electrically Isolated Drive Circuits, Cascode-Connected Drive Circuits, Thyristor Drive Circuits, Power Device Protection in Drive Circuits, Circuit Layout Considerations ■</p>				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Module-5				
<p>Component Temperature Control and Heat Sinks: Control of Semiconductor Device Temperatures, Heat Transfer by Conduction, Heat sinks, Heat Transfer by Radiation and Convection.</p> <p>Design of Magnetic Components: Magnetic Materials and Cores, Copper Windings, Thermal Considerations, Analysis of a Specific Inductor Design, Inductor Design Procedures, Analysis of a Specific Transformer Design, Eddy Currents, Transformer Leakage Inductance, Transformer Design Procedure, Comparison of Transformer and Inductor Sizes. ■</p>				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes:				
At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Discuss power electronic concepts, electronic switches and semiconductor physics. • Explain representation of switches in P-spice and power computations. • Explain the internal structure, the principle of operation, characteristics and base drive circuits of power semiconductor devices; power diodes, power BJT, power MOSFET. • Explain the internal structure, the principle of operation, characteristics and base drive circuits of power semiconductor devices; thyristors, power IGBT, power FET. • Design Snubber circuits for the protection of power semiconductor devices. • Design gate and base drive circuits for power semiconductor devices • Design a heat sink to control the temperature rise of semiconductor devices • Design magnetic components inductors and transformers used in the power electronic circuits. ■ 				
Graduate Attributes (As per NBA):				
Engineering Knowledge Problem, Analysis, Design / development of solutions, Ethics.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

POWER ELECTRONIC CONVERTERS (Core Course)			
Course Code	16EPE13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge of PWM techniques in controlling the converter operation. • To impart knowledge of designing and analyzing DC – DC PWM converters and control modules. • To impart knowledge of designing and analyzing DC – AC and AC – DC converters. • To impart knowledge of analyzing different types of resonant converters and their control. • To impart knowledge of AC –AC converters and multilevel controllers. ■ 			
Module-1			Teaching Hours
PWM DC/DC Converters: Forward Converters - Analysis of the Basic Circuit, Galvanically Isolated Forward Converter, Boost Converter - Analysis of the Basic Scheme, Variation of the Output Voltage, Boundary Between the Continuous and the Discontinuous Mode , Discontinuous Mode Power Losses, Indirect Converter - Boundary Between the Continuous and the Discontinuous Mode, Discontinuous Mode, Indirect Converter with Galvanic Separation, Push – Pull (Symmetric) Converters - Analysis of Idealized Circuit in Continuous Mode, Output Characteristics, Selection of Components, DC Premagnetization of the Core, Half-Bridge Converter, Bridge Converter, Hamilton Circuit, Ćuk Converters - Elimination of the Current Ripple, Ćuk Converters with Galvanic Isolation. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
Control Modules: Basic Principles and Characteristics of PWM Control Modules - Circuit Analysis, Simple PWM, Voltage-Controlled PWM, Current-Controlled PWM- Compensated PWM, IC Control Modules - Control Module TL494, Control Module SG1524/2524/3524, Control Module TDA 1060. DC/AC Converters – Inverters: Single-Phase Voltage Inverters - Pulse-Controlled Output Voltage, Pulse-Width Modulated Inverters - Unipolar PWM, Three-Phase Inverters-Overmodulation ($m_a > 1$), Asynchronous PWM, Space Vector Modulation - Space Vector Modulation: Basic Principles, Application of Space Vector Modulation Technique, Direct and Inverse Sequencing, Real Drive Influence. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
AC/DC Converters – Rectifiers: Half-Wave Single-Phase Rectifiers , Full-Wave Rectifiers - Commutation of Current, Output Filters - Capacitive Filter, L Filter, Voltage Doublers, Three-Phase Rectifiers, Phase Controlled Rectifiers - Full-Wave Thyristor Rectifiers, Three-Phase Thyristor Bridge Rectifiers, Twelve-Pulse Rectifiers, Rectifiers with Circuit for Power Factor Correction, Active Rectifier - Active Rectifier with Hysteresis Current Controller, PWM Rectifiers - Advanced Control Techniques of PWM Rectifiers , PWM Rectifier with Current Output, PWM Rectifiers in Active Filters, Some Topologies of PWM Rectifiers, Applications of PWM Rectifiers. ■			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		

M.TECH POWER ELECTRONICS (EPE) 16EPE13 POWER ELECTRONIC CONVERTERS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4				Teaching Hours
Resonant Converters: Resonant Circuits - Resonant Converters of Class D, Series Resonant Converters, Parallel Resonant Converters, Series – Parallel Resonant Converter, Series Resonant Converters Based on GTO Thyristors, Class E Resonant Converters, DC/DC Converters Based on Resonant Switches - ZCS Quasi-resonant Converters, ZVS Quasi-resonant Converters, Multiresonant Converters, ZVS Resonant DC/AC Converters, Soft Switching PWM DC/DC Converters -Phase Shift Bridge Converters, Resonant Transitions PWM Converters, Control Circuits of Resonant Converters - Integrated Circuit Family UCx861-8, Integrated Circuits for Control of Soft, Switching PWM Converters. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Module-5				
AC/AC Converters: Single-Phase AC/AC Voltage Converters - Time Proportional Control Three-Phase Converters, Frequency Converters, Direct Frequency Converters, Introduction to AC/AC Matrix Converters - Basic Characteristics, Bidirectional Switches, Realization of Input Filter, Current Commutation, Protection of Matrix Converter, Application of Matrix Converter. Introduction to Multilevel Converters: Basic Characteristics -Multilevel DC/DC Converters, Time Interval: $nT < t < nT + DT$, $n = 0, 1, 2$, Time Interval: $nT + DT < t < (n + 1)T$, Multilevel Inverters - Cascaded H-Bridge Inverters, Diode-Clamped Multilevel Inverters, Flying Capacitor Multilevel Inverter, Other Multilevel Inverter Topologies, Control of Multilevel Inverters - Multilevel SPWM, Space Vector Modulation, Space Vector Control, Selective Harmonic Elimination. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Use the knowledge of PWM techniques in controlling different power electronic converters. • Apply the knowledge of power electronics in design and analysis of DC –DC PWM converters. • Design and analyze DC –AC and AC – DC converters and control their operation using PWM techniques. • Design and analyze different resonant converters and their control circuits. • Analyze AC – AC converters and multilevel converters. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem analysis.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - I			
MODELLING AND DESIGN OF CONTROLLERS (Core Course)			
Course Code	16EPE14	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge required for modeling and computer simulation of power electronic converters and systems. • To explain control system essentials in representing system in digital domain. • To explain the designing of digital controllers by different methods. • To explain the design and analysis of optimal and robust controllers by different methods. • To impart knowledge of discrete computation essentials. ■ 			
Module-1			Teaching Hours
Computer Simulation of Power Electronic Converters and Systems: Introduction, Challenges in Computer Simulation, Simulation Process, Mechanics of Simulation, Solution Techniques for Time-Domain Analysis, Widely Used, Circuit-Oriented Simulators, Equation Solvers. Modelling of Systems: Input-Output relations, Differential Equations and Linearization, State Space Representation, Transfer Function Representation, Block Diagrams, Lagrange method, Circuit Averaging, Bond Graphs, Space Vector Modelling. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying.		
Module-2			
Control System Essentials: Representation of system in digital Domain, The Z – Transform, Digital Filter, Mapping between s – plane and z – plane, Effect of Sampling, Continuous to Discrete Domain Conversion, Control System Basics, Control Principles, State - Space Method. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
Digital Controller Design: Controller Design Techniques, Bode Diagram Method, PID Controller, Root Locus Method, State Space Method, Full State Feedback, Regulator Design by Pole Placement, Estimation Design, Tracker : Controller Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
Digital Controller Design (continued): Controlling Voltage, Controlling Current, Control of Induction motor, Output Feedback, Induction motor Control with Output Feedback. Optimal and Robust Controller Design: Least Squares Principle, Quadratic Forms, Minimum Energy Principle, Least Square Solution, Weighted Least Squares, Recursive Least Squares, Optimal Control: Linear Quadratic, Induction motor example, Robust Controller Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE) 16EPE14 MODELLING AND DESIGN OF CONTROLLERS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Discrete Computation Essentials: Numeric Formats, Tracking the Base Point in the Fixed Point System, Normalization And Scaling, Arithmetic Algorithms. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Describe the role of computer simulations in the analysis and design of power electronics systems. • Understand the functional modeling of static systems. • Use sampling technique to determine a digital equivalent to a continuous time system. • Understand the control basics of digital systems. • Design digital controllers in discrete time and frequency domain. • Design optimal and robust controllers by different methods. • Explain essentials of discrete computation. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Ethics.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

EMBEDDED SYSTEMS (Elective Course)			
Course Code	16EPE151	IA Marks	20
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credits - 03			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge of embedded systems with suitable examples, explanation of process, classification of embedded systems. • To explain the processor architecture, memory organization, communication with processor and interrupt services. • To explain the program modeling concepts, inter-process communication and synchronization of processes. ■ 			
Module-1			Teaching Hours
Introduction to Embedded Systems: Embedded Systems, Processor Embedded into a System, Embedded Hardware Units and Devices in a System, Embedded Software in a System, Examples of Embedded Systems, Embedded Systems – on –chip (Soc) and Use of VLSI Circuit Design Technology, Complex Systems Design and Processors, Design of Process in Embedded System, Formulation of System Design, Design Process and Design Examples, Classification of Embedded Systems, Skill required for an Embedded System Designer. ■			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Processor Architecture and Memory Organisation: 8051 Architecture, Real world Interfacing, Introduction to Advanced Architecture, Processor and Memory Organization, Instruction Level Parallelism, Performance Metrics, Memory – Types, Memory – Maps and Addresses, Processor Selection, Memory Selection. ■			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Devices and Communication Buses, Interrupt Services: IO Types and Examples, Serial Communication Devices, Parallel Device Ports, Sophisticated Interfacing Features in Device Ports, Wireless Devices, Timer and Counting Devices, Watchdog Timer, Real Time Clock, Networked Embedded Systems, Serial Bus Device Protocols – Parallel Communication Network Using ISA, PCI, PCI –X and Advanced Protocols.			08
Device Drivers and Interrupts Service Mechanisms: Programmed – I/O Busy – wait Approach without Interrupt Service Mechanism, ISR Concept, Interrupt Sources, Interrupt Servicing Mechanism, Direct Memory Access. ■			
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Program Modelling concepts: Program Models, DFG Models, State Machine Programming Models for Event – controlled Program Flow, Modelling of Multiprocessor Systems, UML Modelling.			08
Interprocess Communication and Synchronization of Processes, Threads and Tasks: Multiple Processes in an Application, Multiple Threads in an Application, Tasks, Task Status, Task and Data, Clear – cut Distention Between Functions, ISRS and Tasks by their Characteristics, Concept of Semaphores, Shared Data, Interprocess Communication, Signal Function, Semaphore Functions, Message Queue Functions, Mailbox Functions, Pipe Functions, Socket Functions, RPC Functions. ■			
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) 16EPE151 EMBEDDED SYSTEMS (Elective Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Real - Time Operating Systems: OS Services, Process Management, Timer Functions, Event Functions, Memory management, Device, File and IO Subsystems Management , Interrupt Routines in RTOS Environment and Handling of Interrupt Source Calls, Real – time Operating Systems, Basic Design Using an RTOS, Rtos Task Scheduling Models, Interrupt Latency and Response of the task as performance Metrics, OS Security Issues. ■				08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain design process in embedded system and formulation of system design. • Describe processor architecture and memory organization. • Describe the devices; serial port, parallel port devices, timing devices, devices for synchronous iso-synchronous and asynchronous communication. • Describe device drivers and interrupt mechanisms. • Explain the programming concepts and source code engineering tools for embedded programming. • Explain real time programming and program modeling concepts during single and multi-processor system software development process. • Describe real time operating systems concepts. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem analysis.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - I POWER ELECTRONICS LABORATORY-1			
Course Code	16PEEL16	IA Marks	20
Number of Practical Hours/Week	03	Exam Hours	03
Total Number of Practical Hours	40	Exam Marks	80
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To conduct experiment on various power electronic devices to analyze their static and dynamic characteristics. • To conduct experiments and enhance understanding of different power electronic converters. ■ 			
Sl. NO	Experiments		
1	Analysis of static and dynamic characteristic of MOSFET and IGBT.		
2	Performance of single phase fully controlled and semi-controlled converter for RL load for continuous current mode.		
3	Performance of single phase fully controlled and semi-controlled converter for RL load for discontinuous current mode.		
4	Study of effect of source inductance on the performance of single phase fully controlled converter.		
5	Performance analysis of three phase fully controlled and semi-controlled converter for RL load for continuous current mode.		
6	Performance analysis of three phase fully controlled and semi-controlled converter for RL load for discontinuous current mode.		
7	Performance analysis of single phase bridge inverter for RL load and voltage control by single pulse width modulation.		
8	Performance analysis of two quadrant chopper.		
9	Diode clamped multilevel inverter.		
10	ZVS operation of a Synchronous buck converter.		
Revised Bloom's Taxonomy Level	L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating, L ₆ – Creating		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Analyze the static and dynamic characteristics of various semiconductor devices. • Apply the knowledge of converters in assessing the performance of single phase and three phase fully controlled and semi controlled converters for RL load for continuous current modes. • Apply the knowledge of converters in assessing the performance of single phase and three phase fully controlled and semi controlled converters for RL load for discontinuous current modes. • Assess the performance of single phase bridge inverter for RL load and control the voltage by pulse width modulation. • Apply the knowledge of power electronics in performance analysis of chopper and synchronous buck converter. ■ 			
Graduate Attributes (As per NBA):			
Engineering Knowledge, Problem Analysis, Conduct investigations of complex Problems, Modern Tool Usage, Individual and Team work, Communication.			

