INTRODUCTION

Bash script that creates a menu-based ordering system for a food establishment. The script begins by displaying a welcome message and presenting the user with a list of menu options to choose from, including breakfast, lunch, snacks, and dinner. Once the user selects an option, they are presented with the corresponding menu and prompted to enter the number of items they wish to order, along with the quantity of each item. The script then calculates the total bill and asks the user to confirm their order. If the user confirms their order, the script displays a confirmation message along with the total bill. If the user chooses not to confirm their order, they are prompted to reorder again. The script is a basic example of how Bash scripting can be used to create simple automation for a business.

RESULTS

MODULE DESCRIPTION

This shell script is a menu-driven program for ordering food items at a restaurant. It displays a welcome message and a list of menu options for breakfast, lunch, snacks, and dinner. The user can choose an option by entering the corresponding number.

If the user chooses the breakfast option, the script displays a list of breakfast items with their prices. The user is then prompted to enter the number of items they want to order and the quantity of each item. The script calculates the total bill based on the user's order and asks the user to confirm their order.

If the user chooses the lunch option, the script displays a list of lunch items with their prices. The user is prompted to enter the number of items they want to order and the quantity of each item. The script calculates the total bill based on the user's order and asks the user to confirm their order.

If the user chooses the snacks option, the script displays a list of snack items with their prices. The user is prompted to enter the number of items they want to order and the quantity of each item. The script calculates the total bill based on the user's order and asks the user to confirm their order.

The script also includes error handling for invalid options entered by the customer.

If the user chooses the dinner option, the script displays a message that the dinner menu is not available and asks the user to choose another option. The script loops back to the beginning, so the user can continue to order food items until they choose to exit the program.

S.Rajeshwari

has successfully completed the online, non-credit Professional Certificate

Google Digital Marketing & E-commerce

Those who earn the Google Digital Marketing & E-commerce Professional Certificate have completed seven courses, developed by Google, that include hands-on, practice-based assessments and are designed to prepare them for entry-level roles in the field. They are competent in foundational skills in digital marketing and e-commerce.

Foundations of Digital Marketing and E-commerce

Attract and Engage Customers with Digital Marketing

From Likes to Leads: Interact with Customers Online

Think Outside the Inbox: Email Marketing

Assess for Success: Marketing Analytics and Measurement

Make the Sale: Build, Launch, and Manage E-commerce Stores

Satisfaction Guaranteed: Develop Customer Loyalty Online

The online specialization named in this certificate may draw on material from courses taught on campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at the university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.

Why semiconductor or VLSI domain ?

- Fascinating world : Consists technology made in 5nm and transistor count is ~1.5 Billion on a chip (Just imagine all in small size size)
- Related field
