Basavarajewari Group of Institutions
INSTITUTE OF TECHNOLOGY & MANAGEMENT
 (An ISO 9001:2015 Certified Institution)
Electronics & Communication Engineering

Programme Outcomes (POs):
 Engineering Graduates will be able to:

- Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem Analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantial conclusion using first principles of mathematics, natural sciences, and engineering sciences.
- Design / Development of Solution:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- Conduct Investigation of Complex Problem:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for, sustainable development.
- Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these in one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- Lifelong Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Specific Outcome (PSO)s:
 PSO1: To understand the principles, processes, techniques and design aspects of electronic devices, systems and communication systems.
 PSO2: To apply, analyze and design electronic circuits, communication systems, embedded systems by using higher engineering mathematical foundations, computational principles and network modeling skills.
 PSO3: To develop electrical hardware and software systems for universal requirements using smart, embedded controllers, signal processing, analog and digital integrated chips.

Basavarajewari Group of Institutions
INSTITUTE OF TECHNOLOGY & MANAGEMENT
(An ISO 9001:2015 Certified Institution)
Electronics & Communication Engineering

Programme outcomes (POs):
Engineering Graduates will be able to:

1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem Analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design:** Development of solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and Sustainability:** Understand the impact of solutions in societal and environmental contexts, and demonstrate commitment to sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and regulations and strive to enhance the safety, health, and welfare of the public.
9. **Individual and Team Work:** Function effectively as an individual and member of a team in diverse teams and environments.
10. **Communication:** Communicate effectively using verbal, written, and graphical communication skills, and be able to write effective reports, proposals, and design documents, as well as make clear presentations.
11. **Project Management and Financial Acumen:** Apply engineering and management principles and apply the use of tools to a team, to manage projects and to develop systems and components.
12. **Lifelong Learning:** Recognize the need for, and have the ability to engage in independent and lifelong learning to maintain and enhance their professional knowledge.

Programme Specific Outcomes (PSOs):

PSO-I: To understand the principles, processes, techniques and design of electronic and communication systems.

PSO-II: To apply, analyze and design electronic circuits, communication systems and systems using higher engineering mathematical foundation, computer modeling skills.

PSO-III: To develop electronic hardware and software systems for sensors, embedded controllers, signal processing, analog and digital systems.