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - I SEMINAR			
Course Code	16EPE17	IA Marks	100

7	16EPE27	Seminar	-	3	-	100	-	100	1
TOTAL			19	06	18	220	480	700	22

Number of credits completed at the end of II semester: 22+ 22 = 44

Elective - 2

Course Code under 16EPE25X	Title
16EPE251	Converters for Solar and Wind Power Systems
16EPE252	Uninterruptible Power Supply
16EPE253	Power Quality Problems and Mitigation
16EPE254	Hybrid Electric Vehicles

Note: Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - II			
ELECTRIC DRIVES (Core Course)			
Course Code	16EPE21	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction to drive, their characteristics and breaking. • To explain the basic elements of drives, classification of drives, their dynamics and speed control • To explain selection of drive for a specific application. • To explain control of an electric drive using microprocessor. ■ 			
Module-1			Teaching Hours
Characteristics Electric motors: Introduction, Characteristics of DC motors, Three phase Induction Motors and Synchronous Motors, Braking of Electric Motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Dynamics of Electric Drives: Introduction, Classification of Electric Drives, Basic Elements of an Electric Drive, Dynamic Conditions of Drive System, Stability Considerations of Electric Drive. Control of Electric Motors: Induction Motor Drives. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Control of Electric Motors (continued): Synchronous Motor Drives, DC Drives. Permanent Magnet Synchronous Motor, Classification of Permanent Magnet Synchronous Motor, Cycloconverters fed Synchronous Motor. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Control of Electric Motors (continued): Permanent Magnet Synchronous Motor, Classification of Permanent Magnet Synchronous Motor, Cycloconverters fed Synchronous Motor. Applications: Drive Considerations for Textile Mills, Steel Rolling Mills, Cranes and Hoist Drives, Cement Mills, Sugar Mills, Machine Tools, Paper Mills, Coal Mines, Centrifugal Pumps, Turbo - compressors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-5			
Microprocessors and Control of Electrical Drives: Introduction, Dedicated Hardware Systems versus Microprocessor Control, Applications Area and Functions of Microprocessors in Drive Technology, Control of Electric Drives using Microprocessors, Control System Design of Microprocessors based Variable Speed Drives, Stepper motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE)
16EPE21 ELECTRIC DRIVES (Core Course) (continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

- Explain characteristics of DC motors, induction motors and synchronous motors.
- Explain braking of electric motors.
- Classify electric drives.
- Discuss dynamics conditions and stability considerations of Electric drive.
- Control the speed of electric motors.
- Suggest a drive for a specific application.
- Explain using microprocessor in the control of an electric drive. ■

Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

Text Book

1	Electric Drives Concepts and Applications	Vedam Subrahmanyam	Mc Graw Hill	2 nd Edition, 2016
---	---	--------------------	--------------	-------------------------------

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - II			
SWITCHED - MODE POWER SUPPLIES (Core Course)			
Course Code	16EPE22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an overview on SMPS, its characteristics, new technologies, basic principles and control modes. • To introduce the topology of DC/DC converter used and the method of selecting key peripheral components of SMPS. • To explain the power factor correction circuit design of SMPS, the design of high-frequency transformer, the examples of SMPS optimization design, and the key design points of SMPS. • To introduce the SMPS testing technology and the protection circuit design of SMPS. ■ 			
Module-1			Teaching Hours
<p>Switching-Mode Power Supply (SMPS): Overview, Classification of Integrated Regulated Power Supply, Characteristics of SMPS, New Development Trend of SMPS, Basic Principles of SMPS, Control Mode Type of SMPS, Working Mode of SMPS, Feedback Type of SMPS, Load Characteristics of SMPS.</p> <p>Topologies of the DC/DC Converter: Topologies of the DC/DC Converter, Basic Principle of Buck Converter, Basic Principle of - Boost Converter, Buck-Boost Converter, Charge Pump Converter, (Single-ended primary inductor converter)SEPIC, Flyback Converter, Forward Converter, Push-Pull Converter, Half/Full Bridge Converter, Soft Switching Converter, Half-Bridge LLC Resonant Converter, 2-Switch Forward Converter. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
<p>Method for Selecting Key Peripheral Components of SMPS: Selection Method for - Fixed Resistor, Capacitors, Inductor Characteristics and Selection Method for Magnetic Beads, Selection Method for EMI Filter - Input Bridge Rectifier, Output Rectifier, Transient Voltage Suppressor (TVS), Power Switching Tube, Optical Coupler, Adjustable Precision Shunt Regulator, SMPS Protection Elements. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
<p>Power Factor Correction Circuit Design of SMPS: Brief Introduction to Power Factor Correction (PFC), Basic Principle of Passive PFC Circuit, Design Examples of Passive PFC Circuit, Basic Principle of Active PFC Circuit, Design Examples of Active PFC Circuit, Principle and Application of High-Power PFC, Measures to Suppress PFC Electromagnetic Interference, PFC Configuration Scheme.</p> <p>Design of High-Frequency Transformer: Selection Method for Magnetic Cores by the Empirical Formula or Output Power Table, Waveform Parameters of the High-Frequency Transformer Circuit, Formula Derivation of Selecting High-Frequency Transformer Magnetic Core Based on AP Method, Design of Flyback High-Frequency Transformer, Design of Forward High-Frequency Transformer, Loss of High-Frequency Transformer. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ – Applying.		

M.TECH POWER ELECTRONICS (EPE) 16EPE22 SWITCHED - MODE POWER SUPPLIES (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4				Teaching Hours
<p>Key Design Points of SMPS: SMPS Design Requirements, Design of High-Efficiency SMPS, Methods of Reducing No-Load and Standby Power Consumption of SMPS, Stability Design of Optocoupler Feedback Control Loop SMPS Layout and Wiring, Design of Constant Voltage/Current SMPS, Design of Precision Constant Voltage/Current SMPS, Design of Remote Turn-Off Circuit for SMPS, Typical Application and Printed Circuit Design of New Single-Chip SMPS, Electromagnetic Interference Waveform Analysis and Safety Code Design of SMPS, Radiator Design of Single-Chip SMPS, Radiator Design of Power Switching Tube (MOSFET), Common Troubleshooting Methods of SMPS. ■</p>				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying.			
Module-5				
<p>SMPS Testing Technology: Parameter Testing of SMPS, Performance Testing of SMPS, SMPS Measurement Skills, Accurate Measurement Method of Duty Ratio, Method to Detect the Magnetic Saturation of High-Frequency Transformer with Oscilloscope, Digital Online Current/Resistance Meter, Electromagnetic Compatibility Measurement of SMPS, Waveform Test and Analysis of SMPS.</p> <p>Protection and Monitoring Circuit Design of SMPS: Design of Drain Clamp Protection Circuit, Overvoltage Protection Circuit Constituted by Discrete Components, Application of Integrated Overvoltage Protector, Design of Undervoltage Protection Circuit, Design of Overcurrent and Overpower Protection Circuit, Design of Soft-Start Circuit, Mains Voltage Monitor, Transient Interference and Audio Noise Suppression Technology of SMPS, Design of Overheating Protection Component and Cooling Control System. ■</p>				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes:				
<p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Explain a SMPS, its characteristics, new technologies, basic principles and control modes. • Suggest a suitable DC/DC converter for an SMPS. • Explain the method of selecting key peripheral components of SMPS. • Design the power factor correction circuit of SMPS. • Explain selection of magnetic core and designing of high-frequency transformer. • Explain designing of different SMPS. • Explain testing technology of SMPS. • Design protection and monitoring circuit for SMPS. ■ 				
Graduate Attributes (As per NBA):				
Engineering Knowledge, Problem Analysis, Design / development of solutions, Ethics, Communication.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Optimal Design of Switching Power Supply	Zhanyou Sha et al	Wiley	2015

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - II			
MODELLING AND ANALYSIS OF ELECTRICAL MACHINES (Core Course)			
Subject Code	16EPE23	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To provide basic concepts of modelling of dc and ac machines. • To provide knowledge of theory of transformation of three phase variable to two phase variable. • To analyze the steady state and dynamic state operation of three-phase induction machines using transformation theory based mathematical modelling. • To provide modeling concepts of single phase and three phase transformers. • To analyze the steady state and dynamic state operation of three-phase synchronous machines using transformation theory based mathematical modelling. ■ 			
Module-1			Teaching Hours
<p>Basic Concepts of Modelling: Basic two pole machine representation of commutator machines, 3-phase synchronous machine with and without damper bar and 3-phase induction machine, Kron's primitive machine-voltage, current and torque equations.</p> <p>DC Machine Modelling: Mathematical model of separately excited DC motor-steady state and transient state analysis, sudden application of inertia load, transfer function of separately excited DC motor, mathematical model of dc series motor, shunt motor, linearization techniques for small perturbations. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
<p>Reference Frame Theory: Real time model of a two phase induction machine, transformation to obtain constant matrices, three phase to two phase transformation, power equivalence.</p> <p>Dynamic Modelling of Three Phase Induction Machine: Generalized model in arbitrary frame, electromagnetic torque, deviation of commonly used induction motor models-stator reference frames model, rotor reference frames model, synchronously rotating reference frames model, equations in flux linkages, per unit model, dynamic simulation. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
<p>Small Signal Equations of the Induction Machine: Derivation of small signal equations of induction machine, space phasor model, DQ flux linkages model derivation, control principle of the induction motor.</p> <p>Transformer Modelling: Introduction, single phase transformer model, three phase transformer connections, per phase analysis, normal systems, per unit normalization, per unit three phase quantities, change of base, per unit analysis of normal system, regulating transformers for voltage and phase angle control, auto transformers, transmission line and transformers. ■</p>			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		
Module-4			
<p>Modelling of Synchronous Machines: Introduction, voltage equations and torque equation in machine variables, stator voltage equations in arbitrary and rotor reference frame variables, Park's equations, torque equations in substitute variables, rotor angle and angle between rotors, per unit system, analysis of steady state operation. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE)				
16EPE23 MODELLING AND ANALYSIS OF ELECTRICAL MACHINES (Core Course) (continued)				
CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Dynamic Analysis of Synchronous Machines: Dynamic performance during sudden change in input torque and during a 3-phase fault at the machine terminals, approximate transient torque versus rotor angle characteristics, comparison of actual and approximate transient torque-angle characteristics during a sudden change in input torque; first swing transient stability limit, comparison of actual and approximate transient torque-angle characteristics during a 3-phase fault at the machine terminals, critical clearing time, equal area criterion, computer simulation. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain the basic concepts of modeling. • Develop mathematical models for DC motors for transient state analysis. • Use reference frame theory to transform three phase to two phase. • Develop dynamic model for three phase induction motor in stator and rotor reference frames. • Develop mathematical model of single phase transformers. • Model synchronous machine using Park's transformation for the analysis of steady state operation. • Model synchronous machine to perform dynamic analysis under different conditions. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Ethics,				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - II			
FACTS CONTROLLERS (Core Course)			
Course Code	16EPE24	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To discuss the growth of complex electrical power networks and to introduce the lack of controllability of the active- and reactive-power flows in energized networks. • To describe the conventional controlled systems and introduce the basic operating principles of new FACTS devices • To describe the various components of a general SVC, its control system, an overview of the voltage-control characteristics of SVC and the principles of design of the SVC voltage regulator. • To explain the concepts of SVC control in such applications as stability enhancement, damping subsynchronous oscillations, improvement of HVDC link performance and the basic issues relating to the design of SVC controllers in different applications. • To explain the concepts of series compensation, TCSC controller and its operation, characteristics, modeling and applications. • To introduce voltage source converter based facts devices. ■ 			
Module-1			Teaching Hours
Control Mechanism of Transmission System: Background, Electrical Transmission Networks, Conventional Control Mechanisms, Flexible ac Transmission Systems (FACTS), Emerging Transmission Networks. Reactive-Power Control in Electrical Power Transmission Systems: Reactive Power, Uncompensated Transmission Lines, Passive Compensation. Principles of Conventional Reactive-Power Compensators: Introduction, Synchronous Condensers, The Saturated Reactor (SR), The Thyristor-Controlled Reactor (TCR), The Thyristor-Controlled Transformer (TCT). ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Principles of Conventional Reactive-Power Compensators (continued): The Fixed Capacitor–Thyristor-Controlled Reactor (FC–TCR), The Mechanically Switched Capacitor–Thyristor-Controlled Reactor (MSC–TCR), The Thyristor-Switched Capacitor (TSC), The Thyristor-Switched Capacitor–Thyristor-Controlled Reactor (TSC–TCR), A Comparison of Different SVCs. SVC Voltage Control: Introduction Voltage Control. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
SVC Voltage Control (continued): Effect of Network Resonances on the Controller Response, The 2nd Harmonic Interaction between the SVC and ac Network, Application of the SVC to Series-Compensated ac Systems, 3rd Harmonic Distortion, Voltage-Controller Design Studies. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
SVC Applications: Introduction, Increase in Steady-State Power-Transfer Capacity, Enhancement of Transient Stability, Augmentation of Power-System Damping - Principle of the SVC, Auxiliary Control, Torque Contributions of SVC Controllers, Effect of the Power System, Effect of the SVC, SVC Mitigation of Subsynchronous Resonance (SSR) - Principle of SVC Control, Configuration and Design of the SVC Controller, Rating of an SVC, Prevention of Voltage Instability- Principles of SVC Control- A Case Study, Configuration and Design of the SVC Controller, Rating of an SVC.			10

M.TECH POWER ELECTRONICS (EPE) 16EPE24 FACTS CONTROLLERS (Core Course) (continued) CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-4 (continued)				Teaching Hours
The Thyristor-Controlled Series Capacitor (TCSC): Series Compensation, The TCSC Controller, Operation of the TCSC, The TSSC, Analysis of the TCSC, Capability Characteristics, Harmonic Performance, Losses, Response of the TCSC, Modelling of the TCSC. ■				
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Module-5				
TCSC Applications: Introduction, Open-Loop Control, Closed-Loop Control, Improvement of the System-Stability Limit, Enhancement of System Damping, Subsynchronous Resonance (SSR) Mitigation, Voltage-Collapse Prevention. VSC based FACTS Controllers: Introduction, The STATCOM, The SSSC, The UPFC, Comparative Evaluation of Different FACTS Controllers. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Discuss the growth of complex electrical power networks, the lack of controllability of the active- and reactive-power flows in energized networks. • Describe the conventional controlled systems and the basic operating principles of FACTS. • Describe the various components of a general SVC, its control system, control characteristics and the design of the SVC voltage regulator. • Explain the use of SVC in stability enhancement, damping subsynchronous oscillations, improvement of HVDC link performance. • Explain the concepts of series compensation, TCSC controller and its operation, characteristics, modeling and applications. • Explain the operation of voltage source converter based FACTS. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Lifelong Learning.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

POWER QUALITY PROBLEMS AND MITIGATION (Elective Course)			
Course Code	16EPE253	IA Marks	20
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credits - 03			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction on power quality (PQ), causes and effects of PQ problems, requirement of PQ improvements, and mitigation aspects of PQ problems. • To give PQ definitions, terminologies, standards, benchmarks, monitoring requirements through numerical problems. • To explain passive shunt and series compensation using lossless passive LC components, active shunt compensation using DSTATCOM (distribution static compensators), active series compensation using DVR (dynamic voltage restorer), and combined compensation using UPQC (unified power quality compensator) for mitigation of current-based PQ problems. • To explain classification, modeling and analysis of various nonlinear loads which cause the power quality problems. ■ 			
Module-1			Teaching Hours
<p>Power Quality: Introduction, State of the Art on Power Quality, Classification of Power Quality Problems, Causes of Power Quality Problems, Effects of Power Quality Problems on Users, Classification of Mitigation Techniques for Power Quality Problems.</p> <p>Power Quality Standards and Monitoring: Introduction, State of the Art on Power Quality Standards and Monitoring, Power Quality Terminologies, Power Quality Definitions, Power Quality Standards, Power Quality Monitoring, Numerical Examples.</p> <p>Passive Shunt and Series Compensation: Introduction, State of the Art on Passive Shunt and Series Compensators, Classification of Passive Shunt and Series Compensators, Principle of Operation of Passive Shunt and Series Compensators, Analysis and Design of Passive Shunt Compensators, Modelling, Simulation, and Performance of Passive Shunt and Series Compensators, Numerical Examples. ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
<p>Active Shunt Compensation: Introduction, State of the Art on DSTATCOMs, Classification of DSTATCOMs, Principle of Operation and Control of DSTATCOMs, Analysis and Design of DSTATCOMs, Modelling, Simulation, and Performance of DSTATCOMs, Numerical Examples. ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
<p>Active Series Compensation: Introduction, State of the Art on Active Series Compensators, Classification of Active Series Compensators, Principle of Operation and Control of Active Series Compensators, Analysis and Design of Active Series Compensators, Modelling, Simulation, and Performance of Active Series Compensators, Numerical Examples. ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
<p>Unified Power Quality Compensators: Introduction, State of the Art on Unified Power Quality Compensators, Classification of Unified Power Quality Compensators, Principle of Operation and Control of Unified Power Quality Compensators, Analysis and Design of Unified Power Quality Compensators, Modelling, Simulation, and Performance of UPQCs, Numerical Examples (from 6.01 to 6.10). ■</p>			08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE)				
16EPE253 POWER QUALITY PROBLEMS AND MITIGATION (Elective Course) (continued)				
CHOICE BASED CREDIT SYSTEM (CBCS)				
Module-5				Teaching Hours
Unified Power Quality Compensators (continued): Numerical Examples (from 6.11 to 20). Loads That Cause Power Quality Problems: Introduction, State of the Art on Nonlinear Loads, Classification of Nonlinear Loads, Power Quality Problems Caused by Nonlinear Loads, Analysis of Nonlinear Loads, Modelling, Simulation, and Performance of Nonlinear Loads, Numerical Examples. ■				08
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to:				
<ul style="list-style-type: none"> • Explain causes, effects of PQ problems and classification of mitigation techniques for PQ problems. • Explain PQ standards, terminology and monitoring requirements through numerical problems. • Explain passive shunt and series compensation using lossless passive components. • Explain the design, operation and modeling of active shunt compensation equipment. • Explain the design, operation and modeling of active series compensation equipment. • Explain the design operation and modeling of unified power quality compensators. • Discuss mitigation of power quality problems due to nonlinear loads. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Modern Tool Usage, Engineers and society, Ethics, Individual and Team work, Communication, Lifelong Learning.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

1	Power Quality Problems and Mitigation Techniques	Bhim Singh, Ambrish Chandra, Kamal Al-Haddad	Wiley	2015

M.TECH POWER ELECTRONICS (EPE) CHOICE BASED CREDIT SYSTEM (CBCS) SEMESTER - II POWER ELECTRONIS LABORATORY-2			
Course Code	16EPEL26	IA Marks	20
Number of Practical Hours/Week	03	Exam Hours	03
Total Number of Practical Hours	40	Exam Marks	80
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To conduct experiments to assess the performance of separately excited DC motor fed by single phase and three phase fully controlled converter in continuous and discontinuous current modes. • To conduct experiments to assess the performance of Chopper fed DC drives for class A and class C commutation in continuous current mode. • To simulate different converters and analyze the waveform in continuous and discontinuous current modes. • To simulate forward converter, fly back converter and resonant converter to study their performance. ■ 			
Sl. NO	Experiments		
1	Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for continuous current mode.		
2	Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.		
3	Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for continuous current mode.		
4	Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.		
5	Performance analysis of a practical chopper fed DC Drives system for class-A and class-C commutation and analysis of wave forms in continuous mode.		
6	Simulation study of buck, boost and buck- boost converter (basic topologies) and analysis of wave forms for continuous current mode (CCM).		
7	Simulation study of buck, boost and buck-boost converter (basic topologies) and analysis of wave forms for discontinuous current mode (DCM).		
8	Simulation study of forward converter and fly back converter and performance analysis of various wave forms.		
9	Resonant converter simulation study and analysis.		
10	Closed loop operation of a buck and boost converter.		
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ – Understanding L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Conduct experiments on single phase / three phase fully controlled converter fed separately excited DC motor to assess the performance in continuous and discontinuous current modes. • Conduct experiments to assess the performance of Chopper fed DC drives for class A and class C commutation in continuous current mode. • Simulate different converters for analyzing the waveform in continuous and discontinuous current modes. • Simulate forward converter, fly back converter and resonant converter to study their performance. ■ 			
Graduate Attributes (As per NBA):			
Engineering Knowledge, Problem Analysis, Conduct investigations of complex Problems, Modern Tool Usage, Individual and Team work, Communication.

Elective - 3

Course Code under 16EPE42X	Title
16EPE421	Digital Power Electronics
16EPE422	MPPT in Solar Systems
16EPE423	Multi-Terminal DC Grids
16EPE424	Multilevel Converters for Industrial Applications

Note: 1. Project Phase-1: 6-week duration shall be carried out between 2nd and 3rd Semester vacation. Candidates in consultation with the guide shall carry out literature survey/ visit industries to finalize the topic of Project.

2. Project Phase-2: 16-week duration during 4th semester. Evaluation shall be done by the committee comprising of HoD as Chairman, Guide and Senior faculty of the department.

3. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall be conducted

4. Project evaluation:

- a. Internal Examiner shall carry out the evaluation for 100 marks.
- b. External Examiner shall carry out the evaluation for 100 marks.
- c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
- d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

M.TECH POWER ELECTRONICS (EPE)			
CHOICE BASED CREDIT SYSTEM (CBCS)			
SEMESTER - IV			
HVDC POWER TRANSMISSION (Core Course)			
Course Code	16EPE41	IA Marks	20
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction to DC power transmission and describe the basic components of a converter, and describe the methods for compensating the reactive power demanded by the converter and the methods for simulation of HVDC systems • To describe the types of filters for removing harmonics and the characteristics of the system impedance resulting from AC filter designs and different methods of control of HVDC converter and system. • To explain the design techniques for the main components of an HVDC system. • To explain the protection of HVDC system and other converter configurations used for the HVDC transmission and the recent trends for HVDC applications. ■ 			
Module-1			Teaching Hours
HVDC Technology: Introduction, Advantages of HVDC Systems, HVDC System Costs, Overview and Organization of HVDC Systems, Review of the HVDC System Reliability, HVDC Characteristics and Economic Aspects. Power Conversion: Thyristor, 3-Phase Converter, 3-Phase Full Bridge Converter, 12-Pulse Converter. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Harmonics of HVDC and Removal: Introduction, Determination of Resulting Harmonic Impedance, Active Power Filter. Control of HVDC Converter and System: Converter Control for an HVDC System, Commutation Failure, HVDC Control and Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Control of HVDC Converter and System (continued): HVDC Control Functions, Reactive Power and Voltage Stability. Interactions between AC and DC Systems: Definition of Short Circuit Ratio and Effective Short Circuit Ratio, Interaction between HVDC and AC Power System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Main Circuit Design: Converter Circuit and Components, Converter Transformer, Cooling System, HVDC Overhead Line, HVDC Earth Electrodes, HVDC Cable, HVDC Telecommunications Current Sensors, HVDC Noise and Vibration. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-5			
Fault Behaviour and Protection of HVDC System: Valve Protection Functions, Protective Action of an HVDC System, Protection by Control Actions, Fault Analysis. Other Converter Configurations for HVDC Transmission: Introduction, Voltage Source Converter (VSC), CCC and CSCC HVDC System, 10.4 Multi-Terminal DC Transmission. Trends for HVDC Applications: Wind Farm Technology, Modern Voltage Source Converter (VSC) HVDC Systems, 800 kV HVDC System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE)
16EPE41 HVDC POWER TRANSMISSION (Core Course) (continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

- Explain importance of DC power transmission.
- Describe the basic components of a converter, the methods for compensating the reactive power demanded by the converter
- Explain the methods for simulation of HVDC systems and its control.
- Describe filters for eliminating harmonics and the characteristics of the system impedance resulting from AC filter designs
- Explain the design techniques for the main components of an HVDC system.
- Explain the protection of HVDC system and other converter configurations used for the HVDC transmission.
- Explain the recent trends for HVDC applications. ■

Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis, Lifelong Learning.

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

MULTILEVEL CONVERTERS FOR INDUSTRIAL APPLICATIONS (Elective Course)			
Course Code	16EPE424	IA Marks	20
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credits - 03			
Course objectives:			
<ul style="list-style-type: none"> • To provide an overview of medium-voltage power converters and their applications. • To describe the generalized multilevel converter topology and to derive the classic converters with a common DC bus and to analyze the common characteristics of the symmetric topologies. • Explain the analysis of the operation of the diode-clamped multilevel converter, and a multilevel space vector modulation and to characterize the balancing boundary of the passive front-end converter • To describe the operation and analysis of the flying capacitor multilevel converter. • To explain asymmetric topology with hybrid modulation and a common DC source called a cascade asymmetric multilevel converter (CAMC) with five voltage levels and its advantages. • To analyse the behaviour of the CAMC as a distribution static compensator (DSTATCOM) and shunt active power filter in improving the power quality in medium-voltage distribution systems as custom power devices. • To analyse the behaviour of the diode-clamped topology configured as a back-to-back converter for several working conditions. ■ 			
Module-1			Teaching Hours
Converters: Introduction, Medium-Voltage Power Converters, Multilevel Converters, Applications. Multilevel Topologies: Introduction, Generalized Topology with a Common DC Bus, Converters Derived from the Generalized Topology, Symmetric Topologies without a Common DC Link, Summary of Symmetric Topologies, Asymmetric Topologies. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-2			
Diode-Clamped Multilevel Converter: Introduction, Converter Structure and Functional Description, Modulation of Multilevel Converters, Voltage Balance Control, Effectiveness Boundary of Voltage Balancing in DCMC Converters, Performance Results. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-3			
Flying Capacitor Multilevel Converter: Introduction, Flying Capacitor Topology, Modulation Scheme for the FCMC, Dynamic Voltage Balance of the FCMC. Cascade Asymmetric Multilevel Converter (CAMC): Introduction, General Characteristics of the CAMC, CAMC Three-Phase Inverter, Comparison of the Five-Level Topologies. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-4			
Case Study 1: DSTATCOM Built with a Cascade Asymmetric Multilevel Converter: Introduction, Compensation Principles, CAMC Model, Reactive Power and Harmonics Compensation. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-5			
Case Study 2: Medium-Voltage Motor Drive Built with DCMC: Introduction, Back-to-Back DCMC Converter, Unified Predictive Controller of the Back-to-Back DCMC in an IM Drive Application, Performance Evaluation. ■			08
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		

M.TECH POWER ELECTRONICS (EPE)
16EPE424 MULTILEVEL CONVERTERS FOR INDUSTRIAL APPLICATIONS (Elective Course)
(continued)
CHOICE BASED CREDIT SYSTEM (CBCS)

Course outcomes:

At the end of the course the student will be able to:

- Explain the working of medium-voltage power converters and their applications.
- Explain multilevel, symmetric and asymmetric topologies.
- Explain the structure and operation of the diode-clamped multilevel converter, and a multilevel space vector modulation.
- Characterize the balancing boundary of the passive front-end converter.
- Describe the operation and analysis of the flying capacitor multilevel converter.
- Discuss the characteristics topologies of the Cascade Asymmetric Multilevel Controller.
- Explain the working of a distribution static compensator (DSTATCOM) built with CAMC for reactive power and harmonic compensation.
- Evaluate the performance of back-to-back converter in an induction motor drive for several working conditions. ■

Graduate Attributes (As per NBA):

Engineering Knowledge, Problem Analysis.

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 16 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

**I SEMESTER M.Tech
POWER ELECTRONICS**

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - I			
MATHEMATICAL METHODS IN CONTROL			
(Professional Core Course)			
Course Code	18EEE11	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To introduce linear algebra in a best suitable approach for solving large number of equations using transformation methods. • To understand the techniques of numerical methods for estimating high accuracy in finding the roots and, in solving differential equations and their applications. ■ 			
Module-1			Teaching Hours
Introduction to vector spaces and sub-spaces, definitions, illustrative example. Linearly independent and dependent vectors- Basis-definition and problems. Linear transformations-definitions. Matrix form of linear transformations-Illustrative examples. ■			10
Revised Bloom's Taxonomy Level	L1 – Remembering, L2 – Understanding		
Module-2			
Solution of Systems of Linear Equations: Direct methods-Relaxation method, Partition method, Croute's Triangularisation method. Eigen values and Eigen vectors. Bounds on Eigen Values. Jacobi method & Givens method for symmetric matrices. ■			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding , L ₃ – Applying		
Module-3			
Orthogonal vectors and orthogonal bases. Gram-Schmidt orthogonalization process. SVD and Applications. ■			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding , L ₃ – Applying		
Module-4			
Probability: Random variables, Probability distributions: Binomial, Poisson, Normal distributions, Joint probability distribution (discrete and continuous)-Illustrative examples. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding		
Module-5			
Moments, central moments, characteristic functions, probability generating and moment generating functions-illustrations. Poisson, Gaussian and Erlang distributions-examples. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I				
18EEE11 MATHEMATICAL METHODS IN CONTROL (Professional Core Course) (continued)				
Course outcomes: At the end of the course the student will be able to: <ol style="list-style-type: none"> 1. Understand the fundamentals of vector space and bases in reference to transformations. 2. Solve system of linear equations using direct and iterative methods. 3. Use the idea of Eigen values and Eigen vectors for the application of SVD. 4. Describe the basic notions of discrete and continuous probability distributions. 5. Find out responses of linear systems using statistical and probability tools. ■ 				
Graduate Attributes (As per NBA): Critical Thinking, Problem Solving, Research Skill, Usage of Modern Tools.				
Question paper pattern: The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 60. <ul style="list-style-type: none"> • The question paper will have ten full questions carrying equal marks. • Each full question consisting of 20 marks. • There will be two full questions (with a maximum of four sub questions) from each module. • Each full question will have sub question covering all the topics under a module. • The students will have to answer five full questions, selecting one full question from each module. ■ 				
Textbooks				
1	Linear Algebra and its Applications	David C.Lay et al	Pearson	5th Edition,2015
2	Numerical Methods for Scientific and Engineering Computation	M. K. Jain et al	New Age International	9 th Edition, 2014
Reference Books				
3	Signals, Systems, and Inference	Alan V. Oppenheim and George C. Verghese	Pearson	2012

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - I			
POWER SEMICONDUCTOR DEVICES AND COMPONENTS			
(Professional Core Course)			
Course Code	18EPE12	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To enhance the knowledge of fundamentals of semiconductor physics, power electronics and power computation in circuits • To enhance the knowledge of fundamentals of various semiconductor devices, their operation and characteristics. • To explain the design and operation of drive circuits and snubber circuits. • To explain the controlling of temperature rise of the semiconductor devices and designing of magnetic components used for the power electronic circuits. ■ 			
Module-1			Teaching Hours
<p>Power Electronics: Introduction, Converter Classification, Power Electronics Concepts, Electronic Switches, Switch Selection, Spice, PSpice and Capture, Representation of switches in Pspice -The Voltage-Controlled Switch, Transistors, Diodes and Thyristors (SCRs).</p> <p>Power Computations: Introduction, Power and Energy, Inductors and Capacitors, Energy Recovery, Effective Values, Apparent Power and Power Factor, Power Computations for Sinusoidal AC Circuits, Power Computations for Nonsinusoidal Periodic Waveforms, Power Computations Using Pspice.</p> <p>Basic Semiconductor Physics: Introduction, Conduction Processes in Semiconductors pn Junctions, Charge Control Description of pn-Junction Operation, Avalanche Breakdown. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
<p>Power Diodes: Introduction, Basic Structure and I – V characteristics, Breakdown Voltage Considerations, On –State Losses, Switching Characteristics, Schottky Diodes.</p> <p>Bipolar Junction Transistors: Introduction, Vertical Power Transistor Structures, Z-V Characteristics, Physics of BJT Operation, Switching Characteristics, Breakdown Voltages, Second Breakdown, On-State Losses, Safe Operating areas.</p> <p>Power MOSFETs : Introduction, Basic Structure, I-V Characteristics, Physics of Device Operation, Switching Characteristics, Operating Limitations and Safe Operating Areas. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
<p>Thyristors: Introduction, Basic Structure, I-V Characteristics, Physics of Device Operation, Switching Characteristics, Methods of Improving di/dt and dv/dt Ratings.</p> <p>Gate Turn-Off Thyristors: Introduction, Basic Structure and Z-V Characteristics, Physics of Turn-Off Operation, GTO Switching Characteristics, Overcurrent Protection of GTOs.</p> <p>Insulated Gate Bipolar Transistors: Introduction, Basic Structure, I-V Characteristics, Physics of Device Operation, Latchup in IGBTs, Switching Characteristics, Device Limits and SOAs.</p> <p>Emerging Devices and Circuits: Introduction, Power Junction Field Effect Transistors, Field-Controlled Thyristor, JFET-Based Devices versus Other Power Devices, MOS-Controlled Thyristors, Power Integrated Circuits, New Semiconductor Materials for Power Devices. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I				
18EPE12 POWER SEMICONDUCTOR DEVICES AND COMPONENTS (Professional Core Course) (continued)				
Module-4				Teaching Hours
Snubber Circuits: Function and Types of Snubber Circuits, Diode Snubbers, Snubber Circuits for Thyristors, Need for Snubbers with Transistors, Turn-Off Snubber, Overvoltage Snubber, Turn-On Snubber, Snubbers for Bridge Circuit Configurations, GTO Snubber Considerations. Gate and Base Drive Circuits: Preliminary Design Considerations, dc-Coupled Drive Circuits, Electrically Isolated Drive Circuits, Cascode-Connected Drive Circuits, Thyristor Drive Circuits, Power Device Protection in Drive Circuits, Circuit Layout Considerations ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Module-5				
Component Temperature Control and Heat Sinks: Control of Semiconductor Device Temperatures, Heat Transfer by Conduction, Heat sinks, Heat Transfer by Radiation and Convection. Design of Magnetic Components: Magnetic Materials and Cores, Copper Windings, Thermal Considerations, Analysis of a Specific Inductor Design, Inductor Design Procedures, Analysis of a Specific Transformer Design, Eddy Currents, Transformer Leakage Inductance, Transformer Design Procedure, Comparison of Transformer and Inductor Sizes. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Discuss power electronic concepts, electronic switches and semiconductor physics. • Explain representation of switches in P-spice and power computations. • Explain the internal structure, the principle of operation, characteristics and base drive circuits of power semiconductor devices; power diodes, power BJT, power MOSFET. • Explain the internal structure, the principle of operation, characteristics and base drive circuits of power semiconductor devices; thyristors, power IGBT, power FET. • Design Snubber circuits for the protection of power semiconductor devices. • Design gate and base drive circuits for power semiconductor devices • Design a heat sink to control the temperature rise of semiconductor devices • Design magnetic components inductors and transformers used in the power electronic circuits. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge Problem, Analysis, Design / development of solutions, Ethics.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text/Reference Books				
1	Power Electronics	Daniel W Hart	McGraw Hill	
2	Power Electronics Converters, Applications, and Design	Ned Mohan et al	Wiley	3 rd Edition, 2014
3	Semiconductor Device Modeling with Spice	G. Massobrio, P. Antognetti	McGraw-Hill	2 nd Edition, 2010
4	Power Semiconductor Devices	B. Jayant Baliga	Springer	2008

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - I			
POWER ELECTRONIC CONVERTERS (Professional Core Course)			
Course Code	18EPE13	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge of PWM techniques in controlling the converter operation. • To impart knowledge of designing and analyzing DC – DC PWM converters and control modules. • To impart knowledge of designing and analyzing DC – AC and AC – DC converters. • To impart knowledge of analyzing different types of resonant converters and their control. • To impart knowledge of AC –AC converters and multilevel controllers. ■ 			
Module-1			Teaching Hours
PWM DC/DC Converters: Forward Converters - Analysis of the Basic Circuit, Galvanically Isolated Forward Converter, Boost Converter - Analysis of the Basic Scheme, Variation of the Output Voltage, Boundary Between the Continuous and the Discontinuous Mode , Discontinuous Mode Power Losses, Indirect Converter - Boundary Between the Continuous and the Discontinuous Mode, Discontinuous Mode, Indirect Converter with Galvanic Separation, Push – Pull (Symmetric) Converters - Analysis of Idealized Circuit in Continuous Mode, Output Characteristics, Selection of Components, DC Premagnetization of the Core, Half-Bridge Converter, Bridge Converter, Hamilton Circuit, Ćuk Converters - Elimination of the Current Ripple, Ćuk Converters with Galvanic Isolation. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
Control Modules: Basic Principles and Characteristics of PWM Control Modules - Circuit Analysis, Simple PWM, Voltage-Controlled PWM, Current-Controlled PWM- Compensated PWM, IC Control Modules - Control Module TL494, Control Module SG1524/2524/3524, Control Module TDA 1060. DC/AC Converters – Inverters: Single-Phase Voltage Inverters - Pulse-Controlled Output Voltage, Pulse-Width Modulated Inverters - Unipolar PWM, Three-Phase Inverters-Overmodulation ($m_a > 1$), Asynchronous PWM, Space Vector Modulation - Space Vector Modulation: Basic Principles, Application of Space Vector Modulation Technique, Direct and Inverse Sequencing, Real Drive Influence. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
AC/DC Converters – Rectifiers: Half-Wave Single-Phase Rectifiers , Full-Wave Rectifiers - Commutation of Current, Output Filters - Capacitive Filter, L Filter, Voltage Doublers, Three-Phase Rectifiers, Phase Controlled Rectifiers - Full-Wave Thyristor Rectifiers, Three-Phase Thyristor Bridge Rectifiers, Twelve-Pulse Rectifiers, Rectifiers with Circuit for Power Factor Correction, Active Rectifier - Active Rectifier with Hysteresis Current Controller, PWM Rectifiers - Advanced Control Techniques of PWM Rectifiers , PWM Rectifier with Current Output, PWM Rectifiers in Active Filters, Some Topologies of PWM Rectifiers, Applications of PWM Rectifiers. ■			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I				
18EPE13 POWER ELECTRONIC CONVERTERS (Professional Core Course) (continued)				
Module-4				Teaching Hours
Resonant Converters: Resonant Circuits - Resonant Converters of Class D, Series Resonant Converters, Parallel Resonant Converters, Series – Parallel Resonant Converter, Series Resonant Converters Based on GTO Thyristors, Class E Resonant Converters, DC/DC Converters Based on Resonant Switches - ZCS Quasi-resonant Converters, ZVS Quasi-resonant Converters, Multiresonant Converters, ZVS Resonant DC/AC Converters, Soft Switching PWM DC/DC Converters -Phase Shift Bridge Converters, Resonant Transitions PWM Converters, Control Circuits of Resonant Converters - Integrated Circuit Family UCx861-8, Integrated Circuits for Control of Soft, Switching PWM Converters. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Module-5				
AC/AC Converters: Single-Phase AC/AC Voltage Converters - Time Proportional Control Three-Phase Converters, Frequency Converters, Direct Frequency Converters, Introduction to AC/AC Matrix Converters - Basic Characteristics, Bidirectional Switches, Realization of Input Filter, Current Commutation, Protection of Matrix Converter, Application of Matrix Converter. Introduction to Multilevel Converters: Basic Characteristics -Multilevel DC/DC Converters, Time Interval: $nT < t < nT + DT$, $n = 0, 1, 2$, Time Interval: $nT + DT < t < (n + 1)T$, Multilevel Inverters - Cascaded H-Bridge Inverters, Diode-Clamped Multilevel Inverters, Flying Capacitor Multilevel Inverter, Other Multilevel Inverter Topologies, Control of Multilevel Inverters - Multilevel SPWM, Space Vector Modulation, Space Vector Control, Selective Harmonic Elimination. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Use the knowledge of PWM techniques in controlling different power electronic converters. • Apply the knowledge of power electronics in design and analysis of DC –DC PWM converters. • Design and analyze DC –AC and AC – DC converters and control their operation using PWM techniques. • Design and analyze different resonant converters and their control circuits. • Analyze AC – AC converters and multilevel converters. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem analysis.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text/Reference Books				
1	Power Electronics Converters and Regulators	Branko L. Doki ć Branko Blanu š a	Springer (International Publishing, Switzerland)	3 rd Edition, 2015
2	Power Electronics Converters, Applications, and Design	Ned Mohan at el	Wiley	3 rd Edition, 2014

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I			
MODELLING AND DESIGN OF CONTROLLERS (Professional Core Course)			
Course Code	18EPE14	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge required for modeling and computer simulation of power electronic converters and systems. • To explain control system essentials in representing system in digital domain. • To explain the designing of digital controllers by different methods. • To explain the design and analysis of optimal and robust controllers by different methods. • To impart knowledge of discrete computation essentials. ■ 			
Module-1			Teaching Hours
Computer Simulation of Power Electronic Converters and Systems: Introduction, Challenges in Computer Simulation, Simulation Process, Mechanics of Simulation, Solution Techniques for Time-Domain Analysis, Widely Used, Circuit-Oriented Simulators, Equation Solvers. Modelling of Systems: Input-Output relations, Differential Equations and Linearization, State Space Representation, Transfer Function Representation, Block Diagrams, Lagrange method, Circuit Averaging, Bond Graphs, Space Vector Modelling. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying.		
Module-2			
Control System Essentials: Representation of system in digital Domain, The Z – Transform, Digital Filter, Mapping between s – plane and z – plane, Effect of Sampling, Continuous to Discrete Domain Conversion, Control System Basics, Control Principles, State - Space Method. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
Digital Controller Design: Controller Design Techniques, Bode Diagram Method, PID Controller, Root Locus Method, State Space Method, Full State Feedback, Regulator Design by Pole Placement, Estimation Design, Tracker : Controller Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
Digital Controller Design (continued): Controlling Voltage, Controlling Current, Control of Induction motor, Output Feedback, Induction motor Control with Output Feedback. Optimal and Robust Controller Design: Least Squares Principle, Quadratic Forms, Minimum Energy Principle, Least Square Solution, Weighted Least Squares, Recursive Least Squares, Optimal Control: Linear Quadratic, Induction motor example, Robust Controller Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I				
18EPE14 MODELLING AND DESIGN OF CONTROLLERS (Professional Core Course) (continued)				
Module-5				Teaching Hours
Discrete Computation Essentials: Numeric Formats, Tracking the Base Point in the Fixed Point System, Normalization And Scaling, Arithmetic Algorithms. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Describe the role of computer simulations in the analysis and design of power electronics systems. • Understand the functional modeling of static systems. • Use sampling technique to determine a digital equivalent to a continuous time system. • Understand the control basics of digital systems. • Design digital controllers in discrete time and frequency domain. • Design optimal and robust controllers by different methods. • Explain essentials of discrete computation. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Ethics.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - I			
MODELLING AND ANALYSIS OF ELECTRICAL MACHINES (Core Course)			
Subject Code	18EPE15	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To provide basic concepts of modelling of dc and ac machines. • To provide knowledge of theory of transformation of three phase variable to two phase variable. • To analyze the steady state and dynamic state operation of three-phase induction machines using transformation theory based mathematical modelling. • To provide modeling concepts of single phase and three phase transformers. • To analyze the steady state and dynamic state operation of three-phase synchronous machines using transformation theory based mathematical modelling. ■ 			
Module-1			Teaching Hours
<p>Basic Concepts of Modelling: Basic two pole machine representation of commutator machines, 3-phase synchronous machine with and without damper bar and 3-phase induction machine, Kron's primitive machine-voltage, current and torque equations.</p> <p>DC Machine Modelling: Mathematical model of separately excited DC motor-steady state and transient state analysis, sudden application of inertia load, transfer function of separately excited DC motor, mathematical model of dc series motor, shunt motor, linearization techniques for small perturbations. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
<p>Reference Frame Theory: Real time model of a two phase induction machine, transformation to obtain constant matrices, three phase to two phase transformation, power equivalence.</p> <p>Dynamic Modelling of Three Phase Induction Machine: Generalized model in arbitrary frame, electromagnetic torque, deviation of commonly used induction motor models-stator reference frames model, rotor reference frames model, synchronously rotating reference frames model, equations in flux linkages, per unit model, dynamic simulation. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
<p>Small Signal Equations of the Induction Machine: Derivation of small signal equations of induction machine, space phasor model, DQ flux linkages model derivation, control principle of the induction motor.</p> <p>Transformer Modelling: Introduction, single phase transformer model, three phase transformer connections, per phase analysis, normal systems, per unit normalization, per unit three phase quantities, change of base, per unit analysis of normal system, regulating transformers for voltage and phase angle control, auto transformers, transmission line and transformers. ■</p>			10
Revised Bloom's Taxonomy Level	L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		
Module-4			
<p>Modelling of Synchronous Machines: Introduction, voltage equations and torque equation in machine variables, stator voltage equations in arbitrary and rotor reference frame variables, Park's equations, torque equations in substitute variables, rotor angle and angle between rotors, per unit system, analysis of steady state operation. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I				
18EPE15 MODELLING AND ANALYSIS OF ELECTRICAL MACHINES (Professional Core Course) (continued)				
Module-5				Teaching Hours
Dynamic Analysis of Synchronous Machines: Dynamic performance during sudden change in input torque and during a 3-phase fault at the machine terminals, approximate transient torque versus rotor angle characteristics, comparison of actual and approximate transient torque-angle characteristics during a sudden change in input torque; first swing transient stability limit, comparison of actual and approximate transient torque-angle characteristics during a 3-phase fault at the machine terminals, critical clearing time, equal area criterion, computer simulation. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain the basic concepts of modeling. • Develop mathematical models for DC motors for transient state analysis. • Use reference frame theory to transform three phase to two phase. • Develop dynamic model for three phase induction motor in stator and rotor reference frames. • Develop mathematical model of single phase transformers. • Model synchronous machine using Park's transformation for the analysis of steady state operation. • Model synchronous machine to perform dynamic analysis under different conditions. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Ethics,				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

SEMESTER - I			
POWER ELECTRONIS LABORATORY-1			
(Professional Core Course)			
Course Code	18EPEL16	CIE Marks	40
Number of Practical Hours/Week	04	Exam Hours	03
Total Number of Practical Hours	56	SEE Marks	60
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To conduct experiment on various power electronic devices to analyze their static and dynamic characteristics. • To conduct experiments and enhance understanding of different power electronic converters. ■ 			
Sl. NO	Experiments		
1	Analysis of static and dynamic characteristic of MOSFET and IGBT.		
2	Performance of single phase fully controlled and semi-controlled converter for RL load for continuous current mode.		
3	Performance of single phase fully controlled and semi-controlled converter for RL load for discontinuous current mode.		
4	Study of effect of source inductance on the performance of single phase fully controlled converter.		
5	Performance analysis of three phase fully controlled and semi-controlled converter for RL load for continuous current mode.		
6	Performance analysis of three phase fully controlled and semi-controlled converter for RL load for discontinuous current mode.		
7	Performance analysis of single phase bridge inverter for RL load and voltage control by single pulse width modulation.		
8	Performance analysis of two quadrant chopper.		
9	Diode clamped multilevel inverter.		
10	ZVS operation of a Synchronous buck converter.		
Revised Bloom's Taxonomy Level	L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating, L ₆ – Creating		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Analyze the static and dynamic characteristics of various semiconductor devices. • Apply the knowledge of converters in assessing the performance of single phase and three phase fully controlled and semi controlled converters for RL load for continuous current modes. • Apply the knowledge of converters in assessing the performance of single phase and three phase fully controlled and semi controlled converters for RL load for discontinuous current modes. • Assess the performance of single phase bridge inverter for RL load and control the voltage by pulse width modulation. • Apply the knowledge of power electronics in performance analysis of chopper and synchronous buck converter. ■ 			
Graduate Attributes (As per NBA):			
Engineering Knowledge, Problem Analysis, Conduct investigations of complex Problems, Modern Tool Usage, Individual and Team work, Communication.			

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - I			
RESEARCH METHODOLOGY AND IPR			
(Professional Core Course) and (Common to all M.Tech Programmes)			
Course Code	18RMI17	CIE Marks	40
Number of Lecture Hours/Week	02	Exam Hours	03
Total Number of Lecture Hours	25	SEE Marks	60
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To give an overview of the research methodology and explain the technique of defining a research problem • To explain the functions of the literature review in research. • To explain carrying out a literature search, its review, developing theoretical and conceptual frameworks and writing a review. • To explain various research designs and their characteristics. • To explain the details of sampling designs, measurement and scaling techniques and also different methods of data collections. • To explain several parametric tests of hypotheses and Chi-square test. • To explain the art of interpretation and the art of writing research reports. • To explain various forms of the intellectual property, its relevance and business impact in the changing global business environment. • To discuss leading International Instruments concerning Intellectual Property Rights. ■ 			
Module-1			Teaching Hours
Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration. ■			05
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed. Research Design: Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs. ■			05
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Design of Sampling: Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs. Measurement and Scaling: Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Technics, Multidimensional Scaling, Deciding the Scale. Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method. ■			05
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.

Outcome Based Education(OBE) and Choice Based Credit System (CBCS)		
SEMESTER - I		
18RMI17 RESEARCH METHODOLOGY AND IPR		
(Professional Core Course) and (Common to all M.Tech Programmes)		
Module-4		Teaching Hours
<p>Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis.</p> <p>Chi-square Test: Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, Cautions in Using Chi Square Tests. ■</p>		05
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.	
Module-5		
<p>Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.</p> <p>Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout-Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property Rights, UNSECO. ■</p>		05
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.	
Course outcomes:		
<p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Discuss research methodology and the technique of defining a research problem • Explain the functions of the literature review in research, carrying out a literature search, developing theoretical and conceptual frameworks and writing a review. • Explain various research designs and their characteristics. • Explain the details of sampling designs, measurement and scaling techniques and also different methods of data collections • Explain several parametric tests of hypotheses and Chi-square test. • Explain the art of interpretation and the art of writing research reports • Discuss various forms of the intellectual property, its relevance and business impact in the changing global business environment and leading International Instruments concerning IPR. ■ 		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - I				
18RMI17RESEARCH METHODOLOGY AND IPR (Professional Core Course) and (Common to all M.Tech Programmes)				
Graduate Attributes (As per NBA): Problem analysis, Investigation, Design, Individual and teamwork, Communication skills, Professionalism.				
Question paper pattern:				
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Textbooks				
1	Research Methodology: Methods and Techniques	C.R. Kothari, Gaurav Garg	New Age International	4 th Edition, 2018
2	Research Methodology a step-by-step guide for beginners. (For the topic Reviewing the literature under module 2)	Ranjit Kumar	SAGE Publications Ltd	3 rd Edition, 2011
3	Study Material (For the topic Intellectual Property under module 5)	Professional Programme Intellectual Property Rights, Law and Practice, The Institute of Company Secretaries of India, Statutory Body Under an Act of Parliament, September 2013

**II SEMESTER M.Tech
POWER ELECTRONICS**

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - II			
ELECTRIC DRIVES (Professional Core Course)			
Course Code	18EPE21	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction to drive, their characteristics and breaking. • To explain the basic elements of drives, classification of drives, their dynamics and speed control • To explain selection of drive for a specific application. • To explain control of an electric drive using microprocessor. ■ 			
Module-1			Teaching Hours
Characteristics Electric motors: Introduction, Characteristics of DC motors, Three phase Induction Motors and Synchronous Motors, Braking of Electric Motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Dynamics of Electric Drives: Introduction, Classification of Electric Drives, Basic Elements of an Electric Drive, Dynamic Conditions of Drive System, Stability Considerations of Electric Drive. Control of Electric Motors: Induction Motor Drives. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Control of Electric Motors (continued): Synchronous Motor Drives, DC Drives. Permanent Magnet Synchronous Motor, Classification of Permanent Magnet Synchronous Motor, Cycloconverters fed Synchronous Motor. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Control of Electric Motors (continued): Permanent Magnet Synchronous Motor, Classification of Permanent Magnet Synchronous Motor, Cycloconverters fed Synchronous Motor. Applications: Drive Considerations for Textile Mills, Steel Rolling Mills, Cranes and Hoist Drives, Cement Mills, Sugar Mills, Machine Tools, Paper Mills, Coal Mines, Centrifugal Pumps, Turbo - compressors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-5			
Microprocessors and Control of Electrical Drives: Introduction, Dedicated Hardware Systems versus Microprocessor Control, Applications Area and Functions of Microprocessors in Drive Technology, Control of Electric Drives using Microprocessors, Control System Design of Microprocessors based Variable Speed Drives, Stepper motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - II				
18EPE21 ELECTRIC DRIVES (Professional Core Course) (continued)				
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain characteristics of DC motors, induction motors and synchronous motors. • Explain braking of electric motors. • Classify electric drives. • Discuss dynamics conditions and stability considerations of Electric drive. • Control the speed of electric motors. • Suggest a drive for a specific application. • Explain using microprocessor in the control of an electric drive. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Electric Drives Concepts and Applications	Vedam Subrahmanyam	Mc Graw Hill	2 nd Edition, 2016

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - II			
SWITCHED - MODE POWER SUPPLIES (Professional Core Course)			
Course Code	18EPE22	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an overview on SMPS, its characteristics, new technologies, basic principles and control modes. • To introduce the topology of DC/DC converter used and the method of selecting key peripheral components of SMPS. • To explain the power factor correction circuit design of SMPS, the design of high-frequency transformer, the examples of SMPS optimization design, and the key design points of SMPS. • To introduce the SMPS testing technology and the protection circuit design of SMPS. ■ 			
Module-1			Teaching Hours
<p>Switching-Mode Power Supply (SMPS): Overview, Classification of Integrated Regulated Power Supply, Characteristics of SMPS, New Development Trend of SMPS, Basic Principles of SMPS, Control Mode Type of SMPS, Working Mode of SMPS, Feedback Type of SMPS, Load Characteristics of SMPS.</p> <p>Topologies of the DC/DC Converter: Topologies of the DC/DC Converter, Basic Principle of Buck Converter, Basic Principle of - Boost Converter, Buck-Boost Converter, Charge Pump Converter, (Single-ended primary inductor converter)SEPIC, Flyback Converter, Forward Converter, Push-Pull Converter, Half/Full Bridge Converter, Soft Switching Converter, Half-Bridge LLC Resonant Converter, 2-Switch Forward Converter. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
<p>Method for Selecting Key Peripheral Components of SMPS: Selection Method for - Fixed Resistor, Capacitors, Inductor Characteristics and Selection Method for Magnetic Beads, Selection Method for EMI Filter - Input Bridge Rectifier, Output Rectifier, Transient Voltage Suppressor (TVS), Power Switching Tube, Optical Coupler, Adjustable Precision Shunt Regulator, SMPS Protection Elements. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
<p>Power Factor Correction Circuit Design of SMPS: Brief Introduction to Power Factor Correction (PFC), Basic Principle of Passive PFC Circuit, Design Examples of Passive PFC Circuit, Basic Principle of Active PFC Circuit, Design Examples of Active PFC Circuit, Principle and Application of High-Power PFC, Measures to Suppress PFC Electromagnetic Interference, PFC Configuration Scheme.</p> <p>Design of High-Frequency Transformer: Selection Method for Magnetic Cores by the Empirical Formula or Output Power Table, Waveform Parameters of the High-Frequency Transformer Circuit, Formula Derivation of Selecting High-Frequency Transformer Magnetic Core Based on AP Method, Design of Flyback High-Frequency Transformer, Design of Forward High-Frequency Transformer, Loss of High-Frequency Transformer. ■</p>			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ – Applying.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - II				
18EPE22 SWITCHED - MODE POWER SUPPLIES (Professional Core Course) (continued)				
Module-4				Teaching Hours
Key Design Points of SMPS: SMPS Design Requirements, Design of High-Efficiency SMPS, Methods of Reducing No-Load and Standby Power Consumption of SMPS, Stability Design of Optocoupler Feedback Control Loop SMPS Layout and Wiring, Design of Constant Voltage/Current SMPS, Design of Precision Constant Voltage/Current SMPS, Design of Remote Turn-Off Circuit for SMPS, Typical Application and Printed Circuit Design of New Single-Chip SMPS, Electromagnetic Interference Waveform Analysis and Safety Code Design of SMPS, Radiator Design of Single-Chip SMPS, Radiator Design of Power Switching Tube (MOSFET), Common Troubleshooting Methods of SMPS. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying.			
Module-5				
SMPS Testing Technology: Parameter Testing of SMPS, Performance Testing of SMPS, SMPS Measurement Skills, Accurate Measurement Method of Duty Ratio, Method to Detect the Magnetic Saturation of High-Frequency Transformer with Oscilloscope, Digital Online Current/Resistance Meter, Electromagnetic Compatibility Measurement of SMPS, Waveform Test and Analysis of SMPS. Protection and Monitoring Circuit Design of SMPS: Design of Drain Clamp Protection Circuit, Overvoltage Protection Circuit Constituted by Discrete Components, Application of Integrated Overvoltage Protector, Design of Undervoltage Protection Circuit, Design of Overcurrent and Overpower Protection Circuit, Design of Soft-Start Circuit, Mains Voltage Monitor, Transient Interference and Audio Noise Suppression Technology of SMPS, Design of Overheating Protection Component and Cooling Control System. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain a SMPS, its characteristics, new technologies, basic principles and control modes. • Suggest a suitable DC/DC converter for an SMPS. • Explain the method of selecting key peripheral components of SMPS. • Design the power factor correction circuit of SMPS. • Explain selection of magnetic core and designing of high-frequency transformer. • Explain designing of different SMPS. • Explain testing technology of SMPS. • Design protection and monitoring circuit for SMPS. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Ethics, Communication.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Optimal Design of Switching Power Supply	Zhanyou Sha et al	Wiley	2015

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - II			
POWER SYSTEM HARMONICS (Professional Core Course)			
Course Code	18EPE23	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To explain about different sources of harmonics in power system. • To explain effects of harmonics and mitigation of harmonics. • To explain modeling of power system components for harmonic studies. • Introducing different methods of harmonic studies. ■ 			
Module-1			Teaching Hours
Fundamentals of Harmonics: Introduction, Examples of harmonic waveforms, characteristics of harmonics in power systems, measurement of harmonic distortion, power in passive elements, calculation of passive elements, resonance, capacitor banks and reactive power supply, capacitor banks and power factor correction, bus voltage rise and resonance, harmonics in transformers. Harmonics in Power system: Introduction, sources of harmonics, transformers, rotating machines, fluorescent lights, static var compensators, cycloconverters. Single phase controlled rectifiers, three phase converters. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Effects of Harmonic Distortion on Power System: Introduction, thermal losses in a harmonic environment, harmonic effects on power system equipment, capacitor banks, transformers, rotating machines, protection, communication and electronic equipment. Mitigation of Power system Harmonics: Introduction, harmonic filters, power converters, transformers, rotating machines, capacitor banks, harmonic filter design, active filters. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
Limits of Harmonic Distortion: Introduction, voltage harmonic distortion limits, current harmonic distortion limits. Harmonic studies – Modelling of System Components: Introduction, impedance in the presence of harmonics, skin effect, modelling of the high voltage grid, generator modelling, modelling of shunt capacitor banks, series capacitor banks, load models, induction motor modelling. Transformer Modelling: Introduction, modelling of two winding transformers, phase sequence admittance matrices, transmission of voltage and current across two winding transformers, transmission matrices and phase admittance matrix, modelling of three and four winding transformers. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
Modelling of Transmission lines/Cables: Introduction, skin effect, modelling of power lines, Line's series impedance, mutual coupling between conductors, mutually coupled lines, line's shunt capacitance, surge impedance and velocity of propagation, line's series impedance and shunt capacitance – single phase equivalents, the transmission (ABCD) matrix, the admittance matrix, conversion between the transmission and admittance matrices, the nominal pi model – single phase equivalent, the equivalent pi model – voltage and current the line, line losses, the equivalent pi model – single phase equivalent, variations in the network's short circuit capacity, examples – the nominal and equivalent models. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - II				
18EPE23 POWER SYSTEM HARMONICS (Professional Core Course) (continued)				
Module-5				Teaching Hours
Power System Harmonic Studies: Introduction, harmonic analysis using a computer program, harmonic analysis using spread sheet, harmonic distortion limits, harmonic filter rating, and practical considerations. Harmonic study of simple system, 300 -22 kV power system and low voltage system. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain the fundamentals that facilitate the understanding of the issues of harmonics. • Explain the causes for generation of harmonics. • Explain the effects of harmonics distortion on power system equipment and loads and suppression of harmonics in power systems. • Discuss standard limits of harmonic distortion and modeling of power system components for harmonic analysis study. • Model transmission lines and cables for harmonic analysis. • Discuss implementation of harmonic studies. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Modern Tool Usage, Ethics.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - II			
HYBRID ELECTRIC VEHICLES (Professional Elective Course)			
Course Code	18EPE243	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To explain the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals. • To explain plug – in hybrid electric vehicle architecture, design and component sizing and the power electronics devices used in hybrid electric vehicles. • To discuss various electric drives suitable for hybrid electric vehicles • To discuss different energy storage technologies used for hybrid electric vehicles and their control. • To explain modeling and simulation of electric hybrid vehicles by different techniques, sizing of components and design optimization and energy management. ■ 			
Module-1			Teaching Hours
Introduction: Sustainable Transportation, A Brief History of HEVs, Why EVs Emerged and Failed, Architectures of HEVs, Interdisciplinary Nature of HEVs, State of the Art of HEVs, Challenges and Key Technology of HEVs. Hybridization of the Automobile: Vehicle Basics, Basics of the EV, Basics of the HEV, Basics of Plug-In Hybrid Electric Vehicle (PHEV), Basics of Fuel Cell Vehicles (FCVs). HEV Fundamentals: Introduction, Vehicle Model, Vehicle Performance, EV Powertrain Component Sizing, Series Hybrid Vehicle, Parallel Hybrid Vehicle, Wheel Slip Dynamics. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Plug-in Hybrid Electric Vehicles: Introduction to PHEVs, PHEV Architectures, Equivalent Electric Range of Blended PHEVs, Fuel Economy of PHEVs, Power Management of PHEVs, PHEV Design and Component Sizing, Component Sizing of EREVs, Component Sizing of Blended PHEVs, HEV to PHEV Conversions, Other Topics on PHEVs, Vehicle-to-Grid Technology. Power Electronics in HEVs: Introduction, Principle of Power Electronics, Rectifiers Used in HEVs, Buck Converter Used in HEVs, Non-isolated Bidirectional DC–DC Converter, Voltage Source Inverter, Current Source Inverter, Isolated Bidirectional DC–DC Converter, PWM Rectifier in HEVs, EV and PHEV Battery Chargers, Modelling and Simulation of HEV Power Electronics, Emerging Power Electronics Devices, Circuit Packaging, Thermal Management of HEV Power Electronics. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Electric Machines and Drives in HEVs: Introduction, Induction Motor Drives, Permanent Magnet Motor Drives, Switched Reluctance Motors, Doubly Salient Permanent Magnet Machines, Design and Sizing of Traction Motors, Thermal Analysis and Modelling of Traction Motors. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Batteries, Ultracapacitors, Fuel Cells, and Controls: Introduction, Battery Characterization, Comparison of Different Energy Storage Technologies for HEVs, Modelling Based on Equivalent Electric Circuits, Battery Charging Control, Charge Management of Storage Devices, Flywheel Energy Storage System, Hydraulic Energy Storage System, Fuel Cells and Hybrid Fuel Cell Energy Storage System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - II				
18EPE243 HYBRID ELECTRIC VEHICLES (Professional Elective Course) (continued)				
Module-5				Teaching Hours
Modelling and Simulation of Electric and Hybrid Vehicles: Introduction, Fundamentals of Vehicle System Modelling, HEV Modelling Using ADVISOR, HEV Modelling Using PSAT, Physics-Based Modelling, Bond Graph and Other Modelling Techniques, Consideration of Numerical Integration Methods, Conclusion. HEV Component Sizing and Design Optimization: Introduction, Global Optimization Algorithms for HEV Design, Model-in-the-Loop Design Optimization Process, Parallel HEV Design Optimization Example, Series HEV Design Optimization Example, Conclusion. Vehicular Power Control Strategy and Energy Management: A Generic Framework, Definition, and Needs, Methodology to Implement, Benefits of Energy Management. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals. • Explain plug – in hybrid electric vehicle architecture, design and component sizing. • Explain the use of different power electronics devices in hybrid electric vehicles. • Suggest a suitable electric drive for a specific type of hybrid electric vehicle. • Explain the use of different energy storage devices used for hybrid electric vehicles, their technologies and control. • Simulate electric hybrid vehicles by different techniques for the performance analysis. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Modern Tool Usage, Individual and Team work, Communication.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Hybrid Electric Vehicles principles and Applications with Practical Perspectives	Chris Mi,M. Abul Masrur,David Wenzhong Gao	Wiley	2011

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - II			
EMBEDDED SYSTEMS (Professional Elective Course)			
Course Code	18EPE253	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To impart knowledge of embedded systems with suitable examples, explanation of process, classification of embedded systems. • To explain the processor architecture, memory organization, communication with processor and interrupt services. • To explain the program modeling concepts, inter-process communication and synchronization of processes. ■ 			
Module-1			Teaching Hours
Introduction to Embedded Systems: Embedded Systems, Processor Embedded into a System, Embedded Hardware Units and Devices in a System, Embedded Software in a System, Examples of Embedded Systems, Embedded Systems – on –chip (Soc) and Use of VLSI Circuit Design Technology, Complex Systems Design and Processors, Design of Process in Embedded System, Formulation of System Design, Design Process and Design Examples, Classification of Embedded Systems, Skill required for an Embedded System Designer. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Processor Architecture and Memory Organisation: 8051 Architecture, Real world Interfacing, Introduction to Advanced Architecture, Processor and Memory Organization, Instruction Level Parallelism, Performance Metrics, Memory – Types, Memory – Maps and Addresses, Processor Selection, Memory Selection. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Devices and Communication Buses, Interrupt Services: IO Types and Examples, Serial Communication Devices, Parallel Device Ports, Sophisticated Interfacing Features in Device Ports, Wireless Devices, Timer and Counting Devices, Watchdog Timer, Real Time Clock, Networked Embedded Systems, Serial Bus Device Protocols – Parallel Communication Network Using ISA,PCI, PCI –X and Advanced Protocols. Device Drivers and Interrupts Service Mechanisms: Programmed – I/O Busy – wait Approach without Interrupt Service Mechanism, ISR Concept, Interrupt Sources, Interrupt Servicing Mechanism, Direct Memory Access. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Program Modelling concepts: Program Models, DFG Models, State Machine Programming Models for Event – controlled Program Flow, Modelling of Multiprocessor Systems, UML Modelling. Interprocess Communication and Synchronization of Processes, Threads and Tasks: Multiple Processes in an Application, Multiple Threads in an Application, Tasks, Task Status, Task and Data, Clear – cut Distention Between Functions, ISRS and Tasks by their Characteristics, Concept of Semaphores, Shared Data, Interprocess Communication, Signal Function, Semaphore Functions, Message Queue Functions, Mailbox Functions, Pipe Functions, Socket Functions, RPC Functions. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - II				
18EPE253 EMBEDDED SYSTEMS (Professional Elective Course) (Continued)				
Module-5				Teaching Hours
Real - Time Operating Systems: OS Services, Process Management, Timer Functions, Event Functions, Memory management, Device, File and IO Subsystems Management , Interrupt Routines in RTOS Environment and Handling of Interrupt Source Calls, Real – time Operating Systems, Basic Design Using an RTOS, Rtos Task Scheduling Models, Interrupt Latency and Response of the task as performance Metrics, OS Security Issues. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain design process in embedded system and formulation of system design. • Describe processor architecture and memory organization. • Describe the devices; serial port, parallel port devices, timing devices, devices for synchronous iso-synchronous and asynchronous communication. • Describe device drivers and interrupt mechanisms. • Explain the programming concepts and source code engineering tools for embedded programming. • Explain real time programming and program modeling concepts during single and multi-processor system software development process. • Describe real time operating systems concepts. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem analysis.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Embedded Systems: Architecture, Programming and Design	Raj Kamal	Mc Graw Hill	2 nd Edition,2014

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - II			
POWER ELECTRONIS LABORATORY-2			
Course Code	18EPEL26	CIE Marks	40
Number of Practical Hours/Week	04	Exam Hours	03
Total Number of Practical Hours	56	SEE Marks	60
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • To conduct experiments to assess the performance of separately excited DC motor fed by single phase and three phase fully controlled converter in continuous and discontinuous current modes. • To conduct experiments to assess the performance of Chopper fed DC drives for class A and class C commutation in continuous current mode. • To simulate different converters and analyze the waveform in continuous and discontinuous current modes. • To simulate forward converter, fly back converter and resonant converter to study their performance. ■ 			
Sl. NO	Experiments		
1	Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for continuous current mode.		
2	Study and performance analysis of single phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.		
3	Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for continuous current mode.		
4	Study and performance analysis of three phase fully controlled converter fed separately excited DC Motor for discontinuous current mode.		
5	Performance analysis of a practical chopper fed DC Drives system for class-A and class-C commutation and analysis of wave forms in continuous mode.		
6	Simulation study of buck, boost and buck- boost converter (basic topologies) and analysis of wave forms for continuous current mode (CCM).		
7	Simulation study of buck, boost and buck-boost converter (basic topologies) and analysis of wave forms for discontinuous current mode (DCM).		
8	Simulation study of forward converter and fly back converter and performance analysis of various wave forms.		
9	Resonant converter simulation study and analysis.		
10	Closed loop operation of a buck and boost converter.		
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ – Understanding L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating.		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Conduct experiments on single phase / three phase fully controlled converter fed separately excited DC motor to assess the performance in continuous and discontinuous current modes. • Conduct experiments to assess the performance of Chopper fed DC drives for class A and class C commutation in continuous current mode. • Simulate different converters for analyzing the waveform in continuous and discontinuous current modes. • Simulate forward converter, fly back converter and resonant converter to study their performance. ■ 			
Graduate Attributes (As per NBA):			
Engineering Knowledge, Problem Analysis, Conduct investigations of complex Problems, Modern Tool Usage, Individual and Team work, Communication.

Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To give an introduction to DC power transmission and describe the basic components of a converter, and describe the methods for compensating the reactive power demanded by the converter and the methods for simulation of HVDC systems • To describe the types of filters for removing harmonics and the characteristics of the system impedance resulting from AC filter designs and different methods of control of HVDC converter and system. • To explain the design techniques for the main components of an HVDC system. • To explain the protection of HVDC system and other converter configurations used for the HVDC transmission and the recent trends for HVDC applications. ■ 			
Module-1			Teaching Hours
HVDC Technology: Introduction, Advantages of HVDC Systems, HVDC System Costs, Overview and Organization of HVDC Systems, Review of the HVDC System Reliability, HVDC Characteristics and Economic Aspects. Power Conversion: Thyristor, 3-Phase Converter, 3-Phase Full Bridge Converter, 12-Pulse Converter. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-2			
Harmonics of HVDC and Removal: Introduction, Determination of Resulting Harmonic Impedance, Active Power Filter. Control of HVDC Converter and System: Converter Control for an HVDC System, Commutation Failure, HVDC Control and Design. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-3			
Control of HVDC Converter and System (continued): HVDC Control Functions, Reactive Power and Voltage Stability. Interactions between AC and DC Systems: Definition of Short Circuit Ratio and Effective Short Circuit Ratio, Interaction between HVDC and AC Power System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-4			
Main Circuit Design: Converter Circuit and Components, Converter Transformer, Cooling System, HVDC Overhead Line, HVDC Earth Electrodes, HVDC Cable, HVDC Telecommunications Current Sensors, HVDC Noise and Vibration. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		
Module-5			
Fault Behaviour and Protection of HVDC System: Valve Protection Functions, Protective Action of an HVDC System, Protection by Control Actions, Fault Analysis. Other Converter Configurations for HVDC Transmission: Introduction, Voltage Source Converter (VSC), CCC and CSCC HVDC System, 10.4 Multi-Terminal DC Transmission. Trends for HVDC Applications: Wind Farm Technology, Modern Voltage Source Converter (VSC) HVDC Systems, 800 kV HVDC System. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - III				
18EPE31 HVDC POWER TRANSMISSION (Professional Core Course) (continued)				
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain importance of DC power transmission. • Describe the basic components of a converter, the methods for compensating the reactive power demanded by the converter • Explain the methods for simulation of HVDC systems and its control. • Describe filters for eliminating harmonics and the characteristics of the system impedance resulting from AC filter designs • Explain the design techniques for the main components of an HVDC system. • Explain the protection of HVDC system and other converter configurations used for the HVDC transmission. • Explain the recent trends for HVDC applications. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Lifelong Learning.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

SEMESTER - III			
MULTILEVEL CONVERTERS FOR INDUSTRIAL APPLICATIONS (Professional Elective Course)			
Course Code	18EPE323	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives:			
<ul style="list-style-type: none"> • To provide an overview of medium-voltage power converters and their applications. • To describe the generalized multilevel converter topology and to derive the classic converters with a common DC bus and to analyze the common characteristics of the symmetric topologies. • Explain the analysis of the operation of the diode-clamped multilevel converter, and a multilevel space vector modulation and to characterize the balancing boundary of the passive front-end converter • To describe the operation and analysis of the flying capacitor multilevel converter. • To explain asymmetric topology with hybrid modulation and a common DC source called a cascade asymmetric multilevel converter (CAMC) with five voltage levels and its advantages. • To analyse the behaviour of the CAMC as a distribution static compensator (DSTATCOM) and shunt active power filter in improving the power quality in medium-voltage distribution systems as custom power devices. • To analyse the behaviour of the diode-clamped topology configured as a back-to-back converter for several working conditions. ■ 			
Module-1			Teaching Hours
Converters: Introduction, Medium-Voltage Power Converters, Multilevel Converters, Applications. Multilevel Topologies: Introduction, Generalized Topology with a Common DC Bus, Converters Derived from the Generalized Topology, Symmetric Topologies without a Common DC Link, Summary of Symmetric Topologies, Asymmetric Topologies. ■			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-2			
Diode-Clamped Multilevel Converter: Introduction, Converter Structure and Functional Description, Modulation of Multilevel Converters, Voltage Balance Control, Effectiveness Boundary of Voltage Balancing in DCMC Converters, Performance Results. ■			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-3			
Flying Capacitor Multilevel Converter: Introduction, Flying Capacitor Topology, Modulation Scheme for the FCMC, Dynamic Voltage Balance of the FCMC. Cascade Asymmetric Multilevel Converter (CAMC): Introduction, General Characteristics of the CAMC, CAMC Three-Phase Inverter, Comparison of the Five-Level Topologies. ■			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-4			
Case Study 1: DSTATCOM Built with a Cascade Asymmetric Multilevel Converter: Introduction, Compensation Principles, CAMC Model, Reactive Power and Harmonics Compensation. ■			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		
Module-5			
Case Study 2: Medium-Voltage Motor Drive Built with DCMC: Introduction, Back-to-Back DCMC Converter, Unified Predictive Controller of the Back-to-Back DCMC in an IM Drive Application, Performance Evaluation. ■			10
Revised Bloom's Taxonomy Level	L ₁ - Remembering, L ₂ - Understanding, L ₃ - Applying, L ₄ - Analyzing, L ₅ - Evaluating, L ₆ - Creating		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - III				
18EPE323 MULTILEVEL CONVERTERS FOR INDUSTRIAL APPLICATIONS (Professional Elective Course) (continued)				
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain the working of medium-voltage power converters and their applications. • Explain multilevel, symmetric and asymmetric topologies. • Explain the structure and operation of the diode-clamped multilevel converter, and a multilevel space vector modulation. • Characterize the balancing boundary of the passive front-end converter. • Describe the operation and analysis of the flying capacitor multilevel converter. • Discuss the characteristics topologies of the Cascade Asymmetric Multilevel Controller. • Explain the working of a distribution static compensator (DSTATCOM) built with CAMC for reactive power and harmonic compensation. • Evaluate the performance of back-to-back converter in an induction motor drive for several working conditions. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■ 				
Text Book				
1	Multilevel Converters for Industrial Applications	Sergio Alberto González, Santiago Andrés Verne, María Inés Valla	CRC Press	2014

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - III			
POWER QUALITY PROBLEMS AND MITIGATION (Professional Elective Course)			
Course Code	18EPE332	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
Credits - 04			
Course objectives: <ul style="list-style-type: none"> To give an introduction on power quality (PQ), causes and effects of PQ problems, requirement of PQ improvements, and mitigation aspects of PQ problems. To give PQ definitions, terminologies, standards, benchmarks, monitoring requirements through numerical problems. To explain passive shunt and series compensation using lossless passive LC components, active shunt compensation using DSTATCOM (distribution static compensators), active series compensation using DVR (dynamic voltage restorer), and combined compensation using UPQC (unified power quality compensator) for mitigation of current-based PQ problems. To explain classification, modeling and analysis of various nonlinear loads which cause the power quality problems. ■ 			
Module-1			Teaching Hours
Power Quality: Introduction, State of the Art on Power Quality, Classification of Power Quality Problems, Causes of Power Quality Problems, Effects of Power Quality Problems on Users, Classification of Mitigation Techniques for Power Quality Problems. Power Quality Standards and Monitoring: Introduction, State of the Art on Power Quality Standards and Monitoring, Power Quality Terminologies, Power Quality Definitions, Power Quality Standards, Power Quality Monitoring, Numerical Examples. Passive Shunt and Series Compensation: Introduction, State of the Art on Passive Shunt and Series Compensators, Classification of Passive Shunt and Series Compensators, Principle of Operation of Passive Shunt and Series Compensators, Analysis and Design of Passive Shunt Compensators, Modelling, Simulation, and Performance of Passive Shunt and Series Compensators, Numerical Examples. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-2			
Active Shunt Compensation: Introduction, State of the Art on DSTATCOMs, Classification of DSTATCOMs, Principle of Operation and Control of DSTATCOMs, Analysis and Design of DSTATCOMs, Modelling, Simulation, and Performance of DSTATCOMs, Numerical Examples. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-3			
Active Series Compensation: Introduction, State of the Art on Active Series Compensators, Classification of Active Series Compensators, Principle of Operation and Control of Active Series Compensators, Analysis and Design of Active Series Compensators, Modelling, Simulation, and Performance of Active Series Compensators, Numerical Examples. ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		
Module-4			
Unified Power Quality Compensators: Introduction, State of the Art on Unified Power Quality Compensators, Classification of Unified Power Quality Compensators, Principle of Operation and Control of Unified Power Quality Compensators, Analysis and Design of Unified Power Quality Compensators, Modelling, Simulation, and Performance of UPQCs, Numerical Examples (from 6.01 to 6.10). ■			10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.		

M.TECH POWER ELECTRONICS (EPE) Outcome Based Education(OBE) and Choice Based Credit System (CBCS) SEMESTER - III				
18EPE332 POWER QUALITY PROBLEMS AND MITIGATION (Professional Elective Course) (continued)				
Module-5				Teaching Hours
Unified Power Quality Compensators (continued): Numerical Examples (from 6.11 to 20). Loads That Cause Power Quality Problems: Introduction, State of the Art on Nonlinear Loads, Classification of Nonlinear Loads, Power Quality Problems Caused by Nonlinear Loads, Analysis of Nonlinear Loads, Modelling, Simulation, and Performance of Nonlinear Loads, Numerical Examples. ■				10
Revised Bloom's Taxonomy Level	L ₁ – Remembering, L ₂ – Understanding, L ₃ – Applying, L ₄ – Analysing.			
Course outcomes: At the end of the course the student will be able to: <ul style="list-style-type: none"> • Explain causes, effects of PQ problems and classification of mitigation techniques for PQ problems. • Explain PQ standards, terminology and monitoring requirements through numerical problems. • Explain passive shunt and series compensation using lossless passive components. • Explain the design, operation and modeling of active shunt compensation equipment. • Explain the design, operation and modeling of active series compensation equipment. • Explain the design operation and modeling of unified power quality compensators. • Discuss mitigation of power quality problems due to nonlinear loads. ■ 				
Graduate Attributes (As per NBA): Engineering Knowledge, Problem Analysis, Design / development of solutions, Modern Tool Usage, Engineers and society, Ethics, Individual and Team work, Communication, Lifelong Learning.				
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question is for 16 marks. • There will be 2 full questions (with a maximum of four sub questions in one full question) from each module. • Each full question with sub questions will cover the contents under a module. • Students will have to answer 5 full questions, selecting one full question from each module. ■

SEMESTER - III			
PROJECT WORK PHASE – 1			
Subject Code	18EPE34	CIE Marks	100
Number of Practical Hours/Week	02	Exam Hours	--
Total Number of Practical Hours	--	SEE Marks	--
Credits - 02			
Course objectives:			
<ul style="list-style-type: none"> • Support independent learning. • Guide to select and utilize adequate information from varied resources maintaining ethics. • Guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly. • Develop interactive, communication, organisation, time management, and presentation skills. • Impart flexibility and adaptability. • Inspire independent and team working. • Expand intellectual capacity, credibility, judgement, intuition. • Adhere to punctuality, setting and meeting deadlines. • Instil responsibilities to oneself and others. • Train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas. ■ 			
<p>Project Phase-1 Students in consultation with the guide/s shall carry out literature survey/ visit industries to finalize the topic of the Project. Subsequently, the students shall collect the material required for the selected project, prepare synopsis and narrate the methodology to carry out the project work.</p> <p>Seminar: Each student, under the guidance of a Faculty, is required to</p> <ul style="list-style-type: none"> • Present the seminar on the selected project orally and/or through power point slides. • Answer the queries and involve in debate/discussion. • Submit two copies of the typed report with a list of references. <p>The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident. ■</p>			
Revised Bloom's Taxonomy Level	L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating, L ₆ – Creating.		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Demonstrate a sound technical knowledge of their selected project topic. • Undertake problem identification, formulation and solution. • Design engineering solutions to complex problems utilising a systems approach. • Communicate with engineers and the community at large in written and oral forms. • Demonstrate the knowledge, skills and attitudes of a professional engineer. ■ 			
Graduate Attributes (As per NBA)			
Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.			
Continuous Internal Evaluation			
CIE marks for the project report (50 marks), seminar (30 marks) and question and answer (20 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairperson. ■			

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - III			
INTERNSHIP / PROFESSIONAL PRACTICE			
Subject Code	18EPEI35	CIE Marks	40
Number of Practical Hours/Week	--	Exam Hours	03
Total Number of Practical Hours	--	SEE Marks	60
Credits - 06			
Course objectives:			
<p>Internship/Professional practice provide students the opportunity of hands-on experience that include personal training, time and stress management, interactive skills, presentations, budgeting, marketing, liability and risk management, paperwork, equipment ordering, maintenance, responding to emergencies etc. The objective are further,</p> <ul style="list-style-type: none"> • To put theory into practice. • To expand thinking and broaden the knowledge and skills acquired through course work in the field. • To relate to, interact with, and learn from current professionals in the field. • To gain a greater understanding of the duties and responsibilities of a professional. • To understand and adhere to professional standards in the field. • To gain insight to professional communication including meetings, memos, reading, writing, public speaking, research, client interaction, input of ideas, and confidentiality. • To identify personal strengths and weaknesses. • To develop the initiative and motivation to be a self-starter and work independently. ■ 			
<p>Internship/Professional practice: Students under the guidance of internal guide/s and external guide shall take part in all the activities regularly to acquire as much knowledge as possible without causing any inconvenience at the place of internship.</p> <p>Seminar: Each student, is required to</p> <ul style="list-style-type: none"> • Present the seminar on the internship orally and/or through power point slides. • Answer the queries and involve in debate/discussion. • Submit the report duly certified by the external guide. <p>The participants shall take part in discussion to foster friendly and stimulating environment in which the students are motivated to reach high standards and become self-confident. ■</p>			
Revised Bloom's Taxonomy Level	L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating, L ₆ – Creating		
Course outcomes:			
<p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Gain practical experience within industry in which the internship is done. • Acquire knowledge of the industry in which the internship is done. • Apply knowledge and skills learned to classroom work. • Develop a greater understanding about career options while more clearly defining personal career goals. • Experience the activities and functions of professionals. • Develop and refine oral and written communication skills. • Identify areas for future knowledge and skill development. • Expand intellectual capacity, credibility, judgment, intuition. • Acquire the knowledge of administration, marketing, finance and economics. ■ 			
Graduate Attributes (As per NBA):			
<p>Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Engineers and society, Environment and sustainability, Ethics, Individual and Team work, Communication.</p>			

M.TECH POWER ELECTRONICS (EPE)
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)
SEMESTER - III

18EPEI35 INTERNSHIP / PROFESSIONAL PRACTICE (continued)

Continuous Internal Evaluation

CIE marks for the Internship/Professional practice report (20 marks), seminar (10 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session by the student) by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairperson. ■

Semester End Examination

SEE marks for the internship report (30 marks), seminar (20 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session) by the examiners appointed by the University. ■

**IV SEMESRER M.Tech
POWER ELECTRONICS**

M.TECH POWER ELECTRONICS (EPE)			
Outcome Based Education(OBE) and Choice Based Credit System (CBCS)			
SEMESTER - IV			
PROJECT WORK PHASE -2			
Subject Code	18EPE41	CIE Marks	40
Number of Practical Hours/Week	04	Exam Hours	03
Total Number of Practical Hours	--	SEE Marks	60
Credits - 20			
Course objectives:			
<ul style="list-style-type: none"> • To support independent learning. • To guide to select and utilize adequate information from varied resources maintaining ethics. • To guide to organize the work in the appropriate manner and present information (acknowledging the sources) clearly. • To develop interactive, communication, organisation, time management, and presentation skills. • To impart flexibility and adaptability. • To inspire independent and team working. • To expand intellectual capacity, credibility, judgement, intuition. • To adhere to punctuality, setting and meeting deadlines. • To instil responsibilities to oneself and others. • To train students to present the topic of project work in a seminar without any fear, face audience confidently, enhance communication skill, involve in group discussion to present and exchange ideas. ■ 			
Project Work Phase - II: Each student of the project batch shall involve in carrying out the project work jointly in constant consultation with internal guide, co-guide, and external guide and prepare the project report as per the norms avoiding plagiarism.			
Revised Bloom's Taxonomy Level	L ₃ – Applying, L ₄ – Analysing, L ₅ – Evaluating, L ₆ – Creating		
Course outcomes:			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • Present the project and be able to defend it. • Make links across different areas of knowledge and to generate, develop and evaluate ideas and information so as to apply these skills to the project task. • Habituated to critical thinking and use problem solving skills • Communicate effectively and to present ideas clearly and coherently in both the written and oral forms. • Work in a team to achieve common goal. • Learn on their own, reflect on their learning and take appropriate actions to improve it. ■ 			
Graduate Attributes (As per NBA):			
Engineering Knowledge, Problem Analysis, Design / development of solutions, Conduct investigations of complex Problems, Modern Tool Usage, Engineers and society, Environment and sustainability, Ethics, Individual and Team work, Communication.			
Continuous Internal Evaluation:			
Project Report: 20 marks. The basis for awarding the marks shall be the involvement of the student in the project and in the preparation of project report. To be awarded by the internal guide in consultation with external guide if any.			
Project Presentation: 10 marks. The Project Presentation marks of the Project Work Phase -II shall be awarded by the committee constituted for the purpose by the Head of the Department. The committee shall consist of three faculty from the department with the senior most acting as the Chairperson.			
Question and Answer: 10 marks. The student shall be evaluated based on the ability in the Question and Answer session for 10 marks. ■			
Semester End Examination			
SEE marks for the project report (30 marks), seminar (20 marks) and question and answer session (10 marks) shall be awarded (based on the quality of report and presentation skill, participation in the question and answer session) by the examiners appointed by the University. ■
